cessive drinking and other moral delinquencies. They seem not to invite the truth." (Minority report, page 17).

Can you cite another case?

Yes, the "Relay ride" matter is another.

What do you know about the "Relay ride" matter?

Mr. Learned testified (page 691). "There had been a good deal of criticism that came in from these witness to us regarding what they called the Relay accident. Mr. Bruce was very seriously injured out at Relay. . . . . late one night, perhaps early one morning; at all events it was about the time of a birthday celebration that he had had, and there was a good deal of rumor about the situation, and witnesses kept bringing up this Relay accident as a clear case where the Assistant Superintendent of public schools was probably drunk."

Do you know of other charges?

Yes. Recently, Mr. Bruce was openly charged in open Board meeting by Mr. George Smith with a most serious offense.

When were other charges preferred against Mr. Bruce?

About the middle of July, 1919.

By whom were the charges preferred?

By Mr. George C. Smith, the Citizens Associations and by the Parents' League.

What were the specific charges preferred? (Page 2, Minority Report):

On the 30th day of July, 1919, on verbal motion made in conference of the Board, by Mr. H. B. Learned, vice-president, it was resolved by the Board to appoint a committee to investigate the educational and administrative efficiency of Mr. Roscoe C. Bruce, assistant superintendent in charge of the colored schools of the District of Colombia. Thereupon the president of the Board, Rev. John van Schaick, Jr., appointed as members of said committee, Mr. H. B. Learned, chairman, Mrs. Coralie F. Cook and Fountain Peyton. Said committee was then and there instructed by the Board to hold sessions in private from time to time and to summon persons in the school system having close relation to, and such contact with, Mr. Bruce, and other persons from among citizens having intelligent interest in the schools, to appear before said committee to testify to the educational and administrative efficiency of Mr. Bruce. It was then and there also resolved that the private nature of the investigation and the limitations on witnesses should not be embraced in the written resolution offered in the public meeting of the same date, which written resolution appears of record in the minutes of July 1919. It was understood that the committee was to ascertain so far as it could the educational and administrative efficiency of said Bruce from said witnesses and not otherwise; and that said investigation was not to be in any sense a trial; nor was it understood that Mr. Bruce was to be called before the committee in support of his efficiency, or to explain away, or defend him-

32-40-108

self against, any of the matters which might be testified to by the witnesses.

Was Rev. Van Schaik much interested in the outcome of this Committee's report?

He certainly was, as he asked Mr. Peyton to go with the majority and promised members of the Parents' League that the report of the Committee would be unanimous.

What did Dr. Van Schaik say to Mr. Peyton about getting a verdict clearing Mr. Bruce?

He said to him, "I do not want any trouble about this affair, and I want you to go with the majority and bring in a unanimous verdict. Let us have peace."

Was this before the committee met?

It was. He tried to determine the verdict before the committee had met.

Was the question of Mr. Bruce's moral qualifications considered?

It was not.

Was it ignored?

Rev. Van Schaik ordered that it should not be included in the investigation.

Was Rev. Van Schaik afraid the people might complain because of his efforts to clear Mr. Bruce.

Not at all. Rev. Van Schaik told Captain Oyster, on one occasion, "The Public be Damned." (Page 1166).

How could a minister of the gospel say such a thing?

No one seems to know.

Was Mr. Bruce allowed to attend the hearings?

He was.

Was Mr. Thurston, his chief, allowed to attend the hearings?

He was not.

Why was he not allowed to attend the hearings?

Dr. Van Schaik decided that he was not to attend.

Did Mr. Thurston make any efforts to attend?

He did, but was refused admittance to the room where the hearings were in progress. Mr. Thurston says;—(page 947) "Dr. Van Schaik met me as I started into the room and said, that they were going into the Bruce case, and requested me to stay out."

Should Mr. Thurston have been allowed to attend?

He certainly should have. Mr. Bruce was there and Mr. Thurston, as head of all the schools, certainly had a right to be there too.

Tell me something more about the investigation by the school committee.

Mr. Peyton says (page 765);—"There were thirty-three people, I think before the committee. I would have to estimate it. I calculated it in the report, but I think 20 of these people testified against Mr. Bruce and showed him up in a very bad light. Most of them were teachers. None of the fifteen teachers who testified against him were promoted. Some of those who testified for him were promoted.

What was the result of the investigation?

activities. If he did not know what was going on after two years, then he is guilty of criminal negligence.

Is there any evidence that Mr. Bruce knew Moens was taking these pictures?

There certainly is as Mr. Bruce was well acquainted with Mr. Moens and complaints had come to him from Dr. Lucy Moten as far back as 1917. (See page 1292). Mr. Bruce refused to notice such a serious matter unless it was put up to him in a formal written complaint by parents. He allowed it to continue, and did not get busy until the people attacked him.

When did the Senate Committee meet to investigate the schools?

The Senate Committee met March 9, 1920, and adjourned April 22, 1920.

What did the Committee do?

It went through an exhaustive examination of the whole School situation. Thirty-seven persons appeared before the committee and gave testimony.

What were some of the striking features of this investigation?

It was shown that Dr. Van Schaik was the board of education. Senator Harrison, in his report said; "Let's take up Mrs. Cook. Anyone who reads the testimony can see a thread running all through it, that Dr. Van Schaik had but to whistle and

Instant from copse and heath arose
Bonnets and spears and bended bows.

His followers like those of Roderick Dhu, started up in every direction ready to perform his bidding. I shall point out from the testimony that this description is not overdrawn."

What else was shown?

Mr. Thurston said, "that Mr. Bruce is not strong in his business procedure. There have been many inaccuracies requiring correction in his business actions. The Superintendent carries under the law the final responsibility, if one of his chief subordinates does not inspire general confidence, in his employee and in a very large section of the Public, and if, he is not any too effective in business procedure, then necessarily I must keep a closer watch over him, and must keep in closer contact with him, than otherwise I would have to do. (Page 1324).

Give me more information about the investigation.

We quote Senator Dillingham:—"Do I understand you to say that Mr. Bruce was not questioned about the automobile ride or the "Slush-Fund" letter during the investigation?" (Page 859)

Mr. Larner:—I think not. I did not like that. That was really the only thing about the whole matter that impressed me badly.

Senator Harrison:—(page 1104) Did you (Mr. Bruce), after the subcommittee was appointed to go into these charges, did you suggest to the committee that you preferred that only they would investigate your efficiency as an administrative officer, your educational qualifications, etc., but that they would go into the other specific charges that affected the moral features?

32-40-110

Mr. Bruce:—I made no suggestions.

Senator Harrison:—Why didn't you ask the committee to go into the matter fully, so that all those charges might be investigated?

Mr. Bruce:—I made no suggestions.

Senator Harrison:—So you really were not sincere when you invited the charges if, when they were made, you did not ask the committee to go into them? They made the charges and you invited those charges, and when they came to substantiate those charges you made no effort to have them produce proof. (page 1104).

What does all this complaint show?

It clearly demonstrates the fact that Mr. Bruce had lost the respect and confidence of the people.

Could this affect his usefulness as a teacher or Superintendent?

It certainly would not only affect his usefulness but really destroy it. And for the good of the children in the schools he should be promptly moved.

What did Mrs. Cook say about Mr. Bruce?

Among much said in his behalf, she also said, (page 314);—"Clamor against the Assistant Superintendent Bruce grew so offensive during the school year of 1919, that it was decided by the board to refer the matter to the corporation counsel."

What did Mr. Larner say about Mr. Bruce?

He said:—"He is an able man, but certainly there is too much friction in the colored schools in regard to Mr. Bruce. It ought to be allayed in some way."

Mr. Peyton said: As further evidence of Mr. Bruce's character, the following are additional instances from Mr. Bruce's testimony. First, let us observe the case of Mr. Madella. Mr. Bruce was displeased with this teacher and sent to this teacher at the Armstrong School a postal card bearing the polite inscription: "A yellow dog is the lowest thing on earth; a knocker is worse than a yellow dog." The reception of this card severely wounded the feelings of this teacher and provoked considerable comment unfavorable to Mr. Bruce; whereupon Mr. Bruce who has so much sympathy for humankind, who wishes to please everybody, humiliates and wounds this teacher, and then offers a sort of perfunctory apology, not so much as a panacea to Mr. Madella's wounded feelings, as in an effort to protect himself in his official position. In Mr. Bruce's testimony before the committee he attempts to explain away this offence. He says that he purchased a number of postal cards at Christmas to send to his friends; that the offensive card got mixed with the other cards and that by mistake he addressed and mailed it to Mr. Madella. (See record, p. 711.) How can any person accept as valid any such explanation? Mr. Bruce had signed the card, and there was no other explanation he could make which would acquit him and thereby preserve his official position. In rebuttal to Mr. Bruce's statements in his testimony on this matter as to how Mr. Madella finally regarded this incident, some excerpts are directly quoted hereafter. They are from a letter written by his widow, Mrs. F. D. Madella, dated

September 24, 1919. The original of this letter is in possession of the writer of this report and will be submitted on request." (Page 781).

EXCERPTS FROM LETTER

"Feeling as I do, that many injustices done my husband by Mr. Bruce were indirectly the cause of his death, viz., the sending of a very unkind post-card. . . . Mr. Bruce made a stiff, reluctant effort to apologize, but Mr. Madella never appreciated, never thought him real. Many times at home, in conversation with me, he would say that he had been unkindly dealt with because he would not assist Mr. Bruce in carrying out his dirty work. Among the last statements made by Mr. Madella, he said: 'I am worried and worked to death; I can't make it.' Kind friends, out of the depths of my heart, I would say away with such a man."

Very truly yours,

(Signed) MRS. F. D. MADELLA.

It also shows that certain members of the board were clearly prejudiced in favor of certain persons, no matter what testimony might be produced. Mrs. Cook was in favor of Mr. Bruce and Miss C. Hunter. Evidence to the contrary notwithstanding. Mrs. Cook says of Miss Hunter.—"I have no understanding or belief that Miss Hunter has been guilty of immoral acts or conduct." In spite of the fact that she knew Miss Hunter had taken school children to Dr. Moens, to be photographed and also had been seen at all hours in the day and night in company with Moens.

In the Bruce Case Senator Harrison said:—Anyone can see that Mrs. Cook was prejudiced against Thurston because she desired Bruce, the assistant superintendent of colored schools, to have greater authority in the school system. Time after time, instance after instance, in matters that came to their attention, she would go over the head of the superintendent and either talk to the president of the board of education or to the assistant superintendent in charge of colored schools about matters which were solely within the jurisdiction of the superintendent himself. It was she who advocated that Bruce, the assistant superintendent of colored schools, should have a seat in the meetings of the board of education, although the law was silent on that point, and although the law had expressly given the right to the superintendent to sit in the meetings of the board of education and discuss with them questions, if need be, denying him only the right to a vote; it said nothing about the assistant superintendent of the white schools or the assistant superintendent of the colored schools being present at the meetings of the board of education. Yet this member of the board and Dr. Van Schaick and other members of the board extended the invitation that the assistant superintendent of the colored schools be admitted to the meetings of the board and there sit by the side of the superintendent, having, as they claimed, just as much right and authority and jurisdiction there as he. Of course, they based their action on the theory that the law says the assistant superintendent of the colored schools shall have sole charge of the colored schools, while the language of the law touching the assistant superintendent of the white schools does not say 'sole charge.' The law, however, expressly states that the super-

intendent may be permitted to attend all meetings of the board and denies him only the right of a vote, but it gives no such authority to the assistant superintendent of colored schools.

This member of the board voted against Thurston in 1917 and for Van Schaick against Daniel, although she had served with Daniel previous to 1917. Her whole attitude was in the direction of giving to Bruce greater power. She evidently thought she could carry out her plans through Van Schaick better than through Daniel. One had been tried out; the other had not."—Congressional Record.

What was Dr. Johnson's position?

When Dr. Van Schaick declared that members of the Parents' League were one-third child, one-third savage, and one-third shell-game man, Dr. Johnson endorsed his statement.

What did Dr. Johnson say?

I would quote from the record (page 511);

Senator Harrison:—Did you disapprove of that statement?

Dr. Johnson:—I modified the proposition, if you will read further.

Senator Harrison:—You thought they were two-thirds child?

Dr. Johnson:—That is it.

Senator Harrison:—And two-thirds savage?

Dr. Johnson:—No, with the rest divided.

Senator Harrison:—You were not going to get too many parts?

Dr. Johnson:—No.

Senator Harrison:—That is a pretty bad allegation to bring against a part of your own race, is it not?

Dr. Johnson:—Knowing them as I do, and as you cannot know them, I do not think so.

Senator Harrison:—There are some pretty good people in the Parents' League, are there not?

Dr. Johnson:—Surely.

Senator Harrison:—You agreed with Dr. Van Schaick about that statement?

Dr. Johnson:—Except in the proportions.

Senator Harrison:—He wrote you a letter in which he stated:—

"Dear Johnson, I have read the evidence, every line. You are absolutely right. That outfit is one-third child, one-third savage and one-third shell-game man."

Senator Harrison:—Evidently you have the same opinion that Dr. Van Schaick had about them, because he had written to you about it?

Dr. Johnson:—Evidently.

Who was Charlotte Hunter?

She was a teacher of history in the Dunbar High School. Formerly she had taught in the Miner Normal.

Was she involved in the Moens case?

She was, as she and Moens were well acquainted.

What did she do for Moens?

She arranged for him to take pictures of certain school children. Some of which were taken nude.

Was she kept in the schools after Moens was arrested?

She taught there some five months until the people rose up and demanded that she be put out.

What was done by these people?

The school was picketed and Mass Meetings were held.

Did Mr. Bruce know of Charlotte Hunter's connection with the Moens case?

He must have as he attended the trial.

Did Mr. Bruce recommend that Charlotte Hunter be dismissed? (page 1009)

He did not and at no time was her dismissal demanded by Mr. Bruce.

Was it a fact, that after it was revealed that for approximately eight months Charlotte Hunter and this man Moens were staying frequently together, and she was the agent at times of Moens to go out and get girls of various types to come to the studio of this man Moens, so that nude pictures might be taken of them, she was retained in the public schools?

It is.

How did she finally get out of the schools?

She was allowed to resign, April 11, 1919, and was given a letter of honorable dismissal by the Board of Education at Mrs. Cook's suggestion.

What is the Parents' League?

It is an organization in the District of Columbia composed of a membership and following of over 20,000 persons.

Why was it organized?

It was organized as a protest against the scandalous conditions disclosed by the Moens case.

When was it organized?

It was organized March 1919.

What is its motto?

"We stand for better Schools.' '

Who belong to the Parents' League?

Some of the best people in Washington. Among its members are, Pastors of some of the leading churches, Doctors, Lawyers, Merchants, Bankers, and Mechanics. It has the sympathy and support of a large number of teachers.

Was the Parents' League justified in holding meetings?

It certainly was. And Senator Harrison said, "they were doing a great deal of good by their agitation, and had they not protested, it would have shown that the colored people did not have any respect for their own race." Even Mr. Bruce said, "that I do not think that anyone could condemn the masses of the colored people for their perfectly sincere indignation." (page 1055).

What other work has the Parents' League done since its organization?

In the lamentable riot of 1919 the Parents' League spent two days with the authorities and with the colored people and succeeded in bringing

32-40-112

about order and the Parents' League was given credit by the white papers for having stopped the riot.

Did not the N. A. A. C. P. in Washington bring about peace?

It did not. For the riot was over when they began to go among the people and see the authorities.

What did Mr. Archibald Grimke do to help Mr. Bruce?

He presented a statement before the select committee of Congress in defence of Mrs. Cook and Mr. Bruce. This statement was on behalf of the N. A. A. C. P. and was lengthy, covering 12 pages.

Did the N. A. A. C. P. order Mr. Grimke to present this statement in its name?

It does not appear anywhere in the record that it did. It appears that Mr. Grimke made this statement on his own initiative. He has always been an ardent supporter of Bruce, and his photograph holds a conspicuous place in Bruce's office at Franklin School.

What was the opinion of Senator Harrison of Dr. Johnson?

He said:—"Dr. Johnson knows just about as much about the school system of Washington as he does about the nebular hypothesis. He has conferred so much with Dr. Van Schaick and other members of the board who are opposed to Thurston that when he started to talk he spoke like a parrot and employed practically the same language as had been used by his confederates who had preceded him."

May I quote part of his testimony? Dr. Johnson said he went on the board prejudiced against Bruce. Then the following occurred:

Senator Harrison:—Did you vote for or against Dr. Van Schaick for president at that time?

Dr. Johnson:—I voted for him.

Senator Harrison:—What were your reasons at that time for voting for Dr. Van Schaick?

Dr. Johnson:—Well, when I went on the board I was very much prejudiced against the assistant superintendent.

Senator Harrison:—Bruce?

Dr. Johnson:—Yes.

Senator Harrison:—Why were you prejudiced against him?

Dr. Johnson:—Like most of the other people in the community, I believed that he was wholly responsible for the condition of the colored schools.

Senator Harrison:—The condition was bad at that time was it?

Dr. Johnson:—There was a lot of grumbling about transfers and appointments and promotions, and had been all along.

Then, he suddenly changed his mind about Bruce, and in a very short while after Johnson became a member of the board he was at all times and under all circumstances a champion of Bruce. It was Dr. Johnson and Mrs. Cook, two colored members of the board, who fought for Bruce to have a place on the board of education when the law did not grant it, going constantly over the head of the superintendent and to the head of the board in order to consult.

I read further from the testimony:

Senator Harrison:—When did you make up your mind as to the superintendent's weaknesses, as you told him that day?

Dr. Johnson:—All through the year.

Senator Harrison:—You ascertained that after you got on the board?

Dr. Johnson:—Oh yes.

Senator Harrison:—What incidents had happened that made you come to that conclusion?

Although Johnson had sat at these hearings for almost three weeks when he testified, had heard the examinations of the witnesses, and knew the character of questioning which we had put to the witnesses, he testified as follows:

Well, out of the mass of detail on the board of education that we had to deal with at every meeting, I could not pick out particular things. Had I known this investigation was coming on I could possibly have noted them down and refreshed my mind.

I shall not go into the Randall case further. That was one of the things, he said, that caused him to change. I have already alluded to that case, a fight between Syphax and Miss Wilson.

This same Dr. Johnson, a colored member of the board, in speaking of his own race in the city of Washington, indorsed language that had been used by Dr. Van Schaick. In speaking of those of his race who comprised the Parents' League, he said that they are more than one-third savage. That was the compliment which was paid by Dr. Van Schaick to the Parents' League, which had been organized by the colored population here, or some of them, in order to rid the public schools of teachers such as Charlotte Hunter, whom they thought might have associated with Moens, this degenerate and profligated anthropologist—this vile and low pervert.—Congressional Record.

What was Senator Harrison's opinion of the Parents' League?

Senator Harrison in speaking of the Parents' League and Dr. Johnson said:—"While he, (Dr. Johnson) expressed himself as believing these members of his race composing the Parents' League were two-thirds savage and the balance divided as childlike and 'shell game,' he wrote a letter to these people April 14, 1919, in answer to an invitation to attend one of their mass meetings, in which he said, 'While I can not be with you in person, I am with you in spirit,' and so forth. 'The Parents' League was organized in a good cause, is capable of doing splendid work for our school system, and, as I told you then, you have my hearty support in your efforts. The people that he speaks of there organized themselves from amongst the colored population here in order to purify and clarify the atmosphere touching this controversy that had arisen respecting Moens, who, as I will show later, entered the school system here through a letter given by Dr. Van Schaick as president of the board, and took pictures of little school children, took pictures in the nude of women throughout the city, in his studio in Washington, and for which action this man Moens was afterwards indicted and tried and convicted in the courts of the District. When this

part of the colored population, desirous of removing the stain from the right living and better element of school-teachers who were trying to do their duty, and upon whom a foul suspicion rested, desirous of ridding the schools of such teachers as Charlotte Hunter, who had associated with Moens for years, then this Dr. Johnson, member of the board, says that they are 'one-third savage, one-third child, and one-third shell-game persons.' He changed as quickly in his estimate of the Parents' League as he did about Thurston as superintendent.

Believing in the motives that were behind most of the people who were in the Parents' League, many of them must have been from the best people of the colored population of Washington—they were good because preachers were there of every kind and every denomination. I read the speeches at their big meeting at one of the churches here, and every speech was pitched upon a high plane, all advocating the one proposition to clarify the atmosphere and rid the schools of these nefarious influences that were calculated to tear down and destroy the colored schools. I have more respect for them, knowing the motives behind them, than I have for this man who makes the allegation that a part of his people are two-thirds savage and one-third child, when they are embarked upon such a good purpose as they were."—Congressional Record.

What did Dr. Van Schaick think of the Parents' League?

Captain Oyster testified that Dr. Van Schaick asked whether he, (Dr. Van Schaick), should attend the meetings of the Parents' League. "I said that would depend entirely as to how you feel toward Bruce. If you are not friendly toward Bruce, you will get a warm welcome. But if you are friendly toward him you better go there with a gatling gun. I knew the type of people. His reply was "I will see them in hell before I will accede to their wishes." (Page 1315).)

And what did he say about Mrs. Cook as compared with Dr. Moten?

There was a row on, or a controversy, between Dr. Moten and Miss Charlotte Hunter, who then taught in her school, and this member of the board about whom I am now speaking took the side of Charlotte Hunter; and since that time, as the evidence disclosed, there has been a feeling of antagonism against Dr. Moten. I visited, with the committee, the school over which this woman, Dr. Moten, presides, the Miner Normal School; and I say to you that I have never seen a school that impressed me so greatly as that.

What did Senator Harrison say about Dr. Moten?

Another reason was a controversy between Dr. Moten, the head of the Miner Normal School, and Charlotte Hunter, a teacher in the school at that time, about whom the newspapers have published articles, about whom witnesses have testified in the courts of the District, about whom much testimony was given before the select committee, a woman who was forced to resign from the schools of the city of Washington because of her association with a man by the name of Moens, an imposter, a degenerate, a man of low character, who claimed to be an anthropologist from Holland or somewhere else.

I have never seen a school that I thought was better managed than the Miner Normal School; and as we came out of that building, and down the high steps of that school, another committeeman remarked to me, "Oh, what a pity it is that Dr. Moten is not serving as assistant superintendent over the colored schools in place of Bruce."

Any one could see at a glance that the woman was of superb qualities when it came to managing a school; and yet one of the reasons why this particular member of the board was against Dr. Thurston was because of that little feeling that had crept into the controversy between Dr. Moten and Charlotte Hunter. Away back in 1914, I believe, Charlotte Hunter had been recommended by Mr. Thurston, then superintendent, to be removed or transferred from the Minor Normal School. It was the wish of Dr. Moten that she should be transferred, but the board even at that time overturned the action of Mr. Thurston. Mrs. Cook as a member assisted in overturning it. She was afterwards, in 1916 or 1917, I believe, transferred to the Dunbar High School, and still later she was fired or I should say allowed to resign.—Congressional Record.

What have the Washington daily papers said?

"Star"—June 5th 1920.

"The Board of Education has been rebuked severely by a select Committee of the Senate after a protracted investigation. If it (the Board) has regard for the state of public feeling it will resign."

"Post"—May 27th 1920.

"There will be a feeling of general satisfaction and agreement with the unanimous decision of the Senate select Committee to recommend the abolition of the present Board of Education of the District of Columbia, the Board has ceased to function properly because it has degenerated into a set of little factions and cliques. It will be a relief to everybody when an institution that had so outlived its usefulness is finally dissolved. The interests of more than 60,000 school children must not be farther jeopardized."

"Times"—June 10th 1920.

"Having back of him (Thurston) the virtual endorsement of the United States and the good wishes of the masses of Washington people, Mr. Thurston looms large on the educational horizon. What Washington needs most is the right to elect, by vote, our own Board of Education, so that its members will be responsive to public sentiment. As now elected it is quite the proper thing that "the Public be damned." "Congress will doubtless even up scores with the Board."

"Times"—July 6th 1920.

"The very best thing possible for the schools would be for the entire board to resign."

How did Mr. Bruce select some of his teachers?

Mr. Peyton said, (page 730):—I cannot go over all the cases, but I would like to give you an illustration. I was told that a "bouncing young widow" who has lots of company was being importuned to accept a place in the Public Schools. I asked who the "Bouncing young widow" was,

and found that she lived within a stone's throw of my house. I think on the same day, or the day after, I met Captain Newman, the principal of Armstrong High School, and I reported this to him, and he was very anxious to know who this "bouncing young widow" was. However it was told me that this "bouncing young widow", in order to prove her assertions, was willing to conceal this person in her house to hear these importunities made. Now I knew that Mr. Bruce frequented this house. I had seen him go there time and time again, and other teachers too. I want to say there is no insinuation in what I am saying. A few months after that talk with the lady, I saw Mr. Bruce on Sunday morning drive up in his auto to that particular house and go in. On Monday morning following, a Miss Sayles, Mable Sayles, living in Hillsdale, came to me and reported that a Miss Cornell a teacher in O street Vocational School, had died suddenly Sunday morning, and that she Miss Sayles, had occupied that particular place before Miss Cornell did, and she would like to be reappointed to that place, temporarily, until an examination could be held. She showed me her papers, and I have them here, very strong papers complimenting her, praising her for her service, etc. They showed that she had gone regularly through our schools, had taken the domestic art course in the High School, and had supplemented that by a course in a trade school, and had actually served for a time with credit in that particular place, that was just vacated by Miss Cornell's death. I told her that I would take the matter up with Mr. Bruce and see what I could do. I went to Mr. Bruce's office and took the matter up with him, and Mr. Bruce agreed with me that she was a splendid woman, that she had given excellent service, and he was going to get busy at once and see what he could do for her, that he felt that she was the woman for the place. In the mean time the "bouncing young widow" came in, before I got through talking with Mr. Bruce, and heard part of the conversation. I left and went back to my office. About three o'clock that afternoon I felt that I had better call up Mr. Thurston over the phone and lay the case before him, and his answer was: "Mr. Peyton, I wish you had spoken of this earlier. Mr. Bruce brought a lady down here this forenoon and recommended her as the only available person for the place, and I gave her a preliminary examination and then an appointment, and she has gone over there and gone to work. I then understood who the "bouncing young widow" was and inferred why Mr. Bruce was at her house on Sunday morning. That was the first experience I had with Mr. Bruce that caused me to believe some of the rumors that were flying about and creating discord and confusion in the Public Schools. This story is nearly ended. I complained about this matter in the meeting of the board of education and insisted that an examination should be held. In the meantime Mr. Bruce had explained that the reason why he had chosen that particular young lady was because she was a practical dressmaker, and I have since learned that although she was appointed to that position in the O Street Vocational School, that she did not serve as a practical dressmaker. The lady had lived opposite me six or eight years, and I had never heard that

she was a dressmaker, but she was shortly thereafter promoted to science teacher, and is now a science teacher.

(Page 752).

Another instance is shown of Mr. Bruce's methods in the following. Mr. W. T. S. Jackson, an Amherst graduate, a post graduate with degree from the Catholic University of America, and a successful teacher in the old M Street High School. Subsequently he was promoted to the principalship of that school. Bruce rated him high for a time and suddenly without warning or constructive effort to uphold Jackson, marked him down and recommended his demotion to a teachership. The case of the appointment of J. Moria Saunders as principal of the O Street Vocational School is a flagrant one. Saunders was a product of the Washington Public Schools, having graduated from Armstrong Manual Training School and the regular teachers course at the Normal School. After Saunders' graduation from the Normal school, he became clerk to the Assistant Superintendent Bruce. During his experience as an employee of the schools prior to his becoming principal, he never taught a day as a regular teacher. His only teaching experience consisted of service as a night school teacher in the lower grades.

Now when Mr. Bruce began his vocational schools here, despite the fact that they were new ventures, technical in character, and required persons of broad education, definite technical training, and specific trade experience, a man of practically no fitness for the position, was recommended by Mr. Bruce to be the First O Street Vocational principal. Mr. Saunders has since resigned and left the schools to enter business. Dr. Bailey is a Harvard graduate, a distinguished language scholar, a fluent speaker of French, and an M. D. from Howard University. After Dr. Bailey had taught for several years in the old M Street High School, because of his superior scholarship, executive promise, and excellent teaching ability, he was made a supervising principal.

When Dr. Bailey was in this position, he was led, even in the last year, by Mr. Bruce to believe that his services were acceptable. As a coincidence it came to pass that Mr. Bailey married and departed on his honeymoon trip, the end of which proved to be his last year as supervisor. While he was off, lulled by Mr. Bruce's misrepresentations into a false sense of security, the colored assistant had him demoted to a high school teachership, overnight. This is an instance of unfair administration.

What was the position of the board regarding charges of immorality against Mr. Bruce?

The board referred the charges to the Corporation Counsel's office. They had no right under the law to do this and the Corporation Counsel had nothing to do with them, and sent them back to the board where nothing was done.

What happened to some of the witnesses who testified for Bruce?

Professor Houston was given the headship of the business Department of Dunbar High School. Others were also promoted.

What was the Slush-fund letter?

Mr. Bruce had this letter originated in his office to defend himself. He got the teachers to contribute so much to this slush-fund to help defend him, he said. It read that in proportion to what the teachers gave, that was the way they were going to be paid back. If you put in $2 then you would get your pro rata, according to amount you paid.

How much money did they succeed in raising?

About $500.

How much damages were they seeking to recover?

$100,000.00.

Did they sue anyone?

They have not, up to this time.

Why have they not?

Because they had no case against the people whom they wished to sue.

Was there anyone whom they might have sued, for reflecting upon any teacher?

Yes. If they were really anxious to protect the good name of their teachers they would sue Dr. Van Schaick, who said in a letter to Dr. Learned, "that Poor, Miss———— (he called her name in the letter), was thrown out for alleged immoral relations with a white man." Here is a case where a conviction for libel could easily be had.

Why then do they not sue Dr. Van Schaick?

1st, Because they are simply hoping to scare the people who are opposed to Mr. Bruce. 2nd, Because Van Schaick is in sympathy with the Bruce faction.

What has been done with the money that was raised?

It is reported that half of it was given to Lawyer C————, and $100.00 more for some expenses and the balance kept in the treasury.

Was it wrong in Mr. Bruce to allow this letter to go out?

It certainly was. Mr. Peyton said, "that he has violated his oath of office; the rules of the board and the law of the land. Can you say that this does not show his incompetency, his inefficiency and his absolute unfitness for an important office of Public trust? Should we not have his resignation at once? Mr. Bruce is guilty of administrative inefficiency through indisputable proof of lack of character. He is shown to be undependable, lacking in directness, candor, frankness and truthfulness. It also is established that he is lacking in backbone and manly insistence. It is needless to say that his usefulness is at an end. His moral effect upon the teachers and children has vanished. His powers to serve the community have waned. Every day he remains at the head of the schools, but serves to bring nearer their complete disintegration. Ruin and destruction can but follow and poor colored children can but be stinted in their larger growth and inclined towards ends destructive of the best interests of our fair land and special community. I recommend that Bruce be separated from official service in the Public Schools of the District of Columbia." (Page 784).

MR. BRUCE'S TESTIMONY

Senate Hearing No. 11, page 99.

Senator Harrison:—What about the stop order?

Mr. Bruce:—There were dark suspicions to say the least, which certainly justified the decisive action, and the moment I presented the matter to the superintendent he agreed with me, as he did in the first instance.

Senator Capper:—When was it you took up the matter with Superintendent Thurston?

Mr. Bruce:—The action of which I am now speaking was in October 1917.

Senator Capper:—How soon after that was the stop order issued?

Mr. Bruce:—Immediately. There was no question about it.

Senator Harrison:—That was eight months after you received those letters?

Mr. Bruce:—The action in the cases of those letters was taken by the president of the board.

Senator Harrison:—But those letters came to you on January 12 and 15, 1917, and you immediately turned them over to the superintendent and he took them up with the president.

Mr. Bruce:—You can readily see that the superintendent felt constrained to refer them to the president since the authority had been issued to Mr. Moens by the president. Throughout the matter the superintendent agreed with my position absolutely.

What report did the Congressional Committee make?

It recommended among other things the following:

(H. R. 9417, Sixty-sixth Congress, first session.)

A BILL To change the school system of the District of Columbia.

Be it enacted, etc., That the present school system of the District of Columbia be abolished and that in its place be established what is known as the Scharf modern system for urban public schools.

SEC. 2. That, accordingly, the functions of the school system of the District of Columbia be divided into three separate, distinct, and independent departments, namely, the pedagogical department, the business department, and the inspection department, each to be conducted under one head with full power, responsibility, and accountability.

SEC. 10. That the school board is hereby abolished. The heads of the three departments may, however, constitute an advisory council, but without any authority whatever of one member of this council over any other.

LETTER OF MR. THURSTON *re* THE BRUCE CASE:

June 30, 1920.

To the Board of Education of the District of Columbia,

Washington, D. C.

Ladies and Gentlemen:

At the last meeting of the Board of Education, replying to a verbal protest of a representative of the Parents' League, the President of the

Board of Education stated in substance as a basis for failure of the Board to act in the Bruce case that the Board could do nothing without the recommendation of the Superintendent of Schools. The direct impression conveyed was that failure to act was due to the Superintendent.

I desire to protest most positively against any such statement. Before the return of the President, Dr. Van Schaik, the Superintendent of schools was in conference with the preceding President of the Board with reference to the charges against Mr. Bruce and showed his entire readiness to act in accordance with the laws and rules of the Board of Education. When Dr. Van Schaik again became President this case was taken entirely away from the Superintendent. It was given to a committee of the Board to investigate. The committee held secret hearings from which it excluded the Superintendent, although the latter has a seat at the Board. Furthermore the committee did not call the Superintendent as witness although he is the best qualified person in the system to talk on certain matters in connection with Mr. Bruce. In addition the Superintendent was definitely refused the testimony in the case, although such testimony was necessary to a consideration of the recommendation because of the facts put before the Board Committee.

By this procedure, as clearly shown in the Senate Hearing, the Board of Education took the case of Mr. Bruce absolutely away from the Superintendent of Schools and must accept absolute and full responsibility for the continuation of Mr. Bruce in the service and for any failure to act in any way in his case. Under the procedure followed it violated the rights of the Superintendent of Schools. The Superintendent had no recourse but to consider himself entirely relieved of the matter until such time as the Board recognized his rights.

The Superintendent is of the opinion that the present status in the colored schools cannot be maintained without serious detriment to the schools. He regrets that the Board had made it impossible for him personally to act, by their action in taking over full control and responsibility of the case. He has stood ready for sometime to make the necessary recommendations to clear the situation, but the Board's own procedure has prevented such action.

Very respectfully,

E. L. THURSTON.
Superintendent of Schools.

An opinion of Mr. Bruce by a leading citizen, *re* the Cardoza case:

"In submitting the above case, Mr. Peyton, I am convinced I do the public of Washington a distinct service, since I feel sure the Board of Education cannot ignore the foregoing in the Bruce case, made up as it is of letters, etc., which prove beyond a doubt the untruthful character of the Assistant Superintendent; and that they cannot escape creating a vacancy. No one can apologize for the person involved, nor mitigate the

Delivered in the Friends' Meeting House, Manchester, England, Oct., 1839, by G. Thompson, with a preface by Wm. Lloyd Garrison.

Pawtucket, R. I. : W. & R. Adams, 1840 206pp

LECTURES OF GEORGE THOMPSON

With a full report of the discussion between Mr. Thompson and Mr. Borthwick, the Pro-Slavery Agent, held at the Royal Amphitheater, Liverpoos, England. Contains a brief history of Thompson's connection with the anti-slavery cause in England by Wm. Lloyd Garrison.

Boston: I. Knapp, 1836, 190pp.

A PETITION

Presented to the Commons House of Parliament, by George Thompson, for the Tower Hamlets.

London: E. Wilson, 1852, 12pp.

THE PLOT UNRAVELLED

Speech of George Thompson at a great meeting, in the Hanover Square rooms, Wednesday, December 21, 1846, developing theiniquitous proceedings of the Indian authorities against His Highness the Rajah of Sattara.

London: Ridgeway, 1847, 34p.

SPEECH OF GEORGE THOMPSON ON THE CORN LAW AND THE SUFFRAGE

At a meeting in Stevenson's Square, Manchester, England, Feb., 21, 1842, from the "Manchester Times" of February 26, 1842.

Manchester, England: Prentice & Catherall, printers, 1842,8p.

30-11-9

SUBSTANCE OF AN ADDRESS

To the ladies of Glasgow and its vicinity upon the present aspect of the great question of Negro Emancipation--delivered in Mr. Anderson's Chapel John Street, Glasgow, Scotland, Tuesday, March 5, 1833. Also, some account of the format on of the Glasgow Ladies' Anti-Slavery Association.

Glasgow: D. Robertson 1833, 42p.

THE SUBSTANCE OF A SPEECH

Delivered in the Wesleyan Met odist Chapel , Irwell Street, Selford, Manchester, England, Monday, August 13, 1832; a reply to Mr. Borthwick's statements on the subject of British Colonial Slavery.

London: J. Hatchard & Son, 1832, 28p.

PUBLIC SPIRIT AND MOBS (By George F. Simmons)

Two Sermons delivered at Springfield, Mass. , Sunday, February 23, 1851, after the Thompson riot. Relates to disturbances in pringfield occasioned by the presence of George Thompson, the English Abolitionist.

Boston: W. Crosby & H. P. Nichols, 1851

Springfield: Merriam, Chapine Co. 31pp.

ENGLAND NEEDS TO GO TO AMERICA

By Gerrit Smith. G. Smith to G. Thompson. Dated, Peterboro, January 25, 1862.

NARRATIVE OF THE LIFE OF MOSES GRANDY (late slave in the U. S. A.)

Boston: C. Johnson, 1844, 45p

Introduction signed by George Thompson

THE FREE CHURCH AND HER ACCUSERS (In the matter of American Slavery;

Being a letter to Mr. George Thompson from Cameron Andrws regarding George Thompsons appearance in Edinburg.

Edinburg: J. Johnstone, 1846, 35p

EDINBURG--TOWN COUNCIL

Review of the proceedings of a minority of the Town Council of Edinburg in presenting the Freedom of the city to Mr. George Thompson Being a report of the speeches delivered at a subsequent meeting of that body.

Edinburg: J. Johnstone, 1846, 14p.

THE FREE CHURCH AND HER ACCUSERS

In the matter of American Slavery; a letter to Mr. George Thompson, M. P. regarding his recent appearances in this sity--signed, A Free Churchman

Edinburg: J. Johnstone, 1846, 38p.

BIBLIOGRAPHY OF HAILEY'S AFRICAN SURVEY

SOUTH AFRICA

For convenience of reference, a bibliography of some of the principal contributions to the study of social anthropology in Africa is given below.

The journals published by learned societies have been mentioned in sect.

A number of governments finance journals which deal with subjects of local interest, including accounts of native, e. g. Nada, the Native Affairs Department Annual of Southern Rhodesia; Tanganyika Notes and Records; The Gold Coast Review; Bulletin du Comite d'Etudes Historiques et Scientifiques de l' Afrique Occidentale Francaise; the monthly journal Congo; and Ethonological Publications, a series issued by the Union Department of Native Affairs. Material is to be found in the reports of agricultural and health officers, and in the proceedings of committees appointed to consider land questions and labour conditions. The most valuable of the special reports made on the subject of land tenures, in the light which they cast on the social system are those relating to the Kikuyu in Kenya and the Yoruba in Negeria. Reference is made to such material in the appropriate chapters throughout this Survey.

31-6-1

South Africa

The South African Inter-University Committee for African Studies published a general review of the work done in South Africa in Bantu Studies, vol. viii, no. 3, 1934. It is responsible for the publications of The Bantu-Speaking Tribes of South Africa, 1937, edited by I. Schapera.

H. A. Junod, The Life of a South African Tribe, 1912; this description of the Tonga, both in South African and Portuguese territory, is the result

of a close investigation of certain aspects of culture, such as kinship, marriage customs, and magic.

H. Callaway, The Religious System of the Amazulu, 1870; most valuable of the older works on the Zulu.

M. M. Fuze, an African, Abantu abamnyama, lapa Cavela ngakona, 1922; a history of the Zulu in the vernacular.

S. T. Plaatje, an African, Sechuana Proverbs 1916; a collection of texts.

W. B. Rubusana, an African, Zemk' Inkomo, Magwalandina, 1906; a collection of Ngoni phrases and proverbs with notes on customs and history.

Z. D. Mangoaela, an African, Litholo tsa Marena a Basotho, 1921; a collection of phrases.

A. Sekese, an African, Mekhoa le Maele a Ba Sotho, 1907; a collection of laws and proverbs.

H. A. Stayt, The Bavenda, 1931.

J. H. Soga, an African, The Amaxosa: Life and Customs, 1932; the most recent work on the Southern Mgoni.

J. E. Casalis, Les Bassoutos, 1861; there is nothing more recent on the Basuto.

Mrs. A. W. Hoernle, "Social Organization of the Nama Hottentots of South West Africa," American Anthropologist, vol. xxvii, 1924, the most valuable account of the Namaqua.

H. Vedder, Die Bergdama, 1923.

E. Fischer, Die Rehobother Bastards und das Basdardierungsproblem beim Menschen, 1913.

H. Beemer, 'The Development of the Military Organization in Swaziland', Africa, vol. x, nos. 1 and 2, 1937.

I. Schapera, The Khoisan Peoples of South Africa: Bushmen and Hottentots, 1930, and E. J. Krige, The Social System of the Zulus, 1936; in these volumes

31-6-2

trained anthropologists have collated existing records.

I. Schapera, 'The Old Bantu Culture' and 'Present Day Life in the Native Reserves', in Western Civilization and the Natives of South Africa, 1934; articles on modern developments, especially among the Kxatla of Bechuanaland. Handbook of Tswana Law and Custom, 1938.

M. Hunter, Reaction to Conquest: Effects of Contact with Europeans on the Pondo of South Africa, 1936.

Southern Rhodesia

C. Bullock, The Mashona, 1928; deals in particular with the legal aspects of local customs; there has been no special inquiry by an anthropologist.

Northern Rhodesia

J. Moffat Thomson and W. G. Fairweather, Memorandum on the Tribal Areas in Northern Rhodesia, 1934; E. M. Lane Poole, The Native Tribes of the East Luangwa Province of Northern Rhodesia, 1934; these are official works published by the government; the latter is mainly historical.

E. W. Smith and A. M. Dale, The Ila-speaking Peoples of Northern Rhodesia, 1920; of high standard.

C. M. Doke, the Lambas of Northern Rhodesia, 1931.

A. I. Richards, 'Tribal Government in Transition', Supplement to the Journal of the Royal African Society, vol. xxxiv, no. cxxxvii, 1935; 'A Modern Movement of Witch-finders', Africa, vol. viii, no. 4, 1935; 'A Dietary Study in North-Eastern Rhodesia' (with E. M. Widdowson), Africa, vol, ix, no. 2, 1936.

Nyasaland.

A. G. O. Hodgson, 'Notes on the Angoni and Achewa of Dowa District', Journal of the Royal Anthropological Institute, vol lxiii, 1933.

T. Cullen Young, Notes on the Customs and Folklore of the Tumbuka-Kamanga Peoples, 1931; the most important work on Nyasaland.

31-6-3

Tanganyika.

There are numerous works in German on individual tribes, including O. Dempwolff, Die Sandawe, 1916; H. Claus, Die Wagogo, 1911; M. Merker, Die Masai, 1904; H. Rehse, Kiziba, Land und Leute, 1910; A. Eichhorn (Editor), Beitrage zur Kenntnis der Waschambaa, 1911-24; E. Nigmann, Die Wahehe, 1908; and a collection of texts by W. Blohm, published under the title Die Nyamwezi, 1931.

Das Eingeborenenrecht, 1929, is a study in 2 volumes, edited by B. Ankermann. It carried out a project, made some years before the War, for the study of native law. It is based on questionnaires circulated to missionaries and others in the former German Colonies in Africa and elsewhere.

B. Gutmann, Das Recht der Dschagga, 1928; this is one of the fullest studies so far published of any African culture; the fruit of long acquaintance with the Chaga as a missionary. Die Stammeslehren der Dschagga, 1932, also by Gutmann, is a collection of the formulae used at initiation ceremonies.

31-6-4

C. Dundas, Kilimanjaro and its People, 1924, writes in amplification of Gutmann's researches.

R. Thurnwald, Black and White in East Africa, 1936, is a survey of the process of culture contact among the principle tribes of Tanganyika. The results of the study by Mrs. Thurnwald on the position of women are summarized in one chapter. They have been published in full in German, Die schwarze Frau im Gestaltwandel Afrikas, 1935.

G. G. Brown and A. McD. B. Hutt, Anthropology in Action, 1935; an example of co-operation between an anthropologist and a government officer; refers to the Hehe tribe.

A. T. and G. M. Culwick, Ubena of the Ribers, 1935, is a valuable study by a District Officer and his wife.

Kenya

G. Lindblom, The Akamba in British East Africa, 1920.

C. W. Hobley, Ethonology of the A-Kamba, and other East African Tribes, 1910, and Bantu Beliefs and Magic, 1922; the latter refers to the Kikuyu. W. S. and K. Routledge, With A Prehistoric People, 1910; also deals with the Kikuyu.

A. C. Hollis, The Masai; Their Language and Folklore, 1905, and The Nandi: their Language and Folklore, 1909.

G. St. J. Orde Browne, The Vanishing Tribes of Kenya, 1925, deals with the minor tribes of the Kikuyu district.

W. M. H. Beech, The Suk, 1911.

J. A. Massam, The Cliff Dwellers of Kenya, 1927; refers to the Elgeyo tribe.

L. S. B. Leakey, 'Goats and Sheep in the Social Life of the Kikuyu', Journal of the Royal African Society, vol. xxxiii, no. cxxx, 1934, pp. 70-9.

31-6-51

Uganda

J. Roscoe, in The Baganda, 1911, made an extensive and valuable if not entirely systematic, collection of material on the Ganda people. The Bakitara or Banyoro, 1923, and The Banyankole, 1923, by the same author, are of less value (vide H. B. Thomas and R. Scott, Uganda, 1935, p. 85, note 1.).

J. H. Driberg, The Lango, 1923.

L. P. Mair, An African People in the Twentieth Century, 1933. These last two books follow modern methods of research.

Nigeria

C. K. Meek, A Sudanese Kingdom, 1931; is a study of the Jukun by a government anthropologist. His Law and Authority in a Nigerian Tribe, 1937, is an important work dealing with the Ibo. The same author's 2 volumes on Tribal Studies in Northern Nigeria, 1931, contain reports on upwards of fifty tribes,

which vary in completeness with the time that could be devoted to them. He also made a general survey of the peoples of the Northern Provinces in connexion with the 1921 census, The Northern Tribes of Nigeria, 1925, 2 volumes.

P. A. Talbot, another government anthropologist, has similarly covered the Southern provinces in The Peoples of Southern Nigeria, 1926, 2 volumes, Nigerian Fertility Cults, 1927, and other works.

The Tiv People, 1933, by R. C. Abraham, and The Tiv Tribe, 1933, by R. M. Downes, are based on reorganization reports by the authors and other officers.

Special interest attaches to the intelligence reports which formed the basis of the reorganization of the pagan areas in Northern Nigeria and in some of the South-Eastern districts. Some of the latter, prepared between 1930 and 1934, were confined to a summary investigation of social groupings and the distribution of judicial and executive functions (see M. Perham, Native Administration in Nigeria, 1937, p. 221, but others, conducted by officers who have had long experience of their districts, are very thorough.

31-6-6

J. R. Wilson-Haffenden, The Red Men of Nigeria, 1930; describes the nomad Fulani.

A. J. N. Tremearne, Tailed Head-Hunters of Nigeria, 1912; refers to the Hausa and other tribes.

S. F. Nadel, 'Witchcraft and Anti-Witchcraft in Nupe Society', Africa, vol. viii, no. 4, 1935, pp. 423-47; 'Nupe State and Community', Africa, vol. viii, no. 3, 1935, pp. 257-303; 'Gunnu; a Fertility Rite', Journal of the Royal Anthropological Institute, vol. lxvii, partl, 1937. Both the last article and a forthcoming book are based on recent research by a trained anthropologist.

C. Daryll Forde, 'Land and Labour in a Cross River Village, Southern Nigeria', Geographical Journal, vol. xc, no. 1, 1937; and 'Social Change in a West African Village Community', Man, January 1937, pp. 10-12; these are the result of modern

research into the legal systems and economic organization of a Southern Nigerian village.

S. Leith-Ross, 'Notes on the Osu system among the Ibo of Owerri Province', Africa, vol. x, no. 2, 1937; African Women: A Study of the Ibo of Nigeria, to be published in 1939, results of the studies of a Leverhulme Trust Fellow.

S. Johnson, an African, History of the Yorubas, 1921.

Gold Coast

C. C. Reindorf, an African, History of the Gold Coast, 1895.

J. M. Sarbah, an African, Fanti Customary Laws, 1897.

J. B. Danquah, an African, Akan Laws and Customs, 1928.

R. S. Rattray, government anthropologist, has published Ashanti, 1923, Religion and Art in Ashanti, 1927, Ashanti Law and Constitution, 1929, Tribes of the Ashanti Hinterland, 1932, Hausa Folk-lore, 1913.

31-6-7

A. W. Cardinall, also a government officer, The Natives of the Northern Territories of the Gold Coast, 1921.

M. and S. L. Fortes, 'Food in the Domestic Economy of the Tallensi', Africa, vol. ix, no. 2, 1936, pp. 237-76; M. Fortes, 'Culture Contact as a Dynamic Process an Investigation in the Northern Territories of the Gold Coast', Africa, vol. ix, no. 1, 1936, pp. 24-55. These articles give the results of recent research by a trained inquirer.

M. J. Field, Religion and medicine of the Ga People, 1937.

Togoland

J. Spieth, Ewe-Stamme, 1906; a collection of texts on native institutions.

Liberia

D. Westermann, Die Kpelle, ein Negerstamm in Liberia, 1921; a study of a Liberian tribe.

Sierra Leone

S. Hofstra, 'Personality and Differentiation in the Political Life of the Mendi', Africa, vol. x, no. 4, 1937, pp. 436-57. The result of recent research by a trained inquirer.

French West Africa

M. Delafosse, Haut-Senegal-Niger, 1912, is based on the results of an inquiry carried out in 1909 with a view to the preparation of a general code of civil law for the use of the courts dealing with native cases. In the French colonies attention has been directed principally to legal studies of this nature. In 1905 the Governor-General issued a circular calling on officials to study native customs with a view to the compilation of a code of civil law. A study of the Islamic tribes was set on foot immediately after the war.

J. Brevie, lately Governor-General, Circulaires sur la politique et l' administration indigenes, 1931, p. 61, mentions a number of other studies, general or devoted to special branches of custom, but describes them as 'fragmentary'. He urged a more energetic application to the subject. As a result of the stimulus given by him. studies have appeared in the local Bulletin du Comite d'Etudes Historiques et Scientifiques de l' A. O. F.

L. Geismar, Recueil des coutumes civiles des races du Senegal, 1933, is the first completed study of the customary law of a colony.

H. Labouret, French Director of the International Institute of African Languages and Cultures, 'Les Tribus du Rameau Lovi', Travaux et memoires de l'Institue d'Ethnologie, no. xv, 1931, a study of the Lovi based on the observations of eleven years spent among them; Les Manding et leur langue, 1934, a manual of information and guidance for officials; Les Bobo, 1924, two volumes of texts on the Bobo of the Upper Volta, dealing with social life and religion, collected by Dr. Cremer and edited by M. Labouret.

J. R. Rodd, People of the Veil, 1926; describes the Tuareg.

L. Tauxier, Le Noir de Bondoukou, 1921, 2 volumes; Negres Gouro et Gagou, 1924, a study of the Ivory Coast tribes.

C. Monteil, Les Khassonke, 1915, and Une Cite soudanaise, Djenne, 1932.

J. H. Saint-Pere, Les Sarakolles du Guidimakhe, 1925.

A. Le Herisse, Ancien royaume du Dahomey, 1911, the principal work on Dahomey.

Dim Delobsom, L'Empire du Mogho-Naba, 1933; a volume on the Mossi by an African.

M. J. Herskovits has recently carried out an investigation in Dahomey, and has published some preliminary material; 'Outline of Dahomean Religious Belief', Memoirs of the American Anthropological Association, no. 41, 1933; 'A Note on "Woman Marriage" in Dahomey', Africa, vol. x, no. 3, 1937, pp. 335-41.

31-6-9

French Equatorial Africa.

General surveys have been made, but there is as yet no monograph devoted to a single tribe.

Cameroons.

E. Pechuel-Loesche, Volkskunde von Loango, 1907.

G. Tessmann, Die Pangwe, 1913; and Die Bafia und die Kultur der Mittelkamerun Bantu, 1934.

Belgian Congo.

Particular attention has been given, above all by the judiciary, to the study of native law. The Institut Royal Colonial Belge offers prizes annually for essays on matters of colonial interest, and the questions set in the anthropological section usually deal with some aspect of customary law. Subjects for 1938, were the rules of succession, the system of customary tributes, and the influence of Belgian colonization upon their payment (Congo, June 1936, pp. 83-4).

A. Sohier, Procurator-General at Elizabethville, Pratique des juridictions indignes, 1932; a pamphlet for the guidance of officials presiding over native courst. He edits a review, Bulletin des juridictions indigenes et du droit coutumier.

Two commaissions, appointed in 1924 and 1930 to inquire into the effect on native life of the migration of labour, brought to light data which are valuable as a preliminary to intensive research.

The inquiries of the Foreami medical organization have made a contribution of interest on the demographic aspect of certain customs.

C. G. F. F. Delhaise, Les Wariga, 1909; Les Mayombe, 1907; J. Van den Plas, Les Kuku, 1910; L. R. P. Colle, Les Baluba, 1913. These six studies follow a uniform plan, based on a questionnaire issued by the Societe Belge de Sociologie.

31-6-10

J. Van Wing, Etudes Bakongo, 1921.

J. H. Weeks, Among Congo Cannibals, 1913; Among the Primitive Bakongo, 1914.

E. Torday and T. A. Joyce, Les Bushongo, 1910.

E. Verhulpen, Baluba et Balubaises du Katanga, 1936.

G. Van der Kerken, Societes Bantoues du Congo Belge, 1920 points out instances in which policy has failed to make due allowance for African custom.

P. Schebesta, Bambuti, Die Zwerge vom Kongo, 1932; Der Urwald ruft wieder, 1935; R. P. Trilles, Pygmees de la foret equatoriale, 1932. The three last-mentioned books refer to the forest pygmy tribes.

Ruanda-Urundi.

H. Meyer, Die Barundi, 1916.

J. Czechanowski, Forschungen im Nil-Kongo Zwischengebiet, 5 volumes, 1917-27.

N. de Cleene, 'Les Chefs indigenes au Mayombe' Africa, vol. viii, no. 1, 1935; pp. 63-75; 'La Famille dans l'organisation sociale du Mayombe', Africa, vol. x, no. 1, 1937, pp. 1-15.

Portuguese East Africa.

E. D. Earthy, Valenge Women, 1933.

Angola.

W. D. Hambly, The Ovimbundu of Angola, 1924; deals mainly with material culture.

Comparative Studies.

There are not many studies which treat the same aspect of African life as it appears in different tribes.

W. C. Willoughby, The Soul of the Bantu, 1928; Nature Worship and Taboo, 1932; these books deal with religious beliefs and rites in South and East Africa.

E. E. Evans Pritchard, Witchcraft, Oracles and Magic among the Azande, 1937; refers to the Anglo-Egyptian Sudan, but deals with a sociological phenomenon of importance throughout Africa.

Africa, vol. viii, no. 4, 1935, was devoted to the subject of witchcraft. It included a number of articles referring to individual tribes, which have been noted above; also articles on 'Witchcraft', by E. E. Evans Pritchard, 'Witchcraft and British Colonial Law', by G. St. J. Orde Browne, 'Witchcraft and Colonial Legislation', by C. Clifton Roberts, and 'Ethical and Political Aspects of African Witchcraft', by F. Melland.

The problem of culture contacts has similarly received attention in Africa, on a scale which embraces many tribes: A. I. Richards, 'Anthropological Problems in North Eastern Rhodesia', vol. v, no. 2, 1932, pp. 121-45, and 'The Village Census in the Study of Culture Contact', vol. viii, no. 1, 1935, pp. 20-33; M. Hunter, 'Methods of Study of Culture Contact' vol. vii, no1

no. 3, 1934, pp. 335-50; L. P. Mair, 'The Study of Culture Contact as a Practical Problem', vol. vii, no. 4, 1934; pp. 415-22; A. T. and G. M. Culwick, 'Culture Contact on the Fringe of Civilization', vol. viii, no. 2, 1935, pp. 163-70; I. Schapera, 'Field Methods in the Study of Modern Culture Contacts', vol. viii, no. 3, 1935, pp. 315-28; M. Fortes, 'Culture Contact as a Dynamic Process', vol. ix, no. 1, 1936, pp. 24-55; G. Wagner, 'The Study of Culture Contact and the Determination of Policy', vol. ix, no. 3, 1936, pp. 317-31.

E. W. Smith, The Golden Stool, 1926; a general survey of the results of European contact on native societies.

D. Westermann, German Director of the International Institute of African Languages and Cultures, Africa and Christianity, 1937, and the African To-day, 1934.

31-6-12

In 1930 the co-operation of government officers, missions, and certain European residents was sought by a Committee on the Human Geography of Inter-Tropical Africa constituted by the British Association for the Advancement of Science. It expressed the view that in anthropological studies 'the relationship of people to country is almost universally missing' (The Human Geography of Inter-Tropical Africa, 1930), and called attention to the need for showing how the environmental factors of climate, soil, and the like, condition the lives of African societies. A list of nineteen questions was circulated to governments. A number of replies was received; the accounts of the Mlanje District of Nyasaland by L. H. L. Foster, and the Kasulu District of Tanganyika by E. A. Leakey and N. V. Rounce, were published in Geography in 1932 and 1933 respectively. The Government of Northern Rhodesia invited all its district officers to answer the questionnaire, and the whole of this territory has been covered by a series of thirty-three reports. Their results were summarized by Professor A. G. Ogilvie, the Chairman of the Human Geography Committee, in his presidential address to the Geography Section of the British Association in September 1934. Studies based on the questionnaire were made

by S. J. K. Baker, of the Geography Department of the University of Liverpool, on the Ankole District of Uganda and the South Nyeri District of Kenya, in the course of a four months' tour of East Africa. Such surveys are comparable with the survey work of the early anthropologist, but the method of circulating questionnaires to observers who may not have given much previous thought to the subject of inquiry, and lack the context of knowledge in which it was drafted, has serious disadvantages.

31-6-13

BIBLIOGRAPHY

As has been said, any person with mind made up in regard to miscegenation can find a strong body of literature to support his belief whatever that beliefmay be. If one believes that miscegenation is wrong and harmful, onemay base one's conclusions on these books:

Gobineau, "Essai sur l'Inegalité des races humaines", 1853-1855. (The first part of this wastranslated into English in 1915.)

H. S. Chamberlain, "Grundlagen des Neunzehnten Jarhunderts", 1890, 1891. (This was translated into English as "The Foundations of the 19th Century".)

M. Grant, "The Passing of A Great Race", 1916.

G. Gould, "America, A Family Matter", 1922.

McDougal, "The Group Mind".

L. Stoddard, "The Rising Tide of Color".

Liberal anthropologists and students of race can be studied in the following books: A. C. Haddon, "The Races of Man", 1925; G. Sergi, "The Mediterranean Race", 1901; J. Deniker, "The Races of Man", 1904; F. Ratzel, "The History of Mankind", translated by Butler, 1904; E. Fischer, "Die Reheboth Bastards", etc., 1913.

C. G. Seligman, article on Anthropology in the Encyclopedia Britannica, 14th Edition.

F. H. Hankins, "Racial Basis of Civilization", 1931.

E. P. Reuter, "The Mulatto in the United States", 1918; "Population Problems", 1923, Chapter 18; "The American Race Problem", 1927, Chapter 6.

E. A. Hooten, "Up from the Ape", 1931, Part V.

C. B. Davenport, "Hereditary of Skin Color in Negro-White Crosses", 1913.

"Negro Population in the United States, 1790-1915", 1918, Chapter II.

M.S. Viteles, "The Mental Status of the Negro", The Annals, Volume 140, November, 1928.

The following books will be deemed by some to be unusually favorable to the Negro race, and backward races in general.

Day, Carolyn Bond, "A Study of Some Negro-White Families in the United States", 1932.

Spiller, G., Ed., "Inter-Racial Problems", containing:

Seal, B., "Meaning of Race, Tribe, Nation", p. 1.
Von Luschan, F., "Anthropological View of Race", p. 13.
Fouillée, "Race from the Sociological Standpoint", p. 24.
Spiller, G., "The Problem of Race Equality", p. 29.
Finch, E., "Effect of Racial Miscegenation", p. 108.
De Lacerda, J. B., "The Metis or Half-Breeds of Brazil", p. 377.

Herskovits, M. J., "The American Negro", 1928; "Anthropometry of the American Negro", 1930.

Hertz, F., "Rasse und Cultur", 3rd Edition, 1925. Translated into English by Levetus and Entz, 1928.

Finot, J., "Race Prejudice". Translated by Wade-Evans, 1907.

Boas, F., "The Mind of Primitive Men", 1911.

Du Bois, W. E. B., "Health and Physique of the Negro-American", Atlanta University Studies, Number 11, 1906.

W. Montague Cobb, "The Physical Constitution of the American Negro".

Notes on Negro Literature

1. The literature of whites about Negroes and influenced by Negroes.
   Joseph Sewell wrote in 1700, a pamphlet on the selling of Joseph.
   Anthony Benezet wrote an account of Guinea and notes on the Slave Trade
   1771 - 1880.

2. Then came the group of what we may call the anti-slavery writers.
   F. A. Kimble, Lydia Maria Child, Ralph Waldo Emerson, 1803 - 1882,
   John G. Whittier, 1807 - 1892, James Russell Lowell, 1819 - 1891, Walt
   Whitman, 1819 - 1892, Julia Ward Howe, 1819 - 1910, Wendell Phillips,
   1811 - 1884, Charles Somner -------, W. L. Garrison, ------ Harriet
   Beecher Stowe, 1811 - 1896, John C. Calhoun---------.

3. Then came the writers of the Reconstruction Period.
   G. W. Cable, Thomas Nelson, Page, Tom Dixon, Howells.

4. In the 20th Century the subject has been consistently avoided by white
   writers.
   Henry W. Grady, Stephen Graham, A. B. Hart, E. G. Murphy, U. B. Ph
   H. J. Seligman, R. T. Kerlin, Detweiler, A. H. Stone, Stribling

~~also overlapped the last eight years of realism, especially in the strict historical writing of Woodson and the pessimism of Grimké.~~

The last years, from 1920 to 1928, have seen a peculiar, almost fourfold alignment. First, there has been the perpendicular division, between a novelist like Jessie Fauset, writing of Negro aristocracy, and a novelist like Claude McKay, writing of Harlem prostitutes. But in addition to this, there is a cross division, between those who still see a vision of Negro possibility and success in America and those who are striving more simply after art for art's sake. Rudolph Fisher and Eric Walrond represent particularly this movement among realists; and Charles S. Johnson and Arthur Fauset among the idealists. Langston Hughes stands perhaps on the border line, while Willis Richardson, playwright, and E. Franklin Frazier, essayist, are realists who fight grimly still for the Negro's ideals. Idealists who still have a vision of Negro triumph and stand distinctly against defeatists are Countee Cullen, Arna Bontemps, Lewis Alexander—all poets—and Walter White, the novelist. Jean Toomer and Helene Johnson again stand on the sort of border line between defeatism and Negro ideals on the idealistic side.

36-2-29

Turning to literature, we think first of the appeal of the color problems to white writers of American literature. It is not too much to say that without the Negro, white American literature would have lost its main theme. The early colonial writers wrote about him and the masters of the nineteenth century, and in recent literature both North and South, the Negro still holds a foremost place. Negro folk lore is the only folk lore save the Indian indigenous to American soil.

Even more significant, however, is the effect of the racial situation on the literature written by Negroes. We may tentatively distinguish four waves of this movement from the end of the 18th Century, to the days of Reconstruction was a period of rather diffident groping; from 1875 to the World War, there was a surge of

THE AFRICAN DEVELOPMENT COMPANY

March 1, 1902
Published announcement

Afuca

The African Development Company.

It is proposed to form a company of the above name and style to be incorporated with a capital stock of Fifty thousand Dollars, divided into ten thousand shares of a par value of Five Dollars each.

The purposes of the said company shall be as follows: To acquire lands in East Central Africa to be used for the cultivation of coffee and other products; to establish and maintain the means for transport by land, river, lakes and ocean; to establish and maintain trading stations, and to develop the natural resources of the lands acquired.

The promoters having already in possession contracts with certain native chiefs for valuable concessions of land, it is proposed:—

That a fund of at least Two Thousand Dollars be guaranteed by twenty persons, that is to say, each guarantor to subscribe one hundred dollars, to be used in promoting the enterprise in the United States.

That each of the guarantors be assigned one hundred shares of the capital stock, fully paid, at twenty per cent. of its par value.

That four thousand of said shares be placed on the market for sale to the public.

That four thousand of said shares be retained in the treasury, for which the said guarantors shall have the first right to subscribe.

T. J. Minton, Chairman,
W. E. B. DuBois, Secretary,
H. T. Kealing, Treasurer,
} Committee.

Office: Room 23, No. 1200 Chestnut St.,
Philadelphia, Pa.

March 1, 1902.

I hereby subscribe the sum of One Hundred Dollars to the Guarantee Fund of the African Development Company, *fifty per cent. of said sum to be paid within thirty days, twenty-five per cent. within ..... days, and the remaining twenty-five per cent. within ..... days after said fund shall have been fully subscribed. One hundred shares of the capital stock of said company, full paid, are to be delivered to me on payment of One Hundred Dollars as above.*

CREDO

Broadside, published by Ed. L. Simon and Company, 1904

CREDO

BY W. E. BURGHARDT DuBOIS

I BELIEVE in God who made of one blood all races that dwell on earth. I believe that all men, black and brown and white, are brothers, varying through Time and Opportunity, in form and gift and feature, but differing in no essential particular, and alike in soul and in the possibility of infinite development

Especially do I believe in the Negro Race; in the beauty of its genius, the sweetness of its soul, and its strength in that meekness which shall yet inherit this turbulent earth

I believe in pride of race and lineage and self; in pride of self so deep as to scorn injustice to other selves; in pride of lineage so great as to despise no man's father; in pride of race so chivalrous as neither to offer bastardy to the weak nor beg wedlock of the strong, knowing that men may be brothers in Christ, even though they be not brothers-in-law

I believe in Service—humble reverent service, from the blackening of boots to the whitening of souls; for Work is Heaven, Idleness Hell, and Wage is the "Well done!" of the Master who summoned all them that labor and are heavy laden, making no distinction between the black sweating cotton-hands of Georgia and the First Families of Virginia, since all distinction not based on deed is devilish and not divine

I believe in the Devil and his angels, who wantonly work to narrow the opportunity of struggling human beings, especially if they be black; who spit in the faces of the fallen, strike them that cannot strike again, believe the worst and work to prove it, hating the image which their Maker stamped on a brother's soul

I believe in the Prince of Peace. I believe that War is Murder. I believe that armies and navies are at bottom the tinsel and braggadocia of oppression and wrong; and I believe that the wicked conquest of weaker and darker nations by nations whiter and stronger but foreshadows the death of that strength

I believe in Liberty for all men; the space to stretch their arms and their souls; the right to breathe and the right to vote, the freedom to choose their friends, enjoy the sunshine and ride on the railroads, uncursed by color; thinking, dreaming, working as they will in a kingdom of God and love

I believe in the training of children, black even as white; the leading out of little souls into the green pastures and beside the still waters, not for pelf or peace, but for Life lit by some large vision of beauty and goodness and truth; lest we forget, and the sons of the fathers, like Esau, for mere meat barter their birthright in a mighty nation

Finally, I believe in Patience—patience with the weakness of the Weak and the strength of the Strong, the prejudice of the Ignorant and the ignorance of the Blind; patience with the tardy triumph of Joy and the mad chastening of Sorrow—patience with God

RACE RELATIONS IN THE UNITED STATES: AN APPEAL TO ENGLAND AND EUROPE

New York
October 26, 1910
Leaflet

Race Relations in the United

The Negro's Intolerable Condition pointed out by Professor Du Bois and other Eminent Afro-Americans.

Dr. Washington's Optimistic Utterances Repudiated

AN APPEAL TO ENGLAND AND EUROPE

Headquarters—NATIONAL NEGRO COMMITTEE,
20, Vesey Street, New York, U.S.A.

October 26th, 1910.

To the People of Great Britain and Europe—

The undersigned Negro-Americans have heard, with great regret, the recent attempt to assure England and Europe that their condition in America is satisfactory. They sincerely wish that such were the case, but it becomes their plain duty to say that if Mr. Booker T. Washington, or any other person, is giving the impression abroad that the Negro problem in America is in process of satisfactory solution, he is giving an impression which is not true.

We say this without personal bitterness toward Mr. Washington. He is a distinguished American and has a perfect right to his opinions. But we are compelled to point out that Mr. Washington's large financial responsibilities have made him dependent on the rich charitable public and that, for this reason, he has for years been compelled to tell, not the whole truth, but that part of it which certain powerful interests in America wish to appear as the whole truth.

In flat contradiction, however, to the pleasant pictures thus pointed out, let us not forget that the consensus of opinion among eminent European scholars who know the race problem in America, from De Tocqueville down to Von Halle, De Laveleys, Archer and Johnston, is that it forms the gravest of American problems.

We Black men who live and suffer under present conditions, and who have no reason, and refuse to accept reasons, for silence, can substantiate this unanimous testimony.

Our people were emancipated in a whirl of passion, and then left naked to the mercies of their enraged and impoverished ex-masters. As our sole means of defence we were given the ballot, and we used it so as to secure the real fruits of the War. Without it we would have returned to slavery; with it we struggled toward freedom. No sooner, however, had we rid ourselves of nearly two-thirds of our illiteracy, and accumulated $600,000,000 worth of property in a generation, than this ballot, which

gly necessary to the defence of our civil and property rights, y force and fraud.

nt States where the bulk of the Negroes live, Black men of property raining can be, and usually are, by law denied the ballot, while the White man votes. This attempt to put the personal and property rights of the Blacks at the absolute political mercy of the worst of the Whites is ch day.

with this has gone a systematic attempt to curtail the education of the . Under a widely advertised system of "universal" education, not one Black ree to-day has in the United States a chance to learn to read and write. rtion of school funds due to Black children are often spent on Whites, and n on private charity to support education, which is a public duty, has become intolerable.

every walk of life we meet discrimination based solely on race and colour, continually and persistently misrepresented to the world as the natural difference due condition.

We are, for instance, usually forced to live in the worst quarters, and our consequent death-rate is noted as a race trait, and reason for further discrimination. When we seek to buy property in better quarters we are sometimes in danger of mob violence, or, as now in Baltimore, of actual legislation to prevent.

We are forced to take lower wages for equal work, and our standard of living is then criticised. Fully half the labour unions refuse us admittance, and then claim that as "scabs" we lower the price of labour.

A persistent caste proscription seeks to force us and confine us to menial occupations where the conditions of work are worst.

Our women in the South are without protection in law and custom, and are then derided as lewd. A widespread system of deliberate public insult is customary, which makes it difficult, if not impossible, to secure decent accommodation in hotels, railway trains, restaurants and theatres, and even in the Christian Church we are in most cases given to understand that we are unwelcome unless segregated.

Worse than all this is the wilful miscarriage of justice in the courts. Not only have 3,500 Black men been lynched publicly by mobs in the last twenty-five years without semblance or pretence of trial, but regularly every day throughout the South the machinery of the courts is used, not to prevent crime and correct the wayward among Negroes, but to wreak public dislike and vengeance, and to raise public funds. This dealing in crime as a means of public revenue is a system well-nigh universal in the South, and while its glaring brutality through private lease has been checked, the underlying principle is still unchanged.

Everywhere in the United States the old democratic doctrine of recognising fitness wherever it occurs is losing ground before a reactionary policy of denying preferment in political or industrial life to competent men if they have a trace of Negro blood, and of using the weapons of public insult and humiliation to keep such men down. It is to-day a universal demand in the South that on all occasions social courtesies shall be denied any person of known Negro descent, even to the extent of refusing to apply the titles of "Mr.," "Mrs.," and "Miss."

Against this dominant tendency strong and brave American
are fighting, but they need, and need sadly, the moral support
Europe in this crusade for the recognition of manhood, despite adve
of race, and it is like a blow in the face to have one, who himself su
and humiliation in America, give the impression that all is well. It is o
optimistic, self-forgetful and forgiving, but it is quite a different thing, c
unconsciously, to misrepresent the truth.

A HALF CENTURY OF FREEDOM

1913
Draft manuscript

1913

A Half Century of Freedom.

In 1863 there were about 5,000,000 persons of Negro descent in the United States. Of these 4,000,000 and more were just being released from slavery. These slaves could be bought and sold, could move from place to place only with permission, were forbidden to learn to read or write, legally could never hold property or marry. 90% were totally illiterate and only one adult in six was a nominal Christian. Until 1863 the total Negro population had been steadily increasing and the South was passing laws to enslave free Negroes. The three-quarters of a million of free Negroes had been equally divided between the North and the South. Those in the South were a wretched, broken-spirited lot for the most part and slaves in all but name. Here and there in cities there were a few among them who were prosperous mechanics and property holders to a small extent. The 250,000 Negroes of the North were the leaven of the whole lump and had been making for nearly a century a desperate struggle for survival. They aided in the anti-slavery movement, had a few newspapers, and had produced leaders like Frederick Douglass and Harriet Tubman. They had planned and carried through a systematic migration to Canada where several prosperous settlements sprang up. They started schools in a number of cities and founded the catering business in Philadelphia. They had held several general conventions appealing for justice. For the most part, these appeals fell on deaf ears, although Garrison, Sumner, Phillips, Harriet Beecher Stowe and John Brown had come to their aid.

38-2-177

Nevertheless, up to the time of the opening of the War, the Negroes in the North were forced to live in the worst slums and alleys,

were either excluded entirely from the public schools or furnished cheap and poor substitutes, and in three hundred years only twenty colored men had received a college education. Except in parts of New England and partially in New York, the Negro was disfranchised and largely without civil rights. Indeed, the Fugitive Slave Law of 1850 made personal freedom difficult, and in 1857 the Supreme Court had declared that Negroes were not citizens and that they had always been considered as having "no rights which the white man was bound to respect."

Then came the War which was not started with the idea of liberating the slaves but which soon showed the North that freedom for the Negro was not only a logical conclusion of the War but the only possible physical conclusion. Two hundred thousand black men were drafted in the army and the whole slave support to the Confederacy was threatened with withdrawal. Insurrection was in the air and the emancipation of the slaves saved the Union. Such, then, was the situation in 1863.

38-2-178

Fifty years later, in 1913, there are in the United States ten and a quarter millions persons of Negro descent, an increase of 105%. Legal slavery has been abolished leaving, however, vestiges in debt peonage and the convict lease system. The freedmen and their sons have -

(1) Earned a living as free men.
(2) Shared the responsibilities of men.
(3) Developed the of their race.
(4) Aspired to spiritual self expression.

The Negro was freed as a penniless, landless, naked, ignorant laborer. There were very few that owned property in the South; there were a larger number that owned property in the North; but 99% of the race in the South were field hands, servants of the lowest class. Today 50% are farm laborers and servants and over one-half of these are working as efficient modern workmen under wage contract. Above these,

to use the figures of 1890, there are 750,000 farmers, 70,000 teamsters, 57,000 railway hands, 36,000 miners, 33,000 saw mill employees, 28,000 porters, 21,000 teachers, 21,000 carpenters, 20,000 barbers, 20,000 nurses, 15,000 clergymen, 14,000 masons, 14,000 dressmakers and seamstresses, 10,000 engineers and firemen, 2,500 physicians, and above all 200,000 mistresses of independent homes and 3,000,000 children in school. Fifty years ago the overwhelming mass of these people were not only penniless but were themselves assessed as real estate.

By 1875, the Negroes probably had gotten hold of something between 2,000,000 and 4,000,000 acres of land through their bounties as soldiers and the low price of land on account of the War. By 1880 this was increased to about 6,000,000 acres, in 1890 to about 8,000,000 acres, and about 12,000,000 acres in 1900. In 1910 this had increased to over 18,000,000 acres.

38-2-179

In 1890 Negroes owned 120,738 farms; in 1900 they owned 187,799; in 1910, they owned about 2,200,000. Thus, over 25% of the Negro farmers owned their own farms, and the increase of farm owners between 1890 and 1910 has been over 83%. The value of land and buildings owned by Negroes in the South was in 1910 $272,992,238 This is an increase of nearly 90% in a single decade. This does not include land owned by Negro farmers but rented out.

If we include that and if the increase in the whole United States has been as great as in the South, which seems fair to suppose, then, the total farm property of Negroes in 1910 is $437,000,000 as compared with $230,000,000 in 1900. On a basis of the value of farm property in 1900, a committee of the American Economic Association estimated the value of Negro wealth in the United States at $300,000,000. On the same basis we can estimate the total Negro wealth today at $570,000,000.

THE AMENIA CONFERENCE

Troutbeck Leaflets Number Eight, Amenia, New York, 1925
Pamphlet and two draft manuscripts

Bot 32-3399

THE AMENIA CONFERENCE

IT was in August, 1916, and the place was Troutbeck, near Amenia. I had no sooner seen the place than I knew it was mine. It was just a long, southerly extension of my own Berkshire Hills. There was the same slow, rocky uplift of land, the nestle of lake and the sturdy murmur of brooks and brown rivers. Afar off were blue and mysterious mountains, and there was a road that rose and dipped and wound and wandered and went on and on past farm and town to the great hard world beyond.

There was the village, small, important, complete, with shadows of old homes; with its broad street that was at once thoroughfare, entrance, and exit. There were the people who had always lived there and their fathers before them, and the people merely passing.

Out from the town lay the farm. I saw its great trees bending over the running brook with a sense of utter friendship and intimate memory, though in truth I had never seen it before. And then one could trudge from the more formal home and lawn, by lane and fence with rise and fall of land, until one came to the lake. The lake, dark and still, lay in the

palm of a great, calm hand. The shores rose slowly on either side and had a certain sense of loneliness and calm beauty.

It was in 1916. There was war in Europe but a war far, far away. I had discussed it from time to time with a calm detachment. I had said: "A New Year, Comrades! Come, let us sit here high in the Hills of Life and take counsel one with another. How goes the battle there below, down where dark waters foam, and dun dust fills the nostrils, and the hurry and sweat of human kind is everywhere? Evil, evil, yes, I know. Yonder is murder: so thick is the air with blood and groans that our pulses no longer quicken, our eyes and ears are full. Here, to homewards, is breathless gain and gambling and the steady, unchecked, almost unnoticed growth of human hate."

Our own battle in America, that war of colors which we who are black always sense as the principal thing in life, was forming in certain definite lines. Booker Washington was dead. He had died but the year before, 1915. I remember the morning that I heard of it. I knew that it ended an era and I wrote: "The death of Mr. Washington marks an epoch in the history of America. He was the greatest Negro leader since Frederick Douglass, and the most distinguished man, white or black, who has come out of the South since the Civil War. His fame was international and his influence far-reaching. Of

the good that he accomplished there can be no doubt: he directed the attention of the Negro race in America to the pressing necessity of economic development; he emphasized technical education, and he did much to pave the way for an understanding between the white and darker races. On the other hand there can be no doubt of Mr. Washington's mistakes and shortcomings: he never adequately grasped the growing bond of politics and industry; he did not understand the deeper foundations of human training, and his basis of better understanding between white and black was founded on caste.

32.25.64

"We may then generously and with deep earnestness lay on the grave of Booker T. Washington testimony of our thankfulness for his undoubted help in the accumulation of Negro land and property, his establishment of Tuskegee and spreading of industrial education, and his compelling of the white South to think at least of the Negro as a possible man. On the other hand, in stern justice, we must lay on the soul of this man a heavy responsibility for the consummation of Negro disfranchisement, the decline of the Negro college and public school, and the firmer establishment of color caste in this land.

"What is done is done. This is no fit time for recrimination or complaint. Gravely and with bowed head let us receive what this great figure gave of good, silently rejecting all else. Firmly and unfalter-

ingly let the Negro race in America, in bleeding Hayti, and throughout the world, close ranks and march steadily on, determined as never before to work and save and endure, but never to swerve from their great goal: the right to vote, the right to know, and the right to stand as men among men throughout the world."

Already we had formed the National Association for the Advancement of Colored People, a precarious thing without money, with some influential members, but we were never quite sure whether their influence would stay with us if we "fought" for Negro rights. We started in tiny offices at 20 Vesey Street and then took larger ones at 26. Finally on the eve of the undreamed-of World War we had moved to 70 Fifth Avenue.

There have been many versions as to how this organization was born, all of them true and yet not the full truth. In a sense William English Walling founded it a hundred years after Lincoln's birth, because of his indignation at a lynching in Lincoln's birthplace. But in reality the thing was born long years before when, under the roar of Niagara Falls, there was formed the Niagara Movement by twenty-nine colored men. How they screamed at us and threatened! The *Outlook*, then at the zenith of its power, declared that we were ashamed of our race and jealous of Mr. Washington. The colored press unanimously condemned us and listed our failures.

Box 32, 32-33, 180

We were told that we were fighting the stars in their courses. Yet from that beginning of the Niagara Movement in 1905 down to the formation of the National Association for the Advancement of Colored People in 1909, we were welding the weapons, breasting the blows, stating the ideals, and preparing the membership for the larger, stronger organization. Seven of the twenty-nine went on the first Board of Directors of the N. A. A. C. P., and the rest became leading members.

There came six years of work. It is, perhaps, hard to say definitely just what we accomplished in these six years. It was perhaps a matter of spirit and getting ready, and yet we established the *Crisis* magazine and had it by 1916 almost self-supporting. We had branches of our organization throughout the country. We had begun to move upon the courts with test cases. We had held mass meetings through the country. We had stirred up Congress and we had attacked lynching.

We said in the Sixth Annual Report: "The National Association for the Advancement of Colored People was first called into being on the one hundredth anniversary of the birth of Abraham Lincoln. It conceives its mission to be the completion of the work which the great emancipator began. It proposes to make a group of 10,000,000 Americans free from the lingering shackles of past slavery: physically free from peonage, mentally free from ignorance, polit-

ically free from disfranchisement, and socially free from insult.

"We are impelled to recognize the pressing necessity of such a movement when we consider these facts:

"The lynching of 2,812 prisoners without trial in the last thirty years.

"The thousands of unaccused black folk who have in these years been done to death.

"The widespread use of crime and alleged crime as a source of public revenue.

"The defenseless position of colored women, continually threatened by laws to make their bodies indefensible and their children illegitimate.

"The total disfranchisement of three-fourths of the black voters.

"The new attack on property rights.

"The widespread and growing discrimination in the simplest matters of public decency and accommodation.

"All these things indicate not simply the suffering of a people, but greater than that, they show the impotence of American democracy. And so the National Association for the Advancement of Colored People appeals to the nation to accept the clear and simple settlement of the Negro problem, which consists in treating colored men as you would like to be treated if you were colored."

Our six years of organized work did not by

Box 32, 32-33, 101

any means satisfy us. We wanted a bigger, stronger organization, and especially we wanted to get rid of the all too true statement that we were asking for things that colored people did not want or at least did not want with any unity. The wall between the Washington camp and those who had opposed his policies was still there; and it occurred to J. E. Spingarn and his friends that up in the peace and quiet of Amenia and around this beautiful lake, colored men and women of all shades of opinion might sit down and rest and talk and agree on many things if not on all.

The conference, as Mr. Spingarn conceived it, was to be "under the auspices of the N. A. A. C. P." but wholly independent of it, and the invitations definitely said this. They were issued by Mr. Spingarn personally, and the guests were assured that they would not be bound by any program of the N. A. A. C. P. Thus the conference was intended primarily to bring about as large a degree as possible of unity of purpose among Negro leaders and to do this regardless of its effect upon any organization, although, of course, many of us hoped that some central organization and preferably the N. A. A. C. P. would eventually represent this new united purpose.

One can hardly realize today how difficult and intricate a matter it was to arrange such a conference, to say who should come and who should not, to gloss over hurts and enmities. I remember Mr. Spin-

garn's asking me with a speculative eye and tentative intonation if the editor of a certain paper ought not to be invited. Now that paper had had an exceedingly good time at my expense, and had said things about me and my beliefs with which I not only did not agree but which gave rise in my hot mind to convictions of deliberate misrepresentation. But after all the editor must come. He was important, and Mr. Spingarn was pleased to see that I agreed with him in this.

About two hundred invitations to white and colored people were actually issued, and in making up this list the advice of friends of Mr. Washington, like Major Moton and Mr. Emmett Scott and Mr. Fred Moore, was sought. There were messages of good will from many who could not attend: from Taft, Roosevelt, Hughes, Woodrow Wilson, and others. But all this selection of persons was the easier part of the thing. The guests had, of course, to be induced to come; fortunately it was possible to accomplish this, and sixty or more persons expressed their willingness to attend. We were going to make for ourselves a little village of tents, and there we had to be fed and amused, while a discreet program was carried out and careful hospitality extended. At this Joel and Amy and Arthur Spingarn and their friends worked long and assiduously, and the result was beautiful and satisfying.

I remember the morning when we arrived. It was

misty with a northern chill in the air and a dampness all about. One felt cold and a bit lonely in those high grey uplands. There were only a few there at first, but they filtered in slowly, and with each came more of good cheer. At last we began to have a rollicking jolly time. Now and then, of course, there was just a little sense of stiffness and care in conversation when people met who for ten years had been saying hard things about each other; but not a false word was spoken. The hospitality of our hosts was perfect and the good will of all was evident.

There was a varied company. From the south came Lucy Laney, John Hope, Henry A. Hunt, and R. R. Wright of Georgia; Emmett J. Scott of Alabama, former Secretary of Booker Washington; J. C. Napier of Tennessee. From the west came Francis H. Warren of Detroit, Charles E. Bentley and George W. Ellis of Chicago, Mary B. Talbert of Buffalo, Charles W. Chesnutt of Cleveland, and B. S. Brown of Minnesota. Washington was represented by Mary Church Terrell, James A. Cobb, George W. Cook, Kelly Miller, L. M. Hershaw, Montgomery Gregory, Neval H. Thomas, and J. R. Hawkins. From Pennsylvania came Leslie Hill, L. J. Coppin, R. R. Wright, Jr., and W. Justin Carter. New York sent Fred Moore, Hutchins Bishop, James W. and J. Rosamond Johnson, Addie Hunton, W. L. Bulkley, William Pickens and Roy Nash, then secretary of the N. A. A. C. P. Baltimore gave us Mason Hawkins

and Ashbie Hawkins and Bishop Hurst. New England sent William H. Lewis, George W. Crawford, and Garnet Waller.

I doubt if ever before so small a conference of American Negroes had so many colored men of distinction who represented at the same time so complete a picture of all phases of Negro thought. Its very completeness in this respect was its salvation. If it had represented one party or clique it would have been less harmonious and unanimous, because someone would surely have essayed in sheer fairness to state the opinions of men who were not there and would have stated them necessarily without compromise and without consideration. As it was, we all learned what the majority of us knew. None of us held uncompromising and unchangeable views. It was after all a matter of emphasis. We all believed in thrift, we all wanted the Negro to vote, we all wanted the laws enforced, we all wanted assertion of our essential manhood; but how to get these things,—there of course was infinite divergence of opinion.

But everybody had a chance to express this opinion, and at the same time the conference was not made up of sonorous oratory. The thing was too intimate and small. We were too near each other. We were talking to each other face to face, we knew each other pretty intimately, and there was present a pervading and saving sense of humor that laughed

the poseur straight off the rostrum and that made for joke and repartee in the midst of serious argument. Of course and in fact let us confess here and now that one thing helped everything else: We were gloriously fed. There was a great tent with tables and chairs which became at will now dining-room, now auditorium. Promptly at meal time food appeared, miraculously steaming and perfectly cooked, out of the nothingness of the wide landscape. We ate hilariously in the open air with such views of the good green earth and the waving waters and the pale blue sky as all men ought often to see, yet few men do. And then filled and complacent we talked awhile of the thing which all of us call "The Problem", and after that and just as regularly we broke up and played good and hard. We swam and rowed and hiked and lingered in the forests and sat upon the hillsides and picked flowers and sang.

Our guests dropped by, the governor of the state, a member of Congress, a university president, an army officer, a distinguished grandson of William Lloyd Garrison, a Harlem real estate man, business men, and politicians. We had the women there to complete the real conference, Mrs. Terrell, Mary B. Talbert, Mrs. Hunton, Lucy Laney, Dr. Morton Jones of Brooklyn; Inez Milholland, in the glory of her young womanhood dropped by, in this which was destined to be almost the last year of her magnificent life. Mrs. Spingarn strolled over now and

then and looked at us quietly and thoughtfully.

The Amenia Conference in reality marked the end of an era and the beginning. As we said in our resolutions: "The Amenia Conference believes that its members have arrived at a virtual unanimity of opinion in regard to certain principles and that a more or less definite result may be expected from its deliberations. These principles and this practical result may be summarized as follows:

"(1) The conference believes that all forms of education are desirable for the Negro and that every form of education should be encouraged and advanced.

"(2) It believes that the Negro, in common with all other races, cannot achieve its highest development without complete political freedom.

"(3) It believes that this development and this freedom cannot be furthered without organization and without a practical working understanding among the leaders of the colored race.

"(4) It believes that antiquated subjects of controversy, ancient suspicions and factional alignments must be eliminated and forgotten if this organization of the race and this practical working understanding of its leaders are to be achieved.

"(5) It realizes the peculiar difficulties which surround this problem in the South and the special need of understanding between leaders of the race who live in the South and those who live in the North.

It has learned to understand and respect the good faith, methods and ideals of those who are working for the solution of this problem in various sections of the country.

"(6) The conference pledges itself to the inviolable privacy of all its deliberations. These conclusions, however, and the amicable results of all the deliberations of the conference are fair subjects for discussion in the colored press and elsewhere.

"(7) The conference feels that mutual understanding would be encouraged if the leaders of the race could meet annually for private and informal discussion under conditions similar to those which have prevailed at this conference."

It is a little difficult today to realize why it was necessary to say all this. There had been bitterness and real cause for bitterness in those years after the formation of the Niagara movement and before the N. A. A. C. P. had come to the front. Men were angry and hurt. Booker Washington had been mobbed by Negroes in Boston, Monroe Trotter had been thrown in jail; the lowest motives that one can conceive had been attributed to antagonists on either side—jealousy, envy, greed, cowardice, intolerance, and the like. Newspapers and magazine articles had seethed with threat, charge, and innuendo.

Then there had been numberless attempts at understanding which had failed. There was, for instance, that conference in Carnegie Hall when

Andrew Carnegie through Booker T. Washington financed a general meeting of Negro leaders. It was a much larger conference than that at Amenia but its spirit was different. It was a conference carefully manipulated. There was no confidence there and no complete revelation. It savored more of armed truce than of understanding. Those of us who represented the opposition were conscious of being forced and influenced against our will. Lyman Abbott of the *Outlook* came and talked with us benevolently. Andrew Carnegie himself came. Numbers of rich and powerful whites looked in upon us and admonished us to be good, and then the opposition between the wings flamed in bitter speech and charge. Men spoke with double tongues saying one thing and meaning another. And finally there came compromise and an attempt at constructive effort which somehow no one felt was real. I had proposed a Committee of Twelve to guide the Negro race, but when the committee was finally constituted I found that it predominately represented only one wing of the controversy and that it was financed indirectly by Andrew Carnegie, and so I indignantly withdrew and the Committee of Twelve never functioned but died leaving only a few pamphlets which Hugh Brown edited. There were other efforts, but it needed time and understanding, and when the Amenia Conference came the time was ripe.

We talked of many matters at Amenia—of educa-

tion, politics, organization, and the situation in the South. First of all we spoke of the former subjects of controversy; then we made the deliberations private, and to this day there is no record of what various persons said; and finally we declared for annual meetings of the conference, and then we got to the main subjects of controversy.

If the world had not gone crazy directly after the Amenia Conference and indeed at the very time of its meeting had not been much more widely insane than most of us realized, it is probable that the aftermath of this conference would have been even greater than we can now see. It happened because of the War that there was but the one conference held at Amenia. While we were there the world was fighting and had fought two long years. In another year America was destined to join the war and the Negro race was to be torn and shaken in its very heart by new and tremendous problems. The old order was going and a new race situation was to be developed.

Of all this the Amenia Conference was a symbol. It not only marked the end of the old things and the old thoughts and the old ways of attacking the race problem, but in addition to this it was the beginning of the new things. Probably on account of our meeting the Negro race was more united and more ready to meet the problems of the world than it could possibly have been without these beautiful

days of understanding. It was a "Close ranks!" before the great struggle that issued in the new world. How appropriate that so tremendous a thing should have taken place in the midst of so much quiet and beauty there at Troutbeck, which John Burroughs knew and loved throughout his life, a place of poets and fishermen, of dreamers and farmers, a place far apart and away from the bustle of the world and the centers of activity. It was all peculiarly appropriate, and those who in the future write the history of the way in which the American Negro became a man must not forget this event and landmark in 1916.

A Negro Conference

It was in August, 1916 and the place was Troutbeck near Amenia. I had no sooner seen the place than I knew it was mine. It was just a long, southerly extension of my own Berkshire Hills. There was the same slow, rocky uplift of land, the nestle of lake and the sturdy murmur of brooks and brown rivers. There were the people who had always lived there and their fathers before them, and the people merely passing ~~through~~.

Out from the town lay the farm. I saw its great trees bending over the running brook with a sense of utter friendship and intimate memory, though in truth I had never seen it before. And then one could trudge from the more formal home and lawn, by lane and fence with rise and fall of land, until one came to the lake. The lake, dark and still, lay in the palm of a great, calm hand. The shores rose slowly on either side and had a certain sense of loneliness and calm beauty.

It was in 1916. There was war in Europe but a war far, far away. I had discussed it from time to time with a calm ~~certain~~ detachment. I had said·

(Crisis Vol 11 h 132)

1915

47-3-44

Our own battle in America, that war of colors which we who are black always sense as the principal thing in life, was forming certain definite lines. Booker Washington was dead. He had died the year before, 1915. I remember the morning that I heard of it. I knew that it marked an era. Already we had formed the National Association for the Advancement of Colored People, a precarious thing without money, with some influential members, but we were never quite sure whether their influence would stay with us if we "fought" for Negro rights. We started in tiny offices, first at 20 Vesey Street and then at 70 Fifth Avenue. There have been many versions as to how this organization was born, all of them true and yet not the full truth. In a sense William English Walling founded it 100 years after Lincoln's birth because of his indignation at a lynching in Lincoln's birthplace. But in reality the thing was born in 1905 when, under the roar of Niagara Falls, there was formed the Niagara Movement by 29 colored men. How they screamed at us and threatened! The Outlook, then at the zenith of its power, declared that we were ashamed of our race and jealous of Mr. Washington. The colored press unanimously condemned us and listed our failures. We were told that we were fighting the stars in their courses. Yet from that beginning of the Niagara Movement in 1905 down to the formation of the National Association for the Advancement of Colored People in 1909, we were welding the weapons, breasting the blows, stating the ideals and preparing the membership for the larger, stronger organization. Seven of the 29 went on to the first Board of Directors of the N.A.A.C.P. The rest became active members.

There came six years of work. It is, perhaps, hard to say definitely just what we accomplished in this six years. It was perhaps a matter of spirit and getting ready and yet, we established The Crisis Magazine and had it by 1916 almost self-supporting. We had branches of our organization throughout the country. We had

began to move upon the courts with test cases. We had held mass meetings through the country. We had stirred up Congress and we had attacked lynching. We said in the Sixth Annual Report:

Copy & return to my files!

Now this did not by any means satisfy us. We wanted a bigger, stronger organization and especially we wanted to get rid of the all too true statement that we were asking for things that colored people did not want or at least did not want with any unity. The bridge between the Washington camp and those who had opposed his policies was still there and it occurred to Joel Spingarn and his friends that up in the peace and quiet of Amenia and around this beautiful lake colored men and women of all shades of opinion might sit down and rest and talk and agree on many things if not on all ~~things~~.

47-3-16

One ~~could~~ can hardly realize today how difficult and intricate a matter it was to arrange such a conference, to say who should come and who should not, to gloss over hurts and enmities. I remember Mr. Spingarn's asking me with a speculative eye and tentative intonation if the editor of a certain paper ~~should~~ ought not be invited. Now that paper had had an exceedingly good time at my expense and had said things about me and my beliefs with which I not only did not agree but which gave rise in my hot mind to ~~suspicions~~ convictions of deliberate lying. ~~deception.~~ But after all the editor must come. He was important and Mr. Spingarn was pleased to ~~know~~ see that I agreed with him in this. And so we culled lists until we had selected fifty or more persons. Their names are familiar even today. ~~Those who actually came were~~

And in addition to that we had the Governor of the State, Oswald Garrison Villard and Herbert Parons, Edward Ware of Atlanta University, John E. Nail and A. G. Dill. And there came to us also that beautiful woman with her fresh, fine enthusiasm and her splendid democracy, Inez Milholland, soon to die. All this selection of persons was, of course, but the easier part of the thing. We were going to make for ourselves a little village of tents, we must be fed and amused, there must be a discreet program and careful hospitality. At this Joel and Amy Spingarn and Arthur Spingarn and their friends worked long and assiduously and the result was beautiful and satisfying.

I remember the morning when we arrived. It was misty with a northern chill in the air and a dampness all about. One felt ~~chilly~~ cold and a bit lonely in those high grey uplands. There were only a few there at first, but they filtered in slowly and with each came more of good cheer. At last we began to have a rollicking jolly time. Now and then, of course, there was just a little sense of stiffness and care in conversation when people met who for ten years had been saying hard things about each other, but not a false word was spoken. The hospitality of the Spingarns was perfect and the good will of all was evident. There was a varied company. From the south came Lucy Laney, John Hope and Henry Hunt, of Georgia, Emmett J. Scott of Alabama, J. C. Napier of Tennessee. From the west came Francis H. Warren of Detroit, Charles E. Bentley of Chicago, Mary B. Talbert of Buffalo, Charles W. Chesnutt of Cleveland and ~~John~~ S. ~~Lost~~ of Minnesota. Washington was represented by Mary Church Terrell, James A. Cobb, George W. Cooke, Kelley Miller, L. M. Hershaw and J. R. Hawkins. From Pennsylvania came Leslie Hill, L. J. Coppin, R. R. Wright, ~~and his father~~ and W. Justin Carter. New York sent Fred Moore, Hutchins

Bishop, James W. and J. Rosamond Johnson, Addie Hunton, W. L. Bulkley, ~~Oswald Garrison Villard~~, William Pickens, Arthur Spingarn, and Roy Nash, then Secretary of the N.A.A.C.P. Baltimore gave us Mason Hawkins and Ashbie Hawkins, and Bishop Hurst. New England sent William H. Lewis, George W. Crawford and Garnet Waller.

I doubt if ever before so small a conference of American Negroes had so many colored men of distinction who represented at the same time so complete a picture of all phases of Negro thought. Its very completness in this respect was its salvation. It it had represented one party or clique it would have been less harmonious and unanimous because someone would surely have essayed in sheer fairness to state the opinions of men who were not there and would have stated them necessarily without compromise and without consideration. As it was, we all learned what the majority of us knew. None of us held uncompromising and unchangeable views. It was after all a matter of emphasis. We all believed in thrift, we all wanted the Negro to vote, we all wanted the laws enforced, we all wanted assertion of our essential manhood; but how to get these things, there of course was infinite diversion of opinion. But everybody had a chance to express this opinion and at the same time the conference was ~~not to make~~ make up of sonorous oratory. We were talking to each other face to face, we knew each other pretty intimately and there was ~~prevalent~~ present a pervading sense of humor that ~~would have~~ saving laughed the poseur straight off the rostrum and that made for joke and repartee in the midst of ~~solemn~~ serious argument. Of course and in fact one thing helped everything else: We were gloriously fed. There was a great tent with tables and chairs which became at will now dining room, now auditorium. Promptly at meal time food appeared, steaming and ~~gloriously~~ perfectly cooked, out of the nothingness of the ~~great~~ wide landscape. We ate hilariously in the open air with such views of the good green earth and the waving waters and the pale blue sky as all men ought often to see, yet few men do. And then filled and complacent we talked awhile of the thing which ~~the~~ all of us called "The Problem", and after that and just as regularly

47-3-18

we broke up and played good and hard. We swam and rowed and hiked and lingered in the forests and sat upon the hill sides and picked flowers and sang. Our guests dropped by, the governor of the state, a member of the legislature, a university president, an army officer, a Harlem real estate man, business men and politicians. We had the women there to complete the real conference, Mrs. Ferrell, Mary B. Talbert, Mrs. Hunton, Lucy Laney, Nacz Milholland, in the glory of her young womanhood dropped by, in this which was destined to be almost the last year of her magnificent life. Mrs. Spingarn strolled over now and then and looked at us quietly and thoughtfully and Dr. Morton Jones of Brooklyn. The Amenia conference in reality marked the end of an era and the beginning. As we said in our resolutions (Page 276). (Crisis vol 12 pp 276-7)

a grandson William Lloyd Garrison

It is a little difficult today to realize why it was necessary to say all this. There had been bitterness and real cause for bitterness in those years after the formation of the Niagra movement and before the N.A.A.C.P. had come to the front. Men were angry and hurt. Booker Washington had been mobbed by Negroes in Boston, Monroe Trotter had been thrown in jail; the lowest motives that one can conceive had been attributed to antagonists on either side — jealousy, envy, greed, cowardice, intolerence and the like. Newspapers and magazine articles had seethed with threat, charge and innuendo. Then there had been numberless attempts at understanding which had failed. There was, for instance, that confere ce in Carnegie Hall when Andrew Carnegie through Booker T. Washington financed a general meeting of Negro leaders. It was ~~if anything~~ a much larger conference than that at Amenia but its spirit was different. It was a conference carefully manipulated. There was no confidence there and no complete revelation. It savored more of armed truce than of understanding. Those of us who represented the opposition were conscious of being forced and influenced against

4-3-19

our will. Lyman Abott of the Outlook came and talked with us benevolently. Andrew Carnegie himself came. Numbers of rich and powerful whites looked in upon us and admonished us to be good and then the opposition between the wings flamed in bitter speech and charge. Men spoke with double tongues saying one thing and meaning another. And finally when there came compromise and an attempt at constructive effort somehow no one felt it was real. ~~There was~~ I had proposed a Committee of Twelve to guide the Negro race but when the committee was finally constituted ~~it was~~ I found that it predominately represented only one wing of the controversy and that it was financed indirectly by Andrew Carnegie and so ~~in truth~~ I unhappily mistakenly the Committee of Twelve never functioned ~~by~~ but died ~~still born~~ leaving only a few pamphlets which Hugh Brown edited. There were other efforts but it needed time and understanding and when the Amenia conference came the time was ripe. We talked of many matters, education, politics, organization and the situation in the south. First of all we spoke of the former subjects of controversy; ~~and the conference declared (Copy 4 - 277).~~ Then ~~Secondly~~ we made the deliberations private and to this day there is no record of what various persons said ~~(Copy 4 - 277).~~ ; and finally ~~Then~~ we declared for annual meetings of the conference and ~~after words getting~~ we got down to the main subjects of controversy. ~~we made these deliberations (276-277).~~

4/7-3-20

If the world had not gone crazy directly after the Amenia conference and indeed at the very time of its meeting was much more widely insane than most of us realized, it is probable that the aftermath of this conference would have been even greater than we can now see. It happened because of the War that there was but one conference ever at Amenia. While we were there the world was fighting and had fought two long years. ~~In 1917 America joined the war.~~ In another year

America was destined to join the war and the Negro race was to be torn and shaken in its very heart by new and tremendous problems. The old order was going and a new race situation was to be developed. Of this the Amenia conference was a symbol. It not only marked the end of the old things and the old thoughts and the old ways of attacking the race problem but in addition to this it was the beginning of the new things. Probably on account of our meeting the Negro race was more united and more ready to meet the problems of the world than it could possibly have been without these beautiful days of understanding. It was a "Closed ranks" before the great struggle that issued in the new world. How appropriate that so tremendous a thing should have taken place in the midst of so much quiet and beauty there at Troutebeck where John Burroughs lived and loved, a place of poets and fishermen, of dreamers and farmers, a place far apart and away from the bustle of the world and the centers of activity. It was all peculiarly appropriate and those who in the future write the history of the way in which the American Negro became a man must not forget this event and land mark in 1915.

42-3-21

A NEGRO CONFERENCE

It was in August, 1916 and the place was Troutbeck near Amenia. I had no sooner seen the place than I knew it was mine. It was just a long, southerly extension of my own Berkshire Hills. There was the same slow, rocky uplift of land, the nestle of lake and the sturdy murmur of brooks and brown rivers. Afar off were blue and mysterious mountains and there was a road that rose and dipped and wound and wandered and went on and on past farm and town to the great hard world beyond.

There was the village, small, important, complete, with shadows of old homes; with its broad street that was at once thoroughfare, entrance and exit. There were the people who had always lived there and their fathers before them, and the people merely passing.

Out from the town lay the farm. I saw its great trees bending over the running brook with a sense of utter friendship and intimate memory, though in truth I had never seen it before. And then one could trudge from the more formal home and lawn, by lane and fence with rise and fall of land, until one came to the lake. The lake, dark and still, lay in the palm of a great, calm hand. The shores rose slowly on either side and had a certain sense of loneliness and calm beauty.

It was in 1916. There was war in Europe but a war far, far away. I had discussed it from time to time with a calm detachment. I had said:"A New Year, Comrades! Come, let us sit here high in the Hills of Life and take counsel one with another. How goes the battle there below, down where dark waters foam, and dun dust fills the nostrils and the hurry and sweat of human kind is everywhere?

Evil, evil, yes, I know. Yonder is murder: so thick is the air with blood add groans that our pulses no longer quicken, our eyes and ears are full. Here, to home-wards, is breathless gain and gambling and the steady, unchecked, almost unnoticed growth of human hate."

Our own battle in America, that war of colors which we who are black always sense as the principal thing in life, was forming in certain definite lines. Booker Washington was dead. He had died but the year before, 1915. I remember the morning that I heard of it. I knew that it marked an era and I wrote: "The death of Mr. Washington marks an epoch in the history of America. He was the greatest Negro leader since Frederick Douglass, and the most distinguished man, white or black, who has come out of the South since the Civil War. His fame was international and his influence far-reaching. Of the good that he accomplished there can be no doubt: he directed the attention of the Negro race in America to the pressing necessity of economic development; he emphasized technical education and he did much to pave the way for an understanding between the white and darker races.

On the other hand there can be no doubt of Mr. Washington's mistakes and short comings: he never adequately grasped the growing bond of politics and industry; he did not understand the deeper foundations of human training and his basis of better understanding between white and black was founded on caste.

We may then generously and with deep earnestness lay on the grave of Booker T. Washington testimony of our thankfulness for his undoubted help in the accumulation of Negro land and property, his establishment of Tuskegee and spreading of industrial education and his compelling of the white south to at least think of the Negro as a possible man.

On the other hand, in stern justice, we must lay on the soul of this man, a heavy responsibility for the consummation of Negro disfranchisement, the decline of the Negro college and public school and the firmer establishment of color caste in this land.

What is done is done. This is no fit time for recrimination or complaint. Gravely and with bowed head let us receive what this great figure gave of good, silently rejecting all else. Firmly and unfalteringly let the Negro race in America, in bleeding Hayti and throughout the world close ranks and march steadily on, determined as never before to work and save and endure, but never to swerve from their great goal: the right to vote, the right to know, and the right to stand as men among men throughout the world."

32-3-54

Already we had formed the National Association for the Advancemenet of Colored People, a precarious thing without money, with some influential members, but we were never quite sure whether their influence would stay with us if we "fought" for Negro rights. We started in tiny offices at 20 Vesey Street and then took larger ones at 26. Finally on the eve of the undreamed of World War we had moved to 70 Fifth Avenue.

There have been many versions as to how this organization was born, all of them true and yet not the full truth. In a sense William English Walling founded it 100 years after Lincoln's birth because of his indignation at a lynching in Lincoln's birthplace. But in reality the thing was born long years before when, under the roar of Niagara Falls, there was formed the Niagara Movement by 29 colored men. How they screamed at us and threatened! The Outlook then at the zenith of its power, declared that we were ashamed of our race and jealous of Mr. Washington. The colored press unanimously condemned us and listed our failures. We were told that we were

fighting the stars in their courses. Yet from that beginning of the Niagara Movement in 1905 down to the formation of the National Association for the Advancement of Colored People in 1909, we were welding the weapons, breasting the blows, stating the ideals and preparing the membership for the larger, stronger organization. Seven of the twenty nine went on the first Board of Directors of the N.A.A.C.P. and the rest became leading members.

There came six years of work. It is, perhaps, hard to say definitely just what we accomplished in this six years. It was perhaps a matter of spirit and getting ready and yet, we established The Crisis Magazine and had it by 1916 almost self-supporting. We had branches of our organization throughout the country. We had begun to move upon the courts with test cases. We had held mass meetings through the country. We had stirred up Congress and we had attacked lynching. We said in the Sixth Annual Report: "The National Association for the Advancement of Colored People was first called into being on the one hundredth anniversary of the birth of Abraham Lincoln.

It conceives its mission to be the completion of the work which the great emancipator began. It proposes to make a group of 10,000,000 Americans free from the lingering shackles of past slavery: physically free from peonage, mentally free from ignorance, politically free from disfranchisement and socially free from insult.

We are impelled to recognize the pressing necessity of such a movement when we consider these facts:

The lynching of 2,812 prisoners without trial in the last thirty years.

The thousands of unaccused black folk who have in these years been done to death.

The widespread use of crime and alleged crime as a source of public revenue.

The defenseless position of colored women continually threatened by laws to make their bodies indefensible and their children illegitimate.

The total disfranchisement of three-fourths of the black voters.

The new attack on property rights.

The widespread and growing discrimination in the simplest matters of public decency and accommodation.

32-3-56

All these things indicate not simply the suffering of a people, but greater than that, they show the impotence of American democracy.

And so the National Association for the Advancement of Colored People appeals to the nation to accept the clear and simple settlement of the Negro problem, which consists in treating colored men as you would like to be treated if you were colored."

Now this did not by any means satisfy us. We wanted a bigger, stronger organization and especially we wanted to get rid of the all too true statement that we were asking for things that colored people did not want or at least did not want with any unity. The bridge between the Washington camp and those who had opposed his policies was still there and it occurred to Joel Spingarn and his friends that up in the peace and quiet of Amenia and around this beautiful lake colored men and women of all shades of opinion might sit down and rest and talk and agree on many things if not on all.

One can hardly realize today how difficult and intricate a matter it was to arrange such a conference, to say who should come and who should not, to gloss over hurts and enmities. I remember

Mr. Spingarn's asking me with a speculative eye and tentative intonation if the editor of a certain paper ought not to be invited. Now that paper had had an exceedingly good time at my expense and had said things about me and my beliefs with which I not only did not agree but which gave rise in my hot mind to convictions of deliberate lying. But after all the editor must come. He was important and Mr. Spingarn was pleased to see that I agreed with him in this.

And so we culled lists until we had selected fifty or more persons. Their names are familiar even today. All this selection of persons was, of course, but the easier part of the thing. We were going to make for ourselves a little village of tents, we must be fed and amused, there must be a discreet program and careful hospitality. At this Joel and Amy and Arthur Spingarn and their friends worked long and assiduously and the result was beautiful and satisfying.

I remember the morning when we arrived. It was misty with a northern chill in the air and a dampness all about. One felt cold and a bit lonely in those high grey uplands. There were only a few there at first, but they filtered in slowly and with each came more of good cheer. At last we began to have a rollicking jolly time. Now and then, of course, there was just a little sense of stiffness and care in conversation when people met who for ten years had been saying hard things about each other; but not a false word was spoken. The hospitality of the Spingarns was perfect and the good will of all was evident.

There was a varied company. From the south came Lucy Laney, John Hope and Henry Huht, and R. R. Wright of Georgia; Emmett J. Scott of Alabama, former Secretary of Booker Washington; J. C. Napier of Tennessee. From the west came Francis H. Warren of

Detroit, Charles E. Bentley of Chicago, Mary B. Talbert of Buffalo, Charles W. Chesnutt of Cleveland and B. S. Brown of Minnesota. Washington was represented by Mary Church Terrell, James A. Cobb, George W. Cook, Kelley Miller, L. M. Hershaw and J. R. Hawkins. From Pennsylvania came Leslie Hill, L. J. Coppin, R. R. Wright, Jr., and W. Justin Carter. New York sent Fred Moore, Hutchins Bishop, James W. and J. Rosamond Johnson, Addie Hunton, W. L. Bulkley, William Pickens, Arthur Spingarn and Roy Nash, then secretary of the N.A.A.C.P. Baltimore gave us Mason Hawkins and Ashbie Hawkins and Bishop Hurst. New England sent William H. Lewis, George W. Crawford and Garnet Waller.

I doubt if ever before so small a conference of American Negroes had so many colored men of distinction who represented at the same time so complete a picture of all phases of Negro thought. Its very completness in this respect was its salvation. If it had represented one party or clique it would have been less harmonious and unanimous because someone would surely have essayed in sheer fairness to state the opinions of men who were not there and would have stated them necessarily without compromise and without consideration. As it was, we all learned what the majority of us knew. None of us held uncompromising and unchangeable views. It was after all a matter of emphasis. We all believed in thrift, we all wanted the Negro to vote, we all wanted the laws enforced, we all wanted assertion of our essential manhood; but how to get these things, - there of course was infinite divergence of opinion.

But everybody had a chance to express this opinion and at the same time the conference was made up of sonorous oratory. The thing was too intimate and small. We were too near each other. We were talking to each other face to face, we knew each other pretty

intimately and there was present a pervading and saving sense of humor that laughed the poseur straight off the rostrum and that made for joke and repartee in the midst of serious argument. Of course and in fact let us confess here and now that one thing helped everything else: We were gloriously fed. There was a great tent with tables and chairs which became at will nowdining room, now auditorium. Promptly at meal time food appeared, miraculously steaming and perfectly cooked, out of the nothingness of the wide landscape. We ate hilariously in the open air with such views of the good green earth and the waving waters and the pale blue sky as all men ought often to see, yet few men do. And then filled and complacent we talked awhile of the thing which all of us call "The Problem", and after that and just as regularly we broke up and played good and hard. We swam and rowed and hiked and lingered in the forests and sat upon the hill sides and picked flowers and sang.

Our guests dropped by, the governor of the state, a member of the legislature, a university president, an army officer, a Harlem real estate man, a grandson of William Lloyd Garrison, business men and politicians. We had the women there to complete the real conference, Mrs. Terrell, Mary B. Talbert, Mrs. Hunton, Lucy Laney, Inez Milholland, in the glory of her young womanhood dropped by, in this which was destined to be almost the last year of her magnificent life. Mrs. Spingarn strolled over now and then and looked at us quietly and thoughtfully and Dr. Morton Jones of Brooklyn.

The Amenia conference in reality marked the end of an era and the beginning. As we said in our resolutions: "The Amenia Conference believes that its members have arrived at a virtual unanimity of opinion in regard to certain principles and that a more or less

32-3-50

definite result may be expected from its deliberations. These principles and this practical result may be summarized as follows:

(1) The conference believes that all forms of education are desirable for the Negro and that every form of education should be encouraged and advanced.

(2) It believes that the Negro, in common with all other races, cannot achieve its highest development without complete political freedom.

(3) It believes that this development and this freedom cannot be furthered without organization and without a practical working understanding among the leaders of the colored race.

(4) It believes that antiquated subjects of controversy, ancient suspicions and factional alignments must be eliminated and forgotten if this organization of the race and this practical working understanding of its leaders are to be achieved.

(5) It realizes the peculiar difficulties which surround this problem in the South and the special need of understanding between leaders of the race who live in the South and those who live in the North. It has learned to understand and respect the good faith, methods and ideals of those who are working for the solution of this problem in various sections of the country.

(6) The conference pledges itself to the inviolable privacy of all its deliberations. These conclusions, however, and the amicable results of all the deliberations of the conference are fair subjects for discussion in the colored press and elsewhere.

(7) The conference feels that mutual understanding would be encouraged if the leaders of the race could meet annually for private and informal discussion under conditions similar to those which have prevailed at this conference.

3A-3-60

It is a little difficult today to realize why it was necessary to say all this. There had been bitterness and real cause for bitterness in those years after the formation of the Niagra movement and before the N.A.A.C.P. had come to the front. Men were angry and hurt. Booker Washington had been mobbed by Negroes in Boston, Monroe Trotter had been thrown in jail; the lowest motives that one can conceive had been attributed to antagonists on either side - jealousy, envy, greed, cowardice, intolerence and the like. Newspapers and magazine articles had seethed with threat, charge and innuendo.

37-3-61

Then there had been numberless attempts at understanding which had failed. There was, for instance, that conference in Carnegie Hall when Andrew Carnegie through Booker T. Washington financed a general meeting of Negro leaders. It was a much larger conference than that at Amenia but its spirit was different. It was a conference carefully manipulated. There was no confidence there and no complete revelation. It savored more of armed truce than of understanding. Those of us who represented the Opposition were conscious of being forced and influenced against our will. Lymon Abott of the Outlook came and talked with us benevolently. Andrew Carnegie himself came. Numbers of rich and powerful whites looked in upon us and admonished us to be good and then the opposition between the wings flamed in bitter speech and charge. Men spoke with double tongues saying one thing and meaning another. And finally when there came compromise and an attempt at constructive effort which somehow no one felt was real. I had proposed a Committee of Twelve to guide the Negro race but when the committee was finally constituted I found that it predominately represented only one wing of the controversy and that it was financed

indirectly by Andrew Carnegie and so I indignantly withdrew and the Committee of Twelve never functioned but died leaving only a few pamphlets which Hugh Brown edited. There were other efforts but it needed time and understanding and when the Amenia conference came the time was ripe.

We talked of many matters, education, politics, organization and the situation in the South. First of all we spoke of the former subjects of controversy; then we made the deliberations private and to this day there is no record of what various persons said; and finally we declared for annual meetings of the conference and then we got to the main subjects of controversy.

32-3-62

If the world had not gone crazy directly after the Amenia conference and indeed at the very time of its meeting was much more widely insane than most of us realized, it is probable that the aftermath of this conference would have been even greater than we can now see. It happened because of the War that there was but one conference ever at Amenia. While we were there the world was fighting and had fought two long years. In another year America was destined to join the war and the Negro race was to be torn and shaken in its very heart by new and tremendous problems. The old order was going and a new race situation was to be developed.

Of all this the Amenia conference was a symbol. It not only marked the end of the old things and the old thoughts and the old ways of attacking the race problem but in addition to this it was the beginning of the new things. Probably on account of our meeting the Negro race was more united and more ready to meet the problems of the world than it could possibly have been without these beautiful days of understanding. It was a "Close ranks!" before the great struggle that issued in the new world. How appropriate that so tremendous a thing should have taken place in the midst

of so much quiet and beauty there at Troutbeck where John Burroughs lived and loved, a place of poets and fishermen, of dreamers and farmers, a place far apart and away from the bustle of the world and the centers of activity. It was all peculiarly appropriate and those who in the future write the history of the way in which the American Negro became a man must not forget this event and land mark in 1916.

BRONZE BOOKLET No. 4 brings to the reader the timely subject of THE NEGRO and SOCIAL RECONSTRUCTION. At this critical cross-roads, Dr. Burghardt Du Bois surveys for us the promise of three alternatives:- hope of social salvation by restored prosperity under capitalism, by radical labor reform and [redacted] working-class self-assertion or by a third path of racial solidarity and economic self-help. After reviewing the programs of the past, their gains and losses, the author advocates as the Negro's most immediate and practical program that of racial self-reliance and economic self-help. It is interesting to see the veteran spokesman [redacted] of the struggle for civil and legal rights turn to an economic program for the Negro's next step in his fight for an improved position in American life. The reader will naturally weigh the merits of the programs reviewed, and whether he agrees with Dr. DuBois or not, cannot but be enlightened by the analysis of the Negro's dilemma by the always eloquent and outspoken author of "Souls of Black Folk", "Darkwater", and recently, "Black Reconstruction". Dr. Du Bois, for so many years editor of "The Crisis", has now returned to college teaching as professor of sociology at Atlanta University. He is shortly to edit "The Encyclopedia of the Negro".

THE NEGRO AND SOCIAL RECONSTRUCTION

By W. E. B. Du Bois

Introduction

In considering the problem of industrial depression and unemployment, it is natural to think of the Negro population of the United States simply as one part of the problem according to its numbers. Further thought, however, will modify this. First of all, because this population of ~~12~~ Twelve millions is but two generations removed from chattel slavery, it naturally has a greater percentage of poverty, dependency and delinquency and impaired physical health. This would immediately make the problem of relief and economic salvation more difficult in its case. The situation is further complicated by the fact that this portion of the American population has never been considered as an integral part of the nation, neither in industry nor in political and civil rights. Consequently, there is added to the economic problem a social problem of aims and ideals. If this part of our population is to be "restored" to prosperity, just what is the status to which it could be restored, or ought to be restored? What place should it be conceived of as able to occupy in the future United States, or permitted to occupy in accordance with public opinion?

49-18-3

These problems have always faced the American Negro in different guise, past and present; and it is the object of this ~~treatise~~ booklet to consider by what special planning the Negro and his friends have sought, past and present, to gain for him an assured status in the United States.

CHAPTER I.

VIOLENCE AND MIGRATION

The first effort to counteract violence is naturally violence in return, which means war, rebellion, or revolt. The Negro slave, seized in Africa between 1442 and the middle of the nineteenth century, fought for freedom against attacking black tribes or white slave raiders. The cost in life was very large and it was Stanley's estimate that for every slave actually captured by raiders four human beings were left lying dead in the villages.

Once captured and brought down to the coast, there was little chance for revolt on the slave ships, although some cases occurred.

Landed in the West Indies, the earliest slaves immediately sought to escape. "The Negroes were not docile like the Indians and were evidently considered as most dangerous people." (Helps, Spanish Conquest, Volume IV, page 372. Quoting from Ley.)

Most of the laws concerning Negroes drawn up in Spain for the government of the West Indies relate to the Cimarones or Maroons, the name given to fugitive Negroes.

Energetic measures for curbing slave revolts took place from the earliest times. They consisted, first, in so mixing the Negroes on plantations by tribe and language that communication between them was difficult; by severe laws against conspiracy or attempts ~~toward~~ at uprising; by ~~the~~ subduing the war-like ~~customs and freedom~~ habits of the African; by hard, manual toil. The Christian religion was ~~eventually~~ also used very successfully to induce submission and contentment.

The ~~plan~~ desire, therefore, to gain freedom through violence was pretty well curbed in the slaves that came to the American continent through the West Indian tutelage. Nevertheless, the plan of revolt was never wholly abandoned as is shown by the testimony of the slave codes. These codes were cruel and severe and give definite evidence that the American slaveholders were afraid of conspiracies among their slaves.

The actual revolts among American Negroes, from 1619 to 1863, were few in number, although there were a great many scares and rumors of conspiracies which spread panic for a time and then afterward were systematically minimized. The truth seems fairly clear, that every decade in the South there was some attempt somewhere of slaves

VIOLENCE AND MIGRATION

to organize and escape their status by armed resistance, but the organization of the slave patrol held these attempts down to a few which were really dangerous. The slave patrol was an organization which included not simply the comparatively small number of slaveholders, but enlisted the interest of the mass of poor whites, so that actually the slaves were outnumbered by the whites, save in certain localities; and there it was possible to bring in wide outside assistance in a comparatively short time. ~~And~~ Of course ~~practically~~ all the arms and ammunition were in the hands of the whites. Moreover, the humanity of some slaveholders and the personal attachment of kind-hearted slaves, nearly always resulted in the betrayal of plots in order to save some particular white family.

A form of violence for the indirect purpose of achieving freedom ~~by proving patriotism~~ was the participation of Negroes in the various wars fought by the United States. Even in Colonial times, some Negro troops were used and it is well-known that the first violence of the Revolutionary War was led by a Negro, Crispus Attucks. A thousand or more Negroes fought on the colonial side during the war and several hundred among the British under Governor Dunmore. Negro sailors were prominent in the War of 1812.

What was really the largest and most successful slave revolt came at the time of the Civil War when nearly all the slaves in the vicinity of the invading armies left the plantations and rushed to the army; ~~and~~ eventually some 200,000 ex-slaves and Northern Negroes joined armies of the North, in addition to a much larger number of laborers and servants. It was this revolt of the slaves and the prospect of a much larger movement among the 4,000,000 other slaves, which was the real cause of the sudden cessation of the war.

~~Later, Negroes took part in the Spanish-American War and the World War.~~

Long before the spasmodic efforts at revolt ended in armed slaves helping to put down secession, other and more successful plans had been tried. Broadly speaking, they involved the running away of ~~individuals~~ slaves ~~and of gangs~~ individually and in groups and, in the case of free Negroes, migration to Canada, the West and Southwest and to Africa, and other destinations overseas.

How large a number of slaves escaped, it is impossible to say. Judging from

49-81-S

(30)

VIOLENCE AND MIGRATION

the growth of the Negro population in the North and the complaints of the slaveholders, it must have been considerable. There were certainly 100,000 and possibly 200,000 fugitives from slavery, representing a loss of at least $25,000,000 capital invested in slavery and perhaps twice that sum. This was the economic loss that spurred secession.

The union of Negroes and Indians for resistance to the whites was long feared in the United States. Negro slaves took refuge among the Indians in Virginia in 1787 and about the same time began to escape among the Indians of Carolina and Georgia. The two races intermarried, making return of the fugitives difficult, as the Indians refused to surrender their Negro-Indian children. After the Revolutionary War and the War of 1812, Americans accused the British of conniving at the escape of Negroes by means of their Indian allies.

In the South, Georgia from 1789 to 1813, accused the Creek Indians of encouraging the running away of slaves. The Creeks were attacked by Andrew Jackson and defeated in 1814, but in 1815, 1,000 Georgia Negroes took possession of the former British fort and together with the Creeks threatened the South. The Spanish refused to destroy the fort, but Jackson moved against it in 1816 and wiped it out with great barbarity. Then came the so-called Seminole wars, which were raids to secure fugitive slaves and drive out the Indians.

Gradually as the slave controversy increased, the chains of the slaves were drawn tighter and the free Negroes of the North found themselves in a more precarious position. Plans for migration beyond the borders of the United States began to mature. Indeed, from the earliest times, the thought that the Negro population of the United States would eventually be repatriated in Africa was widespread among whites and also among Negroes.

~~Liberia was the final result of the efforts of the American Colonization Society.~~

The Civil War stopped thoughts and plans for emigration for many years, although there were small internal movements of freedmen from Carolina to Florida, from the Gulf states to the Southwest and from Virginia to the South in search of better working conditions and free land. When the Negroes began to pour in on the Union Army, Abraham Lincoln proposed to carry out his own long cherished plan of colonization. He consulted foreign

49-18-7

VIOLENCE AND MIGRATION

countries and secured an appropriation of $100,000 from Congress in 1861 and a further appropriation of $500,000 in 1862. He favored compensated emancipation in the Border States on condition that the Negroes should move beyond the limits of the country.

It was not until the withdrawal of Federal troops in the South in 1876 that widespread plans of migration from the South to the North took place. There had been some migration of freedmen from the South immediately after the war, but the difficulty of getting work in the North and the prospect of greater freedom in the South, held this to a minimum. The terrorism of the Ku Klux Klan and the forced disfranchisement of the Negroes in 1875 and 1876 led to widespread plans for migration into the West and particularly into Kansas.

Discussion and Reading

1. How could black Africa have defended itself against European slavetraders?
2. Did the slaves have a right to revolt?
3. Did the American Colonization Society want to send all Negroes to Africa?
4. Did the Negroes help win the Civil War?

(Consult Help's "Spanish Conquest", Volume 4; Bryan Edwards' "History of the West Indies", 4th Edition, Volume I, Appendix, and Volume 4; T. G. Steward, "The Haitian Revolution"; Du Bois, "Black Reconstruction".)

49-17-2

CHAPTER II.

[redacted] POLITICAL POWER.

The Civil War sent through the Negro population a new thrill and vast hopes for emancipation and progress. These hopes were nourished by the promises held out to Negroes when they fought in the ranks and in labor for the Northern armies. They came to seeming fruition in the ~~Civil Rights~~ Reconstruction Legislation of 1867. Not until these ~~civil~~ gains were blasted by the reaction of ~~Reconstruction~~ 1876 did the Negro masses again take up their old weapon of migration to any great extent.

From 1867 to 1876 Negroes placed their whole hope of full emancipation and economic security upon their political power. This was of course putting the cart before the horse. Their political power could only have been permanently sustained by economic security,--ownership of land, control of some capital and education. They sought education and began to get it through their establishment of the public school in the South. Thaddeus Stevens and Charles Sumner and others tried to give them peasant-proprietorship and they themselves sought this through legislation in South Carolina and elsewhere. But the power of the Southern landholders and capitalists hindered this and their efforts were reinforced by Northern capital; this economic combination ruined the political as well as the economic hopes of the Negroes.

49-18-13

Between 1876 and 1890, political power gradually dwindled until the Negroes were practically disfranchised and unrepresented in Congress, the state legislatures, ~~the~~ city councils and the county administrations. In addition to this, their loss of political power went to increase the political power of Southern capital which established a vast "rotten borough" called the "Solid South", and threw the whole democratic balance of the nation out of gear.

Meantime, political organization, chiefly within the Republican Party, tried to restore the ballot, achieve legal defense and new civil enactments. The Republican Party of the various Southern states consisted during this period almost exclusively of Negroes, which meant that they had some right to share in and direct the distribution of Federal appointments to office. In the North, the support of the Negro voters helped

46

to keep the Republicans in power for many years after the Civil War.

The annual conventions, therefore, of the Republican Party became centers of the fight for restoring Negro political and civil rights.

In all the national conventions from 1876-1900, the Negro delegates from the South usually held the balance of power between contesting Republican candidates. But since they had back of them no effective voting population, men were able to secure the position of delegate by manipulation and bribery. For the most part, both colored and white delegates gradually came to be for sale to the highest bidder. Soon, the first solicitude of prospective candidates for the Republican nomination was to buy up the Southern delegates before the convention. Venal whites drifted into the party and controlled the Negroes; venal Negroes were easily induced to forget their higher mission in a scramble for money and place, and venal friends of candidates thus bought the presidential nomination. This bribery of Southern delegates at national conventions became an intolerable scandal and resulted not in any attempt to restore the ballot to the Negro masses, but rather in recognizing their disfranchisement by cutting down their representation in the councils of the Republican Party; a situation which still obtains.

49-18-14

Co-incident with this has come a change in the party platforms. The Republican platforms from 1868 until 1900 invariably complained about the disfranchisement and civil disabilities of Negroes, but the party in Congress after 1896 made no attempt to follow up these provisions. In later years, less and less has been said about the Negro until lately only a perfunctory protest against lynching has been included in the party platform.

In the National Government for a long time, the Negro received important representation in the executive branch. Once Theodore Roosevelt was about to appoint a Negro as Treasurer of the United States, but was thwarted by the race prejudice of his Secretary of the Treasury. Collectors of Customs have been

appointed in Charleston, New Orleans and Atlanta in the earlier days, but no important Federal position has come to Negroes recently in those states. In Washington, the Registrar of the Treasury has usually been a colored man until quite recent times; and the Recorder of Deeds of the District of Columbia almost invariably. In recent administrations, it has been customary to appoint some prominent colored men as assistants in the District Attorney's office and under the New Deal, a number of advisory positions have been given to colored men of education and ability. One of the municipal judges of the District of Columbia is usually a Negro.

In 1900, it was claimed that there were 58 colored men in the higher Federal employ, including 11 in diplomatic and consular service and several Collectors and Postmasters. In the clerical service and the army, there were 15, 868 Negroes. In 1912, 19,729 such positions were claimed, including 8,000 in the army and navy. In 1916 and 1924, the number of presidential appointments of Negroes decreased, but the colored Federal employees were reported to have increased [redacted] to 51,882 in 1928. Most of these were in the Postoffice Department. It was said that the Negroes, constituting 9.9% of the population in 1920, occupied slightly more than 9.1% [redacted] of the positions in the Federal Executive Civil Service.

49-81-15

From 1871 to the present, 24 Negroes have sat in Congress, including 2 Senators. Most of these came during Reconstruction, but one Negro Congressman is still serving. In at least three other cases, there is no doubt but that colored men actually were elected to office, but were counted out.

In several Northern congressional districts, the Negro vote by 1924 had reached such a size that the possibility of a

Negro representative was manifest. For this reason, the white congressmen from one district in Illinois and from one in St. Louis, became practically representatives of the Negro race and worked for such bills as the Negroes demanded, especially the anti-lynching bill. When [redacted] Congressman Madden of the Chicago black belt died, a colored man, Oscar De Priest, was elected to succeed him in 1928 and re-elected in 1930 and 1932. He was defeated in 1934 by a colored Democrat named Mitchell, showing that the Democratic Party was compelled to take a colored candidate in order to defeat the Republicans. In 1928, in St. Louis, a colored candidate was defeated, but made a strong showing.

In the states, the Negro served in the legislature of Georgia until about 1910, but in most of the other Southern states they were eliminated by 1890. In the Northern states, they began to appear as members of the legislature about 1900. Illinois has usually 3 or 4 members of the Lower House and 1 colored Senator. There are usually one or two Negro members of the legislature in Kansas, Nebraska, Michigan, California, Missouri, Indiana, Ohio, Pennsylvania, West Virginia, New Jersey and New York. Once or twice there have been members of the legislature in the New England States. Some of these legislators, like Harry Davis of Ohio, have made distinguished records. It was often said that had Davis been white, he would have been Speaker of the House.

There are no Negro municipal or local officials in the South, except a few notaries. In the North, there have been some important offices held. Chicago has had a Superior Court judge and there are 2 Superior Court judges in New York City. Massachusetts once had a judge and there have been colored police magistrates in several [redacted] states. Some important commission-

49-18-16

erships are held as in the Civil Service Commission and the Tax Commission in New York City and the Civil Service Commission of Cleveland, Ohio [redacted].

¶ On the whole, however, while office holding by American Negroes has been creditable, it has been disappointing since it has mainly served to further the political, social and economic position of a few individuals. They have seldom reached positions of real influence where they could take any decisive action to better the status of their people.

Finding that office-holding and affiliation with the Republican Party was disappointing in its results, the Negro lately attempted to divide his vote both for the President and for congressmen and members of the legislature so as to reward and punish friends and enemies. Negroes largely supported President Wilson in 1912 and he promised them "justice". A smaller number supported Smith and Davis in 1920 and 1924 and a larger number, Roosevelt in 1932. Negroes have also in considerable numbers supported the Socialists. The result of this split vote has been to give Negroes considerable influence in local municipal politics in certain cities like Boston, New York and Chicago. Perhaps this municipal political power in the larger Northern cities is the greatest source of influence which remains to the Negro in politics, together with a considerable balance of power vote in the border states.

49-18-17

The greatest single triumph of Negro voters was the defeat of Parker of North Carolina for confirmation to the Supreme Court. He had been an opponent of Negro suffrage and was named by Hoover; but his record in regard to organized labor

was bad and the influence of the labor vote and of the Negroes combined led to his failure to be confirmed.

The drive of Negroes for legislation through political power has had some measure of success. Appropriations for Howard University, for instance, were long limited and provided for by questionable legislative methods. In the 68th Congress, the appropriation was ruled out on the point of order and finally, in 1930, the legality of the appropriation was fixed by act of Congress and Howard became assured of a Federal subsidy, with an initial appropriation of $1,249,000. The Federal appropriations for education have benefited the Negro, although he has been unsuccessful in his attempt to have them pro-rated according to his numbers in the population. The division, ~~however,~~ has been left entirely to the states and has been notoriously unfair throughout the South.

81-81-64

In another direction, Negroes have succeeded in having laws defending their civil rights put on the statute books. The first case was the celebrated civil rights law of 1875 so long advocated by Charles Sumner, which was eventually emasculated by decisions of the Supreme Court in 1883 and 1913. State civil rights legislation guaranteeing the legal right of Negroes to service in public places has been enacted in 16 states since 1884:

Connecticut	1884 and 1905
Iowa	1884 and 1892
New Jersey	1884
Ohio	1884 and 1894
Colorado	1885
Indiana	1885
Illinois	1885
Michigan	1885
Minnesota	1885, 1897 and 1899
Nebraska	1885 and 1893
Rhode Island	1885
New York	1893, 1895 and 1913.
Pennsylvania	1887 and 1935
Washington	1890
Wisconsin	1895
California	1897

51

However,

A wave of "Jim-Crow" legislation, including disfranchisement and requiring separation in cars, street cars and education, swept over the South from 1890 to 1910 and Negroes could do little to oppose it. They did succeed, however, in confining separation in Maryland to local trains and to defeating separate car laws in Missouri and West Virginia.

On the other hand, the Negro has succeeded in some cases in keeping discriminatory legislation off the statute books. In 1913, after Wilson and the Democrats came to power and because of Jack Johnson's victory, a determined drive was made to spread laws against the inter-marriage of Negroes and whites on the statute books of the Northern states.

Anti-intermarriage bills were introduced in Congress and in California, Colorado, Illinois, Iowa, Kansas, Michigan, Nebraska, New York, Ohio, Pennsylvania, Washington and Wisconsin. Only one passed when Nebraska strengthened an existing statute.

On the whole, however, the social and economic emancipation of the Negro race by means of the ballot has failed of any great success, but perhaps the failure has been no greater in the case of Negroes than it has in that of whites. It has simply made the fact more clear that without economic Reconstruction political freedom and power is impossible.

61-81-44

Discussion and Reading

1. Could the Negro laborer have survived without the vote?
2. Which was of greater importance; the right to vote, or land ownership?
3. Was it fair to fight Southern corruption by cutting down the Negro vote in the Republican conventions?
4. Should Negroes hold office?

(Consult Brawley, "Social History of the American Negro"; Woodson, "The Negro in Our History"; Merriam, "The Negro and the Nation".)

CHAPTER III

CAPITAL AND LABOR

During the sway of the Negro's plan of gaining full American citizenship by political power, and explaining and supplementing that effort from 1867 to 1930, came two other movements: one from 1896 to 1920 which sought firmly to integrate the American Negro into American industry as farmer, laborer, skilled artisan and capitalist; and the other movement, from 1876 to 1930 which sought by agitation and legal defense to clear away race discrimination and allow untrammeled advance of black folk according to chance and ability. One plan was emancipation by labor power under capitalistic auspices and the other by appeal to legislation and democratic ideals.

These two latter movements began in bitter controversy; the first ended with the World War and the second declined with the depression and merged with movements to stop discrimination in the NRA.

Despite political power and legal defense and whatever might be accomplished by migration, it was evident from the first that economic power must underlie all efforts of the American Negro to establish himself. The fact was that the Negro was a poor and ignorant laborer, and his exploitation, which began in slavery, was not ended by emancipation. How, then, should he establish himself as an effective and decently paid laborer?

The first clear and coherent plan to this end was presented by Booker T. Washington and enunciated in his celebrated speech at the Cotton States' Exposition, Atlanta, in 1896.

This occasion had been carefully planned beforehand and was not at all a spontaneous event. William H. Baldwin, a young railroad executive and far-sighted industrial statesman, knew by personal experience Southern labor conditions. He was rapidly coming to the front, having been made President of the Long Island Railroad and slated for the presidency of the Pennsylvania System. He knew that Negro labor with proper training and treatment could be made effective and he and other industrialists also feared the new demands and growing organization of unionism among white craft laborers. As a firm believer in capitalistic exploitation, Baldwin thought that in the South there could be built up two laboring classes who would naturally supplement each other and together make for the economic development of the New South. He wanted the black laborers trained in skilled industry. He wanted the white laborers well-paid, but curbed in their increasingly intolerant demand for a voice in industry. Here was the developing Negro race, increasing in intelligence,

49-18-21

distressed by its partial deprivation of political power and civil rights and needing new incentives and practical ideals. Here, also, was an extraordinary man; a self-made Negro, trained at Hampton, who had been brought down to take charge of a small school in Alabama, started by a young colored woman named Davidson.

Mr. Washington was an opportunist, slow but keen-witted, with high ideals. He believed in political rights for people who could exercise them, but in the case of the Southern Negroes, he knew that the attitude of the white South was against their political activity and he, therefore, took the position that the Negro must first gain an industrial status before he could ask for the exercise of political rights. He knew that the Negro needed civil and social rights. No one suffered more than he from the existence of discrimination in schools, on the railroads, in hotels and otherwise. But he believed that if the Negro showed the people of the United States that they could advance despite discrimination, that the inherent justice in the nation would gradually extend to deserving Negroes the rights that they merited.

Above all, Mr. Washington had not the slightest doubt that the current organization of industry in the United States was normal and right; that capital was accumulated by thrift; that labor was rightfully bought and fed and that profits were rightly the result of buying the product of labor. He, therefore, proposed that the Negro take this path toward eventual equality, ~~and~~ working hard and skillfully to earn a living, ~~[illegible]~~ and beyond that to accumulate in the hands of his more thrifty and gifted individuals, enough capital to hire employees and make money. He expected that the black owners of property would thus gain recognition from other propertyholders and gradually rise in the scale of society. As a first step toward this new capitalism, Washington especially stressed landholding--wide-spread peasant proprietorship and even large-scale farming among Negroes.

As a practical path toward these things, Mr. Washington's program ~~[illegible]~~ included the giving up of political rights, at least temporarily; the giving up of agitation for civil rights; and the insistance upon training young Negroes for farming and industry through industrial schools and a vocational program of education. This plan, launched in 1896, and triumphant from that date until about 1910, was in reality an alliance with white capital and was rewarded by large contributions toward Negro education, especially to such schools as conformed to the Hampton and Tuskegee type. It was rightly regarded as a clever and far-sighted compromise which, if it would not solve, would at least peacefully postpone the solution of

49-81-22

a baffling internal problem of race conflict. Mr. Washington, between 1900 and 1910, became one of the most popular men in America, in constant demand North and South, as a speaker, adviser and referee.

There resulted a new understanding between the leading elements of the North and South with regard to the Negro. Agitation for voting was frowned upon and skilled labor was encouraged. The Negro college, while not entirely discouraged, was looked upon with some suspicion and careers for Negro college graduates became difficult. To some extent, appointments and opportunities of young Negroes were carefully censored and referred for approval to Tuskegee, over a very wide extent of country.

As the white opinion of the land became unified behind Mr. Washington, colored opinion began to become uneasy and suspicious. The best white Southern opinion certainly supported Mr. Washington, but the politicians and the poor rabble got out of hand. A wave of "Jim-Crow" legislation and disfranchising bills swept over the South and border states from 1890 and 1910--at the very time when Negro political power and agitation had been lulled to its lowest by the Washington compromise. Mississippi in 1890, South Carolina in 1895, Louisiana in 1898, North Carolina in 1900, Alabama in 1901, Virginia in 1902, Georgia in 1908 and Oklahoma in 1910 disfranchised Negroes by adroitly drawn illiteracy and property tests.

49-18-23

The result of this was not on the whole encouraging. Evidently despite their premises, the better white South could not protect the voteless Negro. Moreover, the attempt to set up a Negro labor class in rivalry to white laborers led to increased race hatred and lawlessness in the South between white and black labor. Separation of the races in travel had been made compulsory in Tennessee, Florida, Mississippi, Texas, Kentucky, Georgia and Louisiana by 1891. It then paused, but a new wave of legislation began in 1898 and covered South Carolina, North Carolina, Virginia, Maryland and Oklahoma. Determined and repeated efforts were made in Missouri, West Virginia and Delaware. Other laws and ordinances completed the program of racial caste and convinced increasing numbers of Negroes that the only result of the Washington compromise was going to be a permanent caste-system in the United States acquiesced in and condoned by Negroes themselves.

In the North, results were no better. White labor inherited from before the Civil War a fear of the competition of slave labor and of the competition of the free blacks. They finally but grudgingly, encouraged them in separate labor organizations and a Negro trade union movement began and was headed toward success when it became a part of the new

political organization which swept the Negroes into Reconstruction.

After this, however, the craft unions began to exclude Negroes, but when the new Knights of Labor were organized, earnest attempt was made to bring the Negroes in. This, however, was stopped when the American Federation of Labor, the organization of the skilled crafts, came into power in 1886. Most of the constituent organizations excluded Negroes either openly, or by secret policy, so that the division between black and white labor gradually became wider.

This triumph of the radical anti-Negro South, the continued prevalence of lynching and the anti-Negro labor policy in the North, greatly embarrassed Mr. Washington. He hated caste and lawlessness and wanted the best for his people, but he believed implicitly in his economic program and made the fatal mistake of trying to forestall criticism from Negroes and to disparage and if not to oppose Negro colleges. The result was an outburst of wrath and criticism led by the younger college-bred group which split the Negroes into two opposing camps.

Mr. Washington's work, however, was not all lost. It first was shown in the ownership of land. Negroes owned 97,458 farms in 1890. This number increased rapidly until it reached a total of 218,467 in 1910. Then forces over which Washington had no control manifested themselves and land ownership decreased to 181,016 in 1930, which meant a loss of at least 4,000,000 acres of land; and since 1930, nearly a million acres more have been lost. In other words, Negroes bought land just at the time when land ownership was losing its security, so that the Negro landholder was caught in the depression, which so overwhelmed the farmers of the world, that he could not by his unaided efforts hope to make economic improvement on Southern farms. The same difficulties in lesser degree faced the white farmer and the result was that the farm population moved to the city in large numbers and entered industry. Most of these migrants from country to city were white, but a large and increasing number were Negroes. Between 1910 and 1920, the center of the Negro population in the United States moved 19 miles North.

49-18-24

Negro farmers and farm laborers for this reason decreased from 56.6% to 36.7% of the working population from 1890 to 1930. On the other hand, Negroes in transportation, manufacturing and mechanical industries, and in business and clerical work, increased in the same period from 10.3% to 29.9%. But they did not become as Washington had hoped, to any great extent, skilled workers and business leaders. Manifestly, this was not merely the result of lack of skill or unwillingness to work. It was partly the result of race

53

prejudice and partly a change in the whole industrial system of the nation and the age of which Booker Washington did not dream.

Discussion and Reading

1. Was Booker T. Washington's plan best for the Negro?

2. What was the real motive for Negro disfranchisement?

3. Does the future of the Negro lie on the farm?

(Consult Washington, "Up From Slavery"; Du Bois, "Souls of Black Folk"; Johnson, "Negro in American Civilization".)

49-18-25

CHAPTER IV.

AGITATION AND LEGAL DEFENSE

The disfranchisement of Negroes was clearly illegal and a nullification of the Civil War amendments. It therefore became after 1876 and down to our own day, a settled plan among Negroes to reassert their political power through systematic appeal on the basic questions of their legal status before the highest tribunals of the land. This was also buttressed by efforts at new legislation which would secure their civil rights. These efforts were carried on by individual action and group movements.

And these groups and leaders were for the most part no clearer than Mr. Washington in their conception of fundamental economic forces and impending industrial changes. Essentially they were advocates of eighteenth century "freedom" and wanted "laissez-faire" and traditional American free competition in work and wage, but without a Color Line.

The earlier court cases which involved the interpretation of the war amendments were brought before the courts by officials or parties who had no particular interest in securing favorable decisions for Negroes. Thus, the Slaughter House cases of 1873 which emasculated the 14th Amendment; the decisions of 1876 which declared the Force Act of 1870 unconstitutional and denied the right of the Federal government to protect its own voters at the polls; and the decision of 1883 which destroyed the civil rights bill; all these cases were not brought by Negroes nor were the cases prepared primarily in their interest.

49-18-22

Unless now the Negro bestirred himself, a legal basis of color caste in constitutional law would be laid. Various conventions and organizations for protection of Negro rights had been held in the North before the Civil War; the conventions of 1830-1836 beginning in Philadelphia; national colored conventions which met in Troy, New York, in 1847 and in Cleveland, Ohio, in 1848; in Cincinnati in 1852. The movement culminated in a great meeting in Rochester, New York in 1853, which laid plans for industrial education and a National Negro Council. Here a dissenting group despairing of justice in the United States, called an Emigration Convention in 1854.

In 1864, a National Convention of Colored Men was held in Syracuse, New York with Frederick Douglass as president.

Interest was now transferred to the South and the political and civil rights struggle there. It was not until after 1876 that the plan of national Negro organization was resumed, first, in the attempts to form a labor organization which resulted in national and state meetings from 1867 to 1871. A National Convention of Colored Men met in Louisville, Kentucky in 1883 and a National League was formed in Boston a little later.

In 1887, T. Thomas Fortune, editor of what is now the NEW YORK AGE, issued an appeal for a national organization and repeated this in 1889. The so-called Afro-American League, afterward changed to Afro-American Council, met in Chicago with 21 states represented in January, 1890. J. C. Price was President and Mr. Fortune, Secretary. The League held another meeting in Tennessee and then died until Bishop Walters revived it in 1898. It met that year in September at Rochester and later in November in Washington. The object of the organization was to investigate lynching, to test the constitutionality of discriminatory laws, to secure civil rights legislation, to promote migration from the South and to encourage organization. It met afterward annually for several years and practically died with a final meeting in St. Paul, Minnesota about 1900. Its weakness was that it consisted simply of an annual meeting without a continuous working organization. The result was that it did little more than meet, organize and pass resolutions. In the year 1905, a new aspect came over the plans for American Negroes for social Reconstruction.

The new disfranchisement laws and the wave of discriminatory legislation, coupled with Mr. Washington's concessions, alarmed the colored people. Particularly the young colored college man began to fear the dictatorship of the Tuskegee machine and the difficulty of expressing even legitimate criticism. This opposition was crystalized by the jailing of Monroe Trotter in Boston for trying to heckle Mr. Washington during a speech at a ~~of the~~ colored church. This was going too far, and while Trotter was much more bitter and outspoken than was necessary, yet he did have a right to talk even though he criticized Mr. Washington. The result was that a call was issued in June, 1905, signed by 59 men from 17 states. In July, 1905, 29 of these men, representing 14 states, met at Niagara Falls and formed the Niagara Movement. The movement grew and in 1906 held a significant meeting at Harpers Ferry. The Manifesto which it sent out was plain and bitter:

~~In 1906, they held another significant meeting at Harpers Ferry and issued a ringing manifesto.~~ "The men of the Niagara movement coming from the toil of the year's hard work and pausing a moment from the earning of their daily bread, turn toward the nation and again ask in the name of ten million the privilege of a hearing. In the past year the work of the Negro hater has flourished in the land. Step by step the defenders of the rights of American citizens have retreated. The work of stealing the black man's ballot has progressed and the fifty and more representatives of stolen votes still sit in the nation's capital. Discrimination in travel and public accommodation has spread, that some of our weaker brethern are actually afraid to thunder against color discrimination as such and are simply whispering for ordinary decencies...

"Against this the Niagara Movement eternally protests. We will not be satisfied to take one jot or tittle less than our full manhood rights. We claim for ourselves every single right that belongs to a freeborn American, political, civil and social; and until we get these rights we will never cease to protest and assail the ears of America. The battle we wage is not for ourselves alone but for all true Americans. It is a fight for ideals lest this, our common fatherland, false to its founding, become in truth the land of the thief and the home of the Slave--a [redacted] by-word and a hissing among the nations for its sounding pretentions and pitiful accomplishment...

"We do not believe in violence, neither in the despised violence of the raid nor the lauded violence of the soldier, nor the barbarous violence of the mob; but we do believe in John Brown, in that incarnate spirit of justice, that hatred of a lie, that willingness to sacrifice money, reputation and life itself on the altar of right. And here on the scene of John Brown's martydom we reconsecrate ourselves, our honor, our property to the final emancipation of the race which John Brown died to make free."

In 1907, the Niagara Movement developed organizational difficulties mainly because Mr. Trotter, its guiding spirit, was despite his courage, not a good organizer. The movement, moreover, met the opposition of influential white opinion which at the time was backing Hampton and Tuskegee. A year later, a lynching occurred at the birthplace of Abraham Lincoln, and Wm. English Walling and his wife, Anna Strunsky, visited the city. ~~pilgrimaged there.~~ Walling wrote a fiery article in The Independent, suggesting that something ought to be done to finish the emancipation that Abraham Lincoln started. Mary White Ovington, Oswald Garrison Villard,

49-18-29

[redacted] and others suggested such a conference to be held in New York on the hundredth anniversary of Lincoln's birth. Thus the National Association for the Advancement of Colored People was born. After this, the Niagara Movement held no further meetings. There was no formal merger, but seven of its charter members became directors of the new organization. Thus out of the impulse of the Niagara Movement, the N.A.A.C.P. was formed and in November 1910 the Crisis first appeared as its organ.

"The National Association for the Advancement of Colored People seeks to uplift the colored men and women of this country by securing to them the full enjoyment of their rights as citizens, justice in all courts, and equality of opportunity everywhere. It favors and aims to aid, every [redacted] kind of education among them save that which teaches special privileges or [redacted] prerogative, class or caste. It recognizes the national character of the Negro problem and no sectionalism. It believes in the holding of the Constitution of the United States and its amendments, in the spirit of Abraham Lincoln. It upholds the doctrine of "all men up and no man down." It abhors Negro crime, but still more the conditions which breed crime, and most of all the crimes committed by mobs in the mockery of the law, by individuals in the name of the law.

"It believes that the scientific truths of the Negro problem must be available before the country can see its way wholly clear to right existing wrongs. It has no other belief than that the best way to uplift the colored man and best way to aid the white man to peace is social content; it has no other desire than exacting justice, and no other motive than patriotism." (First Annual Report, January 1, 1911.)

The work of the N.A.A.C.P. in the succeeding 25 years is well-known. Its greatest triumph has been in the field of legal defense of Negroes and Negro rights. With the help of the foremost legal talent of the nation, it has secured from the U.S.Supreme Court decisions which in principle establish:

1. Recognition of the validity of the 15th Amendment.
2. The unconstitutionality of the "Grandfather"Clauses in Southern State constitutions.
3. The unconstitutionality of residential segregation laws and ordinances.
4. The right of Negroes to sit on juries.
5. The dictum that "due process of law" may be violated by the threat of mob violence.
6. The denial of the right of a state to segregate primary elections by race.

In addition, scores of individuals have been defended, and sustained and the most effective anti-lynching campaign in the history of the country has been carried out,-though not yet to the successful passage of a Federal anti-lynching law.

Though the N.A.C.P. began through philanthropic aid from wealthy liberals, it became in its best years more and more of a Negro supported effort. Contrary to general opinion, the amount of money received from wealthy whites was small, and its withdrawal would have made little difference except at the start of the project. From 1912 to 1927 Negroes were making substantial advance along economic lines. It is no accident that Negro organization especially for self-improvement and defense was at its peak during that period. By 1928, the economic progress of the Negro was beginning to be slowed down by the depression. Philanthropic gifts to Negro education were lessened, the industrial rivalry of white and black labor increased and Negro organizations began to decline in strength as resources and revenues declined. The N.A.A.C.P. and The Crisis were no exception and faced declining income and support. This should not be interpreted as the Negro's unwillingness to fight discrimination and lynching. It was due primarily to the fact that the colored people, economically hard pressed, were unable to sustain the program financially, especially any needed expansion.

46-18-31

From 1910 until the depression, the N.A.A.C.P. was the most effective militant organization in Negro life and its success was unquestioned. Its history, however laid bare two basic facts:- first, white America, even though sympathizing somewhat with the difficulties and handicaps in the path of Negroes, was not ready to grant them anything like substantial equality; and secondly,

56

the difficulties which faced the Negroes in the basic matter of earning a living were still so large and went so deep that the Negroes themselves did not have the power to make effective their demands for their rights.

Discussion and Reading

1. Was Booker T. Washington responsible for "Jim-Crow" legislation?
2. Why was not the Niagara movement more effective?
3. How far should the Negro seek freedom and equality through the courts?

26

CHAPTER V.

WORLD WAR AND DEPRESSION

The situation of the American Negro at the outbreak of the war seemed favorable. His higher schools were increasing in efficiency and the elementary school system in the South, while still bad, was improving. His political power, curtailed as it was, was increasing and beginning to be used with some intelligence in the North and in the Border States. Determined agitation was beginning to decrease noticeably the annual number of lynchings which had reached the astonishing total of 235 in 1892, and began now with some exceptions to fall below 75 a year.

The Negro press began to increase in efficiency and boldness. Negroes had taken prominent part in the great Races Congress held in London in 1911 and begun to visualize the problems of other groups. In the election of 1912, a considerable number of Negroes supported Wilson in an effort to divide the Negro vote and put the Democratic Party and the "Solid South" under obligations to the Northern Negro voter.

The outbreak of the World War did not at first greatly interest American Negroes. In 1914, 49 Negroes were lynched and the agitation to segregate Negroes in residential sections increased. Negro tenants were bombed in Philadelphia. A corporation was formed to segregate them in New York and the Smith-Lever Bill to assist education in the South went through without safeguards for Negro children. In North Carolina, a leading journal was offering prizes for essays on the segregation of Negroes on farms. In the 67th Congress, some 20 bills against Negroes were introduced and in September of 1915, the United States seized Haiti, the very year that Booker T. Washington died. There were 53 lynchings that year and the only favorable occurrence was the Supreme Court decision which overthrew the "Grandfather" Clauses. St. Louis and Dallas, Texas in 1916 decided to segregate Negroes. In May, a Negro was publicly burned in Waco, Texas under circumstances of horrible brutality and in November, in South Carolina, a well-to-do Negro was publicly lynched for demanding the current price for his cotton.

In 1916, in the midst of a controversy between the Methodists as to whether or not they should get rid of Negroes in order to unite with the Methodist Church South, a migration of Negroes North began to take place. It was induced, first, because of an unusual demand for labor in the North due to the stopping of immigration by the World War. And, on

314

the other hand, crop failures in the winter of 1915, together with the ravages of the boll weevil, decreased the demand for labor in the South. A mass of Negroes began to move North, estimated between 250,000 and 500,000 for the year.

February 3, 1917, the United States entered the World War. During that year, a series of events exasperated the colored people. First, came riots and massacres: in July, the city of East St. Louis destroyed $400,000 worth of property, killed between 100 and 200 Negroes and drove 6,000 people out of their homes. In September, colored soldiers of the regular army and citizens broke out into a riot at Houston, Texas. In August, there was trouble at Chester, Pennsylvania and elsewhere on account of the invading Negro laborers.

The South began propaganda. They magnified the riots and bad conditions of labor; they stopped labor agents by requiring high licenses and they used violence in refusing to sell tickets and driving Negroes from railway stations.

49-18-135

Thus, when unexpectedly the United States was swept into the World War, a sudden crisis faced the American Negro. How far could a black man fight loyally for this country and why should he, in the face of disfranchisement and lynching? Persistent rumors of German propaganda among Negroes were flying here and there, perhaps with some small basis of fact, but little tangible result. It would be futile for Negroes to oppose the war and any suspicion of "disloyalty" on their part would be followed by increased discrimination and mob violence, visited particularly on their most helpless classes. On the other hand, there was in the very conduct of the war abundant chance to make this crisis in the national fortunes an occasion for bettering the Negro's condition. If, for instance, they were not included in the draft, this would be a denial of their American citizenship. If they could not be soldiers but only laborers, this would deny their manhood. If they could not be officers as well as soldiers, this would be an attack on their ability. The inclusion of Negroes in the draft and volunteer Negro soldiers. N. A. A. C. P. took leadership and fought for Then the first difficulty came in the matter of officers for Negro troops.

The N. A. A. C. P. was immediately put in curious dilemma. It had been agitating against all discrimination and it first asked for the admission of Negroes to officers' camps on the same terms as whites. This was peremptorily denied. Thereupon, the Chairman of the Association, abetted by some of the other officers, asked for a separate camp to train Negro officers and received in this plan the enthusiastic support of students of

Howard University and other institutions. The result after some hesitation was that a camp was established at Fort Des Moines, Iowa and 700 Negro officers trained.

Then came further delay. According to the draft law, Negro and white troops were to be separated. Were these officers to lead Negro troops exclusively or were there to be white officers mixed with them? Were they to be in one division or ~~indispersed~~ interspersed among white troops? The final compromise, arranged with some hesitancy, was to form a division of Negro troops known as the 92nd Division with white field officers and Negro line officers. A second divsion, called the 93rd Division, was projected, but never actually ~~formed~~ functioned as a division.

Meantime, in the Draft, the difficulties of racial discrimination came up. In the South, despite widespread allegations that Negroes were physically inferior to whites and manifestly were poorer and more needed by their families, a larger percentage of Negroes were drafted than among whites. In the training of drafted troops there was a great deal of difficulty. In the North, single Negroes drafted, appearing in white camps, were refused or tossed about until they could be put in a Negro camp. In the Negro cantonments, especially those in the South, there was a great deal of discrimination and threats of mob violence. As the war wore on, much bitterness was aroused by the treatment of Negro troops in France and the attitude of white officers toward black officers.

49-18-36

The government did considerable to counteract these difficulties. It called together the editors of the Negro press; it appointed a representative of the Negroes to consult with the Secretary of War. He had no power but he could bring things directly to the ear of the Secretary. There was even a plan to put one or more Negro officers in the Intelligence Service, but sudden caution stopped this. On the whole, however, the conduct of Negroes led mainly by the N. A. A. C. P. and other organizations, resulted in giving the Negro a better status during the war, with black officers over his troops and with some chance to show his prowess. It was, however, in his services as laborer that he did the greatest work in the war. His stevedore units made extraordinary records in the movements of goods and did brave work behind the lines. ~~In the United States, the Negroes rushed North to take the place of drafted men and of skilled labor. They met difficulties, riots broke out, but the economic status of the Negro was distinctly better.~~

These matters occupied the attention of Negro leaders, but beneath all this There were vast changes in the economic condition of Negroes to which they gave but passing notice.

(29) 316

First came the northward migration. Before 1914, not more than 10,000 Negroes a year were going North because of the competition of foreign emigrants. The addition of emigrants from abroad each year for 10 years preceding the war was equal to the entire Negro population of the North and this fact made the Negroes unimportant to trade unions who kept them out. ~~Foreign laborers competed with Negroes as laborers and servants.~~ Since 1820, 36,000,000 European immigrants had come to the North and industries had absorbed this common labor. In 10 years, from 1900-1910, over 7,000,000 immigrants arrived. The World War brought sudden change. Immigration was checked and new industries established because of the demand of war. Later, legislation restricted immigration to a 3% quota and finally to a 2% quota based on the census of 1890. As a result, Italy, Austria, Hungary and Russia, which in 1910 were sending 600,000 a year, were reduced to less than 6,000. ~~Between 1915 and 1928, 1,200,000 Negroes moved from the South to the North. What work did these Negroes find?~~

Ira De A. Reid says: "Before the World War Negroes could not get into industrial positions. European immigrants were used. This immigration was suddenly checked. The demand for labor was high and the Negro was most available. Labor agents began to bring Negro workers into Northern industries in great numbers. Unskilled workers were especially in demand in the steel and iron industries and building construction, in the stock yards and for road maintenance and construction on railroads. In many cases, these men were brought in as strikebreakers and between 1915 and 1928, 1,200,000 Negroes came from the South to the North. Now for the first time, the Negro had to be considered in the problems of Northern capital and labor. The United States Department of Labor reported a 34% increase in skilled labor among Negroes and in some cases this increase went to 186%. In Pittsburgh, Negro steel and iron workers were 100 in 1910 and 16,900 in 23 plants in 1923. The Ford Automobile plant employed 11,000 Negro workers. Chicago employed Negroes in iron and steel and in the packing industries."

The first result was physical conflict. White workers threatened to quit if Negroes were employed and many did. Southern whites were imported to Northern mills as foremen. Many trade unions began to seek Negro members, but Negroes were not always willing to join. There was much discussion as to the efficiency of Negro labor. Came the bitter year, 1919.

49-18-32

"Serious mob outbreaks against Negroes and clashes between the races were reported from 26 cities. The most spectacular of these outbreaks and riots were those occurring in Washington, D. C.; Chicago; Omaha, Nebraska; Knoxville, Tennessee (the latter two were in reality attempts at lynching which precipitated the race riots which followed); Longview, Texas (also an outgrowth of a lynching); and the widely heralded 'uprising against whites' at Elaine, Phillips County, Arkansas. Serious riots occurred also at Charleston, S. C.; Norfolk, Va.; Philadelphia and Bisbee, Arizona.

"Six persons were killed outright in the Washington riots, from July 19 to July 23. These riots were begun and carried on by uniformed soldiers and sailors. Fifty persons were seriously injured and a hundred or more less seriously wounded. Order was restored only by the intervention of United States troops." (Tenth Annual Report of the National Association for the Advancement of Colored People, 1919, p. 34.)

During the war, union labor was triumphant. The President of the American Federation was on the Council of Defense and the War Labor Board. He pledged the co-operation of the unions to win the war. While on the one hand, the unions promised not to strike, on the other hand, the government gave recognition to collective bargaining, the 8-hour day and a high standard of living. Union membership increased between 1917 and 1920 by almost 2,000,000.

49-18-38

Union labor had not welcomed Negro workers since the collapse of the Knights of Labor. The new American Federation of Labor passed through this evolution: in 1881, it declared "the working people must unite and organize irrespective of creed, color, sex, nationality or politics." This was re-affirmed in 1897 after opposition; but in 1902, it was voted that separate charters might be issued to Central Labor Unions, local unions or Federal Labor Unions composed exclusively of colored members. This, in fact, recognized the legality of excluding Negroes from local unions and City Central Labor bodies.

From 1910-1914, the Federation allowed organizations which excluded Negroes to affiliate with them, but hired 3 Negro organizers and proceeded to organize separate local and Federal unions. When Negro workers in the North began to increase between 1916-1920, the matter of organizing was pushed in the conventions of the A. F. of L., but no machinery was provided.

As a result of all this, the A. F. of L. had before the depression less power and influence among the Negro group than it did at any other time.

Most Negro union members are in the Hod-Carriers' Union, the carpenters, the bricklayers and masons, the plasterers, the longshoremen, the international seamen, the United Mine Workers and the Ladies' Garment Workers.

Reid reports 3,523 Negro members in American trade unions in 1890; 32,769 in 1900; 57,662 in 1910; 61,032 in 1926-1928. To this last number, if we add independent Negro unions and organized Negro workers, the total would be 81,658.

Reid says: "Today 24 national unions exclude us from their ranks and proscribe us in our employment."

Monroe N. Work shows that the World War sharply divides Negro population trends. In the period before the World War, the trend of the Negro population was determined mainly by the demand in the South for labor in the production of staple crops. In the period since the World War and up to the present depression, the trend of Negro population has been mainly determined by demands by industry for Negro labor, particularly in the North.

As a result of this, the black belt areas;--that is, counties in which half or more of the population were Negroes increased from 244 in 1860 to 300 in 1880 and then decreased to 189 in 1930. With this has come an extraordinary urbanization of population; 80% of the Negro population was rural in 1890; 73% in 1910 and only 56% in 1930. In 9 main metropolitan regions in the North, over 2,000,000 Negroes were living; 1,500,000 more in metropolitan districts of the South. In occupation, the change has been great. During slavery, the Negro was chiefly engaged in agriculture and in domestic and personal service. As late as 1890, of the Negro population 10 years of age and over, 56% were in agriculture and 31.2% in domestic and personal service. On the other hand, in 1930, 36.7% were in agriculture, 28.6% in domestic and personal service, 29.2% in manufacturing and mechanical industries and trade and transportation.

This indicates almost an economic revolution. The most striking changes being the decrease of the farmers and servants, the increase of those in the professions, trade, transportation, manufacturing and mechanical industries. If we take up the manufacturing and mechanical industries, we find that the increase in building trades from 1890-1930 was over 500% and the cloth and allied industries 270%. The food in the allied industries 473%, lumber and furniture industries, 418% and the metal industry over 1,000%.

The building trades and the metal industries showed the largest relative increase. The increased effort to earn is shown by the percentage of population 10 years of age and

over who are gainfully occupied. For the entire population of the United States this percentage changed but slightly between 1890-1930. For the Negroes, it increased from 57.6% to 59.2%.

When the war was over, the government largely withdrew its support of labor, There were a number of strikes and employers began to push for the open shop. They began to to undermine the labor unions by company unions, stock sales to employees and profit-sharing. In the steel and coal strikes, public opinion upheld the steel trust and the failure to organize Negroes in the industry helped to break the strike. In the coal strike, court injunctions were used to break down the resistance of labor although in this strike numbers of Negroes were members of the unions. By 1923, therefore, labor had lost most of its war gains.

Rising business prosperity, due to an extraordinary profits psychology, took place, which swept up to 1929, but labor did not gain equally. Even at the peak of prosperity, there were many workers who had lost their jobs because of new machinery and efficiency schemes. Membership in the unions declined and almost disappeared in the steel and automobile industry and the textile industry. The miners' union was torn with internal strife. Then came the depression with its vast unemployment, reduction of wages and standards of living. Masses of men were competing for the few jobs that remained.

Certain basic difficulties had appeared before the war. The machine in the great industries, like coal, petrolem, steel, textiles, automobiles and railroads which are the chief industries of America, was replacing human labor, not only skilled labor, but even that of digging and lifting. The coal industry was collapsing from waste, exploitation and competition. The oil wells were run largely by machines. The automobile industry, especially the Ford plant, began to use Negro labor and Negroes got into the steel mills, both South and North, as semi-skilled and skilled laborers. But the Southern textile industry was practically monopolized by whites, a part of the tacit understanding which was one of the earliest results of the Booker Washington compromise.

Occasionally the struggle against Negro labor took the form of intimidation and, in some cases, of actual violence. The most notable recent illustration was a series of assassinations

449-18-40

320

Chapter V.

of Negro locomotive firemen in Mississippi and Louisiana, evidently with the purpose of running all Negro trainmen off their jobs. Idleness on the part of both races has been conducive to unrest, ill temper, crimes against property and other irritating conditions. Certain efforts to lead Negroes to revolutionary violence have fomented mutual distrust, fear and potential hostility and have developed a number of threatening situations.

From the time of Emancipation down until the World War, the Negro had a monopoly on certain jobs in the South that were poorly paid and involved menial service. As Alexander says, it used to be true that "A Southern white man will curry a mule but he will not brush a gentleman's coat. He will drive an ox wagon, but he will not act as coachman." These so-called Negro jobs were the jobs of servants and laborers, but they were fairly permanent and the workers received certain perquisites in food, in clothes and had personal relations with employers that gave them a degree of legal and social protection. The money which built homes and churches for Negroes, educated Negro children and saved sums for capital investment, came largely out of this wage.

Gradually, however, toward the time of the World War and markedly thereafter, this situation changed. In most Southern hotels, the sons of poor whites are today the bell boys and their daughters — the waitresses. This class has pressed into the cities and competes with the Negro as a porter, a garbage mover, a newsboy and a day laborer. It became more and more definitely believed that no Negro should have a job as long as a white man was unemployed and the division of labor by race almost completely disappeared.

The white laboring class in the South was competing for Negro jobs and pushing Negroes from nearly all lines of work, except farming and domestic service. There was severe competition in agriculture and Negro migration to cities was holding down wages and increasing the opposition of white labor.

On the other hand, the change in industrial techniques, the widespread use of machines and mass production, made the effort of the industrial schools to train skilled labor among Negroes extremely difficult, while the situation of the farmer, both white and black, in the presence of new problems of labor, machinery and markets, made the advance of the Negro farmer almost impossible. It was thus that by the time of the World War, the Washington

14-81-64

Chapter V. 321

program for the economic emancipation of the Negro had met insuperable difficulties. The small black capitalist or capable college graduate found no place or welcome to the vast machine which controlled capital and credit and directed industry. He could only hover on this fringe of exploitation which the whites neglected, using color discrimination as a sort of protective tariff for his [redacted] lack of capital and training.

In the South, white organizations, like the Blue Shirts of Jacksonville, Florida, the "Black Shirts of Alabama", and the revived Ku Klux Klan and "Sons of Justice" of Georgia, tried to drive Negroes out of jobs.

A basic
~~The great~~ difficulty which Negroes encountered was impossibility of promotion to any positions of authority or supervision and the practical impossibility of technically trained Negroes in the higher lines of engineering ~~w~~ get-ting any work. The engineering schools themselves discouraged Negroes from taking the courses because of this. In business, Negroes made repeated efforts, but there again the great concentration of capital and credit, the severe competition brought by chain stores and similar enterprises, the tremendous cost of advertising, was the undoing of most Negro enterprises. Taking advantage of the discrimination against Negro risks, several large Negro insurance Companies were started, but the depression brought the failure of two of the largest and while the others are maintaining themselves and in some cases with considerable success, they are more or less at the mercy of white investment concerns. Twenty-one Negro companies had in force in 1930 policies aggregating $260,000,000 and assets amounting to $18,445,000.

49-18-42

These difficulties more particularly
~~This was~~ illustrated in the case of the banks; the Binga Bank of Chicago was a strong institution, but when the pressure came, it was among the 200 small banks which the larger banks of Chicago crushed and it was more easy to sweep away this colored bank than most of the white banks. An effort was made to start a Negro chain of grocery stores, but it began at a time when it had to depend upon wholesale dealers who were themselves being pushed to the wall by the larger chains. It was impossible during the depression for ~~the~~ This Colored Merchants Association chain ~~C.M.A. enterprises~~ to break through this cordon of competition.

In education, Negro colleges increased in number and stability. In ten years, the enrollment had increased from 5,000 to 20,000, and the total income of these colleges was in 1931, $9,317,764. On the other hand, the public schools and high schools which were the basis of this pyramid, are not strong. Rural schools have been closed or cut down by the depression and the city schools seriously curtailed in efficiency.

While the crass discrimination in teachers' wages and buildings and equipments as between whites and blacks has continued, and even widened.

The whole economic situation of American Negroes has thus been greatly complicated by the present depression. In almost every city in the country, the rate of unemployment and the amount of dependency among Negroes has, for the past three years, been greater than among white people. This has meant the loss of homes, disappearance of savings, bankruptcy of Negro business and further handicaps all along the line. When better conditions come, the masses of Negroes will face the task of beginning again to lay foundations for their economic life.

Discussion and Reading

1. Should the American Negro have fought in the World War?

2. Should he have submitted to a separate draft and separate camp for officers?

3. How was the Negro soldier and stevedore treated?

(Consult Emmett Scott, "The American Negro in the World War"; Hunton and Johnson, "Two Colored Women with the A.E.F."; Heywood, "Negro Combat Troops"; Niles, "Singing Soldiers"; 10th Annual Report of the National Association for the Advancement of Colored People, 1919".)

44-18-43

CHAPTER VI.

THE NATIONAL RECOVERY PROGRAM

In such depression, the National Recovery Program offered a single ray of hope.

But the real basic problem of the New Deal was whether an effort was going to be made to restore former prosperity or whether a more fundamental effort was to be put forth to change the economic structure of the nation in essential particulars. In the first case, there was not much hope for the Negro. He simply could look forward to being "restored" to a situation in which to say the least his prospects for economic development were growing less and less. If Southern agriculture was to be put on its feet by government aid, the Negro would remain mainly the tenant-farmer and casual laborer. If the great industries were to be restored by the same means, the Negro would still be the labor reserve with uncertain employment and low wage; and the restoration of [redacted] banking and credit meant comparatively little to a poverty-stricken horde of laborers.

1-19-44

On the other hand, if the relation of industry to labor in general was to be overhauled and readjusted; if the whole relation of the farming industry to the other industries of the land and the world was to be carefully studied and readjusted with regard to prices, methods, machines and markets; if unemployment was to be eradicated by shorter hours, a minimum wage, the forbidding of child labor and old-age security; if new housing and other public works were to be inaugurated; in fine, if these and other similar reforms were going gradually to change the basis of American industry, then as Americans, [redacted] Negroes, barring gross discrimination, were going to have a new chance in industry.

The National Industrial Recovery Act was designed to raise the buying power of workers in industry and employ those that had lost their jobs because of the depression. This would be accomplished by increasing wages and changing the number of hours worked. This would mean some increase in the price of products, but the increase in cost would not be as great as the increase in wages.

It is not easy to say with accuracy just what the effect of the New Deal has been on the American Negro. In a large way, however, we may be sure of certain things. The Negro felt the coming depression as early as 1927 and by 1929, at least

THE NATIONAL RECOVERY PROGRAM

300,000 Negroes in the industries were unemployed. This unemployment has increased until there are from 30 to 60% more Negro workers in proportion to their numbers, unemployed than white workers. Moreover, when the Federal government attempted to deal with unemployment among Negroes there were certain developments that had to be expected. The representatives in Congress from the South elected on a basis which includes the Negro population and yet practically excludes Negro voters, form the most substantial ~~bulk which~~ support of the present administration. The House leader of the Democratic Party comes from Arkansas. The Vice President is from Texas and the Speaker of the House is from Tennessee. This means that as a matter of practical political strategy, the President and his advisers could not affront the South. This not only explains the failure of the anti-lynching bill which commanded a majority in the Senate, but it also explains some peculiar results of the New Deal.

The execution of all the main measures of the New Deal was left to the states, which meant that in the South the race pattern had to be followed in the matter of wages, relief and public work. Even in the North, the administration dealt in labor matters primarily with the American Federation of Labor. Twenty-four of the constituent international unions in this organization exclude Negro workers either by direct provision in their constitutions or by the invariable action of the local bodies. The result of all this was that in the very midst of the effort to raise wages and relieve unemployment there existed a large body of laborers whose position either could not be bettered at all or had to be ameliorated with compromise and finesse.

Let us note some effects of this on Negro labor.

The first blow to Negroes was that farm laborers and servants were not to be subject to codes. These form about two-thirds of the Negro workers of the South, ~~and~~ 60% of the Negro workers in Georgia, and Alabama, and 80% in Arkansas, South Carolina and Mississippi. As Ira Reid said:

46-19-2

THE NATIONAL RECOVERY PROGRAM

> "Three million Negro workers, more than half of the total number of Negroes who must labor for their livelihood, will not be covered by the industrial codes now being formulated by the NRA.
>
> "These three million black workers are the backbone of the Negro consumer market. For them there is no immediate rise in wages. For them an immediate rise in prices will mean additional insecurity and suffering. Furthermore, in certain areas where there have been uniform minimum wages established for white and black workers, employers have replaced Negroes with whites rather than pay them the same wages."

The first code of fair competition was that of the cotton textile industry and took effect July 17, 1933. It provided a minimum wage for all workers in the cotton textile industry except those occupied as outside workers or cleaners. The wage was $12 a week for the South and $13 a week for the North and the maximum hours of work was 40 hours, except for the "outside workers and cleaners." Of the 14,000 Negroes in the industry in 1930, 10,000 were employed as outside workers and cleaners. This meant that for them there was no increased buying power and no new jobs. Objections were made to the code on the ground that wage increase should be parceled out to all workers in the industry and that the unemployment among the Negro workers was in every respect more serious than that among the whites. The only answer to this was that the President in approving the code made it mandatory that the textile industry should establish minimum wages and maximum hours of service for the exempted classes.

49-19-3

December 27, 1933, an executive order providing that the minimum weekly hours for outside workers and cleaners should be 44 and that they should be paid a minimum wage of 75% of that set in the code. In the South, the minimum wage would thus be $9 a week for 44 hours' work. Also, the entire industry was put on half-time, which meant, of course, that the minimum wage was cut in two.

A colored investigator made a trip to the South in November, 1933. He visited more than 200 mills and interviewed workers trying to find out what the situation was among these Negroes. His conclusions were that there was widespread unemployment due to poor business conditions and labor discrimination; that Negroes had been discharged in numbers of cases and their places given to whites; no mill work and very little domestic work was available to Negro women, and the unemployment of white mill

families had seriously decreased the demand for domestic labor.

The relief funds in these localities were small and the distributors local white persons; the relief agencies, therefore, attempted to supply to the full extent the needs of white families often before caring for Negro families. The communities where Negro workers lived were unhealthy and in ghettoes with bad water supply and usually no inside plumbing. Family after family was in debt to the company stores, due not only to their low earnings, but to the excessive prices and there was no escape from this. Negro labor was not organized and the result of the code was in some cases to reduce the wages of Negroes rather than increase them.

In the laundry code, which affected 30,000 Negro women, a differential wage was established giving Northern workers a minimum of 17¢ an hour and Southern workers a minimum of 14¢ an hour. This was finally modified so as to fix Southern wages at $1 a week below the national average.

Such decisions brought up the whole question of difference of pay between white and Negro workers. This has been customary in the South since emancipation and has been defended on various grounds: the Negro was supposed to have a lower standard of living and to be able to live on less; and on the other hand, the white man not only demanded more, but "in the interests of race equilibrium ought to have more." On the other hand, the lower Negro wage brought down and kept down the wages of the whites. Nearly half the laundry workers in the South were white, yet their minimum wage was fixed by the theory of what Negroes ought to receive. In other codes, these same differentials were made. Workers in iron and steel received a minimum of 40¢ an hour in Pennsylvania, but of 27¢ an hour in Alabama. Workers in the fertilizing industry got 40¢ an hour on the Pacific Coast and 25¢ an hour in the South.

In the lumber code there came another type of discrimination. Twenty-three cents an hour was established for the Southern branch of the industry where Negro labor was used and 40¢ an hour for the North and West where white labor was used.

Moreover, the word "South" is flexible. In some industries, it included 16 or 17 states and in others, 9 or 10. Possibly the number of states included depended upon the extent to which Negroes were working at particular industries; although this cannot, of course, be proven.

449-19-4

THE NATIONAL RECOVERY PROGRAM

In the tobacco industry where a large number of Negro employees were at work, there was for a long time no code at all, due to the disinclination of this prosperous industry to pay its workers, and particularly its colored workers, a living wage. In the contractors' code, the minimum wage which was set could be evaded by provisions which did not let the minimum apply to wages settled in the past by Federal consent.

A typical case that came early to notice was that of a garment making company in Arkansas which employed 450 persons, of whom 200 were colored women. In flat defiance of the code, these women were paid $6.16 a week instead of $12 a week. Finally, rather than pay the increased wages, all of the women were dismissed and long continued effort failed to get them a refund of back pay due. When finally the courts decided that nearly $7,000 in back wages must be repaid, a decision of the United States Supreme Court gave this bonus to the employers.

Even the low rates established brought protests and considerable discharge of Negro workers by employers who refused to pay Negroes wages equal to whites in the cases where this was required. Many employers of labor in the South began a determined drive for differential wages for Negroes in all lines.

The Philadelphia Tribune, a Negro weekly, reported equally bad conditions in that city, as "the forty hour week and the minimum wage scale of $12 to $15 per week are raising havoc with Negro workers." Businesses that used Negro labor, because it would accept longer hours and less money, were displacing it with white labor, since a higher wage scale had become obligatory.

The Baltimore Afro-American cited instances in Maryland and Virginia where white employers discharged colored workers, rather than pay them the minimum wage of $15, and placed white workers in their places. It insisted that the employers, who justified their action by saying that Negro workers were not worth $15 a week, were violating both the letter and the spirit of the National Recovery Act. It held out the hope, however, that with the creation of millions of new jobs, the black workers would eventually find new openings to take the place of those lost.

Some white persons, North and South, joined in the general protest. The

49-19-5

THE NATIONAL RECOVERY PROGRAM

Norfolk Virginia-Pilot, a white daily, appealed to the moral sense of the white employers in the following fashion:

> "If in the pre-code days an employer made use of Negro workers because he could hire them at low wages, there is a moral obligation on him to retain their service now that a national code requires that they be paid a little more money. It would be a grim and tragic commentary on the national recovery effort if a business and industrial regimentation directed to lifting the people out of depression should operate to plunge the most depressed of them in a worse depression still."

A white man writing in the Nashville Daily Tennessean in October, 1933, declared that Negroes of Nashville and southern cities were not being benefited by the NRA but that Negro help was being replaced by white; that the Negroes of Nashville had been given an economic set-back by the NRA. In October, 1933, the Associated Negro Press declared that Memphis employers were discharging Negroes [redacted] wholesale because they were not worth $14 a week. In one county of Georgia where the population was 40% Negroes, 300 Negroes who were receiving 50¢ a day, were discharged because the code required 30¢ an hour. In Birmingham, white retail grocers drew up a code of $6 a week for Negro porters and delivery boys. In Arkansas, white farmers sent their sons to the CCC where they received $30 a month and replaced them with Negroes at $10 and $15 a month.

Beyond the letter of the law, undoubtedly, many Negroes consented to wages lower than the minimum and went on working in order to keep their jobs. On the other hand, there were cases where they shared in the benefit of shorter hours and increased wages. In some instances, they were displaced by white workers: for instance, in Columbus, Georgia, large numbers of Negroes lost jobs to whites. In mills, garages, department stores, filling stations and small businesses, a hundred or more Negro workers were displaced. At Montgomery, Alabama, colored girls in the cotton fabric factory lost their jobs. A large factory in St. Louis employed white women instead of 75 colored women.

However, the greatest loss of Negro labor under the NRA was the discontinuation of marginal work. Small businesses closed, small grocery stores stopped delivery service, and office boys and casual workers were laid off. Bootblacks were told that they were

not hired by the job, but that they rented the equipment and were in business for themselves. Sometimes where wages were increased, most of the increased wage was paid back to the employer for food and "breakage." In the lumber industry, shorter hours were accompanied by a forced increased output.

An official news release from the Department of Commerce says:

"A special word should be said concerning operations of the National Recovery Administration in connection with Negro employees in the coded industries. A great deal has been said about the displacements of Negroes from jobs; however, investigations that have been made so far indicate that there have not been so many proven cases of displacements exposed as there have been cases of violations of code wages. This is serious, but no more serious than the fact that these wage differentials are a continuation of differentials that have been in vogue for sixty-five years and constitute one of our national interracial problems that call for untiring and vigilant effort towards adjustment. It is encouraging to know, however, that investigation in a limited number of industries indicates that the 'spread' or the gap between Negro and white wages has tended towards a narrowing process, i.e. to become less."

Again, a peculiar difficulty with regard to the Negro worker arose in the project to manufacture power in the Tennessee Valley. Within the 112 counties and 4,000 square miles of the area in 7 states are 2,335,907 whites and 268,048 Negroes. These Negroes are mostly in Northern Alabama and West Tennessee and only a few of them in Virginia, North Carolina and East Tennessee. In this region are coal, phosphates and other minerals with abundant plant life, excellent climate and the possibility of generating 3,000,000 horse power of energy. The TVA is not merely to build dams and transmission lines, but also " to provide for the agricultural and industrial development of said Valley," and to "foster an orderly, physical and social development of such areas." What now has the TVA done with regard to the Negro?

After some initial difficulties, the TVA has been employing unskilled Negro labor at something like its proportion in the population, but when it comes to the main work of the project, as for instance, in the planning of the model town of Norris, these 450 homes built and rented by the Federal Government, were not open

to Negroes. There is no objection or legal obstacle to Negro towns which would share in the cheap power and opportunities of the farmer. Yet here again comes the problem. Should Negroes accept the principle of segregation, with almost legal sanction, for the sake of possible industrial development, or should they insist upon being allowed to enter such towns as Norris?

The proposed subsistence homesteads involved similar problems. With the present attitude of Americans, it was simply impossible to conceive that in the South or in most places of the North, Negroes were going to be welcomed in the new towns or subdivisions laid out. On the other hand, as I took occasion to say at Swarthmore, in 1933, subsistence homesteads were a necessary present step to help unemployed Negroes ward off starvation; and that through them there could be begun an inner co-operation for the Negro group between farmers and industrial workers. But no sooner had proposals been made for Negro subsistence groups than the N.A.A.C.P. and the Negro Joint Committee for Recovery vehemently opposed the move. They wanted no such homesteads organized for Negroes and they were not even willing that Negroes should themselves organize such homesteads. They congratulated themselves when homesteads were planned with no mention of restriction, although they knew that this meant exclusion by local administration. Against independent, self-governing Negro projects, they set a stern, unyielding countenance.

The result was that nearly all the various projects for Negroes were held up. This was called a triumph of the anti-segregation policy of some Negro leaders, when in fact it was nothing but a triumph of the policy of giving prejudice a freer hand in starving American Negroes.

Despite internal differences of opinion among Negroes, 3 subsistence homesteads in the South were agreed upon in Alabama.

At Tuskegee "three projects are under way here, one involving a Self-Help Cooperative Association in which 60 colored farm families have combined to develop a cooperative farm community a few miles from the school. Sixty-seven thousand dollars capital has been granted by the FERA. Another is the Tuskegee Homestead Unit which comprehends three different projects; one near the school, another at Lowdnes County, and still another at Montgomery. The third is the 'Tuskegee Planned Land Use Demonstration'

THE NATIONAL RECOVERY PROGRAM

in which approximately 600 Negro farm families residing in Macon County [redacted] will be affected. As approved, the plan calls for the expenditure of $200,000 to purchase of some 60,000 acres of sub-marginal and resettlement lands."

¶ The Emergency Housing Project brought the same difficulty about race segregation. Housing areas for Negroes, North and South, are notoriously bad and unsanitary. When the housing project was first proposed, the colored people of Atlanta came forward and secured a site near Atlanta University where $2,100,000 is to be furnished to provide 617 living units for Negroes.

Projects for slum clearance were eventually planned in eight cities: Atlanta, Cleveland, Detroit, Indianapolis, Montgomery, Chicago, Nashville, Washington, D. C. and New York. Whether all of these projects can be finished or not depends largely upon the future decisions of the Supreme Court.

¶ In the Public Works administration, the Federal Government has usually insisted that there be no discrimination, but they had to deal with the problem of local administrative policies. Usually, what happend was that Negroes were employed in the unskilled jobs, but had no chance for skilled work.

The relief program of the New Deal can be illustrated by these facts: in 1932, $300,000,000 was made available for the states and territories to be used for furnishing relief and work relief to native people and relieving hardship resulting from unemployment. Not more than 15% of this sum could go to any single state and the money was lent to the states with interest.

Five hundred million dollars was made available under the relief act of 1933 and was to be furnished to the states as gifts. Half of the fund was available at the rate of $1 to every $3 of public relief furnished in the state during the preceding quarter; the second was a discretionary fund.

In October, 1933, there were 2,117,000 Negroes in families receiving relief, or 17.8% of the total number of Negroes in the 1930 census. In January, 1935, the FERA reports 3,500,000 Negroes in families receiving relief, or 29% of the toal 1930 population.

There is no doubt but that the portion of American Negroes on the border line

6-11-9

of starvation was dangerously large and the figures of relief do not reflect all the facts. For instance, in Mississippi, where the white and colored population is about even and the Negroes without doubt in the greatest economic need, only 9% of the Negroes were receiving relief, as compared with 13.7% of the whites. On the other hand, in cities where Negroes were getting a fair deal, the proportion of them on relief shows their desperate situation: in New York City, the Negroes, forming less than 5% of the population, received in 1933 13% of the relief. In Detroit, forming 7.6% of the population, they formed 29.6% of the relief load.

In the whole Federal Relief Administration, of the total money expended between May 23 and December 31, 1933, 60.6% was furnished by the Federal Government, 14.2% by the state, and 25.2% by local authorities. The way in which the South has evaded responsibility and relied upon the Federal Government is shown by the fact that in 10 Southern states, 95% or more of the relief funds have come from the Federal Government.

49-19-10

Mr. Arthur Raper of the Commission for Inter-Racial Co-operation, reports details with regard to the state of Georgia:

> "Taking the state as a whole, three racial differentials stand out: first, in nearly half of the counties in August and in more than half in March, a larger proportion of the total white population than of the total Negro population was on relief. This is especially meaningful when seen in the light of the fact that the white people own practically all of the lands and other productive properties in nearly every county in the state, whereas, the Negroes generally account for an excessive proportion of the propertyless and poorly remunerated agricultural laborers, farm tenants, casual day laborers and domestics; second, in eight per cent of the counties, the amount spent upon the white person for direct relief in March exceeded the amount spent upon the Negro; third, of the 1,214 CWA teachers in Georgia in mid-March, 1934, only 204, or 16.8 per cent were Negroes, despite the fact that in 1930 the Negroes accounted for 36.8 per cent of the state's total population and 77.5 per cent of the state's total illiterates had no white CWA teacher, while 72 counties, with a total of 56,877 Negro illiterates, had no Negro CWA teachers; in the 154 counties with white CWA teachers there was one teacher to every 45 white illiterates, while in the 87 counties with Negro CWA teachers, there was one teacher to every 521 Negro illiterates."

Not only was there this discrimination as to the number of families given relief, but much discrimination in the South as to the amount given each family. For instance, in Jacksonville, Florida, in October, 1933, there were 5,493 white families on relief and 15,175 Negro families. Yet the Negro families got 45% of the relief and the white

THE NATIONAL RECOVERY PROGRAM

families 55%.

In the matter of schools, the Emergency Federal Aid follows the same pattern as the states were accustomed to. The money was allotted to the state and spent as the state decided. Georgia, for instance, despite the fact that colored children formed 39.1% of the school population, spent in 1929-1930, $23,000,000 of state money for schools and of this $21,000,000 went to the white schools. In 1933-1934, the Federal Government granted to Georgia $4,981,881 for education, and of this $4,338,148 or 87.3% went to white schools.

Not only was there this discrimination in the distribution of the Federal funds, but in a large number of cases, white teachers were designated to teach colored children despite the fact that colored teachers were largely out of work. The government was finally compelled to send out a memorandum on this subject saying that Negro teachers should always be employed for Negro pupils in states maintaining segregated schools.

During the year 1935, 2,780 colored students were given employment under the FERA in colored colleges in 20 states. They were paid in all $377,145 for repairs and equipment for school buildings and equipment for athletic and recreational facilities in connection with schools and playgrounds.

In the Civilian Conservation Corps, there were early in 1935, 14,858 in the all Negro camps and a few in white camps, out of a total of 370,000, or about one-half the Negroes proper proportion.

A part of the far-reaching plan of the Roosevelt administration was not only to restore normal working conditions, but to provide for the future. The Committee on Economic Security, established June 29, 1934, was assisted by an Advisory Council, but no Negro had a place on that council, nor so far as can be learned, was the advice of Negroes sought in any way.

The Wagner-Lewis Bill for social and unemployment insurance expressly eliminates domestic and agricultural workers, thus leaving 15 out of 23 Negro workers unppovided for. It will at the same time allow individual states to enact almost any type of discriminatory legislation so far as races are concerned.

49-19-11

THE NATIONAL RECOVERY PROGRAM

George E. Haynes pointed this out January, 1934 in the hearing on the Economic Security Bill. He argued that unless there was expressed provisions in the bill prohibiting discrimination on account of race and color, that Negroes could receive less compensation than whites and no minimum wage need be set upon which the earnings taxes were based. Appropriations from the Federal Treasury were to be given to the boards in the various states with no conditions ~~as to~~ eliminating discrimination in their distribution.

44-181-2

CHAPTER ~~X~~ VII

(43)

THE BLACK FARMER

The most vital matter which the New Deal has touched so far as the Negro is concerned is the agricultural situation. More teaching and propaganda has been used to encourage and force the Negro into agriculture than in any other matter. It was the chief burden of Mr. Washington's program. It was long the chief object of ~~Howard~~ Hampton and Tuskegee and the various state agricultural schools. It has been encouraged by the national government and by all of the philanthropic agencies.

On the other hand, the Negro farmer has been terribly handicapped. He was emancipated practically without land and capital. The little land actually given him was all taken away after an astonishing breach of faith on the part of the government for the attempt to make ~~him~~ the Negro a peasant-proprietor by giving each Negro family 40 acres was defeated by the greed of Southern planters and the stinginess of Northern manufacturers.

Notwithstanding ~~this~~ by thrift and private effort, landholding among Negroes increased and the farm attained some prosperity. ~~This was again negatived~~ But these gains were cancelled out not only by the world-wide subjection of agriculture to industry, but also by lynching and lawlessness, especially in the small towns which dominated the country districts.

Negro landholding reached its peak in 1910 when there were 218,467 Negro (including other colored) landholders in the South owning about 16,000,000 acres of land. The number of owners dropped a little in 1920, and in 1930 to 182,019 holding 11,478,898 acres. In 1935, Negroes lost another million acres and the value of their holdings between 1930-1935 decreased from $339,242,651 to $207,932,597. In 1920, nearly 24% of the colored farmers owned land, and in 1930, this had dropped to a little over 20%.

44-81-44

The Agricultural Adjustment ~~Authority~~ Administration by its cotton crop control program closed foreign markets to this greatest export crop and gave it over to cotton producers in other lands, and on the other hand, it increased the misery of the sharecroppers and led to bloodshed in Arkansas and elsewhere, because the planters dominated the execution of its policies in the South and ~~Wallace~~ the Secretary of Agriculture was so afraid of the Southern contingent in Congress that he suppressed ~~the~~ one report of his own investigator.

216

A government spokesman says:

"Probably the most difficult governmental service, to analyze from the viewpoint of the Negro, is that of agricultural adjustment. Negro farmers, of course, have had access to all of the benefits offered, but because of the large proportion of Negro tenant farmers many of these citizens have been deprived of their rights through unscrupulous landlords who have schemed to appropriate for themselves the benefits of land rental and reduced acreage to the exclusion of their tenants. This practice the government discourages and seeks to prevent. However, Negro farm owners generally have taken advantage of their privilege of securing agricultural loans and have cashed in on cotton acreage reduction in the same way that other farm owners have exercised their options. As a whole, government officials report that the credit record of the Negro farm owners has been highly commendable."

~~In the Agricultural Adjustment Administration there is no Negro representative, except a few colored men employed as messengers, porters and card punchers.~~

A Commission of Three, consisting of W. W. Alexander, Charles S. Johnson and Edwin R. Embree, has for the past year been working on problems of the Negro in the emergency and the recovery ~~administration~~ programs financed by a special grant from one of the New York foundations. One of the major efforts of this Commission was to explore the Southern farm problem. ~~Starting~~ Their study started from interest in the plight of the rural Negroes, ~~but~~ led directly into the general question of tenants and sharecroppers regardless of race.

From these studies, ~~which were carried on under the immediate direction of Dr. Johnson,~~ it becomes clear that the depression brought Southern agriculture very near to complete collapse and that the AAA program, necessary and useful as it was to farm economy as a whole, has made the plight of the tenant still more desperate. Pegging the cotton price and payments for crop reduction, ~~while saving~~ they saved the land owner, but decimated the ranks of the tanant-croppers. Owners found naturally that they did not need so many worker families on the reduced acreage. Furthermore with cash in hand, they began to hire labor simply for the active months and to discontinue the system of supplies to tenants throughout the year. The result was that tens of thousands of families, both white and colored, who heretofore had been getting a living, however meager, were thrown off the plantations and

44-18-45

217

[redacted]f. These families will probably never be taken back as tenants or croppers, [redacted]he owners have found a new and cheaper way of working their cotton through temporary hiring of cheap labor during the active work seasons, some three or four months a year. The movement away from dependent living on farms into the ranks of casual labor and relief has already involved probably three hundred thousand to four hundred thousand families and is steadily continuing. Of course it will not wipe out all or probably even a majority of the tenants and croppers. But it may easily run to six hundred thousand families in the Southern states, or to about thirty per cent of this dependent farm population.

Unfortunately, because of the old race bugaboo, the South is peculiarly incapable of handling problems of disrupted economic systems and floating populations or casual workers. Great bands of Negroes unattached to the soil, unaccountable to regular bosses, are a new and unmanageable problem. These Negro hordes, competing with poor whites for such casual labor as appears, competing with whites for relief while it lasts, possibly raiding fields or stores if they begin to starve--all this may easily lead to hysteria, terrorizing, lynchings and race riots of unprecedented scope and violence.

An effort is being made to correct these evils by re-distributing land among peasant owners. This was the basic thought of the Bankhead Bill, which has not yet been passed, and of the Resettlement Division in the WPA. Some work has been done along these lines, but the whole future of the New Deal and the funds at its disposal, are at present too uncertain to begin a broad, definite program.

Discussion and Reading

1. What is the future of the Negro farmer?
2. Should Negroes buy land?
3. How can the rural Negro be assured of law and order?

(Consult Johnson, Embree and Alexander, "Collapse of Cotton Tenancy"; Johnson, "Shadow of the Plantation".)

44-81-44

(51)

Chapter ~~XXI.~~

THE NEGRO ADVISERS, 1934

At the Inter-Racial Conference held in Washington in May, 1933, a Negro representative in the New Deal was proposed. A committee went to the Secretary of the Interior and asked for the appointment of a Negro Adviser in his department. They recommended three candidates: two white and one colored. The Secretary chose Clark Foreman, a white man, from Atlanta, Georgia. He was "attached to the Interior Department where his duties entail special attention to the manner and extent to which Negroes are sharing in the results of the operation of the National Recovery Act."

The first appointee ~~of this sort~~ aroused a great deal of criticism because a Southern white man was to represent the American Negroes in the Administration instead of a colored man. Foreman's salary was met from philanthropic sources and he had a difficult time between the fire of the blacks on the one hand and the reluctance of the officers of administration, on the other hand, to touch the delicate subject of Negro leadership. After a while, however, as the fire of general criticism increased, colored appointees were added and eventually in 1935 Foreman was replaced by Robert C. Weaver, a colored Ph.D. of Harvard, while he himself was promoted to a higher position in the Interior Department.

The status and work of this Adviser is thus outlined by Dr. Weaver:

> "The Adviser on the Economic Status of Negroes in the Department of the Interior is responsible to the Secretary. His duties are to acquaint the Secretary with the effect of the agencies of the Department upon Negroes, to suggest measures intended to increase the benefits to Negroes under the various programs administered by the Secretary and to integrate Negroes into the activities of the Department and the Public Works Administration. In doing these things, he is in constant touch with the Divisions of the Department of the Interior and with the Office of the Secretary. The Adviser is also a consultant to the Housing Division of the Public Administration."

In September, 1933, a conference of 10 prominent Negroes was called together by the Secretary of Commerce, Daniel C. Roper, to advise with him on the action which might be taken by the Federal Government to advance the economic life of the Negro.

219

[redacted]ult of this, on November 1, the office of Adviser on Negro Affairs to the [redacted]ary of Commerce, was established and E. K. Jones, head of the National Urban [redacted]gue, was appointed to that office.

Pressure still continued for appointment of Negroes as administrators and especially as investigators to learn the real truth about conditions. A meeting was held September 18 of what was said to be the "Special Industrial Recovery Board." There were present Secretary Ickes, chairman of the Board, Secretary Perkins, General Hugh Johnson, Judge Stephens, Dr. Ezekiel and Dr. Dickinson. What was said and done has never been officially reported, but an alleged transcript of the remarks was published which we reproduce in part without vouching for its absolute accuracy:

Secretary Perkins: Are you all so situated that every day brings demands from a group of Negroes to be appointed to something or other?

Chairman Ickes: I do not see how we can appoint them as Negroes. If we did that we would have to appoint women as women and nationalities as nationalities.

Secretary Perkins: I do think there should be in my department a division studying the problems of Negroes.

Chairman Ickes: Has Mr. Foreman been up to see you yet?

Secretary Perkins: Yes, sir. I have eight or ten others. These Negroes do not agree with each other.

Chairman Ickes: I was criticized for appointing Foreman. It seems to me that he will give them better service than a Negro would in his position.

Secretary Perkins: You have to watch your assignments very closely.

Chairman Ickes: I think Negroes have to be dealt with as individuals.

Secretary Perkins: The Negroes are treated differently as workers than any other group of people and it is just possible that one who has experienced discrimination against Negroes and who has the necessary training in other fields is not qualified to follow up their complaints. Other things being equal, a Negro investigator sent out would be able to bring back the facts better than anybody else.

General Johnson: If the Board thought well of it, we could appoint a Negro Advisory Committee. They are becoming very clamorous.

Secretary Perkins: A Negro (John P. Davis) made a good statement of the case. He pointed out that for the most part in the South where Negroes are not factory workers, they were domestics and that the domestics' wages are not increasing and that there is no likelihood of a code for domestics. I agreed with him that there would not be. He explained that in the meantime they are being paid $2.00 a week wages with no chance of raising them and that the price levels are increasing, perhaps by only small fractions, but

220

still sufficient to make it difficult for those getting only $2.00 a week to get along.

Dr. Dickinson: Might I say that the units of the NRA--the Research Unit, I believe--was about to send down into the South a colored female research worker, who comes from Oregon, I believe; and who has done very competent work at the University of Chicago; but the thought is that the selection of the research worker from the Negro race to go down and make that investigation would perhaps meet with difficulties that would not be met by a research worker of some other race, and that if it were desired to win the confidence of the Negroes in the result of a research investigation, that purpose could be accomplished in a more tactful way which would be, instead of sending a research worker from their race, to put the investigation in the hands of some outstanding Negro, like Mr. Moton, or somebody of that kind; and then if he wanted, to let him employ the research worker. That was my suggestion, but the point here is whether this research worker shall be given her ticket and sent down there this afternoon.

General Johnson: I stopped that. I think it was very unwise.

Dr. Ezekiel: We would be playing with fire to send a Northern trained Negro to the South and certainly anyone trained in Chicago.

All this complaint and agitation brought further efforts by Negroes. First of all, a number of Negro organizations united under two young men in Washington and formed a Joint Committee on National Recovery which proceeded to agitate for better conditions and to interrogate leaders of the NRA. This committee formed in July, 1933, included twenty-four member organizations.

Of these organizations, ~~10~~ ten were religious, ~~4~~ four academic fraternities and sororities, ~~1~~ one a fraternal order, ~~1~~ one an organization for agitation and reform, ~~4~~ four organizations of professional men, ~~1~~ one an organization for club work and ~~3~~ three industrial organizations.

If we divide these organizations according to their outlook on economics and industry, we find that half are reactionary in outlook or believe in the essential soundness of the present capitalistic system. Of the other ~~12~~ twelve, ~~8~~ eight may be classed as liberal in their economic outlook, while ~~2~~ two are distinctly labor organizations and ~~2~~ two organizations of capitalists. Under these circumstances, it was naturally impossible that the Joint Committee should attempt to lay down any guiding program.

There was only one matter on which all the organizations could agree, and that was that in the administration of the recovery program there should be as little color discrimination as possible. But as to the program itself, its general objectives and measures, it had nothing to say and it certainly had no desire to consider or lay down

44-18-44

distinct program for the guidance and protection of the Negro race in industry.

The Urban League did not join the Joint Committee, but attempted to set up an Emergency Advisory Council. T. Arnold Hill, acting executive secretary, in sending out an open letter to Negro workers urging them to organize Workers' Councils, wrote in part:

> "For fourteen months we have been witnessing in the United States a most unprecedented effort at economic stabilization. The cause of labor is riding 'high, wide and handsome,' with the possibility for attaining many desirable goals. Yet the cause of Negro workers has not been one with labor's general aims. The appeals of social organizations in your behalf to the National Recovery Administration, the American Federation of Labor, independent labor organizations and many persons of influence and prestige, while partially successful, have fallen far short of the desired goal. These shortcomings have convinced us that the position of Negro workers will strengthen only if they themselves realize the necessity for action."

4 point

Apparently this proposed organization has never actually functioned, and the Secretary, E. J. Jones, Adviser in the Department of Commerce, seems to have turned to the movement for fully restored capitalism. On the other hand, the NRA, stirred by the investigator's complaints and pitiless publicity of John P. Davis and Robert Weaver, who headed the Joint Committee, executed an adroit flank movement and invited Dr. Weaver to join Clark Foreman as Adviser on Negroes in the Department of the Interior. Davis and others protested against Weaver's acceptance, but nevertheless, he eventually accepted.

August 9, 1933, the FERA authorized funds to be used for the hiring of unemployed teachers. Dr. Ambrose Caliver, from the Office of Education in the Department of the Interior, was put in charge of Educational Relief for Negroes in December, 1933.

When conditions got worse in October, 1933, the FERA inaugurated a Civil Works program, November, 1933. This was to provide work at once for 4,000,000 unemployed persons on short-time public projects and $400,000,000 was allocated to finance this plan.

A Negro, Forrester Washington of the School of Social Work in Atlanta, Georgia, was appointed as Director of Negro Work in the FERA. He selected a tentative

body of welfare workers to help him, but after a few months, resigned, because he found he was to be given no real power. His assistant was named as his successor, but instead of being designated as "Director of Negro Work," he was called the "Colored Assistant in the Correspondence Division." He received complaints from Negroes concerning the administration of relief funds by local authorities and communicated with the state administrator.

The Farm Credit Administration was created by Executive Order and is under a Governor appointed by the President. The purpose is to provide a complete and coordinate credit system for agriculture. One colored man, Henry Hunt, is assistant to the Governor and has an office with a secretary and stenographer. He receives complaints from the colored farmers and makes every effort to remedy injustices placed upon Negroes in the administration of the funds. He has no administrative responsibility, but makes observation tours and inquiries at the offices of the Federal Land Banks.

49-18-51

~~The Federal Credit Union act is to make available to people of small means credit for provident purposes.~~

Among the Negro appointments eventually made in the New Deal administration were 2 in the Department of Labor, 9 in the Department of the Interior, including the re-assignment of Ambrose Caliver from his office as Specialist in Negro Education to Specialist in Educational Relief among Negroes under the FERA, 3 in the Federal Emergency Relief Administration, 1 of whom resigned after 7 months' experience, 1 publicity man who filled Negro newspapers with rosy reports about the New Deal and was reassigned to the FERA, 1 in the Farm Credit Administration, 1 in the Public Health service, 1 in the Bureau of the Census, an old employee who was given work as Specialist on Negro Statistics, 1 in the Department of Commerce and also 1 appointee to the Consumers' Advisory Board, but he soon resigned.

Beside these appointees, there are many subordinate and clerical appointees, as for instance, some 20 in the FERA.

The result, then, of Negro criticism was a corps of Negro advisers and a few Negroes in subordinate, administrative and clerical positions. The adviser could exercise much influence or none, according to his own training, ability and personality and according to the character of the administrative official whose case he has. A subservient Negro and an official disposed to ignore or merely pacify Negroes renders as the system ineffectual and this was true in the case of several appointees. On the other hand, a conscientious cabinet officer who could depend on the knowledge, courage and tact of his Negro adviser could accomplish much and this was proven in at least 2 cases.

Many conferences between Negroes and New Deal officials were had. December 14, 1933, there was a conference in the Carnegie Library building at Howard University, attended by 50 or more Negroes, to consider the differentials in the NRA code. Twenty Negroes and 30 whites were there. They adopted no resolutions and came to no conclusions.

Official reports tells us of other conferences held in Washington under Government auspices. "These gatherings include such interests as Child Welfare, Code Hearings of various industries and relief problems. Special conferences on Negro welfare have been held in connection with subsistence homesteads and an Interdepartmental Group has discussed agricultural adjustments, labor in general and employment in Government buildings in the interest of the Negro. This Interdepartmental Group is made up

RS-81-64

hand, a conscientious cabinet officer who could depend on the knowledge, courage and tact of his Negro adviser could accomplish much, and this was proven in at least two cases.

Many conferences have been held between New Deal officials and representative Negro leaders. There was a conference held December 1933 in Washington, attended by 20 Negroes and 30 whites, to consider the differentials in the N.R.A. codes. However, this conference came to no official conclusions. Many other conferences have been held under Government auspices. These gathering have included such interests as Child Welfare, Code Hearings of various industries, Relief programs, Subsistence Homesteads, Agricultural Adjustment and the like. An "Interdepartmental Group", made up of representatives of the various departments and administrations whose interests touch the Negro, has been appointed by cabinet officers to coordinate Negro activities. Special mention should be made to an important conference held in Washington, May 1934 to survey the state of Negro education, at which Mrs. Franklin D. Roosevelt made a memorable address favorable to the Negro and the principle of social justice. Other conferences have been called by Secretary Roper of the Department of Commerce to discuss the economic situation with respect to the Negro.,

49-14-33

Thus the New Deal has given more attention to Negro affairs and welfare than previous administrations and has had the advice and assistance of trained, non-partisan Negro leaders and men of affairs rather than professional politicians, but ~~with~~ good intentions and ~~professional~~ ~~handicapped~~ have been seriously handicapped in the practical results by inability or lack of courage to insist ~~upon~~ no discrimination in the local administration of its remedial measures and by the presence of reactionary officials within the government ranks.

of representatives of the various departments and administrations, appointed by the cabinet officers and administrators, to coordinate Negro activities in the various departments and administrations. In this connection, special reference should be made to the educational conferences held in Washington last spring for the purpose of advancing education among Negroes at which Mrs. Franklin D. Roosevelt made her memorable address favorable to the Negro; and to the conference of Negro leaders called last fall by Secretary Daniel C. Roper of the Department of Commerce to discuss the economic welfare of the race."

Discussion and Reading

1. Should Negro appointees of the New Deal have been given real authority?
2. Should the Codes have omitted servants and laborers?
3. Can a white or colored ~~appointee~~ administrator best serve Negro interests?

(Consult Reports of the Joint Committee on National Recovery," files of Colored periodicals and D Shricker: "Alien Americans")

49-19-53a

Chapter ~~X~~ IX

THE PROMISE OF RESTORED CAPITALISM

Reaction against the effort of the New Deal ~~to~~ to radically re-organize the basis of American industry has now set in due to the decisions of the Supreme Court and will probably swell to an increasing if not irresistible current. While something will doubtless remain of the effort to compel by Federal action the conduct of industry for the public benefit rather than for private profit, it does not seem at present as though these efforts were going to be widespread or fundamental.

If, now, instead of reform in industry, we are going to have the restoration of the capitalistic regime, what hope in that restoration is there for the American Negro? One gets an idea of what is in the mind of capital by studying the efforts of the Department of Commerce. The Department of Commerce has definitely conceived itself as the organ of American business and the present secretary, Daniell C. Roper, has been devoting something of his time to the situation of the American Negro. In a nation-wide broadcast September 23, Mr. Roper called attention to Negro business and some of its accomplishments.

49-18-53

"From my study of the Federal Census statistics as they reveal the Negro's progress in business, I cite one significant feature, seldom stressed. I refer to your successful commercial ventures in the larger urban communities. Negro merchants, operating retail stores in fifteen of our largest cities, are said to thus serve about two million people. There are in these fifteen cities over 5,700 retail stores with approximately 10,000 colored proprietors and employees. The net sales of these retail stores have run as high in a given year as $27,000,000. This appreciable expansion in business indicates the vast potentialities for future developments in this field. I feel that this feature in business for Negroes should be stressed along with agricultural pursuits, dentistry, medicine and such other industrial and professional lines as required for complete service to the race by representatives of the rade when and if desired by colored people.

"One of the most important objectives to be attained by the colored race today is the establishment of the Negro business man in his rightful place in our economic system, thus enabling him to operate his business efficiently, multiply his resources and earnings and expand his buying power to such an extent that it will be of even greater

(59)

CHAPTER IX.

help and influence upon himself and the economic life of our country...."

The result of Mr. Roper's activity was the appointment of E. K. Jones of the Urban League as the Adviser on Negro Affairs, November 1, 1933. Mr. Jones has prepared a bibliography on Negro business; has furnished information to persons planning to go into business; has held conferences with the Farm Credit Administration and Federal Housing Administration. In many cases, he has acted as liaison between Negro business and the Department of Commerce, and encouraged lecturers and writers. Work has been secured for a thousand or more trained Negroes.

Here, we have clear vision of a return to the earlier ideas of Mr. Washington and the long stressed program of the National Negro Business League. Is this a real way of escape for American Negroes? It is not. In the first place, the old idea of accumulating small capital by thrift and going into business is largely unreal today. Capital is concentrated in immense amounts and the credit agencies monopolize its division and allocation. This means that the small business man is being largely forced out of business.

The individual grocery store cannot maintain competition with the chain store, particularly when the chain store becomes a vertical organization, buying its own raw material and manufacturing and preparing its goods. The small bank will be more and more forced to be part of a large chain. The small insurance organization will not be able to stand up in resources or guarantees of security against the great aggregation of capital in the larger associations. There may be limits beyond which this concentration and monopoly of capital will not go, and many persons expect by use of the vote and political power, not to displace the private ownership and control of capital, but to supplement them by careful public control. This is the program of the greater nations in the world,--the United States, Great Britain and France. It is not a program, however, that seems to promise success. The utmost that it is apparently able to do is to produce a series of cycles of prosperity and depression with the well-grounded fear that the length and time between depressions will not increase and the eras of prosperity will not really restore and rebuild the economic organization.

But whatever the facts may be so far as these nations are concerned, when it comes to a minority and disadvantaged group like that of the American Negro, a restoration

250

CHAPTER IX.

of the full power of the capitalistic system in the United States can mean to them little more than a restoration of their former unfortunate condition. They may be restored as small landholders and farm tenants, but with the control over machines and markets which capital has in the United States, there is no real prosperity for the Negro farmer. They may retain their place as servants in low-paid positions with the social stigma which menial service carries. The place which they secure in industry will depend upon their relation to the labor movement and to the plans of the leaders of organized labor.

There is, therefore, only one real opening and real plan in the restoration of complete capitalism for the Negro and that is the old plan which seeks to admit to the ranks of capitalists enough of the Negro bourgeoisie to enable them to share in the exploitation chiefly of Negro labor and to some extent of white labor. So far as the attitude of white capitalists is concerned, it is very doubtful if they will be more minded tomorrow than today to admit the Negro capitalists, save to small, outlying fields where the chances of success are very small.

49-81-55

This means that young men who have received in Northern and Southern colleges the prevailing economic training will be forced by severe competition to resort in the future, as they have to some extent in the past, to all of the worst forms of exploitation. They will incur, therefore, the resentment and hatred of their own labor classes and any hope of solidarity in the fight of American Negroes against race prejudice or for their own material advancement will be gone. Furthermore, the laboring classes which the colored business man can exploit will be those receiving the least wages and working under the worst conditions. The possibility of exploiting them will depend upon unfair laws and administration and inevitably the class interests of colored business men will be thrown with those very elements that today make capitalistic methods disreputable and harmful. In the South, particularly, the methods of taxation, the fines and penalities, the laws for the collection of debts, the system of installment paying, the irresponsible advertising, the agents and collectors, who swarm in Negro homes, all those must inevitably have back of them the support of Negro business; who will either resort to these methods themselves or fail. There is, then, under ordinary and probable circumstances, no chance for an ultimate economic emancipation of Negroes through the ordinary working of Negro business.

251

Discussion and Reading

1. Can Negro business develop in competition with white business?

2. Will the philanthropy of the wealthy solve the Negro problem?

3. Does the depression emphasize or disprove the theories of Booker T. Washington?

(Consult Harris, "Black Capitalism"; United States Bureau of the Census, "Negroes in the United States, 1920-1932".)

95-81-56

CHAPTER X

THE PROMISE OF LABOR ALLIANCE

Because of the facts marshalled in the last chapter, it has been the growing hope of many thinking American Negroes that the future advance of Negro must be an alliance with the labor movement in the United States. This is a revolution in thought from the earlier generations. The legacy of slavery was an abject admiration of aristocracy, wealth and power. The ordinary descendant of Negro slaves had the ambition to be rich and powerful and gain his livelihood through the hiring and use of laborers. It has taken hard experience and careful thought for a considerable number of American Negroes to see that they are an integral part of the labor movement of the world, logically, if not actually.

If, corresponding to this, there had been the feeling on the part of white labor in the United States that Negroes did belong in the organized labor movement and if Negroes had been welcomed into it and given their chance to work at a decent wage, the history of the United States would have been different. Far from this being so, the experience of the Negro laborer confirms him in the belief of the Negro bourgeois; namely, that capital is his friend and organized labor his enemy.

Personal experiences of laborers emphasize this attitude far beyond the actual facts. The employer who dangerously foments race prejudice and uses its results to cut down the wages of labor and make the conditions of work administer to his greater profit, can easily hide behind anonymity, pursue his aims through agents or even accomplish the results unconsciously. But the laborer who hates Negroes or fears their competition or the undercutting of wages, works personally and openly by means of strikes, mobs and violence. Thus the Negro worker in the United States can not forget the attitude of organized labor toward him for well-nigh two centuries.

It happens, however, that today the labor movement is bringing changes in the attitude of organized labor. The movement toward shop unions and vertical unionization within the factories and the so-called left-wing unions, all these have worked to break down the Color Line and to admit Negro labor where the Negroes apply and are willing to abide by union rules. But this movement is still small as compared with the craft unions represented by the American Federation of Labor. There comes, therefore, a practical matter of policy. How far can Negro labor unite with a minority of

49-18-54

Chapter XI.

white laborers and work with them toward the emancipation of labor regardless of race? Manifestly, so far as the labor movement in the United States is working toward the goal of increasing wages and limiting profits; of maintaining the political power of the labor vote and using it for such reorganization of industry as will limit exploitation and divide the national income on some basis of reason and desert rather than by chance and uncurbed power. So far as this is true, the Negro must more and more become a part of the labor movement if he expects to be a modern citizen of a modern country.

If we include agriculture, the wage earners of the United States in 1930 were 10 9/10 per cent organized as compared with an organization of 35% which Germany used to have and an even higher percentage in Great Britain. Even if we exclude agriculture and domestic service and clerks, labor in the United States is only 1/5 organized. Further than this, 4/5 of this organized labor is in craft unions which are seeking the advance of small groups of skilled labor without regard for the situation of the mass laborers.

The conscious labor movement in the United States which is seeking the uplift of the laboring classes, consists of 1/2 million workers to whom may be added, however, those in the American Federation of Labor who are rebelling against the craft organization system.

These rebels have been increasing in number and power, but they are still considerably in the minority. In practically all the craft unions, with a few exceptions, Negroes are excluded, either by constitutional provision or by the invariable vote of local unions and even those Negroes in the union are liable to discrimination and refusal of recognition. Here, manifestly, there is as yet only a small basis of opportunity for the Negro to co-operate with the union labor movement. A practical labor alliance in his real mass interests is not at present available to the Negro.

449-18-58

254

provision or by the invariable vote of local unions. Even those Negroes in separate locals are liable to discrimination and refusal of recognition. Here manifestly, there is a small basis of opportunity for the Negro to cooperate with organized labor. Yet Negro labor ought by all means to unite in union membership with their fellow workers North and South, and take part in worker's councils. But to say that a common front of American Negro labor with a half million out of five million organized laborers constitutes a real labor alliance seriously overstates the case.

The Radical Labor Movement - Suppose, now, that the Negro turns to the promise of socialism whither I have long looked for salvation. I was once a member of the celebrated Local No. 1. in New York. I am convinced of the essential truth of the Marxian philosophy and believe that eventually land, machines and materials must belong to the state, that private profit must be abolished, that the system of exploiting labor must disappear, that people who work must have essentially equal income and that in their hands the political rulership of the state must eventually rest. But notwithstanding the fact that I believe that this is the truth and that this truth is being gradually exemplified by the Russian experiment, I must nevertheless ask myself seriously, as must every American Negro: "Is there any automatic power in socialism to override and suppress race prejudice"? This has not been proven in America. The analogy of the Jews in Russia does not parallel our case and may easily be misleading.

On the other hand, the tendency of the radical labor movement is not to stop with the socialistic outline, but to embrace communism and that extreme form of it which believes in revolution as the only solution of our present problems. There can be no

65-81-64

doubt of the great contribution which Karl Marx has made to civilization; of his indefatigable industry, his broad knowledge and keen insight into the ills of the economic world. But along with this went his transformation of Hegelian philosophy into a complete system of economic determinism, and an integral part of this system as laid down by the celebrated 'Communist Manifesto' was that the breaking up of the capitalistic system must come by inevitable revolution through which the exploited proletariat would violently take complete charge of the state and conduct it in its own interests.

Most American communists have become dogmatic exponents of the inspired word of Karl Marx as they read it. They believe, apparently in immediate, violent and bloody revolution and make it one of their main objectives. This is a silly program even for white men. For American colored men, it is suicidal.

In the first place, its logical basis is by no means sound. The great and fundamental change in the organization of industry which Karl Marx foresaw must, to be sure, be brought about by revolution; but whether in all times and places and under all circumstances that revolution is going to involve violence, war and bloodshed, is a question which every sincere follower of Marx has a right to doubt.

4 [redacted]-Here then is the chance for two points of view. Liberals and Socialists may agree with Marx in his terrific arraignment of capitalistic exploitation. They may believe firmly that the industrial organization which divides society into two main classes,-one of laborers without capital who must sell their labor, and the other of the owners of machines and materials who get their chief income not from their work, but from ownership of the products of labor is wrong. They may firmly believe that this system must be changed into a state where the political power is in

09-81-64

the hands of the masses and the state is conducted in the interests of those who work and not in the interests of the owners of capital. But these same persons may not believe that this development is coming by inevitable violence. They may, on the contrary, insist that great and fateful economic changes have come in the world since 1848. Increased concentration of capital has not brought universal poverty and despair among laborers, but higher wages and better standards of life. Universal suffrage, including that of women, is widely exercised. While these great changes do not essentially alter the basic conflict, they do make it possible to believe fundamental reform may be brought about by methods of peace and reason, if the masses interested work for this end.

In any real social revolution, every step that saves violence is to the glory of the great end. We should not forget that revolution is not the objective of socialism or communism rightly conceived, the real objective is social justice, and if haply the world can find that justice without blood, the world is the infinite gainer.

Leaving out for the moment the grave question whether or not, with the race hate now prevalent, the Negro in the case of a violent social revolution might not stand between the two factions as buffer and victim, it is clearly the part of wisdom for the American Negro to make social justice and not revolution the objective of his social effort and loyalty. The first duty of workers is not to fight but to convince themselves that union of workers, class solidarity, is better than force and a substitute for it.

The real problem, then, is this concert of the workers. The real emphasis today should be not on revolution but on class consciousness. and labor's uplift. This is the job of socialism, and the first proof of conversion is the abolition of color and race prejudice among the laboring class.

19-81-64

CHAPTER XI.

257

Discussion and Reading

1. Should Negroes join trade unions?

2. Should Negroes become strikebreakers?

3. Is white labor the enemy of Negro labor?

(Consult Spero and Harris, "The Black Worker"; Wesley, "Negro Labor".)

49-18-62

(68)

CHAPTER XI.

CONSUMER'S ORGANIZATION

Growing industrialization and the unfair use of the Negro as a poorly paid and irregularly employed labor reserve, checked the economic possibilities of Booker Washington's plan. The attitude of labor leaders, lack of education and vision among the laboring classes and the monopoly of certain lines of employment made possible by excluding Negro labor, ruined the chances of raising Negro labor through trade union organization. The present radical and revolutionary program lacks both the logic and power to emancipate the Negro.

The gravity of the Negro's condition is shown in the small success of the current reconstruction efforts of the Federal Government. Wherever relief is to be administered by state and local agencies, wherever work is to be allocated, wherever codes are to be administered, the Negro must depend absolutely upon the good-will of his white neighbors and unless public opinion is unusually favorable, relief will come to him after everyone else has been served; jobs will be given him after all others are at work, and his wages will be held at the lowest point.

This situation cannot last forever. The labor movement will see sooner or later that the black worker is absolutely essential to its success. Radical communists will learn that the Negro has too much sense to become the shock troops of its revolution. But meantime, while the nation is regaining its balance on new foundations, and while the labor movement is ridding itself of caste, the Negro is compelled to live and work, and his efforts should begin with the undoubted power of the Negro as a consumer. Two million eight hundred thousand Negro families must spend at least two billion

49-18-63

dollars a year. There can be no reasonable doubt but that proper adult education and economic organization among intelligent American Negroes can so direct this spending as gradually to accomplish the following results:

1. More effective spending so as to secure better goods and services for less money, releasing some surplus for a higher plane of living and for increased social effort.
2. An organization of spending power so as to increase the employment of those Negroes who already produce goods and services which Negro consumers use, thus making Negro employment more secure.
3. A plan to induce Negroes of the requisite training to furnish other goods and services beside what they are now furnishing, backed by a definite organization of Negro consumers who would guarantee the sale of such goods and services regularly; [redacted] thus expanding Negro production.
4. Continued effort to compete with national industry only in those lines and under those circumstances where the level of Negro efficiency is so raised that the total effect upon national welfare would be to increase and not diminish it.
5. Continued effort to integrate this organization of consumers' co-operation with the efforts of white consumers and producers [redacted] no Color Line is drawn and to the extent that integration of the Negro [redacted] industry under the best industrial conditions is allowed and encouraged.

44-18-64

129

These are the general outlines for a sound recovery of Negro industry, or perhaps one would better say, of initiation of the Negro into modern industry, with intelligent comprehension of the industrial process and a plane of living enabling him to become an integral part of the nation's life and of modern human culture.

There are those who insist that the American Negro must stand or fall by his alliance with white Americans; that separation in any degree, physical or social, is impossible and that either, therefore, the Negro must take his stand with exploiting capitalists or with the craft unions or with the communists. To such people it is not convincing to point out that a poor group, like the American Negroes, cannot gain any effective admission to the ranks of capitalism, even though they wish to and thought it was the wisest thing; and secondly, that they cannot co-operate with such craft unions as will not admit them to membership; and that it is suicidal for them to try to lead violent revolution in the United States. Moreover, and in addition to this, whether Negroes can act separately or not is settled by the fact that in so large a measure they already do.

49-18-65

[redacted] We hardly need to remind ourselves of the degree to which we form ourselves today a separate nation within a nation. Most of us are in separate churches and separate schools; we live largely in separate parts of the city and country districts; we marry almost entirely within our own group and have our own social activities; we get at least a part of our news from our own newspapers and attend our own theaters and entertainments, even if white men run them.

In our economic life, the separation is not so complete and yet it is considerable and much more thorough-going than we are apt to remember. I pointed out in 1907 what I then called the "Group Economy" among American Negroes. It consists of such an arrangement

130

of industries and services within the Negro group that the group tends to become a closed economic circle somewhat independent of the surrounding white world. The recognition of this fact explains many of the anomalies which puzzle the student of the Negro American.

"You used to see numbers of colored barbers;you are tempted to think they are all gone--yet today there are more Negro barbers in the United States than ever before, but also at the same time a larger number than ever before cater solely to colored trade where they have a monopoly. Because the Negro lawyer, physician and teacher serve almost exclusively a colored clientage, their very existence is half forgotten. The new Negro business men are not successors of the old; there used to be Negro business men in New York, Philadelphia and Baltimore catering to white trade. The new Negro business man caters largely to Negro trade. So far has this gone that today in every city of the United States with a considerable Negro population, the colored group is serving itself with religious ministration, medical care, legal advice and education of children: and to a growing degree with food, houses, books and newspapers. So extraordinary has this development been that it forms a large and growing part in the economy in the case of fully one-half of the Negroes of the United States."

What was true in 1907 is even more true in 1935. A great deal of this segregation is not only unnecessary but harmful and all of it ought sometime to disappear. But it will not disappear immediately, nor [redacted] in our day; and it looks distinctly to me as though we will see more race segregation in the United States in the near future than in the past.

99-81-64

(91) ~~The Anti-Segregation Right.~~ It has long been the object of Negro organizations to get rid of this segregation by agitation, appeal, recourse to the courts, new legislation and even direct action. After the Reconstruction Acts and for fifty years up until the New York Civil Rights Bill, we united to put upon the statute books bills which would forbid this kind of segregation and discrimination in public places. Charles Sumner, perhaps our greatest friend, died pleading for this civil emancipation. The movement failed, yet it did not all fail. We have today appreciably wider range of civil rights than we had fifty years ago; nevertheless, we still are discriminated against in school and church, in travel and theater, in parks and playgrounds, in work and wage. We recognize from this experience, that back of law must lie public opinion. ~~and~~ It was the basic thought that lay back of the Niagara movement and the N.A.A.C.P. that if once we could bring the facts of our desert and suffering before influential portions of the American public, that we would receive enough co-operation and ~~xxx~~ sympathy to break down the main lines of segregation.

We have worked at that program for a quarter of a century, more continuously and assidiously and with larger expenditures of money than the Negro ever before put into one line of reform action. The result has not been complete failure. The legal defense work has a splendid record of accomplishment; the agitation has made millions listen; but we cannot point to substantial and undoubted advance against the general policy of race ~~segregation~~ discrimination in this land. The work, of course ought to go on. There never ought to be a time ~~xxx~~ when in the United States, both by organized effort and by individual protest, we should not continue to say to this nation that a separation of men simply by race and color is not only illogical but a distinct slap in the face of civilization.

49-18-67

(73)

132

~~Communistic segregation~~ But our program in the future cannot be confined to this. It has got to be changed from one mainly of agitation and appeal to one of inner organization for self-defense. Not for offense, not for blind Chauvinism, but for sheer existence. If we were today earning a living; if we had average incomes which would support life on a plane that meant health, education and the essentials of culture, we could sit down before the ramparts of race hate and continue our slow, determined, unceasing undermining of the walls. But we are on the edge of starvation and we do not need to be. Most persons writing concerning the present depression seem to regard the Negro as utterly helpless; and even in normal times the current philosophy is that both in the United States and elsewhere, we are absolutely at the mercy of the surrounding economic organization. This assumption arises from the fact that we believe that no group can approach economic independence or a position of self-sustaining inter-dependence unless it is organized as a nation with law-making powers, armies and police.

89-18-64

On the other hand, we should remember that the American Negro numbers about 12,000,000 and thus we are much larger than either Denmark, Greece, Hungary, the Netherlands, Norway, Portugal or Sweden and very nearly the size of Egypt, half the size of Spain, and one-third the size of Brazil. This surely indicates that we must have great economic power. This power is curtailed by the fact that we have no decisive economic place in production or transportation, in commerce or credit, or in government; we sell our labor and farm produce at prices determined by a market in which we have little influence; and we must buy what is offered to us at prices determined by others.

~~Consumer Power. Yet~~ Here is food for thought. The economic process today does not logically begin with production, ~~but~~ but with consumption. We do not consume in order to produce. We produce in order to consume. We are misled as to this basic fact, because for two centuries emphasis has been put upon the production of goods and their transportation and their sale. In the next few centuries this is going to be changed and we are going to look more toward the welfare and power of the buyer. As a buyer, the Negro spends something like two thousand million dollars each year. How much exercise of judgment has he in this buying? At first, it may seem that he has a little. ~~In fact~~ However, he has a great deal. He has a wide choice of stores which he will patronize. He has a wide choice of articles of food and clothing. He has some choice in the selection of housing material. In fact, in nearly everything that he buys, either of goods or services, he has a power which today is not organized and which he does not use.

Recently, we have had some intimation of what he can do. The American Negro can, to a large extent, confine his patronage to such retail stores as employ colored people and treat colored customers with honesty and courtesy. This was shown by campaigns in Chicago, Washington and New York. The net results in actual employment has not been large, but the total effort has been limited and spasmodic. There can be little doubt but that the five million Negroes living in cities could by quiet mass pressure compel the employment of 10 to 15 thousand Negroes next year in the retail stores where they buy goods.

In the matter of public service agencies, like telegraph, telephone, electric power, railroads and the like, the Negro, through

his political power and his power as a consumer, can compel a wider employment of colored people and greater courtesy and consideration in the treatment of colored customers. This has already been shown by increased use in instances of colored collectors, messengers, ticket-takers and ushers. The possibilities here reach into many tens of thousands, once Negroes realize their power.

¶ Such mass and racial demands have, of course, difficulties and invite retaliation. The campaign of the Chicago Whip to put Negro clerks into Southside chain stores led to the collapse of the paper through withdrawal of advertising. Conceivably a racial demand for employment might lead to discharge of colored workers in concerns with a white clientele. But surely Negro papers cannot be independent and rely on inimical advertising; and white concerns hiring Negroes after all, are thinking of profits and not of race.

¶ [redacted]-There is a vast field for the organization of mutual services among Negroes which has been almost untouched. Negroes raise and prepare foods; they buy it and eat it. Much of the food which they buy and eat is raised and prepared by Negroes. Much more might be. Much of the raw material raised on Negro farms and prepared by Negro workers is consumed by Negro buyers. In addition to this, many services which are rendered Negroes by white people and many services which Negroes render to white people could by thought, training and organization be rendered to Negroes, thus inducing more sympathetic service and more regular employment. By group buying at wholesale instead of [redacted] retail, by organized and country-wide effort instead of by single stores, and by turning the profits back to the buyer to secure his interest and educate him in economics, a great deal could be saved and many Negroes lucratively employed.

49-18-94

The people who can buy, build and maintain church edifices to the value of $60, 000,000, could do the same thing with regard to homes and tenements, if they were organized and trained to do it. In fine, by co-operative effort in doing their own laundry, making their own bread, preparing most of their food, making a considerable part of their clothes, doing their own repairing of all sorts, printing their own papers and books and in hundreds of other ways, the colored people of the United States ~~could~~ if they put their mind to it and secured the proper training, could spend a considerable part of two thousand million dollars each year in hiring themselves at decent wages to perform services which the Negro group needs; and they could do this without antagonism to the white group, without any essential change of law and without a national organization involving army and police. They could even do it without the help of a protective tariff because color prejudice and race loyalty furnishes a certain amount of the same kind of protection to the Negro which the tariff furnishes manufacturers.

49-18-71

~~Standing here, a new school of Negro thought is arising.~~ Of course, we believe in the ultimate uniting of mankind and in a unified American nation with economic classes and racial barriers leveled; but we believe that this ideal is to be realized only by such intensified class and race consciousness as will bring irresistible force rather than mere sentimental and moral appeal to bear on the motives and actions of men for justice and equality.

~~[redacted]~~ The peculiar situation of Negroes in America offers an unusual chance. Negroes cast today probably two million votes in a total of 40 million and their vote will increase. This gives them, particularly in Northern cities and at critical times, a chance to hold a very considerable balance of

power and the mere threat of this being used intelligently and with determination may often mean much. Again, the consuming power of 2,800,00 Negro families has recently been estimated at 166 million dollars a month--a tremendous power when intelligently directed. Their man-power as laborers probably equals that of Mexico or Yugoslavia. Their illiteracy is much lower than that of Spain of Italy. Their estimated per capital wealth ($215 according to the Tuskegee Year Book) about equals that of Japan (~~$~~ 44 according to the Encyclopedia Britannica).

For a nation with this start in culture and efficiency to sit down and await the salvation of a white God is idiotic. With the use of their political power, their power as consumers and their brains, added to that chance of personal appeal which proximity and neighborhood always gives to human beings, Negroes can develop in the United States an economic nation within a nation, able to work through inner co-operation, to found its own institutions, to educate its genius and at the same time, withoug mob violence or extremes of race hatred, to keep in helpful touch and large co-operation ~~xxfxundxxxxxwxxxxx

it. They think that we have only silently to wait for the white people to settle the problem for us; and finally and predominantly, they think that the problem of 12 million Negro people, mostly poor, ignorant workers, is going to be settled by having their more educated and wealthy classes gradually and continually escape from their race into the mass of American people, leaving the dregs to sink, suffer and die.

Such persons claim with much right, that the plight of the Negro masses is not the fault of the ~~Emerging Elite~~ Talented Tenth; that the slavery and exploitation which has reduced Negroes to their present level or at any rate hindered them from rising, is the fault of the white world; and that the age-long process of raising a group is through the escape of its upper class into welcome fellowship with risen peoples; that for the intelligentsia among Negroes to bend their backs to the task of lifting the mass of people would mean their own ultimate submergence. There is logic in this answer, but futile logic.

If the leading Negro classes cannot assume and bear the uplift of their own proletariat, they are doomed for time and eternity. It is not a case of ethics; it's a plain case of must.

And the method by which this may be done is, first, for the American Negro to achieve a new economic solidarity. This is not turning back to the older program of Booker T. Washington, although Mr. Washington envisaged something of this in collusion with the capitalist system and with its philanthropic cooperation. ~~cooperation of white capitalists.~~ He thought Negro capitalists would gain the opportunity to exploit their own masses and that the mutual interests of capital would integrate these black masters of industry into the group of the ruling captains of industry throughout the nation. This plan failed and can never be restored. But just as

44-18-23

the Jews in the dawning of the new capitalism had a chance to enter the new organization of industry and become intrenched there before the masses of the world ~~f~~ foresaw the trend, just so today there is a chance for the Negro to organize in fact the co-operative and socialistic state within his own group by letting his farmers feed his artisans and his technicians guide his home industries and his thinkers plan this integration of cooperation, while his artists dramatize and beautify the struggle to achieve economic independence. To doubt that this is possible is to doubt the essential humanity and the quality of brains which American Negroes ~~have~~ possess.

~~The Fear of Segregation~~ No sooner is this proposed, however, than a great fear sweeps over the older group of Negroes. They cry "No Segregation," no further yielding to prejudice and race separation." It is true that such effort at group planning for the benefit of American Negroes does imply organized and deliberate self-segregation. And there are plenty of people in the United States who would be only too willing to make a plan of this sort an excuse to increase such legal and customary segregation between the races as already exists. This threat which many Negroes see is no mere mirage. What of it? It must be faced. If the salvation, economicand spiritual, of the American Negro calls for an increase in American race segregation and prejudice, then increase must come. Notwithstanding this, American Negroes have got to plan for their economic salvation and ~~t~~ This social survival of colored folk in America means in a real sense the survival of colored folk in the world and the building of a full humanity instead of a petty white tyranny.

The immediate reaction of most white and colored people to

44-81-74

this suggestion will be that the thing cannot be done. Negro scholars have from time to time emphasized the fact that no nation within a nation can be built because of the attitude of the dominant majority and because all legal and ~~the~~ police power are out of our hands and because large industry, like steel and electric power, are organized on a national basis and impenetrable by small groups. White folk, on the other hand, simply say that granting certain obvious possibilities, the American Negro has not the ability to engineer so delicate a social operation calling for such self-restraint, careful organization and ingenious leadership. In answer to both these groups, it may be said that this matter of a nation within a nation has already been partially accomplished in the organization of a Negro church, the Negro school and retail Negro business; and with all the justly due criticism, the result has been astonishing.

49-18-75

It is becoming clearer to larger groups of American Negroes that, through voluntary and increased segregation, by careful autonomy and planned economic organization, we can build so strong and ~~an~~ efficient a group of 12 million men that no hostile group can continue to ~~to~~ refuse them fellowship and equality.

In round numbers, American Negroes were thus employed in 1930:

2,000,000	farmers
1,500,000	common laborers
1,000,000	servants
800,000	skilled and semi-skilled workers
150,000	in public and professional service
50,000	in commercial employment

Only the 800,000 skilled and semi-skilled laborers,--the miners, steel-workers, automobile workers, tobacco workers and the like--are integrated in basic industry and could not easily find support otherwise. But the farmers and farm laborers, the

140

common laborers and most of the servants are ready and eager for any work which guarantees a living wage, continuous employment and decent treatment. Any subtraction from the mass of half employed and exploited workers, any new line of work for 50,000 or 500,000 of these marginal workers would not only directly save them but indirectly raise the wage and thus better the treatment of all other Negro workers. Is it really impossible for us to employ 500,000 in ministering directly to our own needs? The Negro professional and business men are already so employed for the most part and some of the builders and mechanics.

Never before since the abolition of slavery have the Negroes of the United States had such motives for uniting in a desperate effort to save themselves. If they have the guidance of educated thought and of honest character, there are certain things that they can do as easily as they can eat and sleep and perhaps in these days more easily. The Negroes who eat food can arrange to buy a large part of it from those Negroes who raise food on their farms; the Negroes who use towels and sheets can buy them of Negroes who raise cotton and spin and weave it on machines which can be bought at public sale; the Negroes who wear clothes can have those clothes made, not by individual tailors and dressmakers, but by Negro members of the various clothing unions which have welcomed them and this effective demand can supply the necessary sewing and cutting machines; the Negroes who wear shoes can make those shoes on machines of the United Shoe Machinery just as easily as white workmen can make them; the homes that Negroes live in can be built by Negro carpenters and masons; and so on. This list could be carried out almost endlessly and in most cases, the actual exchange of goods

49-18-46

and services thus indicated are already to some degree being carried out among Negroes; but the chief difficulty, now, is that the work has not been systematized, the advantages of the new highway transportation has not been taken into account, and the whole arrangement has been accidental and spasmodic rather than a carefully thought out and planned racial economy.

But, there is even a greater drawback and cause of failure than this lack of organization. It is that such co-operation as we have carried out within the race has been carried out in accordance with the private profit idea; that is, we have tried to make the incentive success and the enriching of our own owners of capital. What I propose is a complete revolution in that attitude; that we begin the process of training for socialism which must be done in every labor group in the world and in every country in the world, by organizing a nationwide collective system on a non-profit basis with the ideal that the consumer is the center and the beginning of the organization; and that to him all profits over the cost of production shall be returned. In these costs of production, however, we should provide not for starvation wages, not for the waste of advertising and not for goods that are merely cheap; we should be able to say to the man who pays at a Negro co-operative $1 instead of the 95 cents, which he might pay at the white chain store,-we could say to him: that small difference which you have paid insures the employment of Negroes at a decent living wage throughout the country; it insures you getting standard goods and pays for popular education of the people in the meaning and expansion of co-operation.

The real difficulty of any such organization would be the competition and undermining retaliation of surrounding capitalism, and above all, the question of brains and character among the Negroes

49-18-44

(43)

142

who organize it. Of the competition of capital there can be no doubt. It would consist not simply in underselling, but in deception, in propaganda, in unjust laws and mob violence. In the end, it could only be counteracted by unusual race loyalty and by such combining of political power with the laboring classes of America as they could be made to agree to.

¶ The education of the leaders in the economic re-building of the American Negro group is also difficult. You cannot get honest business with dishonest men; you cannot get social planning with every person struggling for his own advancement.

The matter of character is difficult. A generation ago, character, honesty, straight-dealing, was emphasized in Negro schools and in public. But for twenty-five years and more, we have said little about it. Following the lead of white America and of the white world, we have put the stress upon intellectual sharpness; upon accomplishment regardless of methods; upon efficiency, even though it was immoral and destructive. We have got to turn about and while it is much easier to say this than to show how it can be done, the necessity of doing it is absolutely prerequisite to any plan for the rescue of American Negroes under any circumstances.

¶ Unless the present generation of Negroes can have their path lighted by some vast vision of unselfish accomplishment, our planning will be in vain. There is no doubt of the fact that those Negroes who have learned their economics in Northern institutions and those who are learning them today in most Negro institutions, are imbibing a reactionary capitalistic way of thinking which is directly opposed to the interests of American Negroes and of the laboring class in general. They come out of college knowing nothing of the issues of the modern crisis, knowing nothing of the labor movement, lightly criticizing Marx, Russia and communism. The process of securing among these men and among other persons who have the knowledge and the courage to teach a new system of Negro economics is, I admit, a discouraging one, but I believe nevertheless that in the near future we are going to have a body of economic leadership in the United States that can undertake the organization of the consumers' power among American Negroes and lead them to success.

¶ The attitude of our professional group must be changed. Already they are the center of a large co-operative movement. But they seek to monopolize this for

49-18-84

private profit. We need socialized medicine, law and dentistry designed to preserve group health and prevent disease, and sustained by regular fees and limited and adequate salaries. 143

Especially must come planning for Negro health. The general medical practitioner among American Negroes, running an individual enterprise for private profit, must make way for the medical social worker and the nursing home. We must have health surveys, visiting nurses and hospitalization, and if we cannot get admission and decent treatment in public hospitals, we must have our own hospitals. Disease and death cannot wait for justice.

There is a further suggestion which I cannot refrain from making. It will be asked immediately: what social units or beginnings of organization can undertake this vaster regimentation of consumers' power? I answer: it can begin with the Negro church, which is the most complete and oldest and in some respects the most effective Negro institution. Without it, Negro business would be largely helpless and the connection between the church and the school is historic. But the Negro church today has come upon difficult days. Its theology and creed are no longer compelling; the training of its ministers is poor and ill-adapted to the function of the church. The housing of the church is often elaborate beyond its necessary social function, and to put it baldly, the Negro church needs something to do and someone to do it.

49-18-79

But why would it not be possible for the Negro church to add to its organization a business manager: a man trained in business methods, particularly in a knowledge of non-profit business methods, who had studied the work of consumers' co-operation throughout Europe and in the United States. If ~~any~~ the church today furnishes recreation and information to its members, there is no reason why tomorrow it should not furnish coal, food, houses and clothes. A trained business manager, either running an organization under the auspices of the church, or taking charge of the whole business of the church, could accomplish this and eliminate the private profit motive from Negro economic organization. This would leave a chance for the Negro minister to be an ethical leader and source of intellectual information for his people, just as the Jewish rabbi is today in the reformed Jewish church. But, of course, it would mean also a new type of pastor. It would mean

that young men of high character and brains ~~would~~ going to theological schools where the whole course of study would be changed. There would be an end to liturgics, homiletics, ~~and~~ exegesis and Hebrew; and a stressing of economics,

144

sociology, history, modern languages, music and art. Such young, vivid and honest men, freed from the necessity of these endless collections from the poverty of the poor, could talk about things that they were interested in on this earth, instead of confining themselves to heaven and hell.

I know how difficult and seemingly impossible this program appears in the mere stating. It would involve the elimination from the present church organization just as far as possible, of theology and supernaturalism. It would relegate miracles to the lore of fairy tales and prayer would become earnest and purposeful effort. Nevertheless, the Negro church and even the white church, faces grim alternatives: either it becomes a great social organ with ethical ideals based on a reorganized economics, or it becomes a futile and mouthy excrescence on society which will always be a refuge for reaction and superstition. Yet this change need be nothing revolutionary or sudden. The co-operative enterprise could be grafted on the church in the same way that organized charity and [illegible] and the visiting of the sick [illegible] a part of its present program. It could gradually be incorporated into the church organization and the business manager become the manager of the church along with the minister as ethical leader. This method would save a great deal of expense and difficulty of an entire new organization, in expenditure for housing, group organization and propaganda.

[illegible] On the other hand, if the Negro church cannot do this, co-operatives can and must be set up as organizations entirely distinct from it, which means that they would have to compete in a way that would eat into the church organization even more than the fraternal lodges have, since the program of the co-operatives would be more [illegible] vital and the results more satisfactory.

08-81-64

(86)

145

While we are organizing for our own industrial development largely along segregated lines, there is no reason for giving up our fight for equality. On the contrary, the fight against discrimination must be emphasized, but at the same time rationalized. We must provide for immediate and long-term programs, for programs that can be reasonably attained in a decade and for other programs which may take centuries to obtain, but nevertheless must be continually followed.

The short-term program must concentrate upon the education of Negro children and the discovery and support of Negro ability and genius. The children must be educated whether this is done in the public schools or in separate Negro schools: the object being not to use the school as a base of operation for or against segregation, but to use the school as a means of education and to oppose any system which ruins and discourages our children, even though it is called an unsegregated school. But above all, the immediate program must begin with the economic foundation of Negro work through the organization of their consuming power.

With this must go a long-distance program,--the training of children and adults in race relations along the lines of the program so finely worked out by Rachel Davis Du Bois in "The Service Bureau of Human Relations" and so inexplicably neglected by American Negroes. This is an attempt to make all children, youth and adults calmly face the facts of race discrimination, study the results, get some acquaintance with the history of races, and then leave them to work out in their own minds and souls the line of action which they think is decent and just. In the same way, a much more careful plan for bringing the question of Negro citizenship and political power before the higher courts must be laid out. We must not for a moment be discouraged by one adverse decision, like that in the Texas Primary case, however disappointing as that may be. Even a reactionary body of old men can in the long run be made subservient to the demands of poverty and right. Repeated and carefully planned attacks all along the line, including the "Jim-Crow" cars and discrimination in school funds, must be carried on despite its great expense and long, drawn-out litigation. The Board of Legal Strategy which does this must be headed by men of nation-wide ability and by men who have the confidence and trust of the nation.

The great majority of American Negroes are divided, not simply for religious, but for a large number of social purposes, covering a considerable part of their life

18-81-64

146

into self-supporting economic units, self-governed, self-directed. And the greatest present difficulty is that these organizations today have no logical and reasonable norms and do not attract the best and most vigorous and most educated elements of the group.

At present, American philanthropy stands almost check-mated before the Negro problem. The task is so enormous that philanthropy simply cannot attack it. It cannot undertake to put idle Negroes to work so long as white employers will not hire them and white laborers will not work beside them. It cannot support Negro schools, when state and cities and even the Federal government, deliberately and openly neglect these schools and discriminate against them. Even a "New Deal" cannot relieve Negro distress and starvation if it has to work ~~as it must~~ through local and prejudiced agents.

Control of their own education, which is the logical and inevitable end of separate schools, would not be an unmixed ill for Negroes; it might prove a supreme good. Once Negro schools meant poor schools. They need not today; they must not tomorrow. Separate Negro sections will increase race antagonism, but they will also increase economic co-operation, organized self-defense and necessary self-confidence. Of course, the extreme development of this might even lead to complete separation or expulsion. What of it? Better stand in isolation or leave as men, or die as fighters, or be kicked out by superior power, than live as willing slaves and affable, spineless peons.

It is by no means certain that we shall be alone and unaided in such a constructive program. There was a time when the American Negroes thought of themselves simply in relation to the people of the United States and it was then that we argued that there could be but two methods of settling the Negro problem; either the Negro be absorbed physically into the nation, or else he would die out by violence or neglect. Since the World War, this ~~attitude~~ attitude has changed. Not only do we realize that the majority of the peoples of the world are colored, but we also realize that the unquestioned supremacy of the white race over these colored people has passed forever. Europe will not dominate Asia;

449-18-82

torn as China is by internal strife, she will not accept Western domination; certainly not in political lines and not even in economic lines, whenever she is able to escape the rule of Western capitalism. Japan has chosen and so far is following ruthlessly the path of domination laid down by Europe, but it is following this path for the hegemony of Asia and of the yellow race. It will take time for India to assert its political and economic independence, but that time will be spent on achieving inner unity rather than in fighting English domination. That unity once achieved, India will go free. In Africa, one easily forgets that Africa is held under the dominance of Europe mainly by black African troops; that the black and brown regiments of France, England, Belgium, Spain and even Italy, are indispensable to the continued domination of that land. It is, then, in the long run, only a question of knowledge and realization to make the continued white domination of Africa impossible.

If American Negroes, taking the path of organizing their consumers' power, should be able to raise their working classes to dominate within their own group and to such a command of income and resources that they would not be objects of charity and dole, they can not only ally themselves with the white laboring classes in the Unites States and in Europe, but equally well with the black laborers of the West Indes and South America and of Africa; and with the colored laborers of India, China and Japan; and if this union could be cemented by mutual interests, by co-operative exchange of commodities made possible by the lowering of the American tariff and the revision of the commercial rules which hamper British colonies, all this might lead to so strong an economic nexus between colored and white labor that the day of industrial imperialism

49-18-83

(89)

148

would be over. It is a far-fetched dream, but it is worth the contemplation.

No cause of human uplift can be completely gained in one unhesitating assault. There must always be some choice of essentials; some compromises which involve comparative values. The only single and unyielding principle is that the great ideal be brought nearer by every move. During the World War, I once sat in the office of the Secretary of War and complained to him bitterly of discrimination against Negro officers and soldiers. Secretary Baker answered bleakly: "In this conflict I am not trying to settle the Negro problem." "No," I answered, "but you are trying to settle as much of the Negro problem as interferes with the winning of the war." So today, if we move back to increased segregation it is for the sake of added strength to abolish race discrimination; if we move back to racial pride and loyalty, it is that eventually we may move forward to a great ideal of humanity and a patriotism that spans the world.

48-81-44

What we need today is not fighting, but that basis of economic security which will permit us to fight. What we need is not vociferous complaint but such victory over threatened starvation as will give us stamina to back our future complaints with power. We know from bitter experience the futility of asking an administration which bases its power on a political foundation of fifty congressional votes stolen from Negroes, for an effective anti-lynching bill which in many cases would hang (a very considerable number of) their constituents; or to ask the New Deal for an exercise of Federal power which would really distribute Federal funds with justice, when we know perfectly well that any such honest attempt would wreck ~~Roosevelt's~~ The administration in a month.

(90)

149

Not being utter fools and knowing that momentarily the greater plans of the Niagara movement and the N.A.A.C.P. for the emancipation of the American Negro cannot be realized because of the depression, and especially because white America is not ~~willing~~ ready to have them realized, we are compelled to substitute a program of economic power; we are forced to put back of the demands of twelve million people not mere sentiment and appeal, but power. That power must be the power that labor gives to the laborers when its fruits are justly distributed. For this new racial production and reasoned distribution, we must unite every unit of our own forces no matter how much we segregate our spiritual and social life, so long as we never lose sight of one great aim: the making of American Negroes into a real force for economic justice to all men.

Discussion and Reading

1. Is the Negro movement toward consumers' co-operation feasible?
2. Comparing the United States and Sweden, what advantages and disadvantages are there here for consumers' co-operatives?
3. What can the Negro learn from Denmark?

(Consult Child's "Sweden, The Middle Way"; Warbasse, "What Is Co-operation"; Kress, "Capitalism, Co-operation and Communism".)

58-81-49

(1)

150

Finally, may I summarize my thought in the following words:

FOREWORD

1. We American Negroes are threatened today with lack of opportunity to work according to gift and training and lack of income sufficient to support healthy families according to standards demanded by modern culture.
2. In industry, we are a labor reservoir, fitfully employed and paid a wage below subsistence; in agriculture, we are largely disfranchised peons; in public education, we tend to be disinherited illiterates; in higher education, we are the parasites of reluctant and hesitant philanthropy.
3. In the current reorganization of industry, there is no adequate effort to secure us a place in industry, or to open opportunity for Negro ability, or to give us security in age or unemployment.
4. Not by the development of upper classes anxious to exploit the workers, nor by the escape of individual genius into the white world, can we effect the salvation of our group in America. And the salvation of this group carries with it the emancipation not only of the darker races of men who make the vast majority of mankind, but of all men of all races. We, therefore, propose this:

99-18-86

BASIC AMERICAN NEGRO CREED

(BANC)

A. As American Negroes, we believe in unity of racial effort, so far as this is necessary for self-defense and self-expression, leading ultimately to the goal of a united humanity and the abolition of all racial distinctions.

B. We repudiate all artificial and hate-engendering deification of race separation as such; but just as sternly, we repudiate an enervating philosophy of Negro escape into an artificially

privileged white race which has long sought to enslave, exploit and tyrannize over all mankind.

C. We believe that the Talented Tenth among American Negroes, fitted by education and character to think and do, should find primary employment in determining by study and measurement the present field and demand for racial action and the method by which the masses may be guided along this path.

D. We believe that the problems which now call for such racial planning are Employment, Education and Health; these three: but the greatest of these is Employment.

E. We believe that the labor force and intelligence of 12 million people is more than sufficient to supply their own wants and make their advancement secure. Therefore, we believe that, if carefully and intelligently planned, a co-operative Negro industrial system in America can be established in the midst of and in conjunction with the surrounding national industrial organization and in intelligent accord with that reconstruction of the economic basis of the nation which must sooner or later be accomplished.

49-18-87

F. We believe that Negro workers should join the labor movement and affiliate with such trade unions as welcome them and treat them fairly. We believe that workers' councils organized by Negroes for interracial understanding should strive to fight race prejudice in the working class.

G. We believe in the ultimate triumph of some form of Socialism the world over; that is, state ownership and control of the means of production and equality of income.

H. We do not believe in lynching as a cure for crime; nor in war as a necessary defense of culture; nor in violence as the only path to economic revolution. Whatever may have been true in other times and places, we believe that today in America we can

abolish poverty by reason and the intelligent use of the ballot, and above all by that dynamic discipline of soul and sacrifice of comfort which, revolution or no revolution, must ever be the only real path to economic justice and world peace.

I. We conceive this matter of work and equality of adequate Income is not the end of our effort, but the beginning of the rise of the Negro race in this land and the world over, in power, learning and accomplishment.

J. We believe in the use of our vote for equalizing wealth through taxation, for vesting the ultimate power of the state in the hands of the workers; and as an integral part of the working class, we demand our proportionate share in administration and public expenditure.

88-81-44

K. This is and is designed to be a program of racial effort; and this narrowed goal is forced upon us today by the unyielding determination of ~~the mass~~ certain elements in the white race to enslave, exploit and insult Negroes; but to this vision of work, organization and service, we welcome all men of all races and colors so long as their subscription to this basic creed is sincere and is proven by their deeds.

THE NEGRO AND SOCIAL RECONSTRUCTION

Incomplete drafts

CHAPTER I.

PLANS OF VIOLENCE

The first effort to counteract violence is naturally violence in return, which means war, rebellion, or revolt. The Negro slave, seized in Africa between 1442 and the middle of the nineteenth century, fought for freedom against attacking black tribes or white slave raiders. The cost in life of inter-tribal wars was very large and it was Stanley's estimate that for every slave actually captured by raiders four human beings were left lying dead in the villages.

Once captured and brought down to the coast, there was little chance for revolt on the slave ships, although some cases occurred.

The slaves, transported by a Rhode Island master, murdered a part of the crew in 1731 and in 1732 the whole crew of another New England slaver was murdered. Several other similar cases are on record. Perhaps the most celebrated case of all was that of the "L'Amistad". This ship was carrying 54 Negroes from one part of Cuba to another in 1839 and under Joseph Cinque the Negroes murdered passenger and crew and finally landed in Connecticut. The organization which was formed to defend them eventually became the American Missionary Association and their attorney was John Quincy Adams. The slaves were freed. Two years later, "The Creole", sailing from Richmond to New Orleans, arose under Madison Washington, killed the officers and crew and took the ship to a British port. The slaves were allowed to go free, but years later the British Government had to pay $110,000 for them.

Landed in the West Indies, the earliest slaves immediately sought refuge and revolt and the first protest against the Negro slave trade was because they corrupted the Indians and then induced them to revolt.

Ovando "solicited that no Negro slaves should be sent to Hispaniola for they fled among the Indians and taught them bad customs and never could be captured." (Quoted from Herrera by Helps, Volume I, page 219.)

Most of the laws concerning Negroes drawn up in Spain for the government of the West Indies relate to the Cimarones or Maroons, as the name which was given to fugitive Negroes who were in a state of revolt. "The Negroes were not docile like the Indians and were evidently considered as most dangerous people." (Helps, Spanish Conquest, Volume IV, page 372. Quoting from Ley.) The Maroons in Jamaica escaped to the mountains where

they formed a band which chose leaders and made war for a century on the British Government. Their power was broken only by transporting their ranking leaders, first, to Nevia Scotia and finally to West Africa. A similar nucleus of revolt in Haiti led, finally, to the Haitian revolution and the freedom of the island under the leadership of Toussaint L'Ouverture and Dessalines. In South America, the Maroons established a republic with a walled city which eventually set up a regular government. It was finally captured by the Portuguese in 1698 after an heroic defense and the suicide of the leaders. Other revolts established the independence of the Bush Negroes down to our day.

Energetic measures for curbing slave revolts took place from the earliest times. They consisted, first, in so mixing the Negroes by tribe and language on plantations that communication between them was difficult; secondly, by enacting severe laws against conspiracy or attempts toward uprising and breaking the war-like spirit and spirit of individual freedom by legal and hard manual toil. The Christian religion was also used very successfully to induce submission and contentment.

41-9-103

The plan, therefore, to gain freedom through violence was pretty well curbed in the slaves that came to the American continent. Effort was made only to import slaves who had been acclimatized and inured to docile toil into the colonies of the main land. The current theory of the efforts of American Negroes to revolt is, however, singularly contradictory. On the one hand, there is the testimony of the slave codes. They were cruel and severe and show every evidence that the slaveholders were afraid of conspiracies among their slaves.

Any slave presuming to strike a white person could be punished at discretion for the first offense and with death at the second offense in Georgia or at a third offense, as in South Carolina. Resistance to a master could lead to indefinite incarceration and assault and battery could not be committed on the person of a slave. As a North Carolina judge said in 1829: "The power of the master must be absolute to render the submission of the slave perfect." (Goodell's "American Slave Code", page 172.)

The laws of South Carolina of 1712 for the better ordering and governing of Negroes and slaves declared that it was necessary to "restrain the disorders, rapines and inhumanity to which they are naturally prone and inclined." (Heard, Volume I, page 229.)

And the law of 1740 declared that "many late horrible and barbarous massacres have been actually committed and many more designed on the white inhabitants of this province by Negro slaves." (Hurd, Volume I, page 308.)

The actual revolts among American Negroes, from 1619 to 1863, were few in number, although there were a great many scares and rumors of conspiracies which spread panic in various cases for a time and then afterward were systematically minimized. The truth seems fairly clear, that every decade in the South there was some attempt somewhere of slaves to organize and escape their status by armed resistance, but the organization of the slave patrol held these attempts down to a few which were really dangerous. The slave patrol was an organization which included not simply the comparatively small numbers of slaveholders, but enlisted the interest of the mass of poor whites, so that actually the slaves were outnumbered by the whites, save in certain localities; and there it was possible to bring in wide outside assistance in a comparatively short time. And, of course, practically all the arms and ammunition were in the hands of the whites. Moreover, the humanity of some slaveholders and the personal attachment of the kind-hearted slaves, nearly always resulted in the betrayal of plots in order to save a particular white family.

41-9-104

In Virginia, in 1800, an insurrection took place under Gabriel Prosser. He and his fellows were to seize the arsenal in Richmond, kill the whites and liberate the slaves. A great storm interrupted the plot and a slave revealed it. Other plots were unearthed in North and South Carolina. Another uprising was planned in North Carolina in 1816 and a plot to destroy the city of Augusta in 1819. In 1822, a much more dangerous conspiracy was made under Denmark Vesey in Charleston, South Carolina. He was a free Negro with some property and laid his plans carefully. The blow was to be struck in July, 1822, when the masters were largely on vacation. Thousands of slaves were recruited, money was raised to purchase arms and blacksmiths hired to make others. Here, again, one slave tried to save his master and revealed the plot. Thirty-five Negroes were hanged and 43 banished. David Walker, a Negro of Massachusetts, made a bitter appeal for insurrection in 1829 and in August, 1831, Nat Turner, a Negro preacher in Virginia, led a band of insurgents and made 3 attacks upon the whites in 3 days, killing 61 white persons. The leader evaded arrest for 6 weeks until captured by state and Federal troops. One hundred and twenty Negroes were slaughtered during the man hunt and afterward 17 others executed, 12 transported and 10 acquitted.

The largest and most successful slave revolt came at the time of the Civil War when all the slaves in the vicinity of the invading armies left the plantations and rushed to the army and eventually some 200,000 ex-slaves and Northern Negroes joined armies of the North, in addition to a much larger number of laborers and servants. It was this revolt of the slaves and the prospect of a much larger movement among the 4,000,000 other slaves, which was the real cause of the sudden cessation of the war.

41-9-105

CHAPTER II.

PLANS OF MIGRATION

Long before the spasmodic efforts at revolt ended in armed slaves helping to put down secession, other and more successful plans had been tried. Broadly speaking, they involved the running away of individual slaves and of gangs and, in the case of free Negroes, migration to Canada, the West and Southwest, to Africa and to other destinations overseas.

The domestic migration began with the fugitive slave and the fugitive slave was the safety valve of the slave system. The Negro who could not stand the status of slavery did not need to wait until he could organize his fellows into armed and probably futile revolt; but from the widely scattered plantations in a comparatively empty country, he could slip away in various directions; south into the swamps of Florida; east, into the swamps of Virginia; north, along the Appalachian range and the Mississippi River into the free states. This planted in the Northern states an increasing number of runaway slaves, some of whom gave time, money and trouble to encouraging the runaway of their friends and relatives. As the abolition movement increased, many white persons helped in this, so that several regular organizations laid out these paths of escape and accompanying methods known loosely as the Underground Railroad.

The Underground Railroad led indirectly to the Civil War. It meant that the capital invested in slaves was suffering severe losses and the slave owners demanded more and more peremptorily that the laws for the recapture of slaves be enforced. Finally, they asked that a new Fugitive Slave law be enacted which seriously interfered with local state government in the North and individual rights. This in turn led to retaliatory legislation which attempted to nullify the Fugitive Slave law; and all this greatly intensified the bitterness between North and South and led toward the attempt at secession.

How large a number of slaves escaped, it is impossible to say. Judging from the growth of the Negro population in the North and the complaints of the slaveholders, it must have been considerable. The black population of the North increased from 128,984 in 1820 to 344,719 in 1860, an increase of 167% as compared with 151% for the total Negro population. As the Northern group was composed of poor immigrants with broken family life, insecure economic basis and suddenly transferred from city to town, they probably

little more than reproduced themselves and between 100,000 and 200,000 of them were doubtless fugitives from slavery and represented a loss of at least $25,000,000 capital invested in slavery and perhaps twice that sum. This was the economic loss that spurred secession.

The union of Negroes and Indians for resistance to the whites was long feared in the United States. Negro slaves took refuge among the Indians in Virginia in 1787 and about the same time began to escape among the Indians of Carolina and Georgia. The two races intermarried, making return of the fugitives difficult, as the Indians refused to surrender their Negro-Indian children. After the Revolutionary War and the War of 1812, Americans accused the British of conniving at the escape of Negroes by means of their Indian allies.

In the South; Georgia from 1789 to 1813, accused the Creek Indians of encouraging the running away of slaves. The Creeks were attacked by Andrew Jackson and defeated in 1814, but in 1815, 1,000 Georgia Negroes took possession of the former British fort and together with the Creeks threatened the South. The Spanish refused to destroy the fort, but Jackson moved against it in 1816 and wiped it out with great barbarity. Then came the so-called Seminole wars.

Giddings tells succinctly the story of this disreputable part of our national history:

"Torn from their native land, their friends and homes, they were sold in the markets of Carolina and Georgia. Feeling the hand of oppression bearing heavily upon them, they fled to Florida, and, under Spanish laws, became free. Holding lands of the Spanish Crown, they became citizens of that Territory, entitled to protection. To regain possession of their truant bondmen, Georgia made war upon Florida, but failed to obtain her object.

"At a time of profound peace, our army, acting under the direction of the Executive, invaded Florida, murdered many of these free men and brought others to the United States and consigned them to slavery. An expensive and bloody war followed; but failing to capture more of the exiles, our army was withdrawn.

"This war was followed by diplomatic efforts. Florida was purchased; treaties with the Florida Indians were made and violated; gross frauds were perpetrated; dishonorable expedients were resorted to and another war provoked. During its protracted

41-9-107

continuance of seven years, bribery and treachery were practiced towards the exiles and their allies, the Seminole Indians; flags of truce were violated; the pledged faith of of the nation was disregarded. By these means, the removal of the exiles from Florida was effected." (pp. V. and VI. Introduction. Exiles of Florida, Giddings.)

After the Revolutionary War, societies of Negroes in Newport and Boston were formed for migration to West Africa, especially Sierra Leone. Some Massachusetts Negroes as early as 1774 had asked to be assigned to some province of their own. Two thousand Negroes in Rhode Island were willing to go to Africa where a white West Indian, Thornton, promised them that they would be formed into an independent nation.

Gradually as the slave controversy increased, the chains of the slaves were drawn tighter and the free Negroes of the North found themselves in a more precarious position. Plans for migration beyond the borders of the United States began to mature. Indeed, from the earliest times, the thought that the Negro population of the United States would eventually be repatriated in Africa was widespread among whites and also among Negroes.

In 1815, Paul Cuffe, a black New Englander who had been protesting against lack of civil rights in Massachusetts, took 38 Negroes to the West coast of Africa at his own expense. There were various plans for colonization of the Negroes in the Northwest territory and some actual experiments by slaveowners who emancipated their slaves and sent them there. Remains of several of these settlements can be found today.

The free Negroes of Richmond opposed colonization in Africa and asked Congress for territory on the Missouri River. The Negroes of Boston asked how they could be called Africans when they were born in America and the Negroes of Hartford said that ignorant people sent to Africa could not teach ignorant people.

Later, the effort of the United States to curb the slave trade turned back many slave ships with their cargoes and they formed the nucleus of Liberia and Sierra Leone. The American Colonization Society sent numbers of educated Negroes and laborers to help in the Liberian adventure and others went voluntarily. This might have resulted in a very larger migration had not the Colonization Society under Southern leaders turned it into a way of buttressing slavery. This aroused the ire of the abolitionists and the fear of the better class of Negroes.

Liberia was the final result of the efforts of the American Colonization Society. They sent out agents in 1816, but no emigrants until 1819, when 81 went to

Sherbro Island. Others went out in 1821 and changed the settlement to the mainland of Liberia. Here they struggled with the natives and received accessions from America, especially Elijah Johnson and Lott Cary. Slowly other immigrants dribbled in. From 1820-1833, 2,885 Negroes were sent to Africa by the Colonization Society. From 1820-1852, 7,836 were sent. Of these, 2,720 were born free; 3,868 were emancipated. In 1847, after the United States had refused support, Liberia declared itself an independent government and has maintained its independence ever since, despite great difficulties. In 1847, after the United States had refused support, Liberia declared itself an independent government and has maintained its independence ever since, despite great difficulties.

The situation of the new class of free Negroes in the North was not happy. They were finally deprived of political and civil rights and had a hard time earning a living. The determination to enforce the black laws against Negro immigrants and runaway slaves in Cincinnati about 1830 led to the first American-Negro convention in Philadelphia in 1830 and to certain concerted plans of action. The convention met annually from 1830 to 1836 and was attended by a number of educated and influential Negroes, as well as white sympathizers, like William Lloyd Garrison. They raised money and communicated with the British Government and laid plans for a large migration of Negroes into Canada. The nucleus of the settlements in Southern Ontario was begun at that time. Many distinguished Negroes have come from these settlements, including Josiah Henson and the late Richard B. Harrison, "De Lawd" of "Green Pastures".

41-9-109

After emancipation in the West Indies, a few Negroes migrated to Trinidad and Jamaica.

In 1853, a National Council of Negroes was organized to take up the question of migration. Twelve state conventions sent representatives to the Cleveland Convention of 1854. Three proposals were made: one by Martin D. Delaney, who advocated the Niger Valley in Africa; another by James M. Whitfield, who wanted to go to Central America; and a third by Theodore Holly, afterward an Episcopal bishop, who proposed to go to Haiti. These 3 emissaries started out and at the next colonization convention in Canada in 1856, Holly made his report and eventually 2,000 emigrants went to Haiti in 1861. Delaney, later, proceeded to the Niger Valley and concluded treaties with 8 African kings. Whitfield died in San Francis on his way to Central America. The whole plan of wholesale emigration split the American Negroes into bitterly antagonistic groups with Frederick

Douglass leading the opposition.

The Civil War stopped thoughts and plans for emigration for many years, although there were small internal migrations of freedmen from Carolina to Florida, from the Gulf states to the Southwest and from Virginia to the South in search of better working conditions and free land.

When the Negroes began to pour in on the Union army, Abraham Lincoln proposed to carry out his long cherished plan of colonization. He consulted foreign countries and secured an appropriation of $100,000 from Congress in 1861 and a further appropriation of $500,000 in 1862. He was favored compensated emancipation in the Border States on condition that the Negroes should move beyond the limits of the country.

In August, 1862, a delegation of Negroes consulted Lincoln with regard to settlement in Central America or elsewhere, but there arose difficulties in finding suitable places. Finally, a settlement on the Isle à Vache near Haiti was arranged under Bernard Kock, who had leased the island from Haiti. Several hundred Negroes were ready to go, but doubt was thrown on Kock's character and objects. Finally, the Secretary of the Interior made a contract with certain New York capitalists who really represented Kock and an expedition set out in 1862 with 500 Negroes and Kock hired as governor or manager. The result was disastrous. Smallpox broke out, drinking water was scarce and food bad. The company was landed without shelter or supplies. Kock proved to be dishonest and incompetent and finally, in 1864, the remains of the colony were brought back to the United States. Only 293 survived.

41-9-110

It was not until the revolution of 1876 that widespread plans of migration from the South to the North took place. There had been some migration of freedmen from the South immediately after the war, but the difficulty of getting work in the North and the prospect of greater freedom in the South, held this to a minimum. The work of the Ku KluxKlan and the forced disfranchisement of the Negroes in 1875 and 1876 led to several large plans for migration into the West and particularly into Kansas.

Some moved from North Carolina to Indiana and a congressional investigation tried to prove that this was a political scheme. Two men, Henry Adams in Louisiana and Benjamin Singleton of Tennessee organized a major scheme. They told of the opportunities in Kansas and the West andinterested between 100,000 and 200,000 Negroes. Over 50,000 Negroes actually went West and a meeting of whites and blacks in Vicksburg in 1897 tried

to stop the exodus by reassuring Negroes. Afterward the whites resorted to violence.

At first, the Negro emigrants to Kansas were in distress, but a relief association was formed among the Quakers and other whites which supplied them with clothes and money. During the first year, the freedmen took up 20,000 acres of land and built some 300 cabins. A report of the Freedmen's Relief Association said "that the exodus of the colored people from the South began about February 1, 1879 and that 60,000 refugees came to Kansas, of whom 40,000 were in a destitute condition." There was some violent opposition to this migration among local people, but, on the whole, it proved successful.

After 1890, there was a gradual but increasing migration of Negroes from the South to Northern cities. For the most part, they represented the well-to-do, or the educated and ambitious, who could not submit to the caste conditions in the South. There came, also, artisans and laborers, but these met the opposition of the trade unions and were forced to make a living by strike-breaking and were then accused of being "scabs".

41-9-111

Later, the project of a "Return to Africa" recurred and was emphasized by Bishop H. M. Turner, a Reconstruction leader in Georgia and later a prelate in the African Methodist Church. He was greatly discouraged because of the decision of the Supreme Court in the Civil Rights case. There was considerable agitation, but very little actual migration. Senator Morgan of Alabama supported the scheme and 197 Negroes sailed from Georgia to Liberia in 1895. Gradually, the scheme was given up.

Some efforts have been organized to transplant Negroes into Mexico and South America, but understanding between our State Department and the authorities of these South American states has effectively stopped these plans.

The Northern migration of Negroes continued slowly but steadily. The colored population of the North and West increased from 344,719 in 1860 to 626,990 in 1880 and 911,025 in 1900, indicating a movement of 10,000 to 20,000 Negroes a year from North to South. Between 1910 and 1920, the Northern Negro population increased nearly a half-million and a whole million from 1920 to 1930. This probably indicates the permanent northward movement of over a million Negroes between 1910 and 1930.

The reason for the increased migration after 1910 was the World War.

PART II.

1863-1910

CHAPTER III.

THE PLAN OF POLITICAL POWER

The Civil War sent a new thrill through the Negro population and vast hopes for emancipation and progress. These were encouraged by inducements held out to Negroes to fight in the ranks and labor for the Northern armies and finally they came to fruition in the Reconstruction legislation of 1867.

From 1867-1876, the Negroes placed their whole hope of full emancipation and economic security upon their political power. This was of course putting the cart before the horse. Their political power could only have been sustained by economic security. Ownership of land, control of some capital and education. They sought education and began to get it through their establishment of the public school in the South. Thaddeus Stevens and Charles Sumner and others tried to give them peasant-proprietorship and they themselves sought this through legislation in South Carolina and elsewhere; but the power of the Southern landholders and capitalists hindered this until their efforts were reinforced by Northern capital and this economic combination ruined the political as well as the economic hopes of the Negroes.

Between 1876 and 1890, political power gradually dwindled until the Negroes were practically disfranchised and unrepresented in Congress, the state legislatures, the city councils and the county administration.

In addition to this, their support of political power went to increase the political preponderance of Southern capital and threw the whole democratic balance of the nation out of gear.

Meantime, political organizations, chiefly within the Republican Party, tried to restore the ballot, achieve legal defense and new enactments. The Republican Party of the various Southern states consisted during this period almost exclusively of Negroes, which meant that they had some right to share in and direct distribution of the national patronage. In the North, the connection of Negroes with the Republican Party gave that party prestige for several years after the Civil War.

The annual conventions, therefore, of the Republican Party became centers

where the fight for Negro political and civil rights centered.

There were only a few Negro delegates to the Republican National Convention of 1868, but an increased number in 1872. From 1880 to 1900, the number of Negro delegates was large. It included many Negroes of outstanding ability, like N. W. Cuny of Texas, Walter Cohen of Louisiana, Judson Lyons of Georgia and M. W. Gibbs of Arkansas.

On the other hand, in party organizations, they have shown 2 phases of power: first, they became very powerful in the national organization of the Republican Party. Once, in 1884, John R. Lynch of Mississippi was Temporary Chairman, a position of considerable influence and in 1880, Senator B. K. Bruce had some chance of being named candidate for Vice President. In all the national conventions from 1876-1900, the Negro delegates from the South usually held the balance of power between contesting candidates. Since they had back of them no effective voting population, men were able to secure the position of delegate by manipulation and bribery and both colored and white delegates were for the most part practically for sale to the highest bidder. It became, therefore, the first solicitude of prospective candidates for the Republican nomination to buy up the Southern delegates before the convention. Venal whites drifted into the party and controlled the Negroes; venal Negroes were easily induced to forget their higher mission in a scramble for money and place, and venal candidates for the presidential nomination thus bought the nomination. The bribery of Southern Negro delegates at national conventions became an intolerable scandal and resulted in their partial disfranchisement, even in the councils of the Republican Party; a situation which still obtains.

Finally, this system was broken in to by the determination of Southern whites to secure the patronage and graft which had been going to Negroes. They, therefore, formed a "Lily-White" movement which displaced the colored delegates by white delegates. This was accomplished partly by manipulation, cheating and intimidation in the South, but more effectively by the connivance of the Republican committee. On this Republican committee, a few Negroes have always sat, but their numbers have decreased until today there are none.

The overwhelming majority have of course been Northern and Southern whites and their votes have given seats to the Lily-White Southern delegates. In addition to this, the Republican committee has gradually moved toward basing representation from the South on the number of votes cast rather the population of the states, thus, curiously, returnin

41-9-113

to proposals made in Reconstruction and lessening the influence of Negroes in the Republican Party.

The effect of the Lily-White movement can be shown in Texas. The Republican vote in 1896 was 167,000, but in 1904 had fallen to 51,000 and in 1910 to 26,000. Thus, the seizure of the machinery of the Republican Party in the South by white men and the connivance at this by Northern Republicans, has so cut down the Southern Republican vote it is now proposed to further reduce the representation of Southern Republicans in the National Convention,---a curious bit of retribution visited upon the white grafters who dominate the party.

Beginning with the convention of 1912, the party machinery of the Republicans in the Southbegan to pass into the hands of white people and by 1924, they were predominant.

The Republican Convention of 1916 re-appertioned delegates in the South according to voters rather than population. One delegate was elected for every congressional district and 1 additional delegate for every district in which the Republican vote was not less than 7,500. In 1924 and 1928, the figure 7,500 was raised to 10,000.

The result of this disfranchisement was that the South had 65 Negro delegates in 1912, 35 in 1916 and 29 in 1920. The numbers then increased to 59 in 1924 and 49 in 1928. In 1928, there were no Negro delegates from Alabama, Florida, Texas and West Virginia.

Co-incident with this has come a change in the party platforms. The platforms from 1868 until 1900 and later invariably complained about the disfranchisement and civil disabilities of Negroes,but the party in Congress made no attempt to follow up these provisions. In later years, less and less has been said about the Negro until a perfunctory protest against lynching has been included in the party plat form.

In 1896, the Republican Party denounced lynching and from 1920 on favored an anti-lynching law.

The Republican Party in 1900 made a general statement that everybody should have a chance to occupy a place in the government according to his character and ability. It places the services of Negro troops in the Spanish-American war. In 1904, the party emphasized its belief in the equality of all men and in 1908, demanded equal

justice for all men andasked for the enforcement of the 13th, 14th and 15th Amendments. In the campaign of 1912, this was repeated and peonage was attacked.

The Democrats in 1880 taunted the Republicans with the failure of the Freedmen's Saving Bank. In 1904, they protested against reduction of representation in the South. In the campaign of 1912, Woodrow Wilson expressed his earnest wish to see justice accorded to Negroes and in 1916 re-asserted this stand. In 1924, Davis attacked the Ku Klux Klan and organized a Negro bureau during the campaign. This was repeated in 1928.

This made the efforts of the Northern Democrat to attact the Negro vote more effective and the result has been in certain cities like Boston and New York to give Negroes considerable influence in the local Democratic organization. Perhaps this municipal political power in the larger Northern cities is the greatest source of influence which the Negro has left in politics.

The highest positions held by Negroes under Federal appointment have been that of the Registrar of the Treasury, Recorder of Deeds, Minister to Haiti and Minister to Liberia. The office of Recorder of Deeds has been held by Negroes continuously since 1881, except for 1 term under Woodrow Wilson, when a white man was appointed. Beginning with 1881, the office of Registrary of the Treasury was held by Negroes from 1881 until Wilson's first administration, except during Cleveland's administration. Since the administration of President Taft, no Negro has held this position. Wilson appointed 2 American Indians to fill it. The Minister to Haiti has been a colored man from 1869 through the administration of Theodore Roosevelt.

41-9-115

Appointments to Negroes in the national service in the South were made by Grant, Garfield, Hayes, Harrison and McKinley. Even Cleveland made some such appointments. Theodore Roosevelt was opposed by a storm of protest when he re-appointed a colored Postmaster and a Collector of the Port at Charleston. Wilson made few political appointments of Negroes, but out of the war appointed an Assistant to the Secretary of War in the advisory capacity and eventually his commission commissioned 700 Negro officers.

In 1900, the Republican Party claimed that there were 58 colored men in Federal employ, including 11 in the diplomatic and consular service and several Collectors and Postmasters. In the clerical service and the army, there were 15,868 Negroes. In

In 1912, 19,729 such positions were claimed, including 8,000 in the army and navy. In 1916 and 1924, the number of presidential appointments of Negroes decreased, but the colored Federal employees were reported to have increased from 22,540 in 1910 to 51,882 in 1928. Most of these were in the Postoffice Department. It was said that the Negroes, constituting 9.9% of the population in 1920, occupied in 1928 slightly more than 9.1% of the positions in the Federal Executive Civil Service.

Public patronage during the Hoover administration was practically withdrawn from the hands of colored men in the South.

There were in 1930, 2 colored members of the Republican National Committee, both from Mississippi.

From 1871 to the present, 24 Negroes have sat in Congress, including 2 Senators. Most of these came during Reconstruction, but 1 Negro Congressman is still serving. In at least 3 other cases, there is no doubt but what colored men actually were elected to office, but were counted out.

41-9-116

After 1876, a few Negro congressmen from the South represented South Carolina and North Carolina until White, who served in the 56th Congress. There ensued a long interim, from _____ until 1930, when for the first time a Negro congressman was returned from the North.

In several Northern congressional districts, the Negro vote by 1924 had reached such a size that the possibility of a Negro congressman was manifest. For this reason, the white congressmen from 1 district in Illinois and from a district in St. Louis, became practically representatives of the Negro race and worked for such bills as the Negroes demanded, especially the anti-lynching bill. When the white Congressman Madden of the Chicago black belt died, a colored man, Oscar De Priest, was elected to succeed him in 1928 and re-elected in 1930 and 1932. He was defeated in 1934 by a colored Democrat named Mitchell, showing that the Democratic Party was compelled to take a colored candidate in order to defeat the Republicans. In 1928, in St. Louis, a colored candidate was defeated in 1928, but made a strong showing.

In the states, the Negro served in the legislatures of Georgia until about 1910, but in most of the other Southern states they were eliminated by 1890. In the Northern states, they began to appear as members of the legislature about 1900. Illinois has usually 3 or 4 membersof the Lower House and 1 colored Senator. There

There are usually 1 or 2 Negro members of the legislature in Kansas, Nebraska, Michigan, California, Missouri, Indiana, Ohio, Pennsylvania, West Virginia, New Jersey and New York. Once or twice there have been members of the legislature in the New England states. Some of these legislators, like Harry Davis of Ohio, have made distinguished records. It was often said that had Davis been white, he would have been Speaker of the House.

There are no Negro municipal or local officials in the South, except a few notaries. In the North there have been some important offices held. Chicago has had a Superior Court judge and there are 2 Superior Court judges in New York City. Massachusetts once had a judge and there have been colored police magistrates in several states. Some important commissionerships are still held in the Civil Service Commission in New York City and the Tax Commission and the Civil Service Commission of Cleveland, Ohio and various offices in Chicago, including a number of aldermen.

41-9-117

In the National Government for a long time, the Negro received important representation in the executive branch. Once Theodore Roosevelt was about to appoint a Negro as Treasurer of the United States, but was thwarted by the race prejudice of his Secretary of the Treasury. Collectors of Customs have been appointed in Charleston, New Orleans and Atlanta in the earlier days, but no important Federal position has come to Negroes recently in those states. In Washington, the Registrar of the Treasury has usually been a colored man until quite recent times and the Recorder of Deeds of the District of Columbia almost invariably. In recent administrations, it has been customary to appoint some preminent colored men as assistant in the District Attorney's office and under the New Deal, a number of advisory positions have been given to colored men of education and ability. One of the municipal judges in the District of Columbia is usually a Negro.

On the whole, however, the office holding by American Negroes has been creditable, but disappointing so far as it has sought to further their political, social and economic position. They have held clerkships in the Federal Civil Service, in state and municipal Civil Service, but they have seldom reached positions of real importance where they could take any decisive action to help the status of their people.

Finding that office-hoolding and party affiliation were both disappointing in results, the Negro has attempted to divide his votes both for the President and for

congressmen and members of the legislature so as to reward and punish friends and enemies. Negroes largely supported President Wilson in 1912 and he promised them justice. A smaller number supported Smith and Davis in 1920 and 1924 and a larger number Roosevelt in 1932. Negroes have also in considerable numbers supported the Socialists.

Perhaps the greatest single triumph of Negro voters was the defeat of Parker of North Carolina for confirmation in the Supreme Court. He had been an opponent of Negro suffrage and was named by Roosevelt, but his record as regard to organized labor was bad and the influence of the labor vote and of the Negroes combined led to his failure to be confirmed.

811-6-14

The drive of Negroes for legislation through political power has had some measure of success. Appropriations for Howard University, for instance, were long limited and provided for by questionable legislative methods. In the 68th Congress, the appropriation was ruled out on the point of order and finally, in 1930, the legality of the appropriation was fixed by act of Congress and it became a Federal school with an initial appropriation of $1,249,000. The Federal appropriations for education have benefited the Negro, although he has been unsuccessful in his attempt to have them pro-rated according to his numbers in the population. The division has been left entirely to the states.

In another direction, Negroes have succeeded in having laws defending their civil rights put on the statute books. The first case was the celebrated civil rights law so long advocated by Charles Sumner, which was eventually emasculated by the Supreme Court in 1883 and 1913. State civil rights legislation guaranteeing the legal right of Negroes to service in public places was enacted.

In 16 states between 1884 and 1918:

Connecticut	1884 and 1905
Iowa	1884 and 1892
New Jersey	1884
Ohio	1884 and 1894
Colorado	1885 and 1895
Illinois	1885
Indiana	1885
Michigan	1885
Minnesota	1885, 1897 and 1899
Nebraska	1885 and 1893
Rhode Island	1885
New York	1893, 1895 and 1913
Pennsylvania	1887
Washington	1890
Wisconsin	1895
California	1897

(Johnson, The Negro in American Civilization, p.338.)

The laws were so drawn that in the majority of cases courts could easily render them ineffective. In only 2 states have the civil rights laws really been enforced with thoroughness and that is Massachusetts and in New York, since the law of 1918.

On the other hand, in the Southern states, caste legislation between 1881 and 1907 required that colored persons occupy separate seats or compartments in transportation. Then, from 1890 to 1910, came the new wave of disfranchisement laws.

The Jim-Crow legislation, requiring separation in cars, street cars and education, swept over the South from 1890 to 1910 and Negroes could do little to oppose it. They did succeed, however, in confining separation in Maryland to local trains and to defeating separate car laws in Missouri and West Virginia. Other more subtle attacks upon Negroes were contained in the so-called full crew train laws which, through the connivance of the unions, deprived Negroes of employment as train porters on railways and in various craft recognitions, as for instance, as barbers, which is threatening today to make it increasingly difficult for a Negro to become a barber.

41-9-119

On the other hand, the Negro has succeeded in some cases in keeping discriminatory legislation off the statute books. In 1913, after Wilson and the Democrats came to power and because of Johnson's victory, a determined drive was made to spread laws against the inter-marriage of Negroes and whites on the statute books of the Northern states. The opposition to this was at first embraced by being taunted with the accusation that their ambition was to marry with whites, but they were soon able to place their opposition on the teal ground that such laws insulted colored women and made them the victims of the aggressions of white men.

Anti-intermarriage bills were introduced in Congress and California, Colorado, Illinois, Iowa, Kansas, Michigan, Nebraska, New York, Ohio, Pennsylvania, Washington and Wisconsin. Only 1 passed when Nebraska strengthened an existing statute.

Onthe whole, however, the social and economic emancipation of the Negro race by means of the ballot has failed of any great success, but perhaps the failure has been more greater with regard to Negroes than it has to whites. It has simply made the fact more clear that without economic Reconstruction political freedom and power is impossible.

Indeed, the whole use of political power by Negroes is continually handicapped by their dependent economic position. Their political power in the North is considerable and growing but, after all, they have only about 2,000,000 votes there. In the Border

States, their large vote is handicapped by the fact that their employment is often threatened by any political activity, while in the deep South, not only is their employment threatened, but their personal safety and right of domicile. While, then, the plan of using the ballot for defense and aggression among Negroes has not been altogether ineffective, it is manifest that until Negroes have an assured income and an economic basis as a laboring class which gives them essential independence, they cannot exercise the ballot freely or vote as they wish even when they are allowed to vote at all.

41-9-120

"I hold thistruth to be self-evident, that a disfranchised working class in modern industrial civilization is worse than helpless. It is a menace, not simply to itself, but to every other group in the community. It will be diseased; it will be criminal; it will be ignorant; it will be the plaything of mobs; and it will be insulted by caste restrictions." (Johnson, The Negro in American Civilization, p. 466.)

CHAPTER IV.

A PLAN OF CAPITAL AND LABOR

During the sway of the Negro's plan of gaining full American citizenship by political power, and explaining and supplementing that effort from 1867 to 1930, came two other movements: one from 1896 to 1920 which sought firmly to integrate the American Negro into American industry as farmer, laborer, skilled artisan and capitalist; and the other movement which sought by agitation and legal defense to clear away race discrimination and allow untrammeled advance of black folk according to chance and ability.

These two latter movements began in bitter controversy; the first ended with the World War and the second declined with the depression and merged with movements to stop discrimination in the NRA.

Despite political power and legal defense and whatever might be accomplished by migration, there was evident from the first that economic power must underlay all efforts of the American Negro to re-establish himself. The fact was that he was a poor and ignorant laborer and his exploitation, which began in slavery, was not ended by emancipation. How, then, should he establish himself as an effective and decently paid laborer?

The first clear and coherent plan to this end was presented by Booker T. Washington and enunciated in his celebrated speech at the Cotton States' Exposition.

This occasion had been carefully planned beforehand and was not a mere spontaneous event. William H. Baldwin, a young railroad executive and far-sighted industrial statesman, knew by personal experience Southern labor conditions. He was rapidly coming to the front, being made President of the Long Island Railroad in _____, and slated for the presidency of the Pennsylvania Railroad. He knew that Negro labor with proper training and treatment could be made effective and he and other industrialists also feared the new demands and growing organization among white craft laborers. As a firm believer in capitalistic exploitation, Baldwin thought that in the South there could be built up two labering classes who would naturally supplement each other and together make for the economic development of the new South. He wanted the black laborers trained in skilled industry. He wanted the white laborers well-paid, but curbed in their increasingly intolerant demand for a voice in industry. Here was the developing Negro race, increasing in intelligence, but distressed by its partial deprivation of political power and civil rights. Here, also was an extraordinary man; a self-made Negro, trained at Hampton, who had been brought

41-9-121

down to take charge of a small school in Alabama, started by a young colored woman named Davidson.

Mr. Washington was an opportunist with high ideals. He believed in political rights for people who could exercise them, but inthe case of the Southern Negroes, he knew that the attitude of the white South was against their political activity and he, therefore, took the position that the Negro must first gain an industrial status before he could ask for the exercise of political rights. He knew that the Negro needed civil and social rights. No one suffered more than he from the discrimination in schools, on the railroads, in hotels and otherwise. But he believed that if the Negro showed the people of the United States that they could advance despite discrimination, that the inherent justice in the nation would gradually extend to deserving Negroes the rights that they merited. Above all, Mr. Washington had not the slightest doubt that the present organization of industry in the United States was normal and right; that capital was accumulated by thrift; that labor was rightfully bought and fed and that profits were really made as a result of buying the product of labor. He, therefore, proposed that the Negro take this path toward eventual equality, and by working hard and skillfully, accumulate in the hands of his more thrifty and gifted individuals, enough capital to hire employees and make money. He expected that the black owners of property would thus gain recognition from other propertyholders and gradually rise in the scale of society. As a first step toward this new capitalism, Washington especially stressed landholding--wide-spread peasant proprietorship and even large farming among Negroes.

41-9-122

As a practical path toward these things, Mr. Washington's program, therefore, included the giving up of political rights, at least temporarily, the giving up of agitation for civil rights and the insistance upon training young Negroes for farming and industry through industrial schools. This plan, launched in 1896, and triumphant from that date until about 1910, was in reality an alliance wit white capital and was rewarded by large contributions toward Negro education, especially such schools as conformed to the Hampton and Tuskegee type. It was rightly regarded as a clever and far-sighted compromise which if it would not solve would at least peacefully postpone the solution of a baffling and internal problem of race conflict. Mr. Washington, between 1900 and 1910, became one of the most popular men in America, in constant demand North and South, as a speaker, adviser and referee. There resulted a new understanding between the leading

elements of the North and South with regard to the Negro. Agitation for voting was frowned upon and skilled labor was encouraged. The Negro college, while not entirely discouraged, was looked upon with some suspicion and the careers for Negro college graduates bec me difficult. To some extent, appointments and opportunities of young Negroes were carefully censored and referred for approval to Tuskegee over a very wide extent of country. Negro newspapers were brought into line by judicious advertising and other means of control.

As the white opinion of the land became unified behind Mr. Washington, colored opinion began to become uneasy and suspicious, while the best white Southern opinion supported Mr. Washington, the politicians and the rabble got out of hand. A wave of "Jim-Crow" legislation and disfranchising bills swept over the South and border states from 1890 and 1910--at the very time when Negro political power and agitation had been lulled to its lowest by the Washington compromise. Mississippi in 1890, South Carolina in 1895, Louisiana in 1898, North Carolina in 1900, Alabama in 1901, Virginia in 1902, Georgia in 1908 and Oklahoma in 1910 disfranchised Negroes by adroitly drawn illiteracy and property tests.

41-9-123

The result of this was not on the whole encouraging. Evidently despite their promises, the best white South could not protect the voteless Negro. Moreover, the attempt to set up a Negro labor class in rivalry to white laborers led to increased race hatred and lawlessness in the South between white and black labor. Separation of the races in travel had been made compulsory in Tennessee, Florida, Mississippi, Texas, Kentucky, Georgia and Louisiana by 1891. It then paused, but a new wave of legislation began in 1878 and covered South Carolina, North Carolina, Virginia, Maryland and Oklahoma. Determined and repeated efforts were made in Missouri, West Virginia and Delaware. Other laws and ordinances completed the program of racial caste and convinced increasing numbers of Negroes that the only result of the Washington compromise was going to be a permanent caste in the United States acquiesced in and condoned by Negroes themselves.

This triumph of the radical anti-Negro South and the continued prevalence of lynching greatly embarrassed Mr. Washington. He hated caste and lawlessness and wanted the best for his people, but he believed implicitly in his economic program and made the fatal mistake of trying to forestall criticism from Negroes and to neglect if not suppress Negro colleges. The result was an outburst of wrath and criticism led by the younger college-bred group which split the Negroes in two.

In the North, results were no better. White labor inherited from before the Civil War a fear of the competition of slave labor and of the competition of the free blacks. They finally, grudgingly, encouraged them in separate organizations and a Negro trade union movement began and was headed toward success when it became a part of the new political organization which swept the Negroes into Reconstruction.

After this, the craft unions excluded the Negroes, but when the new Knights of Labor were organized, large attempt was made to bring the Negroes in. This, however, was stopped when the American Federation of Labor, the organization of the skilled crafts, came into power. Most of the constituent organizations here held excluded Negroes openly, or by secret policy, so that the division between black and white labor gradually became wider. This gulf between the two labor groups continues to our day. Even the attempt of such organizations as the Pullman Porters has received no effective aid from the American Federation of Labor and it is only in the present movement toward vertical unions that there is even a small chance for Negro laborers to become a part of organized labor.

41-9-124

On the other hand, the change in industrial techniques, the widespread use of machines and mass production, made the effort of the industrial schools to train skilled labor among Negroes extremely difficult, while the situation of the farmer, both white and black, in the presence of new problems of labor, machinery and markets, made the advance of the Negro farmer almost impossible. It was thus that by the time of the World War, the Washington program for the economic emancipation of the Negro had met insuperable difficulties. The small black capitalist or capable college graduate found no place or welcome to the vast machine which controlled capital and credit and directed industry. He could only hover on this fringe of exploitation which the whites neglected using color discrimination as a sort of protection tariff for his marginal lack of capital and training.

Black labor met new competition of white men forced down to the level of the black reservoir, while the machine displaced many of the very skills which Hampton and Tuskegee were trying to teach.

Negroes for the time being were largely eliminated from politics in the South. But they still remained a major factor in Southern poverty. The low purchasing power of the Negro population makes the South a poor market for the products of its own factories and causes outside producers to consider it the poorest market in the nation. Every

dream of economic emancipation for the South has been impossible of realization, for every such dream has failed to include Negroes as an economic factor in Southern development. The South has continued to insist on a political remedy to one of its major economic ills.

From the time of Emancipation down until the World War, the Negro had a monopoly on certain jobs in the South that were poorly paid and involved menial service. As Alexander says: "A Southern white man will curry a mule but he will not brush a gentleman's coat. He will drive an ox wagon but he will not act as coachman." These so-called Negro jobs were the jobs of servants and laborers, but they were fairly permanent and the workers received certain perquisites in food, in clothes and had personal relations with employers that gave them a degree of legal and social protection. The money which built homes and churches for Negroes, educated Negro children and saved sums for capital investment, came out of this wage.

41-9-125

Gradually, however, toward the time of the World War and markedly thereafter, this situation changed. In most Southern hotels, the sons of poor whites are the bellboys and their daughters are the waitresses. This class has pressed into the cities and competes with the Negro as a porter, a garbage mover, a newsboy and a day laborer. It became more and more definitely believed that no Negro should have a job as long as a white man was unemployed and the division of labor by race almost completely disappeared.

Mr. Washington's work, however, was not all lost. It first was shown in the ownership of land. Negroes owned 97,458 farms in 1890. This number increased rapidly until it reached a total of 218,612 in 1920. Then the forces over which Washington had no control manifested themselves and land ownership decreased to 181,016 in 1930, which meant a loss of at least 4,000,000 acres of land; and it has been alleged that since 1930, nearly a million acres more have gone. In other words, Negroes bought land just at the time when land ownership was losing its significance, so that the Negro landholder was caught in the depression which overwhelmed the farmers of the world and could not by his unaided efforts hope to make economic improvement on Southern farms. The same difficulties in lesser degree faced the white farmer and the result was that the farmer moved to the city in large numbers and entered industry. Most of these migrants from country to city were white, but a large and increasing number were Negroes. Between 1910 and 1920, the center of the Negro population in the United States moved 19 miles North.

Negro farmers and farm laborers for this reason decreased from 56.6% to 36.7% of the working population from 1890 to 1930. On the other hand, Negroes in transportation, manufacturing and mechanical industries, and in business and clerical work, increased in the same time from 10.3% to 29.9%. But they did not become as Washington had hoped, to any great extent, skilled workers and business leaders. Manifestly, this was not merely the result of lack of skill or unwillingness to work. It was partly the result of race prejudice and partly the whole industrial system of the nation and the age.

41-9-126

CHAPTER V.

PLANS OF AGITATION AND LEGAL DEFENSE

The disfranchisement of Negroes was clearly illegal and a nullification of war amendments. It therefore became after 1876 and down to our own day, a settled plan among Negroes to reassert their political power through systematic appeal on the basic questions as to their legal status before the highest tribunals of the land. This was also buttressed by efforts at new legislation which would secure their civil rights. These efforts were carried on by individual action and group movements.

The earlier court cases which involved the interpretation of war amendments were brought before the courts by officials or parties who had no particular interest in securing favorable decisions for Negroes. Thus, the Slaughter House cases of 1873 which emasculated the 14th Amendment, the decisions of 1876 which declared the Force Act of 1870 unconstitutional and denied the right of the Federal government to protect its own voters at the polls; and the decision of 1883 which destroyed the civil rights bill; all these were not brought by Negroes nor were the cases prepared primarily in their interest.

Unless now the Negro bestirred himself, a legal basis of color caste in constitutional law would be laid. Various organizations and conventions in the North preceded the Civil War; the conventions of 1830-1836 beginning in Philadelphia. National colored conventions met in Troy, New York in 1847 and in Cleveland, Ohio in 1848, Cincinnati in 1852, and culminated in a great meeting in Rochester, New York in 1853, which laid plans for industrial education and a national council. A dissenting group, however, despairing of justice in the United States, called an Emigration Convention in 1854, which we have discussed.

41-9-127

In 1864, a National Convention of Colored Men was held in Syracuse, New York with Frederick Douglass as president. A National Equal Rights League was formed with John M. Langston as president. Following this, Equal Rights Leagues were formed in many Northern and Southern states.

Interest was now transformed to the South and the political struggle there. It was not until after 1876 that the plan of national organization was resumed, first, in the attempts to form a labor organization which resulted in national and state meetings from 1867 to 1871. A National Convention of Colored Men met in Louisville, Kentucky in 1883 and a National League was formed in Boston a little later.

In 1887, T. Thomas Fortune, editor of what is now the NEW YORK AGE, issued an appeal for a national organization and repeated this in 1889. The so-called Afro-American League, afterward changed to Afro-American Council, met in Chicago with 21 states represented in January, 1890. J. P. Price was President and Mr. Fortune, Secretary. The League held another meeting in Tennessee and then died until Bishop Walters revived it in 1898. It met that year in September at Rochester and later in November in Washington. The object of the organization was to investigate lynching, to test the constitutionality of discriminatory laws, to secure civil rights legislation, to promote migration from the South and to encourage organization. It met for several years and practically died with a final meeting in St. Paul, Minnesota about 1900. Its weakness was that it consisted simply of an annualm eeting without a continuous working organization. The result was that it did little more than meet, organize and pass resolutions. In the year 1905, a new aspect came over the plans for American Negroes for social Reconstruction.

41-6-14 821-128

The new disfranchisement laws and the wave of discriminatory legislation, coupled with Mr. Washington's concessions, alarmed the colored people. Particularly the young colored college man began to fear the dictatorship of the Tuskegee machine and the difficulty of expressing even legitimate criticism. This opposition was crystalized by the jailing of Monroe Trotter in Boston for trying to heckle Mr. Washington during a speech of the colored church. It seems to me that this was going too far and that while Trotter was much more bitter and outspoken than was necessary, yet he did have a right to talk even though he criticized Mr. Washington. The result was that a call was issued in June, 1905, signed by 59 men from 17 states. In July, 1905, 29 of these men, representing 14 states, met at Niagara Falls and formed the Niagara movement. The move-

ment grew and in 1906 held a significant meeting at Harpers Ferry. The Manifesto which it sent out was plain and bitter.

"The men of the Niagara movement coming from the toil of the year's hard work and pausing a moment from the earning of their daily bread turn toward the nation and again ask in the name of ten million the privilege of a hearing. In the past year the work of the Negro hater has flourished in the land. Step by step the defenders of the rights of American citizens have retreated. The work of stealing the black man's ballot has progressed and the fifty and more representatives of stolen votes still sit in the nation's capital. Discrimination in travel and public accommodation has so spread that some of our weaker brethren are actually afraid to thunder against color discrimination as such and are simply whispering for ordinary decencies.

"Against this the Niagara Movement eternally protests. We will not be satisffed to take one jot or tittle less than our fullmanhood rights. We claim for ourselves every single right that belongs to a freeborn American, political, civil and social; and until we get these rights we will never cease to protest and assail the ears of America. The battle we wage is not for ourselves alone but for all true Americans. It is a fight for ideals, lest this, our common fatherland, false to its founding, become in truth the land of the thief and the home of the Slave--a by-word and a hissing among the nations for its sounding pretentions and pitiful accomplishment.

"Never before in the modern age has a great and civilized folk threatened to adopt so cowardly a creed in the treatment of its fellow-citizens born and bred on its soil. Stripped of verbiage and subterfuge and in its naked nastiness the new American creed says: Fear to let black men even try to rise lest they become the equals of the whites. And this is the land that professes to follow Jesus Christ. The blasphemy of such a course is only matched by its cowardice.

"In detail our demands are clear and unequivocal. First, we would vote; with the right to vote goes everything: freedom, manhood, the honor of your wives, the chastity of your daughters, the right to work and the chance to rise,

41-9-129

and let no man listen to those who deny this.

"We want full manhood suffrage and we want it now, henceforth and forever.

"Second. We want discrimination in public accommodation to cease. Separation in railway and street cars, based simply on race and color, is un-American, undemocratic and silly. We protest against all such discrimination.

"Third. We claim the right of freemen to walk, talk and be with them that wish to be with us. No man has a right to choose another man's friends and to attempt to do so is an impudent interference with the most fundamental human privilege.

"Fourth. We want the laws enforced against rich as well as poor; against Capitalist as well as Laborer; against white as well as black. We are not more lawless than the white race, we are more often arrested, convicted and mobbed. We want justice even for criminal and outlaws. We want the Constitution of the country enforced. We want Congress to take charge of Congressional elections. We want the Fourteenth Amendment carried out to the letter and every State disfranchised in Congress which attempts to disfranchise its rightful voters. We want the Fifteenth Amendment enforced and no state allowed to base its franchise simply on color.

"The failure of the Republican Party in Congress at the session just closed to redeem its pledge of 1904 with reference to suffrage conditions at the South seems a plain, deliberate and premeditated breach of promise and stamps that party as guilty of obtaining votes under false pretense.

"Fifth. We want our children educated. The school system in the country districts of the South is a disgrace and in few towns and cities are the Negro schools what they ought to be. We want the national government to step in and wipe out illiteracy in the South. Either the United States will destroy ignorance or ignorance will destroy the United States.

"And when we call for education, we mean real education. We believe in work. We ourselves are workers, but work is not necessarily education. Education is the development of power and ideal. We want our children trained as intelligent human beings should be and we will fight for all time against any

41-9-130

proposal to educate black boys and girls simply as servants and underlings, or simply for the use of other people. They have a right to know, to think, to aspire.

"These are some of the chief things which we want. How shall we get them? By voting where we may vote, by persistent, unceasing agitation; by hammering at the truth by sacrifice and work.

"We do not believe in violence, neither in the despised violence of the raid nor the lauded violence of the soldier, nor the barbarous violence of the mob, but we do believe in John Brown, in that incarnate spirit of justice, that hatred of a lie, that willingness to sacrifice money, reputation and life itself on the altar of right. And here on the scene of John Brown's martyrdom we reconsecrate ourselves, our honor, our property to the final emancipation of the race which John Brown died to make free."

41-9-131

In 1907, the Niagara movement met in Boston and developed internal difficulties of organization chiefly because Mr. Trotter with all his courage was not an organization man. Beside this, the movement met the combined attack of Northern whites as represented by THE OUTLOOK and by all the "friends of Hampton and Tuskegee." The following year a lynching occurred in the birthplace of Abraham Lincoln and William English Walling and his wife, Anna Strunsky, visited the city. Walling wrote an article in THE INDEPENDENT and suggested that something ought to be done to finish the emancipation begun by Abraham Lincoln. Mary White Ovington, Oswald Garrison Villard and others began to meet and suggested that a conference be held in New York on the 100th Anniversay of Lincoln's birth. Out of this conference rose the N. A. A. C. P. and the Niagara movement held no further meetings. There was no formal merger but 7 of the charter members of the Niagara movement were named on the Board of Directors of the new organization and practically the whole membership was represented on the Advisory Committee. Thus, out of the impulse of the Niagara movement was grown a new organization and in November, 1910, THE CRISIS was first published.

41-9-132

The first report of the National Association for the Advancement of Colored People said:

"The National Association for the Advancement of Colored People seeks to uplift the colored men and women of this country by securing to them the full enjoyment of their rights as citizens, justice in all courts, and equality of opportunity everywhere. It favors and aims to aid, every kind of education among them save that which teaches special privileges or prerogative, class or caste. It recognizes the national character of the Negro problem and no sectionalism. It believes in the holding of the Constitution of the United States and its amendments, in the spirit of Abraham Lincoln. It upholds the doctrine of "all men up and no man down." It abhors Negro crime, but still more the conditions which breed crime, and most of all the crimes committed by mobs in the mockery of the law, by individuals in the name of the law.

"It believes that the scientific truths of the Negro problem must be available before the country can see its way wholly clear to right existing wrongs. It has no other belief than that the best way to uplift the colored man and the best way to aid the white man to peace is social content; it has no other desire than exacting justice, and no other motive than patriotism." (First Annual Report, January 1, 1911.)

0 0 8 6

The work of the National Association for the Advancement of Col red People is too well-known to call for review here. I need only point out that its greatest triumph was in the matter of legal defense.

By the help of the foremost legal talent of the nation, it has secured from the United States Supreme Court decisions which establish:

1. Recognition of the validity of the 15th Amendment.
2. The unconstitutionality of the Grandfather Clauses.
3. The unconstitutionality of residential segregation laws and ordinances.
4. The right of Negroes to sit in juries.
5. The dictum that due process of law may be violated by the threat of mob violence.
6. The denial of the right of a state to segregate primary elections by race.

Beside this, scores of individuals were defended and in several cases governors were induced to refuse extraditions for accused persons in danger of lynching. It also secured some protection for accused Negroes from mob violence and made the most effective anti-lynching campaign in the history of the country.

The ability of the National Association to do its great work rested really upon the substantial advance that the Negroes were making at that time in economic lines. Magazine articles and meetings of the Negro Business League emphasized this progress. There was published in 1910 a heavy volume of nearly 600 pages profusely illustrated, which was the outgrowth of a Sunday School Conference at Clifton, Massachusetts, in 1908. The book showed in many ways how the Negro was struggling upward, but the very fact of his progress increased his ability to fight them. Just as soon as economic conditions began to change, the whole situation suddenly altered. The economic progress of the Negro was slowed down, the philanthropic gifts to Negro education were lessened, the industrial rivalry of labor groups increased and the revenues for fighting opposition decreased.

41-9-133

The first sign of change that faced the National Association for the Advancement of Colored People was falling off of its income and the decrease in the circulation of THE CRISIS. This was not due to the fact that the American Negro did not want to fight discrimination and lynching and was not willing to pursue cases in legal defense which should build up the foundation of the whole caste system in marriage, in travel and in education. But it did come from the fact that the colored people, economically, were un-

able to stand the expense. It had been the proud boast of the N. A. A. C. P. that beginning as a quasi philanthropic institution, expecting to rely upon funds furnished mainly by rich white friends, it had become during its best years supported in the main by the mass of colored workers and that THE CRISIS had been made financially independent by the same kind of support. The amounts of money which it recieved from rich white people were small and their withdrawal would have made no particular difference in its program. The falling off now of this income meant that the colored people were financially unable to sustain this program and especially to back its expansion.

From 1910 until the great depression in 1929, th N. A. A. C. P. was the greatest and most effective organization among American Negroes and its success was undoubted. At the same time, it laid bare certain basic facts: first, the white population of America, even though it recognized the difficulties and obstructions in the path of Negroes, was not ready to grant them anything like a substantial equality; and secondly, the difficulties which faced the Negroes in the basic matter of earning a living were still so large and went so deep that the Negroes themselves did not have the power to make effective demands for their rights.

41-9-134

CHAPTER VI.

WORLD WAR AND DEPRESSION

The situation of the American Negro at the outbreak of the war seemed favorable. His higher schools were increasing in efficiency and the elementary school system in the South, while still bad, was improving. His political power, while still curtailed, was increasing and beginning to be used with some intelligence in the North and in the Border States. Determined agitation was beginning to decrease noticeably the annual number of lynchings which had reached the astonishing total of 235 in 1892, began now with some exceptions to fall below 75 a year.

The Negro press began to increase in efficiency and boldness and Negroes looked with interest upon the war in Europe. They had taken a permanent part in the great Races Congress held in London in 1911 and begun to conceive of the color problems of other groups. In the election of 1912, a considerable number of Negroes supported Wilson in an effort to divide the Negro vote and put the Democratic Party and the Solid South under obligations to the Northern Negro voter.

The outbreak of the World War did not at first greatly interest American Negroes. In 1914, 49 Negroes were lynched and the agitation to segregate Negroes in residential sections increased. Negro tenants were bombarded in Philadelphia. A corporation was formed to remove them in New York and the Smith-Lever Bill to assist education in the South went through without safeguards for Negro children. In North Carolina, a leading journal was offering prizes for essays on the segregation of Negroes on farms. In the 67th Congress, some 20 bills against Negroes were introduced and in September of 1915, the United States seized Haiti, the very year that Booker T. Washington died. There were 53 lynchings that year and the only favorable occurrence was the Supreme Court decision which overthrew the Grandfather Clauses. St. Louis and Dallas, Texas in 1916 decided to segregate Negroes. In May, a Negro was publicly burned in Waco, Texas under circumstances of horrible brutality and in November, in South Carolina, well-to-do Negro was publicly lynched for demanding the current price for his cotton.

In 1916, during a controversy between the Methodists as to whether or not they should get rid of Negroes in order to unite with the Methodist Church South a migration North began to take place. It was induced, first, because of an unusual demand for labor in the North due to the stopping of immigration by the World War. And, on the

other hand, frauds and crop failures in the winter of 1915, together with the ravages of the boll weevil, decreased the demand for labor in the South. A mass of Negroes began to move North, estimated between 250,000 and 500,000.

February 3, 1917, the United States entered the World War. During that year, a series of events exasperated the colored people. First, came the riots and massacres. In July, the city of East St. Louis burned and destroyed $400,000 worth of property, killed between 100-200 Negroes and drove 6,000 people out of their homes. In September, colored soldiers and citizens broke out into a riot at Houston, Texas. In August, there was trouble at Chester, Pennsylvania and elsewhere on account of the invading Negro laborers.

The South began propaganda. They magnified the riots and bad conditions of labor; they stopped labor agents by requiring high licenses and they used violence in refusing to sell tickets and driving Negroes from railway stations.

41-9-136

Chapter VI.

Thus, when unexpectedly the United States was swept into the World War, a sudden crisis faced the American Negro. How far could a black man fight loyally for this country and why should he in the face of disfranchisement and lynching? Persistent rumors of German propaganda among Negroes were flying here and there, perhaps with some small basis of fact, but little tangible result. Nevertheless, it seemed necessary for Negroes to make this crisis in the national fortunes an occasion for bettering their own conditions.

If they did not share in the draft, they were denying their own American citizenship and giving color to Southern propaganda which alleged disloyalty and was ready to punish the ignorant and the well-to-do with refusals.

The N. A. A. C. P. took leadership and the first difficulty came in the matter of officers for Negro troops.

41-9-137

The N. A. A. C. P. wasimmediately put in curious dilemma. It had been agitating against all discrimination and it asked for the admission of Negroes to officers8 camps on the same terms as whites. This was naturally denied. Thereupon, the Chairman of the Association, abetted by some of the other officers, asked for a separate camp and received in this plan the enthusiastic support of students of Howard University and other institutions. The result was that a camp was established at Fort Des Moines, Iowa and 700 Negro officers trained. Then came further hesitancy. According to law, Negro and white troops were to be separated.

Were these officers to lead over Negro troops or were there to be white officers mixed with them? Were they to be over one division or indispersed among white troops? The final compromise, arranged with some hesitancy, was to form a division of Negro troops known as the 92nd Division with white field officers and Negro line officers. A second division, called the 93rd Division, was projected, but never actually formed. Meantime, in the Draft, the difficulties of racial discrimination came up. In the South, despite the widespread allegations that Negroes were physically inferior to whites and manifestly were poorer and more needed by their families, a larger percentage of Negroes were drafted than among whites. In the training of drafted troops there was a great deal of difficulty. In the North, single Negroes drafted, appearing in white camps, were refused or tossed about until they could be put in a Negro camp. In the Negro cantonments, especially those in the South, there was a great deal of discrimination and threats of mob violence.

41-6-138

The government did considerable to counteract these difficulties. It called together the editors of the Negro press; it appointed a representative of the Negroes to consult with the Secretary of War. He had no power but he could bring things directly to the ear of the Secretary of War. There was even a plan to put one or more Negro officers in the Intelligence Service, but sudden fear stopped this. On the whole, however, the joining of Negroes led mainly by the N. A. A. C. P. and other oganizations, resulted in giving the Negro a better status during the war, with officers over his troops and with some chance to show his prowess. It was, however, in his services as laborer that he did the greatest work in the war. His stevedore units made extraordinary records in the movement of goods and did brave work behind the lines. In the United States, the Negroes rushed North to take the place of drafted men and of skilled laborers. They met difficulties, riots broke out in East St. Louis and Chicago and even in the capital city, Washington, but the economic status of the Negro was distinctly better. As the war were on, much bitterness was encountered by the treatment of Negro troops in France and the attitude of white officers toward black officers.

Nevertheless, some of this resulted in curious advantage to the Negroes, as for instance, when the white officers were so eager to get Negro troops out of France where they were treated with unusual consideration, they met the tactical error of

having the first troops who landed from France black units and that these units received overwhelming ovation in New York and elsewhere. The whole episode of war and migration led to increased self-assertion on the

41-9-139

part of the Negroes and a determination by means of bold agitation to gain their social and political rights in the United States.

Yet 1919 was a bitter year.

"Serious mob outbreaks against Negroes and clashes between the races were reported from 26 cities. The most spectacular of these outbreaks and riots were those occurring in Washington, D. C.; Chicago; Omaha, Nebraksa; Knoxville, Tennessee (the latter two were in reality attempts at lynching which precipitated the race riots which followed); Longview, Texas (also an outgrowth of a lynching); and the widely heralded 'uprising against whites' at Elaine, Phillips County, Arkansas. Serious riots occurred also at Charleston, S. C.; Norfolk, Va.; Philadelphia and Bisbee, Arizona.

"Six persons were killed outright in the Washington riots, from July 19 to July 23. These riots were begun and carried on by uniformed soldiers and sailors. Fifty persons were seriously injured and a hundred or more less seriously wounded. Order was restored only by the intervention of United States troops." (Tenth Annual Report of the National Association for the Advancement of Colored People, 1919, p. 34.)

Meantime economic changes were rapidly occurring. During the war, labor was triumphant. The President of the American Federation was on the Council of Defense and the War Labor Board. He pledged the co-operation of the unions to win the war. While on the one hand, the unions promised not to strike, on the oth r hand, the government gave recognition to co-operative bargaining, the 8-hour day and a high standard of living. Union membership increased between 1917 and 1920 by almost $2,000,000. The Negro was not admitted to the skilled crafts but some attempt was made to organize semi-skilled and unskilled laborers. When the war was over, while the boom held up wages and conditions. Then the government withdrew its support largely. There were a number of strikes and employers began to push for the open shop. They began to use methods to undermine the labor unions by company unions, stock sales to employees and profit-sharing. In the steel and coal strikes, public opinion upheld the steel trust and the failure to organize Negroes in the industry helped to break the strike. In the coal strike, court injunctions were used to break down the resistance of labor although in this strike numbers of Negroes were members of the unions. By 1923, therefore, labor had lost most of its war gains. Rising business prosperity took place which swept up to 1929, but labor did not gain much and at the peak of prosperity there were many workers who had lost their jobs

41-9-140

because of new machinery and efficiency schemes. Membership in the unions declined and almost disappearedin the steel and automobile industry and the textile industry. The miners' union was down with internal strife. Then came the depression with its vast unemployment, reduction of wages and standards of life. Masses of men were competing for the few jobs that there were.

In the South, white organizations, like the Blue Shirts of Jacksonville, Florida, the Black Shirts of Alabama and the revived Ku Klux Klan and "Sons of Justice" of Georgia tried to drive Negroes out of jobs.

The proportion of Negroes living in the country districts decreased, from 85.6% in 1890 to 80.9% in 1910 and then fell rapidly to 68% in 1920 and 56.3% in 1930. It is probable today that a majority of the Negroes of the United States are living in cities.

Certain basic difficulties appeared before the war. The machine in the great industries, like coal, petrolem, steel, textiles, automobiles and railroads which are the chief industries of America, was replacing human labor, not only skilled labor but even digging and lifting. The coal industry was collapsing from waste, exploitation and competition. The oil wells were run largely by machines. The automobile industry, especially the Ford plant, began to use Negro labor and Negroes got into the steel mills, both South and North, as semi-skilled and skilled laborers. The textile industry was practically monopolized by whites, a part of the tacit understanding which was one of the earliest results of the Booker Washington compromise.

J1-9-141

The situation of Negroes was changed. The white laboring class in the South was competing for Negro jobs and pushing Negroes from nearly all lines of work, except farming and domestic service. There was severe competition in agriculture and Negro migration to cities was holding down wages and increasing the opposition of white labor. Not more than 10,000 Negroes a year were going North because of the competition of foreign emigrants. The addition of emigrants from abread eachyear for 10 years preceding the war was equal to the entire Negro population of the North and this fact made the Negroes unimportant to trade unions who kept them out. Foreign laborers competed with Negroes as laborers and servants. Since 1820, 36,000,000 European immigrants had come to the North and industries had consumed this common labor. In 10 years, from 1900-1910, over 7,000,000 emigrants came in. The World War brought sudden change.

Immigration was checked and new industries established because of the demand of war. Later, legislation placed immigration on a 3% quota and later on a 2% quota based on the census of 1890. As a result, Italy, Austria, Hungary and Russia, who in 1910 were sending 600,000 a year, were reduced to less than 6,000. Between 1915 and 1928, 1,200,000 Negroes moved from the South to the North.

Occasionally the struggle took the form of intimidation and, in some cases, of actual violence. The most notable recent illustration was the series of assassinations of Negro locomotive firemen in Mississippi and Louisiana, evidently with the purpose of running all Negro trainmen off their jobs. Idleness on the part of both races has been conducive to unrest, ill temper, crimes against property and other irritating conditions. Certainefforts to lead Negroes to revolutionary violence have fomented mutual distrust, fear and potential hostility and have developed a number of threatening situations.

Ira De A. Reid, "Negro Municipalship in American Labor Unions":

"Before the World War Negroes could not get into industrial positions. European immigrants were used. This immigration was suddenly checked. The demand for labor was high and the Negro was most available. Labor agents began to bring Negro workers into Northern industries in great numbers. Unskilled workers were especially in demand in the steel and iron industries and building construction, in the stock yards and for road maintenance and construction on railroads. In many cases, these men were brought in as strikebreakers and between 1915 and 1928, 1,200,000 Negroes came from the South to the North. Now for the first time, the Negro had to be considered in the problems of Northern capital and labor. The United States Department of Labor reported a 34% increase in skilled labor among Negroes and in some cases this increase went to 186%. In Pittsburgh, Negro steel and iron workers were 100 in 1910 and 16,900 in 23 plants in 1923. The Ford Automobile plant employed 11,000 Negro workers. Chicago employed Negroes in iron and steel and in the packing industries.

41-9-142

The result was physical conflict. White workers threatened to quit if Negroes were employed and many did. Southern whites were imported to Northern mills as foremen. Many trade unions began to seek Negro members, but Negroes were not always willing to join. There was much discussion as to the efficiency of Negro labor.

Monroe N. Work shows that the World War sharply divides Negro population trends. In the period before the World War the trend of the Negro population was determined

mainly by the demand in the South for labor in the production of staple crops. In the period since the World War and up to the present depression, the trend of Negro population has been mainly determined by demands by industry for Negro labor, particularly in the North.

As a result of this, the black belt areas;--that is, counties which half or more of the population of the Negroes have increased from 244 in 1860 to 300 in 1880 and then decreased to 187 in 1930. With this has come an extraordinary urbanization of population; 80% of the Negro population was rural in 1890; 73% in 1910 and 56% in 1930. In 9 main metropolitan regions in the North, over 2,000,000 Negroes were living; 1,500,000 more in metropolitan districts of the South. In occupation, the change has been great. During slavery, the Negro was chiefly engaged in agriculture and in domestic and personal service. As late as 1890, of the Negro population 10 years of age and over, 56% were in agriculture and 31.2% in domestic and personal service. On the other hand, in 1930, 36.7% were in agriculture, 28.6% in domestic and personal service, 29.2% in manufacturing and mechanical industries and trade and transportation.

41-9-143

This indicates a pretty large economic revolution. The most striking changes being the decrease of the farmers and servants, the increase of those in the professions, trade, transportation, manufacturing and in mechanical industries. If we take up the manufacturing and mechanical industries, we find that the increase in building trades from 1890-1930 was over 500% and the cloth and allied industries 270%. The food in the allied industries 473%, lumber and furniture industries, 418% and the metal industry over 1,000%.

The building trades and the metal industries showed the largest relative increase. The increased effort to earn is shown by the percentage of population 10 years of age and over who are gainfully occupied. For the entire population of the United States this percentage changed but slightly between 1890-1930. For the Negroes, it increased from 57.6% to 59.2%.

Until the outbreak of the World War, the majority of the factory gates of Pennsylvania were closed to the black men. In 1915, on account of labor shortage, they were opened. In 1910, there were 75,566 Negroes in domestic and personal service in Pennsylvania. In 1920, 5 years later, there were only 57,908. In manufacturing and mechanical industries there were in 1910, 23,797 Negroes. This had increased in 1920 to 59,774. In transportation there was an increase of 207% and 103% in public service.

By 1925 there was some decrease from this employment of Negroes in skilled jobs. In the manufacturing and mechanical industries, the decrease was 10% but was still far above their pre-war situation. In the steel industry, the proportion of Negroes working continued to be high. The average weekly wage of Negro men in Pennsylvania in 1925 was $2,924.

In all parts of the South in 1885 Negro workers were joining the Knights of Labor, but in 1881, a federation of organized trades and labor unions was formed and became the American Federation of Labor. Here the skilled craftsmen gained supreme power and the unskilled were left unorganized. From 1881-1890, however, racial difficulties were kept in the background and it was declared that associations which refused admission to Negroes would be excluded from membership in the Federation. For this reason, the International Association of Machinist was refused admission until 1895 when they removed the qualification. From 1890 to 1897, the American Federation continued to declare that labor must organize irrespective of creed or color, sex, etc. Nevertheless, these declarations did not remedy matters and Negroes were being excluded. In 1900, Samuel Gompers separated separate local unions and separate central bodies of Negro workers. This was endorsed and in 1902 separate charters were granted. Thus the A. F. of L. returned to the suggestion of the National Labor Union in 1867. In 1910, however, the matter came up again. Gompers was accused of leading the Negro out of the labor movement. From 1910-1914, the A. F. of L. organized separate local and federal unions and had 3 Negro organizers. From 1916-1920, the A. F. of L. grew fast and the number of Negro workers in the North greatly increased. The A. F. of L. in the conventions of 1916, 1917 and 1918 decided that Negroes should be organized but provided no machinery. June 6, 1918, the Urban League appealed to Gompers asking for revision of the constitutions of such international labor bodies as excluded Negroes and a qualified Negro organizer on salary and a committee of colored and white persons to check on these activities. In the Atlantic City convention of 1919 move was made for an international charter for the Negro members and complaint was made against the union for metal trades. A special committee was asked but the Federation only expressed the hope that organizations excluding Negro workers "will take a broader view of this matter." In the convention of 1920, at Montreal, local and federal labor unions launched a concerted attack upon the indifference

41-9-144

of the Federation toward Negro workers and demanded an educational campaign, interracial conferences and executive secretary and special committee for organizing Negro workers and Negro organizers in all crafts.

Ten unions in the American Federation of Labor denied membership to Negro workers, either in their constitution or their rituals and all of them at various times have been asked tocchange this, but have failed to do so. The N. A. A. C. P. asked for an interracial labor commission in 1924; the Communist Labor Congress in 1925 moved the A. F. of L. to make some reassuring promises. In 1925 and 1926, T. Arnold Hill of the Urban League appeared before the Executive Council of the A. F. of L. with suggestions. They promised most thoughtful consideration, but refused to pay even one-half the expense of a colored organizer.

41-9-145

As a result of all this, the A. F. of L. had before the depression less power and influence among the Negro group than it did at any other time. The Unions which excluded Negroes from their membership through their constitutional rituals are: the boiler makers, the machinists, the car men, the railway clerks, freight handlers, etc., the dining car conductors, the sleepingcar conductors and the railway conductors, the locomotive engineers, the railway expressmen, the express workers, the locomotive firemen, the masters andpilot, the Neptune Association, the Federation of Railway Workers, the Switchmen's Union, the railway trainmen, the railway station engineers, the train dispatchers, the yard masters, the Railway Mail Association, the wire weavers, the railway telegraphers and the commercial telegraphers. Of these, 10 are affiliated with the A. F. of L. As a result of this policy, not less than 225,000 Negro workers are denied trade union affiliations. Certain national unions deny Negroes membership,but permit affiliation to auxiliary bodies. These include the blacksmith, the maintenance of way employees, the sheet-metal workers, the hotel and restaurant employees. Nearly all of these discriminate in various ways against their Negro workers.

Most Negro union men are members of the Odd Carriers' Union, the carpenters, the bricklayers and masons, the plasterers, the longshoremen, the international seamen, the United Mine Workers, the Ladies' Garment Workers.

Reid reports 3,523 Negro members in American trade unions in 1890; 32,769 in 1900; 57,662 in 1910; 61,032 in 1926-1928. To this last number, if we add independent Negro unions and organized Negro workers, the total would be 81,658.

The Negro was put back into bi-artisan politics by the migration of thousands of potential Negro voters. Before 1916, national Negro politics was a matter of rotten borough representation in the Republican convention.

After 1916, the political center of the Negro race shifted from the South to the North and in the various states Negro representatives appeared in the state legislatures and white congressmen with Negro constituents, like Madden of Illinois and Dyer of St. Louis, had to carry out the will of the Negroes. In New York and Harlem, the prevailing machines had a large Negro support.

941-6-14

Woofter said in his study of 1930 that the Negro farmer is a part of the Southern agricultural situation and for that reason relies upon one crop, is primarily a tenant, pays exhorbitant prices for credit and finds unsatisfactory market conditions. He recommends special efforts on the part of all co-operative marketing projects to include Negro farmers.

Woofter declares that the Negro in 1930 was losing ground in agriculture, in skilled trades in the South and municipal employment in the South, as waiters and barbers all over the country, as doormen and apartment janitors in the East; that he was gaining ground in mechanical industry, North and South, in business and as employees in business houses, North and South, in municipal employment in the North and in domestic service in suburbs of large cities. The unfavorable conditions affecting Negro employment was competition with the whites in the South and mechanics in the Southwest and Midwest and foreign-born elsewhere. The political conditions in the South, the closed unions, the blind ally jobs, the subvention of machinery, prejudice, including unwillingness of white workers to mix with Negroes. The favorable factors were the good record made by the new Negro employees in various lines, the acquisition of skill in the shop, the political power in the North and changing attitudes of a few unions, the new industries and new occupations of Negro businesses and white businesses serving Negroes.

Reid says: "Today 24 national unions exclude us from their ranks and prescribe us in our employment."

The waste in industry is clear in the case of Negro employment. Workers with capacity among Negroes find blind ally occupations as a rule. There is little encouragement and less opportunity for promotion. There are few cases of laborers rising to positions of superintendents and managers. There are even fewer cases for training.

Schools do not train Negroes in skilled crafts because there is no opportunity for placing them. Employers will not Hire them because they have no training. The few that do get training find that white workers refuse to accept them. Union workers have been known to walk off jobs when a Negro fellow unionist was employed. The Negro just before the depression was on the fringe of America's industrial rise. He was the marginal worker where Mexican workers were utilized and for this reason he was the ominous threat to American labor.

The great difficulty which Negroes encountered was impossibility of promotion to any positions of authority or supervision and the practical impossibility of technically trained Negroes in the higher lines of engineering to get any work. The engineering schools themselves discouraged Negroes from taking the courses because of this. In business, Negroes made repeated efforts but there again the great concentration of capital and credit, the severe competition brought by chain stores and similar enterprises, the tremendous cost of advertising, was the undoing of most Negro enterprises. Taking advantage of the discrimination against Negro risks, several large insurance societies were started, but the depression brought the failure of two of the largest and while the others are maintaining themselves in some cases with considerable success, they are more or less at the mercy of white investment concerns. Twenty-one Negro companies had in force in 1930 policies aggregating $260,000,000 and assets amounting to $18,445,000.

This was illustrated in the case of the banks; the Binga Bank of Chicago was a strong institution, but when the pressure came, it was among the 200 small banks which the larger banks of Chicago crushed and it was more easy to sweep away this colored bank than most of the white banks. One recent effort was made to start a Negro chain of stores, but it was started at a time when it had to depend upon wholesale dealers who were themselves being pushed to the wall by the larger chains. It was impossible during the depression for the C.M.A. stores to break through this cordon of competition. On the other hand, in education, Negro colleges increased in number and stability. There were 70 in 1921 and 106 in 1931. The enrollment had increased from 5,231 to 22,609. In 1932 there were 2,329 graduates receiving the Bacheler's degree in Southern colleges, not counting a considerable number in Northern colleges and there were in 1930, 18,650 Negroes in college. The total income of 101 of these colleges was in 1931 $9,317,764 and they had an enrollment of 31,468,463. On the other hand, the public schools and

41-9-147

high schools which were the basis of this pyramid, are not strong. Rural schools have been closed or cut down by the depression and the city schools curtailed in efficiency. While the crass discrimination in teachers' wages and buildings and equipments as paid whites and blacks continued.

The whole economic situation of American Negroes has, of course, been greatly complicated by the present depression. In almost every city in the country, the rate of unemployment and the amount of dependency among Negroes has, for the past three years, been greater than among white people. This has meant the loss of homes, disappearance of savings, bankruptcy of Negro business and further handicaps all along the line. When better conditions come, the masses of Negroes will face the task of beginning again to lay foundations for their economic life.

41-9-148

THE NEGRO AND SOCIAL RECONSTRUCTION

W.E.B. Du Bois

Introduction

In considering the Negro and social reconstruction, we must ~~always~~ remember that the Negro has always had more than his proportionate share in the burdens of social maladjustment and economic handicap. He never has had just his proportionate numerical share. His stakes in social reconstruction are therefore disproportionately high, and all the issues of social reform are unusually acute in relation to the Negro. Because this population of twelve millions, ~~is~~ in 1930 was but two generations removed from chattel slavery, it naturally has a greater percentage of poverty, dependency and delinquency and impaired physical health. This situation ~~makes~~ does the issues of relief, economic salvation, social reform more difficult, and more critical, in the Negro's case. Further complications asise from the fact that this part of the American population has never been considered or treated as an integral part of the nation, neither in industry nor in political and civil rights. Consequently the Negro has an economic problem compounded by a social problem. These double problems have always faced the American Negro throughout his group history in this country. They have changed ~~out of~~ shape and appeared in different guise; but past and present have been but phases of one fundamental and critical problem of race adjustment. It is the object of this discussion to review the programs, past and present by which the Negro and his friends have planned, hoped and struggled to gain for him and assured and equal status in the United States.

and democracy

49-14-2

What has been the course of these plans? Towards how many quarters have the tactics of Negro struggle and reform turned? The Negro's first hope of escape from the hard lot of slavery,-other than death itself, was freedom by flight or freedom by insurrection. We first had, opposed to the forced practice of submission, the plan of Violence, ~~Then,~~ meanwhile came the ~~more~~ conservative and fruitful escape from slavery by migration,-and for several generations before and after slavery, ~~this was the Negro's chief weapon of defense and his~~ the fugitive slave and Negro migrant disclosed most profitable high road to a better condition. Toward the end of Reconstruction, facing ~~the hard situation of having to remain~~ disfranchisement & most violence in the South ~~as far as the masses were concerned~~ there came the compromise plan of salvation by labor and thrift, the plan espoused and defended by Booker T. Washington. This plan was opposed by a small but uncompromising minority, who in opposition proposed a plan, of Political Civil Rights protest and defense,-the plan of Equal Rights and Agitation, coupled with education of the Talented Tenth. Then came the World War, with a new hope, and a temporary new footing in American industry. Partly it was a movement of industrial migration, and a plan of Self-Help and Self Assertion. ~~Then~~ With the set back of the depression, the Negro faced once more realistically the discrepencies of his economic and civic life, and had to turn in the present crisis to three alternative hopes,-the promise of restored prosperity and salvation by Capitalism;-the hope of working-class assertion and reform, and salvation by labor alliance or Proletarian Revolution;-and the third path of economic self-help,-which the author advocates as the most immediately practicable; the path of Consumer Organization and Economic Solidarity. ~~After reviewing the programs of the past,-their gains and losses, the reader will review and weigh the merits of the three roads ahead at this critical crossroads of Social Reconstruction.~~

CHAPTER I.

VIOLENCE AND MIGRATION

The first effort to counteract violence is naturally violence in return, which means war, rebellion, or revolt. The Negro slave, seized in Africa between 1442 and the middle of the nineteenth century, fought for freedom against attacking black tribes or white slave raiders. The cost in life was very large and it was Stanley's estimate that for every slave actually captured by raiders four human beings were left lying dead in the villages.

Once captured and brought down to the coast, there was little chance for revolt on the slave ships, although some cases occurred.

Landed in the West Indies, the earliest slaves immediately sought to escape. "The Negroes were not docile like the Indians and were evidently considered as most dangerous people." (Helps, Spanish Conquest, Volume IV, page 372. Quoting from Ley.)

Most of the laws concerning Negroes drawn up in Spain for the government of the West Indies relate to the Cimarones or Maroons, the name given to fugitive Negroes.

Energetic measures for curbing slave revolts took place from the earliest times. They consisted, first, in so mixing the Negroes on plantations by tribe and language that communication between them was difficult; by severe laws against conspiracy or attempts toward uprising; by subduing the war-like customs and freedom by hard, manual toil. The Christian religion was eventually used very successfully to induce submission and contentment.

The plan, therefore, to gain freedom through violence was pretty well curbed in the slaves that came to the American continent through the West Indian tutelage. Nevertheless, the plan of revolt was never wholly abandoned as is shown by the testimony of the slave codes. These codes were cruel and severe and give definite evidence that the American slaveholders were afraid of conspiracies among their slaves.

The actual revolts among American Negroes, from 1619 to 1863, were few in number, although there were a great many scares and rumors of conspiracies which spread panic for a time and then afterward were systematically minimized. The truth seems fairly clear, that every decade in the South there was some attempt somewhere of slaves

6-81-64

to organize and escape their status by armed resistance, but the organization of the slave patrol held these attempts down to a few which were really dangerous. The slave patrol was an organization which included not simply the comparatively small numbers of slaveholders, but enlisted the interest of the mass of poor whites, so that actually the slaves were outnumbered by the whites, save in certain localities; and there it was possible to bring in wide outside assistance in a comparatively short time. ~~And~~, of course, ~~practically~~ all the arms and ammunition were in the hands of the whites. Moreover, the humanity of some slaveholders and the personal attachment of kind-hearted slaves, nearly always resulted in the betrayal of plots in order to save a particular white family.

A form of violence for the indirect purpose of achieving freedom by proving patriotism was the participation of Negroes in the various wars fought by the United States. Even in Colonial times, some Negro troops were used and it is well-known that the first violence of the Revolutionary War was led by a Negro, Crispus Attucks. A thousand or more Negroes fought on the colonial side during the war and several hundred among the British under Governor Dunmore. Negro sailors were prominent in the War of 1812.

What was really the largest and most successful slave revolt came at the time of the Civil War when all the slaves in the vicinity of the invading armies left the plantations and rushed to the army and eventually some 200,000 ex-slaves and Northern Negroes joined armies of the North, in addition to a much larger number of laborers and servants. It was this revolt of the slaves and the prospect of a much larger movement among the 4,000,000 other slaves, which was the real cause of the sudden cessation of the war.

~~Later, Negroes took part in the Spanish-American War and the World War.~~

Long before the spasmodic efforts at revolt ended in armed slaves helping to put down secession, other and more successful plans had been tried. Broadly speaking, they involved the running away of individual slaves and of gangs and, in the case of free Negroes, migration to Canada, the West and Southwest and to Africa, and to other destinations overseas.

How large a number of slaves escaped, it is impossible to say. Judging from

the growth of the Negro population in the North and the complaints of the slaveholders, it must have been considerable. There were at least 100,000 and possibly 200,000 fugitives from slavery, represented a loss of at least $25,000,000 capital invested in slavery and perhaps twice that sum. This was the economic loss that spurred secession.

The union of Negroes and Indians for resistance to the whites was long feared in the United States. Negro slaves took refuge among the Indians in Virginia in 1787 and about the same time began to escape among the Indians of Carolina and Georgia. The two races intermarried, making return of the fugitives difficult, as the Indians refused to surrender their Negro-Indian children. After the Revolutionary War and the War of 1812, Americans accused the British of conniving at the escape of Negroes by means of their Indian allies.

In the South, Georgia from 1789 to 1813, accused the Creek Indians of encouraging the running away of slaves. The Creeks were attacked by Andrew Jackson and defeated in 1814, but in 1815, 1,000 Georgia Negroes took possession of the former British fort and together with the Creeks threatened the South. The Spanish refused to destroy the fort, but Jackson moved against it in 1816 and wiped it out with great barbarity. Then came the so-called Seminole wars, which were raids to secure fugitive slaves and drive out the Indians.

Gradually as the slave controversy increased, the chains of the slaves were drawn tighter and the free Negroes of the North found themselves in a more precarious position. Plans for migration beyond the borders of the United States began to mature. Indeed, from the earliest times, the thought that the Negro population of the United States would eventually be repatriated in Africa was widespread among whites and also among Negroes. ~~Liberia was the final result of the efforts of the American Colonisation Society.~~

The Civil War stopped thoughts and plans for emigration for many years, although there were small internal movements of freedmen from Carolina to Florida, from the Gulf states to the Southwest and from Virginia to the South in search of better working conditions and free land. When the Negroes began to pour in on the Union Army, Abraham Lincoln proposed to carry out his own long cherished plan of colonisation. He consulted foreign

countries and secured an appropriation of $100,000 from Congress in 1861 and a further appropriation of $500,000 in 1862. He favored compensated emancipation in the Border States on condition that the Negroes should move beyond the limits of the country.

It was not until the withdrawal of Federal troops in the South in 1876 that widespread plans of migration from the South to the North took place. There had been some migration of freedmen from the South immediately after the war, but the difficulty of getting work in the North and the prospect of greater freedom in the South, held this to a minimum. The terrorism of the Ku Klux Klan and the forced disfranchisement of the Negroes in 1875 and 1876 led to widespread plans for migration into the West and particularly into Kansas.

Discussion and Reading:

1. How could black Africa have defended itself against European slavetraders?
2. Did the slaves have a right to revolt?
3. Did the American Colonization Society want to send all Negroes to Africa?
4. Did the Negroes help win the Civil War?

(Consult Help's "Spanish Conquest", Volume 4; Bryan Edwards' "History of the West Indies", 4th Edition, Volume I, Appendix, and Volume 4; T. G. Steward, "The Haitian Revolution"; Du Bois, "Black Reconstruction".)

17

CHAPTER I

SALVATION BY REVOLT and WAR: the PLAN OF VIOLENCE.

It is a mistake to think that the Negro has always been submissive to his fate. The Negro slave, seized in Africa between 1442 and the middle of the Nineteenth Century, fought hard for freedom against attacking black tribes or white slave raiders. The cost in life of inter-tribal wars in Africa was very large. There the African paid his first toll, and often the survivors were the weaker and less courageous, or those broken by unsuccessful resistance. It was Stanley's estimate that for every slave actually captured four human beings were left dead in the villages.

Once captured and brought down to the Coast, there was little chance for revolt on the slave ships, although some cases occurred. Raiders, like Canot, tell of slave revolts and massacres on the coast and in the factories. Some slaves, transported by a Rhode Island master, murdered a part of the crew in 1731, and in 1732 the whole crew of another New England slaver was murdered. Several other similar cases are on record. Perhaps the most celebrated case of all was that of the "L'Amistad". This ship in 1839 was carrying 54 Negroes from one part of Cuba to another. Under Joseph Cinque the Negroes murdered passengers and crew and finally landed in Connecticut. The organization which was formed to defend them eventually became the American Missionary Association and their attorney was John Quincy Adams. The slaves were freed. Two years later, on "The Creole", sailing from Richmond to New Orleans, the slaves mutinied under Madison Washington, killed the officers and crew and took the ship to a British port. The slaves were allowed to go free, but years later the British Government had to

49-17-4

~~pay $110,000 in damages.~~

Landed in the West Indes, the earliest slaves immediately sought to escape and there were early protests against the Negro slave trade in the islands because they corrupted the Indians and induced them to revolt. The Spanish Governor, Ovando, "socicited that no Negro slaves should be sent to Hispaniola for they fled among the Indians and taught them bad customs and never could be captured". (Quoted from Herrera by Helps, Volume I, page 219.) "The Negroes were not docile like the Indians and were evidently considered as most dangerous people." (Helps, Spanish Conquest, Volume IV, page 372. Quoting from Ley.)

Most of the laws concerning Negroes drawn up in Spain for the government of the West Indes relate to the Cimarones or Maroons, the name given to fugitive Negroes. The Maroons in Jamica escaped to the mountains when the English captured the island; they formed bands and made war on the British Government from 1655 to 1796. Their power was broken only by transporting their ranking leaders, first, to Novia Scotia and finally to West Africa. (Bryan Edwards; The History, Civil and Commercial, of the British colonies in the West Indes. Philadelphia, 1805, Vol. I., pp. 337-398). A similar revolt in Haiti led, finally, to the Haitian revolution and the freedom of the island under the leadership of Toussaint L'Ouverture and Dessalines. In South America, the Maroons estanlished a republic with a walled city which eventually set up a regular government. It was finally captured by the Portuguese in 1698 after an heroic defense and the suicide of the leaders. Other revolts established the independence of the Bush Negroes of Guiana down to the present day. So, it is an historical mistake to think or say that the Negro always submitted to slavery.

49-17-5

Energetic measures for curbing slave revolts took place also in North America from the earliest times. First, the Negroes on the plantation were so deliberately mixed by tribe and language that communication and common action between them was made almost impossible. Secondly, severe laws were enacted against conspiracy and attempts at uprising. Third, The war-like customs and spirit of the African were broken by hard manual toil and severe physical punishment. Finally, the Christian religion was eventually used-(and very successfully),to induce submission and contentment.

The plan, therefore, to gain freedom through violence was pretty well curbed in the slaves that came to the American continent. Many of them had been broken in already in the West Indes. Efforts were made only to import into the colonies of the mainland slaves who had been acclimated and inured to docile toil. Nevertheless, the plan of revolt was never wholly abandoned as is shown by the testimony of the slave codes. These codes were ~~xxx~~ cruel and severe and give definite evidence that the American slaveholders were afraid of conspiracies among the slaves.

49-17-6

Any slave presuming to strike a white person could be punished at ~~xxx~~ discretion for the first offense, and with death at the second offense in Georgia, or at a third offense in South Carolina. Resistance to a master led to indefinite imprisonment; and assault and battery could not be ~~xxx~~ committed on the person of a slave. As a North Carolina judge said in 1829: "The power of the master must be absolute to render the submission of the slave perfect."(Goodell: American Slave Code, p. 172.) The laws of South Carolina of 1712 for ~~x~~ "the better ordering and governing of Negroes and slaves" declared that it was necessary to " restrain the disorders, rapines and inhumanity to which they are naturally prone and inclined." (Hurd: Vol, I p.229.)

And the law of 1740 declared that "many late horrible and barbarous massacres have been actualy committed and many more designed on the white inhabitants of this province by Negro slaves." (Hurd, p.308.)

From 1619 to 1863 actual revolts among American Negroes were few in number, although there were a great many scares and rumors of conspiracies, which for a time, spread panic. Afterward they were usually discounted as not serious. The truth seems fairly clear, however, that every decade there was some attempt some where in the South by slaves to escapt their bonds by organized armed resistance, but the organization of the slave patrol held such attempts down, so that few were really dangerous. The slave patrol was an organization which included not simply the comparative small numbers, but enlisted the support of the poor whites. So that, actually, the slaves were far outnumbered, except in certain localities, by the total mass of the whites; and even in such localities it was possible to bring in heavy outside assistance on short notice. Practically all the arms and ammunition were in the hands of the whites. Moreover, the humanity of some slaveholders and the personal attachment of kind-hearted slaves nearly always resulted in the betrayal of plots in order to save a particular white family.

In Virginia, in 1800 an insurrection took place under Gabriel Presser. He and his fellows were to seize the arsenal in Richmond, kill the whites and liberate the slaves. A great storm interrupted the plot and a slave revealed it. Other plots were unearthed in North and South Carolina. Another uprising was planned in North Carolina in 1816 and a plot to destroy the city of Augusta in 1819. In 1822, a much more dangerous conspiracy

was made under Denmark Vesey in Charleston, South Carolina. He was a free Negro with some property and laid his plans carefully. The blow was to be struck in July, 1822, when the masters were largely on vacation. Thousands of slaves were recruited, money was raised to purchase arms and blacksmiths hired to make others. Here, again, one slave tried to save his master and revealed the plot. Thirty-five Negroes were hanged and 43 banished.

David Walker, a Negro of Massachusetts, made a bitter appeal for insurrection in 1829 and in August, 1831, Nat Turner, a Negro preacher in Virginia, led a band of insurgents and made three attacks upon the whites in three days, killing 61 white persons. The leader evaded arrest for six weeks until captured by state and Federal troops. One hundred and twenty Negroes were slaughtered during this man-hunt and afterward 17 others were executed and 12 transported.

More and more the resort to direct violence as a way to freedom became foolhardy and impractical. Whenever there was a crisis in colonial life, the Negro urge for freedom found an indirect opening for expression. As a result, the Negro everywhere from New England to Georgia responded eagerly to the call of war and demonstrated valor whenever occasion gave him a chance to express his patriotism and his courage. The participation of Negroes in the various wars of this country from the French and Indian conflicts and the War of the Revolution, proves not only the Negro's loyalty but his courage and his interest in freedom. It is well known that the first violent encounter of the Revolutionary War in Boston was led by a Negro , Crispus Attucks. Several thousand Negroes fought on the colonial side during this war. A Negro soldier captured Major-General Prescott of the Bri-

(Continued over)

49-47-8

tish army at Newport in 1777. Seven hundred Negro soldiers distinguished themselves in the battle of Monmouth in 1778; and turned the tide in the battle of Rhode Island that same year. Even in the South, Negroes were active in war service were cited for bravery and assistance, and many both from the Southern colonies and the West Indes participated in the campaign that climaxed in the surrender of Cornwallis at Yorktown in 1781.

Negro sailors were prominent in the War of 1812. With the civil war, although Negroes participated on both sides, one of the decisive turns of the situation came with the enlistment and valorous action of Negro troops. Behind this militant thrust, was another little-considered and large scale slave revolt, as the slaves in the vicinity of the invading Federal armies left the plantations and rushed to the Yankee camps. Eventually some 200,000 ex-slaves and Northern Negroes joined the armies of the North, in addition to a much larger number of laborers and servants. It was this large-scale bolt of the slaves and the prospect of its spread throughout the slave population of 4,000,000 which was one of the real causes of the collapse of the Confederacy.

49-14-9

Much of the favorable anti-slavery sentiment right after the Revolution was due to the Negro's demonstration of valor and patriotism, and grew from that time on for a period of some forty years. Then a reaction set in due to the increasing spread and profit of the slave system. More and more, freedom by force or wholesale action of any sort became unpopular and ceased to dominate the minds of both black and white advocates of the Negro cause. A small minority, however clung tenaciously to the idea of revolt and freedom by resistance, notable among them David Walker, who sent out in 1828 a public address to the slaves to rise against their masters and Nat Turner who made his

(23)

attempted insurrection in 1831. Gradually, and inevitably, the mind of the Negro began to turn from this way of salvation to the only other way of ~~x~~ escape,-plans of domestic and foreign migration. From 1830 on to into the fifties such plans occupied the center of the Negro's efforts and hopes for an improvement of his status. We turn to "the plans of migration."

CHARTER II

PLANS OF MIGRATION

Long before freedom actually came to the Negro masses through the violence of the Civil War, more piecemeal plans had been tried and had proved partially successful. They involved the running away of individual slaves, occasional mass flight and migration, and, in the case of free Negroes frequent migration to Canada, the West and Southwest, to the West Indes and to Africa.

The domestic migration began with the fugitive slave. The fugitive slave, infact, was the safety valve of the slave system. The Negro to whom slavery was intolerable could not wait for his fellows to rise in armed and probably futile revolt. From the widely scattered plantations in a comparatively empty country he could and often did slip away in various directions; ~~xxxxx~~ south into the swamps of Florida; east into the swamps of Virginia; north along the Appalachian range and the Mississippi River into the free states. This planted fugitive slaves among the Indians in large numbers. In the northern states it accounted for an increasing number of militantly minded Negroes, some of whom gave time, money and devoted effort to aiding the escape of friends, relatives and others. As this movement increased, it became organized with the help of many white liberals into the Abolition Movement, smaller, more radical groups laid out definite organization and help to assist the escape of fugitive slaves. This was known as the Underground Railroad.

The Underground Railroad led indirectly to the Civil War. It meant that the capital invested in slaves began to suf-

49-14-11

fer severe losses and the slave owners demanded more and more peremptory laws for the recapture of slaves. Finally, they asked that a new Fugitive Slave law be enacted, which seriously interfered with local state government in the North and with individual rights. This in turn led to retaliatory legislation which attempted to nullify the Fugitive Slave law; and all this greatly intensified the bitterness between the North and South and eventually led to the attempt at secession.

How large a number of slaves escaped, it is impossible to say. Judging from the growth of the Negro population in the North and the complaints of the slaveholders, it must have been considerable. The black population of the North increased from 128,984 in 1820 to 344,719 in 1860, an increase of 167% as compared with 151% for the total Negro population. As the Northern group was composed of poor immigrants with broken family life, insecure economic basis and suddenly transferred from city to town, they probably little more than reproduced themselves. At least 100,000, and possibly 200,000 of them were fugitives from slavery and represented a loss of at least $25,000,000 capital invested in slavery and perhaps twice the sum. This was the economic loss that spurred secession.

49-17-12

The union of Negroes and Indians for resistance to the whites was long feared in the United States. Negro slaves took refuge among the Indians in Virginia in 1787 and about the the same time began to escape among the Indians of Carolina and Georgia. The two races intermarried, making return of the fugitives difficult, as the Indians refused to surrender their Negro-Indian children. After the Revolutionary War and the War of 1812, Americans accused the British of conniving at the escape of

135

Negroes by means of their Indian allies.

In the South, Georgia from 1789 to 1813, accused the Creek Indians of encouraging the running away of slaves. The Creeks were attacked by Andrew Jackson and defeated in 1814, but in 1815, 1,000 Georgia Negroes took possession of the former British fort and together with the Creeks threatened the South. The Spanish refused to destroy the fort, but Jackson moved against it in 1816 and wiped it out with great barbarity. Then came the so-called Seminole wars. Giddings tells succinctly the story of this disreputable part of our national history;

"Torn from their native land, their friends and homes, they were sold in the markets of Carolina and Georgia. Feeling the hand of oppression bearing heavily upon them, they fled to Florida, and, under Spanish laws, became free. Holding lands of the Spanish Crown, they became citizens of that Territory, entitled to its protection. To regain possession of their truant bondmen, Georgia made war upon Florida, but failed to obtain her object.

"At a time of profound peace, our army, acting under the direction of the Executive, invaded Florida, murdered many of these free men and brought others to the United States and consigned them to slavery. An expensive and bloody war followed; but failing to capture more of the exiles, our army was withdrawn. This war was followed by diplomatic efforts. Florida was purchased; treaties with the Florida Indians were made and violated; gross frauds were perpetrated; dishonorable expedients were resorted to and another war provoked. During its duration of seven years, bribery and treachery were practiced towards the exiles and their allies, the Seminole Indians; flags of truce

49-17-13

were violated; the pledged faith of the nation was disregarded. By these means, the removal of the exiles from Florida was effected." (Exiles of Florida, Giddings. p.V-VI.)

After the Revolutionary War, societies of Negroes in Newport and Boston were formed for migration to West Africa, especially Sierra Leone. Some Massachusetts Negroes as early as 1774 had asked to be assigned to some province of their own. Two thousand Negroes in Rhode Island were willing to go to Africa where a white West Indian, Thornton, promised them they would be formed into an independent nation.

Gradually as the slave controversy increased, the chains of the slaves were drawn tighter and the free Negroes of the North found themselves in a more precarious position. Plans for migration beyond the borders of the United States began to mature. Indeed, from the earliest times, the thought that the Negro population of the United States would eventually be repatriated in Africa was widespread among whites and also among Negroes.

41-61-44

In 1815, Paul Cuffe, a black New Englander who had been protesting against lack of civil rights in Massachusetts, took 38 Negroes to the West coast of Africa at his own expense. There were various plans for colonization of the Negroes in the Northwest territory and some actual experiments by slaveowners who emancipated their slaves and sent them there. The free Negroes in Richmond opposed colonization in Africa and asked Congress for territory in on the Missouri River. The Negroes of Boston asked how could they be called Africans when they were born in America and the Negroes of Hartford said that ignorant people sent to Africa could not teach ignorant people.

Later, the effort of Great Britain and of the United

States to curb the slave trade turned back many slave ships with their cargoes and they formed the nucleus of Liberia and Sierra Leone. The American Colonization Society sent numbers of educated Negroes and laborers to help in the Liberian adventure and others went voluntarily. This might have resulted in a much larger migration had not the Colonization Society under Southern leaders turned the organization into a method of buttressing slavery by getting rid of free Negroes. This aroused the ire of the abolitionists and the fear of the better class of Negroes. Liberia was the final result of the efforts of the American Colonization Society. They sent out agents in 1816, but no emigrants until 1819, when 81 went to Shebre Island. Others went in 1821 and changed the settlement to the mainland of Liberia. Here they struggled with the natives and grew as other immigrants slowly dribbled in. From 1820-1833, 7,836 were sent. In 1847, after the United States had refused support, Liberia declared itself an independent government and has maintained its independence ever since, despite great difficulties.

49-14-15

At this time, the situation of free Negroes in the South was dangerous and in the North not happy. Northern Negroes were widely deprived of political and civil rights and had a hard time earning a living. The determination to enforce the black laws against Negro immigrants and runaway slaves in Cincinnati about 1830 led to the first American-Negro convention in Philadelphia in 1830 and to certain concerted plans of action. The convention met annually from 1830 to 1836 and was attended by a number of educated and influential Negroes, as well as white sympathizers, like William Lloyd Garrison. They raised money and communicated with the British Government and laid plans for a large migration of Negroes into Canada. The nucleus of the

black settlements in Southern Ontario was begun at this time. The settlement had great influence on Negroes in the United States. Here was the headquarters of the Liberty League. Here John Brown first met to plan his raid, which was not to be a slave revolt, but an armed and systematic migration of fugitives. Many distinguished Negroes have come from these settlements, including Josiah Henson and the late Richard B. Harrison, "De Lawd" of "Green Pastures".

As the slavery controversy became more bitter and hope of emancipation faded, many Negroes began to think of wholesale migration. In 1853, a National Council of Negroes was organized to take up the question of migration. Twelve state conventions sent representatives to the Cleveland Convention of 1854. Three proposals were made: one by Martin D. Delaney, who advocated the Niger Valley in Africa; another by James M. Whitfield, who wanted to go to Central America; and a third by Theodore Holly, afterward an Episcopal bishop, who proposed to go to Haiti. These three emissaries started out and at the next colonization convention in Canada in 1856, Holly made his report and eventually 2,000 emigrants went to Haiti. Delaney, later, proceeded to the Niger Valley and concluded treaties with eight African kings. Whitfield died in San Francisco on his way to Central America. The whole plan of wholesale emigration split the American Negroes into bitterly antagonistic groups with Frederick Douglass leading ~~the opposition to the colonization idea~~.

The Civil War stopped thoughts and plans for emigration for many years, although there were small internal movements of freedmen from Carolina to Florida, from the Gulf states to the Southwest and from Virginia to the South in search of better

working conditions and free land. When the Negroes began to pour in on the Union army, Abraham Lincoln proposed to carry out his own long cherished plan of colonization. He consulted foreign countries and secured an appropriation of $100,000 from Congress in 1861 and a further appropriation of $500,000 in 1862. He favored compensated emancipation in the Border States on condition that the Negroes should move beyond the limits of the country.

In August, 1862, a delegation of Negroes consulted Lincoln with regard to settlement in Central America or elsewhere, but there arose difficulties of finding suitable places. Finally, a settlement on the Isle à Vache near Haiti was arranged under Bernard Kock, who had leased the island from Haiti. Several hundred Negroes were ready to go, but doubt was thrown on Kock's character and objects. Finally, the Secretary of the Interior made a contract with certain New York capitalists who who really represented Kock and an expedition set out in 1862 with 500 Negroes and Kock was hired as governor or manager. The result was disastrous. Smallpox broke out, drinking water was scarce and food bad. The company was landed without shelter or supplies. Kock proved to be dishonest and incompetent and in 1864, the remains of the colony were brought back to the United States. Only 293 survived.

49-17-14

It was not until the withdrawal of Federal troops in the South in 1876 that widespread plans of migration from the South to the North took place. There had been some migration of freedmen from the South immediately after the war, but the difficulty of getting work in the North and the prospect of greater freedom in the South held this to a minimum. The terror-

ism of the Ku Klux Klan and the forced disfranchisement of the Negroes in 1875 and 1876 led to widespread plans for migration into the West and particularly into Kansas. Some moved from North Carolina to Indiana and a congressional investigation tried to prove this a political scheme. Two men, Henry Adams in Louisiana and Benjamin Singleton of Tennessee organized major schemes. They told of the opportunities in Kansas and the West and interested between 100,000 and 200,000 Negroes. Over 50,000 Negroes actually went West and a meeting of whites and blacks in Vicksburg in 1897 tried to stop the exodus by reassuring Negroes, after which the whites resorted to violence.

At first, the Negro emigrants to Kansas were in distress, but a relief association was formed among the Quakers and other whites which supplied them with clothes and money. During the first year, the freedmen took up 20,000 acres of land and built some 300 cabins. A report of the Freedmen's Relief Association said "that the exodus of the colored people from the South began about February 1, 1879 and that 60,000 refugees came to Kansas, of whom 40,000 were in a destitute condition." There was some violent opposition to this migration among local people, but, on the whole, it proved successful.

21-41-64

After 1890, there was a gradual but increasing migration of Negroes from the South to Northern cities. For the most part the first wave of migration represented the well-to-do, or the educated and ambitious who could not submit to the caste conditions of the South. There came, also, artisans and lavorers, but they met the opposition of the trade unions and were forced to make a living by sgrike-breaking and were then accused of being "scabs".

Later, the project of a "Return to Africa" recurred and was led by Henry M. Turner, a Reconstruction leader in Georgia and later a bishop in the African Methodist Church. Turner had become greatly discouraged because of an unfavorable decision of the Supreme Court in the Civil Rights case. There was considerable agitation of this plan but very little actual migration. Senator Morgan of Alabama supported it and 197 Negroes sailed from Georgia to Liberia in 1895. Finally, with little response, the scheme was given up.

Organized efforts have also been made to transplant Negroes into Mexico and South America, but understandings between our State Department and the authorities of these South American states has effectively blocked these plans.

Meanwhile the Northern migration of Negroes has continued to gain steadily, and the second wave of it has reached down to the Negro masses and the lower South. The colored population of the North and West increased from 344,719 in 1860 to 626,990 in 1880 and 911,025 in 1900, indicating a movement of 10,000 to 20,000 Negroes a year from South to North. Between 1910 and 1920, on account of the World War, the Northern Negro population increased nearly a half-million, and a whole million from 1920 to 1930. This probably indicates the permanent northward movement of over a million Negroes between 1910 and 1930.

So migration has been one of the great historical weapons of Negro self-defense. Not always successful, it has at least proved a useful agency in improving his lot through change. It has often been urged against him as a failing, but under the hard circumstances of oppression, the Negro's mobility has proved one of the few resources open to him. In addition to

its material gains, migration has kept the spirit of freedom and independence alive and has afforded it a safe channel of expression.

296

The laws were so drawn, however, that in the majority of cases courts could easily render them ineffective. In only two states have the civil rights laws really been enforced with thoroughness, in Massachusetts and in New York since the law of 1918.

A wave of "jim-crow" legislation, inclusing disfranchisement and requiring separation fo the races on railroads, streetcars, public conveyances and in education, swept over the South from 1890 to 1910. Negroes could do little to oppose it. They did succees, however, in confining separation in Maryland to local trains and to defeating separate car laws in Missouri and West Virginia. In 1913, after Wilson and the Democratic Party came into power, a determined drive was made to spread laws against the intermariage of Negroes and whites on the statute books of the Northern states. Anti-intermarriage bills were introduced in Congress and in California, Colorado, Illinois, Iowa, Kansas, Michigan, Nebraska, New York, Ohio, Pennsylvania, Washington and Wisconsin. Negroes succeeded in keeping most of this discriminatory legislation from passage; only one such bill passed when Nebraska strengthened an existing statute. However such laws exist in states of the Union.

49-19-44

The social and economic emancipation of the Negro race by means of the power of the ballot has failed of any great success. But it is true that its power has not been very successful in protecting the rights of many disadvantaged white groups, labor especially. This serves only to make the fact more clear that without economic reconstruction political freedom and power are impossible.

292

CHAPTER IV

TWO RIVAL PLANS: COMPROMISE AND PROTEST

Along side the plan we have just discussed,-the hope for citizenship through the use of political power, came two other movements which dominated the period from late reconstruction to the World War. One, from 1896 to 1920, sought to integrate the American Negro into American industry as a farmer, laborer, skilled artisan and petty capitalist: it took the path of compromise and was championed by Booker T. Washington. The other sought by agitation and legal defense to clear away race discrimination, gain equal rights and win a militant campaign for the advance of black folk according to chance and ability. Starting with the Niagara Movement, the latter became the platform of the National Association for the Advancement of Colored People and its militant organ,-The Crisis. These two movements engaged sharply divided Negro leadership. The first ended with the World War. The second declined with the depression and merged with movements to fight discrimination under the N.R.A. and other "new-deal" plans of relief and reconstruction.

49-19-25

Underneath all the arguements for and against the equal rights movement and the appeal to law and justice, it was evident from the first that economic power must underlie all efforts of the American Negro to establish himself securely. His exploitation, which began in slavery, was not ended by emancipation; it continued from the fact that he was a poor and ignorant laboring class. How, then, could the Negro establish himself as an effective and decently paid laborer? The first clear and coherent plan to this end was presented by Booker T. Washington and was the platform of his celebrated speech at the Cotton States' Exposition.

293

at Atlanta in 1896.

This occasion had been carefully planned beforehand. It was not, as believed, a spontaneous event. William H. Baldwin, a young railroad executive and far-sighted industrialist, knew by personal experience Southern labor conditions. he was then president of the Long Island Railroad and was slated for the presidency of the Pennsylvania system. Foreseeing the new demands and growing organization among white craft laborers, he and other industrialists knew that Negro labor with proper training and treatment could be made a great labor reserve. A firm believer in capitalistic control and expansion, Baldwin foresaw a great new industrial South if both races could be built up into two supplementary laboring classes. So he wanted black laborers trained in skilled industry and farming, and He ~~wanted~~ the white laborers well paid, but curbed in their increasing demand for a voice in industry. Here as a potential buffer was the developing Negro race meeting new incentives and leadership. And here to hand was an extraordinary man, a self-made Negro, trained at Hampton, who had been brought down to take charge of a small trades' school in Alabama, started by a young colored woman named Davidson.

49-17-26

Mr. Washington was an opportunist, slow but keen witted, with high ideals. He believed in political rights for people who could exercise them. But he knew the attitude of the white South was against the political activity of Southern Negroes. He therefore took the compromise position that the Negro must first gain an industrial status before he could effectively exercise political rights. He knew that the Negro needed civil rights and social justice. No one suffered more than he from the discrimination against the Negro in the schools, courts, in the use of public utilities. But he believed that if the

Negro demonstrated that he could make great advances despite discrimination and handicap, the inherent justice of the nation would gradually extend to deserving Negroes the rights they merited.

Above all, Mr. Washington had not the slightest doubt that the prevailing organization of American industry was normal and right; that capital was accumulated by thrift; that labor was rightfully bought and ~~sold~~ and that profits were rightfully the result of buying the product of labor. He proposed therefore that the Negro take this path towards eventual equality, that his laboring masses should work hard and skillfully not only to earn a living but also to accumulate in the hands of the more thrifty individuals enough capital to hire employees and make money. He expected black property owners and petty capitalists to gain power and recognition in an industrial regime and gradually rise in the scale of American life. As a first step toward this new capitalism, Washington stressed land-holding,-widespread peasant farm ownership, and large scale farming by Negroes.

49-17-27

As a practical concession, Mr. Washington's program included the temporary giving up of the fight for political rights and of agitation for civil rights. His plan, launched in 1896 and triumphant with American public opinion until about 1910, put its emphasis upon ~~industrial~~ vocational training and ~~xxxxxxxxxxxxx~~ industrial and commercial pursuits for young Negroes. This plan was in reality an alliance with white capital and current industrialism. It was rewarded by large philanthropic contributions for Negro education, especially to such schools as conformed to the Hampton and Tuskegee type. Regarded as a practical

and far-sighted compromise for the postponement of the more acute issues of the race problem, this program made Mr. Washinton one of the most popular men in America between 1900 and 1910. In constant demand North and South as a speaker, adviser and referee.

On his platform the influential leaders of the North and South came to a new understanding with regard to the Negro. Agitation for civil rights was frowned upon and skilled labor was encouraged. The Negro college, while not openly opposed, was looked upon with some suspicion and careers for Negro college and professional men became restricted. Appointments and opportunities for young Negroes were constantly referred for approval to the sage of Tuskegee.

As white opinion became more and more solid behind Mr. Washington, Negro opinion became uneasy and suspicious. Meanwhile the best white Southern elements continued supporting Mr. Washington and his program of gradual improvement. But the politicians and the rabble got out of hand. A wave of "jim-crow" legislation and disfranchisement swept over the South and border states between 1890 and 1910, just as Negro political power and protest had been undermined by the Washington compromise. By adroitely drawn"literacy tests" and property and residence qualifications Negroes were disfranchised by Mississippi in 1890, South Carolina in 1895, Louisiana in 1898, North Carolina in 1900, Alabama in 1901, Virginia in 1902, Georgia in 1908 and by Oklahoma in 1910.

Evidently, despite their promises, the best white South could not protect the voteless Negro. Moreover, the attempt to set up a Negro labor class led to rivalry with white labor and to

49-17-28

race
increased hatred and lawlessness in the South. By 1891 separation of the races in travel had been made compulsory in Tennessee, Florida, Mississippi, Texas, Kentucky, Georgia and Louisiana. Then after a brief pause it spread to cover South Carolina, North Carolina, Virginia, Maryland and Oklahoma by 1898, with repeated but unsuccessful efforts made in Missouri, West Virginia and Delaware. As these laws and segregation ordinances completed the program of racial caste, it became evident to an increasing number of Negroes that the practical ~~x~~ result of the Washington compromise was going to be a permanent caste system in the United States, acquiesced in and condoned by Negroes themselves.

In the North, unfavorable results set in. White labor inherited from before the Civil War a fear of the competition of slave labor and took the same attitude toward the competition of free black labor. A Negro trade union movement however slowly began and was grudgingly recognized. When the Knights of Labor were organized in , a large scale attempt was made to organize Negro workers. Soon after, the craft unions began to exclude Negroes, and when the American Federation of Labor, the organization of the skilled crafts, came into power this policy grew. Most of its constituent organizations excluded Negroes openly or by secret policy, and the chasm between white and black labor gradually widened.

49-17-29

Mr. Washington, who hated caste and lawlessness and wanted the best for his people, was greatly embarassed in later years by the continuance of lynching, the political triumph of the radical anti-Negro South, and the growth of anti-Negro labor policy in the North. But he believed implicitly in his economic program and made the fatal mistake of trying to forestall cri-

ticism of it by Negroes. The result was an outburst of wrath and opposition led by the younger college bred groups who were at odds with Mr. Washington over his disparagement of the Negro college. This opposition split Negro public opinion into two hostile camps.

Mr. Washington's work, however, was not all lost. It first was shown in the ownership of land. Negroes owned 97,458 farms in 1890. This number increased rapidly until it reached a total of 218,612 in 1920. Then forces over which Washington had no control manifested themselves and land ownership decreased to 181,016 in 1930, which meant a loss of at least 4, 000,000 acres of land; and it has been alleged that since 1930, ~~xkixxx~~ nearly a million acres more have been lost. In other words, Negroes bought land just at the time when land ownership was losing its significance, so that the Negro landholder was caught in the depression which overwhelmed the farmers of the country and could not by his unaided efforts hope to make economic improvement on Southern farms. The same difficulties in lesser degree faced the white farmer and the result was that the farm population moved to the city in large numbers and entered industry. Most of these migrants from country to city were white, but a large and increasing number were Negroes. Between 1910 and 1920, the center of the Negro population in the United States moved 19 miles North.

49-14-30

Negro farmers and farm laborers for this reason decreased from 56.6% to 36.7% of the working population from 1890 to 1930. On the other hand, Negroes in transportation, manufacturing and mechanical industries, and in business and clerical wor, increased in the same time from 10.3% to 29.9%. But they

299

did not become as Washington had hoped, skilled workers and business leaders, to any extent. Manifestly, this was not merely the result of lack of skill or unwillingness to work. It was partly the result of race prejudice and partly a change in the whole industrial system of the nation and the age--of which Booker Washington did not dream.

49-17-31

55

CHAPTER V

PLANS OF AGITATION AND LEGAL DEFENSE

To disfranchise the Negro meant x nullifying the Civil War amendments. This was clearly illegal. Ever since 1876 then, it has been a settled plan and hope among Negroes to regain their political power and full civil status by new legislation or by judicial appeal to the highest courts of the land. Such efforts have been made by militant individuals and groups ever since, and we turn to a brief review of them. All such leaders and movements have proceeded along the lines of the traditional belief of American democracy,-freedom and justice by legal and constitutional guarantees.

But the history of court action from the very beginning has not been favorable on the whole to the Negro's interests. The earlier cases involved the interpretation of the war amendments. In 1873 the Slaughter House cases emasculated the 14th amendment. In 1876 the courts declared the Force Act of 1870 unconstitutional, thus denying the power of the Federal government to protect its own voters at the polls. Another decision in 1893 seriously restricted the Civil Rights bill. Thus Negro rights were off to a bad start at the very beginning of Reconstruction.

The Negro now began to be alarmed lest a legal basis of color caste arise. Even before this time, Negroes had held various national conventions for the discussion and protection of their rights; notably from 1830 to 1836 in Philadelphia, one in Troy, New York in 1847, another in Cleveland Ohio in 1848, in Cincinatti in 1852, and in Rochester , N.Y. 1853. In 1864, a National convention of Colored Men was held in Syracuse, N.Y.

49-12-21

with Frederick Douglass presiding. A National Equal Rights League was formed, with John M. Langston as president. Branches of this were formed in many northern and southern states and immediately after the war the Negro convention movement resumed its activity. From 1867 to 1871, labor organization was the burden of much of this effort. From then on, the Negro conventions became more and more political. After several years of promotion by T. Thomas Fortune, editor of what is now the New York Age, the Afro-American League, later the Afro-American Council was organized in Chicago in January 1890. J.C.Price was president and Mr. Fortune secretary. After one further meeting in Tennessee, this league subsided, but was revived in September 1898 by Bishop Alexander Walters. It met at Rochester in September, and later in Washington that same year "to investigate lynching, to test the constitutionality of discriminatory laws, to secure civil rights legislation, to promote migration from the South and to encourage organization." The weakness of this organization was the lack of a continuous working body to carry out the resolutions of its annual meeting; it was sincere but ineffective.

49-19-22

In 1905 however a new aspect had come over public opinion among Negroes. Alarm at the new wave of disfranchisement and discrimination and resentment over Booker Washington's concession began to spread. Particularly, young colored college men began to fear the dictatorship of the Tuskegee machine. This opposition flamed up when Monroe Trotter was sent to jail in Boston for attempting to heckle Mr. Washington during a speech there. A call to action was issued in June 1905 signed by 59 men from 17 states. In july 1905, 29 of these men representing 14 of these states met at Niagara Falls and formed The Niagara Movement.

that the Negro's handicap in the basic matter of earning a living was still so great and unsolved that Negroes as a mass did not have the power to make effective their demands for their rights.

49-17-23

Chapter VI.

WORLD WAR and DEPRESSION.

At the outbreak of the War, the situation of the Negro seemed favorable. Higher learning was gaining rapidly in quality and quantity, and the elementary school system in the South, while still bad, was improving. Though still restricted, the Negro's political power was beginning to be used with some effect in the North and the border states. Lynching had decreased under pressure of agitation from an annual total of 235 in 1892 to below 75 a year. The Negro press gained in efficiency and boldness. Through participation in the World Races Congress, held in London in 1911, Negroes had begun to visualize the problems of other colored peoples. Many Negroes in the election of 1912 supported Wilson in a move to make the Negro vote a balance of power factor and put the "Party of the South" under obligations to the Northern Negro voter.

But the forces of reaction were still at work. The Smith-Lever Bill to give federal assistance to education in the South passed without safeguards for fair Negro participation. In the 67th Congress, some 20 measures against Negroes were introduced. In September, 1915 Haiti was occupied. That year saw 53 lynchings, and the only favorable event of significance was the Supreme Court decidion overthrowing the "Grandfather clauses." Segregation ordinaces were passed in 1916 in St. Louis and Dallas, and in May, a Negro was publicly burned in Waco, Texas ubder circumstances of horrible brutality, and November a well-to-do Negro was lynched in South Carolina for demanding the current price for his cotton crop.

Then in 1916, the great Negro migration north began as an unusual demand arose for labor. The War had stopped immigration, the main source of supply, just as the crop failures of 1915 and the ravages of the boll-weevil decreased the demand for labor in the South. A mass

of Negroes, estimated at between 250,000 and 500,000 for the year, went North. The South immediately began propaganda to stop this exodus. They restricted labor recruiting agents by high license fees, drove Negroes from railroad stations, refused to sell tickets and spread alarmist rumors abour labor and racial conditions in the North. In fact, there had been labor riots in Chester, Pa. and a few other centers where the influx of Negro labor was resented by white laborers. In July, 1917, the worst of these labor feuds broke out in East St. Louis, where between 100 and 200 Negroes were killed, 6000 driven from their homes and $400,000 worth of property destroyed.

So when the United States entered the war February 3, 1917, the Negro faced a crisis and a dilemma. How could a black man fight loyally for a country where such things could occur and be condoned? Why should he. in the face of disfranchisement and lynching?

49-17-33

Persistent rumors of German propaganda among Negroes were flying here and there, with some small basis of fact but little tangible result. Yet it would have been futile for Negroes to have opposed the war; any suspicion of disloyalty would have been followed by increased discrimination and mob violence, visited particularly on their most helpless classes. On the other hand, there was in the very conduct of the war some chance to make the crisis in the national fortunes an occasion for bettering the Negro's condition. If Negroes were not included in the draft, that would be a denial of their citizenship. If they could not be soldiers, but only laborers, that would deny their full manhood. If they could not be officers as well as soldiers, this would be an attack on their ability.

The N.A.A.C.P. took this stand and fought for the inclusion of Negroes in the draft and for volunteer Negro soldiers. On the matter of Negro officers, they were put in a curious dilemma. At first, on their

principle of fighting discrimination, they asked for the admission of Negroes to regular officers' camps. This was flatly premtorily denied. The chairman of the N.A.A.C.P., with some of the directors thereupon asked for a separate camp to train Negro officers. This plan received enthusiastic support from student groups at Howard University and other colleges, and after some official hestitation, a camp for training Negro officers was established at Des Moines, Iowa, and 700 Negroes trained and commissioned therefrom.

But the difficulties of race discrimination in the Army were just beginning. According to the Draft Act, Negro and white troops were to be separated. Were Negro officers to lead Negro troops exclusively or were white officers to be mixed with them? Were Negro troops to be in separate units or brigaded with white troops? After much hesitation, a final compromise was adopted to form a division of Negro combat troops, known as the 92nd Division, with white field officers and Negro line officers. A second Negro division, the 93rd, was projected but never functioned. The 92nd did however, with a creditable war record, in spite of administrative difficulties and bickering.

49-17-34

In the South, in spite of claims that Negroes were physically inferior, and that they were manifestly poorer and more needed by their families, a larger percentage of Negroes were drafted. In the North, Negro draftees were tossed about on the fringe of "white" camps until they could be put in a "Negro" camp . Many competent, educated men were thus forced into "labor battalions." There was much discrimination and threats of mob violence against Negro cantonments in the South. And later, there was much bitterness aroused by unfair treatment of Negro troops in France, the hostile attitude of many white officers toward black officers, and the contrast of the more just attitudes of the French command and the French populace.

So serious were these situations that the government called together the editors of the Negro pfess and promised reforms. It appointed an advisory Negro representative as special assistant to the Secretary of War. The office carried no executive power, but could bring matters, chiefly complaints, directly to the ear of the Secretary. There was even a plan to put one or more Negro officers in the Intelligence Service, but sudden caution stopped it. On the whole, the program of patriotic cooperation resulted in giving the Negro a better status during the war, with black officers over his troops and some chance to show his prowess. Yet, withal, the Negro was forced to do his greatest service as a laborer; though his stevedore units made extraordinary records in the handling of army supplies and humble but dangerous work behind the trenches lines.

While these matters were occupying the attention of Negro leaders, vast changes were occuring beneath all this in the economic condition of the Negro to which they gave but passing notice. Before 1914, foreign emigrants competed with Negroes as laborers and servants, and each year for ten years preceeding the war came in numbers equal to the entire Negro population of the North. Since 1820 thirty six million immigrants had been absorbed by American industry, mostly as common labor; and from 1900- 1910, seven million came in. Thsi fact made Negroes unimportant to trade unions, which for the most part, kept t them out. Before 1914 not more than 10,000 Negroes migrated North in any year as compared with over a quarter of a million in 1917.

With immigration checked by the World War, and later by American legislation limiting it first to a 3% and then a 2% quota,-(Italy, Austria, Hungary and Russia who in 1910 were sending in 600,000 immigrants a year were thus reduced to less than 6000) - the demand for labor was high. Labor agents began to bring Negro workers into

Northern industries. Unskilled workers were especially in demand in the steel and iron industries and building construction, in the stockyards, and for road maintenance and railroad construction. Between 1915 and 1928, 1,200,000 Negroes came north from the Southland. Many were brought in, through no fault of their own, as strikebreakers. Now for the first time the Negro was a factor in the problems of Northern ~~xxxxxxx~~ capital and labor. Some of this labor became skilled; the U.S. Dept. of Labor reported a 34% increase in skilled labor among Negroes generally, and in some lines the increase reached 186%. Pittsburgh Negro iron and steel workers increased from 100 in 1910 to 16,900 in 1923. The Ford Automobile plant employed at the peak 11,000 Negroes.

Economic, social and even physical conflict followed this rapid change. White workers often threatened to quit if Negroes were employed. Southern whites were imported to Northern mills as foremen. Many trade unions began to seek Negro members, but the Negroes were not always willing to join. ~~xxxxxx~~ Discussion arose over the efficiency of Negro labor. Came the bitter year of 1919.

The 1919 report of the N.A.A.C.P. had this story to tell: " Serious mob outbreaks against Negroes and clashes between the races were reported from 26 cities. The most spectacular of these outbreaks and riots were those occurring in Washington, D.C.; Chicago; Omaha, Nebraska; Knoxville, Tennessee; Longview, Texas; and the widely heralded "uprising against whites" at Elaine, Phillips County, Arkansas. Serious riots occurred also at Charleston, S.C.; Norfolk, Va.; Philadelphia and Bisbee, Arizona. "... " Six persons were killed outright in the Washington riots from July 19 to July 23. These riots were begun and carried on by uniformed soldiers and sailors. Fifty persons were seriously injured and a hundred or more less seriously wounded. Order was restored only by the intervention of

49-17-36

United States troops." The Chicago riots and many others were definite outgrowths of labor antagonism.

During the War, union labor was triumphant. The preseident of the American Federation of Labor was on the Council of Defense and the War Labor Board. In return for pledged cooperation and the pledge not to strike, the government gave recognition to collective bargaining, the 8 hour day, and a high standard of living. Union membership increased 2,000,000 between 1917 and 1920.

But since the collapse of the Knights of Labor ( ), union labor had not welcomed Negro workers. This is how the American Federation of Labor changed its policy. In 1881, it declared "the working people must unite and organize irrespective of creed, color, sex, nationality or politics." This was reaffirmed in 1897 after opposition. In 1902, it was voted that separate charters might be issued to Central Labor Unions, local unions or Federal Labor Unions composed exclusively of colored members. This, in fact, recognized the legality of excluding Negroes from local unions and City Central Labor bodies. From 1910-1914, the Federation allowed organizations which excluded Negroes to affiliate with them, but hired 3 Negro organizers and proceeded to organize separate local and federal unions. When Negro workers began to increase so rapidly in the North between 1916-and 1920, the matter of their organization was pushed in the A.F. Of L. conventions, but no machinery was provided. As a result, the A.F. of L. had, before the depression, less power and influence among the Negro group than it did at any other time. This accounts mainly for the Negro's disinterest in labor organization.

49-12-37

Negro Labor Organization.- Despite this, there has been considerable organized.
growth in Negro Labor. Sra Reid reports (

Negro mebership in trade unions in 1890 at 3,523; in 1900 as 32,769; in 1910, 57,662; 1926-28 as 61,032; and in

49-17-39

Negro Labor To-Day.- Whereas before the World War the Negro's economic position hinged largely on the demand for agricultural labor for the production of staple crops in the South, it has been determined since, largely by the demands for industrial labor, particularly in the mid-West and the North. As a result, the black belt areas , that is counties with half or more of the population Negro have decreased from a high of to a present low of 187 in 1930. The Negro population has rapidly concentrated in cities. Eighty per-cent of the Negro population was rural in 1890, but only 73% in 1910 and 56% in 1930. In 9 main metropolitan regions in the North over 2,000,000 Negroes are living; and 1,500,000 more in metroploitan districts of the South . The change in occupation has been equally great. During slavery, the Negro was engaged chiefly in agriculture and in domestic and personal service. As late as 1890, of the total poulation over ten years of age, 56% were in agriculture and 31.2 % in domestic service. But in 1930 only 36.7 % were in agriculture, 28.6 % in domestic and personal service and 29.2% in manufacturing and mechanical industries and trade and transportation.

This amounts to a wide-scale economic revolution. The striking decrease of farmers and servants, the rapid increase of those in the professions and the steady increase in the numbers in industrial pursuits indicates this clearly. Between 1890 and 1930, for example the increase of Negroes in the building trades was over 500% and in the cloth and allied industries 270%. Increases in the food and allied industries were 473 % ; in the lumber anf furniture industries 418 % and in the metal industries over 1,000%.

49-177-41

The [redacted]:- Another significant change has been the breakdown of the industrial color line, especially since the depression. There were curious prejudices giving Negroes moncpolies on certain types of work. It used to be true, as Alexander described it: " A Southern white man will curry a mule, but will not brush a gentleman's coat. He will drive an ox-cart, but will not act as coachman." These so-called "Negro jobs" were the jobs of servants and laborers, but they were fairly permanent, and these workers had certain perquisites in food and clothing and had personal relations with employers that gave them a degree of legal and social protection. The money which built homes and churches for Negroes, educated Negro children and saved sums for capital investment came, for the most part, out of such wage.

This situation changed gradually just preceeding the World War and markedly thereafter. In most Southern hotels today the sons of the poor whites are the bell-boys and their daughters the waitresses. This class ,too, has pressed into the cities and competes with the Negro as porters, newsboys, servants and day laborers. The white laboring class in the South is competing for Negro jobs and pushing Negroes from nearly all lines of work. The division of labor by race has almost completely disappeared, and during the depression it has become more and more an accepted creed that no Negro should have a job as long as white men were unemployed.

Severer competition, lower wages have increased the opposition of white labor. Black labor has met serious set-backs because of this competition. Meanwhile the machine has displaced many of the very skills which Hampton and Tuskegee were teaching and proposing as the black man's economic ladder. Meanwhile also the situation of the farmer, both white and black, in the presence of new problems of labor, machinery, decreasing

49-17-42

markets and market prices, made the advance of the Negro farmer quite impossible. So by the time of the present economic era, the Booker Washington program for the economic emancipation of the Negro had met insuperable difficulties. The small black capitalist and the capable Negro college or professional graduate found decreasing opportunity for profitable occupation, Concentrating credit, capital and mass production squeezed out his chances. He could only hover on the fringe of exploitation which the whites neglected, using color discrimination as a sort of protective tariff for his marginal lack of capital and opportunity.

Most people do no realize the serious losses of both white and black labor since the War. As soon as that was over, the government withdrew its indirect backing of labor. With numerous strikes, employers began to push for the open shop. The began to undermine the labor unions by company unions, stock sales to employees and profit-sharing. In the steel and caol strikes, the failure to organize Negro workers in these industries helped to break the strikes; and the use of court injunctions by employers broke down the resistance of the unions. Organization of Negroes in these field was belatedly attempted. and quite a few joined. But really by 1923, labor in general had lost much or even most of its war gains. Many workers had lost their jobs because of new machines and mass production schemes. Membership in the unions declined and almost disappeared in the steel and textile automobile industries.

49-17-43

But rising business prosperity continued to sweep values up till 1929, and an extraordinary profits psychology obscured the basic facts. Masses of men were really competing for steadily diminishing jobs and lower wage scales. The machine was steadily replacing and displacing human labor. In the South white organizations like the "Blue Shirts"

of Jacksonville, the "Black Shirts of Alabama, and the revived Ku Klux Klan and " Sons of Justice" of Georgia began agitation by intimidation, and violence to drive Negroes out of jobs. Negro locomotive firemen were assassinated on duty in Mississippi and Louisiana with the purpose of runnuing all Negro trainmen off their jobs. Idleness on the part of both races has led to unrest, ill-temper, crimes against property and labor antagonism. Certain efforts of ~~xxxxxx~~ propaganda among Negroes to lead them to radical revolutionary doctrines have fomented distrust and hysteria.

~~The Depression Makes Elite.~~ The forces of the depression were not only undermining the condition of the masses, but jeopardizing the gains of the elite. In most lines of employment with technical and higher administrative possibilities, Negroes encountered the impossibility of promotion to positions of authority or supervision. This was especially true in technical engineering lines, in which because of difficulties of placement, many engineering schools discouraged refused to take Negro students. In organized business, Negroes made repeated efforts. Here the great concentration of capital and credit, the severe competition of chain systems and the tremendous cost of modern advertising were the undoing of most Negro financial enterprises. Taking advantage of rate discriminations against Negroes in life insurance, several large Negro insurance companies were launched, with considerable success at the outset. But the depression and immature management brought about the failure of two. Others ~~xxxxx~~, with policies aggregating $ 260,000,000 and assets of $ 18,445,000 still survive. But even they are more or less at the mercy of white investment concerns. Numbers of Negro banks encountered failure in the slump which carried under so many small banks, black and white. A recent effort to establish a Negro chain store system

46-12-44

- organized as the Colored Merchants Association in the grocery trade, began at a time when it had to depend on wholesale dealers who themselves were being pushed to the wall by the bigger chains. So they failed to break through this cordon of competition.

Over against these financial set-backs, the steady growth of Negro education might seem at first very encouraging. For Negro colleges have increased in numbers, efficiency and stability, from 70 in 1921 to 106 in 1931; with an enrollment increase from 5,231 to 22,609. There were 18,550 Negroes in college in 1930, 2329 graduates in Southern colleges in 1932, not counting a considerable number graduated in mixed colleges, and the total enrollment in 1931 of 101 Negro colleges was 31, 468 with an annual income of $9,317,764. But on the other hand, the position of the public high and elementary schools which are the pyramid base of this educational advance was precarious through decreasing public school revenues, unfair distribution of tax money for the support of Negro schools, a crippling differential in salary scales between white and Negro teachers. And when we look at the base line of Negro education in the rural school we find the saddest situation of all, with most of them either closed down or seriously curtailed by the depression.

49-14-45

Thus the whole economic situation of American Negroes has, inevitably been greatly complicated by the present depression and economic crisis. For the past three years the amount of unemployment and social dependency among Negroes has been everywhere greater than among the white population. This has meant the loss of home property, the disappearance of savings, the bankruptcy of much Negro business enterprise, and further handicaps all along the line. The masses of Negroes face the task of somehow relaying the foundations of their economic life.

Chapter VIII.

THE NEGRO ADVISERS: 1934.

Negroes were now in a quandary. Theye were told that if they did not accept the lower wage offered, they ould have no jobs, since millions of white workers were unemployed. Kelly Miller advised them to throw in their lot with capital, since any other alliance was hopeless; and yet the acceptance of wage differentials branded the Negro as economically sub-standard. Others counselled no compromise and an alliance , where possible,with labor. The controversy split the Negroes into two new camps.

On the one side these were the arguments; Quoting from an editorial in the New York Times, Sept. 10,1933: " If the Blue Eagle of the N.R.A. had been looking a few days ago over the shoulder of a Negro employee of a manufacturing company in a great Southern city, he would have seen the Negro draw from his pay envelope a pink sheet bearing this message: ' To all colored employees: The wages you are paid now are more than this company can pay unless each worker produces more. ...If the false friends of the colored people do not stop their propaganda about paying the same wages to colored and white, this company will be forced to move the factory to a section where the minimum wage will produce the greatest production. ... Stop your friends from talking you out of your job.' " It should be said that the Negro employees of this company receive from 6 to 13 cents an hour for eight hours daily and five days a week; second that it displays the now familiar emblem of the Blue Eagle. Further, it is only fair to record that a great many, perhaps a majority of Southerners are attempting to give the Negro a square deal. There are also many honest and fair-minded Southerners who believe that a sane solution of the N.R.A. wage problem in the

#9-17-46

South would be to establish a differential. They point out that among ~~the~~ whites the women workers usually receive wages lower than the men, and that since for so many years the Negro has received less than the white worker, it is unwise to make a change as sweeping as that inaugurated under the Blue Eagle. None asserts that such a condition represents justice, but ~~it~~ it is a course which, according to many, wisdom seems to dictate."

In the case of the Southland Manufacturing Co., G.Lake Imes of Tuskegee took the same position, thus defending his advocacy of a lower code wage for Negroes:

" We have now this situation, that 258 women in Montgomery, whose labor supplies practically the only means of livelihood for some 800 people, having had the order issued that whoever employs them must pay a minimum wage of $12 a week regardless of their production capacity, find themselves at the same time without any place to earn that wage or part of it. Many of them are now on relief rolls for direct relief; others have tried in vain to get either food or work slips.

" The Southland Manufacturing Co. does not ask for complete exemption from code requirements. It does ask for temporary exemption until the volume of production of this plant, measured by standards which generally obtain in the industry, is brought to a point where the plant can pay the minimum code wage and operate without actual loss...

" You can get no equality if you have no opportunity. Without opportunity, all the rest of it is theory... and later in the argument quoting Lieutenant Oxley as saying that ' he would rather see all of the colored women of Alabama starve to death than retreat from the principle of equal wages', the Rev. Imes declared:" If this is a sample of the thinking of the colored"brain trust", it would be better had it never been created."

49-17-44

On the other hand, Dr. Moton, president of Tuskegee said: "I realize that if the N.R.A. forces this policy (of equal wages) to be carried out fully, some Negroes ~~will~~ may lose their jobs. Certainly I think it is better that some should lose their jobs, if they have to, than that all Negroes should be put down by organized and unorganized white labor as a group of strike-breakers and 'scabs'."

The Federal administration was finally stirred by such dilemmas, criticisms and complaints. The response eventually was the appointment of a number of special advisers on Negro affairs in connection with various New Deal actvities. Anticipating such situations, the "Interracial Conference" held in Washington in May, 1933 had proposed a representative of Negro interests in the higher administration. A committee went to the Secretary of the Interior with this suggestion, reccomending three candidates, two white and one colored. The choice fell upon Dr. Clark Foreman, a liberal Southerner from Atlanta. He was "attached to the Interior Department where his duties entail special attention to the manner and extent to which Negroes are sharing in the results of the National Recovery Act."

49-17-48

There was much criticism of the selection of a Southern white man to represent Negro interests in the Administration, and although Mr. Foreman's salary was met from philanthropic foundation sources, he was between the difficult cross-fire of Negro criticism and the reluctance of ~~the~~ many higher officers of administration to recognize direct Negro leadership (as an unofficial but suposedly accurate report of one of their private conferences will later show). Finally Negro appointees were gradually added and in 1935 a young Negro economist, graduate of Harvard, Dr. Robert C. Weaver replaced Dr. Foreman, who was promoted to a higher advisory position in the Interior Dept. At that time the scope of this office was widened ~~to~~ as follows: "The Adviser on the Economic Status of

Negroes in the Department of the Interior is responsible to the Secretary. His duties are to acquaint the Secretary with the effect of the agencies of the Department upon Negroes, to suggest measures intended to increase the benefits to Negroes under the various programs administered by the Secretary, and to integrate Negroes into the activities of the Department and the Public Works Administration...The Adviser is also consultant to the Housing Division of the Public Administration."

A conference in September 1933 called by the Secretary of Commerce to advise on steps that might be taken by the Federal Government to advance the economic interests of Negroes, recommended a special adviser. Eugene Kinckle Jones, executive Secretary of the National Urban League, was appointed Special Adviser on Negro Affairs in that department. Then came pressure from other sources for the appointment of Negro administrators and investigators as it was felt that the advisory capacity was not effectively correcting the inequities of the local administration of many federal recovery projects. It was at a private conference of cabinet officers and higher New Deal administrators called to consider such appeals and criticisms that the dilemmas of the authorities themselves were reflected by an unofficial report

Editors Note:
N.B. Either shortened digest of report or omit

49-12-49

This position was energetically and rather effectively taken by a group of Negro organizations that became organized in Washington in July, 1933 as the Joint Committee on National Recovery. This grew out of the initiative of two younger men, John P. Davis and Robert Weaver who made independent investigations and proceeded to agitate for better representation in the New Deal and for full investigation of discrimination in New Deal actvities and programs. The evidence, endorsed by the member organizations of the Joint Committee, produced a profoundly disturbing pressure on the New Deal agencies, especially the N.R.A. and General Hugh Johnson, its administrator. Dr. Weaver later accepted a position as assistant to Dr. Foreman in the Dept. of the Interior, and eventually suceeded him. John P. Davis remained as Executive Secretary of the Joint Committee and has gathered and pressed many reports of discrimination and non-performance before the various authorities of the government. On the whole the Joint Committee has been the most effective and uncompromising channel of criticism and pressure upon the government and public opinion for justice to the Negro under the New Deal.

Yet the Joint Committee, by the very incongruity of its member organizations, cannot represent a unified point of view. Its members are the African Methodist Episcopla Church, the A.M. E. Zion Church, the Alpha Kappa Alpha Sorority, the Alpha Phi Alpha Fraternity, the C.M. E. Church, Delta Theta Sigma Sorority, the I½B and P Order of Elks, the N.A.A.C.P., the National Assoc. of Colleges of Negro Youth, the National Assoc. of Colored Women's Clubs, the National Baptist Convention, the National Catholic Interracial Federation, the National Council Protestant Episcopal League, the National Housewives League, the National Negro Business League, the National Negro Bar Assoc., the National Negro Medical Assoc., the National Technical Assoc., the

49-147-50

National Industrial League, the Omega Psi Phi Fraternity, the Public Affairs Committee of the Y.W.C.A.,the Race Relations Dept. of the Federal Council of Churches, the Women's Auxiliary, National Baptist Convention, and the Women's Mite Missionary Society.

Of these organizations, ten are religious, four are academic fraternities and sororities, one is a fraternal order, one an organization for protest and reform, four, organizations of professional men, one for club work and three industrial organizations. If we examine their programs, we find that half are reactionary in outlook or believe in the essential soundness of the capitalistic system. Of the other twelve, eight may be classed as liberal in their economic outlook, while two are distinctly labor organizations, the remaining two representing capitalist philanthrophy. There is only one matter upon which all these organizations agree, and that is that in the administration of the recovery program there should be as little race disrimination as possible. But as to the program itself and the correctness of its objectives, the Joint Committee can and has had little to say. Certainly, in spite of its great temporary service, one cannot look to it for a definite constructive program for the economic guidance or the industrial development of the Negro race.

The Urban League did not join the Joint Committee, but attempted to set up a program of "Worker's Councils." T.Arnold Hill, acting executive sent out this appeal in an open letter to Negro workers: For fourteen months we have been witnessing in the United States a most unprecedented effort at economic stabilization. The cause of labor is riding 'high, wide and handsome', with the possibility of obtaining many desirable goals. yet the cause of Negro workers has not been one with labor's general aims. The appeals of social organizations in your behalf to the National Recovery Adminsitration, the American Federation of Labor, independent labor organizations and many persons of influence and pres-

49-147-51

prestige, while partially successful, have fallen far short of the desired goal. These shortcomings have convinced us that the position of Negro workers will be strengthened only if they themselves realize the necessity for action." Obviously this is a call for an independent labor program and action, and a distrust of the intentions and probable results of present day capitalism and organized American labor. So the re is little wonder that the movement for Negro Workers Councils has not gone ahead very practically under the auspices of the essentially conservative organization, the National Urban League, in whose name it was promulgated.

Other New Deal Agencies and the Negro.- As economic conditions grew worse in October, 1933, the Federal Emergency Relief inaugurated a Civil Works program. This was to provide work at once for four million unemployed persons on short-term public projects. The same month a Negro was appointed director of Negro Work in the F.E.R.A. He was Forrester Washington of the School of Social Work in Atlanta. He selected a tentative body of welfare workers to help him, but after a few months resigned, presumably because he found he was to be given no real administrative power. His assistant was named as his successor, but instead of being designated as Director of Negro Work, he was styled an Adminstrative Assistant. His function is to receive and adjust complaints from Negroes concerning the administration of relief funds by local authorities.

49-14-52

Similarly when the F.E.R.A. authorized funds to be used for re-employing unemployed teachers in August, 1933, Dr. Ambrose Calliver, specialist in the Office of Education, was also assigned as Specialist in Educational Relief for Negroes; but not until December, 1933.

Likewise when the Farm Credit Administration was created, a Negro adviser was appointed assistant to the Governor of the F.C.A. The Mr. Henry Hunt agency is designed to provide a complete and coordinate credit system for agricultural rehabilitaion. The Negro adviser receives complaints on the administartion of the program as affecting Negro farmers and makes every effort to remedy injustices placed upon Negroes in the administration of these funds. But again, the position has no administrative responsibility, and the incumbent makes inspection tours and inquiries at the Federal Land Banks.

Among the appointments of this kind eventually made were 2 in the Department of Labor, 9 in the department of the Interior, 3 in the Federal Emergency Relief Administration, one of whom resigned after 7 months' experience, 1 publicity man who filled Negro newspapers with rosy reports about the New Deal, but who was later reassigned to the F.E.R.A., 1 in the Farm Credit Administration, 1 in the Public Health Service, 1 in the Bureau of the Census, an older employee who was given rank as Specialist on Negro Statistics, 1 in the Department of Commerce, and 1 appointee to the Consumers' Advisory Board, who soon resigned. Besides these more important appointees, there were many subordinate and clerical appointments, as for instance some 20 in the F.E.R.A.

The result, then, of Negro criticism was a corps of Negro advisers, which has been styled a Negro "Brain Trust", and a few others in subordinate administrative and clerical positions. Such an adviser could exercise much influence or none, according to his own training, ability and personality and according to the character of the administrative official whose case he had. A subservient adviser and an official disposed to ignore or merely pacify Negroes rendered the system ineffectual, and this was true in several cases. On the other

49-17-53

hand, a conscientious cabinet officer who could depend on the knowledge, courage and tact of his Negro adviser could accomplish much, and this was proven in at least two cases.

Many conferences have been held between New Deal officials and representative Negro leaders. There was a conference held December 1933 in Washington, attended by 20 Negroes and 30 whites, to consider the differentials in the N.R.A. codes. However, this conference came to no official conclusions. Many other conferences have been held under Government auspices. These gathering have included such interests as Child Welfare, Code Hearings of various industries, Relief programs, Subsistence Homesteads, Agricultural Adjustment and the like. An "Interdepartmental Group", made up of representatives of the various departments and administrations whose interests touch the Negro, has been appointed by cabinet officers to coordinate Negro activities. Special mention should be made to an important conference held in Washington, May 1934 to survey the state of Negro education, at which Mrs. Franklin D. Roosevelt made a memorable address favorable to the Negro and the principle of social justice. Other conferences have been called by Secretary Roper of the Department of Commerce to discuss the economic situation with respect to the Negro.,

Thus the New Deal has given more attention to Negro affairs and welfare than previous administrations and has had the advice and assistance of trained, non-partisan Negro leaders and men of affairs rather than professional politicians, but with good intentions and professions has been seriously handicapped in the practical results by inability to insist on no discrimination in the local administration of its remedial measures and the presence of reactionary officials within the government ranks.

Chapter IX.

TO-DAY's
THE BALANCE SHEET: 1935-36.

It is not easy to take stock of the effects of the depression on the Negro, and the balance of gains and losses under the New Deal. It is easier to realize that the balance is "in the red" than to fix the blame to this or that factor. In a large way, we may be sure of certain things. The Negro felt the coming depression as early as 1927, and at least 300,000 Negroes in the industries were unemployed by 1929. This unemployment has increased until now from 30 to 60 % more Negro workers are unemployed than white workers in proportion to their numbers. Moreover, in any program depending largely on government action, the political complexion of the Government's majority is an important factor. The representatives in Congress from the South, elected on a basis which includes the Negro population and yet practically excludes Negro voters, form the main political bloc which supports the present administration. The House leader of the Democratic Party comes from Arkansas. The Vice-President is from Texas and the Speaker of the House is from Tennessee. This means that as a matter of practical political strategy, the President and his advisers could not affront the South. This not only explains the failure of anti-lynching legislation and the like, but also explains some peculiar results of the New Deal as far as Negroes are concerned.

The States Right's Heritage.- The execution of all the main measures of the New Deal was left to the states, which meant that in the South the race pattern had to be followed in the matter of wages, relief and public works. Even in the North, the adminsitration dealt in labor matters primarily with the American Federation of Labor. Twenty-four of the constituent international unions in this organization exclude Negro workers either by direct provision in their constitutions or by the invariable action of the locals. The result of all this was that in the very midst

of the effort to raise wages and relieve unemployment, there was a large body of laborers whose position could not be bettered at all or either had to be reached through compromise or ~~xkx~~ strategy.

We have seen how differential wages became the bone of contention immediately in connection with the N.R.A. labor codes. This customary discrimination of the South since emancipation was hotly defended on the grounds that the Negro "had a lower standard of living", that he "was able to live on less", and "that the white man not only "deserved and demanded more", but in the interests of race equilibrium "ought to have more." Yet in actual effect, the lower Negro wage brought down and kept down the wages of the whites in many cases. Nearly half the laundry workers in the South were white, yet their minimum wage of 14 cents an hour was fixed by the theory of what "Negroes ought to receive." In the iron and steel codes a differential between the North and South was made of 40 cents and 27 cents an hour, in the fertilizing industry of 40 cents and 25 cents per hour. Moreover in the codes, the regional classification "South" was variable. In some industries it included 16 or 17 states, in others, 9 or 10. Although it is not definitely provable, the number of Negroes working in particular industries seems to have had something to do with the variation.

49-12-57

But the gravest fact of course was that farm workers and domestics, who form about two-thirds of the Negro workers of the South, did not come under any code or wage agreement. These exempted persons, amounting to 70 % of the Negro workers in Georgia and Alabama, and 80% in Arkansas, South Carolina and Mississippi, were beyond the reach of any organized recovery effort and suffered almost complete pauperization.

The Negro under T.V.A.- A peculiar difficulty arose with regard to the Negro in the government project to manufacture hydro-electric power in the Tennessee Valley. Within the T.V. A. area of 7 states, 112 counties

and 4,000 sqaure miles 2,335,907 whites and 268,048 Negroes reside. The Negroes constitute 10.2 % of this group and are mostly in Northern Alabama and West Tennessee. In this region are coal, phosphates and other minerals with abundant plant life, excellent climate, and the possibility of generating 3,000,000 horse power of energy. The T.V.A. is not merely to bulid dams and transmission lines, but also" to provide for the agricultural and industrial development of said Valley", and "to foster an orderly physical and social development of such areas".

What has T.V.A. done with regard to its Negro constituency? After some difficulties, the T.V.A. has been employing unskilled Negro labor at something like its proportion in the population. But in the model town of Norris at the heart of the project, where the government built 450 homes, Negroes were barred. But there is no official objection or legal obstacle to Negro towns which would share in the cheap power and opportunities for the farmer. But here is the old problem! Should Negroes accept the principle of segregation, this time in connection with a Federal scheme, for the sake of possible industrial development? Or should they, with foreknowledge that for some time their insistence will be in vain, insist on being admitted to common share in such developments as the town of Norris?

49-17-58

The Subsistence Homesteads Plan.- In no plan of reconstruction was there more of a dilemma and muddle than in the matter of subsistence homestaed projects. These residential schemes invclved even in the North meeting traditional American prejudice full-face and head-on. Obviously subsistence homesteads were crucially necessary not only to help unemployed Negroes to permanent rehabilitation, but as the author sais in 1933 to begin cooperation between Negro farmers and Negro industrial workers. From the beginning there was opposition on the part of the N.A.A.C.P., the Joint Committee on

Recovery, and other influential sources against segregation in these projects, even if they arose through Negro initiative as self-governing, independent projects. The practical result was that nearly all of the Negro projects were held up. Finally despite sharp inner differences among Negroes, three subsistence homestead in Alabama were agreed upon. They consist of a Self Help cooperative farm community of 60 farm families near Tuskegee, the Tuskegee Homestead Units at Montgomery, Tuskegee and Lowdnes Co., and in Macon Co. a "Tuskegee Planned Land Use Demonstration" which will reclaim 60,000 acres of sub-marginal land for a resettlement project of about 600 farm families.

The Emergency Housing Project.- This recovery project fell afoul of the same difficulty over racial segregation. Housing areas for Negroes, North and South, are notoriously bad and unsanitary. Early in this project, the colored people of Atlanat came forward and secured a site near Atlanat University where $2,100,000 is alloted to provide 617 house units for Negroes. Projects for slum clearance and modern housing projects are planned for Atlanta, Cleveland, Detroit, Mon Montgomery, Chocago, Nashville, New York, and Washington, D.C.

40-14-57

The Relief Program.- In 1932, ~~$3000x000x000x~~ $300,000,000 was made available for the states and territories to be used for furnishing relief and work relief and to relieve hardship resulting from unemployment. Not more than 15 % of this sum could go to any single state and the money was lent to the states with interest. Later in 1933, five hundred million was appropriated under the Relief Act to be furnished to the states as gifts. Half of the fund was available at the rate of $1 to every $3 of public relief furnished in the state for the preceeding quarter; the other half was a discretionary fund subject to direct allotment.

49-17-60

In October 1933, there were 2,117,000 Negroes receiving relief singly or in family groups, that is 17.8 % of the total number of Negroes according to the 1930 Census.,In January 1935, the F.E.R.A. reports 3,500,000 Negroes in families receiving relief or 29% of the 1930 population. This disproportinate number is not only an alarming excess, but is proof of the Negro's precarious economic position. Further there is little doubt that these relief figures do not reflect all the facts because of inadequate provsion for Negroes in need in many communities. In Mississippi, for instance, where the white and colored population is about even, and the Negroes without doubt are in dire economic need, only 9% of the Negroes are receiving relief while 13.3% of the whites are receiving relief. In places where the Negroes were getting a fairer deal, their proportion on relief shows their desperate economic situation. In New York City, Negroes forming less than 5% of the population needed to receive 13% of the relief. In Detroit, forming 7.6 % of the population, they formed 29,6 % of the relief load.

State Evasions of Relief.- In the whole Federal Relief Administration, the total money expended between May 23 and December 31, 1933, 60.6 % was furnished by the Federal Government, 14.2% by state and 25.2% by localities. The way in which the South has gouged upon the Federal many states have shirked their duty is shown

~~by the fact that in 10 Southern states 95% or more of the relief funds have~~ has come from the Federal Government. In 1933, Alabama, Arkansas, Florida, Idaho, Mississippi, Nebraska, North Carolina, South Carolina Dakota and Texas contributed nothing to ~~the~~ public relief. ~~budget.~~

Mr. Arthur Raper of the Commission for Inter-racial Cooperation has the following to say with regard to the state of Georgia:" Taking the state as a whole, three racial differentials stand out: first, in nearly half of the counties in August and in more than half in March a larger proportion of the total white population was on relief. This is especially meaningful when seen in the light of the fact that the white people own practically all of the lands and other productive properties in nearly every county in the state, whereas the Negroes generally account for an excessive proportion of the propertyless and poorly remunerated agricultural laborers, farm tenants, casual day-laborers and domestics; second, in eight percent of the counties, the amount spent on white persons for direct relief exceeded the amount spent upon the Negro; third, of the 1,214 C.W.A. teachers in Georgia in mid-March, 1934, only 204, or 16.8% were Negroes, despite the fact that in 1930 the Negroes accounted for 36.8 % of the state's total population and 77.5% of the state's total illiterates, while 72 counties with a total of 56,877 Negro illiterates had no C.W.A. teachers, and while 154 counties had one C.W.A. teacher to every 45 white illiterates, 87 counties had only one C.W.A. teacher to every 521 Negro illiterates."

Not only was there this discrimination in the distribution of Federal funds, but in a large number of cases, white teachers were designated to teach colored children, despite the fact that there was

heavy unemployment among Negro teachers. The government was finally compelled to send out a memorandum on this subject ruling that Negro teachers should always be employed for Negro pupils in states maintaining segregated schools.

In the matter of Emergency Federal Aid for schools, the discrimination was still more flagrant. Here the money was alloted to the state and spent as the state decided, following the pattern of its usual differential. Georgia, which in 1929-30 spent $21,000,000 out of its total $23,000,000 school appropriations on white schools, took a Federal grant of $4,981,881 in 1933-34 and spent 87.3% on white schools despite the fact that colored school shildren formed 39.1 % of the population.

42-17-63

242 72 b

Security and Unemployment Provision.- The Committee on Economic Security, established June 29,1934, was assisted by an Advisory Council, but no Negro had a place on that council. The Wagner-Lewis Bill for social and unemployment insurance which was legislated largely as a result expressly omits from unemployment protection domestics and agricultural workers, thus leaving 15 out of every 23 Negro workers unprovided for in this regard. With respect to security and old age provision, as Dr. Geo. Haynes pointed out in the hearings, without express provisions in the bill prohibiting discrimination on account of race and color, Negroes would receive less compensation than whites since Fedreal grants were given to the Boards of the various states with no guarantees of equitable distribution.

49-17-67

Net Results.- The net results so far in the New Deal reconstruction so far as the Negro is concerned have been these; The Negro has received a considerable share of direct relief, less in the South, more in the large Northern cities. In the preliminary planning he was able to give some advice and receive some federal safeguards against open discrimination. But in wages, he was discriminated against in the codes and very generally despite the codes. In the new effeorts at social reorganization, like the T.V.A. and the subsistence homesteads, he has been largely left out of account. Several housing projects were started and perhaps more of these will yet be carried through, though the whole Federal housing program has suffered undue delay. In agriculture, especially crop compensation, the Negro was cheated wholesale by the landlords, and has been discriminated against in the resettlement plans.

To add to these special handicaps, the Negro has his share in the precarious condition of the more radically reconstructive or socialistic aspects of the NewvDeal program. Several of these have been invalidated as "unconstitutional" by the U.S. Supreme Court and others are in a state of suspended animation pending legal decisions. At present, the trend is to give up many of these efforts and return to the traditional profit-making eceonomy, depending upon investment returns and unregulated wage scales to restore "prosperity." It is admitted that at best there will be under these circumstances about ten million persons permanently unemployed, with many others irregularly employed or at wages too low to maintain a decnt standard of living. Of the ten million unemployed, at least two million will be Negroes, or twice their proportion in the population, and probably in all three million Negroes will ~~xix~~ have to live dangerously near the limit of subsistence.

There would be more hope even at that if there was a possibility of democratic appeal in the United States. The rotten borough system

49-17-69

revolving in the South about the disfranchisement of the Negro so dislocates normal political power that it functions chiefly in the interest of reaction and monopoly. In the face of such a situation we are in no position to temper and control either Fascism or Communism. We fall helplessly back upon the rule of a dictator because we despair of getting necessary work done by any other method. If the dictator succeeds, he must, like Roosevelt, move toward socialism; that is, the social control of wealth by the government in the interests of the welfare of the masses.

If however, in this movement toward socialism, the dictator halts or is halted, if "Big Business" sabotages partial success and rushes back to its hog-trough of profits, there comes the Counsel of Despair, which is a revolutionary movement that says to black workers and white;" There is no hope in fascism or democracy so long as wealth dictates."

If the United States is going to avoid revolution, then it must begin again to try the reasined method of democracy to which it pledged its allegiance in 1776 and which after many vicissitudes it definitely abandoned in 1876. It must do the thing that the Negro intellectual has been demanding: it must insist on public education for all and not simply for white folk; it must base political representation upon actual qualified voters and direct responsibility to them and not upon bulk population . It must control Federal elections by Federal power; and then out of this fundamental re-beginning of democracy, it may be able by democratic methods to accomplish the socialization of wealth and thenuplift of labor by peaceful methods and not through revolution.

49-17-70

Chapter X.

THE NEGRO FARMER.

Rural Reconstruction.- The most vital matter which the New Deal has touched so far as the Negro is concerned is the agricultural situation. More advice and propaganda has been used to encourage the Negro into agriculture than in any other matter. It was the chief burden of Booker Washington's program. It was long the main objective of Hampton and Tuskegee and the various state agricultural schools. It has been encouraged by the federal government and most of the philanthropic agencies.

The road of the Negro farmer has been terribly blocked from the outset. He was emancipated practically without land or capital. The attempt to make him a peasant proprietor by giving each Negro family 40 acres and a mule was defeated by the greed of the Southern planters and the lack of practical interest with the Negro's northern friends. Notwithstanding, the Negro made tremendous steady gains in landholding and farm ownership.till in 1930 there were 182,019 Negro farm owners in the South owning 11,478,898 acres and 881,687 farm operators of all types,- owners, share- tenants or croppers working 37,805,765 acres in that area. However recent Census figures report not only a decrease of 35,570 colored farm owners in the South from 1920-1930, but from 1930 to 1935 the land in all the farms of all colored operators in the South decreased by 2,219,482 acres. Add to the latter the 9.3 % decrease in total acreage reported for the preceeding decade 1920-1930 or over 2,500,000 acres, and the seriousness of the Negro's rural anchorage is evident. Negro agriculture has gone down beneath the general depression that has crippled agriculture of the nation. And in addition to his share of the general load, the Negro farmer has borne the extra handicap and loss of special exploitation, eviction for debt and by mob terrorism. The Negro's rural situation is critical and his hold on the

49-17-41

The Agricultural Adjustment Authority had as one of its main features cotton crop control and compensation for restricted acreage. The planters and large owners dominated the execution of this program, shared disproportionately in its cash bonuses, and forced on the hardships to the small holders, the tenant farmers and particularly the share-croppers. A situation of want and misery engulfed the petty cotton farmer, and the situation led to bloodshed in Arkansa and elsewhere. So terrible was this situation that the publication of a report of one of its own investigators on the share-croppers situation was suppressed by the Department of Agriculture.

A government spokesman says: " Probably the most difficult governmental service to analyze from the viewpoint of the Negro is that of agricultural adjustment. Negro farmers, of course, have had access to all of the benefits offered, but because of the large proportion of Negro tenant farmers, many of these citizens have been deprived of their rights through unscrupulous landlords who have schemed to appropriate for themselves the benefits of land rental and reduced acreage to the exclusion of their tenants. This practise the government discourages and seeks to prevent. However, Negro farm owners generally have taken advantage of their privilege of securing agricultural loans and have cashed in on cotton acreage reduction in the same way that other farm owners have exercised their options. As a whole, government officials report that the credit record of the Negro farm owners has been highly commendable." Except a few messengers, porters and card-punchers, there is no Negro representative in the A.A.A.

49-17-43

The Southern Farm System.- Under a grant from one of the foundations, a commission consisting of W.W. Alexander, Chas. S. Johnson, and Edwin

49-17-43

R. Embree, has been at work studying the problems of the Negro in the present emergency. One of the major efforts of this Commission was to explore the Southern farm problem. These studies, carried on immediately under the direction of Mr. Johnson, started out with an interest in the plight of the rural Negro but led directly to the general plight of Southern tenant farmers and sharecroppers regardless of race. The published partial report: "The Collapse of the Cotton Tenancy" ~~Kingdom~~, makes it clear that the depression brought Southern agriculture very near to complete collapse and that the A.A.A. program, necessary and useful as it was to farm rehabilitation as a whole, has made the plight of the tenant still more desperate. Pegging the cotton price and payments for crop reduction, while saving the owner, decimated the ranks of the tenant-croppers. Owners found that they did not need so many worker families on reduced acreage. Furthermore with cash in hand they began to hire labor simply for the active months, and to discontinue the system of carrying tenants throughout the year. The result was that tens of thousands of families, both white and colored, who hertofore had been getting a living however meagre, were thrown off the plantations and on to relief. This tenant farm population will probably never be re-absorbed, since the crisis has taught the owners a new system of hiring labor for the active season. This movement has already involved probably between three hundred and four hundred thousand families and is steadily continuing, threatening to involve about thirty percent of this huge dependent farm population.

Is this a real collapse of the Southern agricultural system? Some competent observers think it is. Commenting recently on the condition, Mr Embree comes to these conclusion: " The great mass of rural workers in the South has never been farmers in any proper sense of the word. Two million families-eight and a half million persons- are merely

49-124

attached to gthe soil as tenants or sharecroppers or otherwise dependent upon owners and bosses. This huge population includes three million Negroes, thre-fourths of all the colored farm population of the South, and nearly twice as great a number, five and a half millions,of white workers.

" The plantation system, which enslaved Negroes before the Civil War, has continued to exploit both Negroes and the poorer whites ever since. Virtual peonage, which shows itself to some extent in the tobacco and sugar plantations, spreads like an evil poison over tthe whole of the great cotton industry. King Cotton has ruled the South for generations, not as a benevolent despot, but as ~~xxx~~ as a ruthless tyrant ravaging the lives of the peons and blighting the economy of the whole region."

" The system, even under fair management, makes the tenants and their families dependents rather than farmers. In practice the owner often insists that all furnishings be purchased at his store, at fancy prices plus exorbitant interest. The tenants are kept in constant debt by high charges and easy manipulation of accounts. These debts, together with the pressure of traditional social customs, renedr the workers bound to the soil and the system. The insistence over huge areas of the South that payments be made in a single crop,-cotton, is often carried to such an extent that the tenant families grow not one item of any other produce, not even vegetables for their own tables, let alone chickens or cows which might so easily add to their proper nourishment.

Race Prejudice as a Factor.- Continuing Dr. Embree says: The system, bad in itself, is made abominable ~~w~~ by the racial situation. Although there are five million white people in this near-peonage, the system takes its tone from the relationship of "boss and nigger." The rural Negro during slavery and since emancipation has not had rights which the white man need respect or does respect. The set patter both of race relations

and of farm relations is that of masters and serfs, Because of his economic condition and because of his race, color and previous condition of servitude, the Negro is helpless before the white master. Every kind of exploitation and abuse is permitted because of caste prejudice. The 'poor white' connives in this abuse of the Negro; in fact he is the chief protagonist of it.

" This 'boss and nigger' tradition, which has added gross corruption and cruelty to an economic order bad enough in itself, has carried over ~~into~~ to the treatment of white tenants and croppers. Yet it has been impossible to bring about any change, even to get the poor white workers to make a stand, since any movement of reform was immediately confused with the race issue. The white farmers have fastened the chains of peonage upon themselves because of their blind rage and prejudice toward the Negro. The white peons have never realized and the owners have been careful to see that they never should be allowed to realize, that the cause of white and colored peons is identical. "Divide and rule" is the slogan of the bosses of the Southern land system quite as much as it was of the Hapsburgs. And in the South, race prejudice is ever an easy means of keeping the white peons divided against their colored fellow sufferers. Because of prejudice against three million Negroes, then, five and a half million white farm workers continue to keep themselves in slavery."

49-17-79

A Proposed Remedy.- Agreement was reached after intensive study of this rural situation on a definite plan of reconstruction, by which the government was to finance a huge program of distributing small farms to farmer tenants and croppers. This program at one fell swoop would begin 1 to substitute ownership for the former tenancy system and 2 to turn back the tide of rural relief dependents to self sufficiency on their own farms.. This was incorporated in the Bankhead Bill. It sought to

establish the "Farm Tenant Homes Corporation", similar in legal structure to the Subsistence Homestead Corporation under the control of the Secretary of Agriculture to "purchase farm land for lease or resale to farm tenants and sharecroppers or make loans to these classes for the pupposes of purchasing farm homes." The corporation with capital established at $ 100,000,000, was authorized to issue bonds up to one billion Prefernce was to be given to farm tenants of good,moral character with dependent families and who have had practical experience in farming, and they were to be allowed from 30 to 50 years to repay the purchase price of the land as loaned by the Corporation.

49-12-82

Chapter XI.

WHICH WAY OUT?-RESTORED CAPITALISM?

Which Way OUt? - Every thoughtful reader must by now be asking himself the inevitable question:"Which way out?" There seem to be three grand alternatives; three ways one or other of which we and the nation must choose in the attempt to achieve better days. What is the Negro's best choice for a social reconstruction that will come nearest to solving his problem and meeting his rather desperate situation? The watchword of one way, the conservative and traditional one, is "the return of propserity"-this is the plan of "restored capitalism". Another,- the radical and revolutionary way has the slogan of class struggle and economic revolution: it is the way of Labor alliance. Still another, that we shall examine after the other two extremes have been balanced, is no less a way of radical change of social program, but it is pivoted upon the Negro's own choice and direction of the program or that part of social reconstruction within his possible control. This is the way of Consumer Cooperation, and it is the one the author believes is at present the most hopeful of success as the Negro's way out.

48-13-44

The Promise of Restored Capitalism.- We first examine the conservative plan of a restoration of capitalism to its former health. Reaction to the effort of the New Deal to reorganize radically the basis of American industry has now definitely set in and will probably swell to an increasing,if not irresistible current. Something will doubtless remain of the effort to compel by Federal action the conduct of industry for the public benefit rather than for private profit, but it does not seem at present as though such efforts were going to be widespread or fundamental. If now, instead of radical reform in industry, we are going to have the restoration of the capitalist regime, what hope in that restoration is there for the American Negro?

The Capitalist Program.- One gets an idea of what is in the mind of capital by studying the efforts of the Department of Commerce. The present secretary, Daniel C. Roper, has been devoting something of his time to the economic situation of the Negro. In a nation-wide broadcast, Mr. Roper called attention to Negro business and some of its prospects and accomplishments. He dais:" From my study of the Federal Census xxxx statistics as they reveal the Negro's progress in business, I cite one xignifixxx significant feature, seldom stressed. I refer to your successful commercial ventures in the larger urban communities. Negro merchants, operating retail stores in fifteen of our largest cities are said to serve about two million people. There are in these fifteen cities over 5,700 retail stores with approximately 10,000 colored proprietors and employees. The net sales of these stores have run as high in a given year as $27,000,000. This appreciable expansion in business indicates the vast potentialities for future developments in this field. I feel that this feature in business for Negroes should be stressed along with agricultural pursuits, dentistry, medecine and such other industrail and professional lines as required for complete service to the race by representatives of the race when and if desired by colored people.

49-17-85

" One of the most importany objectives to be attained by the colored race today is the establishment of the Negro business man to his rightful place in our eco nomic system, thus enabling him to operate his business efficiently, multiply his resources and earnings and expand his buying power to such an extent that it will be of even greater help and influence upon himself and the economic life of our country....

" The Department of Commerece was instituted to encourage, foster and develop business, and with your interests and welfare in mind, I have invited a committee of capable and experienced colored leaders to confer with me on the best methods of solving problems bearing upon

Negro business conditions. It is my thought that this committee will serve as a clearing house on matters relating to your problem and I shall, with the Committee's assistance, select a man of your race who will be located in the Department of Commerce. He will be charged with the responsibility of making business and commercial studies concerning the Negroes' economic problems and their relationship to our national economic program."

The result was the appointment of Mr. Eugene Kinckle Jones, for many years executive secretary of the National Urban League, as "Adviser on Negro Affairs", November 1,1933. An unofficial report from the Department of Commerce makes a summary report of the work accomplished by this advisory agency. From the major items we can gauge the direction of the department's efforts and the prospects as they affect the large majority of Negroes. The special efforts embraced " a bibliography of Negro business", "information on Negro newspapers, Negro isurance companies, cooperatives, Negro consumers consumer purchasing power, code hearings affecting Negro industry and Negro workers, convention dates of Negro organizations, small business trends, Negro manufacturers." Other activities reported in addition to this type of purely statistical and informational investigation, such liason activities as " a series of conferences with officials of the Farm Credit Administration proposing to reach the Negro population with the newly established Federal Credit and with officials of the Federal Housing Administration for the same general purposes." Further, "memoranda to the Secretary indicating directions in which efforts could be successfully employed in securing work for capable Negroes, positions being found for investigators in the Rent Survey, tabulators, card punchers and verifiers under the Bureau of the Census (maximum employed at any one time-537), housing investigators and clerks

49-17-86

(An estimate of 1,000 persons employed is conservative). " No one also will deny or challenge the desirability of such services, but no one could claim that they were anything but remedial and affecting almost negligible small numbers and superficial aspects of the Negro's economic plight.

Similarly optimistic and conventional in approach is Albion Holsey's recommendations in Opportunity for March,1934. Mr. Holsey is Secretary of the National Negro Business League and organizer of the C.M.A. chain of grocery stores. He says: "What should concern the Negro at this time is how to properly and promptly take advantage of the major Recovery measures. With respect to the Reconstruction Finance Corporation, for example, it seems to us that far greater benefits may accrue to the race if we are able, under the present elastic provisions of the Corporation, to secure adequate funds for the rehabilitation and expansion of Negro business. In any discussion of business conducted by Negroes the question of caital inevitably comes up and one invariably hears some such expression as "Negroes can do business the same as other folks if they only had the capital'. The plan under which the loans are made to small business is through the intermediary of the Mortgage Loan Company...The loans are made at 6 per-cent, and they may be extended for three years...With such an opportunity open to Negroes, immediate steps should be taken to set up a Mortgage Loan Company."

41-12-84

The Real Prospects.- Here we have a clear return to the earlier ideas of Booker Washington and the long stressed program of the National Negro Business League. Is this a real way of salvation for the American Negro? Unfortunately, it is not. In the first place, the old idea of accumulating small capital by thrift and going into business is unrealistic today. Capital is concentrated in huge amounts and credit agencies monopolize is division and allocation. This means that the small business

man is being forced out of business largely. Of course, he still exists, and will exist, but on suffrance.

The individual grocery store cannot maintain competition with the chain store system, particularly when the cahin store becomes a vertical system, buying its own raw material and manufacturing and preparing its goods. The small bank will be more and more forced to be part of a large chain. The small insurance company will not be able to stand up in resources or guarantees of security against the great aggregations of capital in the larger associations. There may be limits beyond which such concentration of capital and monopoly will not go, and many hope by the use of the ballot and political power not to displace the private ownership and control of capital, but to supplement this by wise public control. This is the present program of the greater nations in the world,-the United States, Great Britain and France. It is not a program, however, that seems to promise success. The utmost that it is apparently able to do is to produce a series of cycles of prosperity and depression, with a well-grounded fear that the intervals between will shorten and that the areas of prosperity will shrink instead of broadening.

A Minority's Chances.- But whatever the prospects may be for these nations as a whole, when it comes to a minority group, and a disadvantaged one like the American Negro, a restoration of even the full power of the capitalistic system can mean to them little more than a restoration of their former unfortunate condition. They may be restored as small landholders and farm tenants, but with the co trol over machines and markets such as capital has in the United States, there is no real prosperity possible for the Negro farmer. Again, they may retain their places as servants in low-paid positions with the stigma which menial service carries. And the place they will secure in industry will depend upon their

88-17-44

relation to the labor movement and to the plans of the leaders of organized labor.

Self Exploiation.- There is, therefore, only one real opening and hope for the Negro in the restoration of complete capitalism. That is the old plan which seeks to admit to the ranks of the capitalists enough of the Negro bourgeoisie to enable them to share in the exploitation chiefly of Negro labor and of white labor to some small extent. So far as the attitude of white capitalists is concerned, it is very doubtful if they will be more minded tomorrow than today to admit the Negro capitalists, save to outlying fields where the chances of profit and success are very small.

49-17-89

This means that the young men who have received in Northern and Southern colleges the prevailing economic training will be forced by severe competition to resort in the future, as they have to some extent in the past, to all of the worst forms of exploitation. They will incur the resentment and hatred of their own labor classes and any hope of solidarity in the fight of American Negroes against race prejudice or for their own material advancement will be gone. Furthermore, the laboring classes which the colored business man can exploit will be those receiving the least wages and working under the worst conditions. The possibility of exploiting them will depend upon unfair laws and administration, and inevitably the class interests of colored business men will be thrown with those very elements that today make capitalistic methods disreputable and harmful. In the South, particularly, the methods of taxation, the fines and penalties, the laws for the collection of debts, the system of installment paying, the irresponsible advertising, the agents and collectors who swarm in Negro homes, all these must inevitably have back of them the support of this Negro business class, who must either resort to these same methods or fail. There is, then, under ordinary and pro-

probable circumstances no chance for ultimate economic emancipation of the Negro through the ordinary working of the "Negro business program".

Other Dangers.-

There is,too, danger of two things: first, the increased use of the increased use of the accumulated wealth of American capitalists to guide through benevolence the education of Negroes, both in schools and in adult life. At present, the Negro is indebted to philanthropy for his higher training in colleges, universities and professional schools in the South. It takes but a step beyond this to make the trained elements of the American Negro indebted to such sources as to his chances of earning a decent living. In such case, the whole power of the educated classes among Negroes might be regimented in favor of any Fascist or near-Fascist movement which would seek to control labor and politics in the United States. This is a dangerous outlook and its consumation must be guarded against.

Such fascism,moreover,is bound up with militarism. Here is a land, the least threatened in the world by any sort of military aggression, which is spending immense sums for armaments and still larger sums in payment for past wars. The old statement that out of every dollar of Federal income 75 cents must go toward war is, more and more, an understatement as time goes on. If behind such militarism the political and economic power of American Negroes can be marshalled, the results would be most undesirable for their own race interests and those of the other weaker minorities of the world.

Finally, the old idea that among the rich and educated classes of America race prejudice is less and will gradually be dissipated entirely and that, therfore, the hope of those who wish to abolish discrimination rests with those who own the wealth of the country is a chimarical dream. There can be little doubt that so far as the best elements of the United States are concerned today, prejudice against color and race may be regarded as practically static. It will change,of course, in centuries, but not in decades; and

49-17-10

those persons now living, especially members of the Negro race who expect to see their problem solved or approach solution in these terms will be greivously disappointed. At least this is no added reason or adequate for the Negro to throw in his lot or his hopes with the ~~fax~~ fortunes of capitalism.

16-19-41

809

282 90

Chapter XII.

WHICH WAY OUT: LABOR ALLIANCE?

The Radical Way.- Because of the hopelessness of any large gain by the conservative route, there has been a growing hope with many thinking Negroes that there was a radical way out, and that the future of the Negro lay in an alliance with the labor movement and its class philosophy. This is a revolution in thought from the earlier generations. The legacy of slavery was the abject admiration of aristocracy, wealth and power. The ordinary descendant of Negro slaves had the ambition to be rich and powerful and gain his livelihood through the hiring and use of laborers. It has taken hard experience and careful thought for a considerable number of American Negroes to see that they are an intggral part of the labor movement of the world, logically, if not actually.

49-17-92

Labor's Traditional Attitude.

If, corresponding to this, there had been the feeling on the part of white labor in the United States that Negroes did belong in the organized labor movement and if Negroes had been welcomed into it and given their chance to work at a decent wage, the history of the United States would have been radically different. Far from this being so, the experience of the Negro labor confirms him in the belief of the Negro bourgeois; namely that capital is his friend and organized labor his enemy.

Personal experience unfortunately reenforces these beliefs in the mind of the Negro worker. He does not see clearly the real motives of the employer who foments race prejudice and uses its results to cut down wages and make the conditions of labor administer to his greater profit, because the employer can work through agents and other hidden channels of indirect influence. Butthe Negro worker cannot help but see the laborer who hates Negroes and fears their competition or undercutting of wages; for he works personally through strikes, mobs and violence. So the Negro worker cannot forget the attitude of organized labor toward him for well-

nigh two centuries. He cannot see the present interests because of the past conditionings.

Labor's Newer Attitude.- It happens, however, that today the labor movement is bringing about changes in the attitude of organized labor. The movemnet toward shop unions and vertical unionization within single factories or single industries and the so-called "left-wing unions" - all these have worked to break down the color line and to admit Negro labor where the Negroes apply and are willing to abide by union rules and principles. But this movement is still small and embryonic as compared with the craft unions represented by the American Federation of Labor. There comes, therefore, a matter of practical policy. How far can Negro labor unite with a still weak minority of white laborers and work with them toward the emancipation of labor regardless of race? Manifestly, so far as the labor movement in the United States is working toward the goal of increasing wages and limiting profits; of maintaining the political power of the labor vote and using it for such reorganization of industry as will limit exploitation and divide the national income of some basis of reason and merit rather than by chance and uncurbed power. So far as this is true, the Negro must more and more become a part of an enlightened and emancipated labor if he expects to be a modern citizen of a modern country.

49-17-53

American Labor.- But what is the labor movement in the United States? A forty million American business employs about 40,000,000 workers. Of these, the American Federation of Labor declares that thirty million are "organizable" and over seventeen million eligible for membership in existing unions. In face of this, there are at present about four million members of the A½F. of L., while another four hundred thousand belong to the vertical unions or unions organized by shop and industry

making a total of less than five million organized laborers, not including

American Labor,-but what is the labor movement in the United States? American business employs about forty million workers of these, the American Federation of Labor declares that thirty million are "organizable" and over seventeen million elegible for membership in existing unions. In face of this, there are at present about four million members of the American Federation of Labor, four hundred thousand others in the railroad unions and other unions cooperating with the A. F. of L., while another four hundred thousand belong to the vertical unions or unions organized by shop and industry rather than by craft. This makes a total of less than five million organized laborers, not including two million or more in company unions. Or to put in in another way, if we include agriculture, the wage earners of the United States in 1930 were a little less than 11% organized as compared with a labor organization of 35% that Germany used to have and an even higher percentage which Great Britain still has. Even if we exclude agriculture and domestic service and clerks, labor in the United States is only one-fifth organized. Further than this, four-fifths of this labor is organized in the craft unions which are seeking the advance of small groups of skilled labor regardless of the situation of the mass laborers.

49-12-94

The conscious labor movement, therefore, in the United States, which seeks directly the uplift of the laboring classes consists of one-half million workers, to whom may be added those in the A. F. of L. who are rebelling against the craft organization system.

These rebels have been increasing in number and power, but they are still considerably in the minority. In practically all of the craft unions, with a few notable exceptions like the United Mine Workers, Negroes are excluded either by constitutional

(1) (36)

CHAPTER VI.

THE NATIONAL RECOVERY PROGRAM ~~1933~~

The real basic problem of the New Deal was whether an effort was going to be made to restore formerprosperity or whether a more fundamental effort was to be put forth to change the economic structure of the nation in essential particulars. In the first case, there was not much hope for the Negro. He simply could look forward to being "restored" to a situation in which to say the least his prospects for economic development were growing less and less. If Southern agriculture was to be put on its feet by government aid, the Negro would remain mainly the tenant-farmer and casual laborer. If the great industries were to be restored by the same means, the Negro would still be the ~~reservoir of~~ reserve labor with uncertain employment and low wage; and the restoration of the banking and credit meant comparatively little to a poverty-stricken horde of laborers.

On the other hand, if the relation of industry to labor in general was to be overhauled and readjusted; if the whole relation of the farming industry to the other industries of the land and the world was to be carefully studied and readjusted with regard to prices, methods, machines and markets; if unemployment was to be eradicated by shorter hours, a minimum wage, the forbidding of child labor and old-age security; if new housing and other public works were to be inaugurated; in fine, if these and other similar schemes were going gradually to change the basis of American industry, then as Americans and barring gross discrimination, Negroes were going to have a new chance in industry.

49-19-13

The National Industrial Recovery Act was designed to raise the buying power of workers in industry and employ those that had lost their jobs because of the depression. This would be accomplished by increasing wages and changing the number of hours worked. This would mean some increase in the ~~power~~ price of products, but the increase in cost, ~~which was promised,~~ would not be as great as the ~~capacity~~ increase in wages.

It is not easy to say with accuracy just what the effect of ~~the depression and~~ the New Deal has been on the American Negro. In a large way, however, we may be sure of certain things. The Negro felt the coming depression as early as 1927 and by 1929, at least 300,000 Negroes in the industries were unemployed. This unemployment has increased until there are from 30-60% more Negro workers in proportion to their numbers, unemployed than white workers. Moreover, when the Federal government attempted to deal with unemployment among Negroes there were certain developments that ~~must~~ had to be expected. The

representatives in Congress from the South elected on a basis which includes the Negro population and yet practically excludes Negro voters, form the most substantial bulk which supports the present administration. The House leader of the Democratic Party comes from Arkansas. The Vice President is from Texas and the Speaker of the House is from Tennessee. This means that as a matter of practical political strategy, the President and his Advisers could not affront the South. This not only explains the failure of the anti-lynching bill which commanded ~~the~~ a majority ~~of~~ in the Senate, but it also explains some peculiar results of the New Deal.

The execution of all the main measures of the New Deal was left to the states, which meant that in the South the race pattern had to be followed in the matter of wages, relief and public work. Even in the North, the administration dealt in labor matters primarily with the American Federation of Labor. Twenty-four of the constituent international unions in this organization exclude Negro workers either by direct provision in their constitutions or by the invariable action of the local bodies. The result of all this ~~is~~ was that in the very midst of the effort to raise wages and relieve unemployment, there existed a large body of laborers whose position either could not be bettered at all or had to be ameliorated with compromise and finesse.

Let us note some effects of this on Negro labor.

49-19-14

The first blow to Negroes was that farm laborers and servants were not to be subject to codes. ~~These~~ These

4 ~~Farm workers and domestics who~~ form about two-thirds of the Negro workers of the South ~~did not come under any code~~ or wage agreement. ~~These exempted persons~~ and amounted to 70%

49-19-1 3a

of the Negro workers in Georgia and Alabama and 80% in Arkansas, South Carolina and Mississippi. As per Rural Report

"Three million Negro workers, more than half of the total number of Negroes who must labor for their livelihood, will not be covered by the industrial codes now being formulated by the NRA!

"These three million black workers are the backbone of the Negro consumer market. For them there is no immediate rise in wages. For them an immediate rise in prices will mean additional insecurity and suffering. Furthermore, in certain areas where there have been uniform minimum wages established for white and black workers, employers have replaced Negroes with whites rather than pay them the same wages."

The first code of fair competition was that of the cotton textile industry and took effect July 17, 1933. It provided a minimum wage for all workers in the cotton textile industry except those occupied as outside workers or cleaners. The wage was $12 a week for the South and $13 a week for the North and the maximum hours of work was 40 hours, except for the "outside workers and cleaners." ~~It was evident that the excepted classes were Negroes.~~ Of the 14,000 Negroes in the industry in 1930, 10,000 were employed as outside workers and cleaners. This meant that for them there was no increased buying power and no new jobs. Objections were made to the code on the ground that wage increase should be parceled out to all workers in the industry and that the unemployment among the Negro workers was in every respect more serious than that among the whites. The only answer to this was that the President in approving the code made it mandatory that the textile industry should establish minimum wages and maximum hours of service for the exempted classes.

December 27, 1933, an executive order providing that the minimum weekly hours for ourside workers and cleaners should be 44 and that they should be paid a minimum wage of 75% of that set in the code. In the South, the minimum wage would thus be 9 hours a week for 44 hours' work. Also, the entire industry was put on half-time, which meant, of course, that the minimum wage was cut in two.

A colored investigator made a trip to the South in November, 1933. ~~and~~ He visited more than 200 mills, and interviewed workers ~~and tried~~ trying to find out what the situation was among these Negro ~~workers~~. His conclusions were that there was

49-19-15

widespread unemployment due to poor business conditions and labor discrimination; that Negroes had been discharged in numbers of cases and their places given to whites; no mill work and very little domestic work was available to Negro women and the unemployment of white mill families had seriously decreased the demand for domestic labor.

The relief funds in these localities were small and the distributors local white persons; the relief agencies, therefore, attempted to supply to the full extent the needs of white families before caring for Negro families. The communities where Negro workers lived were unhealthy and in ghettoes withbad water supply and usually no inside plumbing. Family after family was in debt to the company stores, due not only to their low earnings, but to the excessive prices and there was no escape from this. Negro labor was not organized and the result of the code was in some cases to reduce the wages of Negroes rather than increase them. P 9 on the Laundry code, which affected 30,000 Negro women,

49-19-16

CHAPTER VIII.

A differential wage was established giving Northern workers a minimum of 17¢ an hour and Southern workers a minimum of 14¢ an hour. This was finally modified so as to fix Southern wages at $1 a week below the national average. ~~This~~ South decisions brought up the whole question of difference of pay between white and Negro workers. This has been customary in the South since emancipation and has been defended on various grounds: the Negro was supposed to have a lower standard of living, and to be able to live on less; and on the other hand, the white man not only demanded more but in the interests of race equilibrium ought to have more. On the other hand, the lower Negro wage brought down and kept down the wages of the whites. Nearly half the laundry workers in the South were white, yet their minimum wage was fixed by the theory of what Negroes ought to receive. In other codes, these same differentials were made. Workers in iron and steel received a minimum of 40¢ an hour in Pennsylvania, but of 27¢ an hour in Alabama. Workers in the fertilizing industry got 40¢ an hour on the Pacific Coast and 25¢ an hour in the South.

Moreover, the word "South" is flexible. In some industries, it included 16 or 17 states and in others, 9 or 10. Possibly the number of states included depends upon the Negroes working at particular industries; although this cannot, of course, be proven.

In the tobacco industry where a large number of Negro employees were at work, there was for a long time no code at all, due to the disinclination of this prosperous industry to pay its workers, and particularly its colored workers, a living wage. In the contractors' code, the minimum wage which was set could be evaded by provisions which did not let the minimum apply to wages settled in the past by Federal consent.

A typical case that came early to notice was that of a garment making company in Arkansas which employed 450 persons, of whom 200 were colored women. In flat defiance of the code, these women were paid $6.16 a week instead of $12 a week. Finally, rather than pay the increased wages, all of the women were dismissed and long continued effort has failed to get them a refund of back pay due. When, finally, the courts decided that nearly $7,000 in back wages must be repaid, the decision of the United States Supreme Court gave this bonus to the employers.

46-19-17

In the lumber code there came another type of discrimination. Twenty-three cents an hour was established for the Southern branch of the industry where Negro labor was used and 40¢ an hour for the North and West where white labor was used. ~~In the steel code, the minimum wages previously paid Negroes in Alabama were adopted~~

Even the low rates established brought protests and considerable discharge of Negro workers by employers who refused to pay Negroes wages equal to whites in the cases where this was required. Many employers of labor in the South began a determined drive for differential wages for Negroes in all lines.

49-19-18

The Philadelphia Tribune, a Negro weekly, reports equally bad conditions in that city, as "the forty hour week and the minimum wage scale of $12 to $15 per week are raising havoc with Negro workers." Businesses that used Negro labor, because it would accept longer hours and less money, ~~are~~ were displacing it with white labor, since a higher wage scale had become obligatory. ~~It is the opinion of the Tribune that the loss of these jobs is creating an even more serious condition among Negroes than before the code went into effect.~~

The Baltimore Afro-American cited instances in Maryland and Virginia where white employers have ~~fired~~ discharged colored workers, rather than pay them the minimum wage of $15, and placed white workers in their places. It insisted that the employers who justify their action by saying that Negro workers ~~are~~ were not worth $15 a week, ~~are~~ were violating both the letter and the spirit of the National Recovery Act. It held out the hope, however, that with the creation of millions of new jobs, the black workers would eventually find new openings to take the place of those lost.

49-19-19

Some white persons, North and South, joined in the general protest. The Norfolk Virginia-Pilot, a white daily, appealed to the moral sense of the white employers in the following fashion:

> "If in the pre-code days an employer made use of Negro workers because he could hire them at low wages, there is a moral obligation on him to retain their services now that a national code requires that they be paid a little more money. It would be a grim and tragic commentary on the national recovery effort if a business and industrial regimentation directed to lifting the people out of depression should operate to plunge the most depressed of them in a worse depression still."

A white man writing in the Nashville Daily Tennessean in October, 1933, declared that Negroes of Nashville and southern cities were not being benefited by the NRA but that Negro help was being replaced by white; that the Negroes of Nashville had been given an economic set-back by the NRA. In October, 1933, the Associated Negro press declared that Memphis employers were discharging Negroes by wholesale because they were not worth $14 a week. In one county of Georgia where the population was 40% Negroes, 300 Negroes who were receiving 50¢ a day, were discharged because the code required 30¢ an hour. In Birmingham, white retail grocers drew up a code of $6 a week for Negro porters and delivery boys. In Arkansas, white farmers sent their sons to the CCC where they received $30 a month and replaced them with Negroes at $10 and $15 a month.

119-9-20

Beyond the letter of the law, undoubtedly, many Negroes consented to wages lower than the minimum and went on working in order to keep their jobs. On the other hand, there were cases where they shared in the benefit of shorter hours and increased wages. In some instances, they were displaced by white workers: for instance, in Columbus, Georgia, large numbers of Negroes lost jobs to whites. In mills, garages, department stores, filling stations and small businesses, a hundred or more Negro workers were displaced. At Montgomery, Alabama, colored girls in the cotton fabric factory lost their jobs. ~~Those~~, with other displacements, ~~amounted to 75 or more.~~ A ~~big~~ large factory in St. Louis employed white women instead of 75 colored women.

The gr atest loss of Negro labor under the NRA was the discontinuation of marginal work. Small businesses closed, small grocery stores stopped delivery service and office boys and casual workers were laid off. Bootblacks were told that they were not hired by the job, but that they rent the quipment and ~~are~~ were in business for themselves. Sometimes where wages were increased, most of the increased wage was paid back to the employer for food and "breakage." In the lumber industry, shorter hours were accompanied by a forced increased output.

429-19-21

They were able to do this by paying small wages, but when the wages were raised under the NRA, they could either install better machinery or close. Some installed better machinery and decreased their employees, while others closed.

(14)

An official news release from the Department of Commerce says:

"A special word should be said concerning operations of the National Recovery Administration in connection with Negro employees in the coded industries. A great deal has been said about the displacements of Negroes from jobs; however, investigations that have been made so far indicate that there have not been so many proven cases of displacements exposed as there have been cases of violations of code wages. This is serious, but no more serious than the fact that these wage differentials are a continuation of differentials that have been in vogue for sixty-five years and constitute one of our national interracial problems that call for untiring and vigilant effort towards adjustment. It is encouraging to know, however, that investigation in a limited number of industries indicates that the 'spread' or the gap between Negro and white wages has tended towards a narrowing process, i.e. to bebome less." (sense)

A peculiar difficulty with regard to the Negro worker arose in the project to manufacture power in the Tennessee Valley. Within the 112 counties and 4,000 square miles of the area in 7 states are 2,335,907 whites and 268,048 Negroes. The Negroes constitute 10.2% of the population, the proportion declining for 40 years. The Negroes are mostly in Northern Alabama and West Tennessee and only a few of them in Virginia, North Carolina and East Tennessee. In this region are coal, phosphates and other minerals with abundant plant life, excellent climate and the possibility of generating 3,000,000 horse power of energy. The TVA is not merely to build dams and transmission lines, but also "to provide for the agricultural and industrial development of said Valley," and to "foster an orderly, physical and social development of such areas." What now has the TVA done with regard to the Negro?

After some initial difficulties, the TVA has been employing unskilled Negro labor at something like its proportion in the population, but when it comes to the main work of the project, as for instance, in the planning of the model town of Norris, these 450 homes built and rented by the Federal Government, were not opened to Negroes. But there is no objection or legal obstacle to Negro towns which would share in the cheap power and opportunities of the farmer. Yet here again comes the problem. Should Negroes accept the principle of segregation with almost legal sanction, for the sake of possible industrial development, or should they insist upon being allowed to enter such towns as Norris?

in the South were agreed upon in Alabama.

At Tuskegee "three great movements are under way here, one involving a Self-Help Cooperative Association in which 60 colored farm families have combined to develop a cooperative farm community a few miles from the school. Sixty-seven thousand dollars capital has been granted by the FERA. Another is the Tuskegee Homestead Unit which comprehends three different projects, one near the school, another at Lowdnes County and still another at Montgomery. The third is the 'Tuskegee Planned Land Use Demonstration' in which approximately 600 Negro farm families residing in Macon County where Tuskegee Institute is situated will be affected. As approved, the plan calls for the expenditure of $200,000 to purchase of some 60,000 acres of sub-marginal and resettlement lands."

The Emergency Housing Project brought the same difficulty about race segregation. Housing areas for Negroes, North and South, are notoriously bad and unsanitary. When the housing project was first proposed, the colored people of Atlanta came forward and secured a site near Atlanta University where $2,100,000 is to be furnished to provide 617 living units for Negroes.

Projects for slum clearance were eventually planned in seven cities: Atlanta, Cleveland, Detroit, Indianapolis, Montgomery, Chicago, Nashville and New York. Whether all of these projects can be furnished or not depends largely upon the future activity of the Supreme Court.

The relief program of the New Deal can be illustrated by these facts:

In 1932, $300,000,000 was made available for the states and territories to be used for furnishing relief and work relief to native people and relieving hardship resulting from unemployment. Not more than 15% of this sum could go to any single state and the money was lent to the states with interest.

Five hundred million dollars was made available under the relief act of 1933 and was to be furnished to the states as gifts. Half of the fund was available at the rate of $1 to every $3 of public relief furnished in the state during the preceding quarter; the second was a discretionary fund.

the subsistence homesteads necessarily involved segregation. With the present attitude of Americans it was simply impossible to conceive that in the South or in most places of the North, Negroes were going to be welcomed in the new towns or sub-divisions laid out. On the other hand, as I took occasion to say at Swarthmore, in 1933, subsistence homesteads were a necessary present step to help unemployed Negroes ward off starvation; that through them could be begun an inner co-operation for the Negro group between farmers and industrial workers. But no sooner had proposals been made for Negro subsistence groups than the N. A. A. C. P. and the Negro Joint Committee for Recovery vehemently opposed the move. They wanted no such homesteads organized for Negroes and they were not even willing that Negroes should themselves organize such homesteads. They congratulated themselves when homesteads were planned with no mention of restriction, although they knew that this meant restriction by local administration. Against independent self-governing Negro projects, they set a stern, unyielding countenance.

The result was that nearly all the various projects for Negroes were held up. This was called a triumph of the anti-segregation policy of some Negro leaders, when in fact it was nothing but a triumph of the policy of giving prejudice a free hand in starving American Negroes. The Jews had more sense and arranged in December for a subsistence homestead in Monmouth County, New Jersey, involving metal workers.

Here, in a Georgia project, the white people wanted no segregation. They wanted the Negroes to come in as servants and cheap laborers and the N. A. A. C. P. supported their contention.

Finally, despite the inner differences of opinion among Negroes, 3 subsistence homesteads

---

In the Public Works administration, the Federal Government has usually insisted that there be no discrimination, but they had to deal with the problem of local administration policies. Usually, what happened was that Negroes were employed in the unskilled jobs, but had no chance for skilled work.

Chapter VIII.

In October, 1933, there were 2,117,000 Negroes in families receiving relief, or 17.8% of the total number of Negroes in the 1930 census. In January, 1935, the FERA reports 3,500,000 Negroes in families receiving relief, or 29% of the total 1930 population.

There is no doubt but that the portion of American Negroes on the border line of starvation w as dangerously large and the figures of relief do not reflect all the facts. For instance, in Mississippi, where the white and colored population is about even and the Negroes without doubt in the greatest economic need, only 9% of the Negroes ~~are~~ were receiving relief, ~~while~~ as compared with 13.7% of the whites. ~~are receiving relief.~~ On the other hand, in cities where Negroes were getting a fair deal, the proportion of them on relief shows their desperate situation: In New York City, the Negroes, forming less than 5% of the population, received in 1933 13% of the relief. In Detroit, forming 7.6% of the population, they formed 29.6% of the relief load.

In the whole Federal Relief Administration, of the total money expended between May 23 and December 31, 1933, 60.6% was furnished by the Federal Government, 14.2% by the state, and 25.2% by local authorities. The way in which the South has evaded responsibility and relied ~~gouged~~ upon the Federal Government is shown by the fact that in 10 Southern states, 95% or more of the relief funds have come from the Federal Government.

49-19-26

Dakota, Texas. In 1933, Georgia contributed to emergency relief the sum of $4.95; Virginia, $30.00; Kentucky, $127.00.

Mr. Arthur Raper of the Commission for Inter-Racial Co-operation, reports details with regard to the state of Georgia:

"Taking the state as a whole, three racial differentials stand out: first, in nearly half of the counties in August and in more than half in March (Direct Relief), a larger proportion of the total white population than of the total Negro population was on relief. This is especially meaningful when seen in the light of the fact that the white people own practically all of the lands and other productive properties in nearly every county in the state, whereas, the Negroes generally account for an excessive proportion of the propertyless and poorly remunerated agricultural laborers, farm tenants, casual day laborers and domestics; second, in eight per cent of the counties, the amount spent upon the white person for direct relief in March exceeded the amount spent upon the Negro; third, of the 1,214 CWA teachers in Georgia in mid-March, 1934, only 204, or 16.8 per cent were Negroes, despite the fact that in 1930 the Negroes accounted for 36.8 per cent of the state's total population and 77.5 per cent of the state's total illiterates had no white CWA teacher, while 72 counties, with a total of 56,877 Negro illiterates, had no Negro CWA teachers; in the 154 counties with white CWA teachers there was one teacher to every 45 white illiterates while in the 87 counties with Negro CWA teachers there was one teacher to every 521 Negro illiterates." (Arthur Raper)

Not only was there this discrimination as to the number of families relieved, but much discrimination in the South as to the amount given each family. For instance, in Jacksonville, Florida, in October, 1933, there were 5,493 white families on relief and 15,175 Negro families. Yet, the Negro families got 45% of the relief and the white families 55%.

In the matter of schools, the Emergency Federal Aid follows the same pattern as the states were accustomed to. The money was alloted to the state and spent as the state decided. Georgia, for instance, spent in 1929-1930, $23,000,000 of state money for schools and of this $21,000,000 went to the white schools. In 1933-1934, the Federal Government granted to Georgia $4,981,881 for education and of this $4,338,148 or 87.3% went to the white schools, despite the fact that colored school children formed 39.1% of the school population.

49-19-24

Not only was there this discrimination in the distribution of the Federal funds, but in a large number of cases, white teachers were designated to teach colored children despite the fact that colored teachers were largely out of work. The government was finally compelled to send out a memorandum on this subject saying that Negro teachers should always be employed for Negro pupils in states maintaining segregated schools.

During the year 1935, 2,780 colored students were given employment under the FERA in colored colleges in 20 states. They were paid in all $377,145 for repairs and equipment for school buildings and equipment for athletic and recreational facilities in connection with schools and playgrounds. ~~Howard University in Washington, D. C. with over $2,000,000 in appropriations for buildings and the North Carolina A. and T. College at Greensboro, N.C., are worthy of special mention.~~

Inthe Civilian Conservation Corps, there ~~are~~ were early in 1935 14,858 in the all Negro camps and a few in white camps, out of a total of 370,000, or about one-half the Negroes proper proportion.

A part of the far-reaching plan of the Roosevelt administration was not only to restore normal working conditions [illegible], but to provide for the future. The Committee on Economic Security, established June 29, 1934, was assisted by an Advisory Council, but no Negro had a place on that council, nor so far as can be learned, was the advice of Negroes sought in any way.

49-19-28

The Wagner-Lewis Bill for social and unemployment insurance expressly eliminates domestic and agricultural workers, thus leaving 15 out of 23 Negro workers unprovided for. It will at the same time allow individual states to enact almost any type of discriminatory legislation so far as races are concerned.

George E. Haynes pointed this out January, 1934 in the hearing on the Economic Security Bill. He argued that unless there was expressed provisions in the bill prohibiting discrimination on account of race and color, that Negroes could receive less compensation than whites and no minimum wage need be set upon which the earnings taxes were based. Appropriations from the Federal Treasury were to be given to the boards in the various states with no conditions as to discrimination in their distribution.

CHAPTER VII.

THE WORLD WAR

The situation of the American Negro at the outbreak of the war seemed feasable. His higher schools were increasing in efficiency and the elementary school system in the South, while still bad, was improving. His political power, while still curtailed, was increasing and beginning to be used with some intelligence in the North and in the Border states. Determined agitation was beginning to decrease noticeably the annual number of lynchings, which had reached the astonishing total of 235 in 1892, began now with some exceptions to fall below 75 a year.

34-1-81

The Negro press began to increase in efficiency and boldness and Negroes looked with interest upon the war in Europe. They had taken a permanent part in the great Races Congresses held in London in 1911 and begun to conceive of the color problems of other groups. In the election of 1912, a considerable number of Negroes supported Wilson in an effort to divide the Negro vote and get some recognition. Again, in 1916, although disappointed with the results of the first election, nevertheless, Wilson received some Negro support. When unexpectedly the United States was swept into the World War, a sudden crisis faced the American Negro. How far could a black man fight loyally for this country and why should he in the face of disfranchisement and lynching? Persistent rumors of German propaganda among Negroes were flying here and there, perhaps with some small basis of fact but little tangible result. Nevertheless, it seemed necessary for Negroes to make this crisis in the national fortunes an occasion for bettering their own conditions. The N. A. A. C. P. took leadership and the first difficulty came in the matter of officers for Negro troops. The N. A. A. C. P. was immediately put in curious dilemma. It had been agitating against all discrimination and it asked for the admission of Negroes to officers' camps on the same terms as whites. This was naturally denied. Thereupon, the Chairman of the Association, abetted by some of the other officers, asked for a separate camp and received in this plan the enthusiastic support of students of Howard University and other institutions. The result was that a camp was established at Fort Des Moines, Iowa and 700 Negro officers trained. Then came further hesitancy. According to law, Negro and white troops were to be separated.

THE WORLD WAR

Were these officers to lead over Negro troops or were there to be white officers mixed with them? Were they to be over one division or indispersed among white troops? The final compromise, arranged with some hesitancy, was to form a division of Negro troops known as the 92nd Division with white field officers and Negro line officers. A second division, called the 93rd Division, was projected, but never actually formed. Meantime, in the Draft, the difficulties of racial discrimination came up. In the South, despite the widespread allegations that Negroes were physically inferior to whites and manifestly were poorer and more needed by their families, a larger percentage of Negroes were drafted than among whites. In the training of drafted troops there was a great deal of difficulty. In the North, single Negroes drafted, appearing in white camps, were refused or tossed about until the could be put in a Negro camp. In the Negro cantonments, especially those in the South, there was a great deal of discrimination and threats of mob violence. The government did considerable to counteract these difficulties. It called together the editors of the Negro press; it appointed a representative of the Negroes to consult with the Secretary. He had no power but could bring things directly to the ear of the Secretary of War. There was even a plan to put one or more Negro officers in the Intelligence Service but sudden fear stopped this. On the whole, however, the joining of Negroes led mainly by the N.A.A.C.P. and other organizations, resulted in giving the Negro a better status during the war, with officers over his troops and with some chance to show his prowess. It was, however, in his services as laborer that he did the greatest work in the war. His stevedore units made extraordinary records in the movement of goods and did brave work behind the lines. In the United States, the Negroes rushed North to take the place of drafted men and of skilled laborers. They met difficulties, riots broke out in East St. Louis and Chicago and even in the capital city, Washington, but the economic status of the Negro was distinctly better. As the war wore on, much bitterness was encountered by the treatment of Negro troops in France and the treatment of white officers against Negroes, nevertheless, some of this resulted in curious advantage to the Negroes, as for instance, when the white officers were so eager to get Negro troops out of France where they were treated with unusual consideration, they made the tactical error of having the first troops who landed ffom France black units, and that these units received overwhelming ovation in New York and elsewhere. The whole episode of war and migration led to increased self-assertion on the

34-1-82

part of the Negroes and a determination by means of bold agitation to gain their social and political rights in the United States.

34-1-83

CHAPTER IX.

PRESENT CONDITIONS, 1935

It is not easy to say with accuracy just what the effect of the depression and the New Deal has been on the American Negro. In a large way, however, we may be sure of certain things. The Negro felt the coming depression as early as 1927 and by 1929, at least 300,000 Negroes in the industries were unemployed. This unemployment has increased until there are from 30-60% more Negro workers in proportion to their numbers unemployed than white workers. Moreover, when the Federal government attempted to deal with unemployment among Negroes there were certain developments that must be expected. The representatives in Congress from the South elected on a basis which includes the Negro population and yet practically excludes Negro voters, form the most substantial bulk which supports the present administration. The House leader of the Democratic Party comes from Arkansas. The Vice President is from Texas and the Speaker of the House is from Tennessee. This means that as a matter of practical political strategy, the President and his Advisers could not affront the South. This not only explains the failure of the anti-lynching bill which commanded the majority of the Senate, but it also explains some peculiar results of the New Deal.

The execution of all the main measures of the New Deal was left to the states, which meant that in the South the race pattern had to be followed in the matter of wages, relief and public work. Even in the North, the administration dealt primarily with the American Federation of Labor. Twenty-four of the constituent international unions in this organization exclude Negro workers either by direct provision in their constitutions or by the invariable action of the local bodies. The result of all this is that in the very midst of the effort to raise wages and relieve unemployment, there existed a large body of laborers whose position either could not be bettered at all or had to be ameliorated with compromise and finesse.

Let us note some effects of this on Negro labor. The NRA proposed labor codes in the various industries with a minimum wage and limited hours of work, in order to put more money in the hands of laborers and employ more workers. One of the first codes considered was the laundry code which effected 30,000 Negro women. A

A differential wage was established giving Northern workers a minimum of 17¢ an hour and Southern workers a minimum of 14¢ an hour. This was finally modified so as to fix Southern wages at $1 a week below the national average. This brought up the whole question of difference of pay between white and Negro workers. This has been ~~curiously~~ customary in the South since emancipation and has been defended on various grounds: The Negro was supposed to have a lower standard of living, to be able to live on less and on the other hand, the white man not only demanded more but in the interests of ~~labor~~ race equilibrium ought to have more. On the other hand, the lower Negro wage brought down and kept down the wages of the whites. Nearly half the laundry workers in the South were white, yet their minimum wage was fixed by the theory of what Negroes ought to receive. In other codes, these same differentials were made. Workers in iron and steel received a minimum of 40¢ an hour in Pennsylvania, but of 27¢ an hour in Alabama. Workers in the fertilizing industry got 40¢ an hour on the Pacific Coast and 25¢ an hour in the South.

Moreover, the word "South" is flexible. In some industries, it included 16 or 17 states and in others, 9 or 10. Possibly the number of states included depends upon the Negroes working at particular industries, although this cannot, of course, be proven.

In the tobacco industry, where a large number of Negro employees ~~were~~ at work, there was for a long time no code at all, due to the disinclination of this prosperous industry to pay its workers, and particularly its colored workers, a living wage. In the contractors code, the minimum wage which was set could be evaded by provisions which did not let the minimum apply to wages settled in the past by Federal consent.

A typical case that came early to notice was that of a garment making company in Arkansas which employed 450 persons, of whom 200 were colored women. In flat defiance of the code, these women were paid $6.16 a week instead of $12 a week. Finally, rather than pay the increased wages, all of the women were dismissed and long continued effort has failed to get them a refund of back pay due. When the Courts decided that nearly $7000 in back wages must be refund, the decision of the Supreme Court gave this bonus to the employers

This situation presented curious dilemma for colored people. Suppose, as in Montgomery, Alabama, a company says that it cannot afford to hire its colored workers at the minimum wage and that if compelled to it will close the factory?

Immediately, two strong bodies of opinion appeared: one, a colored man at Tuskegee says: "Keep the factory open and let these people at least earn their bread and butter. Low wages are better than none." On the other hand, one of the Negro advisers in Washington says: "It will be better for these workers to starve to death rather than give up the principle of equal wages and according with the legal minimum.

Furthermore, farm workers and domestics who form about two-thirds of the Negro workers of the South did not come under any code or wage agreement. These exempted persons amounted to 70% of the Negro workers in Georgia and Alabama and 80% in Arkansas, South Carolina and Mississippi. Beyond the letter of the law, undoubtedly, many Negroes consented to wages lower than the minimum and went on working in order to keep their jobs. On the other hand, there were cases where they shared in the benefit of shorter hours and increased wages. In some instances, they were displaced by white workers. and in other cases, they retained their jobs.

There have been instances of discrimination and displacement (for instance) in Columbus, Georgia, large numbers of Negroes have lost jobs to whites since the NRA came in. In mills, garages, department stores, filling stations and small businesses, a hundred or more Negro workers were displaced. At Montgomery, Alabama, colored girls in the cotton fabric factory lost their jobs. These, with other displacements, amounted to 75 or more. Big factories in St. Louis are employing white women instead of 75 colored women.

The greatest loss of Negro labor under the NRA has been (was) the discontinuation of marginal work. Small businesses have closed, small grocery stores have stopped delivery service and office boys and casual workers have been (were) laid off. Bootblacks have been (were) told that they were not hired by the jobs, but that they rent the equipment and are in business for themselves. Sometimes where wages have been (were) increased, most of the increased wage has been (was) paid back to the employer for food and breakage." In the lumber industry, shorter hours have been (were) accompanied by a forced increased output.

Another peculiar result is the shutting down of mills having poor equipment. (was)

49-12-43

in the South were agreed upon in Alabama

At Tuskegee "three great movements are under way here, one involving a Self-help Cooperative Association, in which 60 colored farm families have combined to develop a cooperative farm community a few miles from the school. Sixty-seven thousand dollars capital has been granted by the FERA. Another is the Tuskegee Homestead Unit, which comprehends three different projects, one near the school, another at Lowdnes County and still another at Montgomery. The third is the 'Tuskegee Planned Land Use Demonstration' in which approximately 600 Negro farm families residing in Macon County where Tuskegee Institute is situated will be affected. As approved, the plan calls for the expenditure of $200,000 to purchase of some 60,000 acres of sub-marginal and resettlement lands."

The Emergency Housing Project brought the same difficulty about race segregation. Housing areas for Negroes, North and South, are notoriously bad and unsanitary. When the housing project was first proposed, the colored people of Atlanta came forward and secured a cite near Atlanta University where $2,100,000 is to be furnished to provide 617 living units for Negroes. A similar project is contemplated for Nashville. When such housing was proposed in the North, the matter of segregation came to the fore. It was partially avoided in Cleveland and Indianapolis by placing in projects in neighborhoods where Negroes predominanted; ~~while then~~ thus it ~~was~~ would not ~~especially~~ be nominally a Negro project, ~~it was~~ but actually so in effect. ~~Nearly $5,000,000 each was spent on these two projects, and~~ In Cincinnati and Detroit similar projects ~~have been started, parts of which will be designed for Negroes, either specially or otherwise. Montgomery, Alabama has a small project.~~ were planned The project in Washington, D. C. has not been accepted and a large project in Chicago, involving $25,000,000, will probably be carried through in part on the Southside where the bulk of the Negroes live. This housing has been a peculiarly difficult matter for the Negroes and their friends. Having kept off the statute books compulsory and legal ghettoes, they nevertheless have had to accept a large amount of separation and especially where new and modern housing has been proposed, they have only been able to profit by it when the project was avowedly designed for Negro families, as in the Rosenwald Apartments in Chicago and the Dunbar Apartments in New York.

On the other hand, in New York City, where housing conditions for Negroes are as bad as anywhere in the world, no movement ~~has been~~ was made by the local Negroes to secure relief by a housing plan. The attitude of the N. A. A. C. P. and other organizations, who are fanatic on the subject of segregation and would apparently rather have Negroes crowded in crime and degradation ~~rather than to accept~~ cheap housing which virtually, even if not

the uncertainty because of [illegible]

67

In 1932, $300,000,000 was made available for the states and territories to be used for furnishing relief and work relief to native people and relieving hardship resulting from unemployment. Not more than 15% of this sum could go to any single state and the money was lent to the states with interest.

Five Hundred Million Dollars was made available under the relief act of 1933 and was to be furnished to the states as gifts. Half of the fund was available at the rate of $1 to every $3 of public relief furnished in the state during the preceding quarter; the second was a discretionary fund.

In October, 1933, there were 2,117,000 Negroes in families receiving relief, or 17.8% of the total number of Negroes in the 1930 census. In January, 1935, the FERA reports 3,500,000 Negroes in families receiving relief, or 29% of the total 1930 population.

There is no doubt but that the portion of American Negroes ~~living~~ on the border line of starvation was dangerously large and the figures of relief do not reflect all the facts. For instance, in Mississippi, where the white and colored population is about even and the Negroes without doubt in the greatest economic need, only 9% of the Negroes are receiving relief, while 13.7% of the whites are receiving relief. On the other hand, in cities where Negroes were getting a fair deal, the proportion of them on relief shows their desperate situation. In New York City, the Negroes forming less than 5% of the population, received in 1933 ~~there are over 13% of Negroes receiving~~ the relief. In Detroit, forming 7.6% of the population, they formed 29.6% of the relief load.

The new problem of poverty and actual starvation among the American Negroes ~~is~~ was simply an intensified problem of the whole country. There are two ways to attack the difficulty: one is by direct relief and the other by work and wages. The problem of direct relief has been immensely complicated by its size and by the indisposition of the states to help.

49-16-44

Inthe whole Federal Relief Administration of the total money expended between May 23 and December 31, 1933, 60.6% was furnished by the Federal Government, 14.2% by the state and 25.2% by local authorities. The way in which the South has gouged upon the Federal Government is shown by the fact that in 10 Southern states, 95% or more of the relief funds have come from the Federal Government.

The following states contributed nothing to the relief budget in 1933: Alabama, Arkansas, Florida, Idaho, Mississippi, Nebraska, North Carolina, North Dakota, South

A differential wage was established giving Northern workers a minimum of 17¢ an hour and Southern workers a minimum of 14¢ an hour. This was finally modified so as to fix Southern wages at $1 a week below the national average. This brought up the whole question of difference of pay between white and Negro workers. This has been curiously in the South since emancipation and has been defended on various grounds. The Negro was supposed to have a lower standard of living, to be able to live on less and on the other hand, the white man not only demanded more but in the interests of labor equilibrium ought to have more. On the other hand, the lower Negro wage brought down and kept down the wages of the whites. Nearly half the laundry workers in the South were white, yet their minimum wage was fixed by the theory of what Negroes ought to receive. In other codes, these same differentials were made. Workers in iron and steel received a minimum of 40¢ an hour in Pennsylvania, but of 27¢ an hour in Alabama. Workers in the fertilizing industry got 40¢ an hour on the Pacific Coast and 25¢ an hour in the South.

Moreover, the word "South" is flexible. In some industries, it includes 16 or 17 states and inothers, 9 or 10. Possibly the number of states included depends upon the Negroes working at particular industries, although this cannot, of course, be proven.

In the tobacco industry, where a large number of Negro employees are at work, there was for a long time no code at all due to the disinclination of this prosperous industry to pay its workers, and particularly its colored workers, a living wage. In the contractors code, the minimum wage which was set could be evaded by provisions which did not let the minimum apply to wages settled in the past by Federal consent.

A typical case that came early to notice was that of a garment making company in Arkansas which employed 450 persons, of whom 200 were colored women. In flat defiance of the code, these women were paid $6.16 a week instead of $12 a week. Finally, rather than pay the increased wages, all of the women were dismissed and long continued effort has failed to get them a refund of back pay due.

This situation presented curious dilemma for colored people. Suppose, as in Montgomery, Alabama, a company says that it cannot afford to hire its colored workers at the minimum wage and that if compelled to it will close the factory?

Immediately, two strong bodies of opinion appeared; one; a colored man at Tuskegee says: "Keep the factory open and let these people at least earn their bread and butter. Low wages are better than none." On the other hand, one of the Negro advisers in Washington says: "It will be better for these workers to starve to death rather than give up the principle of equal wages and according to the legal minimum.

30-1-102

Furthermore, farm workers and domestics who form about two-thirds of the Negro workers of the South did not come under any code or wage agreement. These exempted persons amounted to 70% of the workers in Georgia and Alabama and 80% in Arkansas, South Carolina and Mississippi. Beyond the letter of the law, undoubtedly, many Negroes consented to wages lower than the minimum and went on working in order to keep their jobs. On the other hand, there were cases where they shared in the benefit of shorter hours and increased wages. In some instances, they were displaced by white workers and in other cases, they retained their jobs.

There have been instances of discrimination and displacement in Columbus, Georgia. Large numbers of Negroes have lost jobs to whites since the NRA came in. In mills, garages, department stores, filling stations and small businesses, a hundred or more Negro workers were displaced. At Montgomery, Alabama, colored girls in the cotton fabric factory lost their jobs. These, with other displacements, amounted to 75 or more. Big factories in St. Louis are employing white women instead of 75 colored women.

The greatest loss of Negro labor under the NRA has been the discontinuation of marginal work. Small businesses have closed, small grocery stores have stopped delivery service and office boys and casual workers have been laid off. Bootblacks have been told that they were not hired by the jobs, but that they rent the equipment and are in business for themselves. Sometimes where wages have been increased, most of the increased wage has been paid back to the employer for food and breakage. In the lumber industry, shorter hours have been accompanied by a forced increased output.

Another peculiar result is the shutting down of mills having poor equipment.

They were able to run by paying small wages, but when the wages were raised under the NRA, they could either install better machinery or close. Some installed better machinery and decreased their employees, while others closed.

An official news release from the Department of Commerce says;

"A special word should be said concerning operations of the National Recovery Administration in connection with Negro employees in the coded industries. A great deal has been said about the displacements of Negroes from jobs; however, investigations that have been made so far indicate that there have not been so many proven cases of displacements exposed as there have been cases of violations of code wages. This is serious, but no more serious than the fact that these wage differentials are a continuation of differentials that have been in vogue for sixty-five years and constitute one of our national interracial problems that call for untiring and vigilant effort towards adjustment. It is encouraging to know, however, that investigation in a limited number of industries indicates that the 'spread' or the gap between Negro and white wages has tended towards a narrowing process, i.e. to become less." (Jones)

A peculiar difficulty with regard to the Negro worker arose in the project to manufacture power in the Tennessee Valley. Within the 112 counties and 4,000 square miles of the area in 7 states are 2,335,907 whites and 268,048 Negroes. The Negroes constitute 10.2% of the proportion declining for 40 years. The Negroes are mostly in Northern Alabama and West Tennessee and only a few of them in Virginia, North Carolina and East Tennessee. In this region are coal, phosphates and other minerals with abundant plant life, excellent climate and the possibility of generating 3,000,000 horse power of energy. The TVA is not merely to build dams and transmission lines, but also "to provide for the agricultural and industrial development of said Valley," and to "foster an orderly, physical and social development of such areas." What now has the TVA done with regard to the Negro?

After some initial difficulties, the TVA has been unemploying unskilled Negro labor at something like its proportion in the population, but when it comes to the main work of the project, as for instance, in the planning of the model town of Norris, these 450 homes built and rented by the Federal Government, are not opened to Negroes. But there is no objection or legal obstacle to Negro towns which would share in the cheap power and opportunities of the farmer. Yet here again comes the problem. Should Negroes accept the principle of segregation with almost legal sanction for the sake of possible industrial development, or should they insist upon being allowed to enter such towns as Norris.

about to be (Arsent)

CHAPTER IX.

PRESENT CONDITIONS, 1935

It is not easy to say with accuracy just what the effect of the depression and the New Deal has been on the American Negro. In a large way, however, we may be sure of certain things. The Negro felt the coming depression as early as 1927 and by 1929, at least 500,000 Negroes in the industries were unemployed. This unemployment has increased until there are from 50-60% more Negro workers in proportion to their numbers, unemployed than white workers. Moreover, when the Federal government attempted to deal with unemployment among Negroes there were certain developments that must be expected. The representatives in Congress from the South elected on a basis which includes the Negro population and yet practically excludes Negro voters, form the most substantial bulk which supports the present administration. The House leader of the Democratic Party comes from Arkansas. The Vice President is from Texas and the Speaker of the House is from Tennessee. This means that as a matter of practical political strategy, the President and his Advisers could not affront the South. This not only explains the failure of the anti-lynching bill which commanded the majority of the Senate, but it also explains some peculiar results of the New Deal.

49-16-32

The execution of all the main measures of the New Deal was left to the states, which meant that in the South the race pattern had to be followed in the matter of wages, relief and public work. Even in the North, the administration dealt in labor matters primarily with the American Federation of Labor. Twenty-four of the constituent international unions in this organization exclude Negro workers either by direct provision in their constitutions or by the invariable action of the local bodies. The result of all this is that in the very midst of the effort to raise wages and relieve unemployment, there existed a large body of laborers whose position either could not be bettered at all or had to be ameliorated with compromise and finesse.

Let us note some effects of this on Negro labor. The NRA proposed labor codes in the various industries with a minimum wage and limited hours of work, - in order to put more money in the hands of laborers and employ more workers. One of the first codes considered was the laundry code which affected 30,000 Negro women. A

CHAPTER IX.

A differential wage was established giving Northern workers a minimum of 17¢ an hour and Southern workers a minimum of 14¢ an hour. This was finally modified so as to fix Southern wages at $1 a week below the national average. This brought up the whole question of difference of pay between white and Negro workers. This has been customary in the South since emancipation and has been defended on various grounds: the Negro was supposed to have a lower standard of living, to be able to live on less and on the other hand, the white man not only demanded more but in the interests of race equilibrium ought to have more. On the other hand, the lower Negro wage brought down and kept down the wages of the whites. Nearly half the laundry workers in the South were white, yet their minimum wage was fixed by the theory of what Negroes ought to receive. In other codes, these same differentials were made. Workers in iron and steel received a minimum of 40¢ an hour in Pennsylvania, but of 27¢ an hour in Alabama. Workers in the fertilising industry got 40¢ an hour on the Pacific Coast and 25¢ an hour in the South.

Moreover, the word "South" is flexible. In some industries, it included 16 or 17 states and inothers, 9 or 10. Possibly the number of states included depends upon the Negroes working at particular industries, although this cannot, of course, be proven.

In the tobacco industry where a large number of Negro employees were at work, there was for a long time no code at all, due to the disinclination of this prosperous industry to pay its workers, and particularly its colored workers, a living wage. In the contractors' code, the minimum wage which was set could be evaded by provisions which did not let the minimum apply to wages settled in the past by Federal consent.

A typical case that came early to notice was that of a garment making company in Arkansas which employed 460 persons, of whom 200 were colored women. In flat defiance of the code, these women were paid $6.16 a week instead of $12 a week. Finally, rather than pay the increased wages, all of the women were dismissed and long continued effort has failed to get them a refund of back pay due. When the courts decided that nearly $7,000 in back wages must be repaid, the decision of the Supreme Court gave this bonus to the employers'.

Farm workers and domestics who form about two-thirds of the Negro workers of the South did not come under any code or wage agreement. These exempted persons amounted to 70%

H9-16-33

of the Negro workers in Georgia and Alabama and 80% in Arkansas, South Carolina and Mississippi. Beyond the letter of the law, undoubtedly, many Negroes consented to wages lower than the minimum and went on working in order to keep their jobs. On the other hand, there were cases where they shared in the benefit of shorter hours and increased wages. In some instances, they were displaced by white workers: for instance, in Columbus, Georgia, large numbers of Negroes lost jobs to whites. In mills, garages, department stores, filling stations and small businesses, a hundred or more Negro workers were displaced. At Montgomery, Alabama, colored girls in the cotton fabric factory lost their jobs. These, with other displacements, amounted to 75 or more. A big factory in St. Louis employed white women instead of 75 colored women.

The greatest loss of Negro labor under the NRA was the discontinuation of marginal work. Small businesses closed, small grocery stores stopped delivery service and office boys and casual workers were laid off. Bootblacks were told that they were not hired by the job, but that they rent the equipment and are in business for themselves. Sometimes where wages were increased, most of the increased wage was paid back to the employer for food and "breakage." In the lumber industry, shorter hours were accompanied by a forced increased output.

Another peculiar result was the shutting down of mills having poor equipment.

49-16-34

(INSERT)

The whole plan of the New Deal was suddenly changed by the decision of the United States Supreme Court declaring the establishment of industrial codes unconstitutional and indicating that other efforts of the New Deal were probably going to be declared illegal. This brings forward the question as to whether the effort of the United States to reorganise industry is going to be stopped by court action, or whether the constitution is to be so changed and reinterpreted that the capitalistic system can be reconstructed or replaced. At present, the trend is to give up nearly all the efforts of the New Deal and to return to the profit-making economy depending upon investment and wages to restore prosperity. It is admitted that at best there will be under these circumstances many millions of persons permanently unemployed and many others employed irregularly or at wages too low to maintain a decent standard of living. Among the unemployed and casual workers will be large numbers of Negroes and particularly those upon the farms. The plans for the resettlement of farmers upon better lands are at present very hazy and it does not seem probable that Negro farmers are going to get much real attention or permanent help. The labor movement, thus faces a new problem or rather an extension of the old fight. Negroes struck and struggled in the textile strike and in the longshoremen's strike and in the sharecroppers strike in the Southwest. The Pullman Porters have won their right to be recognised as a union, but they have not been given the status to which they are entitled in the American Federation of Labor. The attitude of the Federation is still reactionary. The industrial union movement, while strong, is not yet triumphant and the craft unions continue to exclude black men. In this situation of flux and change no final word can be said concerning Negro workers at present. But something can be said concerning what Negroes, led by intelligent and sacrificing prophets, must do if in the future they are going to earn a decent living.

49-16-55

THE NEGRO AND SOCIAL RECONSTRUCTION

Draft fragments

~~For this reason, the Inter-~~ ~~national Association of Machinist was refused admission until 1895 when they removed the qualifications.~~ From 1890 to 1897, the American Federation continued to declare that labor must organize irrespective of creed or color, sex, etc. Nevertheless, these declarations did not remedy matters and Negroes were being excluded. In 1900, Samuel Gompers ~~appealed~~ separated separate local unions and separate central bodies of Negro workers. This was endorsed and in 1902 separate charters were granted. ~~Thus the A. F. of L. returned to the suggestion of the National Labor Union in 1867.~~ In 1910, however, ~~the matter came up again.~~ Gompers was accused of leading the Negro out of the labor movement. From 1910-1914, the A. F. of L. organized separate local and federal unions and had 3 Negro organizers. From 1916-1920, the A. F. of L. grew fast and the number of Negro workers in the North greatly increased. The A. F. of L. in the conventions of 1916, 1917 and 1918 decided that Negroes should be organized but provided no machinery. June 6, 1918, the Urban League appealed to Gompers asking for revision of the constitutions of such international labor bodies as excluded Negroes and a qualified Negro organizer on salary and a committee of colored and white persons to check on these activities. In the Atlantic City convention of 1919 move was made for an international charter for the Negro members and complaint was made against the union for metal trades. A special committee was asked but the Federation only expressed the hope that organizations excluding Negro workers "will take a broader view of this matter." In the convention of 1920, at Montreal, local and federal labor unions launched a concerted attack upon the indifference

E1-EC-9E 30-27-13

INGERS CHAPTER I~~:~~ ~~The Issued Committee Worked I the~~

To this the Guard replied in October 1933

"In the administration of the National Recovery Act, the Negroes in America have lately again been faced with disappointment. One of the most liberal members of President Roosevelt's cabinet is Harold Ickes. His sympathy with the colored people and their aspirations is proven by the fact that he was once an officer of the Chicago branch of the N. A. A. C. P. It is admitted that his administration of the Department of the Interior is one of the best ever inaugurated in recent times. It falls to Mr. Ickes to administer a part of the relief inaugurated by the President and Congress which is to re-establish industry in the United States and re-employ the idle.

"One-tenth of our population is of Negro descent and they form at least one-eighth of the workers. Their interests demand attention. According to the fundamental theory of the American government, no person is well enough equipped with knowledge or character to be the sole mouthpiece for his neighbor. And, therefore, the interests of colored workers ought surely to be voiced by colored men. Because of the hateful color prejudice born in slavery, and deliberately perpetuated since, every time a problem of this sort arises some white man is chosen to speak for the Negroes. Sometimes, in the past, men who were the open enemies of the Negro race were made their mouthpieces. Later, "friends" of the Negro were chosen, the idea being that the Negro was too ignorant and inexperienced to speak for himself and either did not know what he wanted or should not have what he wanted. We are in this phase of the problem now.

"A young man, Clark Foreman, connected with the Inter-racial Commission of Atlanta, Georgia, has been named by Mr. Ickes as his assistant to advise him on the best interests of the Negro worker, particularly in the South. And we learn on high authority that if Mr. Foreman had not been appointed some other white man would have received this place. Or in other words, that Mr. Ickes refused to let the interests of colored people be voiced by the colored man.

"Mr. Foreman is an excellent young man of training and ability. We believe that other things being equal, he would give the best advice possible for the interests of the Negro race, so far as he understood these interests. But other things are not equal and in the nature of the case Mr. Foreman does not understand the diffi-

culties of American Negroes, and it is an outrage that we again, through the efforts of some of our best friends, should be compelled to have our wants and aspirations interpreted by one who does not know them and our ideals and ambitions expressed by a person who cannot understand them.

(Editorial, THE CRISIS, October, 1933, p. 237.)

30-27-1P

and let no man listen to those who deny this.

"We want full manhood suffrage and we want it now, henceforth and forever.

"Second. We want discrimination in public accommodation to cease. Separation in railway and street cars, based simply on race and color, is un-American, undemocratic and silly. We protest against all such discrimination.

"Third. We claim the right of freemen to walk, talk and be with them that wish to be with us. No man has a right to choose another man's friends and to attempt to do so is an impudent interference with the most fundamental human privilege.

"Fourth. We want the laws enforced against rich as well as poor; against Capitalist as well as Laborer; against white as well as black. We are not more lawless than the white race, we are more often arrested, convicted and mobbed. We want justice even for criminals and outlaws. We want the Constitution of the country enforced. We want Congress to take charge of Congressional elections. We want the Fourteenth Amendment carried out to the letter and every State disfranchised in Congress which attempts to disfranchise its rightful voters. We want the Fifteenth Amendment enforced and no state allowed to base its franchise simply on color.

"The failure of the Republican Party in Congress at the session just closed to redeem its pledge of 1904 with reference to suffrage conditions at the South seems a plain, deliberate and premeditated breach of promise and stamps that party as guilty of obtaining votes under false pretense.

"Fifth. We want our children educated. The school system in the country districts of the South is a disgrace and in few towns and cities are the Negro schools what they ought to be. We want the national government to step in and wipe out illiteracy in the South. Either the United States will destroy ignorance or ignorance will destroy the United States.

"And when we call for education, we mean real education. We believe in work. We ourselves are workers, but work is not necessarily education. Education is the development of power and ideal. We want our children trained as intelligent human beings should be and we will fight for all time against any

The proportion of Negroes living in the country districts decreased, from 85.6% in 1890 to 80.9% in 1910 and then fell rapidly to 66% in 1920 and 56.3% in 1930. It is probable today that a majority of the Negroes of the United States are living in cities. 11-22-33

of the Federation toward Negro workers and demanded an educational campaign, interracial conferences and executive secretary and special committee for organizing Negro workers and Negro organizers in all crafts.

Ten unions in the American Federation of Labor denied membership to Negro workers, either in their constitution or their rituals and all of them at various times have been asked to change this, but have failed to do so. The N. A. A. C. P. asked for an interracial labor commission in 1924; the Communist Labor Congress in 1925 moved the A. F. of L. to make some reassuring promises. In 1925 and 1926, T. Arnold Hill of the Urban League appeared before the Executive Council of the A. F. of L. with suggestions. They promised most thoughtful consideration, but refused to pay even one-half the expense of a colored organizer.

The official version of the colored Federal advisers says:

6. The following are some of the other government services from which Negroes have received benefits and from which they are now profiting: Protection of mortgages through Home Owners' loans; protection of bank deposits through Federal Deposit Guarantees (Negro banks cooperate in this service); Farm Credit banks loans; U. S. Employment Service; loans for house renovation and modernization; scholarships and remunerative employment to aid students in schools and colleges;

30-22-36

having the first troops who landed from France black units and that these units received overwhelming ovation in New York and elsewhere. The whole episode of war and migration led to increased self-assertion on the

93-27-15

paying the Negro a lower wage than the code demands or supplanting him with white workmen.

"The Negro has become the unintended victim in that the codes do not cover agricultural and domestic service in which pursuits fully three-fifths of the race are engaged."

Jesse O. Thomas, writing in OPPORTUNITY in January, 1934, gave a series of instances and examples:

"Members of Boards of Education which are paying Negro teachers from fifty to seventy per cent as much as white teachers are paid, will not be enthusiastic about getting Negroes equal pay with whites in industry.

"In Macon, Georgia, a Negro teacher has to teach forty years before she receives the salary that a white teacher receives in her first year.

"First: our whole economic system in this section is predicated upon a differential basis, so far as the two racial elements are concerned. The Negro has never been included on equal terms with his fellow citizens in any activity, official or otherwise, public or private, in the South. The Negro's historical relationship to the industrial life of the South has kept him from being considered as an ordinary normal individual.

"In the South there are four classes of employers:

"(1) The class that takes the position that since Negroes are not given equal consideration in any other activity, and since the only reason they have employed Negroes is because they represent cheaper labor than white, or because when Negroes were first employed in the jobs they hold, previous to this depression, there were no white men available who would take their jobs, insist that if they have got to pay a living wage they will discharge Negroes and employ white people.

"(2) The class that is willing to increase the wages of Negroes above what was paid previous to the adoption of the code, but not

The report of Mrs. Mary Conner Myres has been suppressed by the Secretary of Agriculture. She was sent South to investigate the sharecroppers' situation. 258

X "A recent careful consideration of the Southern Negro farmer gives these conclusions: The great mass of rural workers in the South has never been farmers in any proper sense of the word. Two million families--eight and a half million persons--are merely attached to the soil as tenants or sharecroppers or otherwise dependent upon owners and boasses. This hugh population includes three million Negroes--three-fourhhs of all the colored farm population of the South--and nearly twice as great a number--five and a half millions--of white workers.

The plantation system, which enslaved the Negroes before the Civil War, has continued to exploit both Negroes and the poorer whites ever since. Virtual peonage, which shows itself to some extent in the tobacco and sugar plantations, spreads like an evil poison over the whole of the great cotton industry. King Cotton has ruled the South for generations, not as a benevolent despot, but as a ruthless tyrant ravaging the lives of the peons and blighting the economy of the whole region.

The system even under fair management makes the tenants and their families dedependents rather than farmers. In actual practice the owner often insists that all furnishings be purchased at his store--at fancy prices plus exorbitant interest. The tenants are kept in constant debt by high charges and easy manipulation of accounts. These debts, together with the pressure of traditional social customs, render the workers bound to the soil and to the system. The insistence over huge areas of the South that payments be made in the single crop, cotton, is often carried to such an extent that the tenant families

49-17-75

79
257

grew not one item of any other produce, not even vegetables or any kind of fruits for their own tables, let alone chickens or cows which might so easily add to their proper nourishment. Thus in the midst of abundant land, farm workers have not been able to provide any of their own subsistence, but have had to buy for cash or credit such meager and ill balanced food and supplies as they obtain.

The system, bad in itself, is made abominable by the racial situation. Although there are five million white people in this near peonage, the system takes its tone from the relationship of "boss and nigger." The rural Negro during slavery and since emancipation has not rights which the white man need respect or does respect. The set pattern both of race relations and of farm relations is that of masters and serfs. Because of his economic condition and because of his race, color, and previous condition of servitude, the Negro is helpless before the white master. Every kind of exploitation and abuse is permitted because of caste prejudice. The poor white connives in this abuse of the Negro; in fact, he is the chief protagonist of it.

49-17-78

This "boss and nigger" tradition, which has added gross corruption and cruelty to an economic order bad enough in itself, has carried over to treatment of white tenants and croppers. Yet it has been impossible to bring about any change, even to get the poor white workers to make a stand, since any movement for reform was immediately confused with the race issue. The white farm workers have fastened the chains of peonage upon themselves because of their blind rage and prejudice toward the Negro. The white peons have never realized and the owners have been careful to see that they should never be allowed to realize, that the cause of white and colored peons is identical. "Divide and rule" is the slogan of the bosses of the Southern land system quite as much as it was of the Hapsburgs. And in the South, race prejudice is an ever easy means of keeping the white peons divided against their colored fellow sufferers. Because of prejudice against three million Negroes, five and a half million white farm workers continue to keep themselves in slavery.

Servile dependents are in no position to plan or carry through any programs of real education for themselves and their children. Here lies the basic trouble with rural schools in the South, for white as well as for colored. Peons have neither ability to conduct schools nor incentive to become educated. The great bulk of the rural population of the South is in no position to plan its own life. The rural masses are owned and controlled; they must take what is given them and do as they are told. Education does not improve the quality of mere

Agreement was reached on a definite plan of action to be urged upon the government for financing a huge program of distributing small farms to former tenants and croppers and so at one fell swoop: (a) to begin to substitute ownership for the former tenancy system and (b) to turn back the tide of rural relief dependents on to self sufficiency on their own farms.

~~Forrester Washington urged a special set-up for Negro farm families.~~ Secretary Wallace ordered a survey by Calvin Hoover of Duke University. Hoover reported that "it is plainly the duty of the AAA to expend no effort in preventing the unequal distribution of the advantage of the acreage productive program and particularly prevent the operation of this program from making the situation of any class of producers worse." Hoover practically confirmed the reports and noted in the past four or five years a steadily increasing number of squatter families. "Their standard of living is appalling."

The answer of the administration to the problem may be found in Senate Bill Number 1800 known as the "Farm Tenant Homes Act of 1935", --or the Bankhead Bill.

49-17-80

The purposes of the bill are stated to be: to check the rapid increase of tenancy in the United States; the lessening of economic instability of tenant operators (Report of Secretary Wallace, page 68, states average occupancy of farm tenants to be 2 to 3 years); alleviating of conflicts between landlords and tenants which tend to develop.

The bill establishes the "Farm Tenant Homes Corporation" (Similar in legal structure to the Subsistence Homestead Corporation) which may either purchase farm land for lease or resale to farm tenants and sharecroppers or may make loans to these classes for the purposes of purchasing farm homes.

The Corporation is under the control of the Secretary of Agriculture, who may establish the capital of the Corporation up to one hundred million dollars. Bonds may be issued by the Corporation up to one billion dollars.

Preference is to be given to farm tenants of good, moral character, with dependent families and who have had practical experience in farming. Persons selected are to be allowed from 30 to 50 years to repay the purchase price of the land made by the Corporation.

~~The land purchased must be land at present in use as farm land.~~

Normal Thomas says: (The Plight of the Sharecropper, by Norman Thomas)

~~"Sooner or later any search among the millions of exploited Americans for those~~

"An emergency is on. It calls for forthright leadership that will indoctrinate Negro masses with an awareness of the effect of economic relationships upon other aspects of life. It demands leadership that will provide a program for insulating Negroes with industrial and occupational information and firing them with devotion to a cause that is just and fruitful. This leadership is needed to compel the respect of the Administration and to build an esprit de corps among the masses of Negroes who are ready psychologically for a program as they have never been before."

49-16-91

The difficulty arose, first, in the application of the codes.

"As consumers Negroes need protection. Remove the differential wage, eliminate the company store and commissary from competition with private enterprise, establish minimum wages for the domestic occupations in which Negroes are employed—and something still remains undone. Negro areas are ones in which some of the most undesirable merchandising practices are conducted. The Negro consumer finds his neighborhood stores cluttered with a large supply of inferior and cheap goods at prices that are high under any standard. These goods include food, housing and clothing, commodities of all sorts. Furthermore, the goods being cheap means that they are produced under undesirable conditions of labor and distribution. The elimination of these cheap goods would, of course, diminish the purchasing power of the average Negro consumer. The continuance of such merchandising practices as have accompanied the distribution and sale of these goods, including some nefarious practices of partial and installment payments, would violate both the spirit and the letter of NRA standards. There is a price for economic recovery —is it to be paid?

49-16-92

Rank in Opposition

~~to our ear and broken it to our hope.~~ "Today 24 national trade unions exclude us from their ranks and proscribe us in our employment.

"Organized labor, also, has contributed its share in the establishment of the race differential. The working class philosophy in such instances has been for the white workers. In Charleston, South Carolina, for example, where Negro building tradesmen were largely organized ten years ago, these Negro artisans worked at a lower scale than the white workers although they belonged to the same unions as their fellow-unionists. Separate unions for whites and blacks in other Southern cities likewise promoted a differential wage in favor of the white worker. In such cities as Jacksonville, Florida, and Birmingham, Alabama, and New Orleans, Louisiana, (where there were two central labor bodies, one for whites, the other for Negroes) the ill-effects of such duplicity in labor's aims have been most pronounced.

"Advocates of the equal pay for equal work theory maintain that in view of the reasons advanced by employers for a differential wage, (1) the difference in wage costs should be made a fixed charge against the competition of other industries; (2) the payment of equal wages would standardize wages and check the unscrupulous acts of employers who permit low labor charges to offset inefficient management; (3) the elimination of a differential wage would result in the levelling of wages for the whole working population and would check petty abuses in many industries; (4) equal wages would end the subsidizing of inefficient management and antiquated methods of many industries at the expense of Negro employees; (5) equal wages would result in the displacement of many unemployables—unemployables being determined not so much by race as by industrial efficiency; (6) equal wages would protect the white worker against under-bidding in the labor market; (7) the elimination of the differential would, in part, compensate for the restrictons on promotions which adversely affect Negroes in industry.

"It is a strong belief that the differential wage is a very pertinent part of the wage system whereby the workers' share is determined by the rule of thumb bargain. Under such a system, neither the employer nor the employee is certain that he is getting a fair deal. Many of the reasons that employers give justifying a racial differential, however, are due to faulty labor control, inadequate labor management

Chap. VII

and inadequate and improper rate-setting rather than to racial differences.

"The much talked of productive ability of white and Negro workers has not been sufficiently authenticated by scientific studies. It is certain that there should be a study of the capacity of Negro and white racial groups—a capacity not vitiated by various differences in cultural background and opportunity. One of the most recent and most outstanding studies of this relative ability was made by Alma Herbst.* This study showed that the "earning capacity of colored groups as demonstrated by weekly earnings and premiums, though far from conclusive, rules out the assumption of their (the Negroes') lack of ability and industrial efficiency as the only explanation of their status and rates of pay." On the question of labor mobility, Miss Herbst concludes that the "shiftlessness and unreliability of individual colored workmen have not been conclusively demonstrated." It was also found, in an analysis of the earnings of Negro and white employees in a typical meat packing establishment between 1922 and 1926, that under the Bedoux Premium System of Wage Payment, affecting 617 employees of whom 502 were white and 115 Negroes, 20.3 per cent of the whites earned no bonus while all of the Negroes earned some bonus. Furthermore, of those earning a bonus, 45.8 per cent of the whites and 42.6 per cent of the Negroes earned the lowest bonus; while 22.1 per cent of the whites and 26.1 per cent of the Negroes earned the highest amount available under the system.

Even where codes were adopted, employers of Negro labor did not always live up to them.

Meantime, reports continued to come in as to working conditions.

49-16-80

Chap. VIII

41-9-166

I. Because, we believe in the sincerity of purpose governing the National Administration's efforts for economic security;

II. Because, we are convinced that the NRA offers to workers a most significant opportunity for intelligently improving their economic and social status, thereby raising the economic level of the nation;

III. Because, we are convinced that the Federal program must be known to, and effective for every one of 12,000,000 Negroes if they are to profit thereby;

IV. Because,we are convinced that there is need for bringing to the attention of the various constituted authorities of the NRA exclusions of Negroes as practiced in certain areas since they deter and prevent recovery;

V. Because, we are convinced that the purchasing power of 12,000,000 Negro consumers is too potent a factor in our national economy to be subjected to exploitation such as is usually practiced against Negroes;

VI. Because, we are certain that the various emergency acts passed by the last Congress involving relief to the unemployed, the creation of a national employment exchange, the reemployment of workers, public works, farm and home mortgage loans, and all the others ought to be extended fully to Negroes.

Its objects was to continue a nation-wide educational program to acquaint Negroes with the NRA. It has a National Council of 15 members at large and state advisory councils and various committees. The National Chairman was C. C. Spaulding; the National Advisor, T. Arnold Hill."

As a result of this, on November 1, the office of Adviser on Negro Affairs and the Secretary of Commerce, was established and E. K. Jones, head of the National Urban League, was appointed to that office.

Pressure still continued for appointment of Negroes as administrators and especially as investigators to learn the real truth about conditions. A meeting was held September 18 of what was said to be the "Special Industrial Recovery Board". There were present Secretary Ickes, chairman of the Board, Secretary Perkins, General Hugh Johnson, Judge Stephens, Dr. Ezekiel and Dr. Dickinson. What was said and done has never been officially reported, but an alleged transcript of the remarks was published which ~~seems so plausible that~~ we reproduce in part without vouching for its absolute accuracy.

~~Chairman Ickes. The next item is No. 10, the appointment of a Negro investigator.~~

Secretary Perkins: Are you all so situated that every day brings demands from a group of Negroes to be appointed to something or other?

Chairman Ickes: The demand was made on me for the appointment of a Negro Deputy Administrator of Public Works.

Secretary Perkins: They want a Negro Assistant Secretary in the Department of Labor. We already have a Negro economist in the Bureau of Statistics which we could call our Bureau of Economics. He is not very satisfactory but he holds a Civil Service position; and there is a division of Negro economics and a Negro is at the head of that. I do not know how we are going to deal with them. They claim the thing Mr. Roper set up here is not satisfactory - that it is political in its setup.

49-19-29

Chairman Ickes: I do not see how we can appoint them as Negroes. If we did that we would have to appoint women as women and nationalities as nationalities.

Secretary Perkins: I do think there should be in my department a division studying the problems of Negroes.

Chairman Ickes: Has Mr. Foreman been up to see you yet?

Secretary Perkins: Yes, sir. I have eight or ten others. These Negroes do not agree with each other.

Chairman Ickes: I was criticised for appointing Foreman. It seems to me that he will give them better service than a Negro would in his position.

General Johnson: Dr. Sachs has appointed a Negress to look into certain matters with respect to Negro labor. I questioned the wisdom of it and the extent of authority he had given her.

Secretary Perkins: You have to watch your assignments very closely.

Chairman Ickes: I think Negroes have to be dealt with as individuals.

Secretary Perkins: The Negroes are treated differently as workers than any other group of people and it is just possible that one who has experienced discrimination against Negroes and who has the necessary training in other fields is not qualified to follow up their complaints. Other things being equal, a Negro investigator sent out would be able to bring back the facts better than anybody else.

Judge Stephens: That is true.

Secretary Perkins: But you would have to have a man or woman trained in the collection of facts.

General Johnson: If the Board thought well if it, we could appoint a Negro Advisory Committee. They are becoming very clamorous.

Secretary Perkins: Delegations have come to me and asked that since I nominate the members of the Labor Board, I also nominate another one who is a Negro.

General Johnson: I got the request that we must have a Negro Deputy Administrator.

Dr. Ezekiel: In the extension we have appointed Negroes to work with the Negroes in those counties. You might use a similar mechanism by appointing a Negro Board to work with Negroes who are on the consuming end.

Secretary Perkins: A Negro (John P. Davis) made a good statement of the case. He pointed out that for the most part in the South where Negroes are not factory workers, they were domestics and that the domestics' wages are not increasing and that there is no likelihood of a code for domestics. I agreed with him that there would not be. He explained that in the meantime they are being paid $2.00 a week wages with no chance of raising them and that the price levels are increasing, perhaps by only small fractions, but still sufficient to make it difficult for those getting only $2.00 a week to get along.

Dr. Dickinson: Might I say that the units of the NRA--the Research Unit, I believe--was about to send down into the South a colored female research worker, who comes from Oregon, I believe; and who has done very competent work at the University of Chicago; but the thought is that the selection of the research worker from the Negro race to go down and make that investigation would perhaps meet with

40-19-58

difficulties that would not be met by a research worker of some other race, and that if it were desired to win the confidence of the Negroes in the result of a research investigation, that purpose could be accomplished in a more tactful way which would be, instead of sending a research worker from their race, to put the investigation in the hands of some outstanding Negro, like Mr. Moton, or somebody of that kind; and then if he wanted, to let him employ the research worker. That was my suggestion, but the point here is whether this research worker shall be given her ticket and sent down there this afternoon.

General Johnson: I stopped that. I think it was very unwise.

Dr. Ezekiel: We would be playing with fire to send a Northern trained Negro to the South and certainly anyone trained in Chicago.

Secretary Perkins: I think you are right that it is very much better to put a distinguished Negro citizen on some of the central boards.

Dr. Dickinson: Or perhaps use him for a particular job.

General Johnson: This was crazy. It gave this colored woman authority to go in and interrogate employers and all that kind of thing.

All this complaint and agitation brought further efforts by Negroes. First of all, a number of Negro organizations united under two young men in Washington and formed a Joint Committee on National Recovery which proceeded to agitate for better conditions ~~appointments~~ and to interrogate leaders of the NRA. This committee ~~The Joint Committee on National Recovery,~~ formed in July, 1933, included ~~the following~~ twenty-four member organizations:

George E. Haynes, Chairman
John P. Davis, Executive Secretary
Nannie H. Burroughs, Treasurer

Member Organizations

African Methodist Episcopal Church
African Methodist Episcopal Zion Church

49-10-32

Of these organizations, 10 were religious, 4 academic fraternities and sororities, 1 a fraternal order, 1 an organization for agitation and reform, 4 organizations of professional men, 1 an organization for club work and 3 industrial organizations.

If we divide these organizations according to their outlook on economics and industry, we find that half are reactionary in outlook or believe in the essential soundness of the present capitalistic system. Of the other 12, 8 may be classed as liberal in their economic outlook, while 2 are distinctly labor organizations and 2 organizations of capitalists. Under these circumstances, it was naturally impossible that the Joint Committee should attempt to lay down any guiding program.

There was only one matter on which all the organizations agreed and that was that in the administration of the recovery program there should be as little color discrimination as possible. But as to the program itself and its general objects and ends, it had nothing to say and it certainly had no desire to consider or lay down a distinct program for the guidance and development of the Negro race in industry.

The Urban League did not join the Joint Committee, but attempted to set up an Emergency Advisory Council.

T. Arnold Hill, acting executive secretary, in sending out an open letter to Negro workers urging them to organize workers' councils, wrote in part:

> "For fourteen months we have been witnessing in the United States a most unprecedented effort at economic stabilization. The cause of labor is riding 'high, wide and handsome,' with the possibility for attaining many desirable goals. Yet the cause of Negro workers has not been one with labor's general aims. The appeals of social organizations in your behalf to the National Recovery Administration, the American Federation of Labor, independent labor organizations and many persons of influence and prestige, while partially successful, have fallen far short of the desired goal. These shortcomings have convinced us that the position of Negro workers will be strengthened only if they themselves realize the necessity for action."

49-18-34

"It has been a matter of great interest and speculation to thinking Negroes throughout the country as to what extent have been the activities and accomplishments of the NRA with respect to giving the race worker a square deal in the New Deal. The apathetic and often unfriendly attitude of the American Federation of Labor toward the Negro wage-earner in the past has not kindled a feeling of expectancy that organized labor will at present include all workers, regardless of race or color, in its ambitious program.

"The Negro would do himself incalculable harm for many, many years to come were he to agree to any plan whereby he is to receive less pay than the white wage-earner for the same kind of work. The thought of giving the black laborer increased pay and less working hours has greatly agitated Southern employers, some of whom have become so excited as to raise the cry of secession."

Apparently this proposed organization has never actually functioned, and the Secretary, E. K.Jones, Adviser in the Department of Commerce, seems to have turned to the movement for fully restored capitalism. On the other hand, the NRA stirred by the investigator's complains and the pitiless publicity of John P. Davis and Robert Weaver, who headed the Joint Committee, executed an adroit blank movement and invited Dr. Weaver to join Clark Foreman as ~~Joint~~ Adviser on Negroes in the Department of the Interior. Davis and others protested against Weaver's acceptance, but nevertheless, he eventually accepted.

When conditions got worse in October, 1933, the FERA inaugurated a Civil Works program, November, 1933. This was to provide work at once for 4,000,000 unemployed persons on short-time public projects and $400,000,000 was allocated to finance this plan.

August 9, 1933, the FERA authorized funds to be used for the hiring of unemployed teachers. ~~After a while,~~ Dr. Ambrose Caliver, from the Office of Education in the Department of the Interior, was ~~made Specialist in~~ put in charge of Educational Relief for Negroes in December, 1933.

~~The same month,~~ A Negro was appointed as Director of Negro Work in the FERA. ~~He was~~ Forrester Washington of the School of Social Work in Atlanta, Georgia, He selected a tentative body of welfare workers to help him, but after a few months, resigned, ~~presumably~~ because he found he was to be given no real power. His assistant was named as his successor, but instead of being ~~delegated~~ designated as Director of Negro Work, he was called the "Colored Asistant in the Correspondence Division." He received complaints from Negroes concerning the administration of relief funds by local authorities and communicated ~~be~~ with the state administrator. ~~He has an assisbant and a stenographer.~~

The Farm Credit Administration was created by Executive Order and is under a Governor appointed by the President. The purpose is to provide a complete and co-ordinate credit system for agriculture. One colored man, Henry Hunt, is assistant to the Governor and has an office with a secretary and stenographer. He receives complaints from the colored farmers and makes every effort to remedy injustices placed upon Negroes in the administration of the funds. He has no administrative responsibility, but makes observation tours and inquiries at the offices of the Federal Land Banks.

49-19-35

"The Adviser urges the appointment of qualified Negroes by the Department of the Interior; he observes the degree to which Negroes are being employed by the agencies under the Secretary's control and reports the conditions to the Administrator;

44-16-96

Chapter VIII

he develops suggested lines of approach to assure a greater degree of participation by Negroes in the programs of the agencies.

"The Adviser review all projects of the Division of Subsistence Homesteads affecting Negroes. His purpose is to develop a well-rounded and sound program of participation for colored Americans in this program. In connection with housing, the Adviser on the Economic Status of Negroes, urges the appointment of Negro technical men,

NA-16-94

the inclusion of Negroes on local housing committees, the use of Negro labor on projects and the selection of qualified Negroes for local management. As a consultant to the Housing Division, he is constantly in touch with the housing program and attempts to expand the number of projects developed in Negro slum areas.

There are also certain matters of routine, such as answering letters, seeking information, receiving and following up complaints of racial discrimination and maintaining old and opening new employment opportunities for Negroes". (The Sphinx, p. 3)

The Federal Subsistence Homestead Corporation has been incorporated under the division of Subsistence Homesteads in the Department of the Interior. It is to provide for the re-distribution of the over-balance of population in industrial centers and has a fund of $25,000,000. It was organized November 21, 1933.

The Adviser on Negro Economic Status in the Interior Deparmtnet has put a good deal of time on the subsistence homesteads. Many Negroes have been interested in this and several projects proposed. A Negro Subsistence Homesteads division was organized under a white official and an attempt made to start such a homestead at Bricks, North Carolina. In all, 5 young college men and 2 women were employed in this division.

449-16-98

The white official tried to start several Negro subsistence homesteads, but the Adviser protested against all such efforts. One Hundred or more applications have been filed by Negroes from all sections of the United States and, finally, most of these projects came to nothing--because of a ruling that they were agriculture rather than concerned with city population. The only plan that has gotten through is one at Tuskegee, where $200,000 has been allocated for 3 units, 2 agricultural and 1 industrial. Because the Solicitor-General ruled out agricultural products and the Office of the Adviser was adverse to Negro projects, there was a statemate and the office of the white specialist was given up and the colored personnel transferred to the Planning Division. A bi-racial project at Lackawanna, New York was planned, but because it stated that 15% were to be colored and 85% white, it was abandoned. Another

Chapter VIII

project which may come through is that at Newport News, Virginia and there were further proposals at Indianapolis, Garvy, Pennsylvania and Dayton, Ohio.

In the Planning Division of the Subsistence Homesteads are more highly trained colored people than in any other division.

49-16-99

1. Important appointments made:

Lawrence A. Oxley, Chief, Division of Negro Labor, Department of Labor

John Aubrey Davis, Research Assistant, Department of Labor

Robert C. Weaver, Adviser on the Economic Status of Negroes, Department of Interior

H. B. Evans, Executive Assistant to the General Manager Subsistence Homesteads, Department of the Interior

Theophilus Mann, Member of the Legal Staff of the Public Works Administration (Interior)

William Hastie, Assistant Solicitor, Department of the Interior

Ambrose Caliver, Senior Specialist in Negro Education, Department of the Interior and Specialist in the Educational Relief among Negroes, Fed. Emergency Relief Adm.

James A. Atkins, Assistant in Education in the Fed. Emergency Relief Adm.

Forrester B. Washington, Director of Negro Work in the Fed. Emergency Relief Adm. (appointed Feb. 1, 1934; resigned Sept. 1, 1934)

Alfred E. Smith, Special Assistant, Correspondence Division, Fed. Emergency Relief Adm.

Earl Moses, Research Staff of the Fed. Emergency Relief Adm. (resigned on Oct 1, 1934 to take a position in Research Department of District of Columbia Board of Education.)

41-9-170

Edgar G. Brown, Special Assistant to the Director, Emergency Conservation Work

Victor Cools, Project Analyst, Subs. Homesteads Div., Department of the Interior

J. P. Murchison, Associate Adviser on Economic Status of Negroes, Department of the Interior

Hilyard R. Robinson, Architectural Draftsman, Subs. Homesteads Div., Department of the Interior.

William J. Thompkins, Recorder of Deeds, District of Columbia

H. A. Hunt, Assistant to the Governor, Farm Credit Adm.

Roscoe C. Brown, Heatlh Education Specialist and Special Consultant, U. S. Public Health Service.

Charles E. Hall, Specialist on Negro Statistics, Bureau of the Census, Department of Commerce.

Eugene Kinckle Jones, Adviser on Negro Affairs, Department of Commerce

Abram S. Harris, Associate Professor of Economics at Howard University, member of the Consumers' Advisory Board of the National Recovery Administration (resignation effective Sept. 15, 1934)

The current political and social pattern in the South, from 1868-1876, was for the planting class to make alliance with the poor whites on terms that either retained leadership in the hands of the planters or at least leadership in the hands of those poor whites who replaced the planters and assumed the planter ideology toward labor.

But in Atlanta, the change was more subtle than this. The planters haranged in vain five hours on a hot day in Alabama Street against a combination of Northern merchants, but whites and Negroes who dominated the situation had made Bullock Governor. Thereupon some representatives of the planters, like ex-Governor Brown and eventually Ben Hill, determined that the new commercial profits of Atlanta should not go to a combination of Northerners, poor whites and Negroes. They, therefore, secured the alliance of Northern capital and forced Northerners, like Kimball, to ally themselves with them, and he and other poor white merchants willingly did this so long as the object of the combination was to make money and

44-16-45

Chapter IX

On the other hand,

It is the opinion of the Inter-Racial Commission that the NRA has been of more benefit than harm to the Negro and that the amount of wages going into the Negro community after the appearance of the NRA exceeds the amount immediately before. In the larger business, Negroes who were on the payroll when the NRA launched, have remained and in some cases, additional ones hired at code wages. This is true in the service of the newer office buildings, in the distribution and sale of the largest magazines, of automobile tires and gasoline, in distributing products of packing houses, in the electric power business and street railway systems and delivery of parcels for department stores. In oil refining, mining and steel industries, Negroes have received reasonably good treatment. The wages of Negroes in fertilizing factories and cotton-seed oil mills have been increased, in some cases from 50-100%.

This better treatment of Negroes has been true in businesses where the workers were not under the public eye, as was the case in mining and manufacturing, or where they were before the public as servants, as in office buildings and filling stations.

J1-9-169

not being befafited by the N.R.A. but on the whole were sustaining an economic set-back." Extreme examples may be cited where in one county of Georgia, where 300 Negroes who were receiving 50cents a day were discharged when a code fixed wages at 30 cents an hour. In Birmingham, Ala., white retail grocers drew up a code of their own of $6 a week for Negro porters and delivery boys. In Arkansas, white farmers sent their sons to the C.C.C. camps where they received $30 a month and replaced them with Negroes at $10 and $15 a month.

This is a typical picture of what the Negro got economically under the major effort of the New Deal to raise the average worker out of the depression.

49-19-36

(INSERT)

34-1-84

The whole plan of the New Deal was suddenly changed by the decision of the United States Supreme Court declaring the establishment of industrial codes unconstitutional and indicating that other efforts of the New Deal were probably [illegible] illegal. This brings forward the question as to whether the effort of the United States to reorganize industry is going to be stopped by court action, or whether the constitution is to be so changed and reinterpreted that the capitalistic system can be reconstructed or replaced.

B

At present, the trend is to give up nearly all the efforts of the New Deal and to return to the profit-making economy depending upon investment and wages to restore prosperity. It is admitted that at best there will be under these circumstances at least 10 millions of persons permanently unemployed and many others employed irregularly or at wages too low to maintain a decent standard of living. ¶ Among the unemployed and casual workers will be large numbers of Negroes and particularly those upon the farms. The plans for the resettlement of farmers upon better lands are at present very hazy and it does not seem probable that Negro farmers are going to get much real attention or permanent help. The labor movement, thus faces a new problem or rather an extension of the old fight. Negroes struck and struggled in the textile strike and in the longshoremen's strike and in the sharecroppers strike in the Southwest. The Pullman Porters have won their right to be recognized as a union, but they have not been given the status to which they are entitled in the American Federation of Labor. The attitude of the Federation is still reactionary. The industrial union movement, while strong, is not yet triumphant and the craft unions continue to exclude black men. ¶ In this situation of flux and change no final word can be said concerning Negro workers at present. But something can be said concerning what Negroes, led by intelligent and sacrificing prophets, must do if in the future they are going to earn a decent living.

"At Norris will be established a working experiment in coordination between industry and agriculture, the ideal which the TVA envisions for the whole Tennessee Valley. The natives of this cooperative community will receive extensive training in the arts, trades, and skills essential to such a mode of living. That they may become expert in agriculture, for instance, they will be provided a farm-garden for demonstration, a model poultry plant, and a dairy farm with pasteurizing plant connected. Men will also be taught skill in woodwork and in metal work. The women will receive courses in home planning and management. All homes will be electrified for providing lights and heat. Roads will be kept free from sign-boards, hot-dog stands, and road-side clutter. From all this the Negro, as desperately as he needs training, is to be absolutely excluded. He can not even live on the outskirts of the town in his customary hovel.

Promises, nebulous and indefinite, are being made Negro groups that other cooperative communities are to be established in which their rights will be taken care of. It is hoped, not without some assurance, that such a community may be established near Huntsville, Alabama, in connection with the state supported Agricultural and Mechanical College for Negroes. This would be all the more practicable since one service of such a community is to provide a field for student labor for cooperative colleges which proceed according to a work-study program."

(Cranston Clayton, OPPORTUNITY, April, 1934.)

49-16-102

"Soon after we got to the school and made fire we saw Mr. Murphy come up. We called him in to get warm. He was the one Negro then working on the Teachers' Home. (FERA project.) The white men working on the project had not shown up. (They did not show up at all that day.) Mr. Murphy talked (rather, he mumbled) quite a bit while he was warming. He found that he was making fifteen cents an hour for eight hours a day, three days a week. He supported his family of nine children, a wife, and himself on this wage. He walks seven miles every morning to get here to work. His children walk that seven miles to come here to school." (Red Oak, Ga., 1935.)

A report from one of the Negro officials of the New Deal gives this out of relief measures for Negroes:

"Negroes have received emergency relief in proportion to their needs rather than in proportion to their population. The record shows that in October 1933, there were 2,117,644 Negroes in relief and 10,309,844 white persons, i. e., 17.8% of the Negroes and 9.5% of the whites. Of course, they are individual Negroes who have not received a square deal in relief, as has been the case with many whites. Furthermore, the causes behind this undue proportion of Negroes are reprehensible in that a much greater proportion of Negro workers were in marginal employment prior to the depression. But one cannot criticize any administration for the condition it finds on coming into office. The fact is that the Federal Emergency Relief Administration has been and is giving relief to all elements of the public on the basis of need."

44-16-95

During 1935, the following students were employed and the following sums allowed in the various states by the FERA for colored colleges:

	No.	
Alabama	185	$24,975
Arkansas	146	19,710
Delaware	9	1,215
Florida	87	11,745
Georgia	281	37,215
Kentucky	75	6,885
Louisiana	143	19,305
Maryland	57	7,695
Mississippi	69	9,315
Missouri	49	6,615
North Carolina	283	38,205
Ohio	71	9,585
Oklahoma	66	8,910
Pennsylvania	52	7,020
South Carolina	135	18,225
Tennessee	235	31,725
Texas	321	49,140
Virginia	228	30,780
West Virginia	94	12,690
District of Columbia	194	26,190
Total FERA grants to Negro colleges.....		$377,145

SECTION VII.

The following notes will illustrate other activities of the New Deal with regard to the Negro:

Sixteen training centers were established by the FERA to prepare teachers for workers' education; 2 for Negroes; 1 at Atlanta University and 1 at Washington, D. C.

There are nursery schools but how many there are for Negroes, it is not known: 11 are reported in Georgia, 5 in the District of Columbia, 15 in North Carolina and 5 in West Virginia. There is a colored supervisor of nursery schools in the District of Columbia.

There is no information as to what has been done for the Negro under the rural rehabilitation program. There are state transient directors in nearly all the states and separate Negro transient camps in the District of Columbia, Maryland, Virginia, Georgia, Alabama, Arizona and Kentucky. The one at Maryland has a colored supervisor. No colored women of experience or training is employed by the FERA.

The Civilian Conservation Corps was created by the Executive Order April 5, 1933 under the Emergency Conservation Work Organization. Former Representative De Priest secured a proviso in this act "that no discrimination be made on account of race, color or creed." The men received $30 a month, together with subsistence and clothing and the Department of Labor supervised the selection of the persons enrolled.

49-11-43

There is no Negro representative in the United States Employment Service in the Department of Labor.

"There are Sixty-seven all-Negro Camps out of a total of 7,128 in operation today (figures given by the Director in his Radio Broadcast of October 24, 1934), and are located as follows in the corps areas as hereinafter indicated:

First Corps Area.....	None	Sixth Corps Area.....	5
Second Corps Area....	5	Seventh Corps Area...	5
Third Corps Area.....	26	Eighth Corps Area..	None
Fourth Corps Area....	15	Ninth Corps Area...	3
Fifth Corps Area.....	8		

"The total authorized strength of the forest camps (CCC Camps) is 370,000," said the Director of Emergency Conservation Work in his Radio Broadcast of October 24, 1934, and the proposed quota for Negro Enrollees in all-Negro CCC forest for the fourth and last enrollment period is 14,858. This does not necessarily mean that the total of Negro enrollees in all the CCC forest camps is only 14,858 out of a grand total of 370,000, because there are Negro enrollers in these camps located in States where there is no law against segregation, but how many, there is no way of knowing unless the Camp Commanders of these camps are consulted.

of Negroes and a change in policy early last Spring has resulted in the appointment to date of 55 Negro educational advisers in these camps.

Obviously, this is not all that could be stated, as the subject could not be exhausted in a short summary. But assuredly the spirit of the officials in Washington is favorable to according the Negro all the benefits of the Recovery Program. For example, the administrative officials of the newer services, such as the Federal Housing Administration, Federal Credit Unions, and the Labor Relations Board, have given assurance that they will make every effort to guarantee the Negro full benefits from these activities. Recently the Division of Press Intelligence has subscribed to some 16 or 18 Negro newspapers and periodicals with the idea of bringing Negro editorial comment on the Government's acitivites to the attention of those officials who control policies and practicies within the several departments and administrations.

38-27-10

of the decline in agricultural employment for the year 1934 alone being a quarter of a million. The larger portion of these are unskilled Negro agricultural workers - now without income and unable to secure work or relief.

But the unemployment and tenant evictions occasioned by the crop reduction policies of the AAA is not all. For the tenants and sharecroppers who were retained on the plantations, the government's agricultural program meant reduced income. Wholesale fraud on tenants in the payment of parity checks occurred. Tenants complaining to the Department of Agriculture have their letters referred back to the locality in which they live and trouble of serious nature often results. Even when this does not happen, the tenant fails to get his check. The remainder of the land he tills on shares with his landlord brings him only the most meagre necessities during the crop season, varying from three to five months. The rest of the period for him and his family is one of "root hog or die."

The past year has seen an extension of poverty even to the small percentage (a little more than 20 percent) of Negro farmers who own their own land. For them compulsory reduction of acreage for cotton and tobacco crops, with the quantum of such reduction controlled and regulated by local boards on which they have no representation, has meant drastic reduction of their already lwo income. Wholesale confiscation of the income of the Negro cotton and tobacco farmer is being made by prejudiced local boards in the South under the very nose of the federal government. In the wake of such confiscation has come a tremendous increase in land tenantry as a result of foreclosures on Negro-owned properties.

- Farmers Exploited Under AAA -

The Agricultural Adjustment Administration has used cruder methods in enforcing poverty on the Negro farm population. It has made violations of the rights of tenants under crop reduction contracts easy; it has rendered the enforcement of these rights impossible. The reduction of the acreage under cultivation through the government rental agreement made unnecessary large numbers of tenants and farm laborers. Although the contract with the government provided that the landowner should not reduce the number of his tenants he did so. The federal courts have now refused to allow tenants to enjoin such evictions. Faced with this Dred Scott decision against farm tenants, the AAA has remained discretely silent. Farm laborers are now jobless by the hundreds of thousands, the conservative government estimate

Chapter I. 44 — 32 — Chap. VII

30-27-80

I do not pretend to like rough water. I once said that I was willing to die for the President, but that I refused to become sea-sick for him. Yet I find myself continually thinking of the whole term of this administration as a storm at sea. The Spring of 1933 was like the sinking of a great liner in a hurricane. A nervy skipper in a rescue cutter stood by. There was no partisanship then; no criticism of him for the cold and the wet and the danger. Everybody took that skipper's orders because no one else knew what to do or dared to take the responsibility for doing it. Business, large and small; labor, organized and unorganized, were glad to hear a voice ring with command. Not a single rugged individualist even peeped about letting nature take its course or about the survival of the fittest. Finance, commerce and industry were prostrate, thoroughly frightened, thoroughly hopeless. They did not cry: "Leave us alone." They knelt on their slanting decks and prayed: "Save us or we perish." At least those [illegible] had not forgotten how to pray. They grabbed at the lifeline extended to them without asking where they were being taken and that line held in the hour of need. But now, temporarily safe in a calmer sea, they are quarreling over what port it shall be.

These probably has been no similar period in our history when one man might so fundamentally have changed the destined course of a free people. If Franklin D. Roosevelt at that time had desired to supplant the profit system with some new collective form of economic organization, all he would have to do would have been to let nature take its course, permit unrestrained individualism to continue to deflate for thirty days more. If he had done that, no one knows what kind of economic doctrine would have taken root in the ruins of our traditional business and banking system. The course of unrestrained individualism was the surest road to the destruction of that system. Scarcely less sure would have been a yielding to the desperate demands of leaders of business and finance that the government stop their losses by taking over their enterprises, taking up their debts, limiting production, fixing prices, guaranteeing profits —in a word, complete regimentation.

Administration Chose The Hardest Course

The course that the new administration did take was the hardest course. It conformed to no theory, but it did fit into the American system—a system of taking action step by step, a system of regulation only to meet concrete needs, a system of courageous recognition of change. It was a middle of the road course of using the facilities and resources available only to the government until individual enterprise could resume its normal functions in a socially sound competitive order.

The deflationary process has stopped. To achieve that, the administration placed the national credit back of every bank which could reasonably be expected to be restored to a solvent position over a period of years. It gave generous help to railroads and insurance companies. It gave to agriculture and industry instruments to prevent the glutting of markets by forced liquidation and sweated labor. The skipper got aboard his cutter all who could possibly be saved.

The old idea that there was work in America for every individual who wanted work is too precious a heritage to abandon. It was a priceless ingredient in the individual optimism and self-reliance that made us a confident, vigorous nation. I am old-fashioned enough not to want to see it pass from our national life; I am modern enough to be willing to use the power of government to create conditions which will insure that it shall not pass. Until the average man has attained a standard of life and security far beyond that which he now enjoys, there must be work for every one. It is the duty of the government to see that it is provided. When private initiative cannot give work to every man able and willing to work, there is no decent alternative for this nation from the President's determination to assure that work through a public works program.

11-6-176

Negroes ~~for the time being were largely~~ had been eliminated from politics in the South. But they still remained a major factor in Southern poverty. The low purchasing power of the Negro population makes the South a poor market for the products of its own factories and causes outside producers to consider it the poorest market in the nation. Every dream of economic emancipation for the South has been impossible of realization, for every such dream has failed to include Negroes as an economic factor in Southern development. The South has continued to insist on a political remedy to one of its major economic ills. (cf Alexander, loc cit)

Insofar as Negroes are admitted to the white labor movement, they should be loyal. Most Negroes are not admitted and must, therefore, refuse to be goats.

According to the NEW YORK TIMES, a survey by the 20th Century Fund says that there are some 32,000,000 wage earners in the United States at the beginning of 1935. The American Federation estimates that there were 38,934 in February, 1935, of these 4,200,000 were in trade unions and 2,500,000 in company unions.

The American Federation of Labor reports an average membership of 2,608,011 for the year ending August 31, 1934. They are, of course, far below the peak figure of 4,078,740 in 1920. There are about 40 independent unions having a national status, the most important being the railway brotherhoods.

41-9-177

The rise of company unions is pronounced. There were 1,300,000 members in 1932 and now 2,500,000. There is no doubt but what most of the young Negro intellectuals have gone Communist. They do not all say so, but they are cynical and unmoved when any other proposal to better the Negro's condition is made, except communistic revolution. If these young men were white, they might have some strong intellectual reasons for this conclusion, but they, like their fathers, continually deceive themselves into thinking that they can in some way identify their salvation with that of white America. As a matter of fact, they are not white and for this reason alone cannot today in America go Communist.

The Negro church, also, can easily become a center of community medical service, dental care, health preservation and legal defense.

The Federal Emergency Relief Act of 1933, approved May 12, provided for a co-operation between the Federal Government and the several states in relieving hardships and suffering caused by unemployment.

In all New Deal legislation and especially in the FERA grants, the states rights principle was kept; that is, after receiving Federal grants, states were left to go their own way. In only one case was there an attempt to guide them and that was when it was found that white teachers were being paid by Federal funds to teach colored children. A memorandum was then sent out stating that Negro teachers should always be employed to teach Negro pupils and adults in states maintaining segregated school programs.

49-16-89

Aroused by the complaints of the cotton growing states, Secretary Wallace summoned the directors of extension work in the Southern states to Washington for a conference in May, 1934. The planters were given a subsidiary by the government for each acre they agreed not to plant in cotton. For these idle acres the planters received a little less than $5.50 for an acre. If the planters had acted fairly most of this money would have gone to the tenants. In most cases, the planters signed up for themselves and their tenants; received the entire check; and would not share it with the tenants. The cotton tenants were supposed to re-

ceive one-ninth of the money granted the land owners; the total amount varying according to the amount of acres. Tobacco sharecroppers, most of whom are white, received one-half of the money granted owners.

In many instances, the landlord promptly evicted the sharecroppers, leaving them homeless and with no means of support. He was then used as surplus labor. (Norfolk Journal and Guide, May 19, 1934.)

Dr. Haynes argued the need for clauses in the Bill under Titles I, II, III, IV, VII, and VIII providing for no discrimination on account of race or color; and presented evidence of the manner in which this type of discrimination in the past has affected the state administration of federal appropriations. He showed that under the Smith-Hughes Act and the Smith-Lever Act, which laws do not contain clauses against discrimination account of race or color, federal funds have been appropriated on the basis of population for vocational education, teacher-training, and agricultural and home demonstration work, and have been unfairly and inequitably distributed between white and Negro populations according to their proportions in each state. In contrast he cited the administration of the Morrill-Nelson funds for the establishment of land-grant colleges as amended in 1890 which prohibited the payment of funds to a college where distinction of race or color is made in the admission of students, but allows separate institutions for white and Negro students provided funds are equitably appropriated to each according to terms set forth in the law.

30.27-78

There are specific provisions under the several titles of the Economic Security Bill which could be readily used for discrimination against eligible persons on account of race or color:

> "Under Title I, Section 4, (a) a plan for old age assistance offered by a state authority must furnish 'assistance at least great enough to provide, when added to the income of the aged recipient, a reasonable subsistence compatable with decency and health.' In many communities there is a prevailing idea that Negro persons can have such a reasonable subsistence on less income than a white person. In states and communities, North and South, fair-minded citizens have had to contend strenuously against this notion being made a basis for lower wage rates in the NRA codes, for low allowances, for lower standards for Negroes in relief budgets, and other measures. It would very probably be widely used to give less assistance to aged Negroes than to aged whites.

"Under Title II, Section 204 (c) the same standard of reasonable subsistence compatible with decency and health is involved in the approval of state plans for the aid of dependent children. The lack of consideration for the Negro child in nearly all of the Southern states and in many of the large Northern urban communities is generally known and admitted, as one may readily prove from the reports of the President's White House Conference on Child Health and Protection.

"Under Title III, Section 301, there is no minimum for wages upon which the earnings taxes shall be based. It is commonly accepted knowledge that the wages of Negro workers are frequently lower than those of white workers in the same plant and on the same jobs or in the same occupations. Wherever there is this discrimination in wages on account of race or color this Bill should provide an equalization of the percentage of the tax to be paid by the employee so that the employer will be required to pay a larger percentage of the tax.

"Under Title IV, Section 403, it is proposed that the appropriations of specified sums be made from the Federal Treasury, of which sums 98 percent is to be apportioned by the Social Insurance Board among the states. Unless this Bill requires the distribution of benefits irrespective of race or color there is grave danger that in the regulations governing eligibility and other conditions for receiving benefits, unfair practice against Negro aged will arise.

"Under Title VII, Section 701 (a) allotments of federal funds are provided for 'furthering and strengthening state and local health services to mothers and children, extending maternity nursing services in counties predominantly rural, and conducting special demonstration and research in maternal care and other aspects of maternal and child health service.'
In view of the evidence presented here it is clear that specific provision is needed to ensure equitable use of these funds and a fair distribution of benefits from their expenditure to Negro mothers and children.

"Under Title VIII, Section 802, a clause against racial discrimination is needed to ensure equitable expenditure of funds for public health services to Negroes in states where there are separate services provided, and in states where there are no separate service arrangements to ensure that doctors, dentists, nurses and lay workers shall have full opportunity to quality for such service irrespective of race or color.

"Under Title III, Sections 301, 4, 7, in the Unemployment Provision, the Bill applies to employers having four or more employees. Thus practically all domestic and personal servants are excluded from old-age benefits. Further, share tenants and sharecroppers on farms and plantations who are little if any different in their economic condition from laborers, are not covered in the Bill.

"These features affect a larger proportion of Negroes in the United States than any other group. Of 5,000,000 Negroes gainfully employed in 1930, 2,000,000 were in agriculture, and one and a half millions were in domestic and personal service. Any nondiscriminatory provision would certainly have to take this into account.

Chapter V. ~~75~~ 99 ~~31~~ Chapter X

By P. RAYMOND DANIELL.

Special to THE NEW YORK TIMES.

MEMPHIS, Tenn., April 15.—The city of Marked Tree, a community of about 2,000 inhabitants, half of whom are Negroes, squats among the cotton fields of Northeastern Arkansas about forty miles from Memphis, on the inadequate banks of the St. Francis River. Since the first of the year it has been the scene of much of the mob violence to which, the workers say, the landlords and riding bosses of the big plantations have resorted in their effort to stamp out the seeds of unionism sown among their share-croppers by Socialist organizers.

There on March 25 a band of forty-odd masked night-riders fired upon the home of C. T. Carpenter, attorney for the Southern Tenant Farmers' Union and an old-time Southern Democrat whose father fought with General Robert E. Lee in the Army of the Confederacy. The raid upon Mr. Carpenter's home was the climax to a series of similar attacks upon the homes of Negro members of the union.

On March 30 an armed band of vigilantes mobbed a group of Negro men and women returning home from church, beating several of them with pistol butts and flashlights. That same night in the neighboring town of Lepanto night-riders shot out all the lights in a Negro church, terrorizing the women and children of the congregation.

Just over the Poinsett County line in Mississippi County is the town of Birdsong, where on March 16 Norman Thomas and a group of his followers were threatened with violence and run out of town.

The most imposing building in town is the First Methodist Church. It is to that church that most of the business men and planters go on Sunday and it is in the basement of that church that the luncheons of the local Rotary Club are held. The pastor is the Rev. J. Abner Sage, who usually can be found in conference with Mr. Spellings at the commissary store, and who has taken upon himself the task of presenting the views of the planters in letters to editors, and especially to United States Senator Joseph T. Robinson.

He Backs Plantation Owners.

"Brother" Sage, as he is known to his congregation, has a great deal of sympathy for the plantation owners. Of the share-croppers, he says they are a shiftless lot with only themselves to blame if they are not as well blessed with this world's goods as they would like to be.

He also feels pretty strongly about the way in which Northern organizers prefixed the names of Negroes with "Mister," shook hands with them and "gave them ideas about social equality."

Things had come to a pretty pass, he explained, when he hit upon the idea of forming a cooperative society among the merchants to relieve the unemployment situation, which had become acute and which he recognized as one of the causes of unrest among the share-croppers.

In response to the urging of "Brother" Sage the merchants subscribed cash and credit amounting to nearly $1,000 a month, which was used to put men to work beautifying the town at about $1 a day. The

Sitting in his office in the back of the Marked Tree Bank, with "Brother" Sage nodding approval and offering a suggestion now and then, Mr. Stafford told of his efforts to protect American institutions as he understands them, from the "Reds" who he thinks threaten them.

"We're on our toes, I'll tell you," he said. "Only the other day we intercepted a message sent by Norman Thomas to one of his crowd over in Memphis. It said something about getting all the publicity he could for the union and then went on to say that he had arranged through Rexford G. Tugwell to present the share-croppers' case to President Roosevelt."

Brother Sage took up the narrative of the intercepted message.

"Yes, sir," he said, "and it wasn't long before we had Senator Joe T. Robinson on the telephone, and after we talked to him Norman Thomas wasn't going to have any interview with the President."

The minister continued:

"We've had a pretty serious situation here, what with the mistering of these niggers and stirring them up to think the government was agoin' to give them each forty acres. Why, it even got so they held a parade here one day of nigger and white share-croppers, and a nigger with a cane tried to hold up a car with a white lady in it.

"I saw one man reach into his hip pocket for a gun and I grabbed him. I don't know, though, but what it would have been better to have a few no-account shiftless people like that killed at the start than to have had all this

...MOND DANIELL.

Special to THE NEW YORK TIMES.

WASHINGTON, April 21.—The condition of the share-croppers of the Cotton Belt has not escaped the attention of the planners in President Roosevelt's administration. Steps are being taken now to bring immediate relief to this distressed class of tenant farmer and eventually to eliminate a system of farming that has existed in the South since slavery was abolished.

Dr. Calvin B. Hoover, Professor of Economics at Duke University and economic adviser in the Agricultural Adjustment Administration, who made a survey of conditions on the cotton plantations under the acreage reduction program for Secretary Wallace, reported that the share-cropper had not shared equally with the landlord in government benefits.

To win cotton planters to the crop reduction plan, he said, it was deemed necessary to divide the

THE N

the usual home of the share-cropper of the section.

[illegible] Campbell, who is the owner of a Georgia cotton plantation which provides employment for sixty-five families of share-croppers, said he sometimes wondered if, in constructing homes with all modern conveniences, the government was not killing with kindness the people it was trying to help. There is a limit to what a given number of acres can earn, he said.

Seen As Hope for Cure.

Yet it is through just such projects as this that persons who have studied the problem of the share cropper see the possibility of a cure for a system of farming which reduces a large portion of the population to a condition not much better than peonage. The large plantations must be broken up and the government must take the leadership in effecting a transition from tenantry back to land ownership these observers say, if the evils of the share cropping system are to be eliminated.

It is to accomplish this end that Senator Bankhead of Alabama recently introduced his bill for a Farm Tenant Homes Corporation "to promote more secure occupancy of farms and farm homes, to correct the economic instability resulting from some present forms of farm tenancy, and for other purposes."

The corporation would be authorized to lend tenant farmers and share croppers the money to buy farms and farm equipment, allowing the purchasers of such farms to amortize their debt over a thirty to fifty year period at as low a rate of interest as that at which the corporation can obtain money plus a small charge for administration. The corporation would be empowered to sell stock not to exceed $100,000,000 to the Secretary of the Treasury and issue bonds not to exceed $1,000,000,000 to obtain funds to carry out its purposes.

Endorsed by Wallace.

This bill has the endorsement of Secretary Wallace. A week ago last Saturday, in an address at Atlanta, he said, in defending the acreage reduction program:

"[illegible] of the problems of ten[illegible] cropping is not to [illegible]carding a program [illegible] means substantially [illegible] income to divide [illegible]mers, but rather in [illegible]nd industrial recov[illegible] of two-way foreign [illegible]h measures as the [illegible] bill."

TORTOISE ESCA[illegible]

R[illegible]

February 23, 1935

The Bankhead Bill, introduced February 11,

In 1930 there were in the United States 676,043 Negro farm tenants. They were 81.8% of the total number of Negro farmers. Negro sharecroppers in this census year numbered 382,304 or 46.3% of the total Negro farmers. Negro tenants (this term includes sharecroppers) farmed 70.8% of all the acreage farmed by Negroes in the United States. Negro croppers farmed 33% of the acreage farmed by all Negro farmers, but this was but 4% of the total acreage farmed by all farmers in the United States.

The data given above is for the United States as a whole. If the South is taken alone, it is revealed that every state from South Carolina west to Texas in the South had more than 60 per cent of tenancy. Moreover, much of the land still owned by farmers was heavily mortgaged to local banks and Eastern insurance companies, which were the real landlords. In Mississippi, for example, only 13% of the farmers owned their land free of debt. (See J. M. and E.W.S. Maclachlan, "Abolish Tenant Farming" New Republic--June 13, 1934)

Thus absentee landlordship abounds in the South. The Negro tenant, whether tenant on a cash rental agreement or a sharecropper, has suffered a precarious economic and social existence even in good times. In bad times, when cotton sells for less than ten cents a pound instead of 29 cents a pound, his lot is intolerable. The common experience of investigators is that the Negro sharecropper gets from 50 to 75 dollars in "furnishings" from March to September or October. For this pittance, he and his whole family produce the crop and harvest it. Both the crop and any benefit payments accruing as result of crop reduction programs are swallowed up by the landlord. From October until the following March the tenant is left with no job, no income and practically no means of subsistence. Moreover he may even be barred from relief--either because of mal-administration of relief funds by county officials or because of administrative rulings debarring farm families who made a crop from receiving relief. (Such a ruling exists in Alabama and other Southern states. Thus even though both crop and benefit payments are taken for past debts or alleged debts, relief officials in this state refuse relief to the penniless tenant families.)

Recent federal legislation has added an additional factor to this picture. Reduction of acreage devoted to major crops in the South (cotton, tobacco, sugar cane and rice) by about 40% has reduced the need for farm tenants. Unemployment among the farm tenant population has thus increased. And though this is denied by the AAA, another government bureau (The Central Statistical Board) has estimated an increase of 250,000 in the number of unemployed farm tenants and casual laborers for 1934 alone.

Present trends indicate smaller and smaller need for croppers and tenants. Control of crop production (The Agricultural Adjustment Program) and technological advances in cotton culture (use of tractors and possible use of mechanical cotton pickers--See "Revolution in Cotton" by Oliver Carlson, American Mercury, February, 1935) have created this condition. Plantation owners interested in profits now seek to relieve themselves of even the very tenuous responsibility for "furnishing" farm tenants from March to October. This is recognized by the Secretary of Agriculture in his report for 1934. He stated: "Moreoever many plantation owners in the South can no longer operate their plantations by the old methods which called for annual advances to croppers." (See Page 65, Report of the Secretary of Agriculture, 1934.) It is repeatedly substantiated in Rural Problem Areas Survey Reports of the Research Division of FERA.

The worsening of conditions among farm tenants in the South has led to their attempts to better their conditions through organizational methods. These organizational attempts, like similar beginnings in the trade union movement, have been met with violent opposition by landlords. (The Elaine, Arkansas riots several years ago had this basis. A number of lynchings have been caused because of disputes between tenant and landlord. See "Tightening the Cotton Belt", Webster Powell and Addison Cutler, Harpers' Magazine, February, 1934; and NAACP accounts of incidents at Marked Tree, Arkansas in January, 1935, which resulted in jailing of Ward Rogers, white organizer of a sharecroppers' union.)

49-16-75

Davis charged:

the reduction of the acreage under cultivation through the government rental agreement made unnecessary large numbers of tenants and farm laborers. Although the contract with the government provided that the landowner should not reduce the number of his tenants, he did so. The Federal courts have now refused to allow tenants to enjoin such evictions. Faced with this Dred Scott decision against farm tenants, the AAA has remained discreetly silent. Farm laborers are now jobless by the hundreds of thousands, the conservative government estimate of the decline in agricultural employment for the year 1934 alone being a quarter of a million. The larger portion of these are unskilled Negro agricultural workers--now without income and unable to secure work or relief.

But the unemployment and tenant evictions occasioned by the crop reduction policies of the AAA is not all. For the tenants and sharecroppers who were retained on the plantations, the government's agricultural program meant reduced income. Wholesale fraud on tenants in the payment of parity checks occurred. Tenants complaing to the Department of Agriculture have their letters referred back to the locality in which they live and trouble of serious nature often results. Even when this does not happen, the tenant fails to get his check. The remainder of the land he tills on shares with his landlord brings him only the most meagre necessities during the crop season, varying from three to five months. The rest of the period for him and his family is one of "root hog or die."

The past year has seen an extension of poverty even to the small percentage (a little more than 20 percent) of Negro farmers who own their own land. For them compulsory reduction of acreage for cotton and tobacco crops, with the quantum of such reduction controlled and regulated by local boards on which they have no representation, has meant drastic reduction of their already low income. Wholesale confiscation of the income of the Negro cotton and tobacco farmer is being made by prejudiced local boards in the South under the nose of the Federal government. In the wake of such confiscation has come a tremendous increase in land tenantry as a result of foreclosures on Negro-owned properties.

The Department of Agriculture has suppressed a report on conditions in Eastern Arkansas. Arkansas courts have denied sharecroppers the right to sue landlords or enjoin them for violating contracts between the Secretary of Agriculture and the landlords for the benefit of the tenants.

"(a) John Vance of Panola County, Mississippi owned a 40 acre farm, subject to a mortgage of less than $400. He was several times refused the opportunity of securing mortgage relief through Federal authorities, the real reason being that his mortgage holder wanted to foreclose on the valuable property. Vance secured for his son a tract of land for sharecropping promising to pay a bale of cotton as rental. When the poor land thus rented produced only 424 pounds of cotton, Vance offered to make up the 76 pounds difference to the landlord, despite the fact that his son was the renter. The landlord insisted instead that Vance pay the cost of the "tags" on the cotton. When Vance refused, the landowner had the parity checks held up both for the land rented by him and for the acreage reduced on Vance's own property. Vance wrote to Washington. Officials here sent a copy of his letter to the County Farm Extension Agent. When Vance went to the latter's office to inquire about his checks he was beaten over the head and face and kicked in the groins by the government agent. Later the landlord with whom the controversy had arisen gave him 24 hours to leave Panola County. Vance left for Memphis. In leaving he had to turn over a part of his livestock, two horses, a cow and a heifer to his mortgage holder for $20 cash, one of the horses alone bringing that amount for the lender. Later this same mortgage holder refused to let Vance's son manage the place or his wife remain there. Without court action of any kind he took possession of the land and is in complete control. Later he wrote to Vance advising him to sign a quit-claim deed to the premises since 'it is no longer safe for you or your family in Panola County.' Vance is now destitute in Memphis."

About this case the Department of Agriculture has done nothing.

"(b) The case of Will Rideout of Snow Lake, Arkansas is substantially the same. Rideout walked one hundred miles to Little Rock to seek out a lawyer to 'get me my justice.' His story was that he had been forced to sign away his cotton checks to a landlord in the presence of the government agent and a sheriff. Later when he complained he was denied 'furnishings' for last year's cotton season. He worked on the Mississippi Levee for a while at $2.00 a day. Later his former landlord offered him 75 cents a day to chop cotton. When Rideout refused to work, the landlord had him fired from levee work."

A number of similar cases reflect the same conditions and the same callous indifference of the Agricultural Adjustment Administration.

A correspondent of the NEW YORK TIMES, F. Raymond Daniell, tells of the situation in Arkansas in April, 1935:

49-16-74

Today the situation which exists is simply this: hundreds of thousands of farm tenants are no longer needed by plantation owners. They cannot be absorbed in industrial or urban communities already glutted with unemployed workers. There is no employment for them on the farms. They have no land, farm implements or capital necessary for seed, fertilizers and other items necessary to begin commercial farming. Even if they had, the effect of thousands of new commercial farmers beginning operations in the South would be to flood the market with surplus farm products. These surpluses would depress farm prices, since the buying power of urban dwellers has not been made large enough for them to consume even the farm goods at present produced.

The problem stated above has been given some attention by the federal government. The Secretary of Agriculture in his 1934 annual report pointed out the depletion in soils value due to the one crop system, the growth of farm tenancy, urged an improvement of conditions of agricultural tenure (See Pages 65 to 69, "Report of the Secretary of Agriculture, 1934.) He stated: "It may be desirable to plan for a larger number of small semi-commercial or partially self-sustaining farm families, and for some reduction in the number of large commercial farms." But he also pointed out, "Ordinarily an increase in the farm population increases both production and fixed charges. As a result the income of farm operators declines."

Students of the problem have also pointed to subsistence farming as a partial solution. (See Abolish Tenant Farming cited above). Thus the Maclachlans (authors of the above article) urge immediate establishment of subsistence homesteads for farmers (the present subsistence homesteads are planned for industrially stranded workers and do not include stranded farm families). As a part of their plans, however, they urge: 1. long term periods for repayment; 2. use of land which is average or better; 3. settlements large enough to make adequate support of school and medical facilities possible; 4. complete series of home-craft processes established, as projects for grinding grain, mixing fertilizer, etc.; 5. Dealing with Negro tenants on the basis of need and according them community self-government.

"Finally, in the most unscrupulous cases, share-croppers are denied any settlement whatsoever at the season's end. Out of 338 families upon whom the figures are reasonably clear, our records contain 86 cases who report that no settlement was ever made. In such a case the cropper ends the season as he began, without cash resources. Even when settlement is made, cash is frequently not paid. The cropper is furnished with a supply of "dodolum" books, containing credit coupons. Such books are widely used at all seasons to facilitate the credit business of the commissary stores."

Ch XIII
125 The Path of Consumers' Cooperation.

~~MEMORANDUM ON THE ECONOMIC CONDITION OF THE AMERICAN NEGRO IN THE DEPRESSION~~

~~November 20, 1934~~

From long thought, I am convinced that the solution of the present economic problem of the American Negro is a matter of organizing his power as a consumer and entering, through this path, employment as a middle-man and producer.

I believe that the campaign of appeal for social justice has reached at present its limits. Every essential charge has been answered and every demonstration made. No one today can maintain successfully that Negroes cannot be educated; that they cannot work as free and skilled laborers; that they cannot contribute to science and art; and that they do not deserve civil and political rights under the same limitations that are applied to other American citizens.

Despite this, they still form in the main a servile caste on the edge of economic subsistance, largely deprived of civil and political rights, with limited chances for education and small opportunity to enter the higher walks of life.

Power is now needed to reinforce appeal, and this power must be economic power; that is, the nation must be shown that the Negro is a necessary part of the wealth-producing and wealth-consuming organization of the country, and that his withdrawal from these functions in any degree diminishes the wealth and efficiency of the country.

This fact might be demonstrated if a way were opened for the Negro to enter modern industry at a decent wage and with civilized treatment. This way might be opened by employers, which was the plan of the late Booker Washington; or by trades-unions and labor organizations, which is the plan of many of the younger Negro economists and of the white radical groups.

18-91-64

To these, the Communists (oppose an absolute denial. They ridicule such pacifists as cowards ~~and even (revolutionaries.)~~ They accuse them of hedging and inability to see facts or use reason. They regard the Marxism ~~characteristic~~ doctrine as an inspired whole which must be held as a religious dogma and they seek for Marxian texts to support their every position and ~~to~~ oppose all people who do not agree with them. In fact, a complete parallelism between a religion like Christianity and a religion like communism may be drawn. It is not enough for the orthodox Christian to acknowledge the peculiar ~~miracles~~ means of Jesus Christ, his ~~loyalty~~ conduct his moral ideals and his influence upon man. They want to add to that a system of theology, including a plan of salvation, a doctrine of atonement, and a metaphysical explanation of the Trinity, and ~~out of this~~ thus they proceed to let out of the church and the congregation of the righteous persons willing to follow the Golden Rule and to acknowledge the moral ~~teachings~~ majesty of Jesus.

No one can categorically deny that the Marxism dialectic may ~~not~~ be true, just as no one can deny that ~~the~~ a virgin birth, but it is possible for persons to assume that gradual processes of reform can bring in the more perfect state, and that war and violence and blood shed is not absolutely inevitable. ¶ Assuming this and working toward it, the liberal elements of nearly every modern state could slowly achieve socialism in face of the dangerous and selfish and organized opposition. ~~But~~ The difficulty is that not only the Communists, but also the Socialists, have adopted the slogan of "All or none." They will not co-operate with Liberals and reform, but want the whole socialistic state either ~~at~~ by general election or to through revolution, and the result is that in England, France, Germany, Austria, Italy and other countries where socialistic sentiment is either in actual majority or a powerful minority, their action is absolutely nullified by division ~~among themselves~~ and taking advantage of these divisions as to method and immediate aim, capitalism or Fascism rules the state. ¶ It may be said, then, that the labor movement in America which accepts nothing less than violent revolution as the end of its organization, ~~paralyses~~ and inhibits all reform action, and that ~~the~~ a minority group like Negroes which suffers in itself every disadvantage of being the poor and disfranchised, cannot take part in any such movement. Even if it believed in the inevitable violent revolution of the proletariat, Negroes of the United States would know that nothing would so quickly crush and overwhelm attempted revolution as to have black people a part of it; and if they do not believe in it, they cannot allow themselves to be made the shock troops of communistic advance. This

49-16-10

does not for a moment deny that the main objects of communism and ~~Fascism~~ Social; that is to say, the purpose of putting the ownership and control of capital in the hands of the state, the purpose of making incomes equal, the purpose of concentrating political power in the hands of the workers, that this is not all a legitimate and in the long run inevitable reform if we are to escape the recurrent ~~oppositions and~~ depressions of the capitalistic regime. This leaves the American Negro in a difficult position. He does not need to be taunted by Communists or threatened by capitalists not to know this, but he does need to keep his head clear and his purpose firm and to search for such action as will further the realization of the ideals of socialism for himself and all men, while at the same time just as clearly and firmly avoid bloodshed and violence in its accomplishment.

If the white world is unable to re-build and reform the economic structure without violence and bloodshed, that is their drear misfortune and it is our business not to lead or abet such revolution, but before and after, to begin ~~their~~ our re-education and training of men + there to make ~~them~~ us fit for the socialistic state.

It must be remembered that what the world is threatened with today despite propaganda to the contrary, is not a bloody insurrection of the working classes, but it is violence, repression and armed attack on the part of organized wealth and capital which uses this Fascist method to protect ~~and~~ preserve its present power.

I know something of Russia. I have been in Leingrad and I have lived in Moscow. I have seen Nishni-Novorod and the Volga. I have looked upon the flattened domes of Kiev and I have stood in Odessa. I have talked with some of the leaders of the new Russian state and studied before and after my visit the history and development of this land.

I firmly believe that Russian today has the most progressive program of social reform of any nation on earth and is doing more toward accomplishing it. ~~And despite this firm and deep-seated belief, I believe that the American~~

Nevertheless the United States is not Russia. The analogy of ~~facts~~ Jews and other races in Russia with the situation of Negroes in the United States is absolutely false and misleading. The key to the success of reform in Russia has been the fact that the people who led the Revolution were Russians; knew Russia and its history and knew the psychology of its people; and were perfectly willing, despite the howls and antics of their own fellow Communists, to modify Marxism and even set it aside, when it was necessary to do this in order to accomplish the great ends of the Russian Revolution. ~~And that~~ Tentatively

28-91-44

As Reinhold Niebuhr has recently said: "In the "Revolutionary Socialistic Review" for February, 1935:

"A wise radical will not assume the onus of breaking with the democratic process or of finally tearing the fabric of traditional political procedure. Neither will he put himself in the position of the pathetic German Socialists who defended democracy long after their opponents had destroyed it so that what they were defending had become the shadow of a shadow. The wise radical will rather take the position that he will try to preserve the essentials of democracy by force before he will allow its enemies to destroy it completely. The R. P. C. program sacrifices all the advantages which socialism ought to have as the fulfillment of the democratic dream. It announces an insurrectionary revolution without a word about the kind of situations which arise in the decay of the capitalistic structure in which it becomes impossible for any party to act in terms of

taught their interdependence with the workers. There is not a word about the ambiguous position of the agrarian in modern industrial society which makes him, however much a victim of capitalism, something less (or more, if tion of an organized social will, h... integrated, against a social will which is no longer able to maintain the peace and order of society.

A wise socialism, no matter how revolutionary, will exploit American history very much more than the R. P. C. has done and will not deal so cursorily with distinctive American aspects of the social problem. I know of no left wing Socialist in England who doesn't intend

to exploit the constitutional history of England since the 17th century and place the onus of breaking that constitutional tradition upon the conservatives. Put in specific terms, radical Socialists of England are not certain that the crown will ultimately abide by the will of a socialist parliament. But they will act as if they are quite certain that it will abide by it (meanwhile no doubt preparing for other eventualities). The way that question is being handled in England and the way our romantic Socialists speak of revolution is the difference between politics as a science (which understands the tremendous importance of imponderables) and politics as romance, unconsciously used as a way of satisfying perso... emotional needs. T...

A careful knowledge and study of the situation in America and the history of its constituents ~~eliminates~~ any easy way out for the mass, ~~or costly ways of reform than that which Russia followed and~~ but certainly, so far as the American Negro is concerned, there is absolutely no choice. While he fights the battle of labor with its laborers willing to fight with him, he does not accept or follow the program of war and revolution.

49-16-103

~~124~~ 106 Chap. XII

INSERT...~~Chapter XIV.~~

We must, on the one hand, avoid revolution or the fomenting of violence and bloodshed. First, because no reasonable belief in the socialism which Karl Marx so bravely and clearly advocated restates a further implicit faith in his Hegelian materialism which makes revolution inevitable; secondly, because even though one is bound to accept the Marxian interpretation, nevertheless, as Stolberg says:

"It must clarify the issues between the coming American revolution and the reactionary terror which monopoly capitalism will institute against it. It must chart a course through all the winds of doctrine and the chaos of a dying order. The principles of revolutionary cartography are everywhere the same, but the map of every culture differs."

Thirdly, because the American Negroes does not represent any class conscious laboring group and is not recognized in its membership and because of public opinion in the laboring class, it is a hinder rather than a help to any revolutionary movement which it should join.

46-16-83

But while we avoid revolutionary methods and propaganda, we must just as carefully and indeed more carefully avoid allowing ourselves to be made the tools of capitalism to crush the proletariat. Our sympathies must be with the laboring classes and within our own group we must strive with desperate effort to put the power in the hands of the laborers rather than in the hands of any incipient bourgeosie. This will, I admit, call for difficult steering, but it is a matter of life and death.

American

If communism is the answer, we are speechless, for first of all, we represent no class conscious proletariat in the United States and never will in any easily conceivable future.

our

to our plight

~~#23~~ Chap. XII

~~United States, the planning and [illegible] of our Emancipation, is pure nonsense.~~ We have got inside of our group a life and death struggle for the triumph of radical ideas for Negro uplift, but that is no reason why we should surrender to a crowd of ignorant folk whose sole excuse for leadership is the fact that they read a few pages from "Das Kapital", and that they do not wash their socks. Negroes who have any sense at all know perfectly well that it would be in absolute agreement with the plans of this crazy group to push the Negroes into abortive revolution in the United States; to make them the helpless victims of a hope lost before it was born; and then, if they won, a radical kingdom over the shrivelled corpses of 12 million fools; they would still count it a splendid success.

~~Communist~~ ~~Their~~ went into the Scottsboro case, not just to free those boys, but to advertise ~~themselves~~ Communism. They went into the North Carolina strike, not to help Negroes, but to help themselves ~~whites~~. They went into the tenant-farmers agitation, not caring a bit what happened to these helpless and ignorant folk, so long as they raised hell. This kind of foolishness must stop. The influx of these people into ~~our~~ conferences for earnest planning and careful study of our situation with the idea of taking the initiative from us and covering our leaders with ridicule, and smashing through to something which they think will be ~~victory~~ despite

its effect upon us, is more than silly, and must not be forwarded and acquiesced in by the younger group of Negroes. We have got to achieve for the American Negro a dictatorship of his proletariat in his own group as part of the proletariat of the nation, but we have not got to commit suicide simply because we are threatened with ridicule and mob violence by people who have not brains enough to know what they are talking about.

46-16-

"You count on the Negro middle-class to usher in this co-operation. What you need to do, Dr. Du Bois, is to cease dulling your vision to the fact that the Negro middle-class is after all a lousy minority bourgeoisie, of which your late associates at the N.A.A.C.P. should have given you ample proof.

"Your economic thought is too much determined by the notion that the establishment of a Negro bourgeoisie is an essential first step to an ultimate solution. What if the larger white bourgeoisie is crumbling? I went to Hampton the other day. A young Negro teacher of economics was talking about the great field for Negroes in building and operating filling stations. Does he know that there is already 1 to every 87 motor vehicles in the country? He does not. He simply has an injection of race pride."

"And I have a couple of letters from Bennett teachers who were equally hurt over your complete acceptance of the leadership of the stinking Negro middle-class.

"All Negro intellectuals are hoping to work either for relief or in some government job. That is the traditional way out for the Negro intellectual. Post Office, schools and now relief. What of the future? Will not these black bureaucrats behave precisely as Britain's Nigerian chiefs and priests?

100-9-14-175

"As I get your program: socialism is coming. We will work for it separately. We will work for a socialist Negro to be handed over to the movement when fully developed. But who are your teachers? Young men brought up on the Foundations and suckled on teaching jobs. Young men and women who have three hours credit in labor history taught by persons who decry the class struggle. In short, you want only conservative young intellectuals who live as they can beg, who abhor violence without knowing that the class in power determines that."

"Violence? The CP of USA is led by stupid men, but it is nevertheless a working men's organization. The SP is confused and inept for the reason that its leaders feel just as you are writing and talking. In writing about Violence, you write like an apostle of Abdul Bahia. We are criticized for being the communists that we are, but certainly we are not above criticizing the CP. But in criticizing the CP we are not doing so in the belief that the big interests with their private police, gas guns, etc., are going to say:

Now in the present conflict and in all similar endeavors for social uplift, we lack the false sympathy and brutal singleness of aim which characterizes war. When, therefore, the Joint Committee complains of discrimination in the New Deal, both parties lack effective answers. The one doesn't know what war it wishes to win and the other has no plans to guide it in winning its own war. The New Deal does not clearly know its objects. Does it want restoration of prosperity? If so, this cannot satisfy the Joint Committee, because the Negro never adequately shared American prosperity. If now the New Deal envisages a bread idea of social security and economic justice, how far does that include the American Negro? The answer to this question involves a carefully thought-out plan by Negroes for Negroes and the Joint Committee has no such plan. All it can do is to be shrill in complaint and protest when others present plans for themselves which not unnaturally do not include us, but when it comes to positive constructive measures for ourselves, the Joint Committee offers none and has none. And how could it considering its constituent supporters. Would anyone expect a plan of economic adjustment from the National Baptist Convention or of effective labor organization from the N. A. A. C. P.?

If such a careful plan and clearly recognized objectives existed, then the Joint Committee could arrange its strategy accordingly. Its object would be not to fight discrimination, but to gain such economic foothold as to make discrimination a losing proposition for the land. It would recognize the fact that attacking and victorious armies often retreat to consolidate their positions, to build up reserves and to make liaison with the Allies. It would not be guilty of the cruel asininity of asking 300 poor outcasts in Alabama to starve for a principle which does not cost Mr. Oxley a damned

49-16-84

There are about 8,000 colored persons monthly working on various work relief projects in the national capital with a payroll in December of $157,000. A total of over $2,000,000 during 1934 was expended on the relief for Negro workers.

cent to proclaim. If the principle of a minimum wage under all circumstances and everywhere was so sacred to us that these workers out there ~~three in this room~~ would give ~~tonight~~ half or even more of their incomes to feed those who have no relief funds or wages ~~go~~ without feed and clothes and shelter to maintain it, then we could just and honestly yell defiance.

But how shall we decide the essential basic principles for which we must stand, bleed and die? Evidently by wide, careful, intelligent social planning of Negroes, based on knowledge and research. Lacking this, and not having the sense to recognize this lack, the Joint Committee falls back on a National Negro Congress to make confusion worse confounded. Such popular congresses ratify plans already carefully thought out. They do not and cannot initiate such programs and in our present muddle such a vast mass meeting would inevitably result in something worse than nothing.

44-1-98

Now in the present conflict and in all similar endeavors for social uplift, we lack the false sympathy and brutal singleness of aim which characterizes war. When, therefore, the Joint Committee complains of discrimination in the New Deal, both parties lack effective answers. The one doesn't know what war it wishes to win and the other insists that ~~has no plans to guide it in winning its own war~~ the winning the war for whites includes Negroes. The New Deal does not clearly know its objects. Does it want restoration of prosperity? If so, this cannot satisfy the Joint Committee because the Negro never adequately shared American prosperity. If now the New Deal envisages a broad ideal of social security and economic justice, how far does that include the American Negro? The answer to this question involves a carefully thought-out plan by Negroes for Negroes and the Joint Committee has no such plan. All it can do is to be shrill in complaint and protest when others present plans for themselves which not unnaturally do not include us; but when it comes to positive constructive measures for ourselves, the Joint Committee offers none and has none. And how could it considering its constituent supporters? Would anyone expect a plan of economic adjustment from the National Baptist Convention or of effective labor organization from the N. A. A. C. P.?

41-9-167

If such a careful plan and clearly recognized objectives existed, then the Joint Committee could arrange its strategy accordingly. Its object would be not to fight discrimination, but to gain such economic foothold as to make discrimination a losing proposition for the land. It would recognize the fact that attacking and victorious armies often retreat to consolidate their positions, to build up reserves and to make liaison with their Allies. It would not be guilty of the cruel asininity of asking 300 poor outcasts in Alabama to starve for a principle which does not cost Mr. Oxley a damned cent

cent to proclaim. If the principle of a minimum wage under all circumstances and everywhere was so sacred to us that these in this room would give tonight half or more of their incomes to feed those who go without food and clothes and shelter to maintain it, then we could justly and honestly yell defiance.

41-9-174

But how shall we decide the essential basic principles for which we must stand, bleed and die? Evidently by wide, careful, intelligent social planning of Negroes, based on knowledge and research. Lacking this, and not having the sense to recognize this lack, the Joint Committee falls back on a National Negro Congress to make confusion worse confounded. Such popular congresses ratify plans already carefully thought out. They do not and cannot initiate such programs and in our present muddle such a vast mass meeting would inevitably result in something worse than nothing.

41-9-173

It is the duty of socialism to battle the war psychologically and not to promote it. Early Christianity with its battle hymns and war metaphors made the same ghastly mistake,--"Its blood-red banner streams afar" down to our own day.

If, now, reaction toward capitalism can no more save Negroes today than it could in the past; and if the opportunity to ally the Negro with white labor has been limited in the past and while wider today is still too limited for effective action and if a program of avowed violence is out of the question, what can the Negro do?

41-9-172

Such discrimination, represented in the United States by various patriotic women's organizations, by war veterans' leagues, by the army and navy and its friends, are the most dangerous advocates of war and murder; and it is foolish for those who believe in world Peace and economic Justice to be so misled by this reaction as to burst into wild words and futile deeds and thus give greed a chance to kill the innocent.

Granted that the Marxian dialectic is a masterful statement of a great truth, yet the Revolution which it sets down as inevitable, may logically, (even if not probably,) come by votes without violence, by restricted violence, or if with widespread violence, not with cruelty and unnecessary bloodshed. They are fools who think that successful and beneficial revolution consists primarily in raising the devil and it is very doubtful if such persons will ever lead America to Peace and Justice. It may well be that in the awful and fundamental changes to come, calm, silent and com-

It is for this that Tuskegee fought," he declared.

"Do not let the effort of Tuskegee Institute be misconstrued and misrepresented to the board.

"It is not an attempt to undermine the code.

7-1-38

"It is not an attempt to undermine the labor union, or the standards that have been set up for labor in this country. It is an attempt to get the black man a chance under those standards. It is an effort to gain for the black man the protection of that code, in the opportunity that he does have to work. But I do insist, to those who talk of equality, that the beginning of equality is the equality of opportunity.

"That is the start of it

Constructive Segregation.-But our program in the future cannot be confined to this. It has got to be changed from one mainly of agitation and appeal to one of inner organization for self-defense. Not for offense, not for blind Chauvinism, but for sheer existence. If we were today earning a living; if we had average incomes which would support life on a plane that meant health, education and the essentials of culture, we could sit down fx before the ramparts of race hate and continue our slow, determined, unceasing undermining of the walls. But we are on the edge of starvation and we do not need to be. Most persons writing concerning the present depression seem to regard the Negro as utterly helpless; and even in normal times the current philosophy is that both in the United States and elsewhere, we are absolutely at the mercy of the surrounding economic organization. This assumption arises from the fact that we believe that no group can approach economic independence or a position of self-sustaining inter-dependence unless it is organized as a nation with law-making powers, armies and mx police.

49-17-83

On the other hand, we should remember that the A merican Negro numbers about 12,000,000 and thus we are much larger than either Benmark, Greece, Hungary, the Netherlands, Norway, Portugal or Sweden and very nearly the size of Egypt, half the size of Spain, and one-third the size of Brazil. This surely indicates that we must have great economic power. This power is curtailed by the fact that we have no decisive economic place in production or transportation, in commerce or credit, or in government; we sell our labor and farm produce at prices determined by a market in which we have little influence; and we must buy what is offered to us at prices determined by others.

Discussion Questions.

What ~~defenxexdid~~ opposition did the Negro offer to his subjection to slavery,-in Africa,-in colonial America,-in pre-Civil War days?
How was that opposition and defense broken down and off-set?
Was the Negro always submissive, and what was his attitude toward war,-revolt- violence?
What outlets did American conditions allow the Negro for his desire for freedom and independence? Did the Negro have special motives and incentives for engaging in war and military service? How was this related to his own desire for freedom?
What was the Negro's war record,-in the Revolutionary War,-in the War of 1812,-in the Civil War?
What effect did his direct and indirect participation in the Civil War have upon the outcome of the slave cause?

heavy unemployment among Negro teachers. The government was finally compelled to send out a memorandum on this subject ruling that Negro teachers should always be employed for Negro pupils in states maintaining segregated schools.

In the matter of Emergency Federal Aid for schools, the discrimination was still more flagrant. Here the money was alloted to the state and spent as the state decided, following the pattern of its usual differential. Georgia, which in 1929-30 spent $21,000,000 out of its total $23,000,000 school appropriations on white schools, took a Federal grant of $4,981,881 in 1933-34 and spent 87.3% on white schools despite the fact that colored school children formed 39.1 % of the population.

49-17-64

Security and Unemployment Provision.- The Committee on Economic Security, established June 29,1934, was assisted by an Advisory Council, but no Negro had a place on that council. The Wagner-Lewis Bill for social and unemployment insurance which was legislated largely as a result expressly omits from unemployment protection domestics and agricultural workers, thus leaving 15 out of every 23 Negro workers unprovided for in this regard. With respect to security and old age provision, as Dr. Geo. Haynes pointed out in the hearings, without express provisions in the bill prohibiting discrimination on account of race and color, Negroes would receive less compensation than whites since Fedreal grants were given to the Boards of the various states with no guarantees of equitable distribution.

establish the "Farm Tenant Homes Corporation", similar in legal structure to the Subsistence Homestead Corporation under the control of the Secretary of Agriculture to "purchase farm land for lease or resale to farm tenants and sharecroppers or make loans to these classes for the pupposes of purchasing farm homes." The corporation with capital established at $ 100,000,000, was authorized to issue bonds up to one billion Prefernce was to be given to farm tenants of good,moral character with dependent families and who have had practical experience in farming, and they were to be allowed from 30 to 50 years to repay the purchase price of the land as loaned by the Corporation.

49-17-81

(1934) [in Black Dawn]

1. We American Negroes are threatened today with lack of opportunity to work according to gift and training and lack of income sufficient to support healthy families according to standards demanded by modern culture.

2. In industry, we are a labor reserve, fitfully employed and paid a wage below subsistence; in agriculture, we are largely disfranchised peons; in public education, we tend to be disinherited illiterates; in higher education, we are the parasites of reluctant and hesitant philanthropy.

3. In the current reorganization of industry, there is no adequate effort to secure us a place in industry, or to open opportunity for Negro ability, or to give us security in age or unemployment.

4. Not by the development of upper classes anxious to exploit the workers, nor by the escape of individual genius into the white world, can we effect the salvation of our group in America. And the salvation of this group carries with it the emancipation not only of the darker races of men who make the vast majority of mankind, but of all men of all races. We, therefore, propose this:

BASIC AMERICAN NEGRO CREED

(Banc)

A. As American Negroes, we believe in unity of racial effort, so far as this is necessary for self-defense and self-expression, leading ultimately to the goal of a united humanity and the abolition of all racial distinctions.

B. We repudiate all artificial and hate-engendering deification of race separation as such; but just as sternly, we repudiate an enervating philosophy of Negro escape into an artificially privileged white race which has long sought to enslave, exploit and tyrannize over all mankind.

C. We believe that the Talented Tenth among American Negroes, fitted by education and character to think and do, should find primary employment in determining by study and measurement the present field and demand for racial action and the method by which the masses may be guided along this path.

D. We believe that the problems which now call for such racial planning are Employment, Education and Health; these three: but the greatest of these is Employment.

E. We believe that the labor force and intelligence of 12 million people is more than sufficient to supply their own wants and make their advancement secure. Therefore, we believe that, if carefully and intelligently planned, a cooperative Negro industrial system in America can be established in the midst of and in conjunction with the surrounding national industrial organization and in intelligent accord with that reconstruction of the economic basis of the nation which must sooner or later be accomplished.

F. We believe that Negro workers should join the labor movement and affiliate with such trade unions as welcome them and treat them fairly. We believe that workers' councils organized by Negroes for interracial understanding should strive to fight race prejudice in the working class.

47-8-98

G. We believe in the ultimate triumph of some form of Socialism the world over; that is, state ownership and control of the means of production and equality of income.

H. We do not believe in lynching as a cure for crime; nor in war as a necessary defense of culture; nor in violence as the only path to economic revolution. Whatever may have been true in other times and places, we believe that today in America we can abolish poverty by reason and the intelligent use of the ballot, and above all by that dynamic discipline of soul and sacrifice of comfort which, revolution or no revolution, must ever be the only real path to economic justice and world peace.

I. We conceive this matter of work and equality of adequate Income is not the end of our effort, but the beginning of the rise of the Negro race in this land and the world over, in power, learning and accomplishment.

J. We believe in the use of our vote for equalizing wealth through taxation, for vesting the ultimate power of the state in the hands of the workers; and as an integral part of the working class, we demand our proportionate share in administration and public expenditure.

K. This is and is designed to be a program of racial effort; and this narrowed goal is forced upon us today by the unyielding determination of certain elements in the white race to enslave, exploit and insult Negroes; but to this vision of work, organization and service, we welcome all men of all races and colors so long as their subscription to this basic creed is sincere and is proven by their deeds.

65-8-47

FOREWORD

1. We American Negroes are threatened today with lack of opportunity to work according to gifts and training and lack of income sufficient to support healthy families according to standards demanded by modern culture.

2. In industry, we are a labor reservoir, fitfully employed and paid a wage below subsistence; in agriculture, we are largely disfranchised peons; in public education, we tend to be disinherited illiterates; in higher education, we are the parasites of reluctant and hesitant philanthropy.

3. In the current reorganization of industry, there is no adequate effort to secure us a place in industry, or to open opportunity for Negro ability, or to give us security in age or unemployment.

4. The labor force and intelligence of 12 million people is more than sufficient to supply their own wants and make their advancement secure. Therefore, we believe that, if carefully and intelligently planned, a co-operative Negro industrial system in America can be established in the midst of and in conjunction with the surrounding national industrial organization and in intelligent accord with that reconstruction of the economic basis of the nation which must sooner or later be accomplished.

5. We welcome the burden of the uplift of our own masses until they as a conscious and intelligent proletariat can co-operate with all workers in assuming democratic control of the state in the interests of the working class. Only in this way can the American Negro enter the new industrial kingdoms of the world standing on his own economic feet.

6. Not by the development of upper classes anxious to exploit the workers, nor by the escape of individual genius into the white world, can we effect the salvation of our group in America. And the salvation of this group carries with it the emancipation not only of the darker races of men who make the vast majority of mankind, but of all men of all races. We, therefore, propose this:

COLORED FARM OWNERS INCREASED AND TENANTS DECREASED IN THE SOUTH, 1930 to 1935

Director William L. Austin of the Bureau of the Census announces an increase, during the five years 1930 to 1935, of 4,046 farms operated in the South by colored owners, i. e., by Negroes, Indians, Chinese, Japanese and other nonwhite races. Increases in colored owners were reported for Virginia, South Carolina, Florida, North Carolina, Louisiana, Texas, West Virginia, Delaware, and Tennessee. However, South Carolina and West Virginia were the only southern states to report increased acreages for colored owners. There was a decrease of 69,986 other colored farm operators, including 448 managers, 24,489 croppers, and 45,049 other tenants. During the ten years 1920 to 1930 there was a decrease of 35,570 colored farm owners in the South.

From 1930 to 1935 the land in farms of all colored operators in the South decreased by 2,219,482 acres. This represented a decrease of 945,216 acres for colored owners, 86,362 acres for managers, 492,415 for croppers, and 695,489 acres for other tenants. There was a decrease in the average number of acres per farm for both colored and white owners in the South, accompanied by a proportionate decline in the value of owned farm land and buildings.

In the North and West the number of colored farm operators - all tenures - increased in the States comprising the New England, the Middle Atlantic, the East North Central, the Mountain and the Pacific geographic divisions. The number of white farm operators increased in each geographic division and in each State.

1/ The South reported 381 Colored farm managers in 1935 and 829 in 1930.

Reg #7510

THE VOLUME, "NEGROES IN THE UNITED STATES: 1920-1932" IS ON FILE IN ALL DEPOSITORY LIBRARIES.

11-6-11

2 000 000 farmers & farm labourers

25 000 lumbermen

~~37 000 Coal~~ miners

75 000

5 000 fishermen

11 000 masons

32 000 carpenters

23 000 stationary engineers & firemen

8 000 machinists

21 000 Automechanics

8 000 iron moulders

18 000 tanners

13 000 plasterers

4 000 aluminum

7 500 Leather

4 000 Chemical workers

20 000 Cigar & Tobacco factory workers

32 000 Clothing factory

18 000 food industries

24 000 iron & steel

10 000 lumber & furniture

18 000 musical instruments

~~224 000 Railway workers~~

605 000 Laborers

25 000 longshoremen

137 000 Chauffeurs & drivers

24 000 garage workers

59 000 street & road workers

102 000 railway workers

4 800 locomotive firemen

6 000 mail carriers

25 000 delivery men

26 000 Laborers coal & lumber yards

13 000 salesmen

35 000 Laborers, textiles service

136 000 professional service

16 000 Barbers & beauty

4 000 cleaning & dyeing

17 000 elevator boys

18 000 janitors

56 000 laundry workers

9 000 restaurant keepers

~~212 000 accountants & clerks~~

17 000 clerks

15 000 textile workers

89 500 semi-skilled

A PAGEANT IN SEVEN DECADES, 1868-1938

By W. E. B. DuBois

I HAVE been asked to review my life and I have chosen to essay this from the aspect of an historical pageant of human kind in which I have been a more or less active spectator, and whose end and meaning I have sought to see. It is not easy to do this; deeds, facts and fancies flow so ceaselessly and, with occasional whirlpools, so smoothly on, that one grasps and arranges them and views them with difficulty. Temptation to topical treatment is barred by the alchemy of time which not simply prolongs life but successively changes all perspective and interpretation. I find it better then to group my years in decades from childhood to today; seeking in each term of ten years the more or less elusive unity that may lie therein and checking somewhat my present memory by such documents as may partially recreate the past.

The First Decade—Childhood, 1868-1878—*birth-10 years.*—The year of my birth was the year that the Freedmen of the South were enfranchised and for the first time as a mass took part in government. Conventions with black delegates voted new constitutions all over the South; and two groups of laborers—freed slaves and poor whites—dominated the former slave states. It was an extraordinary experiment in democracy. Thaddeus Stevens, the clearest headed leader of this attempt at industrial democracy, made his last speech impeaching Andrew Johnson on February 16 and on February 23 I was born.

I had a pleasant childhood. I can remember no poverty although my family was certainly poor. I represented the third generation from three small land holding brothers on my mother's side and the fourth generation from a West Indian planter on my father's. The outstanding thing in my earliest memory was the school. In a letter which I began to my grandmother in 1877, after conventional thanks for some present, I plunged

right into the real subject, "My school house stands a little way from Main Street." I remember it vividly; down a lane with a great choke-cherry tree on the right; on the left the wooden primary and grammar school and farther on the right, the brick grammar and high school. I attended these schools regularly from five or six years of age until I was sixteen with hardly a day's absence.

The town and its surroundings were a boy's paradise: there were mountains to climb and rivers to wade and swim; lakes to freeze and hills for coasting. There were orchards and caves and wide green fields; and all of it was the free property apparently of the children of the town. My family were pleasant and miscellaneous: the father was dead before I can remember; the mother brown and quietly persistent; the aunts and one uncle a bit censorious but not difficult to get on with; and then an endless vista of approving cousins.

The town was shut in by its mountains and provincialism—cut off both from Boston and New York state. My first glimpse of the outer and wider world was through Johnnie Morgan's news shop which occupied the front end of the post office. There newspapers and books were on display and I remember very early seeing pictures of "U. S." Grant and of Tweed who was beginning his extraordinary career in New York state; and later of Hayes and the smooth and rather cruel face of Tilden. Of the great things happening in the United States at that time, we were touched only by the Panic of 1873. When my uncle came home from the little town east of us where he was the leading barber, he brought me, I remember, a silver dollar which was an extraordinary thing; up to that time I had seen nothing but paper money. I do not remember hearing anything said about the Fifteenth Amendment which became law in 1870; but there were a few new colored people, "contrabands," who came to town. One family particularly I liked, they were so jolly and darkly handsome.

Charles Sumner died and the Freedmen's Bank closed when I was but six years old, and when I was eight there came the revolution of 1876. But I hardly knew of it. And, too, of the world overseas: the Franco-Prussian War; the ups and downs of Disraeli and Gladstone; the opening of the Suez Canal;—of these things my little village said nothing nor did they mention the fact that the Medji Emperors of Japan ascended to new and ever growing power in the year I was born.

The Second Decade—Youth, 1878-1888—10-20 *years.*—The United States in the decades 1870-1890 was an extraordinary country. Grant Hayes, Garfield, Arthur and Grover Cleveland were Presidents. James G. Blaine was an aspirant who barely missed the highest office, and the country was reckless and prosperous; squandering its seemingly endless resources; tying east and west with railways; exploiting iron and coal and oil and making fortunes for a new and ruthless caste of business men who were cashing in on the cost of Civil War. The results of this I could easily see in my town. I grew up in the midst of definite ideas as to wealth and poverty; work and charity. Wealth was the result of work and saving and the rich rightly inherited the earth. The poor, on the whole, were to be blamed. They were lazy or unfortunate and if unfortunate their fortunes could easily be mended by thrift and sacrifice.

There were some differences of wealth in Great Barrington; there were mills and mill-owners; there were German and Irish factory hands. Singularly enough I knew the mill-owners and their children much better than I knew the workers, but I was no flunky for the rich. My people always had a certain independence. They were by occupation small farmers, servants, laborers, barbers and waiters. They earned their way. I early came to understand that to be "on the town," the recipient of public charity, was the depth not only of misfortune but of a certain guilt. I presume some of my folk sank to that but not to my knowledge. We earned our way.

I have a post card dating from 1883 in which "Miss Smith," September 19, writes, "We would like to have you come certainly next Saturday as you did last week to do some splitting for us." This was a matter of splitting up kindling for two maiden ladies and was one of my ways of beginning financial independence. I remember well my first regular work: as a high school lad I went early of mornings and filled one or two of the so-called "base-burning" stoves with coal in a little millinery shop. I received twenty-five cents a week which represented the beginning of affluence. From then on, all through my high school course, I worked after school and on Saturdays, mowing lawns, doing errands, and for a few months through the good will of Johnnie Morgan, I rose to be local correspondent of the *Springfield Republican.* For some time, too, I sent weekly letters to the *New York Age,* and before the A. and P. stores dealt in groceries and simply were selling tea, I was one of their local agents.

Thus in all sorts of little ways I managed to earn some money and never asked nor thought of gifts save in one case: my school principal suggested, quite as a matter of fact, that I ought to take the college preparatory course in high school, which involved Latin and Greek. This meant a considerable expenditure for books, but the wife of one of the mill owners, or rather I ought to describe her as the mother of one of my playmates, offered to furnish all the necessary high school books, which became my one charity.

The other class of rich folk with whom I came in contact were summer boarders who made yearly incursions from New York. I think I was most impressed by their clothes. Outside of that there was little reason so far as I could see to envy them. The children were not very strong and rather too well-dressed to have a good time playing. There were few slum areas in my town and almost no crime. The one indulgence was liquor and there my mother quietly took a firm stand. I was never to enter a saloon. I never did. Alcohol gave perhaps the one reaction that this pleasant but rather drab little town had against the monotony of life, and rich and poor got drunk more or less regularly. I have seen a mill owner staggering; and my own very dignified uncle used to come home now and then walking very straight.

In one respect my training in this town has had rather momentous results. It was not good form in New England or in Great Barrington to express yourself volubly, to give way to emotion:—people held themselves in. They were sparing even of their greetings. There was only on the street a curt "Good Morning" to those whom you knew and no greeting at all for others. The result was that because of this and probably from growing racial consciousness I was early thrown in upon myself. I found it difficult and even unnecessary to approach other people and by that same token my own inner life grew perhaps the richer. Later the habit of repression often returned to plague me, for so early a habit could not easily be unlearned.

I entered the high school at the age of twelve and was graduated at the age of sixteen in 1884. I had during that time my first chance to travel and to get little glimpses of the world. I was sent, for instance, by my mother across the state to see my grandmother and grandfather in New Bedford. I wrote back about this in 1883, "The house is white with green blinds. The yard is full of flowers. Grandma is about my color and

taller than I thought. I like her very much. Grandpa is short and rather thick set. I like him better than I thought I would. He says very little but speaks civilly when I say anything to him. Grandma says by and by he will talk more."

When I was graduated from the high school we all had speeches and mine was on Wendell Phillips. He had died in February and I spoke in June, fired by new and unusual knowledge of his sort of man. Then there came in my life the first great change. My mother died and it was decided that I was too young to go to college. I suspect that money matters had something to do with it. At any rate instead of being able to go to Harvard in the fall of 1884, as I had fondly hoped, I was given a job and promised that the next fall I should begin my college work.

The job brought me in curious touch with the world. There was a great uncle of mine, Tom Burghardt, whose tombstone I had seen often in the village graveyard. My family used to say in undertones that the money of Tom Burghardt helped to build the Pacific Railway and that it came in this wise: Nearly all his life Tom Burghardt was a servant in the Kellogg family, only the Kelloggs forgot to pay him but did give him a handsome burial. Then Mark Hopkins married into the family and used presumably my uncle's unpaid wages, with other assets, to make millions in railways. His widow came back to Great Barrington and planned a mansion out of the beautiful blue granite which formed our hills. A host of workmen, masons, stonecutters, and carpenters were assembled and in the summer of 1884 I was made timekeeper for the contractors, receiving the fabulous wage of a dollar each day.

It was a most interesting experience and had bits of romance. There was the English architect who appeared on the scene and the colored steward who committed suicide when the architect married the widow; then came the death of the widow and the passing of the Hopkins millions into foreign hands. In the meantime the fabrication and growth of this marvelous palace proceeded, beautiful beyond anything that Great Barrington had seen; and always I could sit and watch it grow and handle delegated powers in dismissing workmen and rewarding them.

Finally in the fall of 1885 there came a proposal which made all my cousins and aunts raise their eyebrows. I was to have a scholarship to go South to Fisk University. The South had an unholy name in my

village and the family was not at all sure that I ought to go. Only one black Burghardt had ever gone South and he a Union soldier, but I never hesitated. I started out and went into Tennessee at the age of seventeen to become a sophomore at Fisk University. It was to me an extraordinary experience. I was thrilled to be for the first time among so many people of my own color or rather of such various and such extraordinary colors, which I had not seen before, but who seemed close bound to me by new and exciting ties. I had never seen such beautiful girls in my life or men who gave themselves such merited airs.

The three years here were years of growth, strength and expanding ambition. I learned new things about the world. I came in contact for the first time with a sort of violence that I had never realized in New England. I remember going down and looking wide-eyed at the door of a public building filled with buckshot where the white editor of the leading daily paper had been publicly murdered the day before. I was astonished to find many of my fellow students carrying firearms and to hear their stories of adventure. I suddenly determined that I was going out to teach during the summer vacations. It was not necessary. My scholarship would have supported me but it was adventure. I walked into east Tennessee ten or more miles a day until at last in a little valley I found a place where they had had a Negro public school only once since the Civil War and there for two successive summer terms I taught at $28 and $30 a month; paid immediately in promises and in cash three or four months later.

I began my writing and public speaking at Fisk. I wrote an article of which the *Century Magazine* said, "We shall be glad to print 'The New Negro' if we may take our time and we are afraid we shall have to take a great deal." It did, for it hasn't been printed yet. For three years I was on the editorial staff of the *Fisk Herald;* as editor-in-chief the last year; contributing essays and one novel. I became a considerable orator and for a long time the older students of Fisk took deep joy in remembering the debate where in the very midst of impassioned periods I forgot my lines.

The persistence, however, which I had learned in New England stood me now in good stead. The interlude at Fisk did not turn me from it. When I heard that Harvard was offering scholarships in various parts of the country I immediately wrote and to the astonishment of teachers and fellow students, not to mention myself, received Price Greenleaf aid of

$300. I was graduated from Fisk in 1888 and took as my subject Bismarck. It showed my already growing interest in the wider world. I knew of the great jubilee of Queen Victoria, of the aftermath of the Franco-Prussian War and the triumph of the Mahdi in Khartoum. I had followed the fortunes of Gladstone and Salisbury and was filled with enthusiasm at the rise of the new German empire under Bismarck. So I talked of Bismarck and then turned back to the North.

Third Decade—Education, 1888-1898—20-30 *years.* — This decade covered the years of my education at Harvard and at Berlin and the beginning of my teaching career. The members of the Fisk Glee Club went to Lake Minnetonka, a resort in Minnesota, for the summer of 1888, with the idea of working in the dining room and giving concerts. I was to act as their business manager. During college I had developed as the executive and planner, the natural secretary of affairs rather than the ornamental president and chairman. The only difficulty about the Minnesota excursion was that I had never worked in a hotel in my life; I did not know how to wait on table and therefore became one of the bus boys. It was so unusual a pageant to watch the dining room that I made no tips and for a long time had difficulty in getting enough to eat, not realizing that servants in great hotels are not systematically fed. But after the season I went on ahead and succeeded in making a respectable number of concerts for the students who followed me down all the way to Chicago; while I went on to Harvard to enter the junior class in the fall of 1888.

The Harvard of 1888 was an extraordinary aggregation of great men. Not often if ever since that day have so many distinguished teachers been together in one place and at one time. There was William James, the psychologist; Palmer in ethics; Royce and Santayana in philosophy; Shaler in geology; and Hart in history. The president was the cold, precise but exceedingly efficient Charles William Eliot and there were a dozen lesser lights. By extraordinary good fortune I was thrown into contact with most of these men. I was repeatedly a guest in the house of William James; of all teachers, he was my closest friend. I was a member of the philosophical club; I talked often with Royce and Shaler; I sat alone in an upper room and read Kant's Critique with Santayana; I became one of Hart's favorite pupils and was afterwards guided by him through my graduate course and started on my work in Germany.

It was an extraordinary opportunity for a young man and I think I realized it. I evolved habits of work rather different from those of most of the other students. I burned no midnight oil. I did my studying in the daytime and had my day planned out almost to the minute. I spent a great deal of time in the library and did my assignments with persistent thoroughness and with a rather interesting pre-vision of the kind of work I wanted to do later. I have before me a theme which I wrote October 3, 1890, for Barrett Wendell, the great pundit of Harvard English. I said: "Spurred by my circumstances I have always been given to systematically planning my future, not indeed without many mistakes and frequent alterations, but always with what I now conceive to have been a strangely early and deep appreciation of the fact that to live is a serious thing. I determined while in the high school to go to college—partly because other men went, partly because I foresaw that such discipline would best fit me for life. I believe foolishly perhaps but sincerely that I have something to say to the world, and I have taken English 12 in order to say it well." Barrett Wendell rather liked that last sentence; he read it to the class.

I tried to take culture out into the colored community of Boston; I visited, joined clubs, lectured, and once actually gave the *Birds of Aristophanes* in a colored church on Thanksgiving night. The matter of meeting my college expenses presented some difficulties. I had scholarships for $300 for both college years but that was not enough. One year after careful calculation I found that I needed $50 more and noted with interest that this was exactly the stipend of the Boylston prizes in oratory. I had to have one of the prizes in order to make ends meet for the year and I got it. Then with a colored classmate, Clement Morgan, who was also a Boylston prize-man, I made a tour of the summer resorts of New England. We gave readings in hotels, parlors and churches and did in this way much toward making our expenses. In my senior year the death of my last near relative, my grandfather, left me a fortune of $400.

In 1890, I took my bachelor's degree from Harvard and was one of the six commencement speakers, taking as my subject Jefferson Davis. On the platform of Sanders Theatre were President Eliot, the Governor of Massachusetts and the Bishop of New York. I am glad that the New York *Nation* could say July 3, 1890, that I handled the theme "with absolute good taste, great moderation, and almost contemptuous fairness."

I was graduated just at the beginning of the term of President Har-

rison when the trusts were dominating industry and the McKinley tariff making that domination easier. The understanding between the industrial North and the new South was being perfected and in 1890 a series of disfranchising laws was passed by the Southern States destined in the next six years to make voting by Southern Negroes practically impossible. Already I had received more education than most young white men, having been continuously in school from the age of six to the age of twenty-two. But I did not yet feel prepared. I knew that to cope with the new and extraordinary situation then building in the United States I needed to go further and that as a matter of fact I had just well begun my training and my knowledge of social conditions.

On the other hand, I was quite penniless with no resources in wealth or friends. I applied for a fellowship in the graduate school. If I had not gotten it I should have had to go to work; but I was appointed Henry Broomfield Rogers fellow for a year and later the appointment was renewed so that from 1890 to 1892 I was a fellow in Harvard University studying in history and what would have been social science if Harvard had then recognized such a field.

I worked on my thesis, "The Suppression of the Slave Trade," taking my master's degree in 1891 and hoping to get my doctor's degree in another two years. Then came one of those tricks of fortune which seem partly due to chance, but in this case undoubtedly due to a good deal of stubborn persistence. In 1882 the Slater Fund for the education of Negroes had been established and the board in 1892 was headed by ex-President Rutherford B. Hayes. President Hayes at John Hopkins University talked frankly in 1890 about the plans of the Fund. He said among other things that they had wanted to find some young colored men to whom they could give a chance for graduate training but they had only been able to find "orators."

The statement was brought to my attention at a card party one evening and it not only made me good and mad but also set me thinking. I wrote President Hayes. I received a pleasant reply saying that they did not have any present plans for such scholarships. That really aroused me. I proceeded to get letters from every person I knew in the Harvard Yard and places outside and literally deluged the unfortunate chairman of the Slater Fund. He wrote again and said that he was sorry but the plan had been given up; that they might otherwise have given me some attention.

It has been my experience that most of my small successes have been due to steps that I have taken after all hope seemed lost. I sat down and proceeded to write Mr. Hayes a letter that could be described as nothing less than impudent. I intimated plainly that somebody was lying. I reiterated my plans and added many written references. President Hayes was undoubtedly disturbed and almost apologized to me, reiterating his good faith and promising to take up the matter the next year with the board. Whereupon promptly the next year I proceeded to write the board: "At the close of the last academic year at Harvard, I received the degree of master of arts, and was reappointed to my fellowship for the year 1891-92. I have spent most of the year in the preparation of my doctor's thesis on the suppression of the slave trade in America. I prepared a preliminary paper on this subject and read it before the American Historical Association at its annual meeting at Washington during the Christmas holidays. The paper will shortly be published in their proceedings and a preliminary report of it may be seen in the *Independent* of January 7, 1892, pp. 10, 11; also in *Congregationalist* of about the same date. The first draft of the larger thesis was completed March 28 and it will be formally finished May 1, and, I hope, eventually published; besides this I have worked on a number of general studies. Properly to finish my education, a careful training in an European university for at least a year is in my mind and the minds of my professors, absolutely indispensable. I therefore desire, respectfully to lay these suggestions before you: First, that the board grant me aid to study at least a year abroad under the direction of the graduate department of Harvard or other reputable auspices. Second, if this be not practicable, that the board loan a sufficient sum for this purpose."

The Trustees of the Slater Fund granted my request and gave me $750, half gift and half loan, to study in Europe. I shall never forget my interview with ex-President Hayes in the old Astor House in New York, nor the extravagant shirt I immediately bought in celebration. In the summer I sailed for Europe, saw Holland and the Rhine, and lived in a fine German family in Eisenach with a group of gay young folk who made me realize that white folk were human.

In the fall I went up to Berlin and registered in the University. In groups of one hundred we were ushered into a room. "It was a large room, with high ceiling, and a row of four windows on one side in the deep recesses of which stood busts of Berlin's famous professors. The center of

the room was occupied by chairs, in which the students seated themselves; at the upper end was a long table about which perhaps a dozen officials were grouped. Near the left end was the present year's *rector magnificus*, the widely famous Rudolf Virchow, doctor of medicine, laws and philosophy, city councillor and member of the Reichstag. He is a meek and calm looking little man, white-haired and white-bearded, with a kindly face and a pleasant voice. At smaller tables arranged before the windows were the deans of the various faculties . . . Recognizing with some difficulty my Germanicized name I presented myself with trepidation at the bar. The stiff secretary (it's quite the thing to be stiff in new Germany) with my help more clearly deciphered my name, ascertained under which faculty I wished to study, firmly declined to examine any of my sheepskins, and passed me over to the rector; Rector Virchow smiled benignantly, made some remark as to my faculty, and after filling out the blanks with some remarkably poor writing, presented me with a large 24 by 18 inch sheet of paper: this stated that a certain Gulielmus had in the general goodness of his heart endowed the present Mr. Virchow with various powers; among these was that of making me (who was described with some infelicity of phrase as a "most ornamented young man") a legalized and licity of phrase as a 'most ornamented young man') a legalized and licensed student of the University of Berlin."

I had again at Berlin as at Harvard unusual opportunity. Although a foreigner I was admitted my first semester to two semesters under Schmoller and Wagner, both of them the most distinguished men in their lines; and I received eventually from both of them pleasant testimony of my work. My work was in economics, history and sociology. I sat under the voice of the fire-eating Von Treitschke and heard him assert the general inferiority of mulattoes and mixed races; I wrote on American agriculture for Schmoller and discussed social conditions in Europe with teachers and students. But more especially I travelled; living cheaply I saved good sums for the numerous vacations. I went to the Hansa cities; I made the celebrated Hartzreise up to the Brocken in the spring. "My Christmas vacation I spent in making a trip through south Germany along with a German-American and an Englishman. We visited Weimar, Frankfort, Heidelberg and Mannheim. During Christmas and New Years we stopped in a little German dorf in the Rheinfalz, where I had an excellent opportunity of studying the peasant life closely and comparing it with country life in the South. We visited perhaps twenty different families, talked, ate

and drank with them; listened to their gossip and history, attended their assemblies, etc. We then went to Strassborg, Stuttgart, Ulm, München, Nürnburg, Prague and Dresden. In those places we stayed from one to five days, following our Baedeker closely, and paying much attention to the Münchner and Dresden art galleries. The trip cost about $80." Later I went down to Italy, to Genoa, Rome and Naples and over to Venice and Vienna and Budapest and finally up to Krakau, where the father of a fellow student was the head of the Polish library and where I learned of the race problems of the Poles, and then came by Breslau back to Berlin.

I have a curious document of a birthday which came in Berlin in 1893. "Today I am a quarter of a century old. It seems so strange—my boyhood and youth are but memories now and I am a full grown man. I wonder what the next quarter of a century will bring me—if it will be as rich in work and happiness as the past—as awfully full of fulfilled plans . . . These twenty-five years of mine have been rich in personal history. I remember school days, the brook by Sumner's house, the attic rooms where we lived, the little stove that used to fall down and the window I proudly called a bay window. I remember little sorrows of life when I found no companions to play with and busied myself in making great plans for a toy with which I could play alone. I remember the gate where I looked into the great town—wonderful world to me then."

I returned to the United States by way of Paris, where I stayed as long as possible and then having reduced myself almost to the last cent, took passage to the United States in the steerage, quite penniless. It was by no means a pleasant trip, but perhaps it was a good introduction to the new life, because now at last at twenty-six years of age and after twenty years of study I was coming home to look for a job and to begin work. I need not dwell on the difficulties of landing that job. It was a disturbed world in which I landed; 1892 saw the high tide of lynching in the United States, 235 untried Negroes being slaughtered in that one year. Cleveland had entered his second term in 1893, and the Chicago Exposition had taken place. The Dreyfus case had opened in France with his conviction and imprisonment and he was destined for twelve years to suffer martyrdom. The war between China and Japan broke out the year of my return, and Nicholas II was ruling in Russia.

I wrote everywhere offering my services and at last received three offers. On August 17, 1894, the chair of Latin and Greek at Wilberforce

University, Ohio, with a salary of $800 was offered, which I immediately accepted with gratitude. A little later there came an offer of a position at Lincoln Institute in Missouri at $1,050, but I stuck to my first promise; and finally August 25 I received this telegram from Tuskegee, "Can give you mathematics if terms suit. Will you accept? Booker T. Washington." It would be interesting to speculate just what would have happened if I had accepted the last offer instead of the first.

Wilberforce was a small denominational college married to a state normal school. The church was too poor to run the college, the State did not want the normal school, and there were consequently enormous difficulties in both church and state politics. Into this situation I landed with the cane and gloves of my German student days; with my rather inflated ideas of what a university ought to be and with a terrible plainness of speech that was continually getting me into difficulty; when, for instance, very suddenly and without warning the student leader of a prayer meeting announced that Professor DuBois would lead us in prayer. I simply answered, "No, he won't," and as a result nearly lost my job. It took a great deal of explaining to the board of bishops why a professor in Wilberforce should not be able any time to lead in extemporaneous prayer. I was really saved by the fact that I was so willing to do endless work when the work seemed to me worth doing. My program for a day at Wilberforce looks almost as long as a week's program today. I taught Latin, Greek, German and English and wanted to add sociology to it but the college demurred. I had charge of the most unpleasant of the duties of discipline and did outside work in study and investigation; I met many new friends: First of all, my wife; then my good friend Charles Young, not long graduated from West Point; Charles Burroughs was a student in my classes; Paul Lawrence Dunbar came over from Dayton to read to us. I had known his work but was astonished to find that he was a Negro.

We younger teachers had a hard team fight at Wilberforce and soon saw that we were licked. It was impossible for me especially to stay, for I had talked too plainly and acted too independently. When, therefore, a temporary appointment came from the University of Pennsylvania, it was a message from heaven. I was offered work for one year as "assistant instructor" for $600. I accepted forthwith and in addition to that showed my faith in life by getting married. My wife was one of the Wilberforce students and lived in Iowa, where the marriage took place in the fateful

year 1896. In that year the great battle of Adua occurred, when Abyssinia overthrew Italy and when England suddenly seeing two black nations in ascendency threw her army back into the Sudan and recaptured Khartoum. The next year when my son was born, there burst in the United States the free silver controversy of Bryan and McKinley and it was that year that President Bumstead of Atlanta University, asked me to come to Atlanta and take charge of the work in sociology and of the new conferences on the Negro problem which the University was inaugurating.

Fourth Decade—Research and Propaganda—1898-1908—30-40 *years.* This fourth decade was the real beginning of my life work. My education was finished and I had travelled in the world. The two years at Wilberforce being a sort of uneasy prelude, I began with my advent into the University of Pennsylvania a planned career which had an unusual measure of success and yet was in the end pushed partly aside by forces which, if not beyond my control, were certainly of tremendous weight. My vision was in the beginning clear. The Negro problem called for systematic investigation and intelligence. The world was thinking wrong about races because it did not know. The ultimate evil was ignorance and its child, stupidity. The cure for it was Knowledge based on Study. The opportunity opened at the University of Pennsylvania was exactly what I wanted. I had tried to teach social science at Wilberforce outside my overloaded program but they did not want it. At the University of Pennsylvania I ignored the pitiful stipend. It made no difference to me that I was put down as an "assistant instructor" and even at that my name never actually got into the catalogue; it goes without saying that I did no instructing and rather to my dismay I found as much jealousy and politics in this great white institution as in the smaller black one.

But here at least I had a clear-cut job. The city of Philadelphia at that time had a social theory, and the theory was that this great, rich and famous municipality, founded by godly Quakers, was going to the dogs because of the crime and venality of its Negro citizens. These Negroes lived largely centered in a slum at the lower end of the seventh ward. Philadelphia wanted to prove all this by figures and I was the man they picked to do it. Of this thought and plan I neither knew nor cared. I was simply asked to study, know and tell. I saw here a chance to study an historic group of black folk and to show exactly what their place was in the community. I did the work despite extraordinary difficulties both within

and without the group. The Negroes resented being studied at all and especially by a colored stranger; the whites endured the study as a gesture toward an answer which they already knew.

I made a study of the Philadelphia Negro so thorough that it has withstood the criticism for forty years. It was as complete a scientific answer as could have been given under the limitations of time and money; it showed the Negro group as a symptom and not a cause; as a striving, palpitating human group and not an inert, sick body of crime; it traced, analyzed, charted and counted. It left few untouched queries. At the end of that study I announced with a certain pride my general plan of studying the Negro problem and published papers on the matter in the Annals of the American Academy in 1898.

With this program clearly in mind I came to Atlanta University. There was at the last moment a curious little hitch based on that old matter of extemporaneous public prayer. Dr. Bumstead and I compromised on the Episcopal prayer book and afterward I added certain prayers of my own. I am not sure that they reached heaven but they certainly reached my audience.

Without thought or consultation, I rather preemptorily changed the plans of the first two Atlanta Conferences. They had been conceived as conferences on city problems contrasting with the increasingly popular conferences on rural problems held at Tuskegee. But I was not thinking of mere conferences. I was thinking of a comprehensive plan for studying a human group and if I could have carried it out as completely as I conceived it, the American Negro would have contributed to the development of social science in this country an unforgettable body of work. Social scientists were at that time thinking in terms of theory and of vast and tenuous laws; while I had for study a concrete group of living beings set off by themselves and capable of almost laboratory experiment. I laid down a program of a hundred years, in which taking annually aspect after aspect of the group life of Negroes for a decade, we could repeat and broaden and concentrate our attention; sharpen our tools of investigation and improve our methods, so that we would accumulate an increasing living body of scientifically ascertained fact to make the so-called Negro problems, and through them the problem, of all social living clearer and surer and more definite.

Something of this was accomplished. For thirteen years we poured forth a series of studies limited, incomplete, only partially conclusive, and yet so much better done than any other attempt at such work anywhere else in the world that they gained attention in America, Europe, Asia and Africa. Nevertheless, at the very time when they were beginning to achieve widening success, there cut across this plan of science a red ray of emotion which could not be ignored.

I remember when it first, as it were, pulled me off my feet.

A poor Negro in central Georgia, Sam Hose, had killed his landlord in a wage dispute. He could not be found for days; then at last a new cry was raised that he had raped the landlord's wife. It was obviously and clearly a trumped-up charge to arouse the worst passions of the countryside and the mob roared. I wrote out a careful and reasoned statement concerning the evident facts and started down to *The Constitution,* carrying in my pocket a letter of introduction which I had to Joel Chandler Harris. I did not get there. On the way the news met me: Sam Hose had been lynched and they said that his knuckles were on exhibition at a grocery store on Mitchell Street. I turned back to the University. I suddenly saw that complete scientific detachment in the midst of such a South was impossible.

Nevertheless, I tried to keep my mounting indignation within bounds. I went on with my studies, but together with other black Georgians: W. J. White, John Hope, H. R. Butler and others, I sent out memorials and petitions and protests. One in 1899, which I wrote, said, "Race antagonism and hatred have gone too far in this State; let us stop here; let us insist that they go no further; let us countenance no measure or movement calculated to increase that deep and terrible sense of wrong under which so many today labor. May the Twentieth Century of the Prince of Peace dawn upon an era of generous sympathy and forbearance between these two great races in Georgia, and not upon a season of added injustice and antipathy." Another, a year or so later, said, " 'From each according to his ability—to each according to his needs' is the ideal of modern society, and in the light of this dictum, there is not a boy in Georgia today so poor or so black as not to deserve from the State free common school training." And a third which came out of a great Macon mass meeting: "Popular government in the United States is not a failure, but it is having in these days a severe and critical trial. Its success in the future depends upon the ability

of great classes of men to rise above prejudice and do strict justice to their fellowmen. And today strict justice in Georgia demands free common school training for every single child of the State."

With all this I stuck to my scientific work. I helped prepare in 1900 a sociological exposition of the American Negro for the Paris Exposition, which gained a grand prize for the exhibit and a gold medal for myself. I attended at that time a first Pan-African Conference in London with Bishop Walters, where I met the Colensos and Samuel Coleridge Taylor. I was elected a member of the American Association for the Advancement of Science in 1900 and made a fellow in 1904.

I not only published the conference reports yearly but wrote magazine articles in the *World's Work*, and in the *Atlantic Monthly*, where I was a fellow contributor with Woodrow Wilson on a symposium. I testified before Congressional Commissions in Washington and appeared on the lecture platform with Walter Page, afterwards war ambassador to England. I had wide correspondence with men of prominence in America and Europe: Lyman Abbott of the *Outlook;* E. D. Morel, the English expert on Africa; Max Weber of Heidelberg; Professor Wilcox of Cornell; Bliss Perry of the *Atlantic Monthly;* Horace Traubel, the great protagonist for Walt Whitman; Charles Eliot Norton and Talcott Williams. I began to be regarded by some as having definite information on the Negro to which they might listen with profit.

At the same time there was cause for increasing apprehension. First of all, and for me most astonishing, we could not get money for our work in the Atlanta Conferences and our studies of the Negro problem. My theory had been that just as soon as the world saw the value of our studies, the raising of funds would be the easiest thing in the world. I received for the whole thirteen years that I was then at Atlanta University an annual salary of only $1,200. The whole cost of the conference and studies never exceeded $5,000 a year and usually it was considerably less. The work was done at first in a spare bedroom of my apartment and finally in the attic of Stone Hall, where adequate but rather inaccessible rooms were provided. I had no skilled assistants and yet my dream was still splendid. If in a properly equipped institution I could have gathered four or five well-equipped young students, some tabulating machines and a small corps of travelling investigators, we could at a cost of $10,000 to $25,000 a year have absolutely reconstituted the basis of fact and argument concerning

the American Negro. But we could not get $5,000 even; and then to make the situation worse there came the controversy with Booker T. Washington, which turned from me and from Atlanta University the sympathy of many men who had money to give.

It was no controversy of my seeking; quite the contrary. I was in my imagination a scientist and neither a leader nor an agitator; I had nothing but the greatest admiration for Mr. Washington and Tuskegee and I had applied in 1894 at both Tuskegee and Hampton for work; if the telegram from Tuskegee had reached me before the Wilberforce bid, I should doubtless have gone there. Certainly I knew no less about mathematics than I did about Latin and Greek. But no sooner was my work at Atlanta University under way than pressure began to be placed upon me to leave there and go to Tuskegee. There again I was not adverse in principle to Tuskegee, except that I had started a job and wanted to continue it; surely if my work was worth support it was worth support at Atlanta University as much if not more than elsewhere. I remember that a letter came from Wallace Buttrick late in 1902 asking that I attend a private conference in New York with Felix Adler and William H. Baldwin, Jr., George Foster Peabody and Robert Ogden. The object of the conference was ostensibly the condition of the Negro in New York City. I went to the conference and I did not like it. Most of the more distinguished persons were not present. The conference itself amounted to little, but I was whisked over to William H. Baldwin's Long Island home and there what seemed to me to be the real object of my coming was disclosed. Mr. Baldwin was at that time a prime mover of the Tuskegee board of trustees, and slated to be president of the Pennsylvania Railway; he was the rising industrial leader of America. Both he and his wife insisted that my place was at Tuskegee; that Tuskegee needed the kind of development that I had been trained to give. I could not help being impressed and I promised to think the matter over. Later I had two personal interviews with Mr. Washington. He encouraged me to talk but he said very little himself. I could get no clear understanding of just what I was going to do at Tuskegee if I went. I was given to understand that the salary and accommodations would be satisfactory. Later in the year I went to Bar Harbor for a series of speeches in behalf of Atlanta University and while there met Jacob Schiff, the Schieffelins and Merriam of Webster's dictionary I had dinner with the Schieffelins and their mother, the daughter of John Jay; and again was urged to go to Tuskegee.

But by that time my mind was made up. I was growing increasingly uncomfortable under Mr. Washington's various statements of his program; his depreciation of the value of the vote; his evident dislike of Negro colleges and his general attitude which seemed to place the onus of blame for the race problems upon the Negro himself rather than upon the whites. I attended several conferences at Hampton and found myself consenting by silence to a systematic attack on Negro colleges. I determined on a decisive step. I had been asked sometime before by A. C. McClurg and Company of Chicago, if I did not have material for a book and I suggested a social study which should be perhaps a summing up of the work of the Atlanta Conferences or at any rate a broad scientific treatise which required some time. They asked, however, if I did not have some essays that they might put together and issue immediately and they instanced the articles in the *Atlantic Monthly* and other places. I demurred because essays usually fall so flat. Nevertheless, I got together a series of my fugitive pieces and added a frank evaluation of Booker T. Washington and sent them on. The "Souls of Black Folk" was published in 1903 and in 1938 it is still selling. This settled definitely any further question of my going to Tuskegee, but it also aroused apprehension. Various friends of the Negro desired to keep Negro thought from splitting into a pro-Washington and an anti-Washington camp. After all, Mr. Washington had accomplished much and a new basis of understanding on the Negro seemed to most white people in sight. Every effort must be made to preserve unity of effort. I was asked in 1903 to join Mr. Washington and his friends in a conference to be held in New York to talk of a common program. I assented and as I wrote to Kelly Miller: "I think this will be a chance for a heart-to-heart talk with Mr. Washington. I propose to stand on the following platform:

1. Full political rights on the same terms as other Americans.
2. Higher education of selected Negro youth.
3. Industrial education for the masses.
4. Common school training for every Negro child.
5. A stoppage to the campaign of self-depreciation.
6. A careful study of the real condition of the Negro.
7. A national Negro periodical.
8. A thorough and efficient federation of Negro societies and activities.
9. The raising of a defense fund.

10. A judicious fight in the courts for civil rights.

"Finally, the general watch word must be, not to put further dependence on the help of the whites but to organize for self-help, encouraging 'manliness without defiance, conciliation without servility.' "

The matter dragged on with some argument as to who should be invited. The general invitation to the conference went out in October, 1903, when Mr. Washington sent out the following circular letter: "You will perhaps recall that about the middle of last February I addressed you a letter concerning a private conference to be attended by about fifteen or eighteen of our most prominent men, representing various sections of the country and various race interests, for the purpose of considering quietly all the weighty matters that now confront us as a race. The meeting was not called at the time hoped for in my last correspondence for the reason that there was delay and some disappointment in providing funds for the expenses of the meeting. That feature has now been provided for in a way that will not make those who attend the conference feel obligated to any individual or organization and leave them free for open and frank discussion.

"I very much hope that you can now see your way clear to attend such a conference in New York City to be held, if possible, on the 6th, 7th, and 8th of January, 1904."

The conference took place in Carnegie Hall, New York. There was some plain speaking but it was overborne by almost fulsome praise of Mr. Washington from the lips of various invited guests like Andrew Carnegie and Lyman Abbott. It ended in the appointment of a committee of three, of which I was one, who were to select a sort of racial steering committee called the Committee of Twelve. Nothing really came of this. The two other members of the committee organized it in my absence, placed the full power in the hands of Mr. Washington who was to carry on the work with funds the source of which I did not know. I resigned forthwith and was pretty roundly condemned for my lack of "cooperation," but I was indignant at what seemed to me an effort to buy agreement and smother dissent under a dictatorship.

Things now began to move swiftly. In Boston a new colored weekly newspaper, the Boston *Guardian*, was organized by two young radicals: Monroe Trotter and George Forbes. They were bitter in their attacks upon

Mr. Washington and I got myself in hot water by publishing a statement in the *Guardian* concerning the venality of certain Negro papers whom I charged had sold out and were viciously attacking every Negro who did not agree with Mr. Washington. It was a charge which I could not support by concrete facts, but it was true in the sense that there had been organized at Tuskegee a literary bureau to emphasize Mr. Washington's ideas in the Negro press and to stop the widespread criticism against him. The methods used are common today: distribution of advertising; sending out of special correspondence and distributing other favors; but it seemed to me then that this kind of propaganda was monstrous and dishonest and I resented it. On the other hand, the public expression of this resentment caused many people to think that I was wild and unfair in my statements and beyond that, it undoubtedly made it increasingly difficult for Dr. Bumstead to raise funds for Atlanta University. In the fall of 1904 the printing of our conference report was postponed by the trustees until special funds could be secured. I did not at the time see the handwriting on the wall. I did not realize how strong the forces were back of Tuskegee and how they might interfere with my plan of scientific study of the Negro.

My first thought was in order to state our case and honest criticism we needed a journal. I had already helped an A. U. graduate to establish a printing press in Memphis. Out of this might arise a vehicle for both opinion and fact which would help me carry on my scientific work and at the same time be a forum of reform less radical than the *Guardian* and more rational than the rank and file of Negro papers then so largely arrayed with Tuskegee. I wrote to Jacob Schiff reminding him of having met him in Bar Harbor in 1903. "I want to lay before you a plan which I have and ask you if it is of sufficient interest to you for you to be willing to hear more of it and possibly to assist in its realization. The Negro race in America is today in a critical condition. Only united concerted effort will save us from being crushed. This union must come as a matter of education and long continued effort. To this end there is needed a high class journal to circulate among the intelligent Negroes, tell them of the deeds of themselves and their neighbors, interpret the news of the world to them and inspire them toward definite ideals. Now we have many small weekly papers and one or two monthlies and none of them fill the great need I have outlined. I want to establish therefore for the nine million American Negroes and eventually for the whole Negro world a monthly journal."

Mr. Schiff wrote back courteously, saying: "Your plans to establish a high class journal to circulate among the intelligent Negroes is in itself interesting and on its face has my sympathy. But before I could decide whether I can become of advantage in carrying your plans into effect, I would wish to advise with men whose opinion in such a matter I consider of much value."

Nothing came of this because, as I might have known, most of Mr. Schiff's friends were strong and sincere advocates of Tuskegee. Then came a new and surprising turn to the whole situation which in the end quite changed my life. In the early summer of 1905 Mr. Washington went to Boston and arranged to speak in a colored church to colored people, a thing which he did not often do in the North. Trotter and Forbes, editors of the *Guardian*, determined to heckle him and make him answer certain questions with regard to his attitude toward voting and education. William H. Lewis, a lawyer whom I had introduced to Mr. Washington, had charge of the meeting and the result was a disturbance magnified by the newspapers into a riot which resulted in the arrest of Mr. Trotter and eventually he served a term in jail. Later I explained to Mr. George Foster Peabody, in answer to a query, my own connection with and attitude toward this occurrence. "I did not arrive in Boston until after the Zion Church disturbance. Before seeing the account in the morning papers, I had no inkling or suspicion in any way of the matter. I did not know Mr. Washington was in Boston or intending to go there as I had just left him at Tuskegee. I had had no correspondence with Mr. Trotter for six months, save in regard to a boarding place. When I arrived in Boston and heard of the meeting, I told Mr. Trotter and Mr. Forbes in plain terms my decided disapproval of the unfortunate occurrence and my conviction that it would do harm."

When, however, Mr. Trotter was jailed my indignation overflowed. Trotter was headstrong but sincere. He must not be made a martyr. I sent out from Atlanta in June, 1905, "a call to a few selected persons 'for organized determination and aggressive action on the part of men who believe in Negro freedom and growth." I proposed a conference during that summer "to oppose firmly present methods of strangling honest criticism, to organize intelligent and honest Negroes, and to support organs of news and public opinion." Fifty-nine men from seventeen different states signed a Call for a meeting near Buffalo, New York, during the week of July 9, 1905. I went to Buffalo and hired a little hotel on the Canada side of the

river at Fort Erie and waited for the men to attend the meeting called for July 11, 12, 13 and 14. If sufficient men had not come to pay for the hotel, I should certainly have been in bankruptcy and perhaps in jail; but as a matter of fact, twenty-nine men, representing fourteen states, came. The Niagara Movement was organized January 31, 1906, and was incorporated in the District of Columbia with the following principles:

1. Freedom of speech and criticism.
2. Unfettered and unsubsidized press.
3. Manhood suffrage.
4. The abolition of all caste distinctions based simply on race and color.
5. The recognition of the principles of human brotherhood as a practical present creed.
6. The recognition of the highest and best human training as the monopoly of no class or race.
7. A belief in the dignity of labor.
8. United effort to realize these ideals under wise and courageous leadership.

The Niagara Movement created furor and the most disconcerting criticism. I was accused of acting from motives of envy of a great leader and of being ashamed of the fact that I was a member of the Negro race. The leading weekly of the land, the New York *Outlook*, pilloried me with scathing articles and the Negro weeklies, with few exceptions, went mad. But the movement went forward. The next year, 1906, instead of meeting in secret we met publicly at Harper's Ferry, the scene of John Brown's raid, and had, in significance if not numbers, one of the greatest meetings that American Negroes have ever held. We made pilgrimage at dawn barefooted to the scene of Brown's martyrdom and we talked some of the plainest English that had been given voice by Black men in America.

Now the fat was in the fire and my career as a scientist was beginning to be swallowed up in my role as propagandist. This was not at all to my liking. I was no natural leader of men. I could not slap people on the back and make friends of strangers. I could not easily break down an inherited reserve and a cold, biting, critical streak. Nevertheless, having put my hand to the ploy I could not turn back. The Niagara Movement met with less momentum in Boston in 1907 and in Oberlin in 1908 and then practically became merged into a new and enveloping movement which started

with a conference in 1909 and was incorporated as the National Association for the Advancement of Colored People in 1911.

While now I was being swept on in this current to a new and different mode of expression, I continued to cling to my scientific work. In 1906, I outlined that work to Andrew Carnegie hoping to interest him in the Atlanta Conferences and reminding him that I had been presented to him and Carl Schurz some years before. I said: "I enclose herewith a report on Negro Crime, which is the ninth annual report published by the Conference. The object of this Conference is the systematic and exhaustive study of the American Negro, in order that in the future philanthropists and others who seek to solve this serious set of problems may have before them a carefully gathered body of scientifically arranged facts to guide them.

"The studies mentioned above have been widely used; they are in all the large libraries of the world including the British Museum, the Library of Congress, Harvard University, etc. They have been commended by periodicals like the *Outlook*, The *Nation*, The London *Times*, the *Spectator*, and the Manchester *Guardian;* they have been favorably spoken of by men like G. Stanley Hall, Walter F. Willcox, Tallcot Williams, and most of the teachers of economics and sociology in American colleges." There was no response, but still I pushed on.

I approached the United States Commissioner of Labor in 1906 with a proposal for a study of Lowndes County, Alabama. I was going to take a single county of a former slave state with a large majority of Negroes and make a social and economic study from the earliest times where documents were available, down to the present, supplemented by studies of official records and a house to house individual canvas. I plied Commissioner Neill with plans and specifications until at last he authorized the study. Helped by Monroe Work now at Tuskegee Institute and R. R. Wright now a bishop of the A. M. E. Church and a dozen or more local employees I settled at the Calhoun School and began the study. It was carried on with all sorts of difficulties including the greeting of my agents with shot guns in certain parts of the county; but it was eventually finished. The difficult schedules were tabulated and I think myself that it was the most complete study of the sort that has ever been made. It included maps of the chronological division of the land; studies of the distribution of labor; investigations of the relation of landlord and tenant; a review of the political organization and of the family life and distribution of the population. I went to Washington and I

spent some weeks there revising and perfecting it. It was accepted by the government and $2,000 paid for it, most of which went back to Atlanta University in repayment of funds which it had kindly furnished me to carry on the work.

But the study was not published. I finally approached the bureau and tried to find out when it would be published and was told that the bureau had decided not to publish the manuscript since it "touched on political matters". I was astonished and disappointed but after a year I went back to them again and asked if they would allow me to have the manuscript published since they were not going to use it. They told me it had been destroyed.

And to complete this strange picture while I was down in Lowndes County finishing this study there came the news of the Atlanta riot. I took the next train for Atlanta and my family. On the way I wrote the "Litany of Atlanta".

Meantime I had started in Memphis with the help of two graduates of Atlanta University the little printing shop that I have mentioned and from this was published a weekly paper called The *Moon* beginning in 1906. The *Moon* was in some sort precursor of the *Crisis*. It was published for a year in Memphis and then the printing office given up and in 1907 in conjunction with two friends in Washington there was issued a miniature monthly called the *Horizon*. The *Horizon* was published from 1907 to 1910 and in the fall of 1910 the *Crisis* was born.

So my work in Atlanta and my dream of the settlement of the Negro problem by science faded. I began to be acutely conscious of the difficulty which my attitudes and beliefs were making for Atlanta University. For a while I thought of withdrawing in 1906 when I was offered the position of assistant superintendent of schools of Washington, D. C. But even there, fear of my "radicalism" took the matter up even to President Theodore Roosevelt and the offer while never withdrawn was not pressed. Finally, after the conference of 1909 in New York the new organization of the National Association for the Advancement of Colored People was formed and I was asked to come as Director of Publications and Research.

The Fifth Decade—Editor—1908-1918—40-50 *years.*—The span of my life from 1908 to 1918 is chiefly the story of *Crisis* magazine under my editorship but it had also an astonishing variety of subsidiary interests and activities.

Beginning a little before this period I continued my visits to Europe. I went in 1900 and again by the grace of an English friend in 1907; I took part in the great Races Congress in 1911 and went again in December, 1918, just after the Armistice. This close touch with Europe and European developments had much to do with my understanding of social problems and trends of the world. I followed the development of English imperialism and the forces in England, France, Italy and Germany which resulted in the Balkan War, the World War and eventually the Russian Revolution. In the United States I studied the political development from the free silver controversy led by Bryan, through the administrations of Theodore Roosevelt and Taft and especially the Bull Moose campaign and the election of Wilson.

I kept on writing and publishing not with as much concentration of effort as I ought to have, but with some effectiveness. In 1907 appeared "The Negro in the South"—from lectures, two by myself and two by Mr. Washington. In 1909 I published "John Brown," one of the best written of my books, but one which aroused unfortunate jealousy. In 1915 I published my volume on "The Negro". To this must be added part of a bulletin in the twelfth census and several magazine articles; and, of course, eight years of the *Crisis*.

I was active in the organization of the new National Association for the Advancement of Colored People but carefully avoided the temptation of becoming its executive head. I still clung to my idea of investigation in lines which would temper and guide my exposition of a racial philosophy; and for that reason I determined from the beginning to make my work with the Association not that of executive secretary but editor of an official organ to be established. There was opposition to this from the first. First of all, organs of this sort were known to be usually costly and the organization had no money. Secondly, organs were of doubtful efficiency. My good friend, Albert E. Pillsbury, Attorney-General of Massachusetts, wrote and said feelingly: "If you have not decided upon a periodical, for heaven's sake don't. They are as numerous as flies"—and he meant to conclude about as useful. I came to New York to occupy a bare office; associated with a treasurer who said frankly, "I don't know who is going to pay your salary. I have no money;" and with a generally critical if not hostile public which expected the National Association for the Advancement of Colored People to launch upon a bitter attack upon Booker T. Washington and Tuskegee.

My first job was to get the *Crisis* going; and arriving in August I finally got the first copy off the press in November, 1910. It came at the psychological moment and its success was phenomenal. From the one thousand which I ventured to publish first it went up a thousand a month until by 1918 (due, of course, to special circumstances) we published and sold over a hundred thousand copies.

With this organ of propaganda and defense we were able to organize one of the most effective assaults of liberalism upon reaction that the modern world has seen. We secured extraordinary helpers; great lawyers like Moorfield Storey and Louis Marshall; earnest liberals like Villard, Milholland, John Haynes Holmes, Mary Ovington, Jane Addams, the Spingarns, Charles Edward Russell and William English. We gained a series of court victories before the highest courts of the land which perhaps never have been equalled, beginning with the overthrow of the vicious Grandfather Clauses in 1915 and the breaking of the backbone of segregation in 1917. Above all we could, through the *Crisis* and our officers, our secretaries and friends, place consistently and continuously before the country a clear-cut statement of the legitimate aims of the American Negro and the facts concerning his condition. We organized his political power and made it felt and we started a campaign against lynching and mob law which was the most effective ever organized and at long last seemed to bring the end of the evil in sight.

With these efforts came other activities. I lectured widely in nearly every state in the Union. I furnished information to people everywhere on all sorts of subjects closely and remotely connected with race problems, and carried on from time to time studies and investigations. I was held more responsible for the success of the National Association for the Advancement of Colored People than I cared to confess to myself; than most other people wanted to admit. I had to spread myself over a whole field of activities when I should have done great deal better work if I could have confined myself to writing and study.

The development of the *Crisis* where most of my writing was done was interesting and difficult. It was impaired first and last by lack of trained business management. For the most part I was my own business manager which meant the loss of much time in learning and details. Then there was the delicate matter of policy; of how far I should express my own ideas and reactions in the *Crisis* or the studied judgment of the organization. From first to last I thought strongly, and as I still think rightly, to make the opinion

expressed in the *Crisis* a personal opinion; because as I argued, no organization can express definite and clear-cut opinions; so far as this organization comes to conclusions it states them in its annual resolutions but the *Crisis* states openly the opinion of its editor so long as that opinion is in general agreement with that of the organization.

This of course was a dangerous and delicate matter bound eventually to break down in case there was any considerable divergence of opinion between the organization and editor. It was perhaps rather unusual that for two decades the two lines of thinking ran so largely together. If on the other hand the *Crisis* had not been in a sense a personal organ and the expression of myself, it could not possibly have attained its popularity and effectiveness. It would have been the dry kind of organ that so many societies support for purposes of reference and not for reading. It took, on the part of the organization, a great deal of patience and faith to allow me the latitude that they did for so many years; and on the other hand I was enabled to lay down for the National Association for the Advancement of Colored People, a clear, strong and distinct body of doctrine that could not have been built up by majority vote. It was probably inevitable that in the end a distinct and clear-cut difference of opinion on majority policies should lead to the dissolution of this interesting partnership.

One of the first difficulties that the National Association met was the case of its attitude toward Mr. Washington. I carefully tried to avoid any exaggeration of differences of thought; but to discuss the Negro question in 1910 was to discuss Booker T. Washington and almost before we were conscious of the inevitable trends we were challenged from Europe. Mr. Washington was in Europe in 1910 and made some speeches in England in his usual conciliatory lines. John Milholland who had been so dominant in the organization of the National Association immediately wrote me and said that American Negroes must combat the idea that they were satisfied with conditions. I, therefore, wrote an appeal to England and Europe.

"If Mr. Booker T. Washington, or any other person, is giving the impression abroad that the Negro problem in America is in process of satisfactory solution, he is giving an impression which is not true. We say this without personal bitterness toward Mr. Washington. He is a distinguished American and has a perfect right to his opinions. But we are compelled to point out that Mr. Washington's large financial responsibilities have made him dependent on the rich charitable public and that, for this reason, he has

for years been compelled to tell, not the whole truth, but that part of it which certain powerful interests in America wish to appear as the whole truth. In flat contradiction, however, to the pleasant pictures thus pointed out, let us not forget that the concensus of opinion among eminent European scholars who know the race problem in America from De Tocqueville down to Von Halle, De Laveleys, Archer and Johnston, is that it forms the gravest of American problems. We Black men who live and suffer under present conditions, and who have no reason, and refuse to accept reasons, for silence, can substantiate this unanimous testimony."

In furtherance of this statement and in anticipation of the meeting of the Races Congress Mr. Milholland arranged that I should go early to the conference and make some addresses. The plan simmered down to a proposed address before the Lyceum Club, the leading woman's group of London, and there it ran against the opposition of an American woman who wrote: "I think there is serious objection to entertaining Dr. DuBois at the Lyceum." The result was a rather acrimonious controversy, in which I tried gently to withdraw but was unable to and finally led by Her Highness the Ranée of Sarawak and Dr. Etta Sayre a luncheon was held at the Lyceum Club with a bishop and two countesses and several knights and ladies and with Maurice Hewlett and Sir Harry Johnston.

The Races Congress would have marked an epoch in the racial history of the world if it had not been for the World War. As it was, it was a great and inspiring occasion bringing together representatives of numerous ethnic and cultural groups and bringing new and frank conceptions of scientific bases of racial and social relations of people. I had a chance twice to address the Congress and to write one of the two poems which greeted the assembly.

Returning to the United States I was plunged into the Bull Moose campaign. I thought I saw a splendid chance for a third party movement on a broad platform of votes for Negroes and industrial democracy. Sitting in the office of the *Crisis* I wrote out a proposed plank for the Progressives to adopt at their Chicago meeting: "The Progressive party recognizes that distinctions of race or class in political life have no place in a democracy. Especially does the party realize that a group of 10,000,000 people who have in a generation changed from a slave to a free labor system, re-established family life, accumulated $1,000,000,000 of real property, including 20,000,000 acres of land, and reduced their illiteracy from 80 to 30 per cent,

deserve and must have justice, opportunity and a voice in their own government. The party, therefore, demands for the American of Negro descent the repeal of unfair discriminatory laws and the right to vote on the same terms on which other citizens vote."

This was taken to Chicago by Joel E. Spingarn and advocated by two other directors of the Association, Dr. Henry Moskowitz and Jane Addams. They worked in vain for its adoption. Theodore Roosevelt would have none of it. He told Mr. Spingarn frankly that he should be "careful of that man DuBois" who was in Roosevelt's opinion a dangerous person. The Bull Moose convention not only refused to adopt a plank anything like this but refused to seat most of the colored delegates; elected a Southern "lily white" to run on the ticket with Mr. Roosevelt and finally succeeded in making Woodrow Wilson president of the United States.

Immediately Bishop Walters and myself conceived the idea that Mr. Wilson might be approachable. I proposed to throw the weight of the *Crisis* against Roosevelt and Taft and for Wilson, and Bishop Walters went to see him. He secured from Woodrow Wilson a categorical expression over his signature "of his earnest wish to see justice done the colored people in every matter; and not mere grudging justice, but justice executed with liberality and cordial good feeling. I want to assure them that should I become President of the United States they may count upon me for absolute fair dealing, for everything by which I could assist in advancing the interest of their race in the United States." In this effort to divide the Negro vote which was successful to an unusual degree, we were cruelly disappointed when the Democratic Congress met. There was the greatest flood of discriminatory bills both in Congress and among the states that has probably ever been introduced since the Civil War. Only united and determined effort defeated bills against intermarriage and for other discriminations in eight states, and while most of the proposed legislation in Congress was kept from the statute books, the administration carried out a segregation by color in the various departments which we had to fight for years and vestiges of which even remain today.

In other respects our lines were cast in difficult places. The Socialists began to consider the color question and to discriminate against the membership of colored people in the South, lest whites should not be attracted. Mr. Villard tried to get the President to appoint a National Race Commission to be privately financed to the extent of $50,000 but nothing could be

done; and suddenly war and revolution struck the world: the Chinese Revolution in 1912; the Balkan War in 1913 and finally in 1914 the World War. In that very year the National Council of Social Agencies met in Memphis without daring to discuss the color question but Spingarn and I went down and held open meetings advertising "for all who dared hear the truth." We had an interesting time. This success and the death of Booker T. Washington in 1915 led to the first Amenia conference and united the American Negro in one program of advance.

Finally the World War touched America; with it and in anticipation of it came a sudden increasing of lynching including the horrible burning at Dyersburg; there came renewed efforts at segregation; the refusal to let Negroes volunteer; the whole extraordinary difficulties of the draft and the question of Negro officers. The Association itself hesitated. It did not want openly to advocate segregation but Spingarn, chairman of the board, and of the *Crisis*, went ahead and the students of Howard and other schools backed our efforts. We finally succeeded in arranging for an officers camp at Des Moines where seven hundred officers were eventually given commissions. At the same time there was the increased migration of Negroes to the North, the riots at East St. Louis and the rebellion of Negro soldiers at Houston; the shelving of Colonel Young and the alleged German plots.

The Sixth Decade—Editor and Traveller—1918-1928—50-60 *years.* I review the sixth decade of my life with some misgivings and difficulties of judgment. It was in many respects a culmination and yet again it represented, as it seems to me now, a vast dissipation of energy which might to better purpose have been concentrated in fewer lines. I am not altogether sure of this. There were so many things to do; so many paths that presented themselves as duties which must be followed that I was perhaps more or less helpless in the grasp of forces mightier than my will. Because after all the decade following the War was a time of tremendous crises and changes and no single life could escape the paradox and confussion to which all life, and especially life in culture lands, was subjected.

My career had at this time a certain sense of drama. I had never before seen Theodore Roosevelt but in November, 1918, I presided at a meeting in Carnegie Hall where he made his last public speech, appearing together with Irwin Cobb and a representative of the French High Commission. I remember my introduction: "I have the honor to present Theodore Roosevelt." Then on my fiftieth birthday there was a public celebration and

many kindly messages. The *Crisis* had reached a monthly circulation of 68,000 and during the year I had a little dinner with Glendowen Evans, Margaret DeLand and William James. John Hope wrote: "How glad I am that your fiftieth birthday is going to be such a happy one because you can look back on so much good work done. But not the good work alone. What you may look back upon with greatest comfort is good intention."

And Albert Bushnell Hart wrote a word which one quotes with a certain diffidence: "Out of his fifty years of life I have followed a good thirty —and have counted him always among the ablest and keenest of our teacher-scholars, an American who viewed his country broadly."

Finally I prize most highly the tribute of President Bumstead: "First of all, let me express the keen satisfaction I take in having been the one chiefly responsible, perhaps, for bringing Doctor DuBois to Atlanta University. I cannot but smile when I think of the objections and misgivings of some of our trustees and other friends when he came. We wanted a professor of sociology with special reference to investigating conditions concerning the Negro; and I said that Doctor DuBois was the one man, white or black, far and away best fitted for the position. 'But how about his religion—he's studied in Germany—perhaps if you scratch him, you'll find an agnostic. Now it is true that Atlanta University has always had a pronounced religious, though undenominational, life . . . so I must needs have some assurance on this point.' But, as Doctor DuBois will remember, they were not very easy to get. He seemed to be one of those persons who, when asked about their religion, reply that they 'have none to speak of'. But though reluctant to speak of his religion or to say what he would do at Atlanta, I observed that at the time of my interview with him he was living with his newly wedded bride in the centre of the Negro slums in Philadelphia, doing the beneficent work to which Provost Harrison had called him, and I thought there were some indications of genuine religion in that fact.

"So, in spite of objections and misgivings, Doctor DuBois came to Atlanta University, and we held him there for thirteen years notwithstanding several offers to go elsewhere and get double the salary that we could afford to pay him. His work became a memorable part of the history of the Institution."

The most important work of the decade as I now look back upon it was my travel. Before 1918 I had made three trips to Europe; but now

between 1918 and 1928 I made four trips of extraordinary meaning: to France directly after the close of the War and during the Congress of Versailles; to England, Belgium, France and Geneva in the earliest days of the League of Nations; to Spain, Portugal and Africa in 1923 and 1924; and to Germany, Russia, and Constantinople in 1927. I could scarcely have encompassed a more vital part of the modern world picture than in those stirring journeys. They gave me a depth of knowledge and a breadth of view which was of incalculable value for realizing and judging modern conditions, and above all the problem of race in America.

But this was only part of my work: in the United States I was still fighting the battle of liberalism against race prejudice; trying to adjust war and post-war problems to the questions of racial justice; trying to show from the injustices of war time what the new vision must encompass; fighting mobs and lynchings; encouraging Negro migration; helping woman suffrage; encouraging the new rush of young Blacks to college; watching and explaining the political situation and travelling and lecturing thousands of miles and in hundreds of centers. In addition to this I was encouraging the writing of others and trying to help develop Negro art and literature. Besides editing the *Crisis* continuously, I published "Darkwater" in 1920; "The Gift of Black Folk" in 1924; the article on Georgia "In These United States" in 1924; and the concluding chapter in "The New Negro" in 1925, besides a number of magazine articles. Most of the young writers who began what was called the renaissance of Negro literature in the twenties began their first publication in the *Crisis* magazine.

Above all in these days I made two efforts toward which I look back with infinite satisfaction: the two-year attempt in the Brownie's book to furnish a little magazine for Negro children in which my efforts were ably seconded by Augustus Dill and Jessie Fauset; and most especially my single-handed production of the pageant "The Star of Ethiopia". The pageant was an attempt to put into dramatic form for the benefit of large masses of people, a history of the Negro race. It was first attempted in the New York celebration of Emancipation in 1913; it was repeated with magnificent and breath-taking success in Washington with 1200 participants; it was given again in Philadelphia in 1916; and in Los Angeles in 1924.

Finally in New York I attempted a little theatre movement which went far enough to secure for our little group second prize in an international competition. In 1918 I was asked rather suddenly by the N. A. A. C. P.

to go to Europe right after the Armistice, to investigate the treatment of Negro soldiers and keep the record straight; and then at the behest of a group of American Negroes I considered that the interests of Africa ought to be represented during the peace efforts following the War. With infinite difficulty and through the cooperation of Blaise Diagne, the French Deputy from Senegal, I succeed in gathering in February, 1919, at the Grand Hotel in Paris a Pan-African congress of fifty-seven delegates including sixteen American Negroes, twenty West Indians and twelve Africans. France, Belgium, and Portugal were represented by officials. This was to my mind but a beginning and in 1921 I returned and held a Second Pan-African Congress in London, Brussels and Paris from August 28 to September 6. There were 113 accredited delegates from twenty-six different groups including thirty-five from the United States, thirty-nine from Africa and the rest from the West Indies and Europe. Among the speakers were Sir Sidney now Lord Oliver, Florence Kelly, Bishop Hurst, Paul Otlet, often called the father of the League of Nations, Senator La Fontaine of Belgium, Dr. Vitellian, former physician of Menelik of Abyssinia, General Sorelas, Blaise Diagne, Norman Leys, and others. The attention which the congress evoked all over Europe was astonishing. It was discussed in the London *Times, Observer* and *Daily Graphic;* in the Paris *Petit Parisian, Matin* and *Temps;* in the Manchester *Guardian* and in practically all the daily papers of Belgium. It led to heated debate in Brussels touching the rights of these delegates to discuss the relation of colonies and it emphasized in the minds of all of us the consequent importance of such discussions.

Two of us visited the League of Nations and the International Labor Office with petitions and suggestions. In 1923 a third Pan-African Congress, less broadly representative than the second, but nevertheless of some importance was held in London, Paris and Lisbon; and thence I went to Africa and for the first time saw the homeland of the black race.

It was the time when the U. S. had disappointed Liberia by not granting her a promised loan and a gesture of good will was in order. At the suggestion of William H. Lewis I was therefore designated by cable as special minister plenipotentiary and envoy extraordinary to represent President Coolidge at the inauguration of President King. In the presence of the diplomatic and consular representatives of England, France, Germany, Spain, Belgium, Holland and Panama I had the honor to tell the President of Liberia: "Your Excellency: . . . I am sure that in this special mark of the

President's favor, he has had in mind the wishes and hopes of Negro Americans. He knows how proud they are of the hundred years of independence which you have maintained by force of arms and by brawn and brain upon the edge of this mighty continent; he knows that in the great battle against color caste in America; the ability of Negroes to rule in Africa has been and ever will be a great and encouraging reinforcement."

At the London meeting of the third Pan-African Congress, Harold Laski, H. G. Wells, and Sir Sidney Olivier spoke, and Ramsey McDonald promised to speak to us but was hindered by the sudden opening of the campaign which eventually made him prime minister of England. Among other efforts, at this time we held conferences with members of the Labor Party of England at which Mrs. Sidney Webb, Mr. Keynes and others were present. We emphasized the importance of labor solidarity between white and black labor in England, America and elsewhere. In Portugal our meeting was attended by cabinet ministers and deputies and though small was of great interest.

To return again to the fight in the United States, there arose early in this decade the case of Marcus Garvey. I heard of him first when I was in Jamaica in 1915 when he sent a letter "presenting his compliments" and giving me "a hearty welcome to Jamaica, on the part of the United Improvement and Conservation Association." Later he came to the United States. In his case, as in the case of others, I have repeatedly been accused of enmity and jealously, which have been so far from my thought that the accusations have been a rather bitter experience. In 1920 when his movement was beginning to grow in America I said in the *Crisis* that he was "an extraordinary leader of men" and declared that he had "with singular success capitalized and made vocal the great and long suffering grievances and spirit of protest among the West Indian peasantry." On the other hand, I noted his difficulties of temperament and training, inability to get on with his fellow workers, and denied categorically that I had ever interfered in any way with his work. Later when he began to collect money for his steamship I characterized him as a sincere and hard working idealist but called his methods bombastic, wasteful, illogical and almost illegal and begged his friends not to allow him foolishly to overwhelm with bankruptcy and disaster one of the most interesting spiritual movements of the modern world. But he went ahead, wasted his money, got in trouble with the authorities and was deported. As I said at the time: "When Garvey was sent

to Atlanta, no word or action of ours accomplished the result. His release and deportation was a matter of law which no deed or wish of ours influenced in the slightest degree. We have today, no enmity against Marcus Garvey. He has a great and worthy dream. We wish him well. He is free; he has a following; he still has a chance to carry on his work in his own home and among his own people and to accomplish some of his ideas. Let him do it. We will be the first to applaud any success that he may have."

I felt for a moment during the war that I could be without reservation a patriotic American. The government was making sincere efforts to meet our demands. It had commissioned over seven hundred Negro officers; I had had a personal interview with Newton Baker, Secretary of War, and he had made categorical promises; Wilson had spoken out against lynching; and I had myself been offered a captaincy in the Intelligence Service, afterwards to be sure rather incontinently withdrawn as the higher command realized just who I was. Nevertheless, I tried to stand by the country and wrote the widely discussed editorial "Close Ranks" in which I said to the Negroes: Forget your grievances for the moment and stand by your country.

I am not sure that I was right but certainly my intentions were. I did not believe in war, but I thought that in a fight with America against militarism and for democracy we would be fighting for the emancipation of the Negro race. With the Armistice came disillusion. I saw the mud and dirt of the trenches; I heard from the mouths of soldiers the kind of treatment that black men got in the American army; I was convinced and said that American white officers fought more valiantly against Negroes within our ranks than they did against the Germans. I still believe this was largely true. I collected some astonishing documents of systematic slander and attack upon Negroes and demands upon the French for insulting attitudes toward them, and when I published these documents in America the government started to interfere by refusing the *Crisis* mailing facilities; then realizing that this was an admission of guilt, they quickly withdrew their prohibition.

I was especially upset by the mobs and lynchings during this time: by that extraordinary upheaval wherein for several hours black men fighting against a mob practically held the city of Washington in their hands; then the riot and murder in Chicago. We fought back through the National Association for the Advancement of Colored People, the columns of the *Crisis*, through lectures and articles with every force at hand. Mary Talbert started

the Anti-Lynching Crusaders and with her help and that of the secretary, James Weldon Johnson, we raised a defense fund of $70,000 and put the Dyer Lynch Bill through the House of Representatives and on to the floor of the Senate. It was not until years after that I knew what killed that anti-lynching bill. It was a bargain between the South and the West by which lynching was permitted on condition that the Japanese were excluded.

Court cases kept pressing upon us: there were the Elaine riots and the Arkansas cases; there was the Sweet case in Detroit; and equally significant to my mind but to few other Negroes the Sacco-Vanzetti case in Massachusetts. We continued winning court victories and yet somehow, despite them, we did not seem to be getting far. We added to the Grandfather Case of 1915 and the Segregation Case of 1917, the victories in the Arkansas cases, the white primary case and another segregation case in the high courts, in addition to the eventual freeing of Dr. Sweet and his family. Still injustice prevailed. In the case of the Mississippi flood the Red Cross allowed the Negroes to be treated as slaves and peons, and in Okolona the Episcopal church refused to prosecute a white murderer on its own school grounds. Above all there came disquieting situations among Negro students: a strike at Hampton, disturbed conditions at Wilberforce, turmoil at Howard, and an uprising at Fisk.

It was thus a decade of infinite effort and discouraging turmoil. I suppose it had to be. I suppose that with the best will, it would have been impossible for me to concentrate on a few great lines of creative effort. I had to be a part of the revolution through which the world was going and to feel in my own soul the scars of its battle. Two things made a sort of finale to the decade: the fourth Pan-African Congress held in New York in 1927 with Dantes Bellegarde, George Sylvain and other speakers; and news of the Congress of British West Africa which began its meetings in 1920 and forced the British government to the greatest step toward democratic method ever taken in black colonies. And finally, to my surprise and quite against my best judgment, there was given for me upon my return from Africa at the Cafe Savarin in New York, a dinner. Among the speakers were Heywood Broun, Walter Hampden and Mrs. Bethune, and tributes were sent by Witter Bynner, Zona Gale and Eugene O'Neil. It was a very beautiful and touching tribute.

Seventh Decade—The Teacher and Writer—1928-1938—60-70 *years.* Gradually in the last ten years of my life it has dawned upon me with

increasing clarity just what the essential change in the world has been since the era of war and depression and how the tactics of those who live for the widest development of men must change accordingly. It is not a matter of change in ideals but of decisive change in the methods by which ideals are to be approximated. As I now look back, I see in the crusade waged by the National Association for the Advancement of Colored People from 1910 to 1930 one of the finest efforts of liberalism to achieve human emancipation; and much was accomplished. But the essential difficulty with liberalism of the twentieth century was not to realize the fundamental change brought about by the world-wide organization of work and trade and commerce. Karl Marx had emphasized in the nineteenth century the overwhelming influence of the economic activities of men upon their thought and actions; but it was not until the twentieth century that it became clearer and clearer to those who observed and thought, that modern business enterprise organized for private profit was throttling democratic government, choking art and literature and making work and industry a paradox by systematically increasing the number of unemployed and dislocating industry itself by periodic depressions.

During the decade, 1918-1928, the world tried to "recover" from the disaster of the World War. We strove to "restore prosperity," to "get back to normalcy" and to return to the same sort of world as the one that had just committed suicide. After ten years of confused effort, it became increasingly clear that the disaster was far greater and deeper than most men dreamed, and that not recovery but fundamental change in the very bases of government and civilization faced us. With the world-wide depression, even the dullest began to conceive the size of the disaster that had overwhelmed mankind.

Moreover the words of the prophets who for nearly a century had been warning mankind now began to sound clear: Freedom, that fine dream of the eighteenth century, had been during the nineteenth persistently interpreted as license for business enterprise, until it had not only reforged shackles for the human spirit, but actually re-established human slavery, first by transporting labor and then by making world-wide the domination of capital. Armed rivalry for monopolizing wealth and services had led to commercial imperialism, world war and universal poverty. We were now faced with enormously difficult task of reconstructing the economic foundations of civilization and building thereon a new heaven and a new earth for the free and creative spirit of man.

The first answer was the practically universal abandonment of democratic control in government and social development for oligarchy. This proved unexpectedly easy because already before the War democracy was so widely a form of words and pious belief and not a practical reality. We held to the forms of voting and popular election, but did not believe nor practice the substance. Throughout European culture, government had passed into the hands of industry, and industry was not controlled by democratic methods. When now the realities of the situation were posed to men, two radical solutions were suddenly resorted to: Russian communism and Fascism. They both did away with democracy, and substituted oligarchic control of government and industry of thought and action. Communism aimed at eventual democracy and even elimination of the state, but sought this by a dogmatic program, laid down ninety years ago by a great thinker, but largely invalidated by nearly a century of extraordinary social change. Fascism sought to take complete control of the state, ostensibly for the good of all the people, but practically for the good of the dominant classes. Both dictatorships were forced to consolidate their power by assassination and mass propaganda of every sort.

All this in the years since the War I had been observing in every part of the world, and I had been trying desperately and unremittingly, to spy out in the Universal Gloom a path for the American Negro. One thing I knew and knew well: we could not afford to sit and wait; we must actively and intelligently press forward toward goals consistent with the new ways of a world about to be born. The problem of a minority group in a world torn by old and new national and racial division was of enormous difficulty: it was idle for us simply to repeat the old slogans of democracy in an oligarchic world; no matter how strongly we, with all forward-looking thinkers, might envisage a birth of democracy, we knew or should know, that at present, our problem was economic rather than political reform; this economic reconstruction was now in progress—amid turmoil and contradiction, beclouded by a thousand irrelevances and bedeviled by every art of selfishness, but nevertheless clearly in progress. My problem was—How can American Negroes join this movement and intelligently reenforce it, for their own good and the good of all men.

In the organization whose leadership I then shared, I saw few allies impressed as I was to an ever increasing degree, as to the immediate necessity of a reorientation of objectives in order to make our original and

unshakable ideals realizable. It was a problem not of change of goal but of method. I looked about for allies and looked where man ever looks in such crisis—to Youth. I thought that just as a quarter century earlier, the N. A. A. C. P. was recruited from clear-eyed and courageous young folk, so today, a reorganization of our aims could be led by a similar group.

For this reason the Second Amenia Conference was called, seventeen years after the first. The first Amenia conference in 1916 met at a strategic time. It brought together on the beautiful farm of Joel Spingarn, where once John Burroughs had studied and dreamed, men and women representing all elements of leadership in the Negro race, together with white friends of prominence and influence. It was an unusually successful effort, and there on the old farm and around the dark still lake, while there was war in Europe and unrest in the United States, a hundred or more Negroes came together and a half dozen whites with messages from three presidents of the United States and other distinguished persons and we agreed upon a liberal program which included a plea for education, a warning against factionalism, a need for interracial understanding and a forward movement. Our essential agreement on a program of advance was gratifying and epoch-making. But as I now see, we did not then sufficiently appreciate the spade-work which had gone before and which for 10 years had been preparing the minds of Americans, black and white, for a new deal in race relations and renewed effort toward racial equality.

In 1933, the situation was different. We met at the beginning rather than at the end of a period of preparatory discussion. We were still mentally whirling in a sea of inconclusive world discussion. We could not really reach agreement as a group, because so many of us as individuals had not made up our minds on the essentials of coming social change. The attendance was sifted—perhaps too much so; outside of four of the Elder Statesmen, the median age age was thirty—persons just out of college, their life work begun but not settled. They were teachers, social workers, professional men and two artisans. The discussion was indeterminate and the resolutions contradictory; it was agreed that "The primary problem is economic" but the conclusion was that this problem could not be approached from the point of view of Race, but only from that of a united group of laborers cutting across racial lines. This was of course the intrusion of communistic dogma—ideally right, and practically unworkable. If the workers of the world would unite in unselfish cooperation to uplift the la-

boring mass, the millenium would be in sight. But we cannot expect of the age-long under-privileged worker, that which the educated and advanced have not envisaged; namely, the ignoring of race prejudice at just the era when it is being artificially stimulated by every human device.

Our program then must begin at home. Whatever just objection there be to racial efforts in a day when biologic races have been proved a myth, the reality of cultural groups like the American Negro, whether called "races" or what not, not only must be admitted but used as units of social uplift. I began then, despite the fact that the most courageous of the Negro youth seemed rushing down steep places into the sea of communistic dogma, without stopping to ask how far this dogma applied to our situation—I began advocating a program of economic organization within the Negro group, designed to prepare us for effective citizenship in the new industrial democracy which the world is slowly but surely approaching.

No sooner had I come to this conclusion than I knew that I was out of touch with my organization and that the question of leaving it was only a matter of time. This was no easy decision; to give up the *Crisis* was like giving up a child; to leave the National Association was leaving the friends of a quarter of a centuary. But on the other hand staying meant silence and a repudiation of what I was thinking and planning. My cutting away, therefore, from this work did not conform to any of the ordinary patterns. A good many of my friends and most onlookers are still puzzled. They tried to classify this break of ties as a question of dismissal, of quarrel, of incompatability of age and youth, or other classifications of the sort. It was none of these. I could have stayed with the National Association to the end of my working days or at least as long as it continued to exist. There was no greater friction within its organization than is inevitable to every human machine; but there was a clear difference of point of view. The Association in the matter of segregation emphasized a part of its program more than it emphasized before. We had recognized and used segregation in the matter of schools and colleges, in matter of religion, in the matter of the officers camp; but we had fought its further spread.

At this point I came advocating a new segregation in economic lines; in precisely the lines of business and industry whither the National Association for the Advancement of Colored People was not prepared to go. It was not an absolute difference of principle, but it was a grave difference of further procedure, and therefore I gave up my connection with the Associa-

tion saying: "In thirty-five years of public service my contribution to the settlement of the Negro problem has been mainly candid criticism based on a careful effort to know the facts. I have not always been right, but I have been sincere, and I am unwilling at this late day to be limited in the expression of my honest opinions in the way in which the Board proposes. . . . I am, therefore, resigning from my position as Director of Publications and Research, Editor of the Crisis, member of the Board of Directors of the National Association for the Advancement of Colored People, and member of the Spingarn Medal Committee,—this resignation to take effect immediately." The Association was good enough to express in return appreciation of the work I had done while associated with it.

In the meantime I had already been turning to work which was in a sense a renewal of my early work and research from 1908 to 1918. Already as early as 1909 I had planned an Encyclopaedia of the Negro, had secured on my board of advisers Flinders Petrie, Sir Harry Johnston, Giuseppe Sergi, Dr. J. Deniker, William James and Franz Boaz; and on my proposed board of editors I had practically all the leading Negroes of the United States who were inclined toward research, but my change to New York and the work of starting the *Crisis* and then the World War put this quite out of my mind. The project was reviewed by the Phelps Stokes Fund and today, backed by anthropologists all over the world, we are seeking a quarter of a million dollars to realize this dream.

On the other hand my interest in Reconstruction which had begun in 1910 was renewed. In that year I had read a paper on "Reconstruction and its Benefits" before the American Historical Association. At the suggestion of the president, Albert Bushnell Hart, and others like Dunning of Columbia this paper was published. Finally in 1932 I asked the Rosenwald Fund to give me funds by which I could finish it. They did and the book "Black Reconstruction in America" was published in 1935.

By that time I was teaching at Atlanta University. There again I was carrying out the thread of a long dream. As early as 1905 I had been one of a group interested in uniting the various colored colleges into one university. Later, in 1909, President Hope and I worked out an interchange of lectures. He wrote me February 16, 1910: "I hope and believe this is the beginning of new and larger things in an educational way among our Colored institutions"; and later, April 21, 1910, he added: "I feel a downright enthusiasm over the beginning that our two schools made this

year and hope that, now that we have made a start and have some slight idea of what can be accomplished, the two schools may next year do larger things."

John Hope and I had long been intimate and sympathetic friends and in the earlier part of this same year he had written me quite frankly a letter which I can now without betraying confidence quote:

"My impression is that *friendship*—not acquaintanceship or perfunctory intercourse but real friendship—is based not so much on agreement in opinion and policies and methods but upon downright confidence, upon simple faith, no matter what the view or appearances. You and I for nearly ten years have been friends. . . . You may remember that in the early and bitterly misunderstood efforts of the Niagara Movement, I was the only college president that ventured to attend the Harper's Ferry meeting to take part in its deliberations. You may remember, too, that while some may have answered the call to that seemingly radical meeting in New York last May, I was the only president, colored or white, of our colleges that took part in the deliberations of that meeting. I cite this to show that I have dared to live up to my views even when they threw me in the midst of the most radical. Furthermore, every man on our faculty does the same and will as long as I am head of the institution. . . . I write to ask you whether you have me in your heart—not on your calling list or your mailing list but in your heart—on your list of friends."

Before I had resigned from the National Association for the Advancement of Colored People, Hope had offered me a position in Atlanta whenever I might wish to come, and, when the actual consolidation of these schools took place he repeated the offer. So that finally when the break came I returned to the renewed Atlanta University to carry out my independent lines of thought and express them in such writing and teaching as I might wish. In 1936, I seemed confirmed in the wisdom of my way by the panorama of the world which swept before me in London and Paris, Berlin and Vienna, Moscow and Mukden, Peiping and Shanghai, Kyoto and Tokyo, and heavenly Hawaii.

Finally I suppose upon a seventieth birthday one is presumed to have accumulated enough wisdom on the art of living to leave a wise word. There is not much that I feel moved to say; that little is this: I am especially glad of the divine gift of laughter; it has made the world human and loving,

despite all its pain and wrong. I am glad that the partial Puritanism of my upbringing has never made me afraid of life. I have lived completely, testing every normal appetite, feasting on sunset, sea and hill. I have seen the face of beauty from the Grand Canyon to Capri, from the Alps to Lake Baikal, from the African bush to the Venus of Milo. I am proud of a straightforward clearness of reason, in part a gift of the gods, but also to no little degree due to scientific training and inner discipline. By means of this I have met life face to face, I have loved a fight and above all I have done the work which I wanted to do and not merely that which men wished to pay me for. This is, I ween, the essential difference between Heaven and Hell.

Finally I have realized that the main fact of life is age and death. This makes it the more incomprehensible for me to see persons quite panic stricken at the approach of their thirtieth birthday and prepared for dissolution at forty. Few of my friends have celebrated their fiftieth birthdays, and near none their sixtieth. Of course one sees some reasons: the disappointment at meagre accomplishment which all to some extent must share; the haunting shadow of possible physical decline; the fear of death. I have been fortunate in having health and wise in keeping it. I have never shared what seems to me the essentially childish desire to live forever. Life has its pain and evil—its bitter disappointments; but in healthful length of days there is triumphal fulness of experience and infinite joy in seeing the most interesting of continued stories unfold. Not eternity but time is for the living:

"Mein Vermaechtniss, mein Vermaechtniss,
"Wie herrlich weit und breit!
"Die Zeit ist mein Vermaechtniss—
"Mein Acker ist die Zeit!"

The Revelation of Saint Orgne the Damned

Saint Orgne stood facing the morning and asked: What is this life I see? Is the dark damnation of color, real? or simply mine own imagining? Can it be true that souls wrapped in black velvet have a destiny different from those swathed in white satin or yellow silk, when all these covering are fruit of the same worm, and threaded by the same hands? Or must I, ignoring all seeming difference, rise to some upper realm where there is no color nor race, sex, wealth nor age, but all men stand equal in the Sun?

Thus Orgne questioned Life on his Commencement morning, in the full springtide of his day. And this is the Revelation and the answer that came to Saint Orgne the Damned as he came to be called, as he stood on his Mount of Transfiguration, looking full at life as it is and not as it might be or haply as he would have it.

"In very truth, thou art damned, and may not escape by vain imagining nor fruitless repining. When a man faces evil, he does not call it good, nor evade it; he meets it breastforward, with no whimper of regret nor fear of foe."

"Blessed is he that reads and they that hear the words of this prophecy for the time is at hand. Grace be unto you and peace, from him which was and which is and is to come and from the seven spirits which are before his throne."

I, who also am your brother and companion in tribulation and in the kingdom and the patience, was in the isle that is called America. I was in the spirit and heard behind me a great Voice saying, "I am Alpha and Omega, the first and the last; and what thou seest write. I turned to the voice. I saw seven golden candlesticks with one in the midst of the candlesticks; and in his hands seven stars and out of his mouth went a sharp two edged sword. And when I saw him I fell at his feet as dead and he laid his right hand upon me saying unto me "Fear not. Write thou the things which thou has seen; the mystery of the seven stars and the seven golden candlesticks."

So Orgne turned and climbed the Seven Heights of Hell to view the Seven Stars of Heaven. The seven heights are Birth and Family; School and Learning; the University and Wisdom; the great snow-capped peak of Work; the naked crag of Right and Wrong; the rolling hills of the Freedom of Art and Beauty; and at last, the plateau that is the Democracy of Race; beyond this there are no vales of Gloom—for the star above is the sun itself and all shadows fall straight before it.

Orgne descended into the valleys of the Shadow, lit only by the waving light of single candles set in seven golden candlesticks, struggling through noisome refuse of body and mind. Long years he strove, uphill and down, around and through seven groups of seven years until in the end he came back to the beginning, world-weary, but staunch; and this is the revelation of his life and thought which I, his disciple, bring you from his own hands.

A golden candlestick stood beneath a silver star, atop a high mountain and in the cold gray dawn of a northern spring. There was the first hint of apple blossoms and faint melody in the air; within the melody was the whisper of a Voice, which sighed and said: "Why should we breed black folk in this world and to what end?

Wherefor should we found families and how? Is not the world for such as are born white and rich?"

Then Orgne, half grown, lying prone, reared himself suddenly to his feet and shivering looked upward to light. The sun rose slowly above the mountain and with its light spake. Hear ye the Wisdom of the families of black folk:

Gentlemen are bred and not born. They are trained in childhood and receive manners from those who surround them and not from their blood. Manners maketh Man, and are the essence of good breeding. They have to do with forms of salutation between civilized persons; with the care and cleanliness and grooming of the body. They avoid the stink of bodily excretions; they eat their food without offense to others; they know that dirt is matter misplaced and they seek to replace it. The elementary rules of health become to them second nature and their inbred courtesy one to another makes life liveable and gracious even among crowds.

Now this breeding and infinite detail of training is not learned in college and may not be taught in school. It is the duty and task of the family group and once the infinite value of that training is missed it can seldom be replaced through any later agency. It is in vain that the university seeks to cope with ill-bred youngsters, foulmouthed loafers and unwashed persons who have happened to pass the entrance examinations. Once in the earlier mission schools among American Negroes men tried to do this, knowing of the irreparable harm slavery had done the family group. They had some success right here in this institution; but the day when such effort is possible is gone. Unless a new type of Negro family takes the burden of this duty, we are destined to be, as we are too largely today, a bad-mannered, unclean crowd of ill-bred young men and women who are under the impression that they are educated.

For this task we have got to create a new family group; and a cultural group rather than a group merely biological. The biology and blood relationship of families is entirely subordinate and unimportant as compared with its cultural entity; with the presence of two persons who take upon themselves voluntarily the sacrificial priesthood of parents to children, limited in number and interval by intelligent and scientific birth-control, who can and will train in the elements of being civilized human beings: how to eat, how to sleep, how to wash, how to stand, how to walk, how to laugh, how to be reverent and how to obey.

It is not entirely our fault that we have missed, forgotten or are even entirely unaware of the cultural place of the family. In European and American civilization we have tried to carry out the most idiotic paradox that ever civilized folk attempted. We have tried to make babies both sins and angels. We have regarded sex as a disgrace and as eternal life. We talk in one breath of the Virgin Mary and of the Mother of God. And at the critical age of life for both men and women, we compel them to strain the last sinew of moral strength to repress a natural and beautiful appetite, or to smear it with deception and crime. We base female eligibility for marriage on exotic personal beauty and childlike innocence, and yet pretend to desire brains, common sense and strength of body. If an age thus immolates its ugly virgins, it will crucify its beautiful fools, with the result of making marriage a martyrdom that few enter with open eyes. The change from this has got to recognize the sin of virginity in a world that needs proper children; the right of the so-called unfathered child to be; the legal adoption into the cultural family of gifted and promising chil-

dren and the placing of black sheep, no matter who their parents are, under necessary restraint and correction. Amen.

The Voice ceased. As Orgne walked slowly down the mountain, he brooded long over the word he had heard, wondering vaguely how far the revelation was within or without his own soul; and then turning the message over in his mind, he thought of his own home, of the three small rooms, of the careful, busy mother and grandmother, of the dead father; and he mused: if one's start in life depends on breeding and not on color or unchangeable and unfathomable compulsions before births, surely I may live, even though I am black and poor.

There came a long space of Seven years. Orgne stood by the bank of the Golden River, with the second candlestick in his hand. He could not see the stars above, for it was nine o'clock of a sun-washed morning; but he knew they were there. He was celebrating all alone his entry into High School. None of his people save only his dead grandfather had ever gotten so far; but with the wave of disappointment which comes with all accomplishment, he muttered, "And why should they, why should I, dawdle here with elements of things and mere tools of Knowledge while both I and the world wait." The river flowed softly as he slept in the summer mildness. Daisies and buttercups waved above him. The grey fleecy clouds gathered and swiftly low thunder rolled; a bolt of heat lightning flashed across the sky. He slept on, yet heard the second star as it spoke:

Hear ye! This is the wisdom of the elementary school.

The difficulty and essential difficulty with Negro education lies in the elementary school; lies in the fact that the number of Negroes in the United States today who have learned thoroughly to read, write, and count is small; and that the proportion of those who cannot read, cannot express their thoughts and cannot understand the fundamentals of arithmetic, algebra and geometry is discouragingly large. The reason that we cannot do thorough college work and cannot keep high university standards is that the students in institutions like this are fundamentally weak in mastery of those essential tools to human learning. Not even the dumbest college professor can spoil the education of the man who as a child has learned to read, write, and cipher; so too Aristotle, Emmanuel Kant and Mark Hopkins together are powerless before the illiterate who cannot reason.

The trouble lies primarily, of course, in the elementary schools of the South; in schools with short terms; with teachers inadequate both as to numbers and training; with quarters ill-suited physically and morally to the work in hand; with colored principals chosen not for executive ability but for their agility in avoiding race problems; and with white superintendents who try to see how large a statistical showing can be made without expenditure of funds, thought nor effort.

This is the fault of a nation which does not thoroughly believe in the education of Negroes, and of the South which still to a large extent does not believe in any training for black folk which is not of direct commercial profit to those who dominate the state.

But the fault does not end there. The fault lies with the Negroes themselves for not realizing this major problem in their education and for not being willing and eager and untiring in their effort to establish the elementary school on a fundamental basis. Necessary as are laws against lynching and race segregation, we should put more money, effort, and breath

in perfecting the Negro elementary school than in anything else, and not pause nor think of pausing until every Negro child between five and fifteen is getting at least nine months' a year, five hours a day, five days in the week, in a modern school room, with the best trained teachers, under principals selected for training and executive ability, and serving with their teachers during efficiency and good behavior; and with the school under the control of those whose children are educated there.

Until this is done and so far as it is not done the bulk of university endowment is being wasted and high schools strive partially in vain. Amen.

Again flew seven years. Orgne was far from home and school and land. He was speaking an unknown tongue and looking upon the walls and towers, colors and sounds of another world. It was high noon and autumn. He sat in a lofty cathedral, glorious in the fretted stone lace-work of its proudly vaulted roof. Its flying buttresses looked down upon a grey and rippled lake; beyond lay fields of flowers, golden chrysanthemums and flaming dahlias and further the ancient university, where for a thousand years men had sought Truth. Around rose a symphony of sound, a miraculous blending of strings and brass, trumpet and drum which was the Seventh Symphony with its lovely interlacing of melody and soft solemn marches, breaking to little hymns and dances. He listened to its revelation gazing rapt at candlesticks and gilded star and whispered: "Why should I know and What, and what is the end of knowing? Is it not enough to feel? The angels in the choir sang No—Hear ye! For Wisdom is the principal thing.

There can be no iota of doubt that the chief trouble with the world and the overwhelming difficulty with American Negroes is widespread ignorance; the fact that we are not thoroughly acquainted with human history; of what men and peoples have thought and done in the seven thousand years of our cultural life. We are especially unacquainted with modern science; with the facts of matter and its constitution; with the meaning of time and space; with chemical reaction and electrical phenomena; with the history of the machine and the tool; with the unfolding of life in the vegetable and animal kingdoms; with the history of human labor; the development of our knowledge of the mind; the practical use of the languages of the world; and the methods of logical reasoning, beginning and ending with mathematics.

This great body of knowledge has been growing and developing for thousands of years, and yet today its mastery is in the hands of so few men, that a comparative small death roll would mean the end of human culture. Without this knowledge there can be no planning in economy; no substantial guidance in character building; no intelligent development of art. It is for acquaintanceship with this knowledge and the broadening of its field that the college and university exist. This is the reason and the only reason for its building among American Negroes and the work that it is accomplishing today is so infinitely less than that which with any real effort it might accomplish that one has a right to shudder at the misuse of the word university. Amen.

Orgne stood at twilight in the swamp. In seven more years, all the romance and glamour of Europe had sunk to the winter of America. It was twilight, and the swamp glowed with the mystery of sunset—long shafts of level burning light,—greens and yellows, purples and red; the whisper of leaves, the ghosts of dead and dying life. The sun died dismally,

and the clouds gathered and a drizzling rain began to fall with slow determination. Orgne shrank within himself. He saw the toil of labor and revolted. He felt the pinch of poverty and wept. "What is this stuff I hear," he cried: "how can we marry and support a family without money? How can we control our schools without economic resource? How can we turn our churches from centers of superstition into intelligent building of character; and beyond this how shall we have time for real knowledge; and freedom of art; and effort toward world-wide democracy, until we have the opportunity to work decently and the resources to spend, which shall enable us to be civilized human beings?

Suddenly across the swamp and across the world and up from the cotton fields of Georgia rolled a Negro folk song. Orgne saw in music Jehovah and his angels, the Wheel in a Wheel. He saw the Golden Candlestick and heard the revelation of the Star: Hear ye! This is the teaching of the World of Work.

The most distressing fact in the present world is poverty; not absolute poverty, because some folk are rich and many are well-to-do; not poverty as great as some lands and other historical ages have known; but poverty more poignant and discouraging because it comes after a dream of wealth; of riotous, wasteful and even vulgar accumulation of individual riches, which suddenly leaves the majority of mankind today without enough to eat; without proper shelter; without sufficient clothing.

Nowhere was the dream of wealth, for all who would work and save, more vivid than here in the United States. We Negroes sought to share that vision and heritage. Moreover, the poverty which the world now experiences, comes after a startling realization of our national endowment of rich natural resources and our power to produce. We have the material goods and forces at command, the machines and technique sufficient to feed, clothe the world, educate children and free the human soul for creative beauty and for the truth that will widen the bounds of all freedom.

That does not mean that we could have enough goods and services for present extravagance, display and waste; but if there were neither idle rich nor idle poor; if sharing of wealth were based not on owning but only on effort, and if all who are able did their share of the world's work or starved, and limited their consumption to reasonable wants, we could abolish poverty.

Why have we not done this? It is because of greed in the production and distribution of goods and human labor. We discovered widely in the 18th century and the 19th the use of capital and it was a great and beneficent discovery; it was the rule of sacrificing present wealth for greater wealth to come. But instead of distributing this increase of wealth primarily among those who make it we left most workers as poor as possible in order further to increase the wealth of a few. We produced more wealth than the wealthy could consume and yet used this increased wealth to monopolize materials and machines; to buy and sell labor in return for monopoly ownership in the products of labor and for further wealth.

We thus not only today produce primarily for the profit of owners and not for use of the mass of people, but we have grown to think that this is the only way in which we can produce. We organize industry for private wealth and not for public weal, and we argue often honestly and conscientiously, that no human planning can change the essentials of this process. Yet the process itself has failed so many times and so

abysmally, that we are bound to change or starve in the midst of plenty. We are encouraging war through fear of poverty that need not exist; we face the breakdown of production by persistent overproduction of the kinds of goods which we cannot afford to consume.

What can we do? There is only one thing for civilized human beings to do when facing such a problem, and that is to learn the facts, to reason out their connection and to plan the future; to know the truth; to arrange it logically and to contrive a better way. In some way, as all intelligent men acknowledge, we must in the end, produce for the satisfaction of human needs, and distribute in accordance with human want. To contend that this cannot be done is to face the Impossible Must. The blind cry of reaction on the one hand, which says that we cannot have a planned economy and, therefore, must not try; and the cry of blood which says that only by force can selfishness be curbed, are equally wrong. Is it not a question of deliberate guilt but of selfish stupidity. The economic world can only be reformed by Spartan restraint in the consumption of goods and the use of services; by the will to work not simply for individual profit but for group weal; not simply for one group but for all groups; and the freedom to dream and plan.

This reformation of the world is beginning with agony of soul and strain of muscle. It can and must go on, and we black folk of America are faced with the most difficult problem of realizing and knowing the part which we have got to play in this economic revolution for our own salvation and for the salvation of the world. This is not easy, for we are cut off from the main effort by the lesions of race; by the segregation of color; by the domination of caste. And yet nothing could be more fatal to our own ideals and the better ideals of the world than for us with unconscious ignorance or conscious perversity or momentary applause to join the forces of reaction; to talk as though the 20th century presented the same oversimplified path of economic progress which seemed the rule in the 19th: work, thrift and wealth by individual effort no matter what the social cost.

The economic illiteracy prevalent among American Negroes is discouraging. In a day when every thinker sees the disorganization of our economic life and the need of radical change, we find the teachers of economics in colored colleges, the Negro business men, Negro preachers and writers to a very large extent talking the language of the early 19th century; seeking to make themselves believe that work for any kind of wages, saving at any sacrifice and wealth on any terms not excluding cheating, murder, and theft, are ways of the world still open and beckoning to us. Selah!

Orgne listened and sat staring at the sodden cotton field beyond the somber swamp. Always the swinging thunder of song surged above—Jordan rolled; the rocks and the mountains fled away, the Way was crowded; and Moses went down, away down among the cabins in the cotton patch to the crazy church and hysterical crowd of penitents all praying madly to escape debt. Orgne talked to the planter and said "let my people go." and worked with the tenants seven long years.

Seven years he toiled and in the end had a little nest of land holders owning one large unmortgaged farm in twenty shares; working their crops and buying their provisions in common and dividing them with equal justice. Poor, Orgne came to them and poor he finally went away leaving them poor too but fed and sheltered. They called him Saint. He smiled and looked upward to the star; but the preacher looked down to the dirt and

mortgaged it behind the backs of the trusting flock and ran away with the money.

Saint Orgne cursed and cried how shall we plan a new earth without honest men and what is this thing we call a church. So, angry, disillusioned and weary he came to a land where it was always afternoon, and he laid him prone on the earth and slept.

Seven years he slept and in seven years came a thousand miles and more to Ohio, to teach in college. At high noon he stood before the chapel and heard the singing of a hymn in the haze of early spring time. Around him stretched the wide, undulating valleys of the Miami, the Ohio, and the realm of the Mississippi. He looked up and suddenly hated the walls that shut out the stars; he hated the maudlin words of the hymn quite as much as he loved the lilt of the voices that raised it. He loved the flowers—the violets and morning glory, the blossoming fruit that filled the yards about. Then came the earthquake; then the earth trembled and swayed; far off in San Francisco a city fell and around the nation quivered. In the midst of the rushing, swaying crowd, again Orgne, after seven years, awoke and found the Golden Candlestick in his hands, and heard the low clear revelation of the Star:

Saint Orgne the Damned, behold the Vision of the Seven Black Churches of America,—the Baptist, the four wings of Methodism, the Roman and Episcopal Catholics.

Their five millions of members in 40,000 groups, holding $200,000,000 in their hands, are the most strongly organized body among us; the first source of our group culture, the beginning of our education—what is this church doing today toward its primary task of teaching men right and wrong, and the duty of doing right?

The flat answer is nothing if not less than nothing. Like other churches and other religions of other peoples and ages, our church has veered off on every conceivable side path, which interferes with and nullifies its chief duty of character building.

It has built up a body of dogma and fairy tale, fantastic fables of sin and salvation, impossible creeds and impossible demands for ignorant unquestioning belief and obedience. Ask any thorough churchman today and he will tell you, not that the object of the church is to get men to do right and make the majority of mankind happy, but rather that the whole duty of man is to "believe in the Lord Jesus Christ and be saved;" or to believe "that God is God and Mohammed is his prophet;" or to believe in the "one Holy and Catholic church," infallible and omniscient; or to keep the tomb of one's grandfather intact and his ideas undisputed.

Considering how desperately, great and good men have inveighed against these continuing foibles of priesthood for many thousand years, and how little in essence has been accomplished, it may seem hopeless to return to the attack today, but that is precisely what this generation has to do. The function of the Negro church, instead of being that of building edifices, paying old debts, holding revivals and staging entertainments, has got to be brought back, or shall we say forward, to the simple duty of teaching ethics. For this purpose the Hebrew scriptures and the New Testament canon will not suffice. We must stop telling children that the lying and deceitful Jacob was better than the lazy Esau, or that the plan of salvation is anything but the picture of the indecent anger and revenge of a bully.

We can do this, not so much by the attacking of outworn superstition and conventional belief as by hearty research into real ethical questions. When is it right to lie? Do low wages mean stealing? Does the prosperity of a country depend upon the number

of its millionaires? Should the state kill a murderer? How much money should you give to the poor? Should there be any poor? And as long as there are, what is crime and who are the criminals?

So Saint Orgne preached the word of life from Jeremiah, Shakespeare and Jesus, Confucius, Buddha and John Brown; and organized a church with a cooperative store in the Sunday school room; with physician, dentist, nurse and lawyer to help, serve and defend the congregation; with library, nursery school, and a regular succession of paid and trained lecturers and discussion; they had radio and moving pictures and out beyond the city a farm with house and lake. They had a credit union, group insurance and building and loan association. The members paid for this not by contributions but by ten dollars a month each of reguiar dues and those who would join this church must do more than profess to love God.

Seven years he served and married a woman not for her hair and color but for her education, good manners, common sense and health. Together they made a home and begot two strong intelligent children. Looking one day into their eyes Orgne became suddenly frightened for their future. He prayed "Oh life let them be free!"

So soon, so soon, Orgne sighed, the world rolls around its sevens of years. It was midsummer and he was sailing upon the sea. He was bound for Africa on a mission of world brotherhood. Behind and waiting were wife and children, home and work. Ahead was the darker world of men yellow, brown, and black. Dinner was done and the deck empty save for himself; all were within the magnificent saloon massed with tall vases of roses and lilies, priceless with tapestry and gilding, listening to the great organ which the master played. The largo whispered, smiled and swelled upward to tears. Then the storm swept down. Then the ocean, lashed to fury by the wind, bellowed and burned; the vast ship tossed like a tortured soul, groaned and twisted in its agony. But Orgne smiled. He knew that behind the storm and above the cloud the evening stars were singing, and he listened to the rhythm of their words: Hear Ye! This is the Freedom of Art which is the Beauty of Life.

Life is more than meat, even though life without food dies. Living is not for earning, earning is for living. The man that spends his life earning a living, has never lived. The education that trains men simply for earning a living is not education.

What then is Life—What is it for—What is its great End? Manifestly in the light of all knowledge, and according to the testimony of all men who have lived, Life is the fullest, most complete enjoyment of the possibilities of human existence. It is the development and broadening of the feelings and emotions, through sound and color, line and form. It is technical mastery of the media that these paths and emotions need for expression of their full meaning. It is the free enjoyment of every normal appetite. It is giving rein to the creative impulse, in thought and imagination. Here roots the rise of the Joy of Living, of music, painting, drawing, sculpture and building; hence come literature with romance, poetry, and essay; hence rise Love, Friendship, emulation, and ambition, and the ever widening realms of thought, in increasing circles of apprehended and interpreted Truth.

It is the contradiction and paradox of this day that those who seek to choke and conventionalize art, restrict and censor thought and repress imagination are demanding for their shriveled selves, freedom in precisely those lines of human activity where control and regimentation are neces-

sary; and necessary because upon this foundation is to be built the widest conceivable freedom in a realm infinitely larger and more meaningful than the realm of economic production and distribution of wealth. The less freedom we leave for business exploitation the greater freedom we shall have for expression in art.

We have got to think of the time when poverty approaches abolition; when men no longer fear starvation and unemployment; when health is so guarded that we may normally expect to live our seventy years and more, without excess of pain and suffering. In such a world living begins; in such a world we will have freedom of thought and expression, and just as much freedom of action as maintenance of the necessary economic basis of life permits; that is, given three or six hours of work under rule and duress, we ought to be sure of at least eighteen hours of recreation, joy, and creation with a minimum of compulsion for anybody.

Freedom is the path of art, and living in the fuller and broader sense of the term is the expression of art. Yet those who speak of freedom talk usually as fools talk. So far as the laws of gravitation are concerned there can be no freedom; so far as the physical constitution of the universe is concerned, we must produce and consume goods in accordance with that which is inexorable, unmoved by sentiment or dream. But this realm of the physical need be only the smaller part of life and above it, is planning, emotion and dream; in the exercising of creative power; in building, painting and literature there is a chance for the free exercise of the human spirit, broad enough and lofty enough to satisfy every ambition of the free human soul. Limited though it be by birth and death, by time and space, by health and mysterious native gift, nevertheless its realm is so magnificent that those who fear that freedom may end with the abolition of poverty or that disease is needed to insure room on the earth or that war and murder are the only handmaids of courage are all talking utter nonsense.

The freedom to create within the limits of natural law; the freedom to love without limit; the freedom to dream of the utter marriage of beauty and art; all this men may have if they are sufficiently well-bred to make human contact bearable; if they have learned to read and write and reason; if they have character enough to distinguish between right and wrong and strength enough to do right; if they can earn a decent living and know the world in which they live.

The vastest and finest truth of all, is that while wealth diminishes by sharing and consuming and calls for control; Art, which is experience of life, increases and grows, the more widely it is shared. Here lie the rock foundations of Democracy. Selah.

So now again pass seven years. It is midnight of an autumn day; and Saint Orgne, risen beatified on the dark frustration of his soul, to the quiet peace of pain, stands in an old forest amid falling leaves, with the starry heavens above him. He knows where, months before, the heavy fragrance of purple wisteria had hallowed this air and dipped great festoons of blooms down into a scented world. But tonight these are gone. All is death. There is no sound; and yet somehow somewhere beneath lies some Tone too deep for sound—a silent chord of infinite harmony. Saint Orgne lifts his hands and waves back to the skies the seven golden candlesticks and the seven silver stars, and speaks, saying, "It is enough!" But the Voice replies:

"I see a new Heaven and a new Earth." "How can that be," wails Saint Orgne. "What is new about War and Murder? What is new in

deified and organized race hate? What is new in breadlines and starvation, crime and disease? Is not our dream of Democracy done?

The stars shine silently on, but in his own heart Saint Orgne's answer comes—Hear ye! This is the Truth of Democracy and Race.

The world compels us today as never before to examine and re-examine the problem of democracy. In theory we know it by heart: all men are equal and should have equal voice in their own government. This dictum has been vigorously attacked. All men are not equal. Ignorance cannot speak logically or clearly even when given voice. If sloth, dullness and mediocrity hold power, civilization is diluted and lowered, and government approaches anarchy. The mob cannot rule itself and will not choose the wise and able and give them the power to rule.

This attack began in 1787 during the French Revolution and it rose to crescendo sixty years later in 1867 when our fathers were enfranchised. The original dictum of human equality and the right of the governed to a voice in their government has never been universally accepted and only seldom has it been attempted. In the world today, universal suffrage is coerced by force as was true here in the South during reconstruction; or by intimidation as was true in the South after 1876; or by economic pressure, either through threat of poverty or bribery of increased income, as has been true in the United States for years. Today finally we have entered the period of propaganda, when people to be sure may vote but cannot think freely nor clearly because of falsehood forced on their eyes and ears; or equally by the deliberate suppression of the whole truth. It is thus that there has arisen in our day, on an astonishing scale, the fascism of despair; the acquiescence of great masses of men in irresponsible tyranny, not because they want it, but because they see no other escape from greater disaster.

Let us then examine anew the basic thesis of democracy. It does not really mean to say that all men are equal; but it does assert that every individual who is a part of the state must have his experience and his necessities regarded by that state if the state survive; that the best and only ultimate authority on an individual's hurt and desire is that individual himself no matter how inarticulate his inner soul may be; that life, as any man has lived it, is part of that great national reservoir of knowledge without use of which no government can do justice.

But this is not the main end of democracy. It is not only that the complaints of all should be heard, or the hurts of the humblest healed; it is for the vastly larger object of loosing the possibilities of mankind for the development of a higher and broader and more varied human culture. Democracy then forms not merely a reservoir of complaint but of ability, hidden otherwise in poverty and ignorance. It is the astonishing result of an age of enlightenment, when the ruling classes of the world are the children of peasants, slaves and gutter snipes, that the still dominant thought is that education and ability are not today matters of chance, but mainly of individual desert and effort. As a matter of fact the chances of real ability today getting opportunity for development are not one-tenth as great as the chance of their owners dying in child-birth, being stunted by poverty or ending in prison or on the gallows. Democracy means the opening of opportunity to the disinherited to contribute to civilization and the happiness of men.

Given a chance for the majority of mankind, to be educated, healthy and free to act, it may well turn out that human equality is not so wild a dream as many seem to hope.

The intelligent democratic control of a state by its citizens does not of itself and by any mechanical formula mean good government. It must be supplemented by the thrift and unselfishness of its citizens. The citizen of a democracy who thinks of democratic government chiefly as a means of his own advancement, meets and ought to meet disappointment. Only in so far as he conceives of democracy as the only way to advance the interests of the mass of people, even when those interests conflict with his, is he playing the heroic role of a patriot. And whenever he excludes from that mass the interests of the poor and the foolish; the Jew and Negro; the Asiatic and the South Sea Islander; he kills the effort at democracy.

Democracy does not and cannot mean freedom. On the contrary it means coercion. It means submission of the individual will to the general will and it is justified in this compulsion only if the will is general and not the will of special privilege.

Far from this broad conception of democracy, we have increasingly allowed the idea to be confined to the opportunity of electing certain persons to power without regard as to whether they can or will exercise power or for what. Even this choice of the voter, in current democracies, is confined mostly to comparatively minor matters of adminstration; but in the great realm of making a living, the fundamental interest of all; in the matter of determining what goods shall be produced, what services shall be rendered, and how goods and services shall be shared by all, there has been deep and bitter determination, that here democracy shall never enter; that here the Tyrant or the King by the grace of God shall always and forever rule.

It is widely in vain that the basic argument for democratic control has here been brought to bear; that these goods and services are the product of the labor of the mass of men and not solely of the rich and talented; and that therefore all men must have some decisive voice in the conduct of industry and the division of wealth. To be sure this calls for more intelligence, technical knowledge of intricate facts and forces, and greater will to work and sacrifice than most men today have; which is only saying that the mass of men must more and more largely acquire this knowledge, skill and character; and that meantime its wide absence, is no valid excuse for surrendering the control of industry to the anarchy of greed and the tyranny of chance.

This faces us directly with our problem in America. Our best brains are taught and want to be taught in large northern universities where dominant economic patterns and European culture, not only prevail, but prevail almost to the exclusion of anything else.

Naturally these men are t h e n grabbed up with rolling eyes and eager mien by the best Southern Negro schools. Now if these Negro universities have any real meaning it is that in them other points of view, should be evolved. They may or may not be radically different. They may bring something entirely new or be an adaptation of surrounding civilization; but certainly they should logically bring a newness of view and a re-examination of the old, of the European, and of the white, which would be stimulating and which would be real education.

But right here we have not simply little or no advance, but we have attitudes which make advance impossible. On the matter of race, for instance, we are ultra-modern. There are certainly no biological races in the sense of people with large groups of unvarying inherited gifts and instincts thus set apart by nature as eternally separate. We have seen the whole world reluctantly but surely approaching this truth. We have therefore hastened to conclude there is no sense in studying racial subjects or inculcat-

ing racial ideals or writing racial textbooks or projecting vocational guidance from the point of view of race. And yet standing in stark contradiction of all this are the surrounding facts of race: the Jim Crow seats on the street cars every day, the Jim Crow coaches on the railroads, the separate sections of the city where the races dwell; the discrimination in occupations and opportunities and in law; and beyond that the widespread division of the world by custom into white, yellow and black, ruler and eternally ruled.

We American Negroes form and long will form a perfectly definite group, not entirely segregated and isolated from our surroundings, but differentiated to such a degree that we have very largely a life and thought of our own. And it is this fact that we as scientists, and teachers and persons engaged in living, earning a living, have got to take into account and make our major problem. In the face of that, we have these young intellectual exquisites who smile if they do not laugh outright at our writhings. Their practical program is so far as our race or group is concerned: Do nothing, think nothing, become absorbed in the nation.

To which the flat answer is: this is impossible. We have got to do something about race. We have got to think and think clearly about our present situation. Absorption into the nation, save as a long, slow intellectual process, is unthinkable and while it may eventually come, its trend and result depends very largely upon what kind of a group is being absorbed; whether such racial integration has to do with poverty-stricken and half starved criminals; or whether with intelligent self-guided, independently acting men, who know what they want and propose at any civilized cost to get it. No, separated and isolated as we are so largely, we form in America an integral group, call it by any name you will, and this fact in itself has its meaning, its worth and its values.

In no line is this clearer than in the democratization of industry. We are still a poor people, a mass of laborers, with few rich folk and little exploitation of labor. We can be among the first to help restore the idea of high culture and limited income and dispel the fable that riotous wealth alone is civilization. Acting together, voluntarily or by outer compulsion, we can be the units through which universal democracy may be accomplished.

We black folk have striven to be Americans. And like all other Americans, we have longed to become rich Americans. Wealth comes easiest today through the exploitation of labor by paying low wages; and if we have not widely exploited our own and other labor the praise belongs not to us, but to those whites whose monopoly of wealth and ruthless methods have out-run our tardy and feeble efforts. This is the place to pause and look about, as well, backward as forward. The leaders of the labor movement in America as in Europe, deceived us just as they deceived themselves. They left us out. They paid no attention to us, whether we were drudging in colonies or slaving in cotton fields or pleading in vain at the door of union labor factories. The object of white labor was not the uplift of all labor; it was to join capital in sharing the loot from exploited colored labor. So we too, only half emancipated, hurled ourselves forward, too willing if it had but been possible, to climb up to a bourgeois heaven on the prone bodies of our fellows. But white folk occupied and crowded these stairs. And white labor loved the white exploiter of black folk far more than it loved its fellow black proletarian.

Such is the plight of democracy today. Where in this picture does the American Negro come? With few exceptions, we are all today "white folks' niggers." No, do not wince. I

mean nothing insulting or derogatory, but this is a concrete designation which indicates that very very many colored folk: Japanese, Chinese, Indians, Negroes; and, of course, the vast majority of white folk; have been so enthused, oppressed, and suppressed by current white civilization that they think and judge everything by its terms. They have no norms that are not set in the 19th and 20th centuries. They can conceive of no future world which is not dominated by present white nations and thoroughly shot through with their ideals, their method of government, their economic organization, their literature and their art; or in other words their throttling of democracy, their exploitation of labor, their industrial imperialism and their color hate. To broach before such persons any suggestion of radical change; any idea of intrusion, physical or spiritual, on the part of alien races is to bring down upon one's devoted head the most tremendous astonishment and contempt.

What to do? We went to school. But our industrial schools taught no industrial history, no labor movement, no social reform,—only technique just when the technique of skilled trades was changing to mass industry. Our colleges taught the reactionary economics of Northern Schools. We landed in bitter and justifiable complaint and sought a way out by complaining. Our mistake lay not in the injustice of our cause, but in our naive assumption that a system of industrial monopoly that was making money out of our exploitation, was going voluntarily to help us escape it talons.

On the other hand when we turn to join the forces of progress and reform we find again no easy or obvious path. As the disinherited both of labor and capital; as those discriminated against by employer and employee, we are forced to a most careful and thorough-going program of minority planning. We may call this self-segregation if we will but the compulsion is from without and inevitable. We may call it racial chauvinism but we may make it the path to democracy through group culture. This path includes sympathy and cooperation with the labor movement; with the efforts of those who produce wealth, to assert their right to control it. It has been no easy path. What with organized, intelligent and powerful opposition and ignorant and venal and dogmatic leadership, the white labor movement has staggered drunkenly for two hundred years or more and yet it has given the world a vision of real democracy, of universal education and of a living wage. It is the most promising movement of modern days and we who are primarily laborers must eventually join it.

In addition to this, no matter how great our political disfranchisement and social exclusion, we have in our hands a voting power which is enormous, and that is the control we can exercise over the production and distribution of goods through our expenditure as consumers. The might and efficiency of this method of economic reform is continually mimimized by the obvious fact that it does not involve radical change and that without other and more thorough-g o i n g changes it can bring no immediate millenium. But notwithstanding for a minority group it is the most powerful weapon at hand and to refuse to use an instrument of power because it is not all powerful is silly.

A people who buy each year at least a half billion dollars worth of goods and services are not helpless. If they starve it is their own fault. If they do not achieve a respected place in the surrounding industrial organization, it is because they are stupid.

Here then is the plight and the steps toward remedy. Yet we are not awake. We have let obvious opportunities slip by during these awful days of depression when we have

lost much of the land we used to own; when our savings have been dissipated; when our business enterprises have failed and when if not a majority a strikingly large minority of us are existing on public charity. We have not asked for the advantage of public housing as we should. We have not taken advantage of the possibilities of the TVA. We have not pushed energetically into plans of resettlement and the establishment of model villages. We have almost refused the subsistence homestead. We have not begun to think of socialized medicine and consumers cooperation. We have no comprehensive plans concerning our unemployment, our economic dependence, the profit economy and the changing technique of industry. The day of our reckoning is at hand. Awake, Awake, put on thy strength Oh Zion.

The martyrdom of man may be increased and prolonged through primitive, biological racial propaganda, but on the other hand through cooperation, education and understanding the cultural race unit may be the pipe line through which human civilization may extend to wider and wider areas to the fertilization of mankind.

It is to this use of our racial unity and loyalty that the United States impels us. We cannot escape it. Only through racial effort today can we achieve economic stability, cultural growth and human understanding. The way to democracy lies through race loyalty if only that is its real and consciously comprehended end. Selah and Amen.

This then is the revelation of Saint Orgne the Damned, as given me by his hand; and the philosophy of life out of which he strove to climb, despite the curse, to broader and more abundant life. Bearing this revelation, Men and Women of the Class of 1938, there return to you today, three pilgrims, and the ghosts of three others, whose memories await us. Fifty years ago we stood where you stand and received the Light of the Seven Stars. We return, not all-wise, but wise; for we have seen ten presidents rule in America and five kings reign in England; we have seen the fall of three great empires; a whole world at war to commit 26 million murders; the rise of dark Japan and fall of darker Ethiopia. We have seen our own race in America nearly double in number from less than seven to more than twelve million souls.

We return home today worn and travel stained, yet with the Light which Alma Mater laid upon our hands; it does not burn so high nor flash so fiercely—yet it has lighted thousands of other candles, and it is still aflame. We hand it on to you, that fifty years hence you give it again to others—and so on forever.

The Future of Wilberforce University*

W. E. BURGHARDT DUBOIS

I Go to Wilberforce

I first saw Wilberforce University in September, 1894. Only two months previously I had returned from the University of Berlin and had finished here and there a continuous education which lasted from my sixth to my twenty-sixth birthday. I was at the time full of ideals, quick and arrogant in judgment, with many personal idiosyncrasies. I walked on to this campus, carrying my gloves in one hand and my cane in the other, according to the best fashion of the German student of that day. Yet I was not altogether impossible; I was comparatively indifferent, for instance, to the matter of money. This was the first salaried job that I had ever held and yet I refused an offer of $1,050 at another institution for the $800 offered here, because Wilberforce meant something to my imagination. I had heard its name since I was a child. On May 24, 1856, one of the midnight endorsers who made the purchase of Wilberforce possible, was John Du Bois a member of a family from which I descend.

I taught at Wilberforce two years: Greek, Latin, German, and English and begged in vain to add Sociology to the load; I married a Wilberforce girl; I made here life-long friends like Paul Laurence Dunbar and Charles Young; and for the forty-six years since my first coming, I have known every president of Wilberforce University and visited the campus at least once during their administrations and in some cases many times. At one of the sessions of the older Board of Trustees I was elected an honorary alumnus.

Notwithstanding all this, I was from the moment I stepped on this campus until today, an outspoken critic of Wilberforce. This was true not because I disbelieved in Wilberforce or underrated its work, but for exactly the opposite reason. From the first, I had for Wilberforce the very highest ideals: I wanted for it nothing cheap, second hand, or inferior; I pictured growing up here a great university, not simply Negro, not simply American, but a university in the full sense of those famous institutions of learning with which I had been connected for six years in the United States and in Europe. With all the impetuosity of youth, I had not the slightest doubt of the possibility of building up such an institution. I can imagine the astonishment with which persons heard my first lecture here. It was a sort of inaugural address after the German fashion, attending my advent as professor, in which I outlined with perfect confidence the plan of an institution, unlimited in breadth and efficiency.

My dreams were not wholly built on air. I took into account the extraordinary geographical situation of Wilberforce: practically in the longitudinal center of the Negro population of the United States, and yet in latitude North of Mason and Dixon's line. I was thrilled by the natural beauty of this place and uplifted by the romantic

* Commencement Address, delivered June 13, 1940.

history of its founding. Because of this very dream and high ideal, I was from the first bitter and uncompromising at every act which did not agree with, and every plan that did not lead toward, the sort of institution I had in mind.

I Leave Wilberforce

The result was that after only two years' experiment I left Wilberforce. I was not kicked out, but that was only because I moved before the inevitable swing of the boot. Eventual dismissal was certain and I had sense enough to see it. But notwithstanding that, my interest in this school instead of waning, if anything, increased; my criticism of its shortcomings has never ceased and equally I have never lost my belief in its possibilities.

I come, therefore, again, in my rôle of open and frank critic of Wilberforce University and in an attempt to guide its possible future. I would have you believe that there lurks in what I am going to say, nothing of personal pique or disappointment. There is nothing that I desire of Wilberforce University. I have no scores to settle. For the most part those with whom I was intimately associated while here are long since dead. Some few of the teachers I do know but for the most part I have not seen or heard from them for near a decade. In a sense then I come both as an old friend and yet to most of you as a stranger; but to all as one who knows the history of Wilberforce University, who has followed this history with intense and vivid interest and who speaks with only one idea in mind: that, rising out of the muddle and dispute, failure and promise of the present situation, there should eventually arise a Wilberforce which would be recognized by any standard as one of the great institutions of learning in the United States.

The Present Plight

As you know quite as well as I, this is not the case today. I am deeply disappointed that it is not. Even as I left here as a teacher in the summer of 1896, I firmly believed that a half century would see the institution established in accord with some of the ideals that I had and had expressed. This has not happened. I come back forty-six years after to find the institution still desperately lacking in most things that a great university demands.

The scientific output of this institution in books and articles, in literature and art, in technical efficiency and economic organization falls so far below the standard of great schools that one searches almost in vain for tangible evidence of scientific work done by Wilberforce professors and graduates. There are some to be sure but they stand out in the midst of a great desert. You have not produced great scholars or scientists, great technicians nor great thinkers, and yet there is no earthly reason why you should not have done this. Let me illustrate by the case of one of the smaller colored colleges. In two decades of work between 1919 and 1939 the teachers and graduates of West Virginia State College published thirty-three books and monographs, one hundred fifty-five articles and prepared thirty-one unpublished manuscripts, a total of two hundred nineteen pieces of scientific work which is, if I mistake not, at least ten times the

output of Wilberforce. One encouraging effort in recent days, the *Wilberforce University Quarterly*, I hailed with new hope, but I fear now this will be a casualty of the late war. The quality of educational work done here for more than half a century has never until recently received recognition as being in accord with the standards of the nation. You have not so established yourself in this country as to make it unnecessary for a first-class student to apologize for attending Wilberforce University rather than Ohio State or the University of Chicago. You have been content for a half century to do second-grade work and to make voluminous and frequent excuses therefore.

In addition to this, and perhaps in a sense even more significant, is the situation of this surrounding community. Forty years ago, Xenia was an important manufacturing and commercial center. Wilberforce was a prosperous farming district. One had a right to believe in 1895 that the middle of the twentieth century would see here in Southern Ohio, a thriving economic center with prosperous manufactures and commercial enterprises and with a large and growing colored community here of home owners, farmers, merchants, scientists, and technicians; not only comfortable and self-supporting but a respected and integral part of the economic and social organization of the Middle West. I know the blighting effect of war and depression and the difficulties of economic maladjustment and race prejudice; and yet it seems to me that it apparently has not occurred to this community that any development of the sort was possible under Wilberforce leadership. In appearance and character, in occupation and ambition, the Wilberforce community looks like a center of stagnation, lack of ambition, and, in a certain chilling sense, lack of hope. The surrounding country and Xenia have deteriorated; and when a few weeks ago I wanted to get a through-train from Chicago to Xenia the nearest I could get was Dayton. That would have been a joke in 1900. On the other hand, the physical expansion of Wilberforce as a school has been great in the amount of land controlled, in the number of buildings, in the size of its student body. Buildings like this hall, like the library, and like several of the dormitories are striking evidence of growth; and yet even here you who have seen the marvelous physical expansion that has taken place in other Negro institutions throughout this country know that Wilberforce is behind. In the growth of its faculty, in the caliber of its teaching and facilities for teaching Wilberforce has also grown but here it has lagged far behind similar institutions.

The Ravine

There is one other thing that may seem to you unimportant and aside but it looms to vast size in my thought; and that is, the way in which you have conceived and the way in which you have treated, the natural beauty of your surroundings. Here is a lovely undulating land with beautiful trees, grass and wild flowers, with roads winding naturally between the hills and with little brooks and rivers murmuring day and night through broad meadows. As it seems to me you have looked upon this beauty as a thing to

be leveled, flattened, and scarred. That your ideal would be something slick and square, with brooks hushed, rivers put underground and hills pressed down into the earth. Consider, for instance, the ravine, one of the loveliest natural possibilites of Greene County. It begins with the old main road of Wilberforce and stretches down, widening and deepening to the green meadows and river below. It is a God-created center of natural beauty and development, a potential amphitheatre, a focus around which a university could be ranged, set in the very midst of this community. It was this murmuring vale of healing waters that back in the early nineteenth century attracted people of leisure to Tawawa Springs to drink in its crystal clarity and loll in leisure under the great branches of its oaks and elms. Since then this community has done everything that it could to shame and obliterate the ravine. In my day already they were using it as a refuse dump. Later they made it the center of a sewage disposal area; but recently they have piled mud in its center to make an extra road. I can remember how once as young teachers protesting against the beginning of profanation of this marvelous beauty spot, we planned to give Shakespeare's "Midsummer's Night Dream" in the ravine, ranging the auditors upon its sloping sides and playing in its flower-covered depths. We wanted to raise money for a library. The library in 1896 occupied a room half the size of this rostrum. It was kept locked. I chased Professor Scott over this campus for a week to get the key. We determined to transfer the library to the little-used double parlors and to raise funds for this by this pageant in the ravine. The way our plan was stopped was prophetic: a powerful bishop in 1896 had decided to appoint his good-for-nothing son as a professor in this school. We stopped our midsummer night's dream to stage a strike and protest. In the end we won temporarily; the eventual loss of our jobs became merely a matter of time.

Reasons for Failure

Why now has Wilberforce failed as an institution of learning to reach the heights toward which it must eventually climb if it survives, and why as a community has it failed to become neat, prosperous, beautiful, and self-supporting? You know the answer which the average white citizen of Ohio gives to this question: he simply says "Negroes!" That would not disturb me so much in itself, were it not for the fact that the average colored citizen of the nation is coming to say the same thing. Literally dozens among the best Negroes of Ohio with whom in recent years I have talked concerning Wilberforce have all come to the fatalistic conclusion that you cannot expect an ideal development in education or community life here simply because colored people are in control. If I believed that I would not be here. But I do not believe it. And I do not believe it, because I have had opportunity in the last quarter century to see at first hand the kind of development which is taking place in Negro institutions of learning where the same problems that you face here are being attacked and solved.

I have already told you that when I was offered work at Wilberforce University, a position at what was then

Lincoln Institute in Jefferson City, Missouri, was open for me. I refused the larger salary offered there because Lincoln Institute at the time was the well-known plaything of graft and petty politics. The president of the Institute could only hold his job by handing over to members of the Trustee Board a part of the money which the Institute was overcharged by the merchants who sold it supplies. Appointments to positions in the Institute were matters of petty political deals, personal likes and dislikes, and pool-room politics. There were no standards of instruction or educational accomplishment, and there were cheap buildings with a small enrollment of students who came because they could go nowhere else. Today Lincoln University of Missouri is not yet re-born but its birth pains are distinctly audible. It has driven partisan politics out of the institution. It has killed several presidents in the process but the deed is about done. It has secured a steadily increasing income, more adequately paid professors, new buildings, and better prepared students.

I saw last year the Florida A. and M. College at Tallahassee after an interval of twenty-five years. I was astonished. From a ramshackle agglomeration of few buildings, few teachers, and indifferent students it has today magnificent buildings and a thousand college students; and while its salaries are still too low and its standards of scholarship not as high as they must be, it is a growing and developing college. The same can be said of Virginia State College at Petersburg; the thoughtful planning of that campus, the disappearance of the eye-sore which was long its main building, and the number of well-trained men who have regularly and consistently been appointed to the faculty and given security of tenure and encouragement for graduate study and scientific work, is one of the finest pieces of academic accomplishment in the South.

The possible relation of a college to its community is illustrated at Prairie View, Texas. So astonishing has been this development that when recently a white president of a great Northwestern state wanted to know how his institution could best get into helpful touch with its community, the trustees of the General Education Board referred him to the Texas Colored State College at Prairie View. The president of that college is in close connection with every secondary school in the state; he has records of every Negro student about to be graduated from every high school in Texas; he is continuously studying the economic condition of colored folk in every part of the state; he is bringing them regularly to Prairie View for conference and discussion at the rate of over ten thousand actual visitors a year. Adjoining the campus is today being developed a settlement of a score of one hundred forty-acre farms, financed by the Federal Government, and for that settlement, industry and occupations outside of farming and teaching are already being carefully planned and carried out.

Or suppose we turn to some of the older institutions: Fisk, Howard, and Atlanta University. A record of the books and articles published by professors and graduates of these institutions in the last year form a contribution to American literature recognized

over the whole country. These books are reviewed in the leading periodicals of the nation; the research of their laboratories is recognized even in Europe; the standards of scholarly accomplishment are being set just as high as those in white institutions. In other words, what can be done at Wilberforce is already being done by colored folk in all parts of the nation and in no case have these people had the natural and geographical advantages, the social freedom, and the political power that you have here.

The History of Wilberforce

Not in race nor character, not in ability nor power do the failures of Wilberforce find root. What are then the main reasons of the difficulties which have beset your path? We ourselves in moments of depression are prone to blame our blood for every failure and misfortune, but to know the truth we must address ourselves first to the historical rise of this institution and see what obstacles it has encountered and how it has tried to surmount them and what the results of these efforts in our day have been.

Looking into the historical threads that were woven into the web of this institution I can descry three sets of human beings whose efforts have made Wilberforce and who have been responsible in large part for its successes and its failures. First came three extraordinary figures: Daniel Payne, John Mitchell, and Benjamin Lee. If ever three saints strove without thought of self and with utter devotion to the highest ideals which they could conceive to build here a worthy monument for your worship, these were the men. Two of them I knew personally and one died but the year before I came to Wilberforce, leaving a memory singularly vivid and green. It is not often that it is given any group of human beings to command the services of three such men. Daniel Payne, the little bishop, short, slight, shrivelled, was a man of plodding learning, of austere personal morality, of unflinching firmness and indefatigable energy; no thought of himself or of his own interest ever stood for a moment between him and what he thought best for Wilberforce University, for the African Methodist Church, and for the Negro race. John G. Mitchell, large, calm and placid, starved for thirty-seven years to make a real theological seminary here, living always serenely above the clouds, with a firm and unshakeable belief in a higher world and in its intimate causal relations with this earth. Benjamin Lee came later. He was a more practical man who knew evil, looked it squarely in the face, and fought it doggedly; he was intensely earnest; solemn in soul and action, impatient of dishonesty, greed and sensuality, and always striving desperately to do and make others do what seemed to him exactly the right thing. With these three men, this college started on a high and ideal plane with little money but with great and unselfish hopes.

There came afterward, connected in various ways with this institution and with the church, three hammers: powerful, ambitious but ruthless men who represented force and driving power unhampered by ideals; who had no inhibitions of learning or social standards but drove a way through all sorts of obstacles; and under their

leadership both the church and the school lurched now forward and now back. Contemporaneous with these and later were three politicians, who represented compromise and adjustment. They were victims rather than leaders; they were the buffers between Ideals and Power, Good and Evil, Theory and Practice. They handled the Church and the State, the public and the school, the teachers and the students. Some were gifted men who had to do unpleasant things and devise devious paths in a crooked world. One man, who belonged to this class of leaders was president of this school when I came, Samuel T. Mitchell.

Samuel Mitchell

Samuel Mitchell faced a most difficult problem. Another sort of man, a man like Payne, John Mitchell, or Lee, would have handled his problem differently. But Samuel Mitchell was more subtle and faced a more complex modern world. He was a small, handsome man with captivating manners. He influenced men; he was extraordinarily successful in conference and personal meeting; he stooped to conquer. He came to the presidency of Wilberforce in 1884 and remained until the last year of the nineteenth century. I once blamed Samuel Mitchell severely for his course of action. But time and experience have explained much if not all. He faced the same problem that you face: how can the church of a poor working people support an increasingly costly system of education? Mitchell worked hard to increase income, and in his administration it rose fifty per cent higher than ever before. But at that it was miserably inadequate. He must get more, but how?

During his day the problem of the church and education was apparently settled but in fact was beginning momentous change. It went without saying, before 1900, that churches should promote education, establish colleges, and conduct universities. The union of church and education seemed in that day logical and almost inevitable. Already, however, the burden of supporting education with limited church funds and expanding church programs was beginning to be felt and the alternative had long seemed to be the accumulation of endowments. Thus most of our greater universities like Harvard, Yale, and Princeton starting as denominational schools gradually accumulated endowment funds sufficient to make them independent of the churches and the connection was gradually severed.

Wilberforce had long kept before her this ideal of endowments but there was no precedent then of rich white folk amply endowing a colored institution and there were no rich Negroes. But poor Negroes tried to relieve this situation by heroic efforts to increase its gifts to education. With the appointment of a secretary of education in 1884, the A. M. E. Church responded so that in 1900 it was raising $20,000 a year. This was a notable effort. If all the money raised for education in the Church could have been concentered upon Wilberforce, which was Payne's original idea, the situation would have been well in hand. But in 1904, the church educational fund was being distributed among twenty-five institutions, including ten colleges which averaged less than $3,000 a

40/56/28

school. Particularism was too strong: every bishop, each district, each state wanted and in a sense needed its school. The cost of raising funds for Wilberforce both in actual money and effort became prohibitive.

Moreover, at this time throughout the nation the state was coming in and beginning to support higher education. This support was not altogether effective because it involved a great deal of petty politics and selfish bargaining and consequently low standards in teaching appointments and in scholarship. No one then could have foreseen that in the course of less than a half century, higher education would be very largely in the hands of the state with the prospect that before long the privately endowed or church supported institution will have largely disappeared.

The Bargain of 1889

Samuel T. Mitchell finding increasing difficulty in raising funds and yet the educational demand expanding, conceived the shrewd bargain of 1889. With his inimitable charm and ability to fascinate and convince, he succeeded in the face of the prohibitions of the state constitution and in spite of the just fears of church leaders, in bringing about a certain sort of union between the State of Ohio and the African Methodist Episcopal Church for the support of Wilberforce. As we can now see, it was a dangerous compromise and the time may come when we will look back upon this as the cause of the eventual collapse of this institution. But that will only be if in the face of the continued friction and upheavals that have followed the bargain, we throw up our hands, refuse to look facts in the face, and fail to grasp the plow that is before us and the real furrow that can yet be run.

What have been the results of this consolidation of the A. M. E. school, Wilberforce University, and the State of Ohio as owner of the combined normal and industrial department at Wilberforce? First of all there has been a serious combination of the church and politics. From 1856 to 1889, Wilberforce had become the political capital of the A. M. E. Church and its nation-wide membership. Here the little Bishop, Daniel Payne, as senior prelate of the church ruled. Power became concentrated in his hands, through his extraordinary moral purity, his unselfish ideals, and his indomitable energy. All of the rulers of the Church came to Wilberforce to consult him; bishops' councils were held here; general officers and general policies were decided upon. The senior bishop knew the characters of everybody in the church: when this man aspired to the bishopric—No, said the little bishop, he is not an honest man! No, he is not a moral man! No, he is lazy and selfish and will not work!

When Bishop Payne died, it meant that what had been an ecclesiastical dictatorship in strong, honest, and unwavering hands became a matter of wide intrigue, manipulation, and political arrangement. The well-being and interests of Wilberforce became inextricably intermingled with the interests, and often the selfish personal interests, of the church leaders. The so-called Board of Trustees of Wilberforce University was a body of hundreds of men distributed all over the United States, only a minority of

whom ever came to any meeting and came then, most of them, because of church politics and not because of their interest in Wilberforce.

I remember vividly the first meeting of the Trustees while I was here. As they began to swarm in I took my cane and gloves and went to the woods for a long walk.

"Where have you been?" asked my colleagues.

"To the woods," I answered, innocently.

They threw up their hands. "That's not the thing to do when trustees come to Wilberforce," they said. And they were right.

When now President Mitchell in his effort to raise funds projected this politically-minded Wilberforce into state politics and thus more than doubled the available income of the school, it was natural for ministers, bishops, and presidents of Wilberforce to dabble further in partisan politics until they have helped emphasize that very interference of politics with education which it has been the desperate effort of state universities all over America for fifty years to avoid.

This situation did not however develop immediately in the case of Wilberforce. As Mitchell conceived the consolidation there was to be one head of the combined institutions; the state institution was to be in fact a department of Wilberforce University, although the legal phrase had it "*at* Wilberforce University."

Politics and Wilberforce

The policy which has developed concerning the relation of the State Department and the University is interesting to review: first came the logical action, back to which the state and the University must revert if this institution is to grow and develop properly; that is, the president of the university was also superintendent of the combined normal and industrial department. This is the only way in which one institution with a single policy can be built up. President Mitchell was at the head of both departments from the beginning of state aid until 1896—seven years.

Such a combination, however, presupposes that the interests of the state as well as the university not only be combined but carefully looked after by the single head, so that neither party to the combination would feel under-rated or cheated. The feeling arose under President Mitchell that the State was being used simply for its money and as an unimportant adjunct to the University.

The next step of the State was characteristic but not radical. It appointed a separate head for the State Department, but chose for the position a man long connected with Wilberforce University, the son of one of its founders and absolutely loyal to its ideals, J. P. Shorter. Shorter was a strict administrator and careful business man, and he supplemented President Mitchell's ability to handle persons and compose differences by his own accuracy and executive methods. This went on for fourteen years, and the two parts of the institution worked in considerable, if not perfect, harmony. The main difficulty which now began to show itself and later was emphasized was that the combined normal and industrial department had more money than the University, and yet was the subordinate partner.

Then, soon after the advent of President Scarborough, there came a momentous change: the State appointed as superintendent a young man well-trained as an educator and also experienced as executive and business man. President Scarborough, on the other hand, was a scholar and a theorist in no way designed for the details of administration and with little liking for it. The inevitable happened; the real presidency of Wilberforce was gradually transferred to the State side. The normal department went forward by leaps and bounds. It bought lands and built buildings; it arranged teachers' homes; it introduced electricity; it organized its curriculum; it paid its teachers good salaries; it developed other far-sighted plans; while the University hung on as a sort of poor relative of the dominant owner and was really largely supported by state charity. When the administrations changed in 1920, and Gregg came as president, while Joyner retired, there came a third policy, irregularly and less clearly developed: the head of the normal department became more and more a mere fiscal officer and neither a trained educator nor a conspicuous executive. This tended to separate the two institutions and friction arose and multiplied. Almost, it can be said, two separate and rival institutions appeared here—one with power and no money, the other with money and no clear policy.

It was almost inevitable during the years from 1900 to 1940 that into this situation petty state politics should begin to intrude, and this was in no small part the fault of the A. M. E. Church and of Wilberforce University itself. From the time that Samuel T. Mitchell found that political manipulation could bring funds to Wilberforce, from that time on the temptation on the part of the Church to work this source was difficult to withstand. Bishops, presiding elders, ministers, and presidents of the institution became politicians and worked for what they thought was either their own advantage or the advantage of Wilberforce. Other colored people in the State not connected with the A. M. E. Church saw no reason why they should not share the spoils. The caliber of the persons appointed to the board by the State gradually decreased. In earlier years, some of the best known people of the State, white and black, served upon the board of the normal and industrial department. They were replaced as time went on by persons who, whatever their other qualifications were, had often never attended college, knew little about college problems, and certainly had not been trained or experienced in the technical work of administering an institution of education.

Throughout the United States it has been found that in state universities, this tendency has had to be met and fought and stopped. In the University of Wisconsin the University of Michigan, the University of Illinois, Indiana University, in all the Negro land-grant colleges, and in other institutions, it has taken the voters a quarter of a century to learn that appointments in an institution of learning cannot be used to reward political support or to give jobs to friends or as matters of personal sympathy.

Educational Ideals

Education is a great and serious end.

It has to do primarily not with soils and crops, not with stone and iron, but with the souls of your own children and thus with the future of the Negro race in America. It is becoming one of the greatest functions of government. If it is seduced and cheapened and ruined by putting in charge of it people, who, however worthy they may be personally, are ignorant of the difficult technque of carrying on the training of youth, the whole program is ruined. This is the sort of thing that has happened and is happening to Wilberforce University. Perverted standards have come in. In the eyes of many quite honest people it seems to be natural that the teaching jobs at Wilberforce should be handed around to people whom they like and taken away from people they don't like. The question as to what sort of man one is: whether truthful or a liar; dignified or a clown; an earnest worker or a lazy wastrel does not concern them. They do not inquire whether the candidate knows his subject and knows how to teach it. They assume without reflection that there should be appointed to the faculty and upon the trustee board anybody who is a friend to the governor; that if there is a person at Wilberforce or elsewhere who has been unfortunate, who has suffered, who has not received the consideration that he ought to, that a perfectly legitimate way to settle this difficulty is to appoint him professor or dean even though everybody knows he cannot perform his duties because of congenital unfitness or crass ignorance.

Nor do these perverted standards stop here. Indeed they did not begin here. In the case of the Church and the University, it has become a sort of unwritten law that the bishop of this district should be a sort of super-president; that he should rule the University and at the same time dictate to the board of trustees and also enter into political understanding with the State. I remember vividly when Bishop Arnett laid down law and gospel for President Mitchell. This puts the president in an impossible position: he must placate the bishop of Wilberfore; he must be on good terms with bishops of other districts, who are furnishing funds for Wilberforce; he must keep in touch with the officials of the State; he must try to bring into line the man whom the State for any reason, political or personal, appoints at the head of the normal and industrial department; and then incidentally he must keep a faculty and a body of students at their proper tasks. No human being can successfully occupy such a place.

The Path of Progress

Here then is the situation that confronts us. What is to be done about it? When some years ago a talented professor of history in Howard University, Charles Wesley, was considering accepting the presidency of Wilberforce University, I wrote him hurriedly and said: Under no circumstances accept the presidency of Wilberforce unless at the same time you are made head of the combined normal and industrial department.

The path of progress before Wilberforce is clear and inevitable: first there must be one head to this institution. Anything else spells friction, lost effort, and eventual disaster. It will be difficult to bring this about. There will have to be a rearrangement of trustee

boards and a new understanding with State officials. This can only be done by a determined effort on the part of the colored people of Ohio, the A. M. E. Church, and Wilberforce University to convince the world that what they want here is not jobs for their friends or religious bigotry or the settlement of personal grudges, but a great institution of learning primarily for the Negro race and eventually for the nation; that to this end they propose to subordinate every selfish interest; that they plan to work in accordance with the best advice of the most influential people of Ohio, white and black; that they will consider no political bargain on the part of either Church or State, but with high and unselfish ends unite to rebuild Wilberforce.

There must be, I repeat, as the beginning of reorganization one head to this combined institution, appointed after thorough consultation and understanding between State and Church and the best educational advice of Ohio. That man must undertake this work as a life-time job and not as a mere stepping-stone on his way to the bishopric. As the best guarantee for this, he would best not be a clergyman at all. But minister or layman, he must hold the scales of perfect justice between the Church on the one hand and the State on the other, handling all funds in method and intent with absolute and unswerving honesty. His controlling board of trustees should be nominated by the Church and appointed by the governor and should represent fairly the interests of the colored people of Ohio and the interests of education in the whole state. In accordance with the best and only rule of administration, this board should confine itself to settling general policy and should leave the appointment and dismissal of teachers to the president and then hold him alone responsible for the good conduct and efficiency of this University.

This calls for a union of high effort. Can you make it? You, the school, the community, the State?

Christianity and Wilberforce

I have noted in your president's report the insistence that Wilberforce University is a Christian institution. This is an old note. It has been sounded again and again with all kinds of variations for nearly a hundred years. It was a matter of emphasis when I was here near a half century ago and it did not impress me. It did not impress me because it was all too evident that what most people at Wilberforce called Christianity was a childish belief in Biblical fairy tales, a word-of-mouth adherence to dogma, and a certain sectarian exclusiveness. It often seemed to me when I lived here a miserable misapprehension of the teaching of Christ. I do not attempt in the slightest way to interfere with anyone's sincere and deep-seated belief. If a man believes that faith in Jonah and the whale is necessary to his soul's salvation, I shall not gainsay him. But I do believe that the generation of young folk before me and the world-at-large have some clear and definite ideas of what real religion calls for and I believe that the citizens of Ohio want tangible proof of certain matters before they will continue to support Wilberforce.

Today, in plain English, if Christianity means anything, it means

honesty, unselfishness, and hard work. It means honesty in the handling of funds whether they are the pennies of black washerwomen or the thousands of the State appropriation. It means the absolute wiping out of petty graft, of waste and of stupid carelessness. In addition to this, Christianity means sympathy; the realization of what it costs a human being to live and support a family in decency; the realization that a man cannot do scientific research and scholarly work on a $1,000 a year; the realization that teachers and students are human beings who suffer and strive and fail. Above all, Christianity means unselfishness; the willingness to forego in part one's personal advantage and give up some personal desires for the sake of a larger end which will be for the advantage of a greater number of people. And finally, Love is God and Work is His Prophet.

Frankly, I have never found at Wilberforce University any outstanding evidence of this kind of Christianity. Once upon a time it was here, and that is why I recall the rôle of the Three Saints who put their lives into this institution. It has since then, time and time again, been openly, crassly, and impudently contradicted by dishonesty, cruelty, and utter selfishness.

May I illustrate: when I was asked to come to Wilberforce in 1894, it was to teach Latin and Greek. I did not know much about them, but I knew that Scarborough was head of the department and I was glad and willing to work under his tutelage. Imagine my astonishment, when I arrived at Wilberforce, to find that I was head of the department; that one of your periodical quarrels had taken place, and the president had transferred Scarborough to the Theological Department to teach nobody for nothing; while I, a student of sociology, was the whole department of Latin and Greek in the University! This illustrates better than anything I can say the utter stupidity of such action. Scarborough may have been a difficult man to get along with. I do not know. But he knew Latin and Greek better than most American teachers. Laying aside all personal likes and dislikes he should have been kept at that job. And the opposite is also true: if he had known no Greek and been a poor teacher and an unworthy man, he certainly did not belong in a theological seminary. To appoint a man to position because of sympathy is just as wrong as to dismiss him from the work he is best fitted to do.

Unless, therefore, the Christianity which you vaunt here is going to be the sort I have described you will have endless difficulty in extricating Wilberforce from its plight. On the other hand, if this institution handles its funds honestly, is sympathetic and decent in the treatment of its teachers and unselfish in the establishment of high aims, and if it can do real scientific work in education; then with one head to the combined institution you have begun reconstruction. But here you cannot sit still. Eventually this preliminary treaty of peace between State and Church must go forward toward a complete and definitive consolidation.

Two Paths to the Future

The first possible path is that the Church gradually withdraw from its present dependence upon the State

and establish an independent, self-controlled, and self-supported institution. This appeals to many of you. It is in many respects a great and fine ideal. The difficulty with this program —and the inevitable difficulty—is its cost and the preliminary change in machinery which it involves. Such an institution must become first independent not of but in the Church. The local bishop must loose his stranglehold upon the president. The General Conference and board of bishops must likewise stand aside content with general oversight and refraining from continual interference. The school must cease to be a mere stepping-stone to the bishopric. It must exist for itself. Its own board of trustees must be in supreme control and they must in accordance with universal practice in modern education put the actual executive responsibility upon the president. At the same time that the Church thus withdraws from intermeddling with the institution and that the trustees put on its executive officer responsibility and the power at the same time the Church must furnish vastly increased funds; and here is the rub. Can the Church do it and will it?

There was once a legend that Mark Hopkins, a log and a boy could constitute a college. That legend is no longer valid. The boy needs today a library and a large and costly library with a competent and well-trained staff—not three over-worked slaves. Without it, he cannot get a modern education. The boy needs laboratories carefully planned, systematically conducted, with materials and tools; and laboratories cost a lot of money. The boy must have not one but a dozen instructors; they must be not merely good men who can read and write, but good men with long, thorough training in the accumulating and widening knowledge of their fields of instruction. For these and a dozen other different reasons the cost of conducting a first class college today as compared with fifty years ago has risen enormously. Ignoring for the moment the millions of dollars a year that are spent at Harvard and Columbia, let us turn our attention to colored colleges remembering that the A. M. E. Church has never been able to raise for education as much as $50,000 in a single year and usually it has raised much less.

As compared with that let us remember that it costs $275,000 a year to run Fisk University; over $300,000 a year to run the Atlanta University system; $365,000 a year to run Virginia State College, while Prairie View College costs $420,000; Southern University of Louisiana cost $650,000 last year; and Howard University costs $1,000,000 a year. It costs huge sums of money to conduct universities today and there is no reason to believe that the cost is going to be less in the future; rather if anything, more.

With the demands upon them today nearly all churches are giving up their attempts to run colleges and universities. The great reunited Methodist Church is practically giving notice to all its institutions that they must prepare to stand alone. The Baptists are following. The Presbyterian Church has taken the same path. An institution like Wilberforce could hardly get from the A. M. E. Church adequate funds, even if the church gave up the other smaller institutions and concentrated upon Wilberforce. Today even

that looks impossible. Loyalties have been built around Morris Brown College and Edward Waters College and in most of twenty-five institutions, which makes their closing unthinkable.

Wilberforce will start too late to get much from the distribution of funds now going on under the great foundations, and in addition to that the whole attempt to support higher education even by endowment is made today exceedingly uncertain by the industrial changes brought about partly by world war and partly by far-reaching economic revolution. Millions of dollars of former endowment funds are today worthless from these causes and the future of the endowed college, as I have said before, looks very uncertain.

Wilberforce as a State School

The second possibility is one from which Wilberforce and its constituency has always recoiled but I think you will have to look it straight in the face and that is for Wilberforce University to become a full-fledged state school. There is an example before you of a state colored college to which I beg your careful attention. In 1832, Richard Humphries, a white Quaker, who was once a West Indian slave-owner was living in Philadelphia. On his death he left $10,000 to found an institution for Negroes. Negroes were at that time excluded from the public schools and colleges of that State. His money went to found the Institute for Colored Youth and from that time until after the Civil War, that Institute was one of the best colored high schools of the United States and trained some of our most distinguished leaders The wife of a bishop of this church was long its honored principal.

After the Civil War, however, Negroes were gradually admitted to all the schools and colleges of Pennsylvania. The endowment of the Colored Institute was too small to support it and the attendance not large. The trustees finally moved the school out into the country to Cheyney and established it on an excellent site. Then came the question of support. The new principal, Leslie P. Hill, struggled for years, passing the hat to colored people and white in order to support this school which was now a teacher-training school. He could not get enough money. But the number of his students, attracted by good teaching and pleasant surroundings and repelled from other schools by social ostracism, increased. At last it was clear that either the school must close or the state must support it. Hill, therefore, asked that Cheyney become a recognized state teacher-training school and college.

The colored people of Pennsylvania literally raised hell. They accused Hill of deliberate encouragement of segregation and of an attempt to lower the standard of Negro education. I once went down to Philadelphia to argue in support of Hill's proposition. I shall not soon forget the bitterness with which I was assailed. Nevertheless, Cheyney today is a state college adequately supported from public taxes and perhaps the most beautifully housed of any of our schools with an excellent group of well-paid teachers. Colored students still attend the University of Pennsylvania, the University of Pittsburgh, and the other

state normal schools; but in addition to that they attend Cheyney; and the net result of making Cheyney a state school is to my mind thoroughly vindicated.

If Wilberforce should become a state university, it need not and indeed according to the letter of its charter it cannot ever become an exclusively colored school. The charter of Wilberforce University said from the beginning in 1863 "There shall never be any distinction among the trustees, faculty, or students on account of race or color." Added to this comes the constitution of the State of Ohio which prohibits the establishment of a purely racial school.

But there is no reason why an institution of higher learning like Wilberforce University should not be established here depending entirely upon State and Federal appropriations and student fees; that these appropriations instead of being as they are today too small for the establishment of a first-class educational institution become larger and larger, as there is developed here the will and ability to use them in the right way.

There is no reason why a predominantly colored faculty and colored student body should not constitute Wilberforce University and yet gradually raise itself to be the equal in every respect of any institution in this State or in the United States; thus proving to a skeptical generation that color is not connected with ability or honesty. When the time comes in the future, as it may well come, that white persons would be appointed now and then to the teaching force here and white students appear in the student body, it might also happen that colored men would be appointed to the faculty of Ohio State University and colored students continue to be received there, but not as mere outsiders, not as pariahs, but as integral and welcome members of the institution.

I believe that this is the logical and right way to settle the difficulties and recurring upheavals at Wilberforce University. And I believe this because recently in spite of all the difficulties which have faced the university administration it has received from an independent and not over-friendly authority gratifying testimony as to what can be done at this institution, if the institution is organized and can function as a university should.

Educational Recognition

I do not think that the A. M. E. Church and the Wilberforce constituency realize what it has meant that for eighty-four years Wilberforce University has had no recognized standing in the United States as an educational institution. It has had sympathy; it has been commended for hard effort but its standing has not been officially recognized. The bachelor's degree of Wilberforce University has never been sufficient to admit its possessor to recognized standing in a single institution of the world. Now this is serious. How serious it is can only be known by those acquainted with the present standards and methods of education. In Europe such an institution would not be allowed to confer degrees at all and in the United States until 1939 the Wilberforce degree was nationally discounted. Today for the first time in its history Wilberforce has received recognition, conditional to be sure, but official recognition that its degrees

are reaching the national standard. Educationally this is the greatest accomplishment in the history of Wilberforce University.

In 1935, the officials of the North Central Association of Colleges and Secondary Schools made a careful investigation; they noted particularly this difficulty which I have stressed of two institutions with double control; with clashes of personalities, political interference and lack of funds. Four years later they came back. They generously recorded the fact that great improvement had been made; that through the efforts of the president who had made vital changes in the faculty, the clash of personalities had been abated; the teaching force had been strengthened; the library had been strikingly improved; and the general business administration was better. They said that while this pronounced progress had been accomplished that they could not at present recommend the admission of Wilberforce to the North Central Association.

Despite this, however, the Board of Review of the Commission on Higher Education, while recognizing that Wilberforce was still confronted with the same difficult problems, decided nevertheless to accredit the institution subject to the supervision of a committee which was to make annual reports in 1940, 1941 and 1942.

The University, therefore, for the first time in its history has received conditional recognition as a standard institution.*

Following this, a special committee report for the first of the trial years, 1940, records still continued improvement and "tangible evidence of an increased unity of purpose within the institution." It believes that Wilberforce is making reasonable progress in general and looks forward to the permanent accrediting of the institution after 1942; but the committee is still apprehensive because of threatened political interference. The interference has taken place. Through new legislation, a new state board comes into control. The balance of power swings toward the State, while the Presidency is still in the hands of the Church. The new board, over the president's recommendations, appoints and dismisses teachers. This throws the institution back again to the fundamental problem of putting a permanent end to this double control and of ceasing to make Wilberforce the football of partisan politics, whether this situation arises from dabbling in politics by Wilberforce officials or from outside politicians muscling in.

In either and both cases, an aroused public opinion, with stern rebuke of this cheapening and frustration of the great objects of an old and respected institution can set the present muddle

* The committee of examiners of March, 1939, "despite the pronounced development which has taken place at Wilberforce University during the three years of President Walker's administration," nevertheless "find themselves constrained regretfully to recommend to the Board of Review that Wilberforce University be not at present included in the membership list of the North Central Association of Colleges and Secondary Schools."

However the Board of Review of the Commission on Institutions of Higher Education decided to "accredit the institution subject to the guidance of a committee which will make an annual report in 1940, and in 1941, and a final report in 1942." Unless conditions improved, the Board of Review will then "find it necessary to give further consideration to the retention of Wilberforce University on the list of accredited institutions."

straight and start the program which I have indicated.

The Wilberforce Community

But Wilberforce is more than a school and its problems transcend the Church. It is not simply a community; it is not simply the educational capital of three-quarters of a million people united in a great and powerful organization; it is, or ought to be, one of the main centers out of which trained and scientific guidance for twelve million people could come. Now the chief present problem of these twelve millions today is the matter of employment at a wage which will allow them to live like civilized human beings. In the present increasing turmoil of the world, there must eventually come, on the part of leading nations, a wide and fundamental readjustment of economic organization and industrial life and work and wage. Some of you assume that when this reorganization comes you are going automatically to inherit what belongs to you; but this will not happen unless you plan for yourselves in accordance with the best thought and training of the day.

That means that around Wilberforce as a community there should begin to grow a thriving self-supporting body of citizens, well-trained in science and art, abreast with the world in thought, raising their own food, building their own homes and beginning to manufacture the clothes and other articles that they use; and that this independent economy, separate from the school and yet nourishing it, racial and yet broadly interracial, should spread out through Greene County and Ohio and the Nation.

There should begin here that necessary and fateful organization of consumer power which once rescued Denmark and Sweden and is the only way out for the economic independence and physical survival of the Negro.

This program which you should organize and plan today was begun for you more than a century ago when the colored people of Cincinnati rose up against their impossible surroundings called the first national convention of the Negroes in 1831 and began that mass migration to Canada which was the greatest movement among Negroes before the Civil War. Wilberforce University arose on the echo of the Cincinnati effort and if it ever finally succeeds, it will be because building upon that past it goes forward into an economic future starting here and developing into a community life high in thought, scientific in planning, and unselfish in deed.

Envoi

Gentlemen and ladies of the graduating classes: I have said little today directly to you, whose day of celebration this is. I have talked to your elders and to those set in authority over you. But every word I have uttered is indirectly for you. For yours is the kingdom and the power and the glory, forever. Your fathers will tell you that what I advise and plan is impossible. They are right. It is impossible. But The Impossible is just what you have got to do to save Wilberforce; and believe me when I say, out of the depth of years and the lore of centuries: This is a world where many times, the Impossible has been triumphantly achieved.

"Awake, awake, put on thy strength; O, Zion, put on thy beautiful robes."

BEHOLD THE LAND

By Dr. W. E. B. Du BOIS

NOTE

The text of this pamphlet was delivered in Columbia, S. C. October 20, 1946, as the principal address at the closing session of the Southern Youth Legislature, sponsored by the Southern Negro Youth Congress. This publication is part of the official proceedings of that meeting, the seventh south-wide conference of the S.N.Y.C.

PREFACE

The text which follows, for all its brevity, or possibly because of it, bears all the marks of a classic statement of one of America's most persistent problems. In slightly more than two thousand words, the author, with the incomparably brilliant insight which characterizes all his works, illuminates the basic nature of the social, political and economic life of the South.

As notable as his analysis of socio-economic forces in the South, is Dr. DuBois' hardly-equalled appeal and challenge to the South's youth, white and black. With the full force of his great intellectual and combative powers, the renowned scholar, teacher, and people's leader sounds the democratic tocsin for the emerging generation.

And these two salient features of the work—the analysis of the South's condition and the exhortation to its youth—are couched in language whose grandeur and simplicity explain why Dr. DuBois is regarded as one of the great literary stylists of our times.

The reader will be interested in the circumstances under which the address was delivered. At the closing public session of the Southern Youth Legislature, 861 young delegates Negro and white, crowded into Antisdel Chapel of Benedict College in Columbia, South Carolina. They were joined by a large and sympathetic public who stood in the isles, jammed the doors and listened through loudspeakers outside the auditorium.

A hush fell over the audience as youth prepared to express "the great obligation of reverence and respect which (they) cherish for . . . the senior statesman of the American

Negro's liberation struggle . . . the noble and peerless patriarch of our steady climb out of slavery's darkness into the light of full freedom."

Softly, the Organ swelled with the tones of "The Battle Hymn of the Republic." And throughout the spellbound room a Voice was heard to say:

White Men said that Black Men could never be their equals because they were the Sons of the condemned Ham; and many Black Men believed them.

But in frosty New England a Hamite was born who did not believe the White Men. His mother named him William Edward Burghardt and his family's name was DuBois. William at an early age decided to prove the White Men LIARS *by attaining a wisdom and a culture equal to that of the most learned among them.*

Thus armed, he said to the White Men, "Am I not the equal of your finest?" But the White Men scoffingly replied: "You are a phenomenon, a miracle, an accident. Can you not see that your fellows are still 'hewers of wood and drawers of water?' Cannot you see that you are alone?"

And William was sorely hurt and disappointed. However, other Hamites had been inspired by his aim and determination. These he called around him and bound them together as the Talented Tenth and gave them a mission to create a Movement with the force of Niagara to fight for the recognition of the equality of Black Men.

William was no longer alone; but his group was alone. And the White Men when asked for equality for Black Men still pointed to the countless Black Men who could not solve the mysteries of the symbols which made sound and those which determined measures.

William was challenged.

And down from the Ivory Towers of the Talented Tenth came swiftly the sensitive, suffering, crusading William; down from the Ivory Towers to the Good Earth. Here he mingled with the laborers of the fields, of the mines, of the factories; laborers who stank with sweat made sweet by honest toil. He touched them tenderly, passionately, brotherly.

He asked them to let him join them in the struggle for their daily bread and a fuller life; and to join with him in the great struggle for Equality.

They smiled him a warm welcome.

Then he turned to the Talented Tenth who had watched him with misgiving and cried: "I am now without *the Veil! The Talented Tenth Alone will never prove the White Men* liars. *But with* all *of us working together the truth will establish itself. Together we can challenge destiny and move the Earth; separately each of us shall perish!"*

A voice in the multitude cried, "Close Ranks!"

And God smiled.

As the Voice and the Organ returned the chapel to a tense silence, Dr. DuBois rose to the accompaniment of enthusiastic applause and received from the hands of Miss Esther Cooper, retiring executive secretary of the Southern Negro Youth Congress, youth's award for his "unparalleled achievements . . . monumental labors . . . and principled struggle . . . on behalf of the Negro people of the United States and the unfree peoples of all the world . . ."

Setting aside a book of reverence signed by all the delegates of the Southern Youth Legislature, Dr. DuBois then delivered the address which follows.

Dr. W. E. B. DuBois is shown receiving a *Book of Reverence* from Esther V. Cooper at the closing session of the Southern Youth Legislature.

BEHOLD THE LAND

BY

Dr. W. E. B. Du BOIS

The future of American Negroes is in the South. Here three hundred and twenty-seven years ago, they began to enter what is now the United States of America; here they have made their greatest contribution to American culture; and here they have suffered the damnation of slavery, the frustration of reconstruction and the lynching of emancipation. I trust then that an organization like yours is going to regard the South as the battle-ground of a great crusade. Here is the magnificent climate; here is the fruitful earth under the beauty of the Southern sun; and here if anywhere on earth, is the need of the thinker, the worker and the dreamer. This is the firing line not simply for the emancipation of the American Negro but for the emancipation of the African Negro and the Negroes of the West Indies; for the emancipation of the colored races; and for the emancipation of the white slaves of modern capitalistic monopoly.

ALLIES IN THE WHITE SOUTH

Remember here, too, that you do not stand alone. It may seem like a failing fight when the newspapers ignore you; when every effort is made by white people in the South to count you out of citizenship and to act as though you did not exist as human beings while all the time they are profiting by your labor; gleaning wealth from your sacrifices and trying to build a nation and a civilization upon your degra-

dation. You must remember that despite all this, you have allies and allies even in the white South. First and greatest of these possible allies are the white working classes about you. The poor whites whom you have been taught to despise and who in turn have learned to fear and hate you. This must not deter you from efforts to make them understand, because in the past in their ignorance and suffering they have been led foolishly to look upon you as the cause of most of their distress. You must remember that this attitude is hereditary from slavery and that it has been deliberately cultivated ever since emancipation.

Slowly but surely the working people of the South, white and black, must come to remember that their emancipation depends upon their mutual cooperation; upon their acquaintanceship with each other; upon their friendship; upon their social intermingling. Unless this happens each is going to be made the football to break the heads and hearts of the other.

WHITE YOUTH IS FRUSTRATED

White youth in the South is peculiarly frustrated. There is not a single great ideal which they can express or aspire to, that does not bring them into flat contradiction with the Negro problem. The more they try to escape it, the more they land into hypocrisy, lying and double-dealing; the more they become, what they least wish to become, the oppressors and despisers of human beings. Some of them, in larger and larger numbers, are bound to turn toward the truth and to

recognize you as brothers and sisters, as fellow travellers toward the dawn.

"JAMES BYRNES, THE FAVORITE SON OF THIS COMMONWEALTH"

There has always been in the South that intellectual elite who saw the Negro problem clearly. They have always lacked and some still lack the courage to stand up for what they know is right. Nevertheless they can be depended on in the long run to follow their own clear thinking and their own decent choice. Finally even the politicians must eventually recognize the trend in the world, in this country, and in the South. James Byrnes, that favorite son of this commonwealth, and Secretary of State of the United States, is today occupying an indefensible and impossible position; and if he survives in the memory of men, he must begin to help establish in his own South Carolina something of that democracy which he has been recently so loudly preaching to Russia. He is the end of a long series of men whose eternal damnation is the fact that they looked *truth* in the face and did not see it; John C. Calhoun, Wade Hampton, Ben Tillman are men whose names must ever be besmirched by the fact that they fought against freedom and democracy in a land which was founded upon Democracy and Freedom.

Eventually this class of men must yield to the writing in the stars. That great hypocrite, Jan Smuts, who today is talking of humanity and standing beside Byrnes for a United Nations, is at the same time, oppressing the black people of Africa to an extent which makes their two countries, South Africa and the Southern South, the most reactionary peoples on earth. Peoples whose exploitation of the poor and helpless reaches the last degree of shame. They must in the long run yield to the forward march of civilization or die.

WHAT DOES THE FIGHT MEAN

If now you young people instead of running away from the battle here in Carolina, Georgia, Alabama, Louisiana and Mississippi, instead of seeking freedom and opportunity in Chicago and New York—which do spell opportunity—nevertheless grit your teeth and make up your minds to fight it our right here if it takes every day of your lives and the lives of your children's children; if you do this, you must in meetings like this ask yourselves what does the fight mean? How can it be carried on? What are the best tools, arms, and methods? And where does it lead?

I should be the last to insist that the uplift of mankind never calls for force and death. There are times, as both you and I know, when

> "Tho' love repine and reason chafe,
> There came a voice without reply,
> 'Tis man's perdition to be safe
> When for the truth he ought to die."

At the same time and even more clearly in a day like this, after the millions of mass murders that have been done in the world since 1914, we ought to be the last to believe that force is ever the final word. We cannot escape the clear fact that what is going to win in this world is reason if this ever becomes a reasonable world. The careful reasoning of the human mind backed by the facts of science is the one salvation of man. The world, if it resumes its march toward

civilization, cannot ignore reason. This has been the tragedy of the South in the past; it is still its awful and unforgivable sin that it has set its face against reason and against the fact. It tried to build slavery upon freedom; it tried to build tyranny upon democracy; it tried to build mob violence on law and law on lynching and in all that despicable endeavor, the state of South Carolina has led the South for a century. It began not the Civil War—not the War between the States—but the War to Preserve Slavery; it began mob violence and lynching and today it stands in the front rank of those defying the Supreme Court on disfranchisement.

Nevertheless reason can and will prevail; but of course it can only prevail with publicity—pitiless, blatant publicity. You have got to make the people of the United States and of the world know what is going on in the South. You have got to use every field of publicity to force the truth into their ears, and before their eyes. You have got to make it impossible for any human being to live in the South and not realize the barbarities that prevail here. You may be condemned for flamboyant methods; for calling a congress like this; for waving your grievances under the noses and in the faces of men. That makes no difference; it is your duty to do it. It is your duty to do more of this sort of thing than you have done in the past. As a result of this you are going to be called upon for sacrifice. It is no easy thing for a young black man or a young black woman to live in the South today and to plan to continue to live here; to marry and raise children; to establish a home. They are in the midst of legal caste and customary insults; they are in continuous danger of mob violence; they are mistreated by the officers of the law and they have no hearing before the

courts and the churches and public opinion commensurate with the attention which they ought to receive. But that sacrifice is only the Beginning of Battle, you must re-build this South.

There are enormous opportunities here for a new nation, a new Economy, a new culture in a South really new and not a mere renewal of an old South of slavery, monopoly and race hate. There is a chance for a new cooperative agriculture on renewed land owned by the State with capital furnished by the State, mechanized and coordinated with city life. There is chance for strong, virile Trade Unions without race discrimination, with high wage, closed shop and decent conditions of work, to beat back and hold in check the swarm of landlords, monopolists and profiteers who are today sucking the blood out of this land. There is chance for cooperative industry, built on the cheap power of T.V.A. and its future extensions. There is opportunity to organize and mechanize domestic service with decent hours, and high wage and dignified training.

"BEHOLD THE LAND"

There is a vast field for consumers cooperation, building business on public service and not on private profit as the main-spring of industry. There is chance for a broad, sunny, healthy home life, shorn of the fear of mobs and liquor, and rescued from lying, stealing politicians, who build their deviltry on race prejudice.

Here in this South is the gateway to the colored millions of the West Indies, Central and South America. Here is the straight path to Africa, the Indies, China and the South Seas. Here is the Path to the Greater, Freer truer World. It would be shame and cowardice to surrender this glorious land and its opportunities for civilization and humanity to the thugs and lynchers, the mobs and profiteers, the monopolists and gamblers who today choke its soul and steal its resources. The oil and sulphur; the coal and iron; the cotton and corn; the lumber and cattle belong to you the workers, black and white, and not to the thieves who hold them and use them to enslave you. They can be rescued and restored to the people if you have the guts to strive for the real right to vote, the right to real education, the right to happiness and health and the total abolition of the father of these scourges of mankind, *poverty.*

THE GREAT SACRIFICE

"Behold the beautiful land which the Lord thy God hath given thee." Behold the land, the rich and resourceful land, from which for a hundred years its best elements have been running away, its youth and hope, black and white, scurrying North because they are afraid of each other, and dare not face a future of equal, independent, upstanding human beings, in a real and not a sham democracy.

To rescue this land, in this way, calls for the *Great Sacrifice;* This is the thing that you are called upon to do because it is the right thing to do. Because you are embarked upon a great and holy crusade, the emancipation of mankind black and white; the upbuilding of democracy; the breaking down, particularly here in the South, of forces of evil represented by race prejudice in South Carolina; by Lynching in Georgia;

by disfranchisement in Mississippi; by ignorance in Louisiana and by all these and monopoly of wealth in the whole South.

There could be no more splendid vocation beckoning to the youth of the twentieth century, after the flat failures of white civilization, after the flamboyant establishment of an industrial system which creates poverty and the children of poverty which are ignorance and disease and crime; after the crazy boasting of a white culture that finally ended in wars which ruined civilization in the whole world; in the midst of allied peoples who have yelled about democracy and never practised it either in the British Empire or in the American Commonwealth or in South Carolina.

Here is the chance for young women and young men of devotion to lift again the banner of humanity and to walk toward a civilization which will be free and intelligent; which will be healthy and unafraid; and build in the world a culture led by black folk and joined by peoples of all colors and all races—without poverty, ignorance and disease!

Once a great German poet cried: "Selig der den Er in Sieges Glanze findet."

"Happy man whom Death shall find in Victory's splendor."

But I know a happier one: he who fights in despair and in defeat still fights. Singing with Arna Bontemps the quiet, determined philosophy of undefeatable men:

"I thought I saw an angel flying low,

I thought I saw the flicker of a wing
Above the mulberry trees; but not again,
Bethesda sleeps. This ancient pool that healed
A Host of bearded Jews does not awake.
This pool that once the angels troubled does not move.
No angel stirs it now, no Saviour comes
With healing in His hands to raise the sick
and bid the lame man leap upon the ground.

The golden days are gone. Why do we wait
So long upon the marble steps, blood
Falling from our open wounds? and why
Do our black faces search the empty sky?
Is there something we have forgotten? Some precious thing
We have lost, wandering in strange lands?

There was a day, I remember now,
I beat my breast and cried, "Wash me God,"
Wash me with a wave of wind upon
The barley; O quiet one, draw near, draw near!
Walk upon the hills with lovely feet
And in the waterfall stand and speak!

JOIN TODAY — GIVE TODAY

What the future holds for Negro youth of the South—and, in large measure, for American democracy and world peace—depends on *you.* For almost ten years now (since February, 1937), young Southerners have been making a signal contribution to the growth of democracy through the South's foremost progressive youth organizations:

THE SOUTHERN NEGRO YOUTH CONGRESS

You cannot afford to sit this one out.

In urban centers, rural areas and on college campuses, the crusade proceeds in the fields of citizenship education, veterans' welfare, cultural expression, vocational training and interracial unity. The aims of the SNYC are the simple aims of the vast majority of American citizens. By filling in the blank below and sending your membership and contribution you can help achieve our democratic heritage of

Draft manuscripts and fragments
1950

THE BLACK UNITED STATES

A STORY OF THE DESCENDANTS OF AFRICANS IN THE UNITED STATES OF AMERICA

BY

W. E. B. DU BOIS

35-4-172

1. The Negro Group

There were in the United States of America in 1940, 12,865,518 native born citizens, something less than a tenth of the nation, who form largely a segregated caste, with restricted legal rights, and many illegal disabilities. The growth of the populat on in the nation has been steady. When the Declaration of Independence, July 4, 1776, declared "all men equal" there were a half million black slaves in the future United States or nearly a fifth of the total population. At the beginning of the 19th century there were one million Negroes who increased to three and one-half million by 1850; in 1900 there were 8,8 00,000 and today about 15,000,000. This group is mostly descendants of the Africans brought to America during the sixteenth, seventeenth, eighteenth and nineteenth centuries and reduced to slave labor. It has no complete biological unity, bur varies in color from white to black, and comprised a great variety of physical characteristics, since many are the offspring of white European-Americans as well a s Africans and American Indians. There are a large number of white Americans who also descend from Negroes but who a re not counted in the colored group nor subjected to caste restrictions because the preponderance of white blood conceals their descent.

The so-called American Negro group, therefore, while it is in no sense absolutely set off physically from its fellow Americans has nevertheless a strong, hereditary cultural unity, born of slavery, of common suffering, pro-longed proscription and curtailment of political and civil rights; and especially because of economic and social disabilities. Largely from this fact, have arisen their cultural gifts to America--their rhythm, music and

folk-song; their religious faith and customs; their contribution to American art and literature; their defense of their country in every war, on land, sea and in the air; and especially the hard, continuous toil upon which the prosperity and wealth of this continent has largely been built.

NOTE Some parts of this pamphlet have appe red before in the "Appeal to the World" edited by the author and presented to the United Nations by the National Association for the Advancement of Colored People in 1947.

2. Slavery

Slavery in America is a strange and contradictory story. It cannot be regarded as mainly either a theoretical problem of morals or a scientific problem of race. From either of these points of view, the rise of slavery in America is simply inexplicable. Looking at the facts frankly, slavery evidently was a matter of economics, a question of income and labor, rather than a problem of right and wrong, or of the physical differences in men. Once slavery began to be the source of vast income for men and nations, there followed frantic search for moral and racial justifications. Such excuses were found and men did not inquire too carefully into either their logic or truth.

35-4-173.

The twenty Negroes brought to Virginia in 1619, were not the first who had landed on this continent. For a century small numbers of Negroes had been arriving as servants, as laborers, as free adventurers. The Southwestern part of the present United States was first traversed by four explorers of whom one was an African Negro. Negroes accompanied early explorers like D'Ayllon and Menendez in the southeastern United States. But just as the earlier black visitors to the West Indies were servants and adventurers and then later began to appear as laborers on the sugar plantations, so in Virginia, these imported black laborers in 1619 and after, came to be wanted for the raising of tobacco which was the money crop.

In the minds of the early planters, there was no distinction as to labor whether it was white or black; in law there was at first no discrimination.

But as imported white labor became scarcer and more protected by law, it became less profitable than Negro labor which flooded the markets because of European slave traders, internal strife in Africa; and because in America the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the fabulously rich sugar empire; then the cotton kingdom, and finally colonial imperialism.

3. Revolt and Escape

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike, to slow up and sabotage the work of the plantation. They revolted time after time. In addition to serious and widely publicized revolts in 1739, 1800, and 1822 and 1831, there were according to Aptheker, at least 250 revolts and conspiracies in the history of American Negro slavery. The enacted laws against slave revolt are unanswerable testimony as to what these revolts meant all over America.

35-4174

The slaves themselves especially imperiled the whole slave system by escape from slavery. It was the fugitive slave more then the slave revolt, which finally threatened investment and income; and the organisation for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the white for independence from the British economic empire which began emancipation. The English bid for his help and the colonials, against their first impulse, had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the War of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for whites and blacks was in sight.

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as a place for free land; for continuous

employment and high wage; for freedom of thought and faith. It was here, however, that employers intervened; not because of any moral obliquity but because the Industrial Revolution, based upon the crops raised by slave labor in the Caribbean and in the Southern United States, was made possible by world trade and a new and astonishing technique; and finally was made triumphant by a vast transportation of slave labor through the British slave-trade in the eighteenth and early nineteenth centuries.

35-4-175

4. Civil War

This new mass of slaves became competitors of white labor and drove white labor for refuge into the arms of employers, whose interest were founded on slave labor. The doctrine of race inferiority was used to convince white labor that they had the right to be free and to vote, while the Negroes must be slaves or depress the wage of whites; western free soil became additional lure and compensation, if it could be restricted to free labor.

On the other hand, the fight of the slave-holders against democracy increased with the spread of the wealth and power of the Cotton Kingdom. Through political power based on slaves they became the dominant political force in the United States; they were successful in expanding into Mexico and tried to penetrate the Caribbean. Finally they demandedfor slavery a part of the free soil of the West, and because of this last excessive, and in fact impossible effort, a Civil War to preserve and extend slavery ensued.

This fight for slave labor was echoed in the law. The free Negro was systematically discouraged, disfranchised and reduced to serfdom. He became by law the easy victim of the kidnapper and liable to treatment as a fugitive slave. The Church, influenced by wealth and respectability, was predominately on the side of the slave owner and effort was made to make the degradation of the Negro, as a race, final by Supreme Court decision.

But from the beginning, the outcome of the Civil War was inevitable and this not mainly on account of the predominant wealth and power of the North;

it was because of the clear fact that the Southern slave economy was built on black labor. If at any time the slaves or any large part of them was as workers to cease to support the South; and if even more decisively, as fighters they joined the North, there was no way in the world for the South to win. Just as soon than as slaves became spies for the invading Northern armies; laborers for their camps and fortifications, and finally produced 200,000 trained and efficient soldiers with arms in their hands, and with the possibility of a million more, the fate of the slave South was sealed.

35-4-176

5. Reconstruction

Victory however brought dilemma; if victory meant full economic freedom for labor in the South, white and black; if it meant land and education, and eventually votes, then the slave empire was doomed, and the profits of Northern industry built on the Southern slave foundation would also be seriously curtailed. Northern industry had a stake in the Cotton Kingdom and in the cheap slave labor that supported it. It had expanded for war industries during the fighting, encouraged by government subsidyy and eventually protected by a huge tariff rampart. When war profits declined there was still prospect of tremendous post war profits on cotton and other products of Southern agriculture. Therefore, what the North wanted was not freedom and higher wage for black labor, but its controly under such forms of law as would keep it cheap; and also stop its open competition with Northern labor. The moral protest of abolitionists must be appeased but profitable industry was determined to control wages and governm nt.

The result was an attempt at Reconstruction in which black labor established schools; tried to divide up the land and put a new social legislation in force. On the other hand, the power of Southern land-owners soon joined with Northern industry to disfranchise the Negro , to keep from access to free land or to capital, and to build up the present caste system for blacks founded on color discri ination, peonage, intimidation and mob-violence.

6. Caste

It is this fact that underlies many of the contradictions in the social and political development of the United States since the Civil War. Despite our resources and our miraculous technique; despite comparatively high wage paid many of our workers and their consequent high standard of living, we are nevertheless ruled by wealth, monopoly and big business organizations to an astounding degree. Our railway transportation is built upon monumental economic injustice both to passengers, shippers and to different sections of the land. The monopoly of land and natural resources throughout the United States both in cities, and in farming districts is a disgraceful aftermath to the vast land heritage with which this nation started.

35-4-177

The United States has always professed to be a Democracy. She has never wholly attained her ideal, but slowly she has approached, it. The privilege of voting has in time been widened by abolishing limitations of birth, religion and lack of property. After the Civil War, which abolished slavery, the nation in gratitude to the black soldiers and laborers who helped win that war, sought to admit to the suffrage all persons without distinction of "race, color or previous condition of servitude." They were warned by the great leaders of abolition, like Sumner, Stevens and Douglass, that this could only be effective, if the Freedmen were given schools, land and some minimum of capital. A Freedmen's Bureau to furnish these prerequisites to effective citizenship was planned and put into partial operation. But Congress and the nation, weary of the costs of war and eager to get back to profitable industry, refused the necessary funds. The effort died, but in order to restore friendly civil government in the South the enfranchised Freedman, seventy-five per cent illiterate, without land or tools, was thrown into competitive industry with a ballot in his hands. By herculean effort, helped by philanthropy and his own hard work, the Negro built a school system, bought land and cooperated in starting a new economic order not simply for himself but for the whole South.

In a generation he had reduced his illiteracy by half and had become a wage-earning laborer and share-cropper. He developed a number of able educated and resourceful leaders. He still was handicapped by poverty, disease and crime, but nevertheless the rise of the American Negro from slavery in 1860 to freedom in 1880, has few parallels in modern history.

However, opposition to any democracy which included the Negro race on any terms was so strong in the former slave-holding South, and found so much sympathy in large parts of the rest of the nation, that despite notable improvement in the condition of the Negro by every standard of social measurement, the effort to deprive Negroes of the right to vote succeeded. At first he was driven from the polls in the South by mobs and violence; and then he was openly cheated; finally by a "Gentlemen's agreement" with the North, the Negro was disfranchised in the South by a series of l ws, methods of administration, court decisions and general public policy, so that today half of the Negro population of the nation is deprived of the right to vote by open and declared policy.

35-4178

In 1876, the democratic process of government was crippled throughout the whole nation. This came about not simply through the disfranchisement of Negroes but through the fact that the political power of the disfranchised Negroes and of a large number of equally disfranchised whites was preserved as the basis of political power, but the wielding of that power was left in the hands and under the control of the successors to the planter dynasty in the South.

Most persons seem to regard this as simply unfortunate for Negroes, as depriving a modern working class of the minimum rights for self-protection and opportunity for progress. This is true as has been shown in poor educational opportunities, discrimination in work, health protection and in the courts. But the situation is far more serious than this: the disfranchisement of the American Negro makes the functioning of all democracy in the nation

difficult; and as democracy fails to funtion in the leading democracy in the world, it fails in the world.

The representation of the people in the Congress of the United States is based on population; members of the House of Representatives are elected by groups of approximately 275,000 to 300,000 persons living in 435 Congressional Districts. Naturally difficulties ofdivision within state boundaries, unequal growth of population, migration from year to year, and slow adjustment to these and other changes, makes equal population of these districts only approximate; but unless by and large, and in the long run, essential equality is maintained, the whole basis of democratic representation is marred and as in the celebrated "rotten borough" cases in England in the nineteenth century, representation must be eventually equalized or democracy relapses into oligarchy or even fascism.

35-4-179

This is exactly what threatens the United States today because of the unjust disfranchisement of the Negro and the use of his numerical presence to increase the political power of his enemies and of the enemies of democracy. The nation does not have the courage or power to eliminate from citizenship all persons of Negro descent and thus try to restore slavery. It therefore makes its democracy unworkable by paradox and contradiction.

7. The American Negro

The world will not forget that the population of this group makes it in size one of the considerable nations of the world. We number as many as the inhabitants of the Argentine or Czechoslovakia, or the whole of Scandinavia including Sweden, Norway and Denmark. We are very nearly the size of Egypt, Rumania and Yugoslavia. We are larger than Canada, Saudi Arabia, Ethiopia, Hungary or the Netherlands. We have twice as many persons as Australia or Switzerland, and more than the whole Union of South Africa. We have more people than Portugal or Peru; twice as many as Greece and nearly as many as Turkey. We have more people by far than Belgium and half as many as Korea

or Spain. In sheer numbers than we are agroup which has a right to be heard.

The history of the American Negro since 1900 has been the story of a segregated labor group living under caste conditions and seeking full citizenship by its own efforts and the help of white friends. After disfranchisement and caste laws became crystalised about 1885, the Negro put his faith in mass education, in public and mission schools, under the leadership of a dozen colleges supported by the Negroes themselves and Northern white philanthropy. The white South feared this growth of Negro higher education and supported Booker T. Washington and his plan for developing a trained Negro working class. This program however tended to accept disfranchisement and caste without resistence and beginning in 1905, the Niagara movement of young educated radical Negroes opposed it and developed it into the National Asspociation for the Advancement of Colored People, formed in 1910 of Negroes and whites. This organization has dominated the struggle of American Negroes from 1910 until today. Meantime the mass of Negroes sought emancipation in migration from South to North and even to Africa; in seeking admittance to Trade Unions which was a slow process, not yet fully attained; by inner group organization in Churches and fraternities and economic & comsumers movements. They began at Atlanta University scientific study of their condition. Their efforts were opposed by violence and lynching, repressive legislation and scientific race theories of inferiority.

A great change came with the First World War, in which Negro Soldiers had to be accepted as soldiers and officers after bitter agitation. After the war came sharp reaction with mounting riots and mob violence and attempts to strengthen caste. In one "Red Summer" of 1919, there were 25 race riots including one in the capital, Washingt n and a bloody clash in Chicago. The Ku Klux Klan was widely revived. The Negroes fought back with their increased political power in the North, their newspapers and magazines, led by the

35-4-180

CRISIS. They gained in wider empoloyment, entrance into many trade unions and increased public opinion against lynching.

Two international movements appeared, the West Indian Garvey organization with its "back to Africa" emphasis; and the Pan-African Congress to unite the efforts of Negroes the world over for emancipation, erasure of the color line and end of colonialism.

35-4-781

The depression beginning in 1929, struck the American Negro hard; from 25% to 5% in various centers were unemployed. But the universal suffering tended to soften race differences under the New Deal and emphasize economic and class differences rather than matters of skin color and physique. The bars against Negroes in trade unions began further to disappear and the right of the Negro to vote gained further recognition in the South. The Negro vote also began to divide between the parties. The laws of caste were attacked repeatedly in the courts and notable victories were gained.

8. Present Conditions

It is astonishing how the African has integrated himself into American culture; this is shown in speech, religious observance, folk-lore, music and dancing. Any fair review of American literature should not omit such Negro writers as Phyllis Wheatley, Paul Lawrence Dunbar, George W. Williams, James Weldon Johnson, Charles W. Chestnutt, Countee Cullen, Langston Hughes, Richard Wright, Shirley Graham and Frank Yerby. American artists include Bannister, Tanner, and Prophet. American scientists include Banneker, Just, Turner and Hinton; American education is indebted to Booker T. Washington and John Hope. As musicians and singers are J. Rosamond Johnson, Burleigh, Will Marion Cook, Still, Dett and Handy; Hayes, Robeson and Anderson; on the state were Bert Williams, Gilpin and Richard Harrison; among inventors were Matseliger, Woods, and McCoy. The music of Negroes from the religious folk-song to jazz is world known.

Most slaves were employed as farmers and servants, with a few as artisans. In 1900 53% were in agriculture and 25% servants and laborers and only 5% artisans which show how caste was keeping the freedman out of industry. In 1940, among the men 40% were in Agriculture, 29% in industry, 21% laborers and 5% in business and professions. Among the women, 60% were servants, 17% in industry and 16% in agriculture. Since then the flight of Negroes from farms to cities and from domestic service to industry has continued at increased tempo.

35-4-182

In 1900, a Negro boy baby at birth had a life expectation of thirty-two years; in 1947, this had increased to fifty-seven years. In 1870, nine-tenths of the Negroes were illiterate. The census of 1940 reported the illiterates at 10 per cent, probably an inaccurate figure due to our methods of collecting statistics of reading and writing. Today certainly the Negro illiterates are below 20 per cent. In 1910, there were in school 1,644,000, or 45 per cent, of all Negroes 5 to 20 years of age; in 1940, 64 per cent of such Negro children were in school, or 4,188,000. In 1900, Charles Dudley Warner, speaking for American intellectuals, said that Negroes could not assimilate and use college training. In 1910 not more than 5,000 Negroes were in college. In 1948, more then 88,000 Negroes were enrolled in college.

In 1918, 324 Negroes received the Bachelor's degree; in 1948 some 5,635 received this degree. There are today more than 1,500 Negro students enrolled in Northern colleges and universities, while from these institutions 279 have received the doctorate in philosophy. In the first edition of "Who's Who in America" there was not, so far as I can ascertain, the name of a single American of Negro descent. The fiftieth edition, in 1948, contains the names of 91 Negroes; and in "American Men of Science," 77 Negroes are listed. There are today on the faculties of the leading universities of the North, 70 Negroes instructors, ranging from a full professor at the University of Chicago to associate professors and instructors in other institutions.

The group has long been internally divided by dilemma as to whether its striving upward, should be aimed at strengthening its inner cultural and group bonds, both for intrinsic progress and for offensive power against caste; or whether it should seek escape whereever and however possible into the surrounding American culture. Decision in this matter has been largely determined by outer compulsion rather than inner plan; for prolonged policies of segregation and discrimination have involuntarily welded the mass almost into a nation within a nation with its own schools, churches, hospitals, newspapers and many business enterprise.

35-4-183

The result has been to make American Negroes to wide extent provincial, introvert, self-conscious and narrowly race-loyal; but it has also inspired them to frantic and often successful effort to achieve, to deserve, to show the world their capacity to share modern civilization. As a result there is almost no area of American civilization in which the Negro has not made creditable showing in the face of all his handicaps.

If, however, the effect of the color caste system on the North American Negro has been both good and bad, its effect on white America has been disastrous. It has repeatedly led the greatest modern attempt at democratic government to deny its political ideals, to falsify its philanthropic assertions and to make its religion to a great extent hypocritical. A Nation which boldly declared "That all men are created equal" proceededto build its economy on chattel slavery; masters who declared race-mixture impossible , sold their own children into slavery and left a mulatto progeny which neither law nor science can today disentangle; churches which excused slavery as calling the heathen to God, refused to recognize the freedom of converts or admit them to equal communion.

Sectional strife over the profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves which nevertheless even to this day is not

complete. Poverty, ignorance, disease and crime have been forced on these unfortunate victims of greed to an extent far beyond any social necessity; and a great nation, which today ought to be in the forefront of the march toward peace and democracy, finds itself continuously making common cause with race-hate, prejudice exploitation and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for three hundred and thirty years.

35-4-184

We see that the American Negro is fighting a slow, determined battle and is not going to give up. There is no indication that he will sink into lethargic acceptance of present conditions as inevitable or present progress as satisfactory. He proposes to reach complete equality as an American citizen And by equality he means abolition of separate schools, the disappearance of "Jim-crow" trave; no segregation in public accommodations; the right to vote, the right to think and the right to speak, the right to work and to live in a decent home, and the right to marry any person who wishes to marry him. The Negro does not expect to reach these goals in a minute or in ten years. He is long-suffering and patient. But whether it takes thirty years or a thousand, equality is his goal and he will never stop until he reaches it. Continuous hammering upon the gates of opportunity in the United States has had effect, and because of this, and with the help of his white fellow-citizens, the American Negro has emerged from slavery and attained emancipation from chattel slavery, considerable economic independence, social security and advance in culture.

Foreigners who wish to understand the United States and give intelligent aid and sympathy to efforts to forward human civilisation, must remember certain facts: first the United States is not a white, Anglo-Saxon, British nation. More than a tenth of its population is of African descent and

African culture patterns have helped make America; there are other colored peoples represented: American Indians, Asiatics and mixed central American and West Indian peoples. Among the whites are millions of Irish, Scandinavian, German, Italian and Slav descent. No sentimental appeal to ties with British culture in the United States can today have the same appeal as in the 18th century. The nation is international and inter-racial to a large degree and this aspect of its culture increases as the colored and pan-European elements develop in influence. We must then be regarded as representative of the whole world rather than as part of the British Empire. In this broader aspect of American culture lies the ultimate hope of world peace and understanding.

35-4-185

THE BLACK UNITED STATES

A STORY OF THE DESCENDANTS OF AFRICANS IN THE UNITED STATES OF AMERICA

BY

W. E. B. DU BOIS

1. The Negro Group

There were in the United States of America in 1940, 12,865,518 native born citizens, something less than a tenth of the nation, who form largely a segregated caste, with restricted legal rights, and many illegal disabilities. This group ~~in 1950, numbers about 15,000,000. They are~~ is mostly descendants of the Africans brought to America during the sixteenth, seventeenth, eighteenth and nineteenth centuries and reduced to slave labor. ~~This group~~ It has no complete biological unity, but varies in color from white to black, and comprises a great variety of physical characteristics, since many are the offspring of white European-Americans as well as of Africans and American Indians. There are a large number of white Americans who also descend from Negroes but who are not counted in the colored group nor subjected to caste restrictions because the preponderance of white blood conceals their descent.

The so-called American Negro group, therefore, while it is in no sense absolutely set off physically from its fellow Americans has nevertheless a strong, hereditary cultural unity, born of slavery, of common suffering, prolonged proscription and curtailment of political and civil rights; and especially because of economic and social disabilities. Largely from this fact, have arisen their cultural gifts to America-their rhythm, music and folk-song; their religious faith and customs; their contribution to American art and literature; their defense of their country in every war, on land, sea and in the air; and especially the hard, continuous toil upon which the prosperity and wealth of this continent has largely been built.

* parts of this pamphlet has appeared before in the "Appeal to the World" edited by the auth and presented to the United Nations by the National Association for the Advancement of Color People in 1947.

The growth of ~~the Negro~~ this population in the nation has been steady, ~~despite its poverty, sick~~ ~~ness and legal restrictions.~~ At the beginning of the I9th century there were one million, which increased to three and one-half million by 1850; in I900 there were 8,800,000 and today about I5,000,000. ~~Before the Civil War, nine tenths of the Negroes were in the Southern slave states; today in I940, there were 7I% there and in I950, probably 65 to 70%~~

When the Declaration of Independence declared "all men equal" July 4, 1776
There were a half million black slaves in the United States or nearly a fifth of the Colonial population

2. Slavery

Slavery in America is a strange and contradictory story. It cannot be regarded as mainly either a theoretical problem of morals or a scientific problem of race. From either of these points of view, the rise of slavery in America is simply inexplicable. Looking at the facts frankly, slavery evidently was a matter of economics, a question of income and labor, rather than a problem of right and wrong, or of the physical differences in men. Once slavery began to be the source of vast income for men and nations, there followed frantic search for moral and racial justifications. Such excuses were found and men did not inquire too carefully into either their logic or truth.

35-4-2

The twenty Negroes brought to Virginia in 1619, were not the first who had landed on this continent. For a century small numbers of Negroes had been arriving as servants, as laborers, as free adventurers. The southwestern part of the present United States was first traversed by four explorers of whom one was an African Negro. Negroes accompanied early explorers like D'Ayllon and Menendez in the southeastern United States. But just as the earlier black visitors to the West Indies were servants and adventurers and then later began to appear as laborers on the sugar plantations, so in Virginia, these imported black laborers in 1619 and after, came to be wanted for the raising of tobacco which was the money crop.

In the minds of the early planters, there was no distinction as to labor whether it was white or black; in law there was at first no discrimination. But as imported white labor became scarcer and more protected by law, it became less profitable than Negro labor which flooded the markets because of

European slave traders, internal strife in Africa; and because in America the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the fabulously rich sugar empire; then the cotton kingdom, and finally colonial imperialism.

3. Revolt and Escape

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike, to slow up and sabotage the work of the plantation . They revolted time after time and no matter what recorded history may say, the enacted laws against slave revolt are unanswerable testimony as to what these revolts meant all over America.

35-4-3

The slaves themselves especially imperiled the whole slave system by escape from slavery. It was the fugitive slave more than the slave revolt, which finally threatened investment and income; and the organization for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the whites for independence from the British economic empire which began emancipation. The British bid for his help and the colonials against their first impulse had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the War of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for whites and blacks was in sight.

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as a place for free land; for continuous employment and high wage; for freedom of thought and faith. It was here,

however, that employers intervened; not because of any moral obliquity but because the Industrial Revolution, based upon the crops raised by slave labor in the Caribbean and in the Southern United States, was made possible by world trade and a new and astonishing technique; and finally was made triumphant by a vast transportation of slave labor through the British slave-trade in the eighteenth and early nineteenth centuries.

4. Civil War

This new mass of slaves became competitors of white labor and drove white labor for refuge into the arms of employers, whose interests were founded on slave labor. The doctrine of race inferiority was used to convince white labor that they had the right to be free and to vote, while the Negroes must be slaves or depress the wage of whites; western free soil became additional lure and compensation, if it could be restricted to free labor.

35-4-4

On the other hand, the fight of the slave-holders against democracy increased with the spread of the wealth and power of the Cotton Kingdom. Through political power based on slaves they became the dominant political force in the United States; they were successful in expanding into Mexico and tried to penetrate the Caribbean. Finally they demanded for slavery a part of the free soil of the West, and because of this last excessive, and in fact impossible effort, a Civil War to preserve and extend slavery ensued.

This fight for slave labor was echoed in the law. The free Negro was systematically discouraged, disfranchised and reduced to serfdom. He became by law the easy victim of the kidnapper and liable to treatment as a fugitive slave. The Church, influenced by wealth and respectability, was predominately on the side of the slave owner and effort was made to make the degradation of the Negro, as a race, final by Supreme Court decision.

But from the beginning, the outcome of the Civil War was inevitable and this not mainly on account of the predominant wealth and power of the North; it was because of the clear fact that the Southern slave economy was buuilt

on black labor. If at any time the slaves or any large part of them, was workers ceased to support the South; and if even more decisively, as fighters they joined the North, there was no way in the world for the South to win. Just as soon then as slaves became spies for the invading Northern armies; laborers for their camps and fortifications, and finally produced 200,000 trained and efficient soldiers with arms in their hands, and with the possibility of a million more, the fate of the slave South was sealed.

5. Reconstruction

Victory however brought dilemma; if victory meant full economic freedom for labor in the South, white and black; if it meant land and education, and eventually votes, then the slave empire was doomed, and the profits of Northern industry built on the Southern slave foundation would also be seriously curtailed. Northern industry had a stake in the Cotton Kingdom and in the cheap slave labor that supported it. It had expanded for war industries during the fighting, encouraged by government subsidy and eventually protected bya huge tariff rampart. When war profits declined there was still prospect of tremendous post war profits on cotton and other products of Southern agriculture. Therefore, what the North wanted was not freedom and higher wage for black labor, but its control under such forms of law as would keep it cheap; and also stop its open competition with Northern labor. The moral protest of abolitionists must be appeased but profitable industry was determined to control wages and government.

35-45

The result was an attempt at Reconstruction in which black labor established schools; tried to divide up the land and put a new social legislation in force. On the other hand, the power of Southern land-owners soon joined with Northern industry to disfranchise the Negrop keep him from access to free land or to capital, and to build up the present caste system for blacks founded on color discrimination, peonage, intimidation and mob-violence.

6. Caste

It is this fact that underlies many of the contradictions in the social and political development of the United States since the Civil War. Despite our resources and our miraculous technique; despite comparatively high wage paid many of our workers and their consequent high standard of living, we are nevertheless ruled by wealth, monopoly and big business organization to an astounding degree. Our railway transportation is built upon monumental economic injustice both to passengers, shippers and to different sections of the land. The monopoly of land and natural resources throughout the United States both in cities, and in farming districts is a disgraceful aftermath to the vast land heritage with which this nation started.

35-4-6

~~Let us examine these facts more carefully.~~ The United States has always professed to be a Democracy. She has never wholly attained her ideal, but slowly she has approached it. The privilege of voting has in time been widened by abolishing limitations of birth, religion and lack of property. After the Civil War, which abolished slavery, the nation in gratitude to the black soldiers and laborers who helped win that war, sought to admit to the suffrage all persons without distinction of "race, color or previous condition of servitude." They were warned by the great leaders of abolition, like Sumner, Stevens and Douglass, that this could only be effective, if the Freedmen were given schools, land and some minimum of capital. A Freedmen's Bureau to furnish these prerequisites to effective citizenship was planned and put into partial operation. But Congress and the nation, weary of the costs of war and eager to get back to profitable industry, refused the necessary funds. The effort died, but in order to restore friendly civil government in the South the enfranchised Freedman, seventy-five per cent illiterate, without land or tools, was thrown into competitive industry with a ballot in his hands. By

7

herculean effort, helped by philanthropy and his own hard work, the Negro built a school system, bought land and cooperated in starting a new economic order [illegible] South. In a generation he had reduced his illiteracy by half and had become a wage-earning laborer and share-cropper. He still was handicapped by poverty, disease and crime, but nevertheless the rise of the American Negro from slavery in 1860 to freedom in 1880, has few parallels in modern history.

35-4-7

However, opposition to any democracy which included the Negro race on any terms was so strong in the former slave-holding South, and found so much sympathy in large parts of the rest of the nation, that despite notable improvement in the condition of the Negro by every standard of social measurement, the effort to deprive Negroes of the right to vote succeeded. At first he was driven from the polls in the South by mobs and violence; and then he was openly cheated; finally by a "Gentlemen's agreement" with the North, the Negro was disfranchised in the South by a series of laws, methods of administration, court decisions and general public policy, so that today ~~three-fourths~~ half of the Negro population ~~of Negro population~~ of the nation is deprived of the right to vote by open and declared policy.

In 1876, the democratic process of government was crippled throughout the whole nation. This came about not simply through the disfranchisement of Negroes but through the fact that the political power of the disfranchised Negroes and of a large number of equally disfranchised whites was preserved as the basis of political power, but the wielding of that power was left in the hands and under the control of the successors to the planter dynasty in the South.

Most persons seem to regard this as simply unfortunate for Negroes, as depriving a modern working class of the minimum rights for self-protection and opportunity for progress. This is true as has been shown in poor educational opportunities, discrimination in work, health protection and in the courts. But the situation is far more serious than this: the disfranchisement of the American Negro makes the functioning of all democracy in the nation

difficult; and as democracy fails to function in the leading democracy in the world, it fails in the world.

~~Let us face the facts.~~ The representation of the people in the Congress of the United States is based on population; members of the House of Representatives are elected by groups of approximately 275,000 to 300,000 persons living in 435 Congressional Districts. Naturally difficulties of division within state boundaries, unequal growth of population, migration from year to year, and slow adjustment to these and other changes, makes equal population of these districts only approximate; but unless by and large, and in the long run, essential equality is maintained, the whole basis of democratic representation is marred and as in the celebrated "rotten borough" cases in England in the nineteenth century, representation must be eventually equalized or democracy relapses into oligarchy or even fascism.

This is exactly what threatens the United States today because of the unjust disfranchisement of the Negro and the use of his numerical presence to increase the political power of his enemies and of the enemies of democracy. The nation ~~does~~ has not the courage or power to eliminate from citizenship all persons of Negro descent and thus try to restore slavery. It therefore makes its democracy unworkable by paradox and contradiction.

7. The American Negro

The world will not forget that the population of this group makes it in size one of the considerable nations of the world. We number as many as the inhabitants of the Argentine or Czechoslovakia, or the whole of Scandinavia including Sweden, Norway and Denmark. We are very nearly the size of Egypt, Rumania and Yugoslavia. We are larger than Canada, Saudi Arabia, Ethiopia, Hungary or the Netherlands. We have twice as many persons as Australia or Switzerland, and more than the whole Union of South Africa. We have more people than Portugal or Peru; twice as many as Greece and nearly as many as Turkey. We have more people by far than Belgium and half as many as Korea or Spain. In sheer numbers then we are a group which has a right to be heard.

The history of the American Negro since 1900 has been the story of a segregated labor group living under caste conditions, and seeking full citizenship by its own efforts and the help of white friends. After disfranchisement and caste laws became crystalized about 1885, the Negro put his faith in mass education in public and mission schools, under the leadership of a dozen colleges supported by Northern white philanthropy. The white South feared this growth of Negro higher education and supported Booker T. Washington and his plan for developing a train Negro working class. This program however tended to accept disfranchisement and caste without resistence and beginning in 1905, the Niagara movement of young educated radical Negroes opposed it and developed into the National Association for the Advancement of colored People, formed in 1910 of Negroes and whites. This organization has dominated the struggle of American Negroes from 1910 until today. Meantime the mass of Negroes sought emancipation in migration from South to North and even to Africa; in seeking admittance to Trade Unions which was a slow process, not yet fully attained; by inner group organization in Churches and fraternities and economic consumers movements. They began at Atlanta University scientific study of their condition. Their efforts were opposed by violence and lynching, repressive legislation and scientific race theories of inferiority.

35-4-9

A great change came with the First World War, in which Negro soldiers had to be accepted as soldiers and officers after bitter agitation. After the war came sharp reaction with mounting riots and mob violence and attempts to strengthen caste. In one "Red Summer" of 1919, there were 25 race riots including one in the capital, Washington and a bloody clash in Chicago. The Ku Klux Klan was widely revived. The Negroes fought back with increased political power in the North, their newspapares and magazines, led by the Crisis They gained in wider employment, entrance into many trade unions and increased public opinion against lynching. Two international movements appeared, the West Indian Garvy organization with its "back to Africa" emphasis; and the Pan-African Congresses to organ the efforts of Nebroes for emancipation and end of colonialism and color caste. The depression beginning in 1929, struck the American Negro hard; from 25% to 75% in various centers were unemployed. But the universal suffering tended to soften race differences under the New Deal and emphasis economic and class differences rather than matters of skin color and physique. The bars against Negroes in trade unions began further to disappear and the Negro vote gained further recognition in the South and began to divide between parties. The laws of caste were attacked repeatedly in the courts and notable victories were gained.

The census of 1940 reported the illiterates at 10 per cent, probably an inaccurate figure due to our methods of collecting statistics of reading and writing. Today certainly the Negro illiterates are below 20 per cent. In 1910, there were in school 1,644.000, or 45 per cent, of all Negroes 5 to 20 years of age; in 1940; 64 per cent of such Negro children were in school, or 4,188,000. In 1900, Charles Dudley Warner, speaking for American intellectuals, said that Negroes could not assimilate and use college training. In 1910 not more than 5,000 Negroes were in college. In 1948 more than 88,000 Negroes were enrolled in college.

In 1918, ~~The year after the Rosenwald Fund went into operation,~~ 324 Negroes received the Bachelor's degree; in 1948 some 5,635 received this degree. There are today more than 1,500 Negro students enrolled in Northern colleges and universities, while from these institutions 279 have received the doctorate in philosophy. In the first edition of "Who's Who in America" there was not, so far as I can ascertain, the name of a single American of Negro descent. The fiftieth edicion, in 1948, contains the names of ninety-one Negroes; and in "American Men of Science", seventy-seven Negroes are listed. There are today on the faculties of the leading universities of the North, seventy Negro instructors, ranging from a full professor at the University of Chicago to associate professors and instructors in other institutions.

The group has long been internally divided by dilemma as to whether its striving upward, should be aimed at strengthening its inner cultural and group bonds, both for intrinsic progress and for offensive power against caste; or whether it should seek escape whereever and however possible into the surrounding American culture. Decision in this matter has been largely determined by outer compulsion rather than inner plan; for prolonged policies of segregation anddiscrimination have involuntarily welded the mass almost into a nation within a nation with its own schools, churches, hospitals, newspapers and many business enterprises.

35-4-11

The result has been to make American Negroes to wide extent provincial, introverted, self-conscious and narrowly race-loyal; but it has also inspired them to frantic and often successful effort to achieve, to deserve, to show the world their capacity to share modern civilization. As a result there is almost no area of American civilization in which the Negro has not made creditable showing in the face of all his handicaps.

If, however, the effect of the color caste system on the North American Negro has been both good and bad, its effect on white America has been disastrous. It has repeatedly led the greatest modern attempt at democratic government to

deny its political ideals, to falsify its philanthropic assertions and to make its religion to a great extent hypocritical. A nation which boldly declard "That all men a re created equal", proceededto build its economy on chattel slavery; masters who declared race-mixture impossible, sold their own children into slavery and left a mulatto progeny which neither law nor science can today disentangle; churches which excused slavery a s calling the heathen to God, refused to recognize the freedom of converts or admit them to equal communion.

Sectional strife over the profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves which nevertheless even to this day is not complete. Poverty, ignorance, disease and crime have been forced on these unfortunate victims of greed to an extent far beyond any social necessity; and a great nation, which today ought to be in the forefront of the march toward peace and democracy, finds itself continuously making common cause with race-hate, prejudiced exploitation and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for three hundred and ~~twenty-eight~~ thirty years.

35-4-12

America

We ~~begin to~~ see that the Negro is fighting a slow, determined battle and is not going to give up. There is no indication that he will sink into lethargic acceptance of present conditions as inevitable, or present progress a s satisfactory. He proposes to reach complete equality as an American citizen. And by equality he means abolition of separate schools, the disappearance of "Jim-crow" travel; no segregation in public accommodations; the right to vote, the right to think and the right to speak, the right to work and to live in a decent home, and the right to marry any person who wishes to marry him. The Negro does not expect to reach these goals in a minute or in ten years. He

13 #5

is long-suffering and patient. But whether it takes thirty years or a thousand, equality is his goal and he will never stop until he reaches it. ~~It must be admitted that~~ continuous hammering upon the gates of opportunity in the United States has had effect, and ~~that~~ because of this, and with the help of his white fellow-citizens, the American Negro has emerged from slavery and attained emancipation from chattel slavery, considerable economic independence, social security and advance in culture.

35-4-13

Foreigners who wish to understand the United States and give intelligent aid and sympathy to ~~its better~~ efforts to forward human civilization, must remember certain facts: first the United States is not a white, Anglo-Saxon, British nation. More than a tenth of its population is of African descent and African culture patterns have helped make America; there are other Colored peoples represented: American Indians, Asiatics and mixed central American and West Indian peoples. Among the whites are millions of Irish, Scandinavian, German, Italian and Slav descent. No sentimental appeal to ties ~~to~~ with British culture in the United States can today have the same appeal as in the 18th century. The nation is international and inter-racial to a large degree and this aspect of its culture increases as the colored and pan-European elements ~~increase~~ seem to be in influence. We must then be regarded as representative of the whole world rather than a part of the British Empire. In this broader aspect of American culture lies the ultimate hope of world peace and understanding.

THE BLACK UNITED STATES

...CRY OF THE DESCENDANTS OF AFRICANS IN THE UNITED STATES OF AMERICA

BY

W. E. B. DU BOIS

1. The Negro Group

There were in the United States of America in 1940, 12,865,518 native born citizens, something less than a tenth of the nation, who form largely a segregated caste, with restricted legal rights, and many illegal disabilities. The growth of the populat on in the nation has been steady. When the Declaration of Independence, July 4, 1776, declared "all men equal" there were a half million black slaves in the future United States or nearly a fifth of the total population. At the beginning of the 19th century there were one million Negroes who increased to three and one-half million by 1850; in 1900 there were 8,8[illegible]00,000 and today about 15,000,000. This group is mostly descendants of the Africans brought to America during the sixteenth, seventeenth, eighteenth and nineteenth centuries and reduced to slave labor. It has no complete biological unity, bur varies in color from white to black, and comprised a great variety of physical characteristics, since many are the offspring of white European-Americans as well a s Africans and American Indians. There are a large number of white Americans who also descend from Negroes but who a re not counted in the colored group nor subjected to caste restrictions because the preponderance of white blood conceals their descent.

35-4-14

The so-called American Negro group, therefore, while it is in no sense absolutely set off physically from its fellow Americans has nevertheless a strong, hereditary cultural unity, born of slavery, of common suffering, pro-longed proscription and curtailment of political and civil rights; and especially because of economic and social disabilities. Largely from this fact, have arisen their cultural gifts to America--their rhythm, music and

folk-song; their religious faith and customs; their contribution to American art and literature; their defense of their country in every war, on land, sea and in the air; and especially the hard, continuous toil upon which the prosperity and wealth of this continent has largely been built.

NOTE Some parts of this pamphlet have appeared before in the "Appeal to the World" edited by the author and presented to the United Nations by the National Association for the Advancement of Colored People in 1947.

2. Slavery

Slavery in America is a strange and contradictory story. It cannot be regarded as mainly either a theoretical problem of morals or a scientific problem of race. From either of these points of view, the rise of slavery in America is simply inexplicable. Looking at the facts frankly, slavery evidently was a matter of economics, a question of income and labor, rather than a problem of right and wrong, or of the physical differences in men. Once slavery began to be the source of vast income for men and nations, there followed frantic search for moral and racial justifications. Such excuses were found and men did not inquire too carefully into either their logic or truth.

35-4-15

The twenty Negroes brought to Virginia in 1619, were not the first who had landed on this continent. For a century small numbers of Negroes had been arriving as servants, as laborers, as free adventurers. The Southwestern part of the present United States was first traversed by four explorers of whom one was an African Negro. Negroes accompanied early explorers like D'Ayllon and Menendez in the southeastern United States. But just as the earlier black visitors to the West Indies were servants and adventurers and then later began to appear as laborers on the sugar plantations, so in Virginia, these imported black laborers in 1619 and after, came to be wanted for the raising of tobacco which was the money crop.

In the minds of the early planters, there was no distinction as to labor whether it was white or black; in law there was at first no discrimination.

But as imported white labor became scarcer and more protected by law, it became less profitable than Negro labor which flooded the markets because of European slave traders, internal strife in Africa; and because in America the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the fabulously rich sugar empire; then the cotton kingdom, and finally colonial imperialism.

B. Revolt and Escape

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike, to slow up and sabotage the work of the plantation. They revolted time after time. In addition to serious and widely publicised revolts in 1739, 1800, and 1822 and 1831, there were according to Aptheker, at least 250 revolts and conspiracies in the history of American Negro slavery. The enacted laws against slave revolt are unanswerable testimony as to what these revolts meant all over America.

35-4-16

The slaves themselves especially imperiled the whole slave system by escape from slavery. It was the fugitive slave more then the slave revolt, which finally threatened investment and income; and the organisation for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the white for independence from the British economic empire which began emancipation. The English bid for his help and the colonials, against their first impulse, had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the War of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for whites and blacks was in sight.

In the meantime, however, white labor had continued to regard the United States as a place of refuge, as a place for free land for continuous

employment and high wage; for freedom of thought and faith. It was here, however, that employers intervened; not because of any moral obliquity but because the Industrial Revolution, based upon the crops raised by slave labor in the Caribbean and in the Southern United States, was made possible by world trade and a new and astonishing technique; and finally was made triumphant by a vast transportation of slave labor through the British slave-trade in the eighteenth and early nineteenth centuries.

4. Civil War

85-4-17

This new mass of slaves became competitors of white labor and drove white labor for refuge into the arms of employers, whose interest were founded on slave labor. The doctrine of race inferiority was used to convince white labor that they had the right to be free and to vote, while the Negroes must be slaves or depress the wage of whites; western free soil became additional lure and compensation, if it could be restricted to free labor.

On the other hand, the fight of the slave-holders against democracy increased with the spread of the wealth and power of the Cotton Kingdom. Through political power based on slaves they became the dominant political force in the United States; they were successful in expanding into Mexico and tried to penetrate the Caribbean. Finally they demandedfor slavery a part of the free soil of the West, and because of this last excessive, and in fact impossible effort, a Civil War to preserve and extend slavery ensued.

This fight for slave labor was echoed in the law. The free Negro was systematically discouraged, disfranchised and reduced to serfdom. He became by law the easy victim of the kidnapper and liable to treatment as a fugitive slave. The Church, influenced by wealth and respectability, was predominately on the side of the slave owner and effort was made to make the degradation of the Negro, as a race, final by Supreme Court decision.

But from the beginning, the outcome of the Civil War was inevitable and this not mainly on account of the predominant wealth and power of the North;

it was because of the clear fact that the Southern slave economy was built on black labor. If at any time the slaves or any large part of them was as workers to cease to support the South; and if even more decisively, as fighters they joined the North, there was no way in the world for the South to win. Just as soon than as slaves became spies for the invading Northern armies; laborers for their camps and fortifications, and finally produced 200,000 trained and efficient soldiers with arms in their hands, and with the possibility of a million more, the fate of the slave South was sealed.

35-4-18

5. Reconstruction

Victory however brought dilemma; if victory meant full economic freedom for labor in the South, white and black; if it meant land and education, and eventually votes, then the slave empire was doomed, and the profits of Northern industry built on the Southern slave foundation would also be seriously curtailed. Northern industry had a stake in the Cotton Kingdom and in the cheap slave labor that supported it. It had expanded for war industries during the fighting, encouraged by government subsidy, and eventually protected by a huge tariff rampart. When war profits declined there was still prospect of tremendous post war profits on cotton and other products of Southern agriculture. Therefore, what the North wanted was not freedom and higher wage for black labor, but its control under such forms of law as would keep it cheap; and also stop its open competition with Northern labor. The moral protest of abolitionists must be appeased but profitable industry was determined to control wages and government.

The result was an attempt at Reconstruction in which black labor established schools; tried to divide up the land and put a new social legislation in force. On the other hand, the power of Southern land-owners soon joined with Northern industry to disfranchise the Negro, to keep from access to free land or to capital, and to build up the present caste system for blacks founded on color discrimination, peonage, intimidation and mob-violence.

6. Caste

It is this fact that underlies many of the contradictions in the social and political development of the United States since the Civil War. Despite our resources and our miraculous technique; despite comparatively high wage paid many of our workers and their consequent high standard of living, we are nevertheless ruled by wealth, monopoly and big business organizations to an astounding degree. Our railway transportation is built upon monumental economic injustice both to passengers, shippers and to different sections of the land. The monopoly of land and natural resources throughout the United States both in cities, and in farming districts is a disgraceful aftermath to the vast land heritage with which this nation started.

35-4-19

The United States has always professed to be a Democracy. She has never wholly attained her ideal, but slowly she has approached it. The privilege of voting has in time been widened by abolishing limitations of birth, religion and lack of property. After the Civil War, which abolished slavery, the nation in gratitude to the black soldiers and laborers who helped win that war, sought to admit to the suffrage all persons without distinction of "race, color or previous condition of servitude." They were warned by the great leaders of abolition, like Sumner, Stevens and Douglass, that this could only be effective, if the Freedmen were given schools, land and some minimum of capital. A Freedmen's Bureau to furnish these prerequisites to effective citizenship was planned and put into partial operation. But Congress and the nation, weary of the costs of war and eager to get back to profitable industry, refused the necessary funds. The effort died, but in order to restore friendly civil government in the South the enfranchised Freedman, seventy-five per cent illiterate, without land or tools, was thrown into competitive industry with a ballot in his hands. By herculean effort, helped by philanthropy and his own hard work, the Negro built a school system, bought land and cooperated in starting a new economic order not simply for himself but for the whole South.

In a generation he had reduced his illiteracy by half and had become a wage-earning laborer and share-cropper. He developed a number of able educated and resourceful leaders. He still was handicapped by poverty, disease and crime, but nevertheless the rise of the American Negro from slavery in 1860 to freedom in 1880, has few parallels in modern history.

However, opposition to any democracy which included the Negro race on any terms was so strong in the former slave-holding South, and found so much sympathy in large parts of the rest of the nation, that despite notable improvement in the condition of the Negro by every standard of social measurement, the effort to deprive Negroes of the right to vote succeeded. At first he was driven from the polls in the South by mobs and violence; and then he was openly cheated; finally by a "Gentlemen's agreement" with the North, the Negro was disfranchised in the South by a series of laws, methods of administration, court decisions and general public policy, so that today half of the Negro population of the nation is deprived of the right to vote by open and declared policy.

35-4-20

In 1876, the democratic process of government was crippled throughout the whole nation. This came about not simply through the disfranchisement of Negroes but through the fact that the political power of the disfranchised Negroes and of a large number of equally disfranchised whites was preserved as the basis of political power, but the wielding of that power was left in the hands and under the control of the successors to the planter dynasty in the South.

Most persons seem to regard this as simply unfortunate for Negroes, as depriving a modern working class of the minimum rights for self-protection and opportunity for progress. This is true as has been shown in poor educational opportunities, discrimination in work, health protection and in the courts. But the situation is far more serious than this: the disfranchisement of the American Negro makes the functioning of all democracy in the nation

difficult; and as democracy fails to funtion in the leading democracy in the world, it fails in the world.

The representation of the people in the Congress of the United States is based on population; members of the House of Representatives are elected by groups of approximately 275,000 to 300,000 persons living in 435 Congressional Districts. Naturally difficulties ofdivision within state boundaries, unequal growth of population, migration from year to year, and slow adjustment to these and other changes, makes equal population of these districts only approximate; but unless by and large, and in the long run, essential equality is maintained, the whole basis of democratic representation is marred and as in the celebrated "rotten borough" cases in England in the nineteenth century, representation must be eventually equalized or democracy relapses into oligarchy or even fascism.

35-4-21

This is exactly what threatens the United States today because of the unjust disfranchisement of the Negro and the use of his numerical presence to increase the political power of his enemies and of the enemies of democracy. The nation does not have the courage or power to eliminate from citizenship all persons of Negro descent and thus try to restore slavery. It therefore makes its democracy unworkable by paradox and contradiction.

7. The American Negro

The world will not forget that the population of this group makes it in size one of the considerable nations of the world. We number as manyas the inhabitants of the Argentine or Czechoslovakia, or the whole of Scandinavia including Sweden, Norway and Denmark. We are very nearly the size of Egypt, Rumania and Yugoslavia. We are larger than Canada, Saudi Arabia, Ethiopia, Hungary or the Netherlands. We have twice as many persons as Australia or Switzerland, and more than the whole Union of South Africa. We have more people than Portugal or Peru; twice as many as Greece and nearly as many as Turkey. We have more people by far than Belgium and half as many as Korea

or Spain. In sheer numbers than we are agroup which has a right to be heard.

The history of the American Negro since 1900 has been the story of a segregated labor group living under caste conditions and seeking full citizenship by its own efforts and the help of white friends. After disfranchisement and caste laws became crystalised about 1885, the Negro put his faith in mass education, in public and mission schools, under the leadership of a dozen colleges supported by the Negroes themselves and Northern white philanthropy. The white South feared this growth of Negro higher education and supported Booker T. Washington and his plan for developing a trained Negro working class. This program however tended to accept disfranchisement and caste without resistence and beginning in 1905, the Niagara movement of young educated radical Negroes opposed it and developed it into the National Association for the Advancement of Colored People, formed in 1910 of Negroes and whites. This organisation has dominated the struggle of American Negroes from 1910 until today. Meantime the mass of Negroes sought emancipation in migration from South to North and even to Africa; in seeking admittance to Trade Unions which was a slow process, not yet fully attained; by inner group organization in Churches and fraternities and economic & comsumers movements. They began at Atlanta University scientific study of their condition. Their efforts were opposed by violence and lynching, repressive legislation and scientific race theories of inferiority.

35-4-22

A great change came with the First World War, in which Negro Soldiers had to be accepted as soldiers and officers after bitter agitation. After the war came sharp reaction with mounting riots and mob violence and attempts to strengthen caste. In one "Red Summer" of 1919, there were 25 race riots including one in the capital, Washington and a bloody clash in Chicago. The Ku Klux Klan was widely revived. The Negroes fought back with their increased political power in the North, their newspapers and magazines, led by the

CRISIS. They gained in wider empoloyment, entrance into many trade unions and increased public opinion against lynching.

Two international movements appeared, the West Indian Garvey organisation with its "back to Africa" emphasis; and the Pan-African Congress to unite the efforts of Negroes the world over for emancipation, erasure of the color line and end of colonialism.

The depression beginning in 1929, struck the American Negro hard; from 25% to 5% in various centers were unemployed. But the universal suffering tended to soften race differences under the New Deal and emphasise economic and class differences rather than matters of skin color and physique. The bars against Negroes in trade unions began further to disappear and the right of the Negro to vote gained further recognition in the South. The Negro vote also began to divide between the parties. The laws of caste were attacked repeatedly in the courts and notable victories were gained.

35-4-23

8. Present Conditions

It is astonishing how the African has integrated himself into American culture; this is shown in speech, religious observance, folk-lore, music and dancing. Any fair review of American literature should not omit such Negro writers as Phyllis Wheatley, Paul Lawrence Dunbar, George W. Williams, James Weldon Johnson, Charles W. Chestnutt, Countee Cullen, Langston Hughes, Richard Wright, Shirley Graham and Frank Yerby. American artists include Bannister, Tanner, and Prophet. American scientists include Banneker, Just, Turner and Hinton; American education is indebted to Booker T. Washington and John Hope. As musicians and singers are J. Rosamond Johnson, Burleigh, Will Marion Cook, Still, Dett and Handy; Hayes, Robeson and Anderson; on the state were Bert Williams, Gilpin and Richard Harrison; among inventors were Matseliger, Woods, and McCoy. The music of Negroes from the religious folk-song to jazz is world known.

Most slaves were employed as farmers and servants, with a few as artisans. In 1900 53% were in agriculture and 25% servants and laborers and only 5% artisans which show how caste was keeping the freedman out of industry. In 1940, among the men 40% were in Agriculture, 29% in industry, 21% laborers and 5% in business and professions. Among the women, 60% were servants, 17% in industry and 16% in agriculture. Since then the flight of Negroes from farms to cities and from domestic service to industry has continued at increased tempo.

In 1900, a Negro boy baby at birth had a life expectation of thirty-two years; in 1947, this had increased to fifty-seven years. In 1870, nine-tenths of the Negroes were illiterate. The census of 1940 reported the illiterates at 10 per cent, probably an inaccurate figure due to our methods of collecting statistics of reading and writing. Today certainly the Negro illiterates are below 20 per cent. In 1910, there were in school 1,644,000, or 45 per cent, of all Negroes 5 to 20 years of age; in 1940, 64 per cent of such Negro children were in school, or 4,198,000. In 1900, Charles Dudley Warner, speaking for American intellectuals, said that Negroes could not assimilate and use college training. In 1910 not more than 5,000 Negroes were in college. In 1948, more then 88,000 Negroes were enrolled in college.

In 1918, 324 Negroes received the Bachelor's degree; in 1948 some 5,635 received this degree. There are today more than 1,500 Negro students enrolled in Northern colleges and universities, while from these institutions 279 have received the doctorate in philosophy. In the first edition of "Who's Who in America" there was not, so far as I can ascertain, the name of a single American of Negro descent. The fiftieth edition, in 1948, contains the names of 91 Negroes; and in "American Men of Science," 77 Negroes are listed. There are today on the faculties of the leading universities of the North, 70 Negroes instructors, ranging from a full professor at the University of Chicago to associate professors and instructors in other institutions.

35-4-24

The group has long been internally divided by dilemma as to whether its striving upward, should be aimed at strengthening its inner cultural and group bonds, both for intrinsic progress and for offensive power against caste; or whether it should seek escape whereever and however possible into the surrounding American culture. Decision in this matter has been largely determined by outer compulsion rather than inner plan; for prolonged policies of segregation and discrimination have involuntarily welded the mass almost into a nation within a nation with its own schools, churches, hospitals, newspapers and many business enterprise.

35-4-25

The result has been to make American Negroes to wide extent provincial, introvert, self-conscious and narrowly race-loyal; but it has also inspired them to frantic and often successful effort to achieve, to deserve, to show the world their capacity to share modern civilization. As a result there is almost no area of American civilization in which the Negro has not made creditable showing in the face of all his handicaps.

If, however, the effect of the color caste system on the North American Negro has been both good and bad, its effect on white America has been disastrous. It has repeatedly led the greatest modern attempt at democratic government to deny its political ideals, to falsify its philanthropic assertions and to make its religion to a great extent hypocritical. A Nation which boldly declared "That all men are created equal" proceededto build its economy on chattel slavery; masters who declared race-mixture impossible , sold their own children into slavery and left a mulatto progeny which neither law nor science can today disentangle; churches which excused slavery as calling the heathen to God, refused to recognize the freedom of converts or admit them to equal communion.

Sectional strife over the profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves w ich nevertheless even to this day is not

complete. Poverty, ignorance, disease and crime have been forced on these unfortunate victims of greed to an extent far beyond any social necessity; and a great nation, which today ought to be in the forefront of the march toward peace and democracy, finds itself continuously making common cause with race-hate, prejudice exploitation and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for three hundred and thirty years.

We see that the American Negro is fighting a slow, determined battle and is not going to give up. There is no indication that he will sink into lethargic acceptance of present conditions as inevitable or present progress as satisfactory. He proposes to reach complete equality as an American citizen And by equality he means abolition of separate schools, the disappearance of "Jim-crow" trave; no segregation in public accommodations; the right to vote, the right to think and the right to speak, the right to work and to live in a decent home, and the right to marry any person who wishes to marry him. The Negro does not expect to reach these goals in a minute or in ten years. He is long-suffering and patient. But whether it takes thirty years or a thousand, equality is his goal and he will never stop until he reaches it. Continuous hammering upon the gates of opportunity in the United States has had effect, and because of this, and with the help of his white fellow-citizens, the American Negro has emerged from slavery and attained emancipation from chattel slavery, considerable economic independence, social security and advance in culture.

35-4-26

Foreigners who wish to understand the United States and give intelligent aid and sympathy to efforts to forward human civilization, must remember certain facts: first the United States is not a white, Anglo-Saxon, British nation. More than a tenth of its population is of African descent and

African culture patterns have helped make America; there are other colored peoples represented: American Indians, Asiatics and mixed central American and West Indian peoples. Among the whites are millions of Irish, Scandinavian, German, Italian and Slav descent. No sentimental appeal to ties with British culture in the United States can today have the same appeal as in the 18th century. The nation is international and inter-racial to a large degree and this aspect of its culture increases as the colored and pan-European elements develop in influence. We must then be regarded as representative of the whole world rather than as part of the British Empire. In this broader aspect of American culture lies the ultimate hope of world peace and understanding.

35-4-27

THE BLACK UNITED STATES

A STORY OF THE DESCENDANTS OF AFRICANS IN THE UNITED STATES OF AMERICA

BY

W. E. B. DU BOIS

1. The Negro Group

There were in the United States of America, 1940, 12,865,518 native born citizens, something less than a tenth of the nation, who form largely a segregated caste, with restricted legal rights, and many illegal disabilities. This group in 1950, numbers about 15,000,000. They are descendants of the Africans brought to America during the sixteenth, seventeenth, eighteenth and nineteenth centuries and reduced to slave labor. This group has no complete biological unity, but varies in color from white to black, and comprises a great variety of physical characteristics, since many are the offspring of white European-Americans as well as of Africans and American Indians. There are a large number of white Americans who also descend from Negroes but who are not counted in the colored group nor subjected to caste restrictions because the preponderance of white blood conceals their descent.

The so-called American Negro group, therefore, while it is in no sense absolutely set off physically from its fellow Americans has nevertheless a strong, hereditary cultural unity, born of slavery, of common suffering, prolonged proscription and curtailment of political and civil rights; and especially because of economic and social disabilities. Largely from this fact, have arisen their cultural gifts to America-their rhythm, music and folk-song; their religious faith and customs; their contribution to American art and literature; their defense of their country in every war, on land, sea and in the air; and especially the hard, continuous toil upon which the prosperity and wealth of this continent has largely been built.

The group has long been internally divided by dilemma as to whether its striving upward, should be aimed at strengthening its inner cultural and group

bonds, both for intrinsic progress and for offensive power against caste; or whether it should seek escape whereever and however possible into the surrounding American culture. Decision in this matter has been largely determined by outer compulsion rather than inner plan; for prolonged policies of segregation anddiscrimination have involuntarily welded the mass almost into a nation within a nation with its own schools, churches, hospitals, newspapers and many business enterprises.

The result has been to make American Negroes to wide extent provincial, introvertive, self-conscious and narrowly race-loyal; but it has also inspired them to frantic and often successful effort to achieve, to deserve, to show the world their capacity to share modern civilization. As a result there is almost no area of American civilization in which the Negro has not made creditable showing in the face of all his handicaps.

35-4-29

If, however, the effect of the color caste system on the North American Negro has been both good and bad, its effect on white America has been disastrous. It has repeatedly led the greatest modern attempt at democratic government to deny its political ideals, to falsify its philanthropic assertions and to make its religion to a great extent hypocritical. A nation which boldly declard 'That all men are created equal', proceededto build its economy on chattel slavery; masters who declared race-mixture impossible, sold their own children into slavery and left a mulatto progeny which neither law nor science can today disentangle; churches whichexcused slavery as calling the heathen to God, refused to recognize the freedom of converts or admit them to equal communion.

35-4-29

Sectional strife over the profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves which nevertheless even to this day is not complete. Poverty, ignorance, disease and crime have been forced on these unfortunate victims of greed to anextent far beyond any social necessity; and a great nation, which today ought to be in the forefront of the march toward

peace and democracy, finds itself continuously making common cause with race-hate, prejudiced exploitation and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for three hundred and twenty-eight years.

2. Slavery

Slavery in America is a strange and contradictory story. It cannot be regarded as mainly either a theoretical problem of morals or a scientific problem of race. From either of these points of view, the rise of slavery in America is simply inexplicable. Looking at the facts frankly, slavery evidently was a matter of economics, a question if income and labor, rather than a problem of right and wrong, or of the physical differences in men. Once slavery began to be the source of vast income for men and nations, there followed frantic search for moral and racial justifications. Such excuses were found and men did not inquire too carefully into either their logic or truth.

The twenty Negroes brought to Virginia in 1619, were not the first who had landed on this continent. For a century small numbers of Negroes had been arriving as servants, as laborers, as free adventurers. The southwestern part of the present United States was first traversed by four explorers of whom one was an African Negro. Negroes accompanied early explorers like D'Ayllon and Menendez in the southeastern United States. But just as the earlier black visitors to the West Indies were servants and adventurers and then later be an to appear as laborers on the sugar plantations, so in Virginia, these imported black laborers in 1619 and after, came to be wanted for the raising of tobacco which was the money crop.

In the minds of the early planters, there was no distinction as to labor whether it was white or black; in law there was at first no discrimination. But as imported white labor became scarcer and more protected by law, it became less profitable than Negro labor which flooded the markets because of

European slave traders, internal strife in Africa; and because in America the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the fabulously righ sugar empire; then the cotton kingdom, and finally colonial imperialism.

3. Revolt and Excape

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike, to slow up and sabotage the work of the plantation . They revolted time after time and no matter what recorded history may say, the enacted laws against slave revolt are unanswerable testimony as to what these revolts meant all over America.

The slaves themselves especially imperiled the whole slave system by escape from slavery. It was the fugitive slave more than the slave revolt, which finally threatened investment and income; and the organization for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the whites for independence from the British economic empire which began emancipation. The British bid for his help and the colonials against their first impulse had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the War of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for whites and blacks was in sight.

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as a place for free land; for continuous employment and high wage; for freedom of thought and faith. It was here,

however, that employers intervened; not because of any moral obliquity but because the Industrial Revolution, based upon the crops raised by slave labor in the Caribbean and in the Southern United States, was made possible by world trade and a new and astonishing technique; and finally was made triumphant by a vast transportation of slave labor through the British slave-trade in the eighteenth and early nineteenth centuries.

4. Civil War

This new mass of slaves became competitors of white labor and drove white labor for refuge into the arms of employers, whose interests were founded on slave labor. The doctrine of race inferiority was used to convince white labor that they had the right to be free and to vote, while the Negroes must be slaves or depress the wage of whites; western free soil became a ditional lure and compensation, if it could be restricted to free labor.

On the other hand, the fight of the slave-holders against democracy increased with the spread of the wealth and power of the Cotton Kingdom. Through political power based on slaves they became the dominant political force in the United States; they were successful in expanding into Mexico and tried to penetrate the Caribbean. Finally they demanded for slavery a part of the free soil of the West, and because of this last excessive, and in fact impossible effort, a Civil War to preserve and extend slavery ensued.

This fight for slave labor was echoed in the law. The free Negro was systematically discouraged, disfranchised and reduced to serfdom. He became by law the easy victim of the kidnapper and liable to treatment as a fugitive slave. The Church, influenced by wealth and respectability, was predominately on the side of the slave owner and effort was made to make the degradation of the Negro, as a race, final by Supreme Court decision.

But from the beginning, the outcome of the Civil War was inevitable and this not mainly on account of the predominant wealth and power of the North; it was because of the clear fact that the Southern slave economy was built

on black labor. If at any time the slaves or any large part of them, was workers ceased to support the South; and if even more decisively, as fighters they joined the North, there was no way in the world for the South to win. Just as soon then as slaves became spies for the invading Northern armies; laborers for their camps and fortifications, and finally produced 200,000 trained and efficient soldiers with arms in their hands, and with the possibility of a million more, the fate of the slave South was sealed.

5. Reconstruction

Victory however brought dilemma; if victory meant full economic freedom for labor in the South, white and black; if it meant land and education, and eventually votes, then the slave empire was doomed, and the profits of Northern industry built on the Southern slave foundation would also be seriously curtailed. Northern industry had a stake in the Cotton Kingdom and in the cheap slave labor that supported it. It had expanded for war industries during the fighting, encouraged by government subsidy and eventually protected bya huge tariff rampart. When war profits declined there was still prospect of tremendous post war profits on cotton and other products of Southern agriculture. Therefore, what the North wanted was not freedom and higher wage for black labor, but its control under such forms of law as would keep it cheap; and also stop its open competition with Northern labor. The moral protest of abolitionists must be appeased but profitable industry was determined to control wages and government.

The result was an attempt at Reconstruction in which black labor established schools; tried to divide up the land and put a new social legislation in force. On the other hand, the power of Southern land-owners soon joined with Northern industry to disfranchise the Negrop keep him from access to free land or to capital, and to build up the present caste system for blacks founded on color discrimination, peonage, intimidation and mob-violence.

6. Caste

It is this fact that underlies many of the contradictions in the social and political development of the United States since the Civil War. Despite our resources and our miraculous technique; despite comparatively high wage paid many of our workers and their consequent high standard of living, we are nevertheless ruled by wealth, monopoly and big business organisation to an astounding degree. Our railway transportation is built upon monumental economic injustice both to passengers, shippers and to different sections of the land. The monopoly of land and natural resources throughout the United States both in cities, and in farming districts is a disgraceful aftermath to the vast land heritage with which this nation started.

In 1876, the democratic process of government was crippled throughout the whole nation. This came about not simply through the disfranchisement of Negroes but through the fact that the political power of the disfranchised Negroes and of a large number of equally disfranchised whites was preserved as the basis of political power, but the wielding of that power was left in the hands and under the control of the successors to the planter dynasty in the South.

Let us examine these facts more carefully. The United States has always professed to be a Democracy. She has never wholly attained her ideal, but slowly she has approached it. The privilege of voting has in time been widened by abolishing limitations of birth, religion and lack of property. After the Civil War, which abolished slavery, the nation in gratitude to the black soldiers and laborers who helped win that war, sought to admit to the suffrage all persons without distinction of "race, color or previous condition of servitude." They were warned by the great leaders of abolition, like Sumner, Stevens and Douglass, that this could only be effective, if the Freedmen were given schools, land and some minimum of capital. A Freedmen's Bureau to

furnish these prerequisites to effective citizenship was planned and put into partial operation. But Congress and the nation, weary of the costs of war and eager to get back to profitable industry, refused the necessary funds. The effort dies, but in order to restore friendly civil government in the South the enfranchised Freedman, seventy-five per cent illiterate, without land or tools, was thrown into competitive industry with a ballot in his hands. By herculean effort, helped by philanthropy and his own hard work, the Negro built a school system, bought land and cooperated in starting a new economic order in the South. In a generation he had reduced his illiteracy by half and had become a wage-earning laborer and share-cropper. He still was handicapped by poverty, disease and crime, but nevertheless the rise of the American Negro from slavery in 1860 to freedom in 1880, has few parallels in modern history.

35-4-35

However, opposition to any democracy which included the Negro race on any terms was so strong in the former slave-holding South, and found so much sympathy in large parts of the rest of the nation, that despite notable improvement in the condition of the Negro by every standard of social measurement, the effort to deprive Negroes of the right to vote succeeded. At first he was driven from the polls in the South by mobs and violence; and then he was openly cheated; finally by a "Gentlemen's agreement" with the North, the Negro was disfranchised in the South by a series of laws, methods of administration, court decisions and general public policy, so that today three-fourths of the Negro population of Negro population of the nation is deprived of the right to vote by open and declared policy.

Most persons seem to regard this as simply unfortunate for Negroes, as depriving a modern working class of the minimum rights for self-protection and opportunity for progress. This is true as has been shown in poor educational opportunities, discrimination in work, health protection and in the courts. But the situation is far more serious than this: the disfranchisement of the American Negro makes the funtioning of all democracy in the nation

difficult; and as democracy fails to function in the leading democracy in the world, it fails in the world.

Let us face the facts: the representation of the people in the Congress of the United States is based on population; members of the House of Representatives are elected by groups of approximately 275,000 to 300,000 persons living in 435 Congressional Districts. Naturally difficulties of division within state boundaries, unequal growth of population, migration from year to year, and slow adjustment to these and other changes, makes equal population of these districts only approximate; but unless by and large, and in the long run, essential equality is maintained, the whole basis of democratic representation is marred and as in the celebrated "rotten borough" cases in England in the nineteenth century, representation must be eventually equalized or democracy relapses into oligarchy or even fascism.

28-4-33

This is exactly what threatens the United States today because of the unjust disfranchisement of the Negro and the use of his numerical presence to increase the political power of his enemies and of the enemies of democracy. The nation has not the courage to eliminate from citizenship all persons of Negro descent and thus try to restore slavery. It therefore makes its democracy unworkable by paradox and contradiction.

45-4-239

The world will not forget that the population of this group makes it in size one of the considerable nations of the world. We number as many as the inhabitants of the Argentine or Czechoslovakia, or the whole of Scandinavia including Sweden, Norway and Denmark. We are very nearly the size of Egypt, Rumania and Yugoslavia. We are larger than Canada, Saudi Arabia, Ethiopia, Hungary or the Netherlands. We have twice as many persons as Australia or Switzerland, and more than the whole Union of South Africa. We have more people than Portugal or Peru; twice as many as Greece and nearly as many as Turkey. We have more people by far than Belgium and half as many as Korea or Spain. In sheer numbers then we are a group which has a right to be heard.

We begin to see that the Negro is fighting a slow, determined battle and is not going to give up. There is no indication that he will sink into lethargic acceptance of present conditions as inevitable pr pres nt progress a s satisfactory. He proposes to reach complete equality as an American citizen. And by equality he means abolition of separate schools, the disappearance of "Jim-crow" travel; no segregation in public accommodations; the right to vote, the right to think and the right to speak, the right to work and to live in a decent home, and the right to marry any person who wishes to marry him. The Negro does not expect to reach these goals in a minute or in ten years. He is long-suffering and patient. But whether it takes thirty years or a thousand, equality is his goal and he will never stop until he reaches it.

It must be admitted that continuous hammering upon the gates of opportunity in the United States has had effect, and that because of this, and with the help of his white fellow-citizens the American Negro has emerged from slavery and attained emancipation from chattel slavery, considerable economic independence, social security and advance in culture.

In 1900, a Negro boy baby at birth had a life expectation of thirty-two years; in 1947, this had increased to fifty-seven years. In 1870, nine-tenths of the Negroes were illiterate. The census of 1940 reported the illiterates at 10 per cent, probably an inaccurate figure due to our methods of collecting statistics of reading and writing. Today certainly the Negro illiterates are below 20 per cent. In 1910, there were in school 1,644,000, or 45 per cent, of all Negroes 5 to 20 years of age; in 1940; 64 per cent of such Negro children were in school, or 4,188,000. In 1900, Charles Dudley Warner, speaking for American intellectuals, said that Negroes could not assimilate and use college training. In 1910 not more than 5,000 Negroes were in college. In 1948 more than 88,000 Negroes were enrolled in college.

334-37

45-1-240

The year after the Rosenwald Fund went into operation, 324 Negroes received the Bachelor's degree; in 1948 some 6,635 received this degree. There are today more than 1,500 Negro students enrolled in Northern colleges and universities, while from these institutions 279 have received the doctorate in philosophy. In the first edition of "Who's Who in America" there was not, so far as I can ascertain, the name of a single American of Negro descent. The fiftieth edicion, in 1948, contains the names of ninety-one Negroes, and in "American Men of Science", seventy-seven Negroes are listed. There are today on the faculties of the leading universities of the North seventy Negro insturctors, ranging from a full professor at the University of Chicago to associate professors and instructors in other institutions.

THE BLACK UNITED STATES

AStory of the Descendants of Africans in the United States of America

W. E. Burghardt Du Bois

~~Chapter I~~ I. The Negro Group.

There were in the United States of America, 1940, 12,865,518 native-born citizens, something less than a tenth of the nation, who form largely a segregated caste, with restricted legal rights, and many illegal disabilities. The group in 1950, numbers about 15,000,000. They are descendants of the Africans brought to America during the sixteenth, seventeenth, eighteenth and nineteenth centuries and reduced to slave labor. This group has no complete biological unity, but varies in color from white to black, and comprises a great variety of physical characteristics, since many are the offspring of white European-Americans as well as of Africans and American Indians. There are a large number of white Americans who also descend from Negroes but who are not counted in the colored group nor subjected to caste restrictions because the preponderance of white blood conceals their descent.

45-4-219

35-4-38

The so-called American Negro group, therefore, while it is in no sense absolutely set off physically from its fellow Americans has nevertheless a strong, hereditary cultural unity, born of slavery, of common suffering, prolonged proscription and curtailment of political and civil rights; and especially because of economic and social disabilities. Largely from this fact, have arisen their cultural gifts to America - their rhythm, music and folk-song; their religious faith and customs; their contribution to American art and literature; their defense of their country in every war, on land, sea and in the air; and especially the hard, continuous toil upon which the prosperity and wealth of this continent has largely been built.

The group has long been internally divided by dilemma as to whether its striving upward, should be aimed at strengthening its inner cultural and group bonds, both for intrinsic progress and for offensive power against caste; or whether it should seek escape wherever and however possible into the surrounding American culture. Decision in this matter has been largely determined by outer compulsion rather than inner plan; for prolonged policies of segregation and discrimination have involuntarily welded the mass almost into a nation within a nation with its own schools, churches, hospitals, newspapers and many business enterprises.

35-4-51

The result has been to make American Negroes to wide extent provincial, introvertive, self-conscious and narrowly race-loyal; but it has also inspired them to frantic and often successful effort to achieve, to deserve, to show the world their capacity to share modern civilization. As a result there is almost no area of American civilization in which the Negro has not made creditable showing in the face of all his handicaps.

If, however, the effect of the color caste system on the North American Negro has been both good and bad, its effect on white America has been disastrous. It has repeatedly led the greatest modern attempt at democratic government to deny its political ideals, to falsify its philanthropic assertions and to make its religion to a great extent hypocritical. A nation which boldly declared 'That all men are created equal', proceeded to build its economy on chattel slavery; masters who declared race-mixture impossible, sold their own children into slavery and left a mulatto progeny which neither law nor science can today disentangle; churches which excused slavery as calling the heathen to God, refused to recognize the freedom of converts or admit them to equal

communion. Sectional strife over the profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves which nevertheless even to this day is not complete. Poverty, ignorance, disease and crime have been forced on these unfortunate victims of greed to an extent far beyond any social necessity; and a great nation, which today ought to be in the forefront of the march toward peace and democracy, finds itself continuously making common cause with race-hate, prejudiced exploitation and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for three hundred and twenty-eight years.

35-4-52

2 Slavery

45-4-221

Slavery in America is a strange and contradictory story. It cannot be regarded as mainly either a theoretical problem of morals or a scientific problem of race. From either of these points of view, the rise of slavery in America is simply inexplicable. Looking at the facts frankly, slavery evidently was a matter of economics, a question of income and labor, rather than a problem of right and wrong, or of the physical differences in men. Once slavery began to be the source of vast income for men and nations, there followed frantic search for moral and racial justifications. Such excuses were found and men did not inquire too carefully into either their logic or truth.

The twenty Negroes brought to Virginia in 1619, were not the first who had landed on this continent. For a century small numbers of Negroes had been arriving as servants, as laborers, as free adventurers. The southwestern part of the present United States was first traversed by four explorers of whom one was an African Negro. Negroes accompanied early explorers like D'Ayllon and Menendez in the southeastern United

States. But just as the earlier black visitors to the West Indies were servants and adventurers and then later began to appear as laborers on the sugar plantations, so in Virginia, these imported black laborers in 1619 and after, came to be wanted for the raising of tobacco which was the money crop.

In the minds of the early planters, there was no distinction as to labor whether it was white or black; in law there was at first no discrimination. But as imported white labor became scarcer and more protected by law, it became less profitable than Negro labor which flooded the markets because of European slave traders, internal strife in Africa; and because in America the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the fabulously rich sugar empire; then the cotton kingdom, and finally colonial imperialism.

3 ~~Chapter III~~ Revolt or Escape

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike, to slow up and sabotage the work of the plantation. They revolted time after time and no matter what recorded history may say, the enacted laws against slave revolt are unanswerable testimony as to what these revolts meant all over America.

The slaves themselves especially imperiled the whole slave system by escape from slavery. It was the fugitive slave more than the slave revolt, which finally threatened investment and income; and the organization for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the whites for independence from the British economic empire which began emancipation. The British bid for his help and the colonials against their first impulse had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the war of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for whites and blacks was in sight.

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as a place for free land; for continuous employment and high wage; for freedom of thought and faith. It was here, however, that employers intervened; not because of any moral obliquity but because the Industrial Revolution, based upon the crops raised by slave labor in the Caribbean and in the southern United States, was made possible by world trade and a new and astonishing technique; and finally was made triumphant by a vast transportation of slave labor through the British slave-trade in the eighteenth and early nineteenth centuries.

This new mass of slaves became competitors of white labor and drove white labor for refuge into the arms of employers, whose interests were founded on slave labor. The doctrine of race inferiority was used to convince white labor that they had the right to be free and to vote, while the Negroes must be slaves or depress the wage of whites; western free soil became additional lure and compensation, if it could be restricted to free labor.

On the other hand the fight of the slave-holders against democracy increased with the spread of the wealth and power of the Cotton

Kingdom. Through political power based on slaves they became the dominant political force in the United States; they were successful in expanding into Mexico and tried to penetrate the Caribbean. Finally they demanded for slavery a part of the free soil of the West, and because of this last excessive, and in fact impossible effort, a Civil War to preserve and extend slavery ensued.

This fight for slave labor was echoed in the law. The free Negro was systematically discouraged, disfranchised and reduced to serfdom. He became by law the easy victim of the kidnapper and liable to treatment as a fugitive slave. The Church, influenced by wealth and respectability, was predominately on the side of the slave owner and effort was made to make the degradation of the Negro, as a race, final by Supreme Court decision.

But from the beginning, the outcome of the Civil War was inevitable and this not mainly on account of the predominant wealth and power of the North; it was because of the clear fact that the Southern slave economy was built on black labor. If at any time the slaves or any large part of them, as workers ceased to support the South; and if even more decisively, as fighters they joined the North, there was no way in the world for the South to win. Just as soon then as slaves became spies for the invading Northern armies; laborers for their camps and fortifications, and finally produced 200,000 trained and efficient soldiers with arms in their hands, and with the possibility of a million more, the fate of the slave South was sealed.

Victory however brought dilemma; if victory meant full economic freedom for labor in the South, white and black; if it meant land and education, and eventually votes, then the slave empire was doomed, and the profits of Northern industry built on the Southern slave foundation would also be seriously curtailed. Northern industry had a stake

in the Cotton Kingdom and in the cheap slave labor that supported it. It had expanded for war industries during the fighting, encouraged by government subsidy and eventually protected by a huge tariff rampart. When war profits declined there was still prospect of tremendous post war profits on cotton and other products of Southern agriculture. Therefore, what the North wanted was not freedom and higher wage for black labor, but its control under such forms of law as would keep it cheap; and also stop its open competition with Northern labor. The moral protest of abolitionists must be appeased but profitable industry was determined to control wages and government.

The result was an attempt at Reconstruction in which black labor established schools; tried to divide up the land and put a new social legislation in force. On the other hand, the power of Southern land owners soon joined with Northern industry to disfranchise the Negro; keep him from access to free land or to capital, and to build up the present caste system for blacks founded on color discrimination, peonage, intimidation and mob-violence.

It is this fact that underlies many of the contradictions in the social and political development of the United States since the Civil War. Despite our resources and our miraculous technique; despite comparatively high wage paid many of our workers and their consequent high standard of living, we are nevertheless ruled by wealth, monoply and big business organization to an astounding degree. Our railway transportation is built upon monumental economic injustice both to passengers, shippers and to different sections of the land. The monopoly of land and natural resources throughout the United States both in cities, and in farming districts is a disgraceful aftermath to the vast land heritage with which this nation started.

In 1876 the democratic process of government was crippled throughout the whole nation. This came about not simply through the disfranchisement of Negroes but through the fact that the political power of the disfranchised Negroes and of a large number of equally disfranchised whites was preserved as the basis of political power, but the wielding of that power was left in the hands and under the control of the successors to the planter dynasty in the South.

Let us examine these facts more carefully. The United States has always professed to be a Democracy. She has never wholly attained her ideal, but slowly she has approached it. The privilege of voting has in time been widened by abolishing limitations of birth, religion and lack of property. After the Civil War, which abolished slavery, the nation in gratitude to the black soldiers and laborers who helped win that war, sought to admit to the suffrage all persons without distinction of "race, color or previous condition of servitude". They were warned by the great leaders of abolition, like Sumner, Stevens and Douglass, that this could only be effective, if the Freedmen were given schools, land and some minimum of capital. A Freedmen's Bureau to furnish these prerequisites to effective citizenship was planned and put into partial operation. But Congress and the nation, weary of the costs of war and eager to get back to profitable industry, refused the necessary funds. The effort died, but in order to restore friendly civil government in the South the enfranchised Freedman, seventy-five per cent illiterate, without land or tools, was thrown into competitive industry with a ballot in his hands. By herculean effort, helped by philanthropy and his own hard work, the Negro built a school system, bought land and cooperated in starting a new economic order in the

South. In a generation he had reduced his illiteracy by half and had become a wage-earning laborer and share-cropper. He still was handicapped by poverty, disease and crime, but nevertheless the rise of the American Negro from slavery in 1860 to freedom in 1880, has few parallels in modern history.

However, opposition to any democracy which included the Negro race on any terms was so strong in the former slave-holding South, and found so much sympathy in large parts of the rest of the nation, that despite notable improvement in the condition of the Negro by every standard of social measurement, the effort to deprive Negroes of the right to vote succeeded. At first he was driven from the polls in the South by mobs and violence; and then he was openly cheated; finally by a "Gentleman's agreement" with the North, the Negro was disfranchised in the South by a series of laws, methods of administration, court decisions and general public policy, so that today three-fourths of the Negro population of the nation is deprived of the right to vote by open and declared policy.

Most persons seem to regard this as simply unfortunate for Negroes, as depriving a modern working class of the minimum rights for self-protection and opportunity for progress. This is true as has been shown in poor educational opportunities, discrimination in work, health protection and in the courts. But the situation is far more serious than this: the disfranchisement of the American Negro makes the functioning of all democracy in the nation difficult; and as democracy fails to function in the leading democracy in the world, it fails in the world.

Let us face the facts: the representation of the people in the Congress of the United States is based on population; members of the House of Representatives are elected by groups of approximately 275,000

to 300,000 persons living in 435 Congressional Districts. Naturally difficulties of division within state boundaries, unequal growth of population, migration from year to year, and slow adjustment to these and other changes, makes equal population of these districts only approximate; but unless by and large, and in the long run, essential equality is maintained, the whole basis of democratic representation is marred and as in the celebrated "rotten borough" cases in England in the nineteenth century, representation must be eventually equalized or democracy relapses into oligarchy or even fascism.

This is exactly what threatens the United States today because of the unjust disfranchisement of the Negro and the use of his numerical presence to increase the political power of his enemies and of the enemies of democracy. The nation has not the courage to eliminate from citizenship all persons of Negro descent and thus try to restore slavery It therefore makes its democracy unworkable by paradox and contradiction

Let us see what effect the disfranchisement of Negroes has upon democracy in the United States. In 1944, five hundred and thirty-one electoral votes were cast for the president of the United States. Of these, one hundred and twenty-nine, came from Alabama, Arkansas, Georgia Louisiana, Oklahoma, North and South Carolina, Texas, Virginia, Florida and Mississippi. The number of these votes and the party for which they were cast, depended principally upon the disfranchisement of the Negro and were not subject to public opinion or democratic control. They represented nearly a fourth of the power of the electoral college and yet they represented only a tenth of the actual voters.

If we take the voting population according to the census of 1940, and the vote actually cast in 1946 for members of Congress, we have a fair picture of how democracy is working in the United States.

(11)

be persisted in, without infringing upon the rights of the peoples of the world and especially upon the ideals and the work of the United Nations.

This question then, which is without doubt primarily an internal and national question, becomes inevitably an international question and will in the future become more and more international, as the nations draw together. In this great attempt to find common ground and to maintain peace, it is therefore, fitting and proper that the thirteen million American citizens of Negro descent should appeal to the United Nations and ask that organization in the proper way to take cognizance of a situation which deprives this group of their rights as men and citizens, and by so doing makes the functioning of the United Nations more difficult, if not in many cases impossible.

The World will not forget that the population of this group makes it in size one of the considerable nations of the world. We number as many as the inhabitants of the Argentine or Czechoslovakia, or the whole of Scandanavia including Sweden, Norway and Denmark. We are very nearly the size of Egypt, Rumania and Yugoslavia. We are larger than Canada, Saudi Arabia, Ethiopia, Hungary or the Netherlands. We have twice as many persons as Australia or Switzerland, and more than the whole Union of South Africa. We have more people than Portugal or Peru; twice as many as Greece and nearly as many as Turkey. We have more people by far than Belgium and half as many as Korea or Spain. In sheer numbers then we are a group which has a right to be heard, and while we rejoice that other smaller nations can stand and make their wants known in the United Nations we maintain equally that our voice should not be supressed or ignored.

45-4-229

Cohn 13

(12)

editor himself are subject to "Jim-Crow" laws, to denial of the right to vote, to unequal chance to earn a living; of the right to enter many places of public entertainment supported by their taxes. In other words our complaint is mainly against a discrimination based mainly on color of skin, and it is this that we denounce as not only indefensible but barbaric.

35-4-01

It may be quite properly asked at this point, to whom a petition and statement such as this should be addressed? Many persons say that this represents a domestic question which is purely a matter of internal concern; and that therefore it should be addressed to the people and government of the United States and the various states.

45-4-230

It must not be thought that this procedure has not already been taken. From the very beginning of this nation, in the late eighteenth century, and even before, in the colonies, decade by decade and indeed year by year, the Negroes of the United States have appealed for redress of grievances, and have given facts and figures to support their contention.

It must ~~also~~ be admitted that ~~this~~ continuous hammering upon the gates of opportunity in the United States has had effect, and that because of this, and with the help of his white fellow-citizens the American Negro has emerged from slavery and attained emancipation from chattel slavery, considerable economic independence, social security and advance in culture. (city A)

But manifestly this is not enough; no large group of a nation can lag behind the average culture of that nation, as the American Negro still does, without suffering not only itself but becoming a menace ~~to the nation~~.

~~In addition to this, in its international relations, the~~

But as imported white labor became scarcer and more protected by law, it became less profitable than Negro labor which flooded the markets because of European slave traders, internal strife in Africa; and because in America the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the favulously rich sugar empire; then the cotton kingdom, and finally colonial imperialis.

3. Revolt and Escape

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike, to slow up and sabotage the work of the plantation. They revolted time after time and no matter what recorded history may say, the enacted laws against slave revolt are unanswerable testimonyes to what these revolts meant all over America.

The slaves themselves especially imperiled the whole slave system by escape from slavery. It was the fugitive slave more than the slave revolt, which finally threatened investment and income; and the organisation for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the white for independence from the British economic empire which began emancipation. The British bid for his help and the colonials against their first impulse had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the War of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for whites and blacks was in sight.

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as a place for free land; for continuous

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as a place for free land; for continuous

In addition to serious and widely publicized revolts in 1739, 1800, 1822 and 1831, there were, according to Aptheker, at least 250 revolts and conspiracies in the history of American Negro slavery

I SPEAK FOR PEACE

Speech by Du Bois in New York, September 24, 1950

'I SPEAK FOR PEACE'

Dr. W. E. B. Du Bois

Historian, Poet, Statesman & Humanitarian

The great issue, of this time, of this nation, of this world, is PEACE; and the central theme of the campaign which begins here today is Peace, no more War. There are in this nation today powerful interests which are determined on War. To this end they are suppressing the Bill of Rights so as to stop discussion, distort the facts and stampede the nation through the hysteria of groundless Fear. Who is it among us who wants War and why do they want it?

The American Labor Party knows who and why, and there are many others who also know. But the American Labor Party not only knows but it is going to do something about it. That right of action is the right to elect our lawmakers and executives by universal and secret ballot.

Our party therefore has selected candidates for governor and lieutenant-governor; for comptroller and attorney-general, for mayor of the city of New York and for members of the federal Congress.

It has asked me to run for the United States Senate. This is for me a new role. Only once in my life have I held public office, and that was when for a month I was, in 1928, made Special Minister Plenipotentiary to Liberia. My political activity has been almost wholly confined to writing. In this writing, with some speaking, I tried first to put the Negro vote in proper and effective relation to the national needs. In the first election of Woodrow Wilson, I sought to end Negro subserviency to the Republican Party. I tried to induce the Bull Moose movement to make Negro Rights a main plank and fought it when it refused. I opposed Taft's "lily-white" Southern policy and supported the third party movements of La Follette and Henry Wallace. I have never been an active party worker, but I have been an enrolled member of the Socialist Party, of the Democratic Party under the New Deal, and lately of the American Labor Party.

The basic motive of my political thought and activity has been the securing for all Americans, civil and political rights regardless of race or color. I assumed, and assumed too easily, that once color discrimination was done away with, the nation and the world would be free to attack and solve certain basic problems of human progress which I knew full well cried for solution. Behind and beneath this demand for rights lay always therefore the assumption that with the right to vote, the right to think and speak, and the right to know, would come through the very exercise of these fundamental privileges: the basic right of human beings to live, to work; to eat and be sheltered, to be shielded from disease and have their children educated.

But to my amazement and fright, I have lived to see the era of Peace which I was trained to look forward to as the only goal of civilization transformed into plans for universal world war; a theory of progress by war and more war, each more savage and destructive than the last. I now realize that I, as well as you, am facing a crisis in which no consideration of ease or age, suffice to hold me back from a great duty. That duty is the one of trying to bring reason and past experience to bear upon a group of people gone temporarily insane.

The basic cause of this insanity is the effort of powerful interests, armed by control of press and radio, school and platform, backed by almost unlimited money, to turn the attention of the world from the fundamental problem of our age.

That problem IS THAT IN OUR UNPRECEDENTED ORGANIZATION OF INDUSTRY, WITH ITS MARVELOUS TECHNIQUE AND WORLD-WIDE EXTENT, THE VAST MAJORITY OF MANKIND REMAIN SICK, IGNORANT AND STARVED WHILE A FEW HAVE MORE INCOME IN GOODS AND SERVICES THAN THEY CAN USE.

It is no sufficient answer to this fundamental problem, to point out that the present degradation of the worker is not near so great as it once was, or much less in some lands than in others. The point is that it is far too great than is necessary or decent and calls for drastic cure now and not a thousand years hence.

This is the basic problem of our culture, no matter how much we try to conceal and ignore it; or try to divert attention from it to other matters. There are no other matters so important or so pressing. We may be led to yell our heads off to convince ourselves that the problem of this world today is the Soviet Union and Communism. That is deliberate deception. The problem of economic justice to working men existed before the Russian revolution and would remain if Russia were swept from the face of the earth tomorrow. Proposals to solve this problem by socialism and communism, did not originate in Russia and will not end there. What Russia did was to attempt to solve this problem in a systematic way, at a time when the 19th century had bequeathed to the world the dogma that the problem of economic justice was insoluble; that most men must always be poor, ignorant and sick, because most men were so inferior in gift and morals that this was inevitable; that civilization depended on making the few masters of the many, the Rich the rulers of the Poor, and thus in this way, and only in this way, could civilization be built and maintained.

Is this true? Whether it is true or not, we have no right to stop people and nations from denying the necessity of poverty, disease and ignorance, and from experimenting in their own way to make a better world. Moreover, our own duty is clear and that is not to pull down others but rather to build ourselves up; to prove to the world that the economic condition of mankind can be bettered and that we know how to do this and that we propose to prove our belief by action. Instead of this, what are we up to? We are trying to fight an Idea. We are going to make nations agree with us and our way of life by using atom bombs, and jet planes, battleships and artillery.

Why? Why do we propose to make the Russian experiment fail, to throttle China and to throw the world into continuous war? The reason is clear: we fear that any success of socialism or communism will interfere with our money-making. We have become a nation of money-makers. We think that money-making is the great end of man. Our whole ideology bows to this fantastic idea. Religion, science, art and morals in America tend to be measured by the profit they bring, and the true vocation of American manhood is regarded as profit-making business enterprise.

War is Big Business and a business immensely profitable to a few, but of measureless disaster and death of dream to the many. Big business wants war in order to keep your mind off social reform; it would rather spend your taxes for atom bombs than for schools because in this way it makes more money; it would rather have your sons dying in Korea than studying in America and asking awkward questions. The system which it advocates depends on war and more war.

In order to have war, Big Business must have Hate; so its press and newspapers ask you to hate communists and if not communists, hate all who do not hate communists; indeed hate all who do not take orders from those who now rule America.

What has happened to the world, is that those who profit from war, especially in the United States, have gained control of government, of information and propaganda. This came about because of the First World War, which we entered with reluctance and participated in mainly by furnishing materials at a huge profit to those who controlled them. The result was two-fold; Americans conceived the idea of continuing to profit from the world's disaster and to move in as successor of the British Empire as ruler of most of mankind. On the other hand, Russia and other nations who had been through Hell because of war, began experiments for reforming if not replacing the current methods of industrial organization. We joined the capi-

talists of the world to suppress their socialist experiments which threatened our plan of world industrial empire. However, just as plans were ripe for a mass attack, in particular on the Soviets, the bottom fell out of modern capitalist industry. This was no fault of Russia nor of socialism, but was directly due to the overreaching greed of private profit

But no matter what its cause, the result was that the Soviet experiment got a breathing space while in the United States the New Deal was forced to adopt many socialist remedies for poverty, unemployment and disease: we curbed the profits of capital; we put the State into certain industries and we adopted planned industry like the TVA, and we relieved the unemployed, and we established Social Security.

In other words, the United States began to form and carry out its own plans for so reorganizing industry as to save capitalism wherever it deserved to be saved.

Here the American Labor Party takes its stand as the successor of the New Deal. It maintains that the Soviet Union has a right to adopt its own economic philosophy and carry it out as it will. And that also the United States has a right to attempt to save its own way of life and that this can be done as the New Deal started to prove, when it was sabotaged not only by its enemies but more completely by its friends. What the American Labor Party asserts is that the present plan of Big Business to compel the world to adopt our philosophy and our methods by force of arms is not only unreasonable in the light of our failures, but impossible in itself and can only end in disaster.

It would seem that the futile efforts of a succession of master races to impose their will and power upon mankind would teach us that our program of world conquest is crazy. There is no possible chance for us to accomplish what Egypt, Persia, Greece, Rome, Great Britain and Hitler failed to do. With our little police action in Korea shaking our resources to the foundations, how long and what effort will it take to conquer China, the Soviet Union, the Balkans - not to mention India. Our military plans are idiotic and still more so if we depend on Germany and Japan to pull our chestnuts out of the fire. It will take more than one wild man of Tokyo to bring this fantasy to fact.

Moreover, we point out that the persons who are forcing us to adopt this policy of force and violence are the upholders of Big Business; and they are profiting as never before by war and preparation for war, and are deliberately blind to the fact that their profit is the disaster of America and the world. Moreover, we point out that Herbert Lehman was trained in Big Business and today deliberately represents its interests. Last year, Herbert Lehman called John Foster Dulles "a bigot, an anti-Semite and a Fascist". For that reason I voted for Lehman instead of Dulles. This year Senator Lehman welcomes this same Dulles into "bi-partisan" collaboration for war; he sponsors legislation for concentration camps for Communists and those called Communists; he ignores the restoration to power in Germany of the same gang which killed six million Jews, and acquiesces into their re-arming.

Why? What has changed Mr. Lehman? He has not changed. He follows automatically his training in the same school which made Dulles a war-monger and attorney of the Nazis, and that is, foreign investment of American capital, so as to make enormous profit out of the poverty and helplessness of Asia and Africa. American capital is pouring into South Africa and Rhodesia. We are the real owners of serf-labor in the Belgian Congo. We are wild to have Chinese factory hands at 12 cents a day. We helped shoot down the black miners in West Africa. And to bulwark our investment and guarantee high profit, the power of business joins hands with the military.

Thus, we are today ruled by Big Business and Big Brass for profit. A representative of the Steel Trust has been Secretary of State; a representative of Morgan and Rockefeller is chief adviser of Truman on foreign affairs; another Morgan man has been under-secretary of State and will be second in command under Marshall. A secretary of the Navy and Defense chief represented Dillon, Reid and Company, and another became Secretary of War. Where Big Business does not control government, men trained for war do. We have just reformed our defense department by placing a soldier at its head in defiance of sound tradition; his first word is universal training of our children for all-out war all over the earth, at a cost greater than we ever spent for education, health, housing and social uplift altogether. And for what? For profit to investors which is today piling up at the rate of $23,000,000,000 a year; with the prospect that the profit for 1950 will be four and a half that of 1939, and twice as high as the enormous war profit of 1944.

It is the theory of democratic government, that when a situation like this arises, two political parties will examine, debate and dispute issues and acts until the people can make intelligent choice of the problems before them. Today we have only one political party which shares power for the same ends. Men like Dewey and Hanley can only try to outdo what the Democrats have already done; if the Democrats are for war, they are for more war; if the Democrats repudiate the New Deal, the Republicans loathe and despise it. The one point of agreement between the two so-called parties is war on any nation or movement which stands in the way of American profit; and the suppression of all discussion of the merits of the present crisis. I try to spread in America news of the peace movement in Europe and I am threatened with jail. Paul Robeson advises Negroes never to fight against people who are striving for a better world for black and white, and he is denied the right to make a living.

In this situation the American Labor Party takes its stand on the proposition "There can be no progress without Peace". We are the only nation in the civilized world advocating war and compelling other nations to fight. For this we are hated and feared. We call for the immediate settlement of the war in Korea, which an American soldier has characterized when he said "I never saw such a useless, damned war in all my life". Mediation with both North and South in conference, and China represented in the United Nations, is the only solution. We ask resumption of the free flow of trade between east and west and the utter overthrow of colonialism even when masked under Point Four.

To stop this program of reason and progress, the allied and associated political profit-makers, called the Republican and Democratic parties, have adopted the last tactics of despair. They have made not only truth but civil rights a casualty of war. They have turned your attention from progress and peace to hate and fear. They are making it illegal to think of progress or to advocate peace or progress. Every path to reform like taxation of great wealth; effective rent control; river development and forest planning are all called communistic or socialistic and their promoters threatened with disgrace, jail or loss of livelihood.

And now as a last exercise of tyranny, we are presented with the McCarran bill - the Fugitive Slave Law of 1950. You know what the Fugitive Slave Law of 1850 was: capital invested in human beings began to run away; foolish northerners, black and white, helped it hide. The Slave Power ruled the nation as Wall Street rules it today; they passed a bill that made kidnapping of any Negro possible without trial, that made a man prove his freedom instead of forcing masters to prove property; and tried to make anti-slavery opinion a crime. This law was so successful that in a decade it brought Civil War and slavery was abolished three years later.

So today, we are bidden to hate Communism when what we must hate is war; we are called subversive when we try to think and act as human beings and not as puppets. If we attack segregation in the army or civil life, we are called traitors to America. Against this the American Labor Party protests and fights. And as its candidate for the United States Senate, I ask you to vote to curb Big Business and War as represented by Herbert Lehman, War and Big Business as represented by that eminent veteran, Joe Hanley, and to uphold peace and civil rights which are being sabotaged by Harry Truman.

(Statement by Dr. Du Bois on his candidacy for the United States Senate on the American Labor Party ticket at a press conference held September 24, 1950 at the Hotel Theresa, New York City.)

Dr. W.E.B. Du Bois, Chairman of the PEACE INFORMATION CENTER, was one of the original founders of the National Association for the Advancement of Colored People. He is Vice-Chairman of the Council on African Affairs.

I take my stand FOR peace

— W. E. B. Du Bois

2c

ABOUT THE AUTHOR

DR. WILLIAM EDWARD BURGHARDT DU BOIS, *born in Great Barrington, Massachusetts, in 1868, is one of the world's outstanding scholars. He is the author of numerous books, many of which pioneered in scientific historical, anthropological and sociological research. His novels, poetry, and books of collected essays are permanent additions to the body of American literature. He was one of the chief founders of two great organizations of the Negro people: the Niagara Movement (1905) and the N.A.A.C.P. (1909), whose magazine* The Crisis *he edited from 1910 to 1933. More recently he has served as a Vice-Chairman of the Council on African Affairs, and as a leader of the American Labor Party ran for United States Senator in New York in 1950, polling two hundred thousand votes.*

This pamphlet, reprinted from the progressive cultural monthly Masses & Mainstream, *was written prior to the indictment of Dr. Du Bois and his associates in the former Peace Information Center.*

The drawing of Dr. Du Bois is by the distinguished Negro artist, Charles White.

THE world is astonished at recent developments in the United States. Our actions and attitudes are discussed with puzzled wonder on the streets of every city in the world. Reluctantly the world is coming to believe that we actually want war; that we must have war; that in no other way can we keep our workers employed and maintain huge profits save by spending seventy thousand million dollars a year for war preparation and adding to the vast debt of over 200 thousand millions which we already owe chiefly for war in the past.

Our present war expenditure must be increased, yet we cannot tax the rich much more since the lawyers who make the tax laws can also break them and let the bulk of wealth go untaxed. We cannot raise the taxes on the poor much higher because rising prices leave less and less to tax. Citizens have borrowed 200 thousand million dollars on homes, farms, and furniture, and the poor and middle class have spent nearly all their savings. Yet we cannot stop; either we spend more and more on top of

what we are spending or our whole industrial organization, with its billions of private profit monopoly, will face collapse.

On the other hand, the Soviet Union whom we are determined to destroy does not at present seem willing to fight. We have warned and dared it. We have publicly and privately insulted it. We have eagerly given currency to every charge which anyone at any time makes against the Soviet Union, its economy, its morals, its plans. We thought that at last in Korea we had them where they must fight and we prepared jauntily for World War III almost with shouts of joy.

We were sure the Russians had started the Korean uprising, were furnishing arms and ready to march to war. Henry Wallace actually saw them and ran backward so fast that he tripped over his own resolutions, and stepped in the faces of his friends. Still the Soviets did not fight and began instead to call for world peace; for union against the atom bomb; for peace congresses. But the United States was not misled; not they. They stopped the peace appeal. They picked up and jailed advocates of peace. They barred from our shores foreign advocates of peace, persons of the highest reputation.

Highly placed public officials and military men began openly to declare that if the Russians would not attack us, we would attack them to keep them from attacking us. Meantime, wave after wave of our young men are being trained for murder, and Congress is on the verge of calling every youth in the land for this purpose.

This is what Europe sees us set for, in contradiction to everything we once professed—liberty, free speech, truth and justice. To this our masters will lead us unless you intervene: unless right here and now you, the people of the United States, say No! Enough of this hysteria, this crazy foolishness!

ONCE . . . THE LAND OF THE FREE

Our slow but steady descent into belief in complete and universal war and our determination to make all men agree with what some believe, rather than to let them exercise their free American heritage of choosing truth—this literal descent into Hell in our day, and in this our own country, has been so gradual and complete that many honest Americans cannot believe what they actually hear and see; and sit bewildered, rubbing their eyes in order to get some vague conception of what can

have happened to the land which once declared "these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness."

No American born before 1900 could possibly conceive that the United States would become a land approaching universal military service; with its armed forces in every continent and on every sea; pledged to conquer and control masses of mankind, order the thought and belief of the nations of the world, and ready to spend for these objects more money than it ever spent for religion, education or social uplift altogether.

When men arise and say this and try to prove its truth, every effort is made by secret police, organized spies and hired informers; by deliberate subversion of the fundamental principles of our law, to imprison, slander and silence such persons, and deprive them of earning an honest livelihood.

Avoiding all hysteria and exaggeration, all natural indignation and instinctive defense of the right of free speech and hatred of thought control, it is clear to all Americans who still dare to think, that my description of this America is

true, and if true, frightening to all men who once thought of this land as the Land of the Free.

UNITED STATES ALONE WANTS WAR...

My platform then, like the platform of every honest American who still dares believe in peace and freedom, takes its unalterable stand against war and slavery. There was a day when most men believed that progress depended on war; that by war, and mainly by war, had modern men gained freedom, religion and democracy. We believed this because we were taught this in our literature and science, in church and school, on platform and in newspaper. It was always a lie and as war has become universal and so horrible and destructive that everybody recognizes it as murder, crippling, insanity and stark death of human culture, we realize that there is scarce a victory formerly claimed by war which mankind might not have gained more cheaply and more decently and even more completely by methods of peace. If that was true in the past, it is so clear and indisputable today that no sane being denies it. And yet of all nations of earth today, the United States alone

wants war, prepares for war, forces other nations to fight and asks you and me to impoverish ourselves, give up health and schools, sacrifice our sons and daughters to a Jim-Crow army, and commit suicide, for a world war that nobody wants but the rich Americans who profit by it.

If war were a matter of careful study and grave decision, of prayerful thought and solemn deliberation, we might take its fearful outbreak as at least no more than human error, soon to be stopped by decency and common sense. But when did you ever vote for war? You who have spent most of your lives in a fighting, murdering world? When did you ever have a chance to decide this matter of maiming and murder? Never! And you never will as long as an executive of his own initiative can start a "little police action" which costs the lives and health of over 60,000 American boys, in order that big business can interfere with the governments of Asia.

Of what are we in such deathly fear? Have we been invaded? Has anyone dropped an atom bomb on us? Have we been impoverished or enslaved by foreigners? Is our business failing, and are our millionaires disappearing? Has the rate of profit gone down, is our machinery less

cunning, or our natural resources destroyed by strangers? Is there any sign that the United States of America is victim, or can be victim of any foreign country? No! Then of what are we afraid, and why are we trying to guard the earth from Pacific to Atlantic and from the North to the South Pole, unless it be from ourselves?

. . . AFRAID OF AN IDEA

Our rulers are afraid of an idea; tempted by a vision of power which this idea fights. The power they crave long misled and slaughtered the peoples of Europe and Asia, and now insidiously creeps into our own fever-mad heads; and that is Imperialism—world rule over the world. Once this was sought through black slavery: then it was made easy by yellow coolies: then by all "lesser breeds without the law," who could furnish a "white man's burden" and let him strut over the world, and lord it in Asia and Africa, and rule and rule without end, forever and forever. That was the vision of the nineteenth century. The fever of imperialism caught the United States as the nineteenth century died and we choked a few islands out of dying Spain. But these were but small

change which whetted our appetite. With the first World War came the vision of an Imperial United States as successor of the empire on which the sun already sets. We rushed so madly at the spoils left by European empire that we brought down our whole industrial system about our own ears.

It would seem that the memory of the great depression of the Thirties would convince all thinking men that war is not the path to the millenium, and that what we need is reform of our own system of work and industrial organization, before we attempt to teach the world what to think or how to live.

But what the men of big business ignored was that the industrial system which they were seeking to re-install had already met a terrible and costly reverse; that modifications of imperialism and monopoly capitalism had already been suggested and tried. Such efforts comprehended loosely by the name "Socialism," were not invented by Russia nor first tried by Russia. On the contrary, Socialism is an English, French and German conception and was tried in Russia because that unhappy land was one of the last and worst victims of the capitalist system.

If tomorrow Russia disappeared from the face

of the earth, the basic problem facing the modern world would remain: and that is, why is it, with the earth's abundance and our mastery of natural forces, and miraculous technique; with our commerce belting the earth, and goods and services pouring from our stores, factories, ships and warehouses—why is it that nevertheless, most human beings are starving to death, dying of preventable disease and too ignorant to know what is the matter, while a small minority are so rich that they cannot spend their income?

That is the problem which faces the world, and Russia was not the first to pose it, nor will she be the last to ask and demand answer. The nineteenth century said that this situation was inevitable and must always remain because of the natural inferiority of most men; the twentieth century knows better. It says that there can be food enough for all; that clothes and shelter for all can be provided; that most disease is preventable and that the overwhelming mass of human beings can be educated; that intelligence, health and decent comfort are not only possible, but should be demanded, by all men; planned by all states; and made increasingly effective by all voters in each election.

But the powerful who today own the earth and

the fullness thereof; who monopolize its industry and own its press and screen its news, have another answer. They order us to fight an Idea, to "contain" and crush any dream of abolishing poverty, disease and ignorance; and to do this by organizing war, murder and destruction on any people who dare to try to plan plenty for all mankind. From the nineteenth century, they attempt to take over imperialism to bribe the workers and thinkers of the most powerful countries by high wage and privilege, in order to build a false and dishonest prosperity on the slavery and degradation, the low wage and disease, of Africa and Asia and the islands of the sea; and to pay the price for this, they demand that you, your sons and daughters, in endless stream, be murdered and crippled in endless wars.

This is why we are fighting or preparing to fight in Europe, Asia and Africa—not against an enemy, but against the Idea—against the rising demand of the working classes of the world for better wages, decent housing, regular employment, medical service and schools for all.

It does not answer this world-wide demand to say that we of America have these things in greater abundance than the rest of the world, if our pros-

perity is based on, or seeks to base itself on, the exploitation and degradation of the rest of mankind. Remember, it is American money that owns more and more of South African mines worked by slave labor; it is American enterprise that fattens off Rhodesian copper; it is American investors that seek to dominate China, India, Korea and Burma; who are throttling the starved workers of the Near East.

Yet is it not clear that such a program is sheer insanity? That no nation, however rich and smart, can conquer this world? Have not Egypt, Assyria, Greece, Rome, Britain and Germany taught us this? And also that no Idea based on truth and righteousness can ultimately be suppressed by force and murder?

WHAT CAN BE DONE...?

I never thought I would live to see the day that free speech and freedom of opinion would be so throttled in the United States as it is today. Today in this free country, no man can be sure of earning a living, of escaping slander and personal violence, or even of keeping out of jail unless publicly and repeatedly he proclaims:

—that he hates Russia.
—that he opposes Socialism and Communism.
—that he supports wholeheartedly the war in Korea.
—that he is ready to spend any amount for further war, anywhere or at anytime.
—that he is ready to fight the Soviet Union, China and any other country, or all countries together.
—that he believes in the use of the atom bomb or any other weapon of mass destruction, and regards anyone opposed as a traitor.
—that he not only believes in and consents to all these things, but is willing to spy on his neighbors and denounce them if they do not believe as he does.

The mere statement of this creed shows its absolute insanity. What can be done to bring this nation to its senses? Most people answer: nothing; just sit still; bend to the storm; if necessary, lie and join the witch-hunt, swear to God that never, never did you ever sympathize with the Russian peasants' fight to be free; that you never in your life belonged to a liberal organization, or had a friend who did; and if so, you were deceived, deluded and a damned fool.

I want progress; I want education; I want social medicine; I want a living wage and old age security; I want employment for all and relief for the unemployed and sick; I want public works, public services and public improvements. I want freedom for my people. And because I know and you know that we cannot have these things, and at the same time fight, destroy and kill all around the world in order to make huge profit for big business; for that reason, I take my stand beside the millions in every nation and continent and cry *Peace—No More War!*

A new era of power, held and exercised by the working classes the world over, is dawning and while its eventual form is not yet clear, its progress cannot be held back by any power of man.

"It is a curious thing that I am called upon to defend myself against criminal charges for openly advocating the one thing all people want—PEACE."

—W. E. B. DU BOIS

SHAME OF A NATION

Five American citizens may go to jail for five years because they circulated information about peace activities in our country and throughout the world. They are the distinguished 83-year-old scholar, Dr. W. E. B. Du Bois, Mrs. Elizabeth Moos, Kyrle Elkin, Abbott Simon, and Sylvia Soloff.

Their right to speak for peace must be upheld. Readers of this pamphlet are urged to write to U.S. Attorney General J. Howard McGrath to quash the indictment against Dr. Du Bois and his associates in the former Peace Information Center. Please send copies of such letters, telegrams, resolutions, together with contributions for their defense, to

SHIRLEY GRAHAM, *Treasurer*

PEACE IS DANGEROUS

Partially given as speech to National Council of Arts, Sciences and Professions, New York, September 28, 1951 and at Community Church, Boston, Massachusetts, November 11, 1951

New York, The National Guardian, 1951

Pamphlet

Peace Is Dangerous

39-4A-8

By W. E. B. DuBois

The author of this pamphlet, an American known throughout the world for his scholarship and his unwavering fight for human rights and dignity during more than half a century, speaks with authority of "the great silence that has fallen on the real soul of the nation." In 1951, his 83rd year, he was brought in handcuffs before an American court to be indicted for advocating peace without registering as a "foreign agent." After a week's trial the case against him and four associates in the Peace Information Center, which circulated peace information and petitions, collapsed for lack of evidence to prove peace un-American. Most newspapers, possibly out of sheer embarrassment at having to reveal that the U. S. Government had reached such a stage of hysterical absurdity, handled the trial by completely ignoring it.

As a historian steeped in the greatness of his country's past, Dr. DuBois refuses to despair in this time of great silence; he has faith that the voice of America will not forever be "the babble of cowards" that its masters would have it become. As long as harassment and persecution cannot still the wise words of a W. E. B. DuBois, Americans may share that faith.

Cedric Belfrage
Editor, National Guardian

A portion of this article was delivered as a speech in Town Hall, New York, on September 28, 1951, at a meeting sponsored by the National Council of the Arts, Sciences & Professions. It was revised and enlarged for an Armistice Day address delivered at the Community Church, Boston, on November 11, 1951.

Published as a public service by NATIONAL GUARDIAN, 17 Murray St., New York 7, N. Y. Single copies 10c, 12 for $1. Rates for larger quantities on request.

Peace is dangerous

By W. E. B. DuBois

PEACE IS DANGEROUS; not to all folk, but certainly to those whose power and standard of living depend on war. The danger of war to the majority of men is all too obvious: The killing and maiming of the young; the destruction of property and interference with normal reproduction; the distortion of culture patterns and discouragement of creative effort. When we realize that at least thirty million of the best specimens of the world's youth have been killed in wars since 1914, and many more millions crippled in body and soul, we can get some partial idea of the loss to modern civilization through war.

Why then does war persist? What decisive interests promote and continue it against irretrievable loss on the part of the majority of men? Those who gain from war and suffer from peace are easily discernible at cursory glance: The munition makers and those who furnish war materials and machines. Not so readily seen are those who profit by

the financial changes which war inevitably brings about. Still further in the background are investors and workers whose income is raised by war industries.

Even these large and important groups do not explain the popularity of war or at least the weak resistance to war hysteria. For explanation of this phenomenon we must look further to that vast number of Americans to whom present conditions bring comfort and satisfaction. This mass of intelligent persons either know or fear that if the present system of social and industrial organization prevalent in Western Europe and North America undergoes any essential change, they may not be able to enjoy what they consider the "American way of life". This standard of living does not necessarily call for luxury or conspicuous expenditure. It asks for a comfortable home, enough suitable clothing and sufficient nourishing food; not necessarily an automobile, but convenient transportation facilities, a telephone, medical care, vacations, education for children and provision for a decent old age.

That is what the average American expects from the "American way of life," or wants to be able to expect. It is not, to be sure, what the average American gets. Probably two-thirds of American families do not get it and half of these do not dare hope for it, although it remains their ideal. But a large and influential part of the American middle class do get these things. They believe they deserve them and they are willing to fight to keep them.

The basic question now is: Must this way of life, actual or believed possible for a large minority or even a majority of Americans, be defended by war or is it seriously endangered by peace? Our fear today undoubtedly is that peace is dangerous for this way of life for a large number of Americans and for the hope of it by the majority of our citizens.

This furnishes the reason behind the huge majority of the nation now rushing toward a third and final world war.

The time of all times, then, to examine this thesis and disclose its truth or falsity is now.

Causes of poverty: the forbidden subject

FIRST OF ALL, SOME AMERICANS ARE CONVINCED that our industrial system is so good that the mere existence of any other system is a threat. Most intelligent persons do not go this far. They acknowledge the shortcomings of our economy but still think it the best. They are, however, quite willing for others to try other ways; but they fear to have other ways, deemed inferior and impractical, tried on peoples who do not want them. It is the alleged forced expansion of communism which is today scaring most Americans into war.

But is it true that expanding communism is threatening our way of life? Or, on the contrary, is it the maintenance of our industrial methods which is threatening to keep the mass of the world's people not only below our own standard of living, but even below the life of ordinary decency and sheer survival? It is this aspect of world war which America is today refusing to discuss, indeed is often not permitted to discuss.

Most of us through education and lack of information firmly believe that the poverty and distress of the majority of human beings are primarily their own fault and perhaps can never be entirely alleviated. We are willing to do something in some vague "Point Four," provided the funds for this come out of public taxation and not out of private profits. But we say that even our great wealth is not able to support the world. When two answers are made to this we do not try to reply. The first answer is that a few centuries ago the aristocracy of the world believed that a standard of life such as American workers have today could not be

achieved in any state without the ruin of its culture.

I was taught in high school, at the close of the last century, that labor unions were futile, strikes wrong, and increased wages would go mainly to waste and drunkenness, The second answer as to inevitable poverty for most men is that the colonial system helped cause poverty, that this system is now disappearing and that the remaining poverty and distress are not our fault and are falsely made to seem so by Russia.

Here emerges the kernel of the falsehood which is scaring America into war. Colonialism has not disappeared, even though its back is broken in India and China. American business, however, is desperately trying to maintain and restore where possible the essentials of colonialism under the name of Free Enterprise and Western Democracy, and is plunging the world into destruction with false ideals and misleading fears.

That is a grave charge and needs, I am quite aware, circumstantial proof. Let me indicate proof in this way: There are today at least eighteen main causes of World War and no one of them is Russia. On the contrary, they are the great groups of essential raw material, and the land and labor necessary for their production, which the leading nations of the world need for their industry and their standard of living. These products are illustrated by the gold and diamonds from South Africa; copper from Rhodesia, uranium from the Congo, oil from the Middle East, tin and rubber from Malaya, beverages like tea from China, coffee from Brazil and cocoa from West Africa; drugs like opium and quinine from India; foods like sugar, chocolate, coconuts, fruits and spices from the whole tropical world; fibres like cotton, silk and hemp from our own South, China and India; and dozens of other drugs, dyestuffs and foods.

These materials, with few exceptions, are produced in tropical lands inhabited by colored peoples whose poverty

and ignorance are not natural nor indigenous, but have been increased and made wider during the last three centuries by the determination of Europe and North America to rule the world for their own comfort, luxury and power.

Armed by scientific discovery and a new industrial technique, the white world, since the 17th century, has set itself to reduce colored labor to serfdom or slavery, to seize the land and natural resources of colonial and quasi-colonial countries and so far as possible to rule these peoples by absolute military dictatorship, allowing them little education, no land and too little income for health or decency. Spain, followed by France and Holland, and succeeded by Great Britain, built up a domination of the world which became the foundation of modern civilization. Wealth, luxury, art and learning were thus sustained in the western world until its cultural accomplishment came to be regarded as the highest ideal in the universe: "Better fifty years of Europe than a cycle in Cathay!"

Logic taught us that eventually the revolt of the miserable victims of this world tyranny would cause its extinction. Revolt came early and still continues. But long before divided and ignorant colonial might could successfully storm the bastions of the west, those bastions themselves fell of their own presumption and overweight. The imperial thieves fell out over the division of the fabulous spoils of Asia, Africa and South America, and Europe approached suicide in three world wars, each of increased cost, destruction and human murder.

The rich fall out; the poor feel their power

THE RIFT IN IMPERIALISM BEGAN when Germany and Italy, later Japan, and finally the United States, demanded a larger share of the spoils of imperial control of

the colored world. They insisted on a redistribution of wealth and power. The ensuing World War effected such a redistribution. But it also weakened the intricate system of commercial control which had placed the real power of great modern states in the hands of those who controlled wealth—not simply national wealth but the most valuable materials of the whole earth.

The power of the rich in the late 18th and early 19th centuries was curtailed by democratic control in the hands of the mass of the inhabitants; but this control was limited at home and of no avail in those parts of Asia, Africa and America which the organized industry of the imperial states dominated. Both the national and international organization of industry and commerce was not only undemocratic, but usually oligarchical, if not approaching absolute monarchy. The system placed so great power in the hands of those controlling home industry that they could and did reduce national democracy to the rule of wealth; or at most made home labor a minor partner with industry in the impoverishment, disease and compulsory ignorance of the majority of the peoples of the earth.

The first World War shook this system to its foundations, not only by its cost, but because it filled many of the colored peoples with a fierce desire to escape from the coercion of Europe. In Eastern Europe, which under Western Europe leadership had sunk to quasi-colonial status, the result was a revolution which put socialists in control of Russia.

Socialism was an old, but indefinite and unsystematized theory of easing the monopoly of wealth and the oligarchical control of industry by substituting public welfare for private profit. The great but impractical theorists who had advocated such a change from the first rise of modern industry in the 15th century had seldom been able to agree on a definite program, and the few attempts at socialism had

usually failed or been easily suppressed.

In the case of the Russian Revolution of 1917, however, a set of educated and devoted leaders appeared, determined to carry out the theories of Karl Marx. Marx, by long and thorough study of the Hegelian philosophy of science and by wide knowledge of actual working conditions, had tried to find a scientific foundation for the production and distribution of wealth. Lenin and his Russian followers were not entirely dogmatic. They doubted that the time was ripe or the Russians ready immediately to found a socialist state, and they tried to make some compromise and alliance with the economy of Western Europe. But Britain, France, Japan and the United States made the mistake of trying summarily and by force to suppress this revolution, using the armies of sixteen nations, together with spies, traitors and the worst types of hired mercenaries.

Without doubt this wide effort to stop the Revolution of 1917 would have succeeded for a time had not the whole system of European economy tottered so crazily in 1929 and after. Europe, the United States and Japan needed all their energies to restore their own solvency and rebuild international trade. But even then Britain and France were determined to dominate world industry and commerce as they had before the first World War. They were willing to admit the United States and Germany to junior partnership, but determined to ignore Italy and firmly excluded Japan.

This short-sighted effort led to three developments which changed the course of modern history. It gave the Soviet Union time to build an independent socialist state; it encouraged Japan to undertake her own colonial empire in Asia; and Italy and Germany, joined later by Japan, attempted to restore the European domination of labor, land and products in the colonial and semi-colonial areas of the world, but with one revolutionary change: France and the United States were now to be Junior Partners, and Germany

was set to rule the world with the advice of Italy and Japan. There ensued long attempts at compromise—not touching the control of the world by Europe, but only concerning the division of power between the older empires and newer interlopers. Both sides tacitly agreed that the destruction of Russia and communism must follow their understanding.

But Western and Central Europe could find no basis of agreement and a second World War followed, which was at bottom caused by the rivalry among the great groups for control of the colonial products which I have named.

This war not only further wracked the world industrial system, but curiously enough, compelled Britain and America to make an alliance with the Soviet Union as the only method of conquering almost invincible Germany, Italy and Japan. They hesitated long and hoped until the end that Germany and the Soviet Union would annihilate each other while Western Europe and America were withholding or delaying their support of the hard-pressed Russian armies.

Germany and Japan were completely conquered at last, but what remained were the same causes of World War which ante-dated 1914: namely, those valuable and indispensable materials from colonial regions together with the cheap labor necessary to produce them, which must be seized and used for domestic industry and consumption if the pre-world war organization of industry and control of wealth was to continue. That it must continue, no Britisher nor American for a moment doubted.

U. S. A.—colonialism's last stronghold

CONSIDER FOR A MOMENT OUR OWN COUNTRY and its interest in colonial products or products of semi-colonial areas.

In 1930 we imported at least two billion dollars' worth

of diamonds, silk, coffee, mineral oil, rubber, paper, copper, fibres, sugar, spices, vegetable oils and cocoa. They are all materials upon which not only our own industry but our present standards of living are based. We could scarcely be satisfied a day without abundant supply of them. Moreover we buy them cheap. We pay practically nothing for the land on which they are grown or found; we pay the colored laborer from 25 cents to a dollar a day and make him work. On the other hand the goods which we export to pay for these cheap colonial goods are priced at our own valuation because we control the monopoly of the only markets where colonials can buy machinery, tools and processed goods. We even prevent colonials from supplying their own needs and make them work for us.

This colonial trade is a source of vast profit to private enterprise because even the capital investment needed in colonial life often comes from taxes on citizens in the home country while private firms reap the profits. Thus British taxpayers built the great West African harbor of Takoradi, while private shippers use it. The United States Navy built the harbor at Monrovia, Liberia, from our tax money while the Firestone Company uses it for sizeable dividends.

Moreover this foreign trade with colonial countries is far more profitable than domestic industry. There are in colonies few if any labor unions; there is a minimum of taxation on foreign corporations; there are no wage floors or prohibition of child labor; freight charges are set by the foreign firms who monopolize transport and can make or break a local industry. Capital rushes for such investment if it is assured that there will be no danger of native presumption trying to control foreign capital. This is just what began to happen after the second World War. Not only was Russia, whose industries often paid 50% on investment to Germans, French and British, lost to western business, but also Poland, Czechoslovakia and much of the Balkan area.

Vast colonial regions began to break from European domination. Britain had to emancipate India, but before leaving she encouraged a resurgence of religious hate and made fast alliance with native capitalists, who continued to exploit the poor. The United States entered China as a welcomed friend but we were more interested in tea, silk, fibres, tungsten, oils and cotton than in people. So the wretched Chinese for ten awful years writhed in poverty, war and misery, bearing alone the world burden of Japanese imperialism until in one mighty surge they wrenched American guns right out of the hands of the scoundrel Chiang Kai-shek and drove his filthy outfit onto Formosa where our taxes still support it. Indonesia began to break the bonds of Dutch and British control; Southeast Asia revolted fiercely against their British and French masters. There were other signs of revolt in Africa, the South Seas, the Philippines, the Caribbean and South and Central America. The whole of Western Europe leaned toward control of wealth by democratic process.

It was at this point that world-wide propaganda, led by the United States, on a scale which put Hitler to shame, was started to make men believe that socialism led by a new Russian imperialism was starting a third world war and that America must curb the movement by unlimited force. As a matter of fact what was really beginning was the desperate American attempt to revive colonial imperialism with the United States in the saddle instead of Britain.

Mink coats or humanity's welfare—which?

THE UNITED STATES STEPPED UP ITS PROPAGANDA of disbelief in communism as a workable system by a bitter attack on the decency and humanity of the Russian people and by stressing the utter dishonesty of their

leaders. Every charge against the Soviets, no matter how unsupported and questionable, was given the widest publicity, and our government openly encouraged and supported subversive organizations formed on our own soil by foes of Russia. We have just given 100 million dollars to encourage this treason against a nation with which we are not yet at open war. The result is a hysteria and hate of the Soviets which almost precludes reason.

The real causes of World War will persist and threaten so long as peoples of Europe and America are determined to control the wealth of most of the world by means of cheap labor and monopolies. Against this a resurgence of the revolt of the poor will raise a new Russia from the dead if we kill this one, and birth a new theory of communism so long as Africa, Asia and South America see the impossibility of otherwise escaping poverty, ignorance and disease.

This brings the question of war straight back home. If the United States stops trying to own cheap colored labor, to control land and raw materials over the world; so to regulate exchange of goods and services that while cocoa and sugar call for the highest prices in our markets, the peons who raise them do not get enough to eat; if we stop the war policy we are pursuing to continue this system, will resultant World Peace be dangerous to the American way of life? Let us put it even more bluntly: Suppose it proved true that if we had fewer automobiles, fewer night clubs, and fewer mink coats—if this self-denial on the part of certain Americans would prevent world war and give Chinese children enough to eat, would we be willing to make the sacrifice?

I used to say as a teacher of youth: "You are told, do right and you will be happy; have courage and you will win; sacrifice and you will be rich. Now it is gloriously true that many men have done the right and are happy, many courageous heroes have won the good fight, and many who have sacrificed have gained more than a fortune. But," I would

add, "let us also face the bitter truth—many who have stood for the right have been ruined; many who have battled bravely have gone down in defeat; and many who have sacrificed their last penny have died in poverty. What we have got to learn is to do right even if we do not achieve happiness; to be brave in the face of defeat and to sacrifice even if we reap no reward." My students used to look a bit doubtful at this doctrine, and many of you may want either to deny or ignore what you know is true.

Now let us apply this reasoning to what we call the American way of life. Most Americans do not enjoy this way of life. As I have said, probably two-thirds of American families are below this standard of comfort and nine-tenths of the people of the world would be happy with a tenth of our standards. What are we going to do—fight to preserve the present methods of world industry, or make Peace in order to consider what is right and best for humanity?

The great silence on America's soul can be broken

LET US BE HUMBLE, not arrogant or boastful, in this awful crisis.

Who are we to lead this world to Peace and Righteousness? We whose nation is shot through with crime, graft and violence, who are driving decent Americans to jail, poverty and suicide; we whose "Un-American" inquisition against free speech and thought was lately headed by a convicted thief and is now presided over by a Georgia statesman who holds office by the 30,000 votes cast in his congressional district, with 150,000 of his Negro neighbors disfranchised? We not only abrogate our own Bill of Rights on the street and on the Bench, but send our arms and armies to help overthrow any people on earth who today fight to be free, and call to our aid the reactionary tyrannies in Spain, Turkey

and Greece. Our effort to control the world by force of arms is as fantastic as it is evil. Our last desperate plan to restore colonial imperialism with the help of Germany and Japan is the eraziest dream of a crazy age.

We who have known a better America find the present scene almost unbelievable. A great silence has fallen on the real soul of the nation. We are smearing loyal citizens on the paid testimony of self-confessed liars, traitors and spies. We are making the voice of America the babble of cowards paid to travel.

Meantime our nation writhes in nameless fear, our workers groan under increasing prices and mounting taxes, our education lags. We call disciplined labor "slavery" and yell "Freedom" for industrial anarchists. Our crime grows: gambling, liquor and drugs spread. Our democracy dies while our police, unable to apprehend murderers and thieves, arrest, handcuff and jail men and women whose only crime is to demand Peace.

My words are not a counsel of despair. Rather they are a call to new courage and determination to know the Truth. Four times this nation has faced disaster and recovered: Once at the end of the 18th century when we hesitated between separate independent colonies and a disciplined federal state; again when in the age of Jackson the uncouth, democratic west overbore the oligarchical well-mannered east; once more in the 19th century when human slavery cut the heart of the nation in two and we had to cement it with blood; finally, when in 1929 our boasted industries fell in vast ruin and begged on their knees for government aid, until Roosevelt rescued them with socialist planning and gave his life to rebuilding our economy.

What we have done, we can do again. But not by silence —not by refusing to face the ugly facts.

" . . something new under the sun"

(From FDR's last speech, written the day before he died)

THE work, my friends, is peace. More than an end of this war—an end to the beginnings of all wars. Yes, an end, forever, to this impractical, unrealistic settlement of the differences between governments by the mass killing of peoples.

Even as I speak these words, I can hear . . . an old, old chorus. . . . It is the chorus coming from the defeatists, the cynics, the perfectionists, all the world's aggregation of timid souls who tell us, for one reason or another, it can't be done. . . .

Oh, yes, they will agree, war is horror. War is hell. And yet, in their pale, anemic minds there is a kind of worship of this same horror of war. They tell us there can be no end to it. They endow it with immortality. They certify it as the ultimate fate of mankind on earth.

Now, you and I don't stand in such awe and adoration. We don't think war deserves it. You and I are not willing to concede that we were put here on earth for no better purpose. And from here on, the wars that would come if we let them would leave precious few of us to argue to the contrary.

. . . Today the cult of the faint-hearted, the credo of those cringing adorers of a criminal precedent, is on its way out. And in a space of time as far back as history goes, that is something new under the sun.

—FRANKLIN DELANO ROOSEVELT, APRIL 1945

WHAT IS WRONG WITH THE UNITED STATES?

Speech at Madison Square Garden, New York,
May 13, 1952
New York: American Labor Party, 1952
Fragment of draft manuscript

1952

42-59-11

from

This is ~~the complete text of~~ the key-note address by ~~the world-renowned Negro scholar and author,~~ Dr. W.E. B. Du Bois, given at Madison Square Garden, May 13, 1952, before 17,000 persons at a meeting sponsored by the American Labor Party launching the 1952 political campaign.

"What is wrong with the United States? We are an intelligent, rich and powerful nation. Yet today we are confused and frightened. We fear poverty, unemployment and jail.

"We are suspicious not only of enemies but especially of friends. We shrink before the world and are ready to make war on everybody. General Eisenhower has assured us that "we can lick the world" and we are preparing to spend seventy billions of dollars to do it even when we do not know whom to fight or why or how.

"Of the 35 civilized nations of the world, we and Japan are the only ones which have refused to sign the International Treaty promising not to resort to germ warfare; and it widely charged that we are now using bacteria in China.

"We face today a national election, to exercise the greatest prerogative of citizenship, in order to decide our future policy as to peace and war; trade and commerce; taxation, wages and prices; employment; social progress in housing, flood control, education, sickness and old age; honesty in public service; labor unions and civil rights.

"These are tremendous problems before us which we are supposed to settle in broad outline, and yet apparently we will not have real opportunity to pass judgement on these questions.

"We are deprived from day to day of knowledge of the real facts. Our sons fight and die and we cannot learn why or how. Death by bullets are reported but deaths by freezing and disease are concealed. We are allowed

THE SECRETARIAT OF THE WORLD COUNCIL OF PEACE
VIENNA — 1956

42/5A/3

PREFACE

The 250th anniversary of the birth of Benjamin Franklin has been celebrated by the whole world.

The World Council of Peace included this anniversary among the great cultural anniversaries to be celebrated in 1956.

This choice was made to enable the peace movement to associate itself with the commemoration of a man who, by his own unaided efforts, became his country's greatest journalist, a scientist of world renown who paved the way for all modern research on electricity, and a great citizen who worked for his country's independence and strove to win it through negotiation.

But Benjamin Franklin's greatest claim to glory is that he was a man in every sense of the word.

The end of his life was the culminating point in the ascending development of a man who, from being a slave dealer became an opponent of slavery, from being a colonialist ended by drawing up his country's Declaration of Independence, defending it against the imperialism of the colonialists. In Europe he personified the great ideas of the Declaration of the Rights of Man, the goal of all the liberating efforts of the 18th and 19th centuries.

AUTHOR'S FOREWORD

This short life of Benjamin Franklin has been written for the World Council of Peace, which, since its inception at Paris in 1949, I have held in highest esteem, and co-operated with whenever and wherever I have been given opportunity. The work is based entirely on secondary material and is aimed principally at youthful readers, although I hope older ones may profit by it.

My chief sources of information have been the celebrated Franklin "Autobiography," the monumental work by Carl Van Doren, and the shorter work by Samuel Morse. My own social studies in Philadelphia and New England have given me some personal knowledge of Franklin's environment. All quotations have been taken from Franklin's own works.

IN CONGRESS. JULY 4. 1776.

The unanimous Declaration of the United States of America,

Facsimile of the Declaration of Independence of the United States of America signed on July 4, 1776. "We hold the truth to be self-evident," it proclaimed, "that all men are created equal, that they are endowed by their birth with certain inalienable rights, that among these are life, liberty and the pursuit of happiness—that to secure these rights governments are instituted among men, deriving their just power from the consent of the governed, and that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute new government, laying its foundation on such principles and organising its powers in such form as to them shall seem most likely to effect their safety and happiness."

CHAPTER I

THE BOY (1706—1722)

On the first of September, 1715, a little boy, Benjamin Franklin, was standing on the waterfront of Boston Harbour in North America. He was looking out on the tossing waves and was very unhappy. He wanted to be a sailor and sail the vast Atlantic and all the seas. He wanted to see and learn and know the whole wide world and his father would not let him go.

Benjamin Franklin was born two hundred and fifty years ago in the thriving port town of Boston. His father, Josiah Franklin, had left England in 1685 and brought his family to the new land of America so as to have more freedom and more opportunity for a better life. Small Benjamin did not know as he looked east that at that very hour in France Louis XIV lay dying, a period of world history was ending, leaving a new era of the world to him. Meanwhile, the father was standing some distance away watching his little boy. Josiah Franklin's family had been farmers and artisans. He was a good father, of middle height and strong. He could sing and draw and was an excellent mechanic. But he was a bit anxious over this boy and indeed about life in general. He knew that the life of a sailor was not as alluring as his small son imagined. He had set his heart on giving Benjamin, his tenth child, and very smart, an unusual training so that through him the family might take a step upward from artisan to the learned profession of minister in the church. To this end he sent Benjamin in his eighth year toa good fitting school where he did very well. But the fees were costly. Josiah had a large family of seventeen children, and although he worked hard and steadily it was not easy to make ends meet. The father began to wonder if it was really best to train this boy above his class; so finally he took him out of the fitting school and sent him to a school of general studies with the idea of preparing him for apprenticeship to his own trade of tallow candle-maker.

Benjamin did not like this trade. It was dirty and uninteresting and his father saw the boy's unhappiness. As on this morning, they frequently took long walks visiting the harbour, the shops of carpenters, bricklayers and metal workers. Only the harbour really interested Benjamin Franklin.

But then, James, Benjamin's oldest brother, returned from England with a printer's outfit. The father saw Benjamin's immediate interest, especially because of books in the office which he wanted to read. His eyes shone as he watched the process of making a book. So in his twelfth year, Benjamin became a printer, apprenticed to his older brother, James.

The boy quickly loved his work although he and his brother did not get on so well. He could now secure books he had long wanted to read: John Bunyan, Defoe, Plutarch, and others from historical collections. With this reading came the fascinating work of setting words in print and seeing them reproduced on clean white paper. He early learned one of the first truths of the worker —that thought, to be real, must become action, and that daily work is revealed in daily thinking. He read voraciously about the world and its people and as early as his fourteenth year began to write articles.

James Franklin was now publishing a weekly newspaper and kept his young apprentice very busy. Benjamin wrote his articles in secret and finally began slipping them under the office door. The older brother did not suspect their authorship. To Benjamin's delight he read the articles and actually printed many of them. Imagine the boy's feelings as he put his own words in type. Soon people not only read but began to talk about what he had written. He dabbled in poetry, but his father, becoming aware of his efforts, discouraged poetry and guided him to careful study of good English essays. Benjamin became more aware of the real world. He wrote letters from an imaginary "Silence Dogood" which were widely read. At sixteen Franklin stood up for freedom of printers and writers:

"Without freedom of thought, there can be no such thing as wisdom... and no such thing as public liberty, without freedom of speech which is the right of every man, as far as by it he does not hurt and control the right of another; and this is the only check it ought to suffer, and the only bounds it ought to know."

This short of writing published in his brother's paper and other writings aimed at religious hypocrisy, got his brother in trouble with the authorities. James was arrested and jailed. He suggested that Benjamin's name be substituted as publisher so that the paper could continue. Thus, technically the boy's indenture was broken. Now Benjamin Franklin was a printer in his own right.

Apprentices in those days were subject to unpleasant treatment. They were often kicked and cuffed about, poorly fed and clothed. Benjamin had been no exception. His older brother, partly from bad temper and perhaps a little jealous of this boy's precocity and growing popularity, was pretty hard on him. Benjamin wanted to get away and be his own man. Legally he was bound to serve until he was twenty-one. Taking advantage of James' having made him nominal editor, he first tried to transfer to another master printer. James blocked this and Benjamin determined to go to New York. His father would not consent, so the boy, with little baggage and only a little money which he got by selling some of his books, ran away from home in 1723.

CHAPTER II

THE YOUTH (1723—1726)

The boat trip to New York took three days; but when he arrived and applied to the only printer in town for work, there was no opening. He advised Benjamin to go to Philadelphia, which was ninety miles away. He was sure he would find work there. Franklin left his small box of clothes and started by boat across the bay. A squall tore their sail and landed them on Long Island, where one of the passengers was nearly drowned. They were thirty hours adrift without food or water. Finally reaching land, Benjamin walked three days across country and then, finding a passenger boat, reached Philadelphia rather the worse for wear and beginning to wish he had never run away.

But on a Sunday morning he finally stood on the wharf in Philadelphia. "I was in my working dress... I was dirty from my journey; my pockets were stuffed out with shirts and stockings and I knew no soul nor where to look for lodging." Also, he had but a shilling in money, left after paying his boat fare. Then, buying some bread, he walked up Market Street with a loaf under each arm, passing the girl whom he later married on the steps of her home. Afterward she told him that he made "a most awkward, ridiculous appearance."

Franklin soon found work with an eccentric and foolish printer, whose shop he immediately started to set in order. Then an astonishing thing happened. He met the governor of the state! It came about in this way. A friend who learned of Benjamin's whereabouts told him of his family's anxiety over him. But Franklin was enjoying his freedom and was making a little money. Moreover, being from Boston, the largest city on the continent, he had soon become quite well known among the young folk. He wrote his friend about his reasons for leaving Boston and of his good chances here. His friend read the letter to the governor and the governor, Sir William Keith, a good-hearted, airy, but irresponsible man, immediately called

on young Franklin, to his astonishment and that of his boss. Keith proposed that Franklin set up a new printing shop. If he had not enough capital, why not borrow it from his father? Keith would give him a letter.

So Franklin, in a new suit, with a watched and £5 cash in his pocket, hurried back home where he was welcomed. But when he laid his plans before his father, the cautious Josiah was unimpressed. He said that Keith seemed to him a man of little sense. He wrote him politely, thanking him, but saying that his son was too young for so important and expensive an adventure. Josiah hoped Franklin would remain at home, but Benjamin went back to Philadelphia and told the governor of his failure. Keith airily dismissed the matter by promising himself to raise the capital. He commissioned Franklin to make an inventory of his needs and go to London to buy furniture for his shop.

Franklin was walking on clouds. He prepared for the trip to London even though the governor's letter and money failed to arrive. He even boarded the boat. Still no word. He finally landed in London with no friends and only £12 in his pocket. But he was a good printer and he soon found work. Here he stayed for a year and a half, in the brilliant capital of the British Empire. George I, who followed poor Queen Anne, was reigning. The King could not speak English and did not like England. But after the bankruptcy of the bursting South Sea bubble Walpole, the Whig, ruled for twenty years. Franklin arrived during his premiership. England was rich and at peace. Luxury ruled and literature flourished. Voltaire was a visitor, Newton was studying, Defoe and Swift were writing. Franklin avoided bad companions and gave up drink and gambling. He worked hard and got increased pay, at the same time keeping down expense. He was saving money so as to return to America and start his own printing establishment. He did not meantime neglect his writing, issuing among other pamphlets a dissertation "On Liberty and Necessity, Pleasure and Pain." This brought him acquaintanceship with some men of letters.

He was not yet certain about his future. He went into the business of buying and selling for export and made considerable money. He found exercise in swimming and a nobleman offered to set him up as a swimming teacher, with aristocratic patronage. But Franklin declined. He was growing homesick for America and his former idea of a printing shop for writing and publicity was revived. So on July 23, 1726, Franklin sailed for Philadelphia, leaving the temptations of London behind, and bringing some equipment for his printing shop.

• CHAPTER III

THE YOUNG MAN (1727—1730)

Young Franklin was now of age and ready to settle down for work. He laid down a design of life: "I have never fixed a regular design as to life, by which means it has been a confused variety of different scenes. I am now entering upon a new one; let me therefore make some resolutions, and form some scheme of action, that henceforth I may live in all respects like a rational creature. 1. It is necessary for me to be extremely frugal for some time, till I have paid what I owe. 2. To endeavor to speak truth in every instance, to give nobody expectations that are not likely to be answered, but aim at sincerity in every word and action: the most amiable excellence in a human being. 3. To apply myself industriously to whatever business I take in hand, and not divert my mind from my business by any foolish project of growing suddenly rich; for industry and patience are the surest means of plenty. 4. I resolve to speak ill of no man whatever, not even in a matter of truth; but rather by some means excuse the faults I hear charged upon others, and upon proper occasions speak all the good I know of everybody."

First, after returning from London, Franklin found employment as manager of his old place of work. Then in 1728, he opened a printing shop in partnership with a friend and took over a newspaper, formerly published by a competitor, and shortened its name to the *Philadelphia Gazette.* He dropped re-publication of British books from its columns, and limited it to actual news of Pennsylvanians; he wrote much for it himself. He increased the advertisements, and printed the paper with skill and taste. He wrote or rewrote the foreign and domestic news. He wrote letters to himself as editor and answered them.

In 1730, he became sole owner of the shop. He began to show some of that smug self-righteousness and eye to public opinion which characterised his whole life. "I began to pay off the debt I was under for the printing-house. In order to secure my

credit and character as a tradesman, I took care not only to be in *reality* industrious and frugal, but to avoid all appearances to the contrary. I drest plainly; I was seen at no places of idle diversion. I never went out a fishing or shooting; a book, indeed, sometimes debauch'd me from my work, but that was seldom, snug, and gave no scandal; and, to show that I was not above my business, I sometimes brought home the paper I purchas'd at the stores thro' the streets on a wheelbarrow. Thus being esteem'd an industrious, thriving young man, and paying duly for what I bought, the merchants who imported stationery solicited my custom; others proposed supplying me with books, and I went on swimmingly."

42/SA18

Franklin then got married, saying: "...that hard-to-be governed passion of youth hurried me frequently into intrigues with low women that fell in my way, which were attended with some expense and great inconvenience, besides a continual risque to my health by a distemper which of all things I dreaded." He turned toward thought of Deborah Read, the girl who had seen him first enter Philadelphia. During his absence she had married unfortunately, and separated from her good-for-nothing husband. In 1730, Franklin married her with some hesitation, fearing that her husband might return. "She proved a good and faithful helpmate, assisted me much by attending the shop; we throve together, and have ever mutually endeavor'd to make each other happy... She assisted me cheerfully in my business, folding and stitching pamphlets, tending shop, purchasing old linen rags for the paper-makers, etc., etc. We kept no idle servants, our table was plain and simple, our furniture of the cheapest."

He organized among his friends "a club of mutual improvement, which we called the Junto; we met on Friday evenings. The rules that I drew up required that every member, in his turn, should produce one or more queries on any point of Morals, Politics, or Natural Philosophy, to be discuss'd by the company; and once in three months produce and read an essay of his own writing, on any subject he pleased. Our debates were to be under the direction of a president, and to be conducted in the sincere spirit of inquiry after truth, without fondness for dispute, or desire of victory."

From this club came a loan library which in time grew into the Philadelphia Public Library. Franklin records his method of debate; "I made it a rule to forbear all direct contradiction of the sentiments of others, and all positive assertion of my own... I soon found the advantage of this change in my manner; the conversations I engaged in went on more pleasantly. The modest way in which I proposed my opinions procured them a readier reception and less contradiction; I had less mortification when I was found to be in the wrong; and I more easily prevailed with others to give up their mistakes and join with me when I happened to be in the right."

CHAPTER IV

THE MAN (1731—1735)

From 1731 to 1735, Franklin became a successful printer and publisher and a widely read writer. His business flourished and expanded. In 1732, he issued the first number of an almanac which became the most famous of his writings. He said: "I first publish'd my Almanack, under the name of *Richard Saunders*; it was continu'd by me about twenty-five years, commonly call'd *Poor Richard's Almanack*. I endeavor'd to make it both entertaining and useful, and it accordingly came to be in such demand, that I reap'd considerable profit from it, vending annually near ten thousand. And observing that it was generally read, scarce any neighborhood in the province being without it, I consider'd it as a proper vehicle for conveying instruction among the common people, who bought scarcely any other books; I therefore filled all the little spaces that occurr'd between the remarkable days in the calendar with proverbial sentences, chiefly such as inculcated industry and frugality, as a means of procuring wealth, and thereby securing virtue; it being more difficult for a man in want, to act always honestly."

The aphorisms in this Almanack illustrate Franklin's philosophy and his times. He advised thrift for a poor, hard-working people tempted often to waste. "An empty bag cannot stand upright." "Beware of little expenses, a small leak will sink a ship." "He that buys upon credit pays interest upon what he buys." "A penny saved is a penny earned." "God helps them that help themselves."

This philosophy of thrift has been greatly stressed as typifying Franklin's philosophy. But he just as strongly attacked avarice. "He does not possess wealth; it possesses him." "Avarice and happiness never saw each other. How then should they become acquainted?" "Poverty wants some things, luxury many things, avarice all things." "He that is rich need not live sparingly, and he that can live sparingly need not be rich." "Wealth is not his that has it, but his that enjoys it."

"He that is of the opinion money will do everything may well be suspected of doing everything for money." "Seven wealthy towns contend for Homer dead, through which the living Homer begged his bread."

Franklin stressed good health: "Early to bed and early to rise makes a man healthy, wealthy, and wise." "A long life may not be good enough, but a good life is long enough." "Eat to live, and not live to eat." "He that can take rest is greater than he that can take cities."

Franklin believed in plain honesty and doing right; in good will and justice. "The rotten apple spoils his companion." "An innocent plowman is more worthy than a vicious prince." "Words may show a man's wit, but actions his meaning." "There was never a good knife made of bad steel." "Caesar did not merit the triumphal car more than he that conquers himself." "Better slip with foot than tongue." "A mob's a monster; heads enough but no brains." "What signifies your patience, if you can't find it when you want it?" "Many foxes grow gray, but few grow good." "All blood is alike ancient." "The noblest question in the world is, 'What good may I do in it?'" "Wish not so much to live long as to live well. Keep conscience clear, then never fear." "A lie stands on one leg, truth on two." "Half the truth is often a great lie." "Trust thyself, and another shall not betray thee." "Great beauty, great strength, and great riches are really and truly of no great use; a right heart exceeds them all." "Wink at small faults — remember thou hast great ones." "The worst wheel of the cart makes the most noise." "Deny self for self's sake." "None preaches better than the ant, and she says nothing." "Time is an herb that cures all diseases." "Where there's marriage without love there will be love without marriage." "The heart of the fool is in his mouth, but the mouth of the wise man is in his heart." "Approve not of him who commends all you say." "The family of fools is ancient." "What is serving God? 'T is doing good to man."

CHAPTER V

FRANKLIN THE MERCHANT (1736—1744)

During the eight years from his thirtieth to his thirty-eighth birthday, Franklin foreshadowed the new trader and investor who was to typify the last half of the eighteenth century and pave the way for the triumph of commerce and industry in the nineteenth. He expanded his printing and publishing and embarked on trade and commerce; he saved money and invested it and began to accumulate a fortune. His business enterprises grew in New York and Newport, in South Carolina and the West Indies. His usual method was to furnish capital and share profits until his partner took over the business or gave it up. His own store in Philadelphia not only did printing and publishing, but sold stationery, books, pencils, slates, and ink; soap, wax, maps, wine, oil, coffee, chocolate, mustard, scales, patent medicines, cheese, fish, cloth, stockings, tea, linen rags, stoves and horses. Also, he sold both the unexpired work time of indentured white servants and the bodies of black slaves for life. He advertised: "A very good tailor, having one year and ten months to run; fit for either town or country business. And a servant lad for six years, fit for country business." "Also a breeding Negro woman about twenty years of age. Can do any household work." "A likely Negro wench about fifteen years old, has had the smallpox, been in the country above a year and talks English. Inquire of the printer hereof." "A likely young Negro fellow about nineteen or twenty years of age, to be disposed of. He is very fit for labor, being used to plantation work, and has had the smallpox." "Two likely young Negroes, one a lad about nineteen, the other a girl of fifteen."

In such trade, Franklin was following the universal custom of his day and as yet had evidently given no thought to the ethics of slavery. Nor did he consider that trade had any object beside gain for the trader. It was not until many years later that the fundamental right and wrong of commerce began to force itself on his mind and conscience.

42/5A/10

Slow-burning stove invented by Franklin in 1757.

Franklin in his print-shop with his workers.

In 1734, Franklin became public printer for Pennsylvania and Delaware, and in 1736, clerk of the Pennsylvania Assembly. This insured his doing all the public printing, which was a profitable undertaking. The next year he became deputy postmaster of the city, which helped distribute his publications. Also it brought travel and contact with the widely scattered colonies and a broader knowledge of social conditions and problems. His family increased by his own children, the adoption of his brother James' son, and by another son of his own, who was perhaps not Deborah's child; but she took him into the family without protest.

Franklin was now prosperous and began to grow in thought and breadth of interest; he began to study French, Italian and German until he could read in these languages. He also learned to speak ungrammatical French so as to be understood. Socially he and his family still counted as outsiders — a printer and shopkeeper whom aristocratic Philadelphia of landholders and professional men never received socially and of course they did not invite his wife to their homes. But they had to recognize this man as efficient and valuable; he certainly did much for the city and state. He organized the first fire company; he helped reorganise the police; he worked with the churches but did not join them; he became a prominent Mason. He got on amicably with the dominant Quakers of his state.

Later, from Franklin's prominence and public spirit, he was brought in contact with certain world movements. There were the new British Methodists, who were protesting against the Church of England and now began to expand to America. When their leader, Wesley, and his helper, Whitefield, came to America, it was Franklin who helped them in Philadelphia, printed their sermons and found them an audience and place to preach, and gave them valuable advice. Out of experiences like this and widening duties as colonial postmaster, Franklin got his first ideas of colonial union; he proposed an inter-colonial philosophical society, which he planned could become a center of continental thought and activities.

CHAPTER VI

FRANKLIN RETIRES FROM BUSINESS (1745—1753)

Benjamin Franklin was now approaching fifty years of age; his property and investments were enough to support the simple life to which he and his family were accustomed. He began to retire from active business and looked forward to indulging himself in scientific inquiries and the companionship of his friends. He purchased a new home in Philadelphia and a farm in New Jersey. He began to experiment and amuse himself as well as continuing his writing. His skit appeared, defending Polly Baker for her children born out of wedlock but carefully raised. He invented the Franklin stove to save fuel and refused to patent it. He studied the pores of the skin and the laws of motion and gravity. He amused himself with "magic squares", one with sixteen figures vertical and across, which all added to the same sum each way. He learned to play the harp, the guitar and violin, and invented the harmonica. He became interested in studying the weather, looked into geology and experimented in agriculture. As a printer and writer he had observed the disorderly confusion of English spelling. He examined the first principals of phonetic reform.

Then came Franklin's interest in electricity. In Boston in 1746, he met a man from Scotland, who showed him some electrical experiments. At home again, Franklin gave up the whole winter to electricity. "I never was before engaged in any study that so totally engrossed my attention. . . ; for, what with making experiments when I can be alone, and repeating them to my friends and acquaintances who, from the novelty of the thing, come continually in crowds to see them, I have during some months past had little leisure for anything else."

Franklin distinguished between positive and negative electricity, built an electric battery and succeeded in sending an electric spark across a river. Then came his epoch-making idea that lightning was but electricity. To test this possibility he made his world-famous experiment with a kite. He stretched a large silk handkerchief on

two cross-sticks and on the first approach of a thunderstorm he took a walk in the fields.

"The kite being raised, a considerable time elapsed before there was any appearance of its being electrified. One very promising cloud had passed over it without any effect; when, at length, just as he was beginning to despair of his contrivance, he observed some loose threads of the hempen string to stand erect, and to avoid one another, just as if they had been suspended on a common conductor. Struck with this promising appearance, he immediately presented his knuckle to the key, and the discovery was complete. He perceived a very evident electric spark."

He said in 1751: "There are no bounds... to the force man may raise and use in the electrical way."

Once Europe heard this epoch-making discovery, Franklin was famous almost before he knew it. In 1753, he received the Copley medal from England, and both Harvard and Yale Colleges gave him honorary degrees — he who had never attended college a single day.

While these experiments were progressing, various public duties began to encroach on Franklin's time. He helped found a city hospital and to organize a fire insurance company. For the first time he came in close contact with the Indians. He learned about the Indian confederacy called the Six Nations. He was one of the commissioners sent by Pennsylvania to treat with them in 1749 and, if possible, keep them from siding with the French. A treaty was signed and this gave Franklin an idea: If Indians could thus unite and act together, why not the thirteen colonies?

Franklin did not advise the Indians to become civilized. "I should never advise a nation of savages to admit of civilization; for I assure you that in the possession and enjoyment of the various comforts of life, compared to these people every Indian is a gentleman." With rare foresight he added that civilized society seemed to progress only by depressing the masses below the savage state in order that a few might be raised above it.

It had occurred to Franklin earlier that Pennsylvania should have a college. Massachusetts had Harvard and Connecticut Yale. Virginia, New Jersey and Rhode Island were soon to follow.

In 1749, he proposed that since the war of Austrian succession, known in America as King George's War, was finished, an academy be established. He went into the matter of its housing, "not far from a river, having a garden, orchard, meadow and a field or two"; a library "with maps of all countries, globes, some mathematical instruments, an apparatus for experiments in natural philosophy and for mechanics; prints of all kinds, buildings, machines, etc." The students should eat together

"plainly, temperately, and frugally," and "be frequently exercised in running, leaping, wrestling and swimming."

"As to their studies, it would be well if they could be taught everything that is useful and everything that is ornamental. But art is long and their time is short."

Louis XIV had left France deeply in debt. The regent ruling for Louis XV had blown up John Law's Mississippi bubble until it burst. Now France was looking toward empire in America and buying furs from the Indians and moving into the valley of the Mississippi in an effort to cut the British colonies off from the West.

Franklin promoted the Albany Congress in 1754 to consider measures to protect the British colonies against the French. He proposed his Albany plan of colonial union, which was not listened to until ten years later. But Franklin continued thinking in continental terms.

He thought that the English, with the Saxons, made up the principal body of white people on the face of the globe and he looked on America as a great frontier for the refuge of Britain.

CHAPTER VII

ENVOY TO ENGLAND (1754—1762)

In the third quarter of the eighteenth century, when Franklin, between fifty and seventy years of age, was passing from middle age to old age, he became increasingly aware of the relation of the colonies to the British Empire and the world. He realized the truth that in his century, "France ruled the land, England ruled the seas, and Germany ruled the clouds." He knew something of the struggle between Frederick the Great of Prussia with Maria Theresa of Austria, because this seven years in Europe had been echoed in the colonies. The French cultivated the Indians, they intermarried with them, and together the vastly valuable fur trade was increasing. The British and colonists had done little but take the Indian's land. So the French were pressing in on the British colonies in the West and the Indians were largely their allies.

Franklin began to think of the general condition of the colonies in America. The population had increased rapidly from natural growth and immigration. The two hundred thousand inhabitants of 1690 had become a million and a half. Trade between England and its continental colonies now amounted to three million pounds sterling a year, or twice the West Indian trade. But war and a bad colonial policy were interferring with trade. In the seventeenth century, only four of its hundred years had been without some war in Europe. Now the great monarch, "the greatest actor of majesty who ever wore a crown," was dead and his bitter enemy William of Orange was gone and also poor Queen Anne. The long war of Spanish succession, called in America Queen Anne's war, had given England the slave trade and poured Negroes into America. England was reaching east, now that the great Mohammedan moguls had lost their power, and India fell in 1759 at the battle of Plassey. All this reacted on the continental colonies of America. The West India lobby in London had secured heavy taxes on rum, molasses, and sugar in order to stop the

illegal trade between the West Indies and the continent. Smuggling and evasion of the British Navigation Acts were common.

Franklin began to sense this commercial rivalry and to develop his idea of the relation of England to the American colonies. Britain and its American colonies were to be one country with only the sea between. The colonies should be extended West. Americans must have first hand in their own government but remain naturally an integral part of the Empire. They already paid high indirect taxes to Britain by having their trade curtailed and manufactures forbidden.

Opportunity to work out a solution was interrupted by war. In Europe in 1756, Prussia began its fight for survival, which brought its monarch, Frederick the Great, and Maria Theresa of Austria into fierce struggle, and soon involved France, Britain, Russia and Spain in a world struggle for empire.

Before war broke out in Europe, fighting began in America. The French moved into the Ohio Valley and fortified it. Young George Washington was sent west but failed to dislodge the French. Then the British sent General Braddock to lead an expedition westward while others attacked Canada. Franklin helped. As postmaster general he took a trip and met Braddock in person. The haughty general ignored Franklin's advice about Indian warfare, but accepted his aid in furnishing transport wagons and horses. Franklin obligated himself personally to a debt of £20,000 and hundreds of pounds of food. Braddock was overwhelmingly defeated and for months Franklin was in danger of bankruptcy. It was three months later that the state of Pennsylvania reimbursed him.

William Pitt now took the helm in England. More British troops were sent and the colonies rallied. The French were attacked successfully in Canada and the Ohio Valley and finally Quebec fell in 1759. In 1763, by the Treaty of Paris, England got Canada and the Mississippi Valley except New Orleans; Spain got Louisiana and the West.

The end of the seven years' war left England mistress of a vast colonial empire but it also left her deeply in debt, and she tried to get funds out of her American colonies. This raised a grave question: What was the political position of English colonists in America? Had they the rights of Englishmen or were they at the mercy of the English Parliament? Franklin argued:

That the colonists have no representatives in Parliament;

That compelling the colonists to pay money without their consent would be more like raising contributions in an enemy's country, than taxing of Englishmen for their own public benefit;

That it would be treating the colonists as a conquered people, and not as true British subjects.

But England was stubborn. George III had begun his long reign and the British Empire was beginning to belt the world. The theory that colonies existed for the benefit of Englishmen was emphasized. It was proposed to regulate the trade of the colonies so as to carry out three principles: first, that England should be the only shop in which colonists could purchase; second, that colonists should not manufacture for themselves articles which England had to sell; third, that the people of different colonies should not trade with each other to the detriment of the trade of either with England.

While this broader problem was pending, Pennsylvania sent Franklin to England to discuss the narrower problem of their right to tax the American property of the proprietors, the Penn family. Franklin sailed in 1757, prepared to stay perhaps for a year or two; but he had to stay five years.

He was, however, well known in England by reputation; he moved among high officials, men of letters, and merchants. He was already a member of the Royal Society. He was given a degree by Oxford University and by the Scottish University of St. Andrews. He was made Burgess of Edinburgh and dined with Adam Smith. Franklin succeeded in securing from the English the right of Pennsylvania to tax the Penn property in the colony. But he was drawn into discussion of the broader aspect of the relation of the colonies to Great Britain. He argued for the retention of Canada rather than its exchange for a small West Indian Island as was proposed. He insisted that the American colonies should be united. Some of his English friends argued that this would lead to a demand for independence of British control. This Franklin denied vehemently, "unless you grossly abuse them."

Finally, in 1762, he was sorry to leave "this happy island and my friends," but glad to reach Philadelphia in November. His family was well and reports of the loss of his friends were false. "My house has been full of a succession of them from morning to night ever since my arrival, congratulating me on my return with the utmost cordiality and affection."

illegal trade between the West Indies and the continent. Smuggling and evasion of the British Navigation Acts were common.

Franklin began to sense this commercial rivalry and to develop his idea of the relation of England to the American colonies. Britain and its American colonies were to be one country with only the sea between. The colonies should be extended West. Americans must have first hand in their own government but remain naturally an integral part of the Empire. They already paid high indirect taxes to Britain by having their trade curtailed and manufactures forbidden.

Opportunity to work out a solution was interrupted by war. In Europe in 1756, Prussia began its fight for survival, which brought its monarch, Frederick the Great, and Maria Theresa of Austria into fierce struggle, and soon involved France, Britain, Russia and Spain in a world struggle for empire.

Before war broke out in Europe, fighting began in America. The French moved into the Ohio Valley and fortified it. Young George Washington was sent west but failed to dislodge the French. Then the British sent General Braddock to lead an expedition westward while others attacked Canada. Franklin helped. As postmaster general he took a trip and met Braddock in person. The haughty general ignored Franklin's advice about Indian warfare, but accepted his aid in furnishing transport wagons and horses. Franklin obligated himself personally to a debt of £20,000 and hundreds of pounds of food. Braddock was overwhelmingly defeated and for months Franklin was in danger of bankruptcy. It was three months later that the state of Pennsylvania reimbursed him.

William Pitt now took the helm in England. More British troops were sent and the colonies rallied. The French were attacked successfully in Canada and the Ohio Valley and finally Quebec fell in 1759. In 1763, by the Treaty of Paris, England got Canada and the Mississippi Valley except New Orleans; Spain got Louisiana and the West.

The end of the seven years' war left England mistress of a vast colonial empire but it also left her deeply in debt, and she tried to get funds out of her American colonies. This raised a grave question: What was the political position of English colonists in America? Had they the rights of Englishmen or were they at the mercy of the English Parliament? Franklin argued:

That the colonists have no representatives in Parliament;

That compelling the colonists to pay money without their consent would be more like raising contributions in an enemy's country, than taxing of Englishmen for their own public benefit;

That it would be treating the colonists as a conquered people, and not as true British subjects.

But England was stubborn. George III had begun his long reign and the British Empire was beginning to belt the world. The theory that colonies existed for the benefit of Englishmen was emphasized. It was proposed to regulate the trade of the colonies so as to carry out three principles: first, that England should be the only shop in which colonists could purchase; second, that colonists should not manufacture for themselves articles which England had to sell; third, that the people of different colonies should not trade with each other to the detriment of the trade of either with England.

While this broader problem was pending, Pennsylvania sent Franklin to England to discuss the narrower problem of their right to tax the American property of the proprietors, the Penn family. Franklin sailed in 1757, prepared to stay perhaps for a year or two; but he had to stay five years.

He was, however, well known in England by reputation; he moved among high officials, men of letters, and merchants. He was already a member of the Royal Society. He was given a degree by Oxford University and by the Scottish University of St. Andrews. He was made Burgess of Edinburgh and dined with Adam Smith. Franklin succeeded in securing from the English the right of Pennsylvania to tax the Penn property in the colony. But he was drawn into discussion of the broader aspect of the relation of the colonies to Great Britain. He argued for the retention of Canada rather than its exchange for a small West Indian Island as was proposed. He insisted that the American colonies should be united. Some of his English friends argued that this would lead to a demand for independence of British control. This Franklin denied vehemently, "unless you grossly abuse them."

Finally, in 1762, he was sorry to leave "this happy island and my friends," but glad to reach Philadelphia in November. His family was well and reports of the loss of his friends were false. "My house has been full of a succession of them from morning to night ever since my arrival, congratulating me on my return with the utmost cordiality and affection."

CHAPTER VIII

BACK TO ENGLAND (1763—1766)

Soon after Franklin arrived at home, he travelled 1,600 miles to regulate postal matters. He then settled a dangerous situation with regard to the Indians and stopped a massacre of Indians by white rowdies. The Indians had attacked settlers. In retaliation the settlers murdered Indian women and children, but not those guilty of the attack. An Indian war was imminent. Franklin organized defense and quelled the mob, but made enemies by this act. In 1763 the Indian chief, Pontiac, revolted against all whites. He had long been a friend of the French; but he refused to retreat with them and formed an Indian Federation against all whites. The British procured his assassination, but his Federation flamed in blood in the Valley of the Mississippi.

This showed that the defense of the colonies must still be pushed. During the Seven Years' War, the public debt of Great Britain had doubled. British landholders were being taxed a fifth of their incomes. British merchants were clamouring anew for enforcement of the colonial navigation laws, which had been neglected, while colonial contraband trade was booming. The government therefore in 1763 proposed more strict enforcement of the former Navigation Acts; a standing British army in America supported in part by American taxes; and new import duties with a stamp tax on newspapers, pamphlets, and legal papers.

The people of Pennsylvania meanwhile were still striving to get rid of the Penn family and secure government directly under the King. They prepared a petition and, after bickering, named Franklin to return to England and present it. Just as Franklin was leaving, the colonies heard of the proposed Stamp Act. He was commissioned to oppose it.

Franklin sought audience with the Prime Minister in February, 1765. He was received "with great civility; and after some questions respecting the present state of affairs in America and discourse thereupon, he said to me: 'You Americans have wrong

ideas of the nature of your constitution; you contend that the king's instructions to his governors are not laws, and think yourselves at liberty to regard or disregard them at your own discretion... They are then, so far as they relate to you, the *law of the land*, for the king is the *legislator of the colonies*.' I told his lordship this was new doctrine to me. I had always understood from our charters that our laws were to be made by our assemblies, to be presented indeed to the king for his royal assent; but that being once given, the king could not repeal or alter them. And as the assemblies could not make permanent laws without his assent, so neither could he make a law for them without theirs. He assured me I was totally mistaken." Thereupon the Stamp Act was passed and signed.

Franklin was disappointed but philosophical about it and when asked recommended a good person as collector. In the colonies, however, there was an outburst of anger, with mobs and arson; king's officers were made to resign; distribution of the stamps was prevented and a Stamp Act Congress called. Agreements were made not to import or use articles of English manufacture.

The colonists turned against Franklin. They believed that their trusted representative had been a traitor. Mobs threatened to destroy his new house in Philadelphia, and it was said that he had "planned" the Stamp Act.

Franklin wrote protesting: "I took every step in my power to prevent the passing of the Stamp Act. Nobody could be more concerned and interested than myself to oppose it sincerely and heartily. But the tide was too strong against us. The nation was provoked by American claims of independence, and all parties joined in resolving by this act to settle the point. We might as well have hindered the sun's setting."

Non-importation agreements were effective. A comprehensive "boycott" against all articles of English manufacture started, and English manufacturers became the real victims of the Stamp Act.

Franklin was disturbed. He saw the tremendous power of Great Britain and wondered how the separate colonies and the infant towns could fight Parliament and the king.

In January, 1766, Pitt said: "The Americans are the sons, not the bastards, of England. As subjects they are entitled to the common right of representation, and cannot be bound to pay taxes without their consent." The British had to retreat, but only temporarily and in bad temper. They repealed the Stamp Act, but with the declaration that "the King in Parliament has full power to bind the colonies and people of America in all cases whatsoever."

The people of Philadelphia were now persuaded that this repeal was chiefly due to Franklin, were ashamed of their first reaction, and began to praise his devotion. They built a barge, forty feet long, and dragged it in a great procession.

CHAPTER IX

HOME TO AMERICA (1766—1774)

In February, 1766, Franklin and other Americans were summoned to give testimony concerning the colonies at the bar of the House of Commons sitting in committee of the whole. The attitude of Parliament toward Franklin and his fellow Americans was insulting. For nearly an hour, Franklin, now 68 years old, was compelled to stand before a hostile audience and take abuse. There were some of the best trained and most experienced men in England to question Franklin.

The "Gentleman's Magazine" said: "The questions are put with great subtlety and judgment, and they are answered with such deep and familiar knowledge of the subject, such precision and perspicuity, such temper and yet such spirit, as do the greatest honor to Dr. Franklin, and justify the general opinion of his character and abilities."

Franklin now understood the colonial sentiment, and was in accord with it. He was asked whether the colonists would submit to a modified Stamp Act. He replied: "No, they will never submit to it." Could anything less than a military force carry the Stamp Act into execution? Franklin replied: "I do not see how a military force can be applied." Why not? Franklin answered that if a military force were sent to America, they would find nobody in arms. They cannot force a man to take stamps who chooses to do without them. They will not find a rebellion, unless they make one.

Franklin's efforts in behalf of the colonies brought appointment from other colonies to act as their agent, so he became known as unofficial American minister. The government tried to bribe him by offering him office; he could have been an under-secretary of state, if he had been willing to modify his views.

The next year Parliament framed a new tax bill, with duties on wine, oil, glass, paper, lead, and three pence per pound on tea. Colonial governors and chief justices

were hereafter to be paid by the king from his American revenue, and not by the colonial assemblies.

Matters were at an impasse between Britain and the colonies. He, however, took opportunity with his son to slip over to France, where Louis XV was reigning. Franklin went to "Versailles last Sunday and had the honour of being presented to the king; he spoke to both of us very graciously and cheerfully, is a handsome man, has a lively look, and appears younger than he is. In the evening we were at the grand couvert, where the family sup in public."

Thus the colonial saw a bit of French monarchy and was attracted.

In 1768, two regiments were sent to Boston to enforce the law. Franklin pointed out the hazard of this procedure and soon enough in 1770 came three fateful occurrences: the Boston massacre, the accession of Lord North to the premiership of England, and the marriage of the Dauphin, later Louis XVI of France, to Marie Antoinette of Austria. As Daniel Webster said later, the Boston massacre marked "the severance of England and her American colonies." Many other Americans said this was merely a mob led by a Negro, but the people of America celebrated this 5th of March as a national holiday for twenty years, until gradually it was superceded by Independence Day, the Fourth of July.

Lord North proposed a compromise: All the duties would be repealed save those on tea. There was reason for this: the East India Company had seventeen million pounds of tea in storage and its stock on the market had fallen from 380 to 160. Sale of the tea to America would rid it of surplus tea and bring money to the British Treasury. The tax was voted but still the colonists were stubborn. This was still a tax without their consent and they could smuggle all the tea they needed. The boycott continued.

Meantime, Franklin travelled. In Dublin he attended two sessions of the Irish Parliament, and was formally received. Two months later he got to Edinburgh. "Through storms and floods I arrived here on Saturday night, late, and was lodged miserably in an inn," he wrote on October 27. "But that excellent Christian David Hume, agreeable to the precepts of the Gospel, has received the stranger, and I now live with him at his house in the new town most happily."

It may have been at this time or perhaps later that Franklin found himself stopping at the same inn with Gibbon the great historian. He asked leave to call. Gibbon refused to receive a "rebel." Franklin replied that when Gibbon came to write of the decline and fall of the British Empire, Franklin would be happy to furnish him with the ample materials in his possession.

Tea from Britain began arriving in America in 1773. The people of Boston would not allow the tea ships to land their cargo. Other cities induced the ships

to return or to store the cargoes. Noisy meetings were held, and in Boston two thousand men came to the wharf and watched while about fifty men, disguised as Indians, threw the $90,000 worth of tea into the harbor.

Britain immediately took action. The port of Boston was closed, the charter of Massachusetts changed, and the rioters were ordered sent to England for trial. When Franklin returned to London in 1774, "I was called an incendiary, and the papers were filled with invectives against me. Hints were given that there was some thoughts of apprehending me, seizing my papers, and sending me to Newgate."

In 1775, Franklin voiced the resentment at the sending of troops to Boston and the other measures. An English gentleman told him that these steps were taken upon the advice of Americans. Later he produced letters, signed by residents and officeholders in America, to prove this.

The British saw here a chance to get rid of Franklin. The charge was that he had made a public use of private letters. Franklin therefore received notice that he had been dismissed from his office as Deputy Postmaster-General, and he was refused recognition as colonial agent. Members of Parliament contemptuously accused Americans of dishonesty and cowardice. Franklin replied with the two most stinging satires of all his years in England; one was *Rules by Which a Great Empire May Be Reduced to a Small One.*

Disappointed and disgusted, Franklin, in tears and anger, spent his last day in England and read papers from America. If there should be a war, he was sure America would win, but it would take ten years, and he would never live to see the end. Before leaving, he induced a poor discouraged writer, Tom Paine, to migrate to America.

He journeyed to Portsmouth with haste and precaution, and sailed in March, 1775. His departure marked an era in the relations of Great Britain with her American colonies. It showed that hope of agreement, all possibility of reconciliation upon one side or of recession upon the other, were over. Franklin arrived in Philadelphia May 5, 1775. He found his wife dead.

CHAPTER X

FRANKLIN HELPS FORM THE UNITED STATES OF AMERICA (1775—1778)

For the next year and a half after his return to America, Franklin was very busy. He took part in the Second Continental Congress of the colonies. He made a difficult journey to Canada. He organized a new postal system for the colonies. He planned Articles of Permanent Confederation. He was one of the five who drafted the Declaration of Independence. He conferred with Lord Howe on peace with England, and finally went to France to secure her co-operation against England. For a man of seventy, this was hard work.

Benjamin Franklin was aboard ship on the way home when he heard of the Battles of Lexington and Concord and knew that war between the colonies and Great Britain had actually broken out. He was the oldest member of the Continental Congress, but also the most widely known. He was tired and usually sat listening rather than talking. Often he fell asleep in his chair.

On July 21, Congress resolved itself into a committee of the whole to "take into consideration the state of America," and Franklin read the *Articles of Confederation and Perpetual Union* which he had drawn up for "The United Colonies of North America." This was his Albany Plan of Union, revised to fit the changed conditions. But the colonists still hoped for peace and put the matter off. But after the Declaration of Independance the subject recurred. It was not settled until Franklin had left for France in 1777.

On one matter Franklin was firm, but partially over-ruled. He wanted the colonies to participate in the new government according to population and not as equals. This proposal was lost. The nation still regrets it and lives to see its mistake in letting a state like Nevada with a population of 160,000 have the same representation in the Senate as New York, with 15,000,000.

In the spring of 1776, Congress sent Franklin on a journey to Montreal, to confer concerning affairs in Canada. It was a severe task for a man of seventy; but he accepted the mission, although he suffered from fatigue and exposure.

The feeling in favor of independence grew rapidly. On January 10, Thomas Paine, now a journalist in Philadelphia, published his "Common Sense," which settled the nation's mind.

Franklin was one of the committee of five selected to frame a Declaration of Independence. He modified some of Jefferson's eloquence, and perhaps assented to leaving out that arraignment of King George for encouraging the slave trade. But he agreed to the principle, and when John Hancock asked for unanimity, said: "Yes, we must indeed all hang together, or assuredly we shall all hang separately."

When General Howe came to America to adjust differences, his talks with Franklin were illuminating. Franklin declared that Britain, at the expense of three million pounds, killed one hundred and fifty Yankees, which is twenty thousand pounds a head; and at Bunker's Hill she gained a mile of ground, half of which she lost again. During this time 60,000 children had been born in America. From these facts, he said, Howe might calculate the time and expense necessary to kill all Americans and conquer their territory.

Howe was very polite and said that if America should fall he would lament it "like the loss of a brother." Franklin replied tartly: "My lord, we will use our utmost endeavors to save your lordship that mortification."

When Franklin and a committee went to see Washington and his army in Boston, Franklin agreed with Washington that Negroes, even if free, ought not to be accepted in the Colonial Army. But news of the Proclamation of Lord Dunmore, Governor of Virginia, reached Washington next day. Dunmore had offered freedom to slaves who would desert to his army, and Negroes were pouring into British lines. Washington quickly reversed his decision, and more than five thousand black men eventually fought for the freedom of the colonies. Perhaps this incident and the subsequent conduct of Negro soldiers changed Franklin's attitude toward Negroes.

Meantime, France became interested in the American differences with Great Britain. Louis XVI, grandson of the Louis whom Franklin had met, came to the throne in 1774. He was amiable but dull, and married a beautiful, frivolous woman. Matters were going ill for the colonists and a petition to England had been ignored. At last Franklin was chosen to run the British blockade and see what could be done to secure aid for America from France. He was old and sick, but he left for France in October, 1776.

42/SA/17

CHAPTER XI

AMBASSADOR TO FRANCE (1776—1784)

In October, 1776, Franklin secretly left Philadelphia on a warship, with a cargo of indigo to pay his expenses. It was a long and exhausting voyage, but his welcome in France was enthusiastic. This was no mere ambassador; he was a world philosopher. He was compared with the great men of Greece and Rome. The people thronged the streets to see him and his pictures filled the shop windows. As John Adams said, he enjoyed a reputation "more universal than that of Leibnitz or Newton, Frederick or Voltaire." Particularly, Paris enjoyed his dress, and Franklin indulged them.

"Figure me in your mind," he wrote, "as jolly as formerly, and as strong and hearty, only a few years older, very plainly dressed, wearing my thin grey straight hair that peeps out under my only coiffure, a fine fur cap, which comes down to my forehead almost to my spectacles. Think how this must appear among the powdered heads of Paris."

He arrived at a critical time. Louis XVI, not yet twenty and not too bright, had just ascended the throne. The finances of the Kingdom were desperate. The great statesman Turgot declared this was no time to risk war with England over America. Eventually the colonies were bound to be free and, win or lose, England would be too exhausted to make war with France. But Turgot was dismissed and Vergennes gained the King's ear. He had listened to the dreams of Beaumarchais, the dramatist, who had just returned from England with wild tales of the colonists' success at Lexington and Bunker Hill and the opportunity of France to gain from England's losses. Vergennes connived at furnishing the Americans munitions.

Franklin was encouraged. "All Europe is on our side of the question, as far as applause and good wishes can carry them. Those who live under arbitrary power do nevertheless approve of liberty, and wish for it; they almost despair

of recovering it in Europe; they read the translations of our separate colony constitutions with rapture; and there are such members everywhere who talk of removing to America, with families and fortunes, as soon as peace and our independence shall be established, that it is generally believed that we shall have a prodigious addition of strength, wealth, and arts from the emigration of Europe; and it is thought that to lessen or prevent such emigration, the tyrannies established here must relax, and allow more liberty to their people. Hence it is a common observation here that our cause is the *cause of all mankind*, and that we are fighting for their liberty in defending our own. It is a glorious task assigned us by Providence, which has, I trust, given us spirit and virtue equal to it, and will at last crown it with success."

In America the war varied: Howe had captured New York, but Washington had checked him at Trenton, so that when Howe reached Philadelphia it was as Franklin said: he had not taken that city, "Philadelphia has captured Howe." Then came the great American triumph when the British general, Burgoyne, surrendered his army of 5,000 men at Saratoga. That winter Washington's army nearly starved at Valley Forge, but Burgoyne's disaster led France to give open aid and England to make offers of conciliation.

Franklin's influence increased. Adams reported: "His name was familiar to government and people, to kings, courtiers, nobility, clergy, and philosophers, as well as plebians, to such a degree that there was scarcely a peasant or a scullion in a kitchen who was not familiar with it and who did not consider him a friend to human kind." Voltaire and Franklin met and embraced publicly to the delight of the populace.

Franklin continued hard at work. He managed to furnish Paul Jones with ships and arms to annoy the British Navy, and, despite British spies all about him, a treaty of amity and commerce with France was made and the French fleet sent to help the Americans. The British government secretly offered Franklin almost all he had formerly demanded, but balked at independence. The United States and France exchanged ministers, while Franklin told the British as to independence: "We have never asked it of you; we only tell you that you can have no treaty with us but as an independent state."

The British gradually lost their supremacy at sea. They captured cities in the South, but were repulsed at last. The French sent men and money. Currency troubles harassed the colonists, but in 1781, the British General Cornwallis surrendered his army of 7,000 and the war was over.

Franklin sighed with relief. He wrote to Lafayette: "I must soon quit the scene, but you may live to see our country flourish, as it will amazingly and rapidly after

The signing of the Declaration of Independence on July 4th, 1776.

42/573/18

Franklin presenting his grandson to Voltaire for his blessing. Voltaire holds his hand over the child's head and says: "God and liberty."

Franklin, with his family round him, receives friends at his home in Philadelphia.

42/SA/19

My dear Friend, Passy, Sept. 11. 1783.

Mr. Storer told me, not long since, that you complain'd of my not writing to you. You have reason, for I find among your Letters to me two unanswered, viz. those of May 26, and Dec. 19. 1781. The Truth is, I have had too much Business to do for the Publick, and too little Help allow'd me; so that it became impossible for me to keep up my private Correspondencies. I promis'd myself

But enough of these petty Personalities. I quit them to rejoice with you in the Peace God has blest us with, and in the Prosperity it gives us a Prospect of. The Definitive Treaty was signed the third Instant. We are now Friends with England and with all Mankind. May we never see another War, for in my Opinion there never was a good War, or a bad Peace. Adieu, & believe me ever, my dear Friend

Yours most affectionately

B Franklin

A letter written by Franklin from Passy to a friend on September 11, 1783: "May we never see another war, for in my opinion there never was a good war, or a bad peace."

the war is over: like a field of young Indian corn, which long fair weather and sunshine had enfeebled and discoloured, and which, in that weak state, by a thunder-gust of violent wind, hail, and rain seemed to be threatened with absolute destruction; yet the storm being past, it recovers fresh verdure, shoots up with double vigor, and delights the eye not only of its owner but of every observing traveller."

42/STA/20

Franklin sent his resignation to Congress and planned a tour in Italy and Germany, and to "spend the evening of life more agreeably in philosophic leisure." But Congress refused to relieve him and commissioned him to make peace with Great Britain, "I have never known a peace made," he wrote, "even the most advantageous, that was not censured as inadequate, and the makers condemned as injudicious or corrupt."

He accepted the task. He was ordered to make peace with England only in concert with France. However, England now offered for the first time to acknowledge the independence of the colonies, which hitherto she had stubbornly refused. Franklin therefore hastened to sign a treaty.

The French were technically right at regarding this precipitate signing of the treaty with England as at least discourteous to the King, but there had been so much of secret negotiations on the part of France with Spain and America with England that Franklin succeeded in adjusting and on September 3, 1783, the final treaty of peace was signed. Franklin wrote to a friend: "I join with you most cordially in rejoicing at the return of peace. I hope it will be lasting, and that mankind will at length, as they call themselves reasonable creatures, have reason and sense enough to settle their differences without cutting throats; however in my opinion there never was a good war or bad peace. What vast additions to the conveniences and comforts of living might mankind have acquired, if the money spent in wars had been employed in works of public utility."

Despite the hard work and disappointments, Franklin enjoyed his long stay in France. He wrote that he would not "forget Paris and the nine years' happiness I enjoyed there, in the sweet society of a people whose conversation is instructive, whose manners are highly pleasing, and who, above all the nations of the world, have, in the greatest perfection, the art of making themselves beloved by strangers."

"I should rejoice much," he wrote Priestley in 1782, "if I could once more recover the leisure to search with you into the works of nature; I mean the inanimate not the animate or moral part of them: the more I discovered of the former the more I admired them; the more I know of the latter the more I am disgusted with them."

International honors came to Franklin during 1784-85: his election to membership in the Royal Academy of History at Madrid, to the academies of sciences

and arts at Orleans, and Lyons, to the Literary and Philosophical Society of Manchester. From the Papal Nuncio in July 1784 Franklin heard that the Pope had named John Carroll the Superior of the Catholic Clergy in America because of what Franklin had said about him.

Franklin, despite his work and worries, led a pleasant life in France, at Passy, a suburb. He was often entertained in the Arcadian mode of the old regime. A companion of Marie Antionette remembered when the most beautiful of three hundred women placed a crown of laurel on Franklin's white head and kissed both his cheeks. In 1781 he was the hero of a *fête champêtre* arranged by Rousseau's Sophie. She and her party came on foot half a mile to meet him, and welcomed him with verses she had composed.

42/54/21

CHAPTER XII

THE UNITED STATES OF AMERICA

So in 1785, Franklin returned to America, the most famous private citizen in the world, with King Louis' miniature set with 408 diamonds.

One matter puzzles the reader of Franklin's life and that was his surprise at hearing of the French Revolution which broke out several years after his return. To be sure, he spoke French indifferently and lived apart in a lovely suburb of Paris. He walked little, and probably knew little of the mass of Parisian people and nothing of the rural districts. How far did he realize the misery and oppression of the French? When he stood at court beside the beautiful Marie Antoinette, with her mound of jeweled curls and saw her gambling away the bread of her hungry people, did he hear of her remark: "Why don't they eat cake?"

Franklin must have realized that help for America hastened the bankruptcy of France. Probably he did not know that in the year after he left France a Corsican boy of fifteen, Napoleon Bonaparte, became Corporal in the French Army. Yet could not Franklin have foreseen some clouds of the coming terror? Perhaps not. At any rate, he mused after the fall of the Bastille: "In this world, nothing can be said to be certain except death and taxes. The convulsions in France are attended with some disagreeable circumstances; but if by the struggle she obtains and secures for her nation its future liberty, and a good constitution, a few years' enjoyment of those blessings will amply repair all the damages their acquisition may have occasioned. God grant that not only the love of liberty but a thorough knowledge of the rights of man may pervade all the nations of the earth, so that a philosopher may set his foot anywhere on its surface and say: 'This is my country'."

Franklin was at last settled at home. For a long time he had given little attention to his private affairs. But without him his "estate . . . more than tripled in value since the Revolution by the rise in the price of real property." At that time few

Americans if any owned a million dollars. Franklin was worth about $200,000 and was accounted rich. In his will he left considerable sums for philanthropic purposes, especially loan funds for young tradesmen and for education.

He was well satisfied with conditions in America. "Our husbandmen," he wrote in 1786, "who are the bulk of the nation, have had plentiful crops, their produce sells at high prices and for ready, hard money... Our working-people are all employed and get high wages, are well fed and well clad... Buildings in Philadelphia increase rapidly, besides small towns rising in every quarter of the country." The laws govern. Of course Franklin was not thinking of the 770,000 black slaves and partially free Negroes, then living in the nation, when he wrote this. He did remember them later.

"I seem to have intruded myself into the company of posterity," wrote the aged Benjamin Franklin at the Constitutional Convention of 1787. On Friday, May 25, when at last there was a quorum of states, the Convention was organized. As in the Continental Congress of 1775, Franklin was the oldest man in the Convention. "Dr. Franklin," a Georgian wrote, "is no speaker, nor does he seem to let politics engage his attention. He is, however, a most extraordinary man, and tells a story in a style more engaging than anything I ever heard... He is eighty-two and possesses an activity of mind equal to a youth of twenty-five years of age."

Franklin's legislative ideas — a single legislature, a plural executive, the non-payment of officers — were none of them adopted. His advocacy of legislative power based on population was compromised: state equality in the Senate and representation based on population in the House.

Despite much effort the question of Negro slavery arose in the convention when the matter of representation in the Congress came up, together with trade in goods and slaves and slavery itself. In early life he had owned a few slaves and traded in them; but he disliked to have them in his own house. As far back as 1751, he had pointed out the economic weakness of slavery, and had suggested the establishment of the first school for Negroes in Philadelphia in 1758.

He wrote while in England a reasoned judgment: "There is not, take North America through, perhaps one family in a hundred that has a slave in it. Many thousands abhor the slave trade;... conscientiously avoid being concerned with it, and do everything in their power to abolish it." British traders "bring the slaves to us and tempt us to purchase them. I do not justify our falling into temptation." Franklin then argued that the Scottish colliers, and British soldiers and sailors, were not much better off than American slaves.

The first Abolition society, founded by Quakers in 1775 but inactive during the war, was renewed in 1787 as the Pennsylvania Society for Promoting the Abolition

of Slavery and the Relief of Free Negroes Unlawfully Held in Bondage. Franklin was president. On November 9, 1789, it appealed for support and funds in an *Address to the Public* which Franklin signed and perhaps himself wrote.

"Slavery is such an atrocious debasement of human nature, that its very extirpation, if not performed with solicitous care, may sometimes open a source of serious evils . . . Attention to emancipated black people, it is therefore to be hoped, will become a branch of our national policy."

Franklin signed also the memorial which the society presented to the first Congress. This memorial was referred to a committee which reported that Congress had no authority to interfere in the internal affairs of the states.

42/57/22

CHAPTER XIII

BENJAMIN FRANKLIN DIES (1790)

In his last years, Franklin suffered cruelly from gout and from stone in the kidney, which the surgery of his day could not relieve. He was old, hurt, and tired, and did not wish to live longer. Yet his wit and sarcasm in defense of justice as he had learned to conceive of it showed itself in the article which he wrote less than a month before his death.

He had read the protest of James Jackson of Georgia against Congressional interference with slavery or the condition of slaves. Franklin wrote: "It puts me in mind of a similar one made about a hundred years since by Sidi Mehemet Ibrahim, a member of the Divan of Algiers... It was against granting the petition of the sect called Erika, or Purists, who prayed for the abolition of piracy and slavery, as being unjust." Jackson's defense of slavery was matched by Sidi Mehemet Ibrahim's defense of the right of the Algerines to have Christian slaves. "The Divan came to this resolution: 'That it is the interest of this state to continue the practice, is clear; therefore let the petition be rejected.' And it was rejected accordingly."

He had never been a dogmatist in religion, and said: "I think all the heretics I have known have been virtuous men. They have the virtue of fortitude, or they would not venture to own their heresy; and they cannot afford to be deficient in any of the other virtues, as that would give advantage to their many enemies." He said that so far as he could see, God never distinguished "unbelievers in his government of the world with any peculiar marks of his displeasure."

"Vicious actions," he added, "are not hurtful because they are forbidden, but forbidden because they are hurtful..."; that it was therefore every one's interest to be virtuous who wished to be happy.

Benjamin Franklin died in 1790. From his deathbed he rose and asked that it be made up freshly for him. His daughter said that she hoped he would live

many years longer. He replied calmly: "I hope not." She asked him to change his position that he might breathe more easily. He said: "A dying man can do nothing easy." So died a great man.

Emmanuel Kant called him the Prometheus of modern times. Turgot said: "He tore the lightning from heaven and the scepter from tyrants." He was probably more widely known than any other man born on this side of the Atlantic.

In Paris, at the Constituent Assembly which started the French Revolution, Mirabeau said that Europe "owes at least a token of remembrance and regret to one of the greatest men who have ever been engaged in the service of philosophy and of liberty. I propose that it be decreed that the National Assembly, during three days, shall wear mourning for Benjamin Franklin."

PREFACE

This short life of Benjamin Franklin has been written for the World Council of Peace, which, since its inception at Paris in 1949, I have held in highest esteem, and co-operated with it whenever and wherever I have been given opportunity. The work is based entirely on secondary material and is aimed principally at youthful readers, although I hope older ones may profit by it.

My chief sources of information have been the celebrated Franklin "Autobiography," the monumental work by Carl Van Doren, and the shorter work by Samuel Morse. My own social studies in Philadelphia and New England have given me some personal knowledge of Franklin's environment. All quotations have been taken from Franklin's own works.

THE STORY OF BENJ

BY W. E. B. D

CHAPTER I. THE CHILD. 1706-1718.

On the first of September, 1715, on the waterfront of Boston Harbor in sing waves and was very unhappy. He w tic and all the seven seas. He wante would not let him.

He was born 250 years ago of an E father, Josiah Franklin, had left Engl new land so as to have more freedom t know as he looked east that at that ve period of world history was ending, le while, his father was standing some di was a good father, of middle height an excellent mechanic. But of course he as alluring as his little boy imagined deed about life in general. He had se child, and very smart, an unusual trai a step upward from artisan to the lear this end he had sent Benjamin in his e did very well. But the fees were cost children, and although he worked hard The father began to wonder if it was n so finally he took him out of fitting of general studies with the idea of pr tallow candle maker.

Benjamin did not like this trade.

saw his unhappiness. So this morning they took a walk; they visited then and later the shops of carpenters, bricklayers, and metal workers. Finally, when his older son, James, returned from England with a printer's outfit, he saw that Benjamin was interested, especially because of the books in the office which he wanted to read; and then he liked the process of making books. So Benjamin in his twelfth year became a printer.

CHAPTER II. THE BOY. 1719-1722.

From his twelfth through his sixteenth year, Benjamin was a printer in Boston, apprenticed to his older brother, James. He grew quickly to love the work, although he and his brother did not get on so well. First, he could now secure the books he had wanted long to read: John Bunyan, Defoe, Plutarch, and some historical collections. With this reading came the fascinating work of setting words in print and seeing them reproduced on clean white paper. He learned early one of the first truths of the worker, that thought, to be real, must become action, and that daily working is revealed in daily thinking. So he read voraciously about the world and its people and as early as his fourteenth year began to write articles and slip them under the office door, fearing his brother, who was now publishing a weekly newspaper, might not like them. To his delight, his brother read many and actually printed them. Imagine Benjamin's feelings as he put his own words in type! Not only that, but in the next two or three years, people began to read and talk about what he had written. He dabbled on poetry, but his father, becoming aware of his efforts, discouraged poetry and guided him to a careful study of good English essays. Benjamin became more aware of the real world. He wrote letters from an imaginary "Silence Dogood" which were widely read. At sixteen, Franklin stood up sturdily for freedom of printers and writers to say what they wanted to:

> "Without freedom of thought, there can be no such thing as wisdom...and no such thing as public liberty, without freedom of speech, which is the right of every man, as far as by it he does not hurt and control the right of another; and this is the only check it ought to suffer, and the only bounds it ought to have."

This sort of talk published in his brother's paper, and similar thoughts, aimed at religious hypocrisy, got his brother in trouble with the authorities, so that James was put in jail, and substituted Benjamin's name as publisher. This technically broke the boy's indenture and gave him the chance he wanted.

Apprentices in these days were subject to unpleasant treatment. They were often kicked and cuffed about and poorly fed and clothed. Benjamin was no exception. His older brother, partly from bad temper and perhaps a little jealous of this boy's precocity and growing notoriety, was pretty hard on him. Benjamin wanted to get away and be his own man. Legally he was to serve until he was 21; but taking advantage of James' making him nominal editor, he first tried to transfer to another master printer; but James blocked that and Benjamin determined to go to New York. His father would not ~~xxxxxx~~ consent, so the boy, with little baggage and with only a little money which he got by selling some of his books, ran away in 1723.

CHAPTER III. THE YOUTH. 1723-1726.

The boat trip to New York took three days; but when he arrived and applied to the only printer in town for work, there was no opening. He advised Benjamin to go to Philadelphia, which was ninety miles away. He was sure he would find work there. Franklin left his small box of clothes and started on boat across the bay. A squall tore their sail and landed them on Long Island, where one of the passengers was nearly drowned. They were thirty hours adrift without food or water. Finally reaching land, Benjamin walked three days across country and then, finding a passenger boat, reached Philadelphia rather the worse for wear and beginning to wish he had never run away.

But on a Sunday morning he finally stood on the wharf in Philadelphia. "I was in my working dress.... I was dirty from my journey; my pockets were stuffed out with shirts and stockings and I knew no soul; nor where to look for lodging." Also, he had but a shilling in money, left after paying his boat fare. Then, buying some bread, he walked up Market Street with a loaf under each arm, passing the girl whom he later married on the steps of her home. Afterward she told him that he made "a most awkward, ridiculous appearance."

Franklin soon found work with an eccentric and foolish printer, whose shop he immediately started to set in order. Then an astonishing thing happened. He met the governor of the state! It came about in this way: A friend who learned of Benjamin's whereabouts told him of his family's anxiety over him. But Franklin was enjoying his freedom and was making a little money. Moreover, being from Boston, the largest city on the continent, he had soon become quite well known among the young folk. He wrote his friend about his reasons for leaving Boston and of his good chances here. His friend read the letter to the governor and the governor, Sir William Keith, a good-hearted, airy, but irresponsible man, immediately called on young Franklin, to his astonishment and that of his boss. Keith proposed that Franklin set up a new printing shop. If he had not enough capital, why not borrow it from his father? Keith would give him a letter.

So Franklin, in a new suit, with a watch and ~5 cash in his pocket, hurried back home where he was welcomed. But when he laid his plans before his father, the cautious Josiah was unimpressed. He said that Keith seemed to him a man of little sense. He wrote him politely, thanking him, but saying that his son was too young for so important and expensive ~~xxxxxx~~ an adventure. Josiah ~~hxpxd~~ hoped Franklin would remain at home, but Benjamin went back to Philadelphia and told the governor of his failure. Keith airily dismissed the matter by promising himself to raise the capital. He commissioned Franklin to make an inventory of his needs and go to London to buy furniture for his shop.

Franklin was walking on clouds. He prepared for the trip to London even though the governor's letter and money failed to arrive. He even boarded the boat. Still no word. He finally landed in London with no friends and only ~12 in his pocket. But he was a good printer and he soon found work. Here he stayed for a year and a half, in the brilliant capital of the British Empire. ~~xtxxhxxgxxxtxxxx

America and his former idea of a printing shop for writing and publicity was revived. So on July 23, 1726, Franklin sailed for Philadelphia, leaving the temptations of London behind, and bringing some equipment for his printing shop.

CHAPTER IV. THE YOUNG MAN. 1727-1730.

Young Franklin was now of age and ready to settle down for work. He laid down a design of life: "I have never fixed a regular design as to life, by which means it has been a confused variety of different scenes. I am now entering upon a new one; let me therefore make some resolutions, and form some scheme of action, that henceforth I may live in all respects like a rational creature. 1. It is necessary for me to be extremely frugal for some time, till I have paid what I owe. 2. To endeavor to speak truth in every instance, to give nobody expectations that are not likely to be answered, but aim at sincerity in every word and action: the most amiable excellence in a human being. 3. To apply myself industriously to whatever business I take in hand, and not divert my mind from my business by any foolish project of growing suddenly rich; for industry and patience are the surest means of plenty. 4. I resolve to speak ill of no man whatever, not even in a matter of truth; but rather by some means excuse the faults I hear charged upon others, and upon proper occasions speak all the good I know of everybody."

First, after returning from London, Franklin found employment as manager of his old place of work. Then in 1728, he opened a printing shop in partnership with a friend and took over a newspaper, formerly published by a competitor, and shortened its name to the Philadelphia Gazette. He dropped re-publication of British books from its columns, and limited it to actual news of Pennsylvanians; he wrote much for it himself. He increased the advertisements, and printed the paper with skill and taste. He wrote or rewrote the foreign and domestic news. He wrote letters to himself as editor and answered them.

In 1730, he became sole owner of the shop. He began to show some of that smug self-righteousness and eye to public opinion which characterized his whole life. "I began to pay off the debt I was under for the printing-house. In order to secure my credit and character as a tradesman, I took care not only to be in reality industrious and frugal, but to avoid all appearances to the contrary. I dress plainly; I was seen at no places of idle diversion. I never went out a fishing or shooting; a

book, indeed, sometimes debauch'd me from my work, but that was seldom, snug, and gave no scandal; and, to show that I was not above my business, I sometimes brought home the paper I purchas'd at the stores thro' the streets on a wheelbarrow. Thus being esteem'd an industrious, thriving young man, and paying duly for what I bought, the merchants who imported stationery solicited my custom; others proposed supplying me with books, and I went on swimmingly."

Franklin then got married, saying: "... that hard-to-be governed passion of youth hurried me frequently into intrigues with low women that fell in my way, which were attended with some expense and great inconvenience, besides a continual risque to my health by a distemper which of all things I dreaded." He turned toward thought of Deborah Read, the girl who had seen him first enter Philadelphia. During his absence she had married unfortunately, and separated from her good-for-nothing husband. In 1730, Franklin married her with some hesitation, ~~hearing~~ fearing that her husband might return. "She proved a good and faithful helpmate, assisted me much by attending the shop; we throve together, and have ever mutually endeavor'd to make each other happy.... She assisted me cheerfully in my business, folding and stitching pamphlets, tending shop, purchasing old linen rags for the paper-makers, etc., etc. We kept no idle servants, our table was plain and simple, our furniture of the cheapest."

He organized among his friends "a club of mutual improvement, which we called the Junto; we met on Friday evenings. The rules that I drew up required that every member, in his turn, should produce one or more queries on any point of Morals, Politics, or Natural ~~History~~ Philosophy, to be discuss'd by the company; and once in three months produce and read an essay of his own writing, on any subject he pleased. Our debates were to be under the direction of a president, and to be conducted in the sincere spirit of inquiry after truth, without fondness for dispute, or desire of victory."

From this club came a loan library which in time grew into the Philadelphia Public Library. Franklin records his method of debate: "I made it a rule to forbear

all direct contradiction of the sentiments of others, and all positive assertion of my own.... I soon found the advantage of this change in my manner; the conversations I engaged in went on more pleasantly. The modest way in which I proposed my opinions procured them a readier reception and less contradiction; I had less mortification when I was found to be in the wrong; and I more easily prevailed with others to give up their mistakes and join with me when I happened to be in the right."

CHAPTER V. THE MAN. 1731-1755.

From 1731 to 1755, Franklin became a successful printer and publisher and a widely read writer. His business flourished and expanded. In 1732, he issued the first number of an almanac which became the most famous of his writings. He said: "I first publish'd my Almanack, under the name of Richard Saunders; it was continu'd by me about twenty-five years, commonly call'd Poor Richard's Almanack. I endeavor'd to make it both entertaining and useful, and it accordingly came to be in such demand, that I reap'd considerable profit from it, vending annually near ten thousand. And observing that it was generally read, scarce any neighborhood in the province being without it, I consider'd it as a proper vehicle for conveying instruction among the common people, who bought scarcely any other books; I therefore filled all the little spaces that occurr'd between the remarkable days in the calendar with proverbial sentences, chiefly such as inculcated industry and frugality, as a means of procuring wealth, and thereby securing virtue; it being more difficult for a man in want, to act always honestly."

The aphorisms in this Almanac illustrate Franklin's philosophy and his times. He advised thrift for a poor, hard-working people tempted often to waste. "An empty bag cannot stand upright." "Beware of little expenses, a small leak will sink a ship." "A penny saved is a penny earned." "God helps them that help themselves."

This philosophy of thrift has been greatly stressed as typifying Franklin's philosophy. But he just as strongly attacked avarice. "Avarice and happiness never saw each other. How then should they become acquainted?" "Poverty wants some things, luxury many things, avarice all things." "He that is rich need not live sparingly, and he that can live sparingly need not be rich." "Wealth is not his that has it, but his that enjoys it." "He that is of the opinion money will do everything may well be suspected of doing everything for money." "Seven wealthy towns contend for Homer dead, through which

the living Homer begged his bread."

Franklin stressed good health: "Early to bed and early to rise makes a man healthy, wealthy, and wise." "Eat to live, and not live to eat." "He that can take rest is greater than he that can take cities."

Franklin believed in plain honesty and doing right; in good will and justice. "The rotten apple spoils his companion." "An innocent plowman is more worthy than a vicious prince." "Words may show a man's wit, but actions his meaning." "There was never a good knife made of bad steel." "Caesar did not merit the triumphal car more than he that conquers himself." "Better slip with feet than tongue." "A mob's a monster; heads enough but no brains." "What signifies your patience, if you can't find it when you want it?" "Many foxes grow gray, but few grow good." "All blood is alike ancient." "The noblest question in the world is, 'What good may I do in it?'" "Wish not so much to live long as to live well. Keep conscience clear, then never fear." "A lie stands on one leg, truth on two." "Half the truth is often a great lie." "Trust thyself, and another shall not betray thee." "Great beauty, great strength, and great riches are really and truly of no great use; a right heart exceeds them all." "Wink at small faults -- remember thou hast great ones." "The worst wheel of the cart makes the most noise." "Deny self for self's sake." "None preaches better than the ant, and she says nothing." "Time is an herb that cures all diseases." "Where there's marriage without love there will be love without marriage." "The heart of the fool is in his mouth, but the mouth of the wise man is in his heart." "Approve not of him who commends all you say." "The family of fools is ancient." "What is serving God? 'Tis doing good to man."

CHAPTER VI. FRANKLIN THE MERCHANT. 1736-1744.

During the eight years from his thirtieth to his thirty-eighth birthday, Franklin foreshadowed the new trader and investor who was to typify the last half of the eighteenth century and pave the way for the triumph of commerce and industry in the nineteenth. He expanded his printing and publishing and embarked on trade and commerce; he saved money and invested it and began to accumulate a fortune. His business enterprises grew in New York and Newport; in South Carolina and the West Indies. His usual method was to furnish capital and share profits until his partner took over the business or gave it up. His own store in Philadelphia not only did printing and publishing, but sold stationery, books, pencils, slates, and ink; soap, wax, maps, wine, oil, coffee, chocolate, mustard, scales, patent medicines, cheese, fish, cloth, stockings, tea, linen rags, stoves and horses. Also, he sold both the unexpired work time of indentured white servants and the bodies of black slaves for life. He advertised: "A very good tailor, having one year and ten months to run; fit for either town or country business. And a servant lad for six years, fit for country business." "Also a breeding Negro woman about twenty years of age. Can do any household work." "A likely Negro wench about fifteen years old, has had the smallpox, been in the country above a year and talks English. Inquire of the printer hereof." "A likely young Negro fellow about nineteen or twenty years of age, to be disposed of. He is very fit for labor, being used to plantation work, and has had the smallpox." "Two likely young Negroes, one a lad about nineteen, the other a girl of fifteen."

In such trade, Franklin was following the universal custom of his day and as yet had evidently given no thought to the ethics of slavery. Nor did he consider that trade had any object beside gain for the trader. It was not until many years later that the fundamental right and wrong of commerce began to force itself on his mind and conscience.

In 1734, Franklin became public printer for Pennsylvania and Delaware, and in 1736, clerk of the Pennsylvania Assembly. This insured his doing all the public

printing, which was a profitable undertaking. The next year he became deputy postmaster of the city, which helped distribute his publications. Also it brought travel and contact with the widely scattered colonies and a broader knowledge of social conditions and problems. His family increased by his own children, the adoption of his brother James' son, and by another son of his own, who was perhaps not Deborah's child; but she took him into the family without protest.

Franklin was now prosperous and began to grow in thought and breadth of interest; he began to study French, Italian and German until he could read in these languages. He also learned to speak ungrammatical French so as to be understood. Socially he and his family still counted as outsiders -- a printer and shopkeeper whom aristocratic Philadelphia of landholders and professional men never received socially and of course they did not invite his wife to their homes. But they had to recognize this man as efficient and valuable; he certainly did much for the city and state. He organized the first fire company; he helped reorganize the police; he worked with the churches but did not join them; he became a prominent Mason. He got on amicably with the dominant Quakers of his state.

Later, from Franklin's prominence and public spirit, he was brought in contact with certain world movements. There were the new British Methodists, who were protesting against the Church of England and now began to expand to America. When their leader, Wesley, and his helper, Whitefield, came to America, it was Franklin who helped them in Philadelphia, printed their sermons and found them an audience and place to preach, and gave them valuable advice. Out of experiences like this and widening duties as colonial postmaster, Franklin got his first ideas of colonial union; he proposed an inter-colonial philosophical society, which he planned could become a center of continental thought and activities.

CHAPTER VII. FRANKLIN RETIRES FROM BUSINESS. 1745-1753.

Benjamin Franklin was now approaching fifty years of age; his property and investments were enough to support the simple life to which he and his family were accustomed. He began to retire from active business and looked forward to indulging himself in scientific inquiries and the companionship of his friends. He purchased a new home in Philadelphia and a farm in New Jersey. He began to experiment and amuse himself as well as continuing his writing. His skit appeared, defending Polly Baker for her children born out of wedlock but carefully raised. He invented the Franklin stove to save fuel and refused to patent it. He studied the pores of the skin and the laws of motion and gravity. He amused himself with "magic squares," one with sixteen figures vertical and across, which all added to the same sum each way. He learned to play the harp, the guitar and violin, and invented the harmonica. He became interested in studying the weather, looked into geology and experimented in agriculture. As a printer and writer he had observed the disorderly confusion of English spelling. He examined the first principles of phonetic reform.

Then came Franklin's interest in electricity. In Boston in 1746, he met a man from Scotland, who showed him some electrical experiments. At home again, Franklin gave up the whole winter to electricity. "I never was before engaged in any study that so totally engrossed my attention...; for, what with making experiments when I can be alone, and repeating them to my friends and acquaintance who, from the novelty of the thing, come continually in crowds to see them, I have during some months past had little leisure for anything else."

Franklin distinguished between positive and negative electricity, built an electric battery and succeeded in sending an electric spark across a river. Then came his epoch-making idea that lightning was but electricity. To test this possibility he made his world-famous experiment with a kite. He stretched a large silk handkerchief on two cross-sticks and on the first approach of a thunderstorm he took a walk in the fields.

"The kite being raised, a considerable time elapsed before there was any appearance of its being electrified. One very promising cloud had passed over it without any effect; when, at length, just as he was beginning to despair of his contrivance, he observed some loose threads of the hempen string to stand erect, and to avoid one another, just as if they had been suspended on a common conductor. Struck with this promising appearance, he immediately presented his knuckle to the key, and the discovery was complete. He perceived a very evident electric spark."

He said in 1751: "There are no bounds...to the force man may raise and use in the electrical way."

Once Europe heard this epoch-making discovery, Franklin was famous almost before he knew it. In 1753, he received the Copley medal from England, and both Harvard and Yale Colleges gave him honorary degrees -- he who had never attended college a single day.

While these experiments were progressing, various public duties began to encroach on Franklin's time. He helped found a city hospital and to organize a fire insurance company. For the first time he came in close contact with the Indians. He learned about the Indian confederacy called the Six Nations. He was one of the commissioners sent by Pennsylvania to treat with them in 1749 and, if possible, keep them from siding with the French. A treaty was signed and this gave Franklin an idea: If Indians could thus unite and act together, why not the thirteen colonies?

Franklin did not advise the Indians to become civilized. "I should never advise a nation of savages to admit of civilisation; for I assure you that in the possession and enjoyment of the various comforts of life, compared to these people every Indian is a gentleman."/ With rare foresight he added that civilized society seemed to progress only by depressing the masses below the savage state in order that a few might be raised above it.

It had occurred to Franklin earlier that Pennsylvania should have a college. Massachusetts had Harvard and Connecticut Yale. Virginia, New Jersey and Rhode Island

were soon to follow. In 1749, he proposed that since the war of Austrian succession, known in America as King George's War, was finished, an academy be established. He went into the matter of its housing, "not far from a river, having a garden, orchard, meadow, and a field or two;" a library "with maps of all countries, globes, some mathematical instruments, and apparatus for experiments in natural philosophy and for mechanics; prints of all kinds, prospects, buildings, machines, etc." The students should eat together "plainly, temperately, and frugally," and "be frequently exercised in running, leaping, wrestling, and swimming.

"As to their studies, it would be well if they could be taught everything that is useful and everything that is ornamental. But art is long and their time is short."

Louis XVI had left France deeply in debt. The regent ruling for Louis XV had blown up John Law's Mississippi bubble until it burst. Now France was looking toward empire in America and buying furs from the Indians and moving into the valley of the Mississippi in an effort to cut the British colonies off from the West.

Franklin promoted the Albany Congress in 1754 to consider measures to protect the British colonies against the French. He proposed his Albany plan of colonial union, which was not listened to until ten years later. But Franklin continued thinking in continental terms: he anticipated the Malthus theory of population and food by fifty years. "There is, in short," he wrote in 1751, "no bound to the prolific nature of plants or animals but what is made by their crowding and interfering with each other's means of subsistence. Was the face of the earth vacant of other plants, it might be gradually sowed and overspread with one kind only; as, for instance, with fennel. And were it empty of other inhabitants, it might in a few ages be replenished from one nation only; as, for instance, with Englishmen."

He looked on America as a great frontier for the refuge of Britain. Franklin frankly preferred Englishmen and said so. "The number of purely white people in the world is proportionately very small. All Africa is black or tawny; Asia chiefly

tawny; America (exclusive of the newcomers) wholly so. And in Europe the Spaniards, Italians, French, Russians, and Swedes are generally of what we call a swarthy complexion; as are the Germans also, the Saxons only excepted, who with the English make up the principal body of white people on the face of the globe. I could wish their numbers were increased. And while we are, as I may call it, scouring our planet by clearing America of woods and so making this side of our globe reflect a brighter light to the eyes of inhabitants in Mars or Venus, why should we in the sight of superior beings darken its people? Why increase the sons of Africa by planting them in America, where we have so fair an opportunity, by excluding all blacks and tawnys, of increasing the lovely red and white? But perhaps I am partial to the complexion of my country, for such kind of partiality is natural to mankind.

CHAPTER VIII. ENVOY TO ENGLAND. 1754-1762.

In the third quarter of the eighteenth century, when Franklin, between fifty and seventy years of age, was passing from middle age to old age, he became increasingly aware of the relation of the colonies to the British Empire and the world. He realized the truth that in his century, "France ruled the land, England ruled the seas, and Germany ruled the clouds." He knew something of the struggle between Frederick the Great of Prussia with Maria Theresa of Austria, because this seven years in Europe had been echoed in the colonies. The French cultivated the Indians, they intermarried with them, and together the vastly valuable fur trade was increasing. The British and colonists had done little but take the Indians' land. So the French were pressing in on the British colonies in the West and the Indians were largely their allies.

Franklin began to think of the general condition of the colonies in America. The population had increased rapidly from natural growth and immigration. The two hundred thousand souls of 1690 had become a million and a half. Trade between England and its continental colonies now amounted to three million pounds sterling a year, or twice the West Indian trade. But war and a bad colonial policy were interfering with trade. In the seventeenth century, only four of its hundred years had been without some war in Europe. Now the great monarch, "the greatest actor of majesty who ever wore a crown," was dead and his bitter enemy William of Orange was gone and also poor Queen Anne. The long war of Spanish succession called in America Queen Anne's war had given England the slave trade and poured Negroes into America. England was reaching east, now that the great Mohammedan moguls had lost their power, and India fell in 1759 at the battle of Plassey. All this reacted on the continental colonies of America. The The West India lobby in London had secured heavy taxes on rum, molasses, and sugar in order to stop the illegal trade between the West Indies and the mainland continent. Smuggling and evasion of the British Navigation Acts were common.

Franklin began to sense this commercial rivalry and to develop his idea of the relation of England to the American colonies. Britain and its American colonies were

to be one country with only the sea between. The colonies should be extended West. Americans must have first hand in their own government but remain naturally an integral part of the Empire. They already paid high indirect taxes to Britain by having their trade curtailed and manufactures forbidden.

Opportunity to work out a solution was interrupted by war. In Europe in 1756, Prussia began its fight for survival, which brought its monarch, Frederick the Great, and Maria Theresa of Austria into fierce struggle, and soon involved France, Britain, Russia and Spain in a world struggle for empire.

Before war broke out in Europe, fighting began in America. The French moved into the Ohio Valley and fortified it. Young George Washington was sent west but failed to dislodge the French. Then the British sent General Braddock to lead an expedition westward while others attacked Canada. Franklin helped. As postmaster general he took a trip and met Braddock in person. The haughty general ignored Franklin's advice about Indian warfare, but accepted his aid in furnishing transport wagons and horses. Franklin obligated himself personally to a debt of £20,000 and hundreds of pounds of food. Braddock was overwhelmingly defeated and for months Franklin was in danger of bankruptcy. It was three months later that the state of Pennsylvania reimbursed him.

William Pitt now took the helm in England. More British troops were sent and the colonies rallied. The French were attacked successfully in Canada and the Ohio Valley and finally Quebec fell in 1759. In 1763, by the Treaty of Paris, England got Canada and the Mississippi Valley except New Orleans; Spain got Louisiana and the West.

The end of the seven years' war left England mistress of a vast colonial empire but it also left her deeply in debt, and she tried to get funds out of her American colonies. This raised a grave question: What was the political position of English colonists in America? Had they the rights of Englishmen or were they at the mercy of the English Parliament? Franklin argued:

That the colonists have no representatives in Parliament.

That compelling the colonists to pay money without their consent would be more like raising contributions in an enemy's country, than taxing of Englishmen for their own public benefit.

That it would be treating the colonists as a conquered people, and not as true British subjects.

But England was stubborn. George III had begun his long reign and the British Empire was beginning to belt the world. The theory that colonies existed for the benefit of Englishmen was emphasized. It was proposed to regulate the trade of the colonies so as to carry out three principles: first, that England should be the only shop in which colonists could purchase; second, that colonists should not manufacture for themselves articles which England had to sell; third, that the people of different colonies should not trade with each other to the detriment of the trade of either with England.

While this broader problem was pending, Pennsylvania sent Franklin to England to discuss the narrower problem of their right to tax the American property of the proprietors, the Penn family. Franklin sailed in 1757, prepared to stay perhaps for a year or two; but he had to stay five years.

He was, however, well known in England by reputation; he moved among high officials, men of letters, and merchants. He was already a member of the Royal Society. He was given a degree by Oxford University and by the Scottish University of St. Andrews. He was made Burgess of Edinburgh and dined with Adam Smith. Franklin succeeded in securing from the English the right of Pennsylvania to tax the Penn property in the colony. But he was drawn into discussion of the broader aspect of the relation of the colonies to Great Britain. He argued for the retention of Canada rather than its exchange for a small West Indian Island as was proposed. He insisted that the American colonies should be united. Some of his English friends argued that this would lead to a demand for independence of British control. This Franklin denied vehemently, "unless you grossly abuse them."

Finally, in 1762, he was sorry to leave "this happy island and my friends," but

glad to reach Philadelphia in November. His family was well and reports of the loss of his friends were false. "My house has been full of a succession of them from morning to night ever since my arrival, congratulating me on my return with the utmost cordiality and affection.

CHAPTER IX. BACK TO ENGLAND. 1763-1766.

Soon after Franklin arrived at home, he travelled 1,600 miles to regulate postal matters. He then settled a dangerous situation with regard to the Indians and stopped a massacre of Indians by white rowdies. The Indians had attacked settlers. In retaliation the settlers murdered Indian women and children, but not those guilty of the attack. An Indian war was imminent. Franklin organized defense and quelled the mob, but made enemies by this act. In 1763 the Indian chief, Pontiac, revolted against all whites. He had long been a friend of the French; but he refused to retreat with them and formed an Indian Federation against all whites. The British procured his assassination, but his Federation flamed in blood in the Valley of the Mississippi.

This showed that the defense of the colonies must still be pushed. During the Seven Years' War, the public debt of Great Britain had doubled. British landholders were being taxed a fifth of their incomes. British merchants were clamoring anew for enforcement of the colonial navigation laws, which had been neglected, while colonial contraband trade was booming. The government therefore in 1763 proposed more strict enforcement of the former Navigation Acts; a standing British army in America supported in part by American taxes; and new import duties with a stamp tax on newspapers, pamphlets, and legal papers.

The people of Pennsylvania meanwhile were still striving to get rid of the Penn family and secure government directly under the King. They prepared a petition and, after bickering, named Franklin to return to England and present it. Just as Franklin was leaving, the colonies heard of the proposed Stamp Act. He was commissioned to oppose it.

Franklin sought audience with the Prime Minister in February, 1765. He was received "with great civility; and after some questions respecting the present state of affairs in America and discourse thereupon, he said to me: 'You Americans have wrong ideas of the nature of your constitution; you contend that the king's instructions to his governors are not laws, and think yourselves at liberty to regard or disregard them at your own discretion.... They are then, so far as they relate to you, the law

of the land, for the king is the legislator of the colonies.' I told his lordship this was new doctrine to me. I had always understood from our charters that our laws were to be made by our assemblies, to be presented indeed to the king for his royal assent; but that being once given, the king could not repeal or alter them. And as the assemblies could not make permanent laws without his assent, so neither could he make a law for them without theirs. He assured me I was totally mistaken." Thereupon the Stamp Act was passed and signed.

Franklin was disappointed but philosophical about it and When asked recommended a good person as collector. In the colonies, however, there was an outburst of anger, with mobs and arson; kings' officers were made to resign; distribution of the stamps was prevented and a Stamp Act Congress called. Agreements were made not to import or use articles of English manufacture.

The colonists turned against Franklin. They believed that their trusted representative had been a traitor. Mobs threatened to destroy his new house in Philadelphia, and it was said that he had "planned" the Stamp Act.

Franklin wrote protesting: "I took every step in my power to prevent the passing of the Stamp Act. Nobody could be more concerned and interested than myself to oppose it sincerely and heartily. But the tide was too strong against us. The nation was provoked by American claims of independence, and all parties joined in resolving by this act to settle the point. We might as well have hindered the sun's setting."

Non-importation agreements were effective. A comprehensive "boycott" against all articles of English manufacture started, and English manufacturers became the real victims of the Stamp Act.

Franklin was disturbed. He saw the tremendous power of Great Britain and wondered how the separate colonies and the infant towns could fight Parliament and the king.

In January, 1766, Pitt said: "The Americans are the sons, not the bastards, of England. As subjects they are entitled to the common right of representation, and cannot be bound to pay taxes without their consent." The British had to retreat, but only

temporarily and in bad temper. They repealed the Stamp Act, but ~~it~~ with the declaration that "the King in Parliament has full power to bind the colonies and people of America in all cases whatsoever."

The people of Philadelphia were now persuaded that this repeal was chiefly due to Franklin. They were ashamed of their first reaction, and began to praise his devotion. They built a barge, forty feet long, and dragged it in a great procession.

CHAPTER X. HOME TO AMERICA. 1766-1774.

In February, 1766, Franklin and others Americans were summoned to give testimony concerning the colonies at the bar of the House of Commons sitting in committee of the whole. The attitude of Parliament toward Franklin and his fellow Americans was insulting. For nearly an hour, Franklin, now 68 years old, was compelled to stand before a hostile audience and take abuse. There were some of the best trained and most experienced men in England to question Franklin.

The "Gentleman's Magazine" said: "The questions are put with great subtlety and judgment, and they are answered with such deep and familiar knowledge of the subject, such precision and perspicuity, such temper and yet such spirit, as do the greatest honor to Dr. Franklin, and justify the general opinion of his character and abilities."

Franklin now understood the colonial sentiment, and was in accord with it. He was asked whether the colonists would submit to a modified Stamp Act. He replied: "No, they will never submit to it." Could anything less than a military force carry the Stamp Act into execution? Franklin replied: "I do not see how a military force can be applied." Why not? Franklin answered that if a military force were sent to America, they would find nobody in arms. They cannot force a man to take stamps who chooses to do without them. They will not find a rebellion, unless they make one.

Franklin's efforts in behalf of the colonies brought appointment from other colonies to act as their agent, so he became known as unofficial American minister. The government tried to bribe him by offering him office; he could have been an undersecretary of state, if he had been willing to modify his views.

The next year Parliament framed a new tax bill, with duties on wine, oil, glass, paper, lead, and three pence per pound on tea. Colonial governors and chief justices were hereafter to be paid by the king from his American revenue, and not by the colonial assemblies.

Matters were at an impasse between Britain and the colonies. He, however, took opportunity with his son to slip over to France, where Louis XV was reigning. Franklin

went to "Versailles last Sunday and had the honour of being presented to the king; he spoke to both of us very graciously and cheerfully, is a handsome man, has a lively look, and appears younger than he is. In the evening we were at the grand couvert, where the family sup in public."

Thus the colonial saw a bit of French monarchy and was attracted.

In 1768, two regiments were sent to Boston to enforce the law. Franklin pointed out the hazard of keeping this procedure and soon enough in 1770 came three fateful occurrences: the Boston massacre, the accession of Lord North to the premiership of England, and the marriage of the Dauphin, later Louis XVI of France, to Marie Antoinette of Austria. As Daniel Webster said later, the Boston massacre marked "the severance of England and her American colonies." Many other Americans said this was merely a mob led by a Negro, but the people of America celebrated this 5th of March as a national holiday for twenty years, until gradually it was superceded by Independence Day, the Fourth of July.

Lord North proposed a compromise: All the duties would be repealed save those on tea. There was reason for this: The East India Tea Company had seventeen million pounds of tea in storage and its stock on the market had fallen from 380 to 160. Sale of the tea to America would rid it of surplus tea and bring money to the British Treasury. The tax was voted but still the colonists were stubborn. This was still a tax without their consent and they could smuggle all the tea they needed. The boycott continued.

Meantime, Franklin traveled. In Dublin he attended two sessions of the Irish Parliament, and was formally received. Two months later he got to Edinburgh. "Through storms and floods I arrived here on Saturday night, late, and was lodged miserably in an inn," he wrote on October 27. "But that excellent Christian David Hume, agreeable to the precepts of the Gospel, has received the stranger, and I now live with him at his house in the new town most happily."

It may have been at this time or perhaps later that Franklin found himself stopping

at the same inn with Gibbon the great historian. He asked leave to call. Gibbon refused to receive a "rebel." Franklin replied that when Gibbon came to write of the decline and fall of the British Empire, Franklin would be happy to furnish him with the ample materials in his possession.

Tea from Britain began arriving in America in 1773. The people of Boston would not allow the tea ships to land their cargo. Other cities induced the ships to return or to store the cargoes. Noisy meetings were held, and in Boston two thousand men came to the wharf and watched while about fifty men, disguised as Indians, threw the $90,000 worth of tea into the harbor.

Britain immediately took action. The port of Boston was closed, the charter of Massachusetts changed, and the rioters were ordered sent to England for trial. When Franklin returned to London in 1774, "I was called an incendiary, and the papers were filled with invectives against me. Hints were given that there was some thoughts of apprehending me, seizing my papers, and sending me to Newgate."

In 1775, Franklin voiced the resentment at the sending of troops to Boston and the other measures. An English gentleman told him that these steps were taken upon the advice of Americans. Later he produced letters, signed by residents and office-holders in, America, to prove this.

The British saw here a chance to get rid of Franklin. The charge was that he had made a public use of private letters. Franklin therefore received notice that he had been dismissed from his office as Deputy Postmaster-General, and he was refused recognition as colonial agent. Members of Parliament contemptuously accused Americans of dishonesty and cowardice. Franklin replied with the two most stinging satires of all his years in England; one was Rules by Which a Great Empire May Be Reduced to a Small One.

Disappointed and disgusted, Franklin, in tears and anger, spent his last day in England and read papers from America. If there should be a war, he was sure America would win, but it would take ten years, and he would never live to see the end. Before leaving, he induced a poor discouraged writer, Tom Paine, to migrate to America.

H journeyed to Portsmouth with haste and precaution, and sailed in March, 1775. His departure marked an era in the relations of Great Britain with her American colonies. It showed that hope of agreement, all possibility of reconciliation upon one side or of recession upon the other, were over. Franklin arrived in Philadelphia May 5, 1775. He found his wife dead.

CHAPTER XI. FRANKLIN HELPS FORM THE UNITED STATES OF AMERICA. 1775-1778.

For the next year and a half after his return to America, Franklin was very busy. He took part in the Second Continental Congress of the colonies. He made a difficult journey to Canada. He organized a new postal system for the colonies. He planned Articles of Permanent Confederation. He was one of the five who drafted the Declaration of Independence. He conferred with Lord Howe on peace with England, and finally went to France to secure her co-operation against England. For a man of seventy, this was hard work.

He was aboard ship on the way home when he heard of the Battles of Lexington and Concord and knew that war between the colonies and Great Britain had actually broken out. He was the oldest member of the Continental Congress, but also the most widely known. He was tired and usually sat listening rather than talking. Often he fell asleep in his chair.

On July 21, Congress resolved itself into a committee of the whole to "take into consideration the state of America," and Franklin read the Articles of Confederation and Perpetual Union which he had drawn up for "The United ~~States~~ Colonies of North America." This was his Albany Plan of Union, revised to fit the changed conditions. But the colonists still hoped for peace and put the matter off. But after the Declaration of Independence the subject recurred. It was not settled until Franklin had left for France in 1777.

On one matter Franklin was firm, but partially over-ruled. He wanted the colonies to participate in the new government according to population and not as equals. This proposal was lost. The nation still regrets it and lives to see its mistake in letting a state like Nevada with a population of 160,000 have the same representation in the Senate as New York, with 15,000,000.

In the spring of 1776, Congress sent Franklin on a journey to Montreal, to confer concerning affairs in Canada. It was a severe task for a man of seventy; but he accepted the mission, although he suffered from fatigue and exposure.

The feeling in favor of independence grew rapidly. On January 10, Thomas Paine,

now a journalist in Philadelphia, published his "Common Sense," which settled the nation's mind.

Franklin was one of the committee of five selected to frame a Declaration of Independence. He modified some of Jefferson's eloquence, and perhaps assented to leaving out that arraignment of King George for encouraging the slave trade. But he agreed to the principle, and when John Hancock asked for unanimity, said: "Yes, we must indeed all hang together, or assuredly we shall all hang separately."

When General Howe came to America to adjust differences, his talks with Franklin were illuminating. Franklin declared that Britain, at the expense of three million pounds, killed one hundred and fifty Yankees, which is twenty thousand pounds a head; and at Bunker s Hill she gained a mile of ground, half of which she lost again. During this time 60,000 children had been born in America. From these facts, he said, Howe might calculate the time and expense necessary to kill all Americans and conquer their territory.

Howe was very polite and said that if America should fall he would lament it "like the loss of a brother." Franklin replied tartly: "My lord, we will use our utmost endeavors to save your lordship that mortification."

When Franklin and a committee went to see Washington and his army in Boston, Franklin agreed with Washington that Negroes, even if free, ought not to be accepted in the Colonial Army. But news of the Proclamation of Lord Dunmore, Governor of Virginia, reached Washington next day. Dunmore had offered freedom to slaves who would desert to his army, and Negroes were pouring into British lines. Washington quickly reversed his decision, and more than five thousand black men eventually fought for the freedom of the colonies. Perhaps this incident and the subsequent conduct of Negro soldiers changed Franklin's attitude toward Negroes.

Meantime, France became interested in the American differences with Great Britain. Louis XVI, grandson of the Louis whom Franklin had met, came to the throne in 1774. He was amiable but dull, and married a beautiful, frivolous woman. Matters

were going ill for the colonists and a petition to England had been ignored. At last Franklin was chosen to run the British blockade and see what could be done to secure aid for America from France. He was old and sick, but he left for France in October, 1776.

CHAPTER XII. AMBASSADOR TO FRANCE. 1776-1784.

In October, 1776, Franklin secretly left Philadelphia on a warship, with a cargo of indigo to pay his expenses. It was a long and exhausting voyage, but his welcome in France was enthusiastic. This was no mere ambassador; he was a world philosopher. The people thronged the streets to see him and his pictures filled the shop windows. As John Adams said, he enjoyed a reputation "more universal than that of Leibnits or Newton, Frederick or Voltaire." Particularly, Paris enjoyed his dress, and Franklin indulged them.

"Figure me in your mind," he wrote, "very plainly dressed, wearing my thin grey straight hair that peeps out under my only coiffure, a fine fur cap, which comes down to my forehead almost to my spectacles. Think how this must appear among the powdered heads of Paris."

He arrived at a critical time. Louis XVI, not yet twenty and not too bright, had just ascended the throne. The finances of the Kingdom were desperate. The great statesman Turgot declared this was no time to risk war with England over America. Eventually the colonies were bound to be free and, win or lose, England would be too exhausted to make war with France. But Turgot was dismissed and Vergennes gained the King's ear. He had listened to the dreams of Beaumarchais the dramatist, who had just returned from England with wild tales of the colonists' success at Lexington and Bunker Hill and the opportunity of France to gain from England's losses. Vergennes connived at furnishing the Americans munitions.

Franklin was encouraged. "All Europe is on our side of the question, as far as applause and good wishes can carry them. Those who live under arbitrary power do nevertheless approve of liberty, and wish for it; they almost despair of recovering it in Europe; they read the translations of our separate colony constitutions with rapture; and there are such numbers everywhere who talk of removing to America, with

families and fortunes, as soon as peace and our independence shall be established, that it is generally believed that we shall have a prodigious addition of strength, wealth, and arts from the emigration of Europe; and it is thought that to lessen or prevent such emigration, the tyrannies established here must relax, and allow more liberty to their people. Hence it is a common observation here that our cause is the cause of all mankind, and that we are fighting for their liberty in defending our own. It is a glorious task assigned us by Providence, which has, I trust, given us spirit and virtue equal to it, and will at last crown it with success."

In America, the war varied: Howe had captured New York, but Washington had checked him at Trenton, so that when Howe reached Philadelphia it was as Franklin said: he had not taken that city, "Philadelphia has captured Howe." Then came the great American triumph when the British general, Burgoyne, surrendered his army of 5,000 men at Saratoga. That winter Washington's army nearly starved at Valley Forge, but Burgoyne's disaster led France to give open aid and England to make offers of conciliation.

Franklin's influence increased. Adams reported: "His name was familiar to government and people, to kings, courtiers, nobility, clergy, and philosophers, as well as plebians, to such a degree that there was scarcely a peasant or a scullion in a kitchen who was not familiar with it and who did not consider him a friend to human kind." Voltaire and Franklin met and embraced publicly to the delight of the populace.

Franklin continued hard at work. He managed to furnish Paul Jones with ships and arms to annoy the British Navy, and, despite British spies all about him, a treaty of amity and commerce with France was made and the French fleet sent to help the Americans. The British government secretly offered Franklin almost all he had formerly demanded, but balked at independence. The United States and France exchanged ministers, while Franklin told the British as to independence: "We have never asked it of you; we only tell you that you can have no treaty with us but as an independent state."

The British gradually lost their supremacy at sea. They captured cities in the South, but were repulsed at last. The French sent men and money. Currency troubles

harassed the colonists, but in 1781, the British General Cornwallis surrendered his army of 7,000 and the war was over.

Franklin sighed with relief. He wrote to Lafayette: "I must soon quit the scene, but you may live to see our country flourish, as it will amasingly and rapidly after the war is over: like a field of young Indian corn, which long fair weather and sunshine had enfeebled and discoloured, and which, in that weak state, by a thunder-gust of violent wind, hail, and rain seemed to be threatened with absolute destruction; yet the storm being past, it recovers fresh verdure, shoots up with double vigor, and delights the eye not of its owner but of every observing traveller."

Franklin sent his resignation to Congress and planned a tour in Italy and Germany, and to "spend the evening of life more agreeably in philosophic leisure." But Congress refused to relieve him and commissioned him to make peace with Great Britain. "I have never known a peace made," he wrote, "even the most advantageous, that was not censured as inadequate, and the makers condemned as injudicious or corrupt."

He accepted the task. He was ordered to make peace with England only in concert with France. However, England now offered for the first time to acknowledge the independence of the colonies, which hitherto she had stubbornly refused. Franklin therefore hastened to sign a treaty.

The French were technically right at regarding this precipitate signing of the treaty with England as at least discourteous to the King, but there had been so much of secret negotiations on the part of France with Spain and America with England that Franklin succeeded in adjusting this difference and on September 3, 1783, the final treaty of peace was signed. Franklinwrote to a friend: "I join with you most cordially in rejoicing at the return of peace. I hope it will be lasting, and that mankind will at length, as they call themselves reasonable creatures, have reason and sense enough to settle their differences without cutting throats; however in my opinion there never was a good war or a bad peace. What vast additions to the conveniences and comforts of living might mankind have acquired, if the money spent in wars had been employed in works of public utility."

Despite the hard work and disappointments, Franklin enjoyed his long stay in France. He wrote that he would not "forget Paris and the nine years' happiness I enjoyed there, in the sweet society of a people whose conversation is instructive, whose manners are highly pleasing, and who, above all the nations of the world, have, in the greatest perfection, the art of making themselves beloved by strangers."

"I should rejoice much," he wrote Priestley in 1782, "if I could once more recover the leisure to search with you into the works of nature; I mean the inanimate not the animate or moral part of them: the more I discovered of the former the more I admired them; the more I know of the latter the more I am disgusted with them."

International honors came to Franklin during 1784-85: his election to membership in the Royal Academy of History at Madrid, to the academies of sciences and arts at Orleans and Lyons, to the Literary and Philosophical Society of Manchester. From the Papal Nuncio in July 1784 Franklin heard that the Pope had named John Carroll the Superior ofthe Catholic Clergy in America because of what Franklin had said about him.

Franklin, despite his work and worries, led a pleasant life in France, at Passy, a suburb. He was often entertained in the Arcadian mode of the old regime. A companion of Marie Antoinette remembered when the most beautiful of three hundred women placed a crown of laurel on Franklin's white head and kissed both his cheeks. In 1781 he was the hero of a fete champetre arranged by Rousseau's Sophie. She and her party came on foot half a mile to meet him, and welcomed him with verses she had composed.

CHAPTER XIII. THE UNITED STATES OF AMERICA.

So in ~~1782~~ 1785, Franklin returned to America, the most famous private citizen in the world, with King Louis' miniature set with 408 diamonds.

One matter puzzles the reader of Franklin's life and that was his surprise at hearing of the French Revolution which broke out two years after his return. To be sure, he spoke French indifferently and lived apart in a lovely suburb of Paris. He walked little, and probably knew little of the mass of Parisian people and nothing of the rural districts. How far did he realize the misery and oppression of the French? When he stood at court beside the beautiful Marie Antoinette, with her mound of jeweled curls and saw her gambling away the bread of her hungry people, did he hear of her remark: "Why don't they eat cake?"

Franklin must have realized that help for America hastened the bankruptcy of France. Probably he did not know that in the year after he left France a Corsican boy of fifteen, Napoleon Bonaparte, became Corporal in the French Army. Yet could not Franklin have foreseen some clouds of the coming terror? Perhaps not. At any rate, he mused after the fall of the Bastille: "In this world, nothing can be said to be certain except death and taxes. The convulsions in France are attended with some disagreeable circumstances; but if by the struggle she obtains and secures for her nation its future liberty, and a good constitution, a few years' enjoyment of those blessings will amply repair all the damages their acquisition may have occasioned. God grant that not only the love of liberty but a thorough knowledge of the rights of man may pervade all the nations of the earth, so that a philosopher may set his foot anywhere on its surface and say: 'This is my country.'"

Franklin was at last settled at home. For a long time he had given little attention to his private affairs. But without him his "estate...more than tripled in value since the Revolution by the rise in the price of real property." At that time few Americans if any owned a million dollars. Franklin was worth about $200,000 and was accounted rich. In his will he left considerable sums for philanthropic purposes,

especially loan funds for young tradesmen and for education.

He was well satisfied with conditions in America. "Our husbandmen," he wrote in 1786, "who are the bulk of the nation, have had plentiful crops, their produce sells at high prices and for ready, hard money.... Our working-people are all employed and get high wages, are well fed and well clad.... Buildings in Philadelphia increase rapidly, besides small towns rising in every quarter of the country." The laws govern. Of course Franklin was not thinking of the 750,000 black slaves and partially free Negroes, then living in the nation, when he wrote this. He did remember them later.

"I seem to have intruded myself into the company of posterity," wrote xx the aged Benjamin Franklin at the Constitutional Convention of 1787. On Friday, May 25, when at last there was a quorum of states, the Convention was organized. As in the Continental Congress of 1775, Franklin was the oldest man in the Convention. "Dr. Franklin," a Georgian wrote, "is no speaker, nor does he seem to let politics engage his attention. He is, however, a most extraordinary man, and tells a story in a style more engaging than anything I ever heard.... He is eighty-two and possesses an activity of mind equal to a youth of twenty-five years of age."

Franklin's legislative ideas -- a single legislature, a plural executive, the non-payment of officers -- were none of them adopted. His advocacy of legislative power based on population was compromised: state equality in the Senate and representation based on population in the House.

Despite much effort the question of Negro slavery arose in the convention when the matter of representation in the Congress came up, together with trade in goods and slaves and slavery itself. In early life he had owned a few slaves and traded in them; but he disliked to have them in his own house. As far back as 1751, he had pointed out the economic weakness of slavery, and had suggested the establishment of the first school for Negroes in Philadelphia in 1758.

He wrote while in England a reasoned judgment: "There is not, take North America

through, perhaps one family in a hundred that has a slave in it. Many thousands abhor the slave trade;... conscientiously avoid being concerned with it, and do everything in their power to abolish it." British traders "bring the slaves to us and tempt us to purchase them. I do not justify our falling into temptation." Franklin then argued that the Scottish colliers, and British soldiers and sailors, were not much better off than American slaves.

The first Abolition society, founded by Quakers in 1775 but inactive during the war, was renewed in 1787 as the Pennsylvania Society for Promoting the Abolition of Slavery, and the Relief of Free Negroes Unlawfully Held in Bondage. Franklin was president. On November 9, 1789, it appealed for support and funds in an Address to the Public which Franklin signed and perhaps himself wrote.

"Slavery is such an atrocious debasement of human nature, that its very extirpation, if not performed, with solicitous care, may sometimes open a source of serious evils.... Attention to emancipated black people, it is therefore to be hoped, will become a branch of our national policy."

Franklin signed also the memorial which the society presented to the first Congress. This memorial was referred to a committee which reported that Congress had no authority to interfere in the internal affairs of the states.

CHAPTER XIV. BENJAMIN FRANKLIN DIES. 1790.

In his last years, Franklin suffered cruelly from gout and from stone in the kidney, which the surgery of his day could not relieve. He was old, hurt, and tired, and did not wish to live longer. Yet his wit and sarcasm in defense of justice as he had learned to conceive of it showed itself in the article which he wrote less than a month before his death.

He had read the protest of James Jackson of Georgia against Congressional interference with slavery or the condition of slaves. Franklin wrote: "It puts me in mind of a similar one made about a hundred years since by Sidi Mehemet Ibrahim, a member of the Divan of Algiers.... It was against granting the petition of the sect called Erika, or Purists, who prayed for the abolition of piracy and slavery, as being ~~unjustxx~~ unjust." Jackson's defense of slavery was matched by Sidi Mehemet Ibrahim's defense of the right of the Algerines to have Christian slaves. "The Divan came to this resolution: 'That it is the interest of this state to continue the practice, is clear; therefore let the petition be rejected.' And it was rejected accordingly."

He had never been a dogmatist in religion, and said: "I think all the heretics I have known have been virtuous men. They have the virtue of fortitude, or they would not venture to own their heresy; and they cannot afford to be deficient in any of the other virtues, as that would give advantage to their many enemies." He said that so far as he could see, God never distinguished "unbelievers in his government of the world with any peculiar marks of his displeasure."

"Vicious actions," he added, "are not hurtful because they are forbidden, but forbidden because they are hurtful...; that it was therefore every one's interest to be virtuous who wished to be happy.

Benjamin Franklin died in 1790. From his deathbed he rose and asked that it be made up freshly for him. His daughter said that she hoped he would live many years longer. He replied calmly: 'I hope not.' She asked him to change his position that he might breathe more easily. He said: "A dying man can do nothing easy." So died

a great man.

Emmanuel Kant called him the Prometheus of modern times. Turgot said: "He tore the lightning from heaven and the scepter from tyrants." He was probably more widely known than any other man born on this side of the Atlantic.

In Paris, at the Convention which started the French Revolution, Mirabeau said that Europe "owes at least a token of remembrance and regret to one of the greatest men who have ever been engaged in the service of philosophy and of liberty. I propose that it be decreed that the National Assembly, during three days, shall wear mourning for Benjamin Franklin."

A Foreword

By W. E. B. DU BOIS

For now near a half century the world has been in spiritual turmoil amounting often to hysteria. Our emotions have been stirred as seldom in the history of civilization and certainly never on so wide a scale. We have seen war and destruction beyond computation. We have seen death in mounting millions. The suffering, apprehension and stark fear around the world has defied human imagination, so much so that historians have not begun to interpret it nor artists to depict it.

The causes of all this distress have not yet been thoroughly understood, much less cured; but thinking men are beginning to agree with increasing approach to unanimity that no matter how much we still differ as to cause, effect and cure, at least it is ever clearer that the time for Reason has come. That the phase of hysteria is past and that if Civilization is to survive in its present more favorable aspects, we must immediately guide our actions by reason or die.

The struggle between Socialism and Private Capitalism is not finished; indeed it has but begun. The strife between Dictator and majority rule is still in the balance. There is no final judgment yet entered as to the abilities, relations and accomplishments of the various peoples, races and nations of the earth. But all these and other unsettled questions of human life on this planet are now in position to be laid before the considered judgment of mankind for slow, careful moral and scientific decision; and the time is past when any civilized human being can longer for a moment dream that these difficult problems can be settled by force or violence.

It is just at this crisis of modern life that we are confronted, not by this comparatively simple problem of the use of force,

but by the frightening proposal of continuing experiments for still greater physical forces to be applied to destruction and death, and also by the carrying on of experimentation with the real and present danger of killing more human beings today, infecting others with disease tomorrow, and even contaminating our children's children. It is idiotic to pause here and ask how great or how wide or how imminent is this danger; all science agrees that there is danger and as the words of this pamphlet prove, all thinking folk, of all degrees of prominence and in every class of life, tell and beg us to stop further experiment for the further development of forces by which war may be waged, when we all know that further war today is suicide and must cease; and that immediate disarmament is our only and our imperative problem—not experiments with the Hydrogen-bomb.

Listen then to the word of Pope and Labor leader; Chemist and General of the armed forces; medical Missionary and Nuclear Scientist; Technician and Philanthropist; Communist and Capitalist; Ruler and Politician; Philosopher and Sage.

Can anyone afford to ignore these messages?

A DECLARATION OF CONSCIENCE

By Albert Schweitzer

SINCE March 1, 1954 hydrogen bombs have been tested by the United States at the Pacific island of Bikini in the Marshall group and by Soviet Russia in Siberia. We know that testing of atomic weapons is something quite different from testing of non-atomic ones. Earlier, when a new type of giant gun had been tested, the matter ended with the detonation. After the explosion of a hydrogen bomb that is not the case. Something remains in the air, namely, an incalculable number of radioactive particles emitting radioactive rays. This was also the case with the uranium bombs dropped on Nagasaki and Hiroshima and those which were subsequently tested. However, because these bombs were of smaller size and less effectiveness compared with the hydrogen bombs, not much attention was given to this fact.

Since radioactive rays of sufficient amount and strength have harmful effects on the human body, it must be considered whether the radiation resulting from the hydrogen explosions that have already taken place represents a danger which would increase with new explosions.

In the course of the three-and-a-half years that have passed since then (the test explosions of the early hydrogen bombs) representatives of the physical and medical sciences have been studying the problem. Observations on the distribution, origin, and nature of radiation have been made. The processes through which the human body is harmfully affected have been analyzed. The material collected, although far from complete, allows us to draw the conclusion that radiation resulting from the explosions which have already taken place represents a danger to the human race—a danger not to be

underrated—and that further explosions of atomic bombs will increase this danger to an alarming extent.

This conclusion has repeatedly been expressed, especially during the last few months. However, it has not, strange to say, influenced public opinion to the extent that one might have expected. Individuals and peoples have not been aroused to give to this danger the attention which it unfortunately deserves. It must be demonstrated and made clear to them.

I raise my voice, together with those of others who have lately felt it their duty to act, through speaking and writing, in warning of the danger. My age and the generous understanding so many people have shown of my work permit me to hope that my appeal may contribute to the preparing of the way for the insights so urgently needed.

My thanks go to the radio station in Oslo, the city of the Nobel Peace Prize, for making it possible for that which I feel I have to say to reach far-off places.

What is radioactivity?

Radioactivity consists of rays differing from those of light in being invisible and in being able to pass not only through glass but also through thin metal discs and through layers of cell tissue in the human and animal bodies. Rays of this kind were first discovered in 1895 by the physicist Wilhelm Roentgen of Munich, and were named after him.

In 1896 the French physicist Henry Becquerel demonstrated that rays of this kind occur in nature. They are emitted from uranium, an element known since 1786.

In 1898 Pierre Curie and his wife discovered in the mineral pitchblende, a uranium ore, the strongly radioactive element radium.

The joy caused by the fact that such rays were at the disposal of humanity was at first unmixed. It appeared that they influence the relatively rapidly growing and relatively rapidly decaying cells of malignant tumors and sarcomas. If exposed to these rays repeatedly for a longer period, some of the terrible neoplasms can be destroyed.

After a time it was found, however, that the destruction of cancer cells does not always mean the cure of cancer and also, that the normal cells of the body may be seriously damaged if long exposed to radioactivity.

When Mme. Curie, after having handled uranium ore for four years, finally held the first gram of radium in her hand there appeared abrasions in the skin which no treatment could cure. With the years she grew steadily sicker from a disease caused by radioactive rays which damaged her bone marrow and through this her blood. In 1934 death put an end to her suffering.

Even so, for many years we were not aware of the grave risks involved in X-rays to those constantly exposed to them. Through operating X-ray apparatus thousands of doctors and nurses have incurred incurable diseases.

Radioactive rays are material things. Through them the radioactive element constantly and forcefully emits tiny particles of itself. There are three kinds. They are named after the three first letters of the Greek alphabet, *alpha, beta, gamma*. The gamma rays are the hardest ones and have the strongest effect.

The reason why elements emit radioactive rays is that they are in a continuous state of decaying. The radioactivity is the energy liberated little by little. There are other elements besides uranium and radium which are radioactive. To the radiation from the elements in the earth is added some radiation from space. Fortunately, the air mass 400 kilometers high that surrounds our earth protects us against this radiation. Only a very small fraction of it reaches us.

We are, then, constantly being exposed to radioactive radiation coming from the earth and from space. It is so weak, however, that it does not hurt us. Stronger sources of radiation, as for instance X-ray machines and exposed radium, have, as we know, harmful effects if one is exposed to them for some time.

The radioactive rays are, as I said, invisible. How can we tell that they are there and how strong they are?

Thanks to the German physicist Hans Geiger, who died in 1945 as a victim to X-rays, we have an instrument which makes that possible. This instrument is called the Geiger counter; it consists of a metal tube containing rarified air. In it are two metal electrodes between which there is a high potential. Radioactive rays from the outside affect the tube and release a discharge between the two electrodes. The stronger the radiation the quicker the discharges follow one another. A small device connected to the tube makes the discharge audible. The Geiger counter performs a veritable drum-roll when the discharges are strong.

There are two kinds of atom bomb—uranium bombs and hydrogen bombs. The effect of an uranium bomb is due to a process which liberates energy through the fission of uranium. In the hydrogen bomb the liberation of energy is the result of the transformation of hydrogen into helium.

It is interesting to note that this latter process is similar to that which takes place in the center of the sun, supplying it with the self-renewing energy which it emits in the form of light and heat.

In principle, the effect of both bombs is the same. But according to various estimates the effect of one of the latest hydrogen bombs is 2,000 times stronger than the one which was dropped on Hiroshima.

To these two bombs has recently been added the cobalt bomb, a kind of super atom-bomb. It is a hydrogen bomb surrounded by a layer of cobalt. The effect of this bomb is estimated to be many times stronger than that of hydrogen bombs that have been made so far.

The explosion of an atom bomb creates an unconceivably large number of exceedingly small particles of radioactive elements which decay like uranium or radium. Some of these particles decay very quickly, others more slowly, and some of them extraordinarily slowly. The strongest of these elements cease to exist only ten seconds after the detonation of the bomb. But in this short time they may have killed a great number of people in a circumference of several miles.

What remains are the less powerful elements. In our time it is with these we have to contend. It is of the danger arising from the radioactive rays emitted by these elements that we must be aware.

Of these elements some exist for hours, some for weeks, or months, or years, or millions of years, undergoing continuous decay. They float in the higher strata of air as clouds of radioactive dust. The heavy particles fall down first. The lighter ones will stay in the air for a longer time or come down with rain or snow. How long it will take before everything carried up in the air by the explosions which have taken place till now has disappeared no one can say with any certainty. According to some estimates, this will be the case not earlier than thirty or forty years from now.

When I was a boy I witnessed how dust hurled into the air from the explosion in 1883 of the island Krakatoa in the Sunda group was noticeable for two years afterwards to such an extent that the sunsets were given extraordinary splendor by it.

What we can state with certainty, however, is that the radioactive clouds will constantly be carried by the winds around the globe and that some of the dust, by its own weight, or by being brought down by rain, snow, mist, and dew, little by little, will fall down on the hard surface of the earth, into the rivers, and into the oceans.

Of what nature are these radioactive elements particles of which were carried up in the air by the explosion of atom bombs and which are now falling down again?

They are strange variants of the usual non-radioactive elements. They have the same chemical properties, but a different atomic weight. Their names are always accompanied by their atomic weights. The same element can occur in several radioactive variants. Besides Iodine 131, which lives for sixteen days only, we have Iodine 129, which lives for 200,000,000 years.

Dangerous elements of this kind are: Phosphorus 32, Calcium 45, Iodine 131, Iron 55, Bismuth 210, Plutonium 239,

Cerium 144, Strontium 89, Caesium 137. If the hydrogen bomb is covered by cobalt, Cobalt 60 must be added to the list.

Particularly dangerous are the elements combining long life with a relatively strong efficient radiation. Among them Strontium 90 takes the first place. It is present in very large amounts in the radioactive dust. Cobalt 60 must also be mentioned as particularly dangerous.

The radioactivity in the air, increased through these elements, will not harm us from the outside, not being strong enough to penetrate the skin. It is another matter with respiration, through which radioactive elements can enter our bodies. But the danger which has to be stressed above all the others is the one which arises from our drinking radioactive water and our eating radioactive food as a consequence of the increased radioactivity in the air.

Following the explosions of Bikini and Siberia rain falling over Japan has, from time to time, been so radioactive that the water from it cannot be drunk. Not only that: Reports of radioactive rainfall are coming from all parts of the world where analyses have recently been made. In several places the water has proved to be so radioactive that it was unfit for drinking.

Well-water becomes radioactive to any considerable extent only after longer periods of heavy rainfall.

Wherever radioactive rainwater is found the soil is also radioactive—and in a higher degree. The soil is made radioactive not only by the downpour, but also from radioactive dust falling on it. And with the soil the vegetation will also have become radioactive. The radioactive elements deposited in the soil pass into the plants, where they are stored. This is of importance, for as a result of this process it may be the case that we are threatened by a considerable amount of radioactive elements.

The radioactive elements in grass, when eaten by animals whose meat is used for food, will be absorbed and stored in our bodies.

In the case of cows grazing on contaminated soil, the absorption is effected when we drink their milk. In that way small children run an especially dangerous risk of absorbing radioactive elements.

When we eat contaminated cheese and fruits the radioactive elements stored in them are transferred to us.

What this storing of radioactive material implies is clearly demonstrated by the observations made when, on one occasion, the radioactivity of the Columbia River in North America was analyzed. The radioactivity was caused by the atomic plants at Hanford, which produce plutonium for atomic bombs and which empty their waste water into the river. The radioactivity of the river water was insignificant. But the radioactivity of the river plankton was 2,000 times higher, that of the ducks eating plankton 40,000 times higher, that of the fish 15,000 times higher. In young swallows fed on insects caught by their parents in the river the radioactivity was 500,000 times higher, and in the egg yolks of water birds more than 1,000,000 times higher.

From official and unofficial sources we have been assured, time and time again, that the increase in radioactivity of the air does not exceed the amount which the human body can tolerate without any harmful effects. This is just evading the tissue. Even if we are not directly affected by the radioactive material in the air, we are indirectly affected through that which has fallen down, is falling down, and will fall down. We are absorbing this through radioactive drinking water and through animal and vegetable foodstuffs, to the same extent as radioactive elements are stored in the vegetation of the region in which we live. Unfortunately for us, nature hoards what is falling down from the air.

None of the radioactivity of the air, created by the explosion of atom bombs, is so unimportant that it may not, in the long run, become a danger to us through increasing the amount of radioactivity stored in our bodies.

What we absorb of radioactivity is not spread evenly in all cellular tissue. It is deposited in certain parts of our body,

particularly in the bone tissue and also in the spleen and in the liver. From those sources the organs which are especially sensitive to it are exposed to radiation. What the radiation lacks in strength is compensated for by time. It works day and night without interruption.

How does radiation affect the cells of an organ?

Through being ionized, that is to say, electrically charged. This change means that the chemical processes which make it possible for the cells to do their job in our body no longer function as they should. They are no longer able to perform the tasks which are of vital importance to us. We must also bear in mind that a great number of the cells of an organ may degenerate or die as a result of radiation.

What are the diseases caused by internal radiation? The same diseases that are known to be caused by external radiation.

They are mainly serious blood diseases. The cells of the red bone marrow, where the red and the white blood corpuscles are formed, are very sensitive to radioactive rays. It is these corpuscles, found in great numbers in the blood, which make it possible for it to play such an important part. If the cells in the bone marrow are damaged by radiation they will produce too few or abnormal, degenerating blood corpuscles. Both cases lead to blood diseases and, frequently, to death. These were the diseases that killed the victims of X-rays and radium rays.

It was one of these diseases that attacked the Japanese fishermen who were surprised in their vessel by radioactive ashes falling down 240 miles from Bikini after the explosion of an hydrogen bomb. With one exception, they were all saved, being strong and relatively mildly affected, through continuous blood transfusions.

In the cases cited the radiation came from the outside. It is unfortunately very probable that internal radiation affecting the bone marrow and lasting for years will have the same effect, particularly since the radiation goes from the bone tissue to the bone marrow. As I have said, the radioactive elements are by preference stored in the bone tissue.

Not our own health only is threatened by internal radiation, but also that of our descendants. The fact is that the cells of the reproductive organs are particularly vulnerable to radiation which in this case attacks the nucleus to such an extent that it can be seen in the microscope.

To the profound damage of these cells corresponds a profound damage to our descendants.

It consists in stillbirths and in the births of babies with mental or physical defects.

In this context also, we can point to the effects of radiation coming from the outside.

It is a fact—even if the statistical material being published in the press needs checking—that in Nagasaki, during the years following the dropping of the atom bomb, an exceptionally high occurrence of stillbirths and of deformed children was observed.

In order to establish the effect of radioactive radiation on posterity, comparative studies have been made between the descendants of doctors who have been using X-ray apparatus over a period of years and descendants of doctors who have not. The material of this study comprises about 3,000 doctors in each group. A noticeable difference was found. Among the descendants of radiologists a percentage of stillbirths of 1.403 was found, while the percentage among the non-radiologists were 1.222.

In the first group 6.01 per cent of the children had congenital defects, while only 4.82 per cent in the second.

The number of healthy children in the first group was 80.42 per cent; the number in the other was significantly higher, viz. 83.23 per cent.

It must be remembered that even the weakest of internal radiation can have harmful effects on our descendants.

The total effect of the damage done to descendants of ancestors who have been exposed to radioactive rays will not, in accordance with the laws of genetics, be apparent in the generations coming immediately after us. The full effects will appear only 100 or 200 years later.

As the matter stands we cannot at present cite cases of serious damage done by internal radiation. To the extent that such radiation exists it is not sufficiently strong and has not lasted long enough to have caused the damage in question. We can only conclude from the harmful effects known to be caused by external radiation to those we must expect in the future from internal radiation.

If the effect of the latter is not as strong as that of the former, it may become so, through working little by little and without interruption. The final result will be the same in both cases.

Their effects add up.

We must also remember that internal radiation does not have to, in contrast to that coming from the outside, penetrate layers of skin, tissues, and muscles to hit the organs. It works at close range and without any weakening of its force.

When we realize under what conditions the internal radiation is working, we cease to underrate it. Even if it is true that, when speaking of the dangers of internal radiation, we can point to no actual case, only express our fear, that fear is so solidly founded on facts that it attains the weight of reality in determining our attitude. We are forced to regard every increase in the existing danger through further creation of radioactive elements by atom bomb explosions as a catastrophe for the human race, a catastrophe that must be prevented.

There can be no question of doing anything else, if only for the reason that we cannot take the responsibility for the consequences it might have for our descendants.

They are threatened by the greatest and most terrible danger.

That radioactive elements created by us are found in nature is an astounding event in the history of the earth and of the human race. To fail to consider its importance and its consequences would be a folly for which humanity would have to pay a terrible price. We are committing a folly in thoughtlessness. It must not happen that we do not pull our-

selves together before it is too late. We must muster the insight, the seriousness, and the courage to leave folly and to face reality.

This is at bottom what the statesmen of the nations producing atomic bombs are thinking, too. Through the reports they are receiving they are sufficiently informed to form their own judgments, and we must also assume that they are alive to their responsibility.

At any rate, America and Soviet Russia and Britain are telling one another again and again that they want nothing more than to reach an agreement to end the testing of atomic weapons. At the same time, however, they declare that they cannot stop the tests as long as there is no such agreement.

Why do they not come to an agreement? The real reason is that in their own countries there is no public opinion asking for it. Nor is there any such public opinion in other countries with the exception of Japan. This opinion has been forced upon the Japanese people because, little by little, they will be hit in a most terrible way by the evil consequences of all the tests.

An agreement of this kind presupposes reliability and trust. There must be guarantees preventing the agreement from being signed by anyone intending to win important tactical advantages foreseen only by him.

Public opinion in all nations concerned must inspire and accept the agreement.

When public opinion has been created in the countries concerned and among all nations, an opinion informed of the dangers involved in going on with the tests and led by the reason which this information imposes, then the statesmen may reach an agreement to stop the experiments.

A public opinion of this kind stands in no need of plebiscites or of forming of committees to express itself. It works through just being there.

The end of further experiments with atom bombs would be like the early sunrays of hope which suffering humanity is longing for.

To Live or To Die

Pope Pius XII

"The growing mastery of man over terrifying natural forces has caused new and insistent reasons for anxiety. In fact, the destructive power of nuclear weapons has become unlimited. . . .

". . . If a catastrophe were to occur by a man's perverse will for domination—with all the reprisals implied in it—(the) ultimate biological, especially hereditary, effects on living species, in addition to its immense immediate damages, nobody can predict with certainty . . . instead of the exhausting and costly race toward death, the scientists of all nations and all faiths must feel grave moral obligation to pursue the noble aim of harnessing these energies for the service of man. . . ."

Walter Reuther

"None of the things we win at the bargaining table can defend us against the tragic destruction of the H-bomb.

"Each bigger bomb is followed by a still bigger bomb.

"Megaton H-bombs are followed by even greater megaton H-bombs until finally mankind has achieved the capacity of total self-destruction. . . .

"There is no defense against the H-bomb. I say the only adequate defense against the H-bomb is peace, unconditional peace in the world. There is no other defense.

"Have we arrived at that place in human civilization where mankind now wants to crawl back into new holes? Is that the kind of life we want for our children?

"I say the answer must be no. We do not want to live our lives in the tunnels and in dugouts; we want to live in the bright sunshine of a free world of peace so that all people can have a fuller measure of freedom and social justice."

Eleanor Roosevelt

". . . The question is whether we could not accept the offer which, if I remember rightly, already has been made by the Soviet Union to abandon these tests.

"So far we have known whenever the Soviet has set off hydrogen bomb explosions. They are like an earthquake; they register all over the world. . . . I would be willing to take the small risk involved in not having an inspection system.

". . . It requires the experience the Japanese have had to make people feel strongly about doing something—and doing it now—to end nuclear bomb tests, which may be harming us far more than we know."

Dr. Linus Pauling
Nobel Prize Winner

"An international agreement to stop the tests would stop the spread of these weapons and would be a first step toward general disarmament. Inspection is simple. No large bomb can be detonated without detection. . . .

"The bomb tests that have been made so far will ultimately have caused the deaths of about one million persons in the world. These one million persons will have died 10 or 20 or 30 years earlier than their life span because the radiation has produced bone cancer, leukemia or some other disease.

"These bomb tests will also cause the birth of 200,000 seriously defective children in the next generation of human beings, children with serious mental deficiency or serious physical defects.

"If the Christmas Island tests are carried out and one superbomb, with five megatons equivalent of fission, is exploded, it will cause the deaths from cancer and other diseases of 100,000 persons now in the world and will increase by 20,000 the number of seriously defective children born in the next generation.

". . . in an absolute sense, the estimated effect (of bomb tests) is no small matter, no negligible effect.

"It is, indeed, a crime, a crime against the human race. It is immoral, a violation of the principles of humanity.

". . . if another 10 super-bombs are exploded in the next few years, the damage will be doubled. The bomb tests must be stopped."

Lt. Gen. James Gavin

(Chief of the U.S. Army Research and Development, testifying before a U.S. Senate subcommittee on what would happen in a full-scale nuclear assault on the Soviet Union):

"Current planning estimates run on the order of several hundred million deaths; that would be either way, depending on which way the wind blew. If the wind blew to the southeast, they would be most likely in the USSR, although they would extend into Japan and perhaps down into the Philippines area. If the wind blew the other way, they would extend well back into Western Europe."

Statement of 18 Leading Nuclear Scientists of the German Federal Republic

"Tactical atomic weapons have the same destructive power as normal atomic bombs. They are described as tactical in order to express the idea that they are to be used not only against human settlements but against ground troops. Every single tactical atom or shell has an effect similar to that of the first atom bomb, which destroyed Hiroshima. Because the tactical atom bombs are available today in great numbers, their total destructive effect would be much greater. These bombs are called 'small' only in comparison with the 'strategic' bombs developed since, above all the hydrogen bomb.

"No physical limits are known to the possibility of increasing the destructive effects of strategic atomic weapons. Today one tactical atom bomb can destroy a small city. But one hydrogen bomb can render a region as big as the Ruhr uninhabitable for some time. Through the diffusion of radioactivity, one could today with hydrogen bombs in all likelihood destroy the population of the West German Republic. We know no possible technique for protecting large masses of population from this peril. . . .

"Our profession, which is devoted to pure science and its development, and through which we influence many younger men, imposes upon us responsibility for the possible consequences. . . .

"None of the undersigned are ready to take any part in any way in the manufacture, testing or use of atomic weapons. . . ."

Eugene Dennis

(*Speech at Carnegie Hall, Jan.* 20, 1956)

". . . Just look at what has happened to a few of the ideas that were supposedly locked away in prison with us Communist leaders in the summer of 1951.

"One was the very tenacious idea—embodied in the Stockholm peace pledge—that all nations should renounce atomic warfare, that all testing of nuclear weapons should be halted,

and that all nuclear instruments of war should be prohibited and destroyed.

"This idea has now become transformed into a mighty world-wide movement embracing the vast majority of mankind, and scores of governments, East and West. To the growing roster of its great advocates, who range from Khrushchev and Mao Tse-tung, to Nehru, Nasser, and the late Einstein—has now been added the influential voice of Pope Pius XII.

"Surely America's Catholics, especially those in the ranks of labor, will give prayerful thought to the Pope's Christmas message, and will help popularize his plea to save mankind from the horror of atomic warfare.

"Surely, too, most of America's Protestants and Jews, no less than we Communists, will also support this noble plea. If we peace-loving Americans, of different faiths and beliefs, concert our efforts, we can yet compel Washington to help the universal popular demand to quarantine the A- and H-bomb!"

". . . Is it not high time to curb the powers of monopoly, especially of those ultra-rapacious and bloodthirsty trusts that now have their clutches on atomic energy, and seek to divert this great potential force for promoting the general welfare to amassing super-profits and gambling with the peace of the world?

"Is it not high time to demand that the ownership, production, and control of all nuclear energy, resources, and know-how be nationalized—with full safeguards for labor's right to organize, strike and bargain collectively?"

Nobusuke Kishi

Premier of Japan

"We demand the prohibition of all (nuclear weapons) experiments solely and purely from the standpoint of humanity."

Dr. Charles Price

Retiring President of the Federation of Atomic Scientists

"Most scientists agree that these tests are harmful. There is plenty of data that suggest that the hydrogen bomb we exploded in 1954 harmed at least 10,000 people. Actually, between 10,000 and 1,000,000 is the closest we can get on the basis of our present knowledge, to the number that are harmed by the radio active fall-out of a bomb of that magnitude."

Adlai Stevenson

"It is like adding a little arsenic to your neighbor's coffee each day, but assuring him that it isn't enough to kill him."

Harold E. Talbot

Former U.S. Air Force Secretary

"(Atomic weapons) can lay waste an entire continent—men, women, children, even the beasts and the vegetation. They can abolish in a single night, not only a nation, but a whole civilization."

Bertrand Russell

"Neither side can hope for victory in such a (nuclear) war and there is a very real danger of the extermination of the human race by dust and rain from radioactive clouds. . . . The only hope for mankind is the avoidance of war."

Albert Einstein

"We cannot cease warning, again and again; we cannot relax our efforts to make all peoples of the world and particularly their governments aware of the unimaginable dis-

aster they are sure to call forth if they do not change their attitude towards each other and their conception of the organization of the future."

Professor Frederick Joliot-Curie

Nobel Prize Winner

"If the experiments are not stopped, radio-strontium will certainly reach a sufficient strength in men, and above all in young growing children, to provoke numerous cancers of the bone and leukemia . . . and constitutes a threat for future generations. . . . A great danger threatens each one of us and our descendants if a stop is not put immediately to test explosions of nuclear weapons"

Ralph E. Lapp and Jack Schubert

(*Radiation: What It is and How It Affects You.* Viking, N. Y.)

"If we define the maximum permissible concentration . . . as that which will produce only 1 per cent of radiation injury, we must recognize that extrapolation of such reasoning, even dividing the occupational MPC by ten, to a large population leaves one with 0.1 per cent incidence of injury. Such a risk is quite acceptable for small groups, but 0.1 per cent of the earth's population is 2.5 million people! . . .

"Evaluation of the global risk of continuing tests is a most perplexing enigma. Who makes the evaluation? What is the 'acceptable' risk? Quite obviously, an agency like the Atomic Energy Commission, which is charged with responsibility for testing nuclear weapons, should not be asked to assume the onus of appraising their risks to humanity. Such an action puts the plaintiff and judge on the same bench. . . .

". . . We should insist that the calculation of the risk be made in the open, in the light of all available physical and biological data. The authors venture the estimate that annual

additions to the stratosphere of approximately three megatons constitute a reasonable risk. This value is so small that a single Bravo (uranium-hydrogen-uranium) bomb exceeds it, and we propose that the nations of the world should focus their efforts on a cooperative plan to cease rather than to limit nuclear tests."

Warren Weaver

Vice-President of the Rockefeller Foundation

". . . In terms of inducing luekemia, in terms of the possible inducing of other forms of cancer such as bone cancer, this is a serious problem, of course. . . .

"When strontium-90 falls on the earth, the cycle through which it gets into human beings is largely a matter of going through the grasses, being eaten by cows, going into dairy products, and then going into man. And when this material goes into man, strontium, since it is chemically very like calcium, gets built into the skeleton.

"Now, this is a very unhappy fact, because it gets more or less permanently built into the skeleton and it is a long-lived isotope. So, unfortunately, that means that we are in the process of building into people, permanently inside of them, a source of radiation. . . ."

Pare Lorentz

"Radioactivity is poisoning our children. . . . It is not a question of whether we have polluted the earth; it is a question of how much we have polluted it. . . . If any disagreements arise, they are over the degree of our danger—how much of this stuff has already been absorbed by plants, ingested by animals, and given to human beings in food and milk? How much have we inhaled?"

THE TRUTH ABOUT HUNGARY

By HERBERT APTHEKER

This book, by a leading American scholar, deals with one of the most stirring and significant events of the twentieth century—the Hungarian uprising of the Fall of 1956.

After a careful examination of the historical and social background of Hungary, the volume probes deeply into the sources of popular discontent within the New Hungary. It examines at length the efforts at change that were being made, particularly after 1952, by the Party and the Government. The question of Hungarian-Soviet relations is weighed critically.

The author's own point of view is stated clearly and is argued for persuasively; but the volume brings forth in full and documentary form evidence that must be known and weighed by all, no matter what final value judgments may be reached.

The treatment of the subject is basically analytical, and the work is documented with care, with the source of every significant fact or quotation given. This book represents a conscientious effort to get a clear and truthful picture of Hungarian developments. The whole question of the meaning of Hungary for world socialism, and the lessons the uprising holds for Marxists, socialists, and democrats of all persuasions are dealt with at length.

This book is an exciting, thoughtful and challenging study of one of the most controversial and important occurrences of modern history.

A PATH FOR NIGERIA

1961
Draft manuscript

TWO PROPOSED PAMPHLETS FOR NIGERIA

by W.E.B. Du BOIS

I. A PATH FOR NIGERIA

FEED & CLOTHE YOURSELVES; do not import large quantities of food & drink; tax imported luxuries

DO NOT NEGLCT YOUR FARMER; he must be educated; he must receive a livin income; he must have a healthy, comfortable home

READJUST CITY, SUBURBS, RURAL DISTRICTS; do not emphasize city at expense of country; country must have schools, scien skill & machines. It must have Art and literature; entertainment

INDUSTRIES FOR NIGERIA, but not for profit of foreigners, but foruse, convenience and comfort of Nigerians .

save your own CAPITAL, import only as much as is necessary for you best develment. Do not let capitalists foreign or domestic control what is made; your need and not private profit is the criterion.

curb corporations and demands reports of business and profperty and profits regularly. This is a right not more curiosity. Learn skills and welcome skilled worke workers from abroad, but only if they come as equals and ask no privileges

COMMERCE & TRADE. Fair exchange of goods and services is the great conserver of Time and Effort and way to conserv civilization. But it must be fair. Foreign Trade tod especially between rich and poor countries; betwee home countries and colonies is to often theft based on force. Watch the absentee investor, the local business man who is stooge of foreiners. Remember that what you import from abroad must be paid for with what you sell a road; if imports exceed exports your are borowing and

must pay sometime, somehow

WAGES & INCOME. Ultimately a person must earn what he receives by his work or sacrifice. Income which is a gift, or gambling or theft will not in the end support a people. The ideal is from each worker the best he can do; ~~xrxxxxxxxx~~ to each person what he needs for life and health. to accomplish this we need Science and professions; knowledge of modern discovery; memory of the real past which is history. not lies and fairy tales which often masquerade as truth. We need law for Justice not simply for force

40-74-7

THESE ARE SOME OF THE PATTERNS WHICH THE WORLD ABOUT YOU IS STUDYING AND TRYING OUT. THIS YOU MUST DO. YOU CANNOT IGNORE THIS WORLD. YOU MUST BE APART OF IT AND FOR THIS ITHERS MUST BE PEACE ON EARTH

A PATH FOR NIGERIA

ABOUT MYSELF

My mother's great-grandfather was born in West Africa, kidnapped as a boy and sold by the Dutch into slavery in New York. As a young man he fought with the Americans in their revolution against the British and won his freedom. His grandchildren became small landholders in western Massachusetts and the daughter of one of them, Othelia, married the descendant of a French Huguenot who had migrated from Flanders to New York and thence his descendant, Dr. James Du Bois, settled in the Bahamas, where he had two mulatto sons, Alexander and John. Alexander was brought to the United States and his son, Alfred, married my mother, Mary Burghardt.

MY EDUCATION

I went to primary and secondary schools in my home town, Great Barrington, then to a college for freed Negroes, Fisk University, in Nashville, Tennessee; then to Harvard College in Massachusetts, where I stayed for two years and two more years in the University graduate school receiving my A. B., Cum Laude; A. M., and Ph. D. Then, for two years, I attended the Friedrich

Wilhelm (now Humboldt) University at Berlin, Germany.

MY WORK
AND TRAVEL

I began my work as a teacher in the United States in 1894, instructing in history and sociology until 1910. From 1910 to 1934, I became a founder and official of the National Association for the Advancement of Colored People, and editor of its monthly magazine advocating full citizenship rights for Americans of Negro descent.

In 1934 I returned to teaching and research. I travelled widely, visiting all states of the United States and making sixteen trips to Europe, Africa, and Asia, and once circumnavigating the globe. Also, I wrote fifteen books and many articles. Especially, I became interested in Africa, the land of my fathers. I wrote three books on Africa: In 1915 a book called "The Negro" (Home University Library, No. 91), "Black Folk, Then and Now", 1930; "The World and Africa", 1946. Also, I planned an Encyclopaedia Africana and got distinguished promises of assistance. However, I was never able to raise the funds actually to realise the project.

38-11-121

During the armistice which followed the First World War, I called the First Pan-African Congress, in Paris, 1919. In 1921 I assembled a Second Pan-African Congress meeting in London, Paris and Brussells in 1921 and largely attended. A Third Congress was held in London and Lisbon in 1923; a Fourth in New York in 1927, and a Fifth in Manchester, England, in 1945. The All-African Conference which met in Accra in 1958 was, in fact, the Sixth Pan-African Congress. Many other meetings and organisations followed the lead of these congresses and got inspiration from them, like the Congress of West Africa in 1920, and the various African organisations of South and East Africa.

MY VISITS
TO AFRICA

In 1925, I visited Liberia as Special Minister Plenipotentiary of the United States, bringing a message from President Coolidge to President King. In 1958, I visited Ghana when Dr. Nkrumah became Prime Minister and President of independent Ghana. I attended the opening of parliament and the inauguration of the President; I visited the cities and ports and paid my respects to the Asantehene of Ashanti at Kumasi. In 1960, I visited Nigeria when Dr. Nnamdi Azikiwe became the first native governor of this nation. I visited Lagos, Ibadan and Onitsa, where I sailed the Niger. In Ibadan I visited the University College. I had an interview with the Governor and suggested sending him a memorandum of advice to Nigeria, based on my knowledge of Africa, and on my recent visits to England, France, Germany, Italy, the Soviet Union and its allied states; China, and my long residence and study in the United States. This is the pamphlet.

221-11-83

FOOD, CLOTHES
AND SHELTER

Normally, the first duty of a people is to feed, clothe and shelter themselves. Nigeria is a well-situated state, with rich soil, great rivers, lakes and forests, a wealth of materials, vegetable and mineral, and a generous seaboard. It has a large but not crowded population which it can support from its own soil, with its own sowing, and reaping; spinning and weaving; planning and building. Its people are not homogenous, but not too different to preclude working together as one unified state with reconcilable aims and ideals.

For many centuries peoples living in what is now called Nigeria,

were not hungry, had sufficient clothing and shelter, and were content. Widows were cared for, there were no orphans nor prostitutes; artists and artisans made beautiful things and poets sang and recorded history. Now and then intertribal wars brought disaster, but there were long spaces of peace and plenty. Then came strangers from abroad to explore and trade; but in time this trade degenerated into slave trading and tribal wars became slave raids. When the slave trade declined, Britain appeared as ruler, seeking to displace native rule. Poverty appeared in the colonies. More and more of what the natives raised and made was seized as taxes and used not so much for native needs, as for cheap exports. Nigeria, an agricultural country, feeding, clothing and sheltering itself by the toil of its educated farmers, will need manufactures and skilled industries run by modern technical and scientific methods. The current method of bringing industry to farming countries is by borrowing wealth from Europe; buying machines and tools with this wealth and then importing skilled technicians from abroad to migrate here and set up factories. With these factory hands and engineers come merchants to buy the manufactured products for sale abroad; and bringing with them goods made abroad to sell to the natives. This system which once seemed quite natural and good for all was soon seen to be but little different from colonialism. The interest on borrowed capital was so high and the terms so onerous, that the lending capitalists soon owned the country. It was thus that Algeria, Tunis and Egypt came under the complete control of Britain and France. It was this that would soon have happened to Ghana had not Nkrumah checkmated the trend; it was this that would have been the fate of Nigeria had it not been for the sacrifice and persistence of Macauley and Azikiwe. Moreover, their work is not finished; it has just begun.

It is, of course, possible for a state to buy food and materials from abroad and thus trade can be a part of its interests. But foreign trade as

38-11-123

compared with domestic production always entails certain considerations: goods bought abroad must always eventually be paid for by goods sold to foreigners, and the ratio of exchange must therefore be carefully calculated. If the traders of goods or services are equal individuals or tribes of essentially equal status, the ratio of exchange, that is, the prices, will be reached by haggling in the market and will, in the long run, be fair to all. But under the colonial system, it was the practice for the mother country to set the prices and as white Europe despised black Africa and did not believe in the ability nor desert of of black folk it soon became customary for whites to pay the lowest possible wages for African labor and the cheapest prices for materials. Thus, the mother country grew rich and kept her home labor satisfied by paying them higher wages out of their profits on colonial trade. They also granted home labor some education and political rights, provided labour supported government policies and fought as soldiers to gain and keep colonial territory. The expenses of colonial government, pensions for colonial officials and special wages and privileges for white workers who came to the colonies greatly increased. In time, privileges for whites included segregated and comfortable homes and the right to vote and hold office, even when the natives were disfranchised and housed in ghettoes. As the native peoples realised their plight; and as by efforts of missionaries, some began to acquire education, there arose a demand for reform, which, today, in every part of Africa is resulting in colonial freedom.

38-11-124

FREE
NIGERIA

When now a nation like Nigeria becomes "free" just what does that mean? Under the laws of nature; with universal need for food, clothes and shelter,

there can manifestly be no complete freedom for man anywhere, nor at any time. Men must always plant and reap; search and dig and carry; spin and weave; cook, build and store; they must plan marriage, home and children. They must provide government: that is for order, cooperation and respect for others, so that all may live a good life and none be completely subordinate to the will of a few. Moreover, above and apart from this work to sustain life, there must remain leisure to make life worth living: for rest and play; for dance and song; for creative activity and any pursuit or game that men may choose and which does not hurt them, nor limit nor prevent similar activities among others.

From primitive times the work of a tribe or nation will include foreign trade, and that will call for increasing activity and thought as men come into contact with men. No people can live to themselves. Ever by accident or design, peoples meet with each other, and while there are times when such contact means trouble and war, in the long run, it is the contact of strange folk with others that leads to civilisation; that brings new goods and methods; new thoughts and ideals. Thus, foreign trade has ever been the beginning of progress. The West Coast early traded gold for salt with its northern neighbors. Spice for metals followed, and laborers for tools. This last exchange between Portuguese and Africans led to difficulties, at first unnoticed, but, in the end, of world wide significance. Intertribal wars were common in the early centuries: quarrels over hunting grounds, over succession to power, over trade. They often resulted in prisoners who became slaves of the visitors, and despised slaves if they differed in religion and culture.

38-11-125

THE FOREIGN
SLAVE TRADE

In the Fourteenth Century, as Holland, France and Britain were growing

rich on the loot of India, Portugal started to India down the coast of Africa, and began a trade in slaves which she sent back to Portugal. Portugal had been impoverished by war and class exploitation. Labor was sorely needed on the farms. Negroes were imported and this trade in human beings gave a new incentive to African intertribal wars. In the next century Spain sent an Italian west over the Atlantic to find a shorter way to India. Thus, Columbus discovered America. Here a new market for African labor arose among the British, French and Spanish.

Thus, in the Fifteenth Century the African slave raids became an industry that spread over the continent and after the Seven Years War, the British became attracted by the possibilities of gain by sending African slaves to America. From their Assiento Treaty with Spain in 1703, for 100 years, Britain built up the trade in African slaves to be the most profitable trade on earth, and the most disastrous to the African race. It is estimated that black Africa lost 100,000,000 souls in slave raids, the middle passage and captivity in America. Britain, by theft in India and the profit on the slave trade, accumulated an amount of capital that made its owners the most powerful people in the world; and America, despite its visions of democracy, freedom of religion and conquest of poverty, became the center of a new modern slavery.

38-11-126

AFRICAN
HISTORY

What now was this Africa, which came into fatal contact with the European world in the Fifteenth and following Centuries? Most men have forgotten the role of Africa from the beginning of time. Because of the slave trade they have come to despise black Africa and to say that Africa has no history. They excused African slavery by pretending that its purpose was conversion of

Africans to Christianity. This was the excuse invented after slavery became profitable. Then, when African slavery became the most prosperous industry on earth, Europeans claimed that Negroes were naturally inferior and their slavery to whites their natural condition. But, now, at last, the history of Africa is beginning to be made known. Bushmen and Pygmies seem to be the modern survivors of the first African peoples. About 5,000 years before Christ, Negroes appeared, pushing up from the Great Lakes regions, and coming down the Nile, founded Egypt. They mingled with Asiatic peoples, and this blend of races moved across North Africa, then a fertile region with no Sahara. Some of them went southwest, through the Congo Valley, and others marched northwest "toward the setting sun". They began to found cultures and states. Ghana appears about 300 years after Christ. It grew for 5 centuries into a notable dominion. Then the new Mohammedan religion spread from Arabia across North Africa and into Spain, converting thousands of Negroes. There, Arabs and Africans built a notable culture in Spain, influencing the European Renaissance and attacking Europe at Tours in 732. Also, they spread slowly southward and began to expand into imperial rule.

38-11-127

Under the black Mandingoes, the great empire of Malle (Melle, the Mellestine), with the cities of Timbucktu and Djenna (Guinea)arose. The Mellestine reached its zenith under the Sultan Kankan Musa. His pilgrimage to Mecca took place in 1324, and in his caravan were 60,000 persons and five million dollars worth of gold dust: the peoples of the East still talk of this magnificent journey -- and his state in the 14th century was one of the greatest states of the world.

ANCIENT
NIGERIA

We come now to the territory long known as Nigeria, and its extensions northward and eastward. Here developed one of the most interesting phases of

modern history, which has been almost forgotten. Here developed the Ashanti, and the people of Dahomey and Benin. Here were the Mandingoes, the Yorubas, the Mossi, Nube and Borgu, and Kanem. Here, along the Gulf of Guinea, was a civilization that reached back 5,000 years before Christ. Its peoples may have come from the East, or possibly, from out of the West and the fabulous Atlantis. The Yoruba-Benin-Dahomey appeared with remarkable art and industry, abreast, in many respects, with the modern world. The African slave trade in America centered in Guinea and devastated the Coast morally, socially and physically. European gin and firearms were traded for human beings from the 16th to the 19th centuries.

On the other hand, further north, the Songhay Empire, centering at the great bend of the Niger, lasted a thousand years from 700. The greatest ruler was Mohammed Abou Bakr, known as Mohammed Askia. He controlled an empire as large as all of Europe. "He was obeyed with as much docility in the farthest limits of his empire as he was in his own palace, and there reigned everywhere great plenty and absolute peace." The University of Sankore became a center of learning for the Mediterranean folk. Askia the Great reigned for 36 years. His successors were overthrown by the Moors who with the new gunpowder defeated the Songhay power at the Battle of Tondidibou in 1591. After the Songhay rule the Hausa appeared with their seven cities, of which Kano was the greatest, and Katsena the most famous. They brought industry and trade. Then came the kings of Kanem and lords of Bornu, whose power extended down through the valley of the Congo. A new people, the Fula, entered Nigeria in the 19th century, and, in time, became masters of the Central Sudan.

38-11-128

THE INDUSTRIAL REVOLUTION

At the very time that the Sudan was spreading its mighty empires; which

had pushed the Bantu on their thousand-year march south; and as the artisans of Atlantis came pressing east, Europe was developing the capitalistic system. Capital is wealth saved; not consumed, but used to make more wealth for future consumption. Africans saved and used wealth for capital, but on a small scale, since production was limited; and owned by the family and clan, not by individuals. The same was true in Europe until, suddenly, in the Sixteenth Century, European traders got hold of fabulous treasure from two sources: and its control fell into private hands. Europeans found vast wealth by plundering India, and by stealing peasants in West Africa and enslaving them in America. Americans raised tobacco, sugar and cotton, and sold them over all the earth. Tribal wars of Africa, feeding the foreign slave raids, robbed the continent of 100,000,000 human beings, distorted African lives and customs, uprooted its political structure, its art, and clouded its ideals. The world was transformed. Conquest by Europe overthrew the civilization of Asia: Europe began to gain rule over most of the world, by stealing gold and silver, using slave labor, and selling the goods which slaves made for profits so huge as to enable it to manufacture goods and trade these for the raw materials of the whole world. The skill of American and European labor increased the ability to manufacture, and science and invention gave miraculous power to this new technique.

38-11-129

From 1800 Europe ruled the world. Africa and Asia and the islands of the Seven Seas bowed or were bent before it. It even partially deceived itself; and, under the spell of a new religion borrowed from Asia, justified theft and slavery, conquest and force, as the one way in which superior White folk, could lead colored folk to civilization, if, indeed, they could be led. But the world did not stand still. The Christian church split in disagreement, the black slaves in the West Indies arose in continuous and increasing revolt from the 15th to the 18th century, and the white peasants of Europe sought freedom from serfdom in the

growing towns where the new capitalists hired them as servants, laborers, artisans, and soldiers. The artisans in turn, fought wars to gain more capital for the town dwellers.

AMERICAN
DEMOCRACY

38-11-130

America is a curious tale of selfish greed and lofty hope. Spain, seeing in the Fifteenth Century, how much gold and other treasure Portugal, Holland, Britain and France were making in Africa and Asia by sailing south around Africa on the Atlantic Ocean; and what riches Italy had garnered in Asia by traversing the Mediterranean, was sold the idea of reaching the east more quickly by sailing west. On the way, the Italian, Columbus, and his one black and two white pilots, discovered the West Indies. Europeans flocked there to find gold and jewels, but found mainly only fertile soil, which, if cultivated, would yield rich crops. European laborers were sent overseas by bargain, force and fraud; then they obtained African slaves which were bought from the Spanish, Dutch and French. The British built a vast world trade on African slaves and the Americans found profitable use for them. Black slaves raised tobacco and cotton in the Southern United States and sugar in the West Indies: white labor distilled rum in the Northern states and sold it in Africa for slaves; they sold the slaves in the West Indies for sugar, and took the sugar to the Northern United States to make rum. Everybody was prosperous. Sugar began to be cheap in Europe, tobacco began to make Virginians rich, and cotton became king. Only the black slaves writhed.

However, some Europeans began to see in America a place where free land would make all citizens well-to-do, able to move freely, do what they wanted to, and believe what they thought was true. Here, political democracy would grow,

and religious freedom. But greed interfered. American traders grew rich on their commerce. Monopoly of the American colonial trade would make Britain the greatest empire of the world if the British limited their colonies to trade with Britain alone. The Americans refused to restrict trade or let the British rule them completely; they stopped the most profitable British monopoly, the African slave trade. Britain and America flew to war, both using black slaves as soldiers. France, allied with the red Indians, helped America, and America won. A new democracy was formed, founded on the dictum that "all men are created equal".

38-11-131

America hesitated: it refused to continue the prohibition of the African slave trade, because so much slave labor had been lost in the war. Britain, however, itself, tried to stop the trade, which had ceased to pay because of continuous revolt of slaves in the West Indies. America finally followed, but did not enforce her own laws, and the illicit African slave trade continued until 1860. The slave system, meantime, became so powerful that slave-raised cotton was furnishing the world with cheap clothing. The Northern United States, France and Britain competed for the cotton crop, and the slave South sought the highest price for its product. The North sought to monopolise the cotton crop by tariff restrictions on imports. However, the white laborers of the nation feared the competition of slave labor; and to their opposition to slavery was added the moral repulsion to slavery which arose from the Abolitionists and the protest of Free Negroes. When this alliance succeeded in restricting the further spread of slave territory in the United States, the South tried to secede from the Union and form a slave empire in the West Indies and South America. The North tried to hold them in the Union by force. The non-slave-holding Southern whites began to refuse to fight for the slaveholders and deserted by the thousands; the Northern white laborers,

especially, the foreigners, refused to enlist and mobbed the Negroes on the streets. But the Negroes, free and slave, offered their services, and, in the end, 500,000 were used as soldiers, stevedores, servants and spies. Other millions stood ready to enlist. The slave barons became frightened, and even tried to enlist slaves on their side. But it was too late, and they surrendered to the North. Thus, the Civil War became a war which abolished Negro slavery in the United States.

The United States is regarded as the richest country in the world, and this is credited to its development of private initiative and development of private capital. This is not the complete truth. The United States is rich because of its vast store of natural materials like coal, iron, oil and other minerals; its almost unlimited amount of rich land, with forests and water power. This wealth we have wasted, and are wasting. We have allowed it to be monopolized by private individuals until now their corporations rule the land. Socialism in the New Deal fought this, and even today, the capitalist system is being bolstered by money from public taxation assigned as a gift to private individuals. This nation is still rich, but in grave danger unless real socialism prevails.

38-11-132

COLONIAL
IMPERIALISM

Britain, unable to make further profit out of the slave trade, gradually adopted Colonial Imperialism -- that is, instead of transporting labor from Africa to America, she sought to seize control of territory and people in Africa and Asia, and, raising raw material there with cheap labor, carry it to Europe and process it into valuable goods which sold at huge profit. European workers increased their demand for wages and rights; after organising trade unions the workers won, but only by helping capital to gain and hold more colonial territory.

Thus, Britain gained control of countries like Nigeria. The British appeared there first as traders. Then, helped by natives like Samuel Crowther, they explored more land and materials; finally, they attempted political control, but met resistance from native rulers. They tried methods learned in Asia. Bringing in highwaymen and freebooters like Lugard and Chinese Gordon, they gained new colonial territory for the empire. Thus in Uganda, Lugard used his machine guns on Catholics, Protestants and Mohammedans fighting to conquer each other and subdue the native tribes. At last Lugard made Uganda a part of the British Empire. Then, although still legally an outlaw, he came to Nigeria and showed the British how to annex Nigeria by his "indirect rule": that is, by bribing, cajoling and befriending rulers, and paying the salaries of chiefs until they acknowledged Britain as overlord, not by conquest, but by consent.

28-11-132a

However, the Nigerians were not content. Increasingly, they protested against the loss of their ancient liberties. Many used their ancient lore and customs; some secured education. The grandson of Samuel Crowther, the first black Anglican Bishop in West Africa, secured a place in the civil service and through his newspaper, Macauley started the battle for freedom. He was later joined by a young Nigerian student, Nnamdi Azikiwe, now Governor-General of Nigeria, who for 25 years fought a desperate battle for freedom until freedom came, November 1, 1960.

I witnessed with pride and hope the inauguration of the first black Governor-General and Commander-In-Chief of a Dominion of the British Commonwealth of nations. I hail Nigeria as the largest black nation of the world, and as a worthy successor of the African imperial rule which began with the Songhay seven hundred years after Christ and became, under Mohammed Askia, in the sixteenth

8 1 1 8

century, an empire as large as all Europe today, and as cultured as the Europe of that day, with its great University of Sankore, and with "peace and plenty for all".

Then succeeded the rule of the Hausa with their seven industrial cities led by Kano and accompanied in development to the East by the kings of Kanem and the lords of Bornu. Westward then marched the Fulani, and there rolled up from the Gulf of Guinea, the Yoruba, the Ibo and the people of Benin. With these came industry, art and architecture which has taught the whole modern world. But all this marvelous development was distorted and overthrown by the British slave trade to America, and followed in the nineteenth century by colonial imperialism which reduced this part of Africa to subjection to capitalist West Europe and North America.

38-11-33

THE PROBLEM
OF CAPITAL

What does independence and freedom mean? Nigeria, an agricultural country, feeding, clothing and sheltering itself by the toil of its farmers, will need manufactures and skilled industries run by modern technical and scientific methods. For this Nigeria will need capital. All nations need capital. Capital accumulation is a great modern idea. This means simply that a nation must produce more than enough for its immediate needs so as to use the surplus for better and increased production in the future. How now can capital best be raised? The simplest way is that a worker refrains from consuming all he makes and saves the surplus. He thus deserves a profit for his sacrifice, and, of course, retains ownership of his original property. This is the original and simple concept of capital. But the concept and practice has greatly changed in modern days: first, the original capital is often not owned wholly by an individual,

but is the gift of the state, and yet the profit goes into private hands. For instance, the state builds a harbor with public taxes and yet private persons or corporations reap the profit without adequate payment. Or a private corporation builds a railroad, sells it to the state for a price fixed by the corporation and much higher than it is worth. The state tries to run the railroad, but must first pay the inflated price or "bonded indebtedness" with high interest. State conduct of the railroad results in a deficit which the public pays with high fares and freight charges. Or, again, the state gives a private corporation a monopoly in the use of public streets, and the corporation makes a large profit which it calls its own, with no payment or very inadequate payment to the public. So that a new state like Nigeria must, from the beginning, be sure that the capital they borrow really belongs to the person or corporation which claims profit for its use.

The current method of bringing industry to farming countries is by borrowing wealth from Europe; buying machines and tools with this wealth and then importing skilled technicians from abroad to migrate here and set up factories. With these factory hands and engineers come merchants to buy manufactured products for sale abroad; and bringing with them goods made abroad to sell to the native. This system which once seemed quite natural and good for all was soon seen to be but little different from colonialism. The interest on borrowed capital was so high and the terms so onerous, that the lending capitalists soon owned the country. It was thus that Algeria, Tunis and Egypt came under the complete control of Britain and France. It was this that would soon have happened to Ghana had not Nkrumah checkmated the trend; it was this that would have been the fate of Nigeria, had it not been for the sacrifice and persistence of Macauley and Azikiwe. Moreover, their work is not finished: it has just begun.

38-11-134

Nigeria is a rich land in both senses of the word: it is rich because it has abundance of rich soil, variety of tree and vine; a wealth of minerals, buried beneath, and bright sun and floods of water above. It can, if properly used, feed and clothe and shelter thirty-six million Nigerians and other millions abroad. Then, too, Nigeria is rich in the sense that, if its soil is raped and its workers starved and its materials stolen and taken abroad, the white folk of Britain, France and the United States may live, not simply in comfort, but in extravagant luxury, while Nigerians starve. In this sense much of the world would regard Nigeria as rich because its masses of people would be poor.

Nigeria needs industry; and for industry Nigeria needs capital; and to use capital Nigeria needs skill, engineers, science. Capital must be saved. Each Nigerian, above what he eats, wears, and uses, must sacrifice and save. Every nation must save wealth for use as capital -- to make more goods for future use.

28-11-135

Considering the need; looking the present world crisis and threat straight in the face; considering how advantageous it would be if more capital was available now, some capital can and should be borrowed, if that can be done on favorable terms. It has long been the custom for western capitalists to gang up on poor countries in Asia and Africa and charge them exorbitant interest. Today they charge from five to ten percent, with other requirements which raise the charge to fifteen or twenty-five percent. But the Soviet Union and China often lend for two percent, and sometimes for nothing. Nigeria should examine all terms offered, and if they are clear and honest, with no strings attached, borrow at the best rates, the smallest sums sufficient for its needs.

Again, in the past, the nations which loan, usually sent their own nationals to direct colonial industry and furnish the direction and skill. For

these they demanded special pay, preferred status, the right to govern, even when the natives were disfranchised; and preferred places to live. All this privilege must go. If white folk cannot come to Nigeria and live on Nigerian wages, alongside Nigerian people, with the rights, and no more rights, than Nigerians enjoy, then White folk must stay out of Nigeria. Differences in custom, current ignorance of sanitation, and dire poverty, may make it difficult at present to carry out this equality of treatment; but that only indicates how quickly and thoroughly Nigeria must rid itself of poverty, ignorance and disease, and what whites must sacrifice if they come here.

38-11-136

However, there is offered another way. Nigeria will find that the British and French, and, especially, the North Americans, suggest a quick by-path for Nigeria to become rich and happy. And that is for intelligent and well-to-do Nigerians to join the British and Americans and other white capitalists in exploiting the country, and using cheap black labor and cheap land and its products, in making themselves and the white folk rich, and keeping most Nigerians, expecially the farmers and peasants, ignorant, poor and sick.

They say this should be done because it is the best and quickest way to help Nigeria upward. They point out that when men say that such a country is rich, they mean that their upper classes are rich, but that the masses are poor, because the wealth they earn is used to support the rich in comfort and even luxury. They suggest that, just as in the past, white Europe lived on black Africa, so in the future, the more prosperous black Nigerians and rich colored Americans become junior partners with white Europeans and live on the poverty, ignorance and sicknesses of the mass of Nigerians living in the country districts and the slums of the towns.

SOCIALISM

There are other folk in Nigeria, and increasingly in Europe and Asia, who say no, there is another answer. It has become customary in the 19th century in Europe and North America to build Progress on Poverty; to make a few cultured classes rich by letting them feed on a mass of the poor and ignorant workers. This is not necessary and was not done in the past. In primitive Nigeria, no member of a tribe was hungry so long as the tribe had food. There were no homeless and unmarried women, no uncared-for widows, nor helpless orphans. The tribe and clan fed the hungry and protected the helpless. The clan saved capital and invested it. The profits naturally belonged, not to the individual who handled the transaction, but to the tribe which owned the wealth. The individual was paid for his work but for no more. To be sure, this system was not perfect. Tribes were broken up by wars, and wars became slave raids which further disrupted clans. Clans and nations moved to avoid disaster or gain new land or power. Disrupted members of tribes took refuge in towns without tribal protection, and the ancient care failed often or disappeared. But it was an effective way of preventing poverty and spreading wisdom where and when it worked. Men remembered it, chiefs practiced it, and medicine men told about it. When now it is suggested that this common effort of the state be revived in some form, British and Americans scream "Socialism!" or "Communism!" but wise Nigerians are not frightened.

I have only to impress upon you that here there should be on your part little hesitancy. Socialism and Communism, under the teaching of Karl Marx and Lenin, are beginning to triumph all over the world; and you should not hesitate to study these doctrines, and the results of the reign of private capital, under Western Europe during the nineteenth century. Your logical development should stem directly from the communalism of your fathers, where capital or wealth used

38-11-137

to produce wealth was controlled by the chiefs who represented the tribe as real owner, just as, today, land and water are owned in a similar way; and the profit made in early days through this capitalism belonged to all and not to any individual. Can and should socialism be restored in the great independent Dominion of Nigeria? Northern Nigeria, with its ruling sultans and emirs, with its Mohammedan and primitive religions, with its chiefs and medicine men, is still the stronghold of the ancient communalism. As such, it is a most valuable counterweight to Eastern and Western Nigeria, which are centers of the new commercialism, where a new Bourgeoisie are seeking to exploit land and labor as is customary in the western world. The industrial and commercial Nigeria has embraced education and science, while the North has lagged in schools, and defended primitive customs and dogma which hinder progress. The star of hope is that the North is now beginning to encourage education and the commercial south is studying Socialism and Communism, and what they may hold for future Nigeria.

38-11-188

Nigeria must build a welfare state and move toward a state where all men work to the best of their ability and receive as wage not everything that they want, but everything that they need for the greatest development of all the people. This will involve sacrifice. This will mean, not the rule of the rich and the smart, but the uplift of the great mass of people, out of which will come power and genius, and ideals which will restore Africa to the place it once occupied in the forefront of the world.

In the hard and bitter strife toward this end you will find allies. Some few in Western Europe and North America. But not many, for they want, not so much your progress, as profit from your free land and cheap labor. They are willing to share this loot with those of you who can be bought. But, in nations like the Soviet Union and the Peoples Republic of China; in Czechoslovakia,

Poland, East Germany, and Hungary, you will find allies and friends who will help you toward freedom and peace. These people are not as they are often painted, either fools or conspirators, but struggling and oppressed folk like you, who are striving for a decent life. You should visit them, and get to know them. Britain and Scandinavia accept a partial socialism, but refuse, as yet, to accept the aims and methods of Communism. That is their right. If the United States fears Communism, that is their business, if they do not suppress the truth. If Cuba chooses Communism, it has the right so to choose. Whatever Nigeria accepts is not a name but a fact. Nigeria must prevent poverty; it must educate its children; it must heal its sick. Whatever path leads to these ends, Nigeria must follow, no matter what it is called. Nigerian students should study and travellers should visit and examine the way in which the nations of the West and East are settling the pressing problems of income and expense; of work and wage; of property, of crime; of education and employment. Deeds, not mere words, settle these problems, and it matters not a jot whether the system which proves effective is called Capitalism, Socialism, or Communism. Nigeria must adopt those measures which solve her problems and ignore that which suits others, but does not apply to her.

88-11-139

AMERICAN
NEGROES

In seeking these answers, the attitude and words of American Negroes greatly puzzle Nigerians today. They know that millions of black Africans for 400 years were stolen from their homes and enslaved in America when not murdered or drowned at sea. In America they suffered every cruelty and degradation, while digging from the soil stolen from the Red Indians, wealth which made Europe rich and powerful, and long masters of mankind. At length, these black slaves gained

partial freedom by their own revolt, and by the help of white folk who grew ashamed of their own sin, and pitied their victims' sufferings. They sued and sacrificed as black Americans and their white friends hoped that free black Americans might lead black Africa to freedom. But, before black America was really free, Black Africa arose to its feet and asserted a freedom and independence which is astonishing the world.

When, now, after some efforts at returning to their motherland; after a series of Pan-African Congresses and two world wars, there begins a new visiting of Africa by American Negroes. ~~Most~~ many of these Negroes seem to insist that they are really quite well off in America; that racial segregation and color discrimination has almost disappeared, and that American Negroes are ready to join white folk as investors in African industry, and as guides in American skills and methods.

38-11-140

Then comes some contradiction. Some other black Americans arrive, many of whom have suffered persecution in the United States and been refused passports to travel. They deny this rosy picture; they aver that, despite great progress, oppression, color discrimination and segregation still persist in the United States, even despite the law; and that most of the black Americans who spread these pleasant stories are paid to do so by the State Department of the Government of the United States; Or by Big Business enterprise which wants to prevent Africans from learning of Socialism or seeing Communism in action. Under these circumstances, the path of Nigeria is straight. Learn the facts. Listen to the truth. Believe what is Right and follow the good.

Freedom and independence do not involve isolation. Do not withdraw from the world: join it more closely than before, but join as equals. Educate your youth at home; but send some of your bright and eager youth abroad for study and living in the chief nations of the world. Send students to Britain, to the

United States, to Scandinavia, and Germany; also to the Soviet Union and its allies; and, especially, to China, because the Yellow Race has suffered even more than the Black Race from the cruelty and exploitation of the white race. Use education to rebind and heal the rifts of mankind, and never forget that trade and commerce can be aids to human progress.

THE AFRICAN WOMAN

Africans are born traders. From the birth of Time, the African market has set patterns for the world from the Nile to the Niger, from the Senegal to the Congo, from the Zambesi to the sea. The freedom of women began in the African market-place, and still can be seen on the streets of Cairo, Accra, Lagos, Ibadan and Leopoldville.

Guard your women. The white man has for two centuries been the threat of Negro womanhood. White men have raped and degraded colored women from Casablanca to Capetown, from Thailand to Calcutta. Americans are planning to send a "Peace Corps" to Africa. This, which seems like unselfish help to many, may prove veritable disaster. Some of these young people may be honestly desirous to help; but most of them have been trained from childhood with prejudice against Negroes and to regard them as inferiors. Most of them will have been taught to regard Communism as a crime and Socialism as dangerous, and will have learned distrust of the Soviet Union and contempt for China. They will believe Americans must prepare for a third world war and will be apt to assume, as Eisenhower once said, that Americans "can lick the world". Also, there will be among these Americans a number who will come to Africa to carouse, gamble and whore, and to leave their bastards in Nigeria, as Americans did in Germany, Japan, the Phillipines and Korea. Without much work they will receive an income far higher than Africans, and for a fifth column for their foes. Watch this Corps and treat their members as they deserve.

28-11-141

You are facing a desperately divided world, full of suspicion and hate. In this world, Americans, especially, assume that Negroes believe in them and will eagerly follow wherever they beckon. They believe that colored folk are quickly flattered by their notice. They will, therefore, hasten to give Negroes advice. They will not go to Africa to learn, but only to teach. Among such visitors will be sent some Americans of African descent, who, also, will assume that they will be received gladly, and will be able to teach Africans before they know them. Disabuse all these visitors. Disabuse their ignorance. Make them either learn or go home. After they learn what they must do before Africa receives them, then be willing to learn from them whatever they can teach.

Against women African traders, and their market-place, is rising a terrible menace in the form of the European corporation, like unilevers of Britain, and other giant corporations of Belgium, France and Switzerland, with the best and highest paid skill of the world, backed by the airplanes, armies and navies of most of the world's most powerful nations. This duel goes on today along the streets of every African town. The mass of retail traders, selling

38-11-142

directly to consumers who are themselves either artisans or workers, are the basis of the national economy. They correspond to the artisans and retail traders of the world, and, like them, are being attacked by the Corporation which, eventually, unless the State steps in, will drive them out of business, as it is driving out the retail merchants of the western world.

THE CORPORATION

What is the Corporation? It began in Western Europe in the Middle Ages, when a Group of persons secured the right to be legally regarded as a person with limited responsibilities, so that it could keep its gains made in trade and work for private use, but could shift a part of its losses on the State. It could thus afford to risk chances which would have ruined the lone trader. This artificial Body or Corporation entered into trade, and, if it lost, lost only what it risked; if it gained, it made fortunes. The state soon saw these advantages and took part in the Corporations. If the State was an absolute monarchy, the King then shared the gains of the Corporation and taxed the people for its losses. But soon the other members of the corporations secured some of the gain or threatened withdrawal. Thus they shared some of the monarch's power and turned the State into an aristocracy.

Later, the common folk forced themselves into corporations and aristocracies became democracies. When the wage contract became common -- that is, when the laborer was forced to sell the results of his labor to the capitalist, he had to form a defensive alliance, the Trade Union, to protect his rights. He changed the medieval guild which comprised both employer and worker, and made a new group

38-11-143

of laborers, after bitter opposition from the property owners. In the early 18th century the South Sea Bubble ruined thousands and revealed the possibilities of fraud. But in the late Nineteenth Century the labor union gained recognition and legal status with political power and education for workers. Then, in the Twentieth Century, the corporations of capitalists began to move in to control the labor unions by law, curtailing their activities; and by bribing their officials; until, today, many of the most powerful unions represent capital as much, or more so, than labor. Nigeria must watch her unions; see that the workers control them by democratic process, and that the power of their officials is not secretly increased by bribery from capitalists. It was the revolt of the workers at Paris, in 1945, against capitalist-controlled unions, which made the Fifth Pan-African Congress possible, and started Nkrumah toward freeing Ghana.

38-11-144

This growth and change of corporations can be seen in Western Europe. Elisabeth of England incorporated the African slave trade. Her nobility forced themselves into power; the great merchant groups succeeded to power under the Stuarts, and with Cromwell the power of merchants decreased. Then democracy entered, reaching its zenith with 1776. Democracy fell before the oligarchy of the Slave Power, but triumphed in Civil War and abolition.

Since 1876, however, a new set of corporations appeared in America, due to disfranchising Negroes and Poor Whites; to hoarding gold and monopolising land and natural resources. The Corporation killed democracy in the United States, and now rules supreme, buying the presidency, owning most high offices, cowing Congress, and controlling Public Opinion through the monopoly of news-gathering, of the press, radio and television, and the limiting of the publication of books. Capital and invention now made the corporate form of enterprise invincible, and it swept the world. Great Britain and France drove Germany out of competition

in colonial power; and the United States pressed Britain to the wall, and made a million a day profit out of the First World War. But the greed of the United States drove the world into bankruptcy; and Germany and Italy and Japan tried to seize the cheap colonial labor of the world in 1939, and, thus, rule industry.

A new element appeared, the Socialist Union of Russia and neighboring peoples. They, under the stern Stalin, beat back the Germans, and freed Europe and America, at the sacrifice of 20,000,000 lives, and a large part of their hard-earned savings. Stalin and Roosevelt, therefore, proposed an alliance between the Socialist East and Capitalist West, based on disarming Germany and making her pay a part of the cost of the war. But Churchill, (flattering and) cajoling Truman, Byrnes, and his rotten Boroughs, the American corporations and Trade Unions, guided by Meany; and Clay, with the armed forces, forced a settlement which refused the Soviet Union help, furnished West Germany with arms and capital, and gave her corporations immense new power. The United States ringed the Soviet Union with threatening bases, armed with modern weapons. These weapons now included atomic and nuclear power, and, for a time, the United States believed that it could make the world do its will. But America failed. The Soviets invented their own bomb. India freed itself from Britain, so far as her own capitalists allowed. China threw off America's stooge, and, with American arms, drove Chiang-Kai-Chek off the mainland. She erected an independent Socialist Republic. Britain saw the handwriting on the wall. She yielded independence to Ghana, and provincial status to Nigeria. France gave most of her colonial world partial independence.

Moreover, corporations in America and the West have, lately, increased their power and privilege. Formerly, the corporation belonged to those furnishing its capital. Now, only a part of those buying stock are real owners, with a voice in controlling the policies and funds of the corporations. The rest are merely shareholders, receiving, when the real owners decree, dividends of such

38-11-145

amount as the owners decide, or none at all. Yet Big Businesses advertise how large a share of industry the public owns! Beyond this, through corporations buying stock in other corporations, such "holding companies" can arrange to control whole industries through ownership of as little as a fifth of the invested capital. Thus democracy gradually disappears from industry and oligarchy or dictatorship takes control of work and wage, property and income. All this is made possible through elaborate secrecy. The ownership of property; the amount of individual or corporate income; the business transactions, the profits or losses, are guarded by law, and, thus, the basic facts of industry, knowledge of which is indispensable to intelligent judgment, can be known only in part.

38-11-146

THE FUNCTION
OF LAWYERS

This legal basis of work and wage is laid by lawyers. Lawyers make the law in legislatures, interpret it as judges; and guide individuals, and, especially, corporations, in methods of breaking it. Physicians heal, preachers guide, engineers calculate; but by growing agreement and common understanding, lawyers not only make the law but break it, not only defend the innocent but set the guilty free, and this is regarded as right and justifiable.

Of course, other professions are not all unselfish: physicians often forget their duty to heal disease and prevent disease, and act like trade unions to prevent competition, raise fees, and monopolise medicine. Civil servants often try to make money, rather than carry on the business of the State honestly. Preachers seek place and salary, rather than moral conduct. In fact, human beings are not naturally good, but are tempted to be selfish and forgetful of their neighbors. Especially since this awful era of world wars, many have come to think

that the world belongs to the smart, and that murder, gambling, and theft, are the quickest way to success. The history of mankind proves that this is not true. That is the reason that all peoples have adopted religions to teach morals and to emphasize the public value of right conduct.

FOREIGN
CORPORATIONS

38-11-147

How, now, shall Nigeria protect her retail trade and curb corporations, both native and foreign, of Britain, France, Switzerland and America, which are already doing large business within her borders, and which restrain her own bourgeoisie from becoming junior partners in this foreign enterprise? Remember that, for the most part, these corporations are too large, powerful and widespread for Nigerians to think of gaining control of them. They are, today, a sort of super-government of the world. Unilevers is a combination of British and German companies with capital of a billion dollars, and profits of 250,000,000 dollars a year. Its 25,000 managers cover the earth, and are ruled by an oligarchy, and backed by the armies and ships of the British Commonwealth. There is the Imperial Chemical Industries, which has spent since the second World War, a billion and a half dollars on new plants, and is ruled by a tight family group of 12 men. There is the Union Miniere du Haut Katanga, which mines 60% of the world's cobalt, and 11% of the world's copper. It is owned by Belgian, British and American investors, and is responsible for holding up the black Congo Republic, and for murdering its Prime Minister. Here is the fight of the futures Corporation against democracy.

A few black employees may share corporation profits and have some weak voice in policy. Meantime, that policy will seek to kill the African markets, and the host of small women traders, reducing them to poverty and unemployment. The state of Nigeria has, of course, the power to eject these corporations and confiscate their local capital. But that would be a fatal mistake at present. These

corporations now perform a great function. They dominate world trade. Without their consent Nigerian enterprise cannot function abroad. They have the power to hurt Nigeria in many ways: not only in trade and credit, but also in acquiring skill and technique; in finding foreign markets for African goods; in getting credit and getting fair prices.

Nevertheless, they are not all-powerful. The small retailers can undersell them, locally unless they keep their prices reasonable and treat their black customers courteously. Also, Nigeria has much power. She can tax all corporations doing business within her borders on their property and privileges. In most western nations, corporations escape taxation by various devices, but, especially, because the people do not know the income of, or privileges enjoyed by, corporations. In the United States, a teacher may pay 40 percent of his income in taxes, while the Standard Oil Company escapes with payment of one percent. Nigeria, tax your corporations, fairly but fully! Also, control your retail traders; enforce sanitary rules of maufacture and display; require steadily higher education of those buying and selling; allow no cheating nor deception. For both corporations and individuals enforce fair prices. In turn, give both the market-place and the sidewalk vendor, clean and accessible places for trade. Do not clutter the sidewalks, or fill the streets with waste and refuse. In short, so lift the standards of the street vendors, and so curb the profit and privileges of the corporations that they gradually approach substantial equality of opportunity to serve the folk.

And there lies the great truth which this people must seek: Service, not gain, not the spread of profit, but the increase of contentment and happiness. This is not utopian; it is not impossible. For five centuries Europe has taught the world that only the few can be rich, educated and live decently; and that this can happen only at the expense of keeping most people poor, ignorant and sick.

38-11-148

Prophets and sages, working people, and poets, today are pointing out a better way: if all work hard at that which they can do best; if materials, goods and services are given to all men, not in proportion to what they can take, but in proportion to what they need to make them healthy persons, and effective citizens.

EDUCATION

To know the truth requires intelligence; not only native ability to think, but also information acquired from others; from words of the wise, from books and papers in which wisdom and events are recorded. Not only must such knowledge be had for work and trade, but also, even more, for knowledge of the natural laws which rule this intricate and puzzling world in which we live. This is a world of regular law, and not of haphazardness chance as the ignorant think. Sages have, from the beginning of Time, tried to know Truth, and, gradually, over thousands of years of search and thought, mankind has in the last few centuries, come to understand a great deal about the laws of nature -- not all to be sure; there is still much that remains mystery -- but in 1960 we know vastly more about the laws of the universe than we did in 1860, when Bishop Crowther explored the Niger, and Lagos was seized by the British, or when the black empires of the Sudan were rising to power. This information the mass of men must know; not simply the children, not simply the men, but the women. All their lives people must be learning about themselves and the world about them.

This process must begin with the Young; but it must not end there. With the Young a large part of their time must be set aside for School, where they learn to Read, Write, and Count in primary school; and in secondary grades how to make use of words to convey meanings; and where men live and how. Children do not simply study; they also learn by doing, by helping their elders to work.

38-11-149

Then, such youth as have the aptitude should go to college where they study the Universe as a whole, its Past and Present, its Laws and Probabilities, its Future, so far as it may be guessed. They then become, through study or practice, co-workers for carrying on life; laborers, artisans, scientists, lawyers, physicians, writers, artists; parents of children, makers of goods, processors of materials.

Curiously enough, it has happened in the past and is true largely today, that the very persons who do the fundamental work of raising food and fibre, get so little of the food they raise and the fibre they grow, that these farmers are poor, ignorant and ragged.

38-11-150

There is developing in Nigeria what is called a Bourgeoisie; that is, a group of professional men, civil servants, merchants and white collar workers, who are accumulating wealth, furnishing comfortable homes with servants, motor cars, and many luxuries. This is copying after the white West, and is normal, and, in many respects, desirable. But it skirts fatal dangers unless watched, guided and curbed. In all history, civilization has developed in cities. That is what the name means. It is natural that where men congregate in groups and come to know each other and learn from each other, here knowledge develops, inventions grow, and men become builders of culture. But, here too, lurk dangers: the city group easily learns to use the peasant for the city's life and comfort, without returning to the rural districts any of the human culture which its toil sustains. Almost invariably the country grows poor and ignorant as the city grows rich and sophisticated. Then the inevitable happens: the peasant tries to leave the farm and the city dweller tries to drive him back.

This is beginning to happen in Nigeria, and it will increase in the future; and many will tell you that it is inevitable. Do not believe them. Educate your peasants; give them beauty and recreation. Make a life and career in the country as good as one in the city. Watch city and suburb, and do not let

them kill nor oppress each other; do not pamper the city and starve the country. Protect the forest and keep it replanted. Protect wild life, both beast and bird; know the great world of insects and regulate it for the good of man, and not for attack and disease. Watch and record the weather, guide the rivers, and harness power so that nature as well as man furnish work. Give thought to the making of homes, so that they become centers of protection, education and pleasure, and not airless, dirty dens of drudgery, dirt and pain. Let most of mankind live in a contented, happy world.

The gathering of news from the world; the free expression of opinion; the unhampered creation of forms of art, are prime needs of a nation. Remember that most nations, today, have difficulty in getting true reports of current events; are not allowed to hear what men think, and are limited in knowing forms of art and literature which their governments do not like. Let this never occur in Nigeria. Watch the press. Insist on hearing the "other side". Resent the gagging of opinion or taste. Watch the beginning of this tendency, before it is too late and you find yourselves bound with monopoly.

It is not war that made Europe great; rather war has nearly ruined what men have done to make a decent world. Cry Peace, then, Peace and plenty for all.

RELIGION

Nigeria has many religions. This is fortunate, for it teaches tolerance. Had Nigerians been born in Spain, they would have been taught to hate Protestants; had they been born in Sweden, they would have feared Catholics; had they been born in the United States, they would have been contemptuous of Moslems. But there are in Nigeria millions of Africans who still believe in the ancient faith of their forefathers, who saw God in mountain, tree and river, who believed in

32-11-151

witchcraft and chance. The followers of Mohammed know no color line; Christians know modern European cultures; all Nigerian religions respect the faith of others, and grant them the right to follow it. They know that a religion is an attempt to know the truth, and a belief in such truth as is beyond proof. This dogma may go so far as to deny Truth, even when it is proven; but if it does, in time, it must give up dogma and recognize Science; just as Science admits freely that it does not know all, and perhaps never will.

The treatment of religion -- of all religion, whether it be that which you believe, or that which you deem false, is ever a delicate and holy task. From dawn of consciousness all men are trained to believe in what their group and their age calls Truth. It may be wrong, in part, but it is believed by hundreds or millions. That belief must be treated with respect. Carefully, thoughtfully, must the real truth be taught, and this task in Nigeria must be paramount. The good of religions, not alone their mistakes, must be taught. Conference and understanding must be sought. Cooperation must be paramount. Witchcraft must not be derided. It is ancient as the hills; it holds stores of wisdom; it is the source of literature and art; indeed, it gave birth to science and still has much to teach. Meantime, the object of religion is to induce men to act right so that none will hurt another, and all can find happiness. Let no religion, Catholic, Protestant or Mohammedan, interfere with the functions of the paramount State. The State alone controls Government and the Education of children. Let Science, not witchcraft nor pretended miracles, preserve the health of the masses.

38-11-152

What is happiness? It is primarily the gratification of the senses: seeing, hearing, touch, taste, smell. But here, manifestly, this is true: moderation must be the rule; temperance; you cannot see everything on earth; you cannot hear all the music of the spheres; you cannot feel every pleasure at once. So, the wise man eats moderately, drinks sparingly, does not go on sprees. Especially, man must never seek happiness at the cost of pain and unhappiness to others. In a land like Nigeria, so long deprived of ordinary decencies, much more of happiness can be had, than is usual today. Many are apt to think that the

Western world has enjoyed every happiness and should be imitated: that drunkenness, drug-taking, loud noise and hysteria, are signs of culture. No, after all, eyes only see; ears only hear; the old dancing of your fathers is as lovely as the new steps, and lovelier than Rock and Roll. Man is just man. His capacities are limited and are loveliest when enjoyed in reasoned limit.

In many ways the West, in the matter of pleasure, particularly Britain and France, have seriously misled the world. Perhaps the worst is in gambling. The primitive world thought chance ruled life; and, for that reason, they cast lots and threw dice. But now we know that natural laws, and human effort, make history; and that dependence on luck and chance is misleading, especially, for the mass of workers. Yet gambling has been made fashionable in London, Paris, and Rome, by the rich and high-born, through horse-racing, card-playing, and so-called "sports". This is bad enough, but beyond games of real chance, comes systematic cheating, which enables professional gamblers to use marked cards and other deceptions. Foremost today is the so-called "Stock-Market" where, under the pretext of distributing capital, whole nations are plunged into daily gambling with rigged results. Beyond that is the custom of establishing centers of gambling, prostitution and drug taking. Under the Colonial system, Britain did this at Singapore, after she had forced opium from India on helpless China. France made Hanoi and Saigon such centers. All three of these nations made Shanghai and its Bund a sink of iniquity until China arose and redeemed a nation. Hong Kong is still a cess-pool under the British. "Chinatowns" all over the World used to be encouraged to prove Chinese hopelessly debauched.

38-11-153

Nigeria must, from the first, strive to treat the problems of sex with commonsense and not mess them up as Europe has. You cannot worship virginity in women, when the natural function of women is to give birth to babies. You cannot regard the human body and sex relations as essentially nasty, and still induce girls to reproduce healthy human beings. Sex is a healthy, natural

appetite, but promiscuity defeats its aim of pleasure and healthy children. While women are designed to bear children, they cannot in civilised life be regarded as simply brood mares or toys for the pleasure of men. They have as much right to careers as men, and, after the normal child-bearing age, they should join in the world's work; they should even have the right, if it suits their health or ambition, to surrender motherhood for work they can do better. In fine, from the year of about sixteen to twenty-six, the natural sex appetite is strong and should be indulged, legally and normally. These years are best for parenthood and make possible a normal companionship of children and parents which can build the normal family. Marriage should make public this procreation of children. But the marriage should be made terminable at will of either partner when it ceases to be satisfactory, provided the rights of husband, wife, and children, are fully assured. All this can be feasible, if treated by law and decency, and not hidden in secrecy, cheating and false shame.

38-11-154

One problem has resulted in paradox in modern civilization. That is what is called "menial service". It is arising in Nigeria. What shall be the status and wage of those who do the intimate services which every man requires more or less from infancy through age: the care of infants, the bathing of bodies, getting rid of dirt and excrement, the cooking and serving of food, the washing of clothes, the cleaning of living quarters, attending the sick, adorning the body, entertaining guests, and like matters? These services are, on the one hand, matters of love and trained knowledge; on the other, they are often the lowest work of mankind, fit only for slaves, or the lowest and worst treated of workers. Yet both these things cannot be. What is holier and dirtier than a mother's care? What is more despised than menial service? This paradox must be reconciled. Nigerians of wealth and position are hiring many servants and paying them low wage. Nigerians of education and ambition refuse to become

servants. What must be the end of this? Service needs education and skill, and such folk can be had only for good pay and public respect. In all civilised lands the "servant" problem is unsolved, and often seemingly unsoluble. Nigeria must help solve it. She must rate menial service high in esteem, and pay it well; and in turn, the servant must be educated, trained and so capable as to deserve respect. This will take time and thought, but it is none the less pressing and pressing now. Here and there in the world one sees the beginnings of a solution: in New York garbage collectors are paid more than most teachers; in Britain old and trusted servants are part of the family; in the Soviet Union, servants are equal in status to any worker.

38-11-155

What Nigeria should seek is right conduct; simple comfort without senseless luxury and show; work and wage, not stealing and gambling; walking and running gymnastics and games, rather than elaborate "sports"; music, not noise and hysteria; mothers, homes and children, not abortions, dens and prostitutes; refrigerators to preserve food, rather than automobiles to crowd the streets, kill the pedestrians, and carry hundreds whither they have no need to go. Think, listen, read, and do the right which you well know: This is the Will of all your gods; this is Peace on earth and Plenty.

Nations must defend themselves: from foes from without, from inner crime and turmoil. Increased civilization lessens the fear of outer attack, and yet, even today, some armed defense is called for. Always inner police must be at call. But the cost of defense decreases as War ceases; as men become educated and moral, and as crime decreases because of education and cure of disease. For Nigeria, friendliness with neighbors is called for; intertribal quarrels must be lessened and wider union of nations rather than division into small and smaller parts. The Pan-African movement must someday unite all Africa into one great federation, playing a leading roll in a perfect United Nations. Meantime, so

long as South Africa breaks every law of human decency; so long as the Rhodesias fight democracy; so long as Portugal continues to lie about her murder and theft in Africa; so long Nigeria must be strong enough to boycott and refuse political ties with them. And, if Britain, France or Israel prepare nuclear force against Algeria or other helpess nations, Nigeria is justified in demanding atomic weapons of the Soviet Union and China.

If Nigeria is asked by anybody -- white or black, Jew or Gentile, -- to take sides in a power struggle between Britain and Slav, French or German, American or Latin, it should say No. But, if the Soviet Union, China or any other land has a good idea or sound advice, Nigeria should accept it, even if Britain and the United States protest. The history of the Anglo-Saxon World gives it no right to advise black folk.

38-11-158

One peculiar development in the West and particularly in the United States is the dominance of advertising over production and distribution of goods. Advertising is letting the consumer know what the producer has to sell. Or, at another step, shows what the trader has bought from the producer and offers to sell the producer. But, today, in America, the advertiser dominates the market; he decides what shall be sold and at what price; the consumer is compelled to buy what the advertiser offers at the advertiser's price. The insidious methods by which the advertiser has acquired this power are intricate and hard to understand, but they involve large capital for useless display, highly paid skill in picture, word, and the government-backed monopoly of advertising media like newspapers and magazines, radio and television, and other methods which the government uses to put public profit into private hands. Nigeria should watch all approaches to this subtle transfer of power.

Another method of public aid to private gain is through what is called

"Fashions". This is inducing the consumers, especially women, to wear what certain persons who monopolise publicity tell them is "fashionable". After a time respectable women are actually afraid to wear what is not "fashionable" whether it suits them or not. Now the people of Africa have for centuries become used to wearing clothes of a weight and texture, and color, peculiarly suited to their life and climate: the men's toga which Rome copied, the brilliant ~~robes~~ colors worn by women, the children with a minimum of clothes, were excellently adapted to Africa. Today, Africans are being tempted to dress as Europeans do, regardless of whether these clothes are suitable or not. This is wrong. Resist "fashions" and insist on what is suitable. Instead of holding back a nation's whole industry until some fashion dictator decides whether a skirt should be long or short, wide or narrow, let individuals decide what suits them; instead of sending their designs and colors abroad for fabrication, let them be done at home in Lagos or Ibadan, and thus keep Nigerians at work.

38-11-157

The African loves drama; his sense of theatre is inborn. Nigeria should encourage and lead this desire and as soon as possible escape from the present compulsion to see only foreign plays and films. Especially, the present dependence of the world on the decadence of Hollywood is deplorable and must, as soon as possible, be terminated. Nigeria must eventually make its own films and meantime seek decent films from those who have them.

Each Nigerian village and city should build its own little theatre where its own life is depicted, its own history told; and the theatre of other times and nations brought to teach and guide and inspire the people.

Finally, what Nigeria and all Africa needs is knowledge of their past history and culture. Europe has grown powerful largely because its children for generations have been taught to believe in themselves. They have read the

story of their past, seen pictures of the deeds of their fathers, and heard legends of their people. Africans also heard of their past, but only in the dry regions like the Nile valley was the record kept in imperishable stone or written on papyrus. In the valleys of the Niger, Senegal and Congo, and on the West Coast, history lived in the minds of men, and was handed down over the centuries from father to son. It has made a remarkable folk-lore and a fine literature, ~~when written down.~~ The West, however, interpreted this as fairy tale and not truth; also, when the West wanted an excuse for oppressing and exploiting black folk, they said that Africans had no history and that this proved their inferiority. On the other hand, the West was tempted to exaggerate their own past, and, especially, after the slave trade, to forget or embroider the sordid story of colonialism. Thus, the young African today, and the descendants of Africans in America, know little or nothing of their history or of the cultural inventions of their fathers. As a matter of fact, the transmitted lore of Africa is one of the finest cultural heritages of all time; it has often borne the tests of science and the highest standards of literature and art.

38-11-158

To change this fatal ignorance of the present world I have undertaken to plan an Encyclopaedia Africana, in which scholars will set down in the light of the latest results of social science the history of mankind on the African continent. The Ghana Academy of Learning, under the patronage of President Kwame Nkrumah initiated this project, and asked my help, since I had planned such an encyclopaedia early in the century. The Governor-General of Nigeria has expressed his interest in this project and the cooperation of other African rulers will be asked. In order that this project shall be written from the African point of view, and not from that of the colonial masters, we shall seek African scholars, so far as we can find well-trained scientists of African descent.

For this I have already consulted Dr. Diké of the Nigerian University College at Ibadan. He is, perhaps, the best known African scholar in African history. He and his scholars have given cheerful promise of cooperation. Other African Universities and Colleges have promised cooperation. But scientific truth is our aim and not mere racial propaganda; when, then, no African scholars are found who measure up to modern scientific standards, we will draw no color line, and seek the best scholars, without regard to color, race or religion.

Nigeria must, finally, say to the world: Africa is for the Africans, for the black folk who for centuries have inhabited this continent. But we are a hospitable and friendly people, and we welcome to our shores all men of good will. We do not want again slave traders or thieves. We do not want whore-mongers nor gamblers. Those who come to us as friends, who wish to live beside us as equals, sharing our poverty and our conditions of life will be welcomed. Others will be sent home.

38-11-159

We wish to judge the white folk who have come to Africa with fairness. The British have enslaved and exploited us in the past; but, also, they have given us education and advice. In the future we will treat them as they deserve, but, not, necessarily, as they demand. One matter we must consider, delicate as it is: how long can Nigeria permit her citizens to receive rewards and titles from Great Britain? True it is that these honors may be bestowed fairly and with sound judgment; but often they may be given for political purposes and to influence our policy. This is a matter gravely to be considered.

Americans have sent us missionaries, who have done us both good and evil. We do not want missionaries who thoughtlessly antagonize our religion and try, without consultation, to change our ancient customs; we would be glad to learn the thrift and skill of America insofar as the United States does not make color prejudice a central part of its policy.

We know that the French have done much for Africa; but that, also, there are things that they have not done, and evils to which they cling. So far as France frees her colonies, and stands by her fine ideal of liberty, equality and brotherhood, people from France are welcome to Nigeria.

We see in the Soviet Union and its allied states friends and helpers for peoples who have suffered as we have suffered from the oppression of their rulers. We hail the emancipation and struggles of their peoples. In China and India we recognize our colored brethen: peoples who have suffered from color caste in the past, and who, since, have gained freedom and independence.

Hail Peace and Plenty, for the World and for Africa.

A PATH FOR NIGERIA

by W. E. B. Du BOIS, Ph.D. (Harvard), LL.D. (Fisk) Hist. Sci. D. (Charles) / Prague Hist. Sci.D. (Moscow), Hist. Sci. D. (Humboldt, Berlin), International Lenin Peace Prize, 1959, Fellow of the American Association for the Advancement of Sciences, Member of the National Institute of Arts and Letters, Honorary Member of Hungarian Academy of Sciences; Associate Member, German Academy of Sciences, Berlin

02-2-04

ABOUT MYSELF

My mother's great-grandfather was born in West Africa, kidnapped as a boy and sold by the Dutch into slavery in New York. As a young man he fought with the Americans in their revolution against the British and won his freedom. His grandchildren became small landholders in western Massachusetts and the daughter of one of them, Othello, married the descendant of a French Huguenot who had migrated from Flanders to New York and thence his descendant, Dr. James Du Bois, settled in the Bahamas, where he had two mulatto sons, Alexander and John. Alexander was brought to the United States and his son Alfred married my mother Mary Burghardt.

MY EDUCATION

I went to primary and secondary schools in my home town, Great Barrington, then to a college for freed Negroes, Fisk University, in Nashville, Tennessee; then to Harvard College in Massachusetts where I staid two years and two more years in the University graduate school receiving my A.B. (CUM LAUDE), A.M., and Ph.D. Then for two years I attended the Friedrich Wilhelm(now Humboldt) University at Berlin, Germany.

MY WORK AND TRAVEL

I began my work as a teacher in the United States in 1894, instructing in history and sociology until 1910. From 1910 to 1934, I became a lecturer and editor of a monthly magazine advocating full citizenship rights for Americans of Negro descent.

In 1934 I returned to teaching and research. I travelled widely, visiting all states of the United States and making sixteen trips to Europe, Africa and Asia and once circumnavigating the globe. Also I wrote fifteen books and many articles. Especially I became interested in Africa, the land of my fathers. I attended a Pan-African Conference in London in 1900 and acted as secretary. Also I planned an Encyclopaedia Africana and got distinguished promises of assistance. However, I was never able to raise the funds to actually realize the project.

During the armistice which followed the First World War, I called the First Pan-African Congress, in Paris, 1919. In 1921 I assembled a Second Pan-African Congress meeting in London, Paris and Brussells in 1921 and largely attended. A Third Congress was held in London and Lisbon in 1923; a Fourth in New York in 1927, and a Fifth in Manchester, England, in 1945. The All-African Conference which met in Accra in 1958 was, in fact, the Sixth Pan-African Congress. Many other meetings and organizations followed the lead of these congresses and got inspiration from them, like the Congress of West Africa in 1920, and the various African organizations of South and East Africa.

40-2-23

MY VISITS
TO AFRICA

In 1923, I visited Liberia as Special Minister Plenipotentiary of the United States, bringing a message from President Coolidge to President King. In 1958, I visited Ghana when Dr. Nkwami Nkruma became Prime Minister and President of independent Ghana. I attended the opening of parliament and inauguration of the President; I visited the cities and ports and paid my respects to the Asantehene of Ashanti at Kumasi. In 1960, I visited Nigeria when Dr. Nnamdi Azikiwe became the first native governor of this nation. I visited Lagos, Ibadan and Onitsa, where I sailed the Niger; Ibadan [redacted] I visited the University College. [redacted] I had an interview with the Governor and suggested sending him a memorandum of advice to Nigeria, based on my recent visits to England, France, Germany, Italy, the Soviet Union and its allied states, China, and my long residence and study in the United States. This is

the pamphlet

For this I have already consulted Dr. Dike of the Nigerian University College at Ibadan. He is, perhaps, the best known African scholar in African history. He and his scholars have given cheerful promise of cooperation. Other African Universities and Colleges have promised cooperation. But scientific truth is our aim and not mere racial propaganda; when, then, no African scholars are found who measure up to modern scientific standards, we shall draw no color line, and shall seek the best scholar, without regard to color, race or religion.

40A .2..31

witchcraft and chance. The followers of Mohammed know no color line; Christians know modern European culture; all Nigerian religions respect the faith of others, and grant them the right to follow it. They know that a religion is an attempt to know the truth, and a belief in such truth as is beyond proof. This dogma may go so far as to deny Truth, even when it is proven; but if it does, in time, it must give up dogma and recognise Science; just as Science admits freely that it does not know all, and perhaps never will.

The treatment of religion -- of all religion, whether it be that which you believe, or that which you deem false, is ever a delicate and holy task. From dawn of consciousness all men are trained to believe in what their group and their age calls Truth. It may be wrong, in part, but it is believed by hundreds or millions. That belief must be treated with respect. Carefully, thoughtfully, must the real truth be taught, and this task in Nigeria must be paramount. The good of religions, not alone their mistakes, must be taught. Conference and understanding must be sought. Cooperation must be paramount. Witchcraft must not be derided. It is ancient as the hills; it holds stores of wisdom; it is the source of literature and art; indeed, it gave birth to science and still has much to teach. Meantime, the object of religion is to induce men to act right so that none will hurt another, and all can find happiness.

What is happiness? It is primarily the gratification of the senses: seeing, hearing, touch, taste, smell. But here, manifestly, this is true: moderation must be the rule; temperance; you cannot see everything on earth; you cannot hear all the music of the spheres; you cannot feel every pleasure at once. So, the wise man eats moderately, drinks sparingly, does not go on sprees. Especially, man must never seek happiness at the cost of pain and unhappiness to others. In a land like Nigeria, so long deprived of ordinary decencies, much more of happiness can be had, than is usual today. Many are apt to think that the

40A.2.15

United States, to Scandinavia, and Germany; also to the Soviet Union and its allies, and, especially, to China, because the Yellow Race has suffered even more than the Black Race from the cruelty and exploitation of the white race. Use education to rebind and heal the rifts of mankind, and never forget that trade and commerce can be aids to human progress.

THE AFRICAN WOMAN

Africans are born traders. From the birth of Time, the African market has set patterns for the world from the Nile to the Niger, from the Senegal to the Congo, from the Zambesi to the sea. The freedom of women began in the African market-place, and still can be seen on the streets of Cairo, Accra, Lagos, Ibadan and Leopoldville.

Guard your women. The white man has for two centuries been the threat of Negro womanhood. White men have raped and degraded colored women from Casablanca to Capetown, from Thailand to Calcutta. Americans are planning to send scouts to West Africa. Some will be honest friends, hoping to learn and help. Most will be curiosity-seekers. Teach them if you can. But many will be men seeking colored concubines; put these in jail or deport them. Show them no mercy.

Against women African traders, and their market-place, is rising a terrible menace in the form of the European corporations: unilevers of Britain, with a capital of a million dollars and an annual income of three hundred millions of dollars; other giant corporations of Belgium, France, and Switzerland, with the best and highest paid skill of the world, backed by the airplanes, armies and navies of most of the world's most powerful nations. This duel goes on today along the streets of every African town. The mass of retail traders, selling

40A.2.7

We see in the Soviet Union and its allied states friends and helpers for peoples who have suffered as we have suffered from the oppression of their rulers. We hail the emancipation and struggles of their peoples. In China and India we recognise our colored brethern: peoples who have suffered from color caste in the past, and who, since, have gained freedom and independence.

Hail Peace and Plenty, for the World and for Africa.

40A.2.30

This legal basis of work and wage is laid by lawyers. Lawyers make the law in legislatures; interpret it as judges, and guide individuals, and, especially, corporations, in methods of breaking it. Physicians heal, preachers, guide, engineers calculate; but by growing agreement and common understanding, lawyers not only make the law, but break it; not only defend the innocent, but set the guilty free; and this is regarded as right and justifiable.

THE FUNCTION OF LAWYERS

Of course, other professions are not all unselfish; physicians often forget their duty to heal disease and prevent disease and act like trade unions to prevent competition, raise fees and monopolise medicine. Civil servants often try to make money rather than carry on the business of the State honestly; preachers seek place and salary rather than moral conduct. In fact, human beings are not naturally good but are tempted to be selfish and forgetful of their neighbors. Especially since this awful era of world war, many have to come to think that the world belongs to the smart and that murder, gambling and theft are the quickest way to success. The history of mankind proves that this is not true. That is the reason that all peoples have adopted religions to teach morals and emphasise the public value of right conduct.

How now shall Nigeria protect her retail trade and curb corporations, native and foreign, of Britain, France, Switzerland and America, already doing large business within her borders, and restrain her own bourgeoisie from becoming junior partners in this foreign enterprise? Remeber that for the most part, these corporations are too large, powerful and widespread for Nigerians to think of gaining control of them. They are today a sort of super-government of the World. The utmost that now can be envisaged is that a few black employees may share their profits and have some weak voice in policy. Meantime, that policy will gradually kill the African markets and the host of small women traders, reducing them to poverty and unemployment. The State of Nigeria has, of course, the power to eject these corporations and confiscate their local capital. But that would be a fatal mistake at present. These corporations now perform a great function. They funnell world trade to Nigeria on a scale that no Nigerian enter-

CORPORATIONS

40A.2.25

prise is able to do. They have the power to hurt Nigeria in many ways: not only in trade and credit, but also in acquiring skill and technique; in finding foreign markets for African goods; in getting credit and setting fair prices.

Nevertheless, they are not all-powerful. The small retailers can undersell them unless they keep their prices reasonable and treat their black customers courteously. Also, Nigeria has much power. She can tax all corporations doing business within her borders on their property and privileges. In most western nations, corporations escape taxation by various devices, but especially because the people do not know the income of, or privileges enjoyed by, corporations. In the United States a teacher may pay 40 percent of his income in taxes, while the Standard Oil Company escapes with payment of one percent. Nigeria, tax your corporations, fairly but fully! Also, control your retail traders; enforce sanitary rules of manufacture and display; require steadily higher education of those buying and selling; allow no cheating nor deception. For both corporations and individuals enforce fair prices. In turn, give both the market-place and the sidewalk vendor, clean and accessible places for trade. Do not clutter the sidewalks, or fill the streets with waste and refuse. In short, so lift the standards of the street vendors, and so curb the profit and privileges of the corporations that they gradually approach substantial equality of opportunity to serve the folk.

And their lies the great truth which this people must seek: Service, not gain; not the spread of profit, but the increase of content and happiness. This is not utopian; it is not impossible. For five centuries Europe has taught the world that only the few can be rich, educated and live decently; and that this can happen only at the expense of keeping most people poor, ignorant and sick. Prophets and sages, working people, and poets, today are pointing out a better way: if all work hard at that which they can do best; if materials, goods and services are given all men, not in proportion to what they can take, but in proportion to what they need to make them healthy persons,

40A.2.26

0 1 2 0

For this I have already consulted Dr. Dike of the Nigerian University College at Ibadan. He is, perhaps, the best know African scholar in African history. He and his scholars have given cheerful promise of cooperation. Other African Universities and Colleges have promised cooperation. But scientific truth is our aim and not mere racial propaganda; when, then, no African scholars are found who measure up to modern scientific standards, we shall draw no color line, and shall seek the best scholars, without regard to color, race or religion.

Nigeria must, finally, say to the world: Africa is for the Africans, for the black folk who for centuries have inhabited this continent. But we are a hospitable, and friendly people, and we welcome to our shores all men of good will. We do not want again slave traders nor thieves. We do not want whore-mongers nor gamblers. Those who come to us as friends, who wish to live beside us as equals, sharing our poverty and our conditions of life will be welcomed. Others will be sent home.

Americans have sent us missionaries, who have done us both good and evil. We do not want missionaries who antagonize our religion and try, arbitrarily, to change our customs; but we would be glad to receive the thrift and skill of America insofar as the United States and the people of South Africa do not make color prejudice a central part of their lives.

We know that the French have done much for Africa; but that, also, there are things that they have done, and evils to which they cling. So far as France stands by her fine ideal of liberty, equality and brotherhood, people from France are welcome to Nigeria.

40A.2.10

appetite, but promiscuity defeats its aim of pleasure and healthy children. While women are designed to bear children, they cannot in civilised life be regarded as simply breed mares or toys for the pleasure of men. They have as much right to careers as men, and, after the normal child-bearing age, they should join in the world's work; they should even have the right if it suits their health or ambition, to surrender motherhood for work they can do better. In fine, from the year of about sixteen to twenty-six, the natural sex appetite is strong and should be indulged, legally and normally. These years are best for parenthood and make possible a normal companionship of children and parents which can build the normal family. Marriage should make public this procreation of children. But the marriage should be made terminable at will of either partner when it ceases to be satisfactory, provided the rights of husband, wife, and children, are fully assured. All this can be feasible by law and custom, if treated by law and decency and not hidden in secrecy, cheating and false shame.

One problem has resulted in paradox in modern civilisation. That is what is called "menial service". It is arising in Nigeria. What shall be the status and wage of those who do the intimate services which every man requires more or less from infancy through age: the care of infants, the bathing of bodies, the cooking and serving of food, the washing of clothes, the cleaning of living quarters, attending the sick, adorning the body, entertaining guest, and the like matters. These services are, on the one hand, matters of love and trained knowledge; on the other, the removal of dirt, manure, they are often regarded as the lowest work of mankind, fit only for slaves, or the lowest and worst treated of workers. Yet both these things they cannot be. What is holier and dirtier than a mother's care? What is more despised than menial service? This paradox must be reconciled. Nigerians of wealth and position are hiring many servants and paying them low wage. Nigerians of education and ambition refuse to become

40A,29

witchcraft and chance. The followers of Mohammed know no color line; Christians know modern European culture; all Nigerian religions respect the faith of others, and grant them the right to follow it. They know that a religion is an attempt to know the truth, and a belief in such truth as is beyond proof. This dogma may go so far as to deny Truth, even when it is proven; but if it does, in time, it must give up dogma and recognize Science; just as Science admits freely that it does not know all, and perhaps never will.

A PATH FOR NIGERIA

by W. E. B. Du BOIS, Ph.D. (Harvard), LL.D. (Fisk) Hist. Sci. D. (Charles) / Prague Hist. Sci.D. (Moscow), Hist. Sci. D. (Humboldt, Berlin), International Lenin Peace Prize, 1959, Fellow of the American Association for the Advancement of Sciences, Member of the National Institute of Arts and Letters; Honorary member of Hungarian Academy of Sciences; Associate Member, German Academy of Sciences, Berlin

ABOUT MYSELF

My mother's great-grandfather was born in West Africa, kidnapped as a boy and sold by the Dutch into slavery in New York. As a young man he fought with the Americans in their revolution against the British and won his freedom. His grandchildren became small landholders in western Massachusetts and the daughter of one of them, Othello, married the descendant of a French Huguenot who had migrated from Flanders to New York and thence his descendant, Dr. James Du Bois, settled in the Bahamas, where he had two mulatto sons, Alexander and John. Alexander was brought to the United States and his son Alfred married my mother Mary Burghardt.

MY EDUCATION

I went to primary and secondary schools in my home town, Great Harrington, then to a college for freed Negroes, Fisk University, in Nashville, Tennessee; then to Harvard College in Massachusetts where I staid two years and two more years in the University graduate school receiving my A.B., A.M., and Ph.D. Then for two years I attended the Friedrich Wilhelm(now Humboldt) University at Berlin, Germany.

MY WORK AND TRAVEL

I began my work as a teacher in the United States in 1894, instructing in history and sociology until 1910. From 1910 to 1934, I became a lecturer and editor of a monthly magazine advocating full citizenship rights for Americans of Negro descent.

40A.2.17

homes and the right to vote and hold office even when the natives were disfranchised and housed in ghettoes. As the native peoples realized their plight; and as by efforts of missionaries some began to acquire education, there arose a demand for reform, which today in every part of Africa is resulting in colonial freedom.

FREE
NIGERIA

When now a nation like Nigeria becomes "free" just what does that mean? Under the [redacted] laws of nature; with universal need for food, clothes and shelter, there can manifestly be no complete freedom for man anywhere nor at any time. Men must always plant and reap; search and dig and carry; spin and weave; cook, build and store; they must plan marriage, home and children. They must provide government: that is for order, cooperation and respect for others, so that all may live a good life and none be completely subordinate to the will of a few. Moreover, above and apart from this work to sustain life, there must remain leisure to make life worth living: for rest and play; for dance and song; for creative activity and any pursuit or game that men may choose and which does not hurt or kill them, nor limit nor prevent similar activities among others.

From primitive times the work of a tribe or nation will include foreign trade and that will call for increasing activity and thought as men come into contact with men. No people can live to themselves. Ever by accident or design peoples meet with each other, and while there are times when such contact means trouble and war, in the long run it is the contact of strange folk with others that leads to civilization; that brings new goods and methods; new thoughts and ideals. Thus foreign trade has ever been the beginning of progress. The west Coast early traded gold for salt with its northern neighbors. Spice for metals followed, and laborers for tools. This last exchange between Portuguese and Africans led to difficulties, at first unnoticed, but in the end of world wide significance. Intertribal wars were common in the early centuries. Quarrels over hunting grounds, over succession to power, over trade. They

40A.2.16

sold the idea of reaching the east more quickly by sailing west. On the way the Italian, Columbus, and his black pilot and later whaler helpers discovered the West Indies. Europeans flocked there to find gold and jewels, but found only fertile soil, which, if cultivated, would yield rich crops. European laborers were sent overseas by bargain, force and fraud; then they obtained African slaves were bought from the Spanish and then the Dutch and French. The British built a vast world trade on African slaves and the Americans found profitable use for them in raising tobacco which Europe bought eagerly. Black slaves raised tobacco and Cotton in the Southern United States; white labor distilled rum and began to use Sugar in the West Indies, and sold it in Africa for slaves; they sold the slaves in the West Indies for sugar and took the sugar to the northern United States to make rum. Everybody was prosperous. Sugar began to be cheap in Europe, tobacco began to make Virginians rich, and Cotton began to make only the black slaves writhed. However, some Europeans began to see in America a place where free land would make all everybody well-to-do, able to move freely, do what they wanted to and believe what they thought was true. Here real democracy could grow and religious freedom. But greed interfered. American traders grew rich on their commerce. Monopoly of the colonial trade made Britain the greatest empire of the world and the British refused to limit their colonies to trade with Britain alone. The Americans, therefore, stopped the most profitable British monopoly, the African slave trade. Britain and America flew to war, both using black slaves as soldiers. France allied with the real Indians, helped America and America won. A new democracy was formed, founded on the dictum that "all men are created equal". But America hesitated; they refused to stop the African slave trade immediately because they had lost much slave labor in the war. Britain, however, stopped the trade which had ceased to pay because of revolt of slaves in the West Indies and America condemns followed, but did not enforce her laws and the illicit slave trade continued. The slave system became so powerful that cotton began to furnish the world with cheap clothing. The Northern United States, France and Britain competed and the slave South sought the highest price for its product. The North sought to control the cotton crop by tariff restrictions on imports and also by encouraging the white laborers who feared the competition of slave labor. To these opposition was added the moral repulsion of

40-2-12

Or Let the Product Raise Them Completely; and

This which seems to many like unselfish help, may prove veritable disast to Africa. Some of these young people may be honestly desirous to help But most of them have been trained from childgood to despise Negroes and to regard them as inferiors. Most of them will be briefed by the State department or by leaders of industry to regard Socialism as a crime and to spread hate and distrust of the Soviet Union and contempt for China. Theyh will betold that a third world war is inevitable and that xxxxri we xxx must prepare for it at any cost, since as Eisenhauer once said Americans "can lick the world". Also there will be among these American s scouts a number who will come to Africa to carouse, gamble and whore and leave their bastards in Nigeria as Americans did in Germany, Japan the Phillipines and Korea.. Watch these scouts and treat them as they d deserve.

40-2-13

Such of them as can and as soon as they can to to the towns where they seek work of various kinds, acting as servants or helpers, buying and selling of goods, or even in some cases subsisting by begging, or crime. The reason for this neglect and oppression of the peasant in the past has usually been War and war has generally been started by hunger or natural catastrpphe. War led to conquest and the conquered laborers became slaves and did the lowest, hardest work. Work then, especially farming with its digging, carrying and hard toil became despised. Then peasants were given little education, and the city lived on the low-paid toil of the country.

40-2-14

This has been true in Asia, Europe and Africa, and became true in America, both in ancient and modern times. But today in Nigeria it need not continue to be. The rural districts with their trees, vines and flowers; their fruits and orchards; with their winds and flowing waters, their animals, birds and insects, is naturally beautiful and healthy; here is sky and space and is plenty to eat and wear, and shelter, and food may be raised. All that is needed is intelligent workers, laboring under scientific guidance with the right tools and practices as good neighbors. Schools, information by radio and television can be furnished, and recreation for young and old be made available. In neighboring and easily accessible towns, factories can be built where raw materials can be turned into marketable goods with native power for massed and skilled labor; where markets can be laid out and schools can flourish, and universities can be set up. Families can be formed, children raised in town and country, artists can work, with space and beauty all around, with neighborly cooperation and good cheer. The problem of transport can be solved on simple lines at low cost.

This will call for skill and technique; it will require machines and tools unknown to most Nigerians and even unheard of by their thaters: engines of all kinds to transmit and transform power from water and steam, to make electricity out of heat, and light and heat out of electricity. Such machines and techniques have been developed by Europeans and Americans since 1500

production was limited; and owned by the family and clan, not by individuals. The same was true in Europe until suddenly in the Sixteenth century, European traders got hold of fabulous treasure from two sources: and it fell into private hands: Europeans found vast wealth by plundering India, and by stealing peasants in West Africa and enslaving them in America. Americans raised tobacco, sugar and cotton and sold them over all the earth. The world was transformed. Incidental tribal wars of Africa became profitable slave raids which robbed the continent of 100,000,000 human beings, distorted their lives and customs, severely uprooted their political structure, their art, and clouded their ideals. Conquest by Europe overthrew the civilization of Asia: Europe began to gain rule over most of the world, by stealing gold and silver of usurers, slave labor, and selling the goods which slaves made, for profits so huge as to enable it to manufacture goods for sale, and trade these goods for the raw materials of the wole world. The skill of American and European labor increased the ability to manufacture and science and invention gave miraculous power to this new technique.

40-2-15

From 1800 Europe ruled the world. Africa and Asia and the islands of the Seven Seas bowed or were bent before it. It even partially deceived itself and under the spell of a new religion borrowed from Asia, justified theft and slavery, conquest and force as the one way in which superior White folk, could lead colored folk to civilization, if indeed they could be led. But the world did not stand still. The Christian church split in disagreement, the black slaves in the West Indies arose in continuous and increasing revolt, and the white peasants of Europe sought freedom from serfdom in the growing towns where the new capitalists hired them as servants, laborers, artisans and soldiers. The ~~artisans~~ soldiers in turn fought wars to gain more capital for the town dwellers.

AMERICAN DEMOCRACY

America is a curious tale of selfish greed and lofty hope. Spain, seeing in the fifteenth Century how much gold and other treasure Portugal, Holland, Britain, and France were making in Africa and Asia by ~~way of~~ sailing south on the Atlantic Ocean; and what riches Italy had garnered ~~in~~ from Asia by traversing the Mediterranean, was

sold the idea of reaching the east quickly by sailing west. On the way the Italian, Columbus, and his black pilot discovered the West Indies. Europeans flocked there to find gold and jewels, but found only fertile soil, which, if cultivated, would yield rich crops. European laborers were sent overseas by bargain, force and fraud; then they obtained African slaves from the Spanish and then the Dutch and French. The British built a vast world trade on African slaves and the Americans found profitable use for them in raising tobacco which Europe bought eagerly. ~~The Black~~ slaves raised tobacco in the Southern United States; white labor distilled rum in the northern states and sold it in Africa for slaves; they sold the slaves in the West Indies for sugar and took the sugar to the northern United States to make rum. Everybody was prosperous. Sugar began to be cheap in Europe, tobacco began to make Virginians rich, and only the black slaves writhed. Yet Some Europeans began to see in America a place where free land would make everybody well-to-do, able to move freely, do what he wanted to and believe what he thought was true. Here real democracy could grow and religious freedom. But greed interfered. American traders grew rich on their commerce. Monopoly of the colonial trade would make Britain the greatest empire of the world and the British tried to limit their colonies to trade with Britain alone. The Americans, therefore, stopped the most profitable British monopoly, the African slave trade. Britain and America flew to war, both using slaves as soldiers. France allied with ~~all India~~ red Indians, helped America and America won. A new democracy was formed, founded on the dictum that "all men are equal". But America hesitated: they refused to stop the African slave trade immediately because they had lost much slave labor in the war. Britain, however, now stopped the trade which had ceased to pay because of revolt of slaves in the West Indies; and America followed, but did not enforce her laws and the illicit slave trade continued. The slave system became so powerful that cotton began to furnish the world with cheap clothing. The Northern United States, France and Britain competed and the slave South sought the highest price for its product. The North sought to control the cotton crop by tariff restrictions on imports and also by encouraging the white laborers who feared the competition of slave labor. To this opposition was added the moral repulsion of

40-2-16

the slave system which arose from the protest of Free Negroes. When this alliance succeeded in restricting the further spread of slave territory in the United States, the South tried to secede from the Union and form a slave empire in the West Indies and South America. The North tried to hold them in the Union by force, but in order to accomplish this they had to seek the aid of Negro slaves and promise them freedom in return. Thus the Civil War (with the help of 500,000 black soldiers and laborers) became a war which abolished Negro slavery in the United States.

40-2-17

COLONIAL IMPERIALISM

Britain, unable to make further profit out of the slave trade, gradually adopted Colonial Imperialism -- that is, instead of transporting labor from Africa to America, she sought to seize control of territory and people in Africa and Asia, and, raising raw material there with cheap labor, carried it to Europe and processed it to valuable goods which sold at huge profit. European workers increased their demand for wages and rights; after organizing trade unions the workers won, but only by helping capital to gain and hold more colonial territory. Thus Britain gained control of countries like Nigeria. The British appeared first as traders. Then helped by natives like Samuel ~~Bishop~~ Crowther, they explored more land and materials; finally they attempted political control, but met resistance from native rulers. They tried methods learned in Asia. Bringing in highwaymen and freebooters like Frederick Lugard and Chinese Gordan, they gained new colonial territory for the empire. Thus in Uganda, Lugard used his machine guns on Catholics, Protestants and Mohammedans fighting to conquer each other and subdue the native tribes. At last Lugard made Uganda a part of the British Empire. Then although still legally an outlaw he came to Nigeria and showed the British how to annex Nigeria by his "indirect rule": that is, by bribing, cajoling and befriending rulers, and paying the salaries of chiefs until they acknowledged Britain as overlord, not by conquest, but by consent.

However, the Nigerians were not content. Increasingly they protested against the loss of their ancient liberties. Many used their ancient lore and customs, some secured education. The grandson of Samuel Crowther, who had become the first black Anglican Bishop in West Africa, secured a place in the civil service and through his newspaper, Lemander

Macauley started the battle for freedom. He was later joined by a young Nigerian student, Nnamdi Azikiwe, now Governor General of Independent Nigeria, who for 25 years fought a desperate battle for freedom until freedom came, November 1, 1960.

I witnessed with pride and hope the inauguration of the first black Governor-General and Commander-In-Chief of a Dominion of the British Commonwealth of nations. I hail Nigeria as the largest black nation of the world and as a worthy successor of the African imperial rule which began with the Songhay seven hundred years after Christ and became under Mohammed Askia, in the sixteenth century, an empire as large as all Europe today and as cultured as the Europe of that day, with its great University of Sankore and with "peace and plenty for all."

Then succeeded the rule of the Hausa with their seven industrial cities led by Kano and accompanied in development to the East by the kings of Kanem and the lords of Bornu. Westward then marched the Fulani, and there rolled up from the Gulf of Guinea, the Yoruba, the Ibo and the people of Benin. With these came industry, art and architecture which has taught the whole modern world. But all this marvelous development was distorted and overthrown by the British slave trade to America and followed in the nineteenth century by colonial imperialism which reduced this part of Africa to subjection to capitalist West Europe and North America.

What does independence and freedom mean? Nigeria, an agricultural country,
THE PROBLEM
OF CAPITAL feeding, clothing and sheltering itself by the toil of its farmers, will need manufactures and skilled industries run by modern technical and scientific methods. For this Nigeria will need capital. All nations need capital. Capital accumulation is a great modern idea. This means simply that a nation must produce more than enough for its immediate needs so as to use the surplus for better and increased production in the future. How now can apital best be raised? The simplest way is that a worker refrains from consuming all he makes and saves the surplus. He thus deserves a profit

freedom. He was later joined by a young Nigerian student, Nnamdi Azikiwe, now Governor General of Independent Nigeria, who for 25 years fought a desperate battle for freedom until freedom came November 1, 1960.

40-2-19

I witnessed with pride and hope the inauguration of the first black Governor-General and Commander-In-Chief of a Dominion of the British Commonwealth of nations. I hail Nigeria as the largest black nation of the world and as a worthy successor of the African imperial rule which began with the Songhay seven hundred years after Christ and became under Mohammed Askia, in the sixteenth century, an empire as large as all Europe today and as cultured as the Europe of that day, with its great university of Sankore and with "peace and plenty for all."

Then succeeded the rule of the Hausa with their seven industrial cities led by Kano and accompanied in development to the East by the kings of Kanem and the lords of Bornu. With these came industry, art and architecture which has taught the whole modern world. But all this marvelous development was distorted and overthrown by the British slave trade to America and followed in the nineteenth century by colonial imperialism which reduced this part of Africa to subjection to capitalist West Europe and North America.

But the tide has turned from the effort of a British adventurer raised to the perrage governing as Lord Lugard who tried to make Africa subdue itself under indirect rule. At last through the efforts of Nmandi Azikiwe, Kwame Nkrumah and others, independence and self-rule are being restored and this day marks a great step in this direction.

What does independence and freedom mean? Nigeria, an agricultural country, feeding, clothing and sheltering itself by the toil of its ~~educated~~ farmers, will need manufactures and skilled industries run by modern technical and scientific methods.

[redacted]

[The Problem of Capital]

40-2-22

I wrote three books on Africa: in 1915 a book called "The Negro" (Home University Library, No. 91) "Black Folk, Then and Now" 1930; "The World and Africa " 1946.

In 1934 I returned to teaching and research. I travelled widely, visiting all states of the United States and making sixteen trips to Europe, Africa and Asia and once circumnavigating the globe. Also I wrote fifteen books and many articles. Especially I became interested in Africa, the land of my fathers. I attended a Pan-African Conference in London in 1900 and acted as secretary. Also I planned an Encyclopaedia Africana and got distinguished promises of assistance. However, I was never able to raise the funds to actually realize the project.

During the armistice which followed, I called the First Pan-African Congress, in Paris, 1919. In 1921 I assembled a Second Pan-African Congress meeting in London, Paris and Brussells in 1921 and largely attended. A Third Congress was held in London and Lisbon in 1923; a Fourth in New York in 1927, and a Fifth in Manchester, England, in 1945. The All-African Conference which met in Accra in 1958 was, in fact, the Sixth Pan-African Congress. Many other meetings and organizations followed the lead of these congresses and got inspiration from them, like the Congress of West Africa in 1920, and the various African organizations of South and East Africa.

42-2-04

MY VISITS
TO AFRICA

In 1923, I visited Liberia as Special Minister Plenipotentiary of the United States, bringing a message from President Coolidge to President King. In 1958, I visited Ghana when Dr. Nkwami Nkruma became Prime Minister and President of independent Ghana. I attended the opening of parliament and inauguration of the President; I visited the cities and ports and paid my respects to the Asantehene of Ashanti at Kumasi. In 1960, I visited Nigeria when Dr. Nnamdi Azikiwe became the first native governor of this nation. I visited Lagos, Ibadan, Onitsa, where I sailed the Niger; Ibadan where I visited the University College. On that occasion I had an interview with the Governor and suggested sending him a memorandum of advice to Nigeria, based on my recent visits to England, France, Germany, Italy, the Soviet Union and its allied states, China, and my long residence and study in the United States. This is

AFRICAN HISTORY

What now was this Africa, which came into fatal contact with the European world in the fifteenth, sixteenth, seventeenth, eighteenth and nineteenth centuries? Most men have forgotten the role of Africa from the beginning of time. Because of the slave trade they have come to despise black Africa and to say that Africa had no history. They excused African slavery by pretending that its purpose was conversion to Christianity. Then when African slavery became the most prosperous industry on earth, Europeans claimed that Negroes were naturally inferior and their slavery to whites their natural condition. But now, at last, the history of Africa is beginning to be made known. Bushmen and Pygmies seem to be the modern survivors of the first African peoples. About 5,000 years before Christ, Negroes appeared, pushing up from the Great Lakes regions, and coming down the Nile, founded Egypt. They mingled with Asiatic peoples, and this blend of races moved across North Africa, then a fertile region with no Sahara. Some of them went southwest through Central Africa and others marched northwest "toward the setting sun". They began to found cultures and states. Ghana appears about 300 years after Christ. It grew for 5 centuries into a notable dominion. Then the new Mohammedan religion spread across North Africa and into Spain, converting thousands of Negroes. There Arabs and Africans built a notable culture in Spain, influencing the European Renaissance and attacking Europe at Tours in 732. Then they spread slowly southward and began to expand into imperial rule. Converted Negroes, known as Mandingoes

Under the Mandingoes the great empire of Malle,(Melle, the Mellestine role), with the cities of Timbucktu and Djenna(Guinea) The Mellestines reached its zenith under the Sultan Kankan Musa -- When pilgrimage to Mecca took place in 1324, and in his caravan were 60,000 persons and five million dollars worth of gold dust: the peoples of the East still talk of this magnificent journey -- and his state in the 14th century was at one of the greatest states of the world.

AFRICAN HISTORY

What now was this Africa, which came into fatal contact with the European world in the fifteenth, ~~sixteenth, seventeenth, eighteenth and nineteenth~~ and following centuries? Most men have forgotten the role of Africa from the beginning of time. Because of the slave trade they have come to despise black Africa and to say that Africa has no history. They excused African slavery by pretending that its purpose was conversion of Africans to Christianity. Then when African slavery became the most prosperous industry on earth, Europeans claimed that Negroes were naturally inferior and their slavery to whites their natural condition. But now, at last, the history of Africa is beginning to be made known. Bushmen and Pygmies seem to be the modern survivors of the first African peoples. About 5,000 years before Christ, Negroes appeared, pushing up from the Great Lakes regions, and coming down the Nile, founded Egypt. They mingled with Asiatic peoples, and this blend of races moved across North Africa, then a fertile region with no Sahara. Some of them went southwest through the Congo Valley and others marched northwest "toward the setting sun". They began to found cultures and states. Ghana appears about 500 years after Christ. It grew for 5 centuries into a notable dominion. Then the new Mohammedan religion spread from Arabia across North Africa and into Spain, converting thousands of Negroes. There Arabs and Africans built a notable culture in Spain, influencing the European Renaissance and attacking Europe at Tours in 732. Then they also spread slowly southward and began to expand into imperial rule.

Under the black Mandingoes the great empire of Malle, (Melle, the Mellestines), with the cities of Timbuktu and Djenna (Guinea), arose. The Mellestines reached its zenith under the Sultan Kankan Musa. The pilgrimage of Kankan Musa to Mecca took place in 1324 and in his caravan were 60,000 persons and five million dollars worth of gold dust; the peoples of the East still talk of this magnificent journey — and his state in the 14th century and was at that time one of the greatest states of the world.

This was the period when Negro slavery became intolerable

92-2-04

We come now to the territory long known as Nigeria and its extensions north and eastward. Here developed one of the most interesting phases of

ANCIENT NIGERIA

modern history which has been almost forgotten widely suppressed. Here developed ~~the Songhay~~, the Ashanti, and the people of Dahomey and Benin. Here were the Mandingoes, the Yorubas, the Mossi, Nube and Borgu, and Kanem. Here, along the Gulf of Guinea, was a civilization that reached back 5,000 years before Christ. Its peoples may have come from the East or possibly, from out of the West and the fabulous Atlantis. The Yoruba-Benin-Dahomey appeared with remarkable art and industry, abreast, in many respects, with the modern world. The African slave trade, centered in Guinea and devastated the Coast morally, socially, and physically. European gin and firearms were traded for human beings from the 15th to the 19th centuries. On the other hand, further north, the Songhay Empire, centering at the great bend of the Niger lasted a thousand years from 700 ~~A.D.~~. The greatest ruler was Mohammed Abou Beku known as Mohammed Askia. He controlled an empire ~~2,000 miles long and 1,000 miles wide. A territory~~ as large as all of europe. "He was obeyed with as much docility in the farthest limits of his empire as he was in his own palace, and there reigned everywhere great plenty and absolute peace." The University of Sankore' became a center of learning for the Mediterranean folk. Askia the Great reigned for 36 years. His successors were overthrown by the Moors who defeated the Songhay power at the Battle of Tenkaibibou in 1591. After the Songhay rule the Hausa appeared with ~~its~~ their seven cities of which Kano was the greatest and Katsena the most famous. Then came the kings of Kanem and ~~the~~ lords of Bornu, whose power extended down through the valley of the Congo. A new people, the Fula, entered Nigeria in the 19th century and in time became masters of the Central Sudan.

THE INDUSTRIAL REVOLUTION

At the very time that the Sudan was spreading its mighty empires; which had pushed the Bantu on their thousand year march south; and as the artisans of Atlantis came pressing east, Europe was discovering the capitalistic system. Capital is wealth saved; not consumed but used to make more wealth for future consumption. Africans saved and used wealth for capital, but on a small scale, since

ANCIENT NIGERIA

We come now to the territory long known as Nigeria and its neighbors north and eastward. Here developed one of the most interesting phases of modern history which has been widely suppressed. Here developed the Songhay, the Ashanti, and the poeple of Dahomey and Benin. Here were the Mandingoes, the Yorubas, the Mossi, Nuba and Borgu, and Kanem. Here, along the Gulf of Guinea, was a civilization that reached back 3,000 years before Christ. Its peoples may have come from the East or possibly, from out of the West and the fabulous Atlantis. The African slave trade centered in Guinea and devastated the Coast morally, socially, and physically. European gin and firearms were traded for human beings from the 15th to the 19th centuries. On the other hand, further north, the Songhay Empire, centering at the great bend of the Niger, lasted a thousand years between 96 and 700 AD. The greatest ruler was Mohammed Abou Beku known as Mohammed Askia. He controlled an empire 2,000 miles long and 1,000 miles wide, a territory as large as all of europe. "He was obeyed with as much docility in the farthest limits of his empire as he was in his own palace, and there reigned everywhere great plenty and absolute peace." The University of Sankore' became a center of learning for the Mediterranean folk. Askia the Great reigned for 36 years. His successors were overthrown by the Moors with gunpowder who defeated the Songhay power at the Battle of Tenkaibibou in 1591. After the Songhay rule the Hausa appeared with then seven cities of which Kano was the greatest and Katsena the most famous. Then came the kings of Kanem and the lords of Bornu, whose power extended down to through the valley of the Congo; and A new people, the Fula, entered Nigeria in the 19th century and in time became masters of the Central Sudan.

40-2-82

→ The Bantu

THE INDUSTRIAL REVOLUTION

At the very time that the Sudan was spreading its mighty empires; which had pushed the Bantu on their thousand year march south; and as the artisans of Atlantis came pressing east, Europe was discovering the capitalistic system. Capital is wealth saved; not consumed but used to make more wealth for future consumption. Africans saved and used wealth for capital, but on a small scale, since

THE BANTU

The spread of the mighty empires in the Sudan brought them into contact with the peoples of West Africa; with the people who followe the Nok culture, can be traced back to 3500 years before Christ; to the Yoruba and Beni and the peoples of Ife, the Mossi and Nupe. It is not yet possible to separate these peoples or to say whence came the first use of iron which appeared in the great culture of Meroe, and ruled the world from five hundred years before Christ until Kush fell 200 A.D.

At any rate, a horde of West African peoples, traders and artisans moved east against Sudanese imperialism, disrupted north Africa and drove masses of Africans south. These folk different in origin and culture started on a pilgrimage which lasted z thousand years and five thousand miles until they saw the southern seas from the Cape of Evil Omen called Good Hope. On their journey these people acquired a common tongue the singularly beautiful Bantu. They established centers of cultures and overthrew or overthrew older states. They founded, overthrew cities like Zymbabwe and Mapungubwe; and they overthrew or founded great states like the Monopotapa; they sent a king of Congo to Portugal for education; . They gave birth to Chaka the military genius and they killed the French prince imperial. Their history is yet to be written

40-2-29

the pamphlet.

40-2-30

FOOD, CLOTHES
AND SHELTER

Normally, the first duty of a people is to feed, clothe and shelter themselves. Nigeria is a well-situated state, with rich soil, great rivers, lakes and forests, a wealth of materials, vegetable and mineral and a generous seaboard. It has a large but not crowded population which it can support from its own soil, with its own sowing, and reaping; spinning and weaving; planning and building. Its people are not homogeneous, but not too different to preclude working together as one unified state with reconcilable aims and ideals.

Wilhelm (now Humboldt) University at Berlin, Germany.

MY WORK
AND TRAVEL

I began my work as a teacher in the United States in 1894, instructing in history and sociology until 1910. From 1910 to 1934, I became a founder and official of the National Association for the Advancement of Colored People and editor of its monthly magazine advocating full citizenship rights for Americans of Negro descent.

In 1934 I returned to teaching and research. I travelled widely, visiting all states of the United States and making sixteen trips to Europe, Africa, and Asia, and once circumnavigating the globe. Also, I wrote fifteen books and many articles. Especially, I became interested in Africa, the land of my fathers. I wrote three books on Africa: In 1915 a book called "The Negro" (Home University Library, No. 91), "Black Folk, Then and Now", 1930; "The World and Africa", 1946. Also, I planned an Encyclopaedia Africana and got distinguished promises of assistance. However, I was never able to raise the funds actually to realize the project.

modern history, which has been almost forgotten. Here developed the Ashanti, and the people of Dahomey and Benin. Here were the Mandingoes, the Yorubas, the Mossi, Nube and Borgu, and Kanem. Here, along the Gulf of Guinea, was a civilization that reached back 3,000 years before Christ. Its peoples may have come from the East, or possibly, from out of the West and the fabulous Atlantis. The Yoruba-Benin-Dahomey appeared with remarkable art and industry, abreast, in many respects, with the modern world. The African slave trade in America centered in Guinea and devastated the Coast morally, socially and physically. European gin and firearms were traded for human beings from the 15th to the 19th centuries.

On the other hand, further north, the Songhay Empire, centering at the great bend of the Niger, lasted a thousand years from 700. The greatest ruler was Mohammed Abou Bekr, known as Mohammed Askia. He controlled an empire as large as all of Europe. "He was obeyed with as much docility in the farthest limits of his empire as he was in his own palace, and there reigned everywhere great plenty and absolute peace." The University of Sankoré became a center of learning for the Mediterranean folk. Askia the Great reigned for 36 years. His successors were overthrown by the Moors who defeated the Songhay power at the Battle of Tenkadibou in 1591. After the Songhay rule the Hausa appeared with their seven cities, of which Kano was the greatest, and Katsena the most famous. They brought industry and trade. Then came the kings of Kanem and lords of Bornu, whose power extended down through the valley of the Congo. A new people, the Fula, entered Nigeria in the 19th century, and, in time, became masters of the Central Sudan.

THE INDUSTRIAL REVOLUTION

At the very time that the Sudan was spreading its mighty empires; which

40-3-10

had pushed the Bantu on their thousand-year march south; and as the artisans of Atlantis came pressing east, Europe was developing the capitalistic system. Capital is wealth saved; not consumed, but used to make more wealth for future consumption. Africans saved and used wealth for capital, but on a small scale, since production was limited; and owned by the family and clan, not by individuals. The same was true in Europe until, suddenly, in the Sixteenth Century, European traders got hold of fabulous treasure from two sources: and its control fell into private hands. Europeans found vast wealth by plundering India, and by stealing peasants in West Africa and enslaving them in America. Americans raised tobacco, sugar and cotton, and sold them over all the earth. ~~Incidental~~ tribal wars of Africa ~~became profitable~~ leading to the Europe slave raids ~~which~~ robbed the continent of 100,000,000 human beings, distorted ~~their~~ Africa lives and customs, ~~utterly~~ uprooted ~~their~~ its political structure, ~~their~~ its art, and clouded ~~their~~ its ideals. The world was transformed. Conquest by Europe overthrew the civilization of Asia: Europe began to gain rule over most of the world, by stealing gold and silver, using slave labor, and selling the goods which slaves made for profits so huge as to enable it to manufacture goods and trade these goods for the raw materials of the whole world. The skill of American and European labor increased the ability to manufacture, and science and invention gave miraculous power to this new technique.

From 1800 Europe ruled the world. Africa and Asia and the islands of the Seven Seas bowed or were bent before it. It even partially deceived itself, and, under the spell of a new religion borrowed from Asia, justified theft and slavery, conquest and force, as the one way in which superior White folk, could lead colored folk to civilization, if, indeed, they could be led. But the world did not stand still. The Christian church split in disagreement, the black slaves in the West Indies arose in continuous and increasing revolt from the 15th to the 18th century, and the white peasants of Europe sought freedom from serfdom in the

40-3-13

and religious freedom. But greed interfered. American traders grew rich on their commerce. Monopoly of the American colonial trade would make Britain the greatest empire of the world if the British limited their colonies to trade with Britain alone. The Americans refused to restrict trade or let the British rule them completely; ~~and~~ they stopped the most profitable British monopoly, the African slave trade. Britain and America flew to war, both using black slaves as soldiers. France, allied with the red Indians, helped America, and America won. A new democracy was formed, founded on the dictum that "all men are created equal".

America hesitated: it refused to ~~stop~~ continue the profitable the African slave trade, ~~immediately~~, because so much slave labor had been lost in the war. Britain, however, closed tried to stop the trade, which had ceased to pay because of continuous revolt of slaves in the West Indies. America finally followed, but did not enforce her own laws, and the illicit African slave trade continued until 1860. The slave system, meantime, became so powerful that slave-raised cotton was furnishing the world with cheap clothing. The Northern United States, France and Britain competed for the cotton crop, and the slave South sought the highest price for its product. The North sought to monopolize the cotton crop by tariff restrictions on imports. However, the white laborers of the nation, who feared the competition of slave labor, and to their opposition to slavery was added the moral repulsion to slavery which arose from the Abolitionists and the protest of Free Negroes. When this alliance succeeded in restricting the further spread of slave territory in the United States, the South tried to secede from the Union and form a slave empire in the West Indies and South America. The North tried to hold them in the Union by force. The non-slave-holding Southern whites began to refuse to fight for the slaveholders and deserted by the thousands; the Northern white laborers,

40-3-15

SOCIALISM

There are other folk in Nigeria, and increasingly in Europe and Asia, who say no, there is another answer. It has become customary in the 19th century in Europe and North America to build Progress on Poverty; to make a few cultured classes rich by letting them feed on a mass of the poor and ignorant workers. This is not necessary and was not done in the past. In primitive Nigeria, no member of a tribe was hungry so long as the tribe had food. There were no homeless widows, nor helpless orphans. The tribe and clan fed the hungry and protected the helpless. The clan saved capital and invested it. The profits naturally belonged, not to the individual who handled the transaction, but to the tribe which owned the wealth. The individual was paid for his work but for no more. To be sure, this system was not perfect. Tribes were broken up by wars and wars became slave raids which further disrupted clans. Clans and nations moved to avoid disaster or gain new land or power. Disrupted members of tribes took refuge in towns without tribal protection, and the ancient communal care failed often or disappeared. But it was an effective way of preventing poverty and spreading wisdom where and when it worked. Men remembered it, chiefs practiced it, and medicine men told about it. When now it is suggested that this common effort of the state be revived in some form, British and Americans scream "Socialism!" or "Communism!" but wise Nigerians are not frightened.

I have only to impress upon you that here there should be on your part little hesitancy. Socialism and Communism, under the teaching of Karl Marx and Lenin, are beginning to triumph all over the world; and you should not hesitate to study these doctrines, and the results of the reign of private capital, under Western Europe during the nineteenth century. Your logical development should stem directly from the communalism of your fathers, where capital or wealth used

40-3-16

Poland, East Germany, and Hungary, you will find allies and friends who will help you toward freedom and peace. These people are not as they are often painted, either fools or conspirators, but struggling and oppressed folk like you, who are striving for a decent life. You should visit them, and get to know them. Britain and Scandinavia accept a partial socialism, but refuse, as yet, to accept the aims and methods of Communism. That is their right. If the United States fears Communism, that is their business, if they do not bother us. If Cuba chooses Communism, it has the right so to choose. Whatever Nigeria accepts is not a name but a fact. Nigeria must prevent poverty; it must educate its children; it must heal its sick. Whatever path leads to these ends, Nigeria must follow, no matter what it is called. Nigerian students should study and travellers should visit and examine the way in which the nations of the West and East are settling the pressing problems of income and expense; of work and wage; of property, of crime; of education and employment. Deeds, not mere words, settle these problems, and it matters not a jot whether the system which proves effective is called Capitalism, Socialism, or Communism. Nigeria must adopt those measures which solve her problems and ignore that which suits others, but does not apply to her.

AMERICAN
NEGROES

In seeking these answers, the attitude and words of American Negroes greatly puzzle Nigerians today. They know that millions of black Africans for 400 years were stolen from their homes and enslaved in America when not murdered or drownded at sea. In America they suffered every cruelty and degradation, while digging from the soil stolen from the Red Indians, wealth which made Europe rich and powerful, and long masters of mankind. At length, these black slaves gained

40-3-17

United States, to Scandinavia, and Germany; also to the Soviet Union and its allies, and, especially, to China, because the Yellow Race has suffered even more than the Black Race from the cruelty and exploitation of the white race. Use education to rebind and heal the rifts of mankind, and never forget that trade and commerce can be aids to human progress.

THE AFRICAN
WOMAN

Africans are born traders. From the birth of Time, the African market has set patterns for the world from the Nile to the Niger, from the Senegal to the Congo, from the Zambesi to the sea. The freedom of women began in the African market-place, and still can be seen on the streets of Cairo, Accra, Lagos, Ibadan and Leopoldville.

Guard your women. The white man has for two centuries been the threat of Negro womanhood. White men have raped and degraded colored women from Casablanca to Capetown, from Thailand to Calcutta. Americans are planning to send scouts to ~~West~~ Africa. ~~Some will be honest friends, hoping to learn and help.~~

This which seems to many like unselfish help, may prove veritable disast~~to Africa.~~ Some of these young people may be honestly desirous to help! But most of them have been trained from childhood ~~to despise~~ Negroes and to regard them as inferiors. Most of them will ~~be briefed by the State department~~ or by leaders of industry to regard ~~Socialism~~ as a crime and to spread ~~hate and~~ distrust of the Soviet Union and contempt for China. They will ~~betold that a third world war is inevitable and that~~ we must prepare ~~for it at any cost, since~~ as Eisenhauer once said that Americans "can lick the world". Also there will be among these Americans a number who will come to Africa to carouse, gamble and whore and leave their bastards in Nigeria as Americans did in Germany, Japan the Phillipines and Korea. Watch these scouts and treat them as they deserve.

40-3-18

You are facing a desperately divided world, full of suspicion and hate. In this world, Americans especially assume that Negroes believe in them and will eagerly follow whereever they beckon. They believe that colored folk are quickly flattwered by their notice. They will therefor hasten to give Negroes advice. They will not go to Africa to learn, but only to teach. Among such visitors will be sent some Americans of African descent, who also will assume that they will be received gladly and will be able to teach Africans before they know them. Disabuse all these visitors. Disabuse their ignorance. Make them either learn or go home. After they learn what they must do before Africa receives them, then be willing to learn from them whatever they can teach

Against women African traders, and their market-place, is rising a terrible menace in the form of the European corporations like Unilevers of Britain, ~~with a capital of a billion dollars and an annual income of three hundred millions of dollars;~~ and other giant corporations of Belgium, France, and Switzerland, with the best and highest paid skill of the world, backed by the airplanes, armies and navies of most of the world's most powerful nations. This duel goes on today along the streets of every African town. The mass of retail traders, selling

40-3-04

witchcraft and chance. The followers of Mohammed know no color line; Christians know modern European culture; all Nigerian religions respect the faith of others, and grant them the right to follow it. They know that a religion is an attempt to know the truth, and a belief in such truth as is beyond proof. This dogma may go so far as to deny Truth, even when it is proven; but if it does, in time, it must give up dogma and recognize Science; just as Science admits freely that it does not know all, and perhaps never will.

The treatment of religion -- of all religion, whether it be that which you believe, or that which you deem false, is ever a delicate and holy task. From dawn of consciousness all men are trained to believe in what their group and their age calls Truth. It may be wrong, in part, but it is believed by hundreds or millions. That belief must be treated with respect. Carefully, thoughtfully, must the real truth be taught, and this task in Nigeria must be paramount. The good of religions, not alone their mistakes, must be taught. Conference and understanding must be sought. Cooperation must be paramount. Witchcraft must not be derided. It is ancient as the hills; it holds stores of wisdom; it is the source of literature and art; indeed, it gave birth to science and still has much to teach. Meantime, the object of religion is to induce men to act right so that none will hurt another, and all can find happiness. Let no religion, Catholic, Protestant or Mohammedan interfere with the functions of the paramount State. The State alone controls Government and the Education of children. Let Science not witchcraft nbor pretenced miracles preserve the health of the masses.

What is happiness? It is primarily the gratification of the senses: seeing, hearing, touch, taste, smell. But here, manifestly, this is true: moderation must be the rule; temperance; you cannot see everything on earth; you cannot hear all the music of the spheres; you cannot feel every pleasure at once. So, the wise man eats moderately, drinks sparingly, does not go on sprees. Especially, man must never seek happiness at the cost of pain and unhappiness to others. In a land like Nigeria, so long deprived of ordinary decencies, much more of happiness can be had, than is usual today. Many are apt to think that the

40-3-20

appetite, but promiscuity defeats its aim of pleasure and healthy children. While women are designed to bear children, they cannot in civilized life be regarded as simply brood mares or toys for the pleasure of men. They have as much right to careers as men, and, after the normal child-bearing age, they should join in the world's work; they should even have the right if it suits their health or ambition, to surrender motherhood for work they can do better. In fine, from the year of about sixteen to twenty-six, the natural sex appetite is strong and should be indulged, legally and normally. These years are best for parenthood and make possible a normal companionship of children and parents which can build the normal family. Marriage should make public this procreation of children. But the marriage should be made terminable at will of either partner when it ceases to be satisfactory, provided the rights of husband, wife, and children, are fully assured. All this can be feasible ~~by law and custom~~, if treated by law and decency and not hidden in secrecy, cheating and false shame.

One problem has resulted in paradox in modern civilization. That is what is called "menial service". It is arising in Nigeria. What shall be the status and wage of those who do the intimate services which every man requires more or less from infancy through age: the care of infants, the bathing of bodies, (getting rid of dirt and excrement) (the cooking and serving of food, the washing of clothes, the cleaning of living quarters, attending the sick, adorning the body, entertaining guests, and ~~the~~ like matters. These services are, on the one hand, matters of love and trained knowledge; on the other, they ~~removal of dirt, manure~~, they are often ~~regarded~~ as the lowest work of mankind, fit only for slaves, or the lowest and worst treated of workers. Yet both these things they cannot be. What is holier and dirtier than a mother's care? What is more despised than menial service? This paradox must be reconciled. Nigerians of wealth and position are hiring many servants and paying them low wage. Nigerians of education and ambition refuse to become

40-3-21

For this I have already consulted Dr. Dike of the Nigerian University College at Ibadan. He is, perhaps, the best known African scholar in African history. He and his scholars have given cheerful promise of cooperation. Other African Universities and Colleges have promised cooperation. But scientific truth is our aim and not mere racial propaganda; when, then, no African scholars are found who measure up to modern scientific standards, we ~~shall~~ will draw no color line, and ~~shall~~ seek the best scholars, without regard to color, race or religion.

Nigeria must, finally, say to the world: Africa is for the Africans, for the black folk who for centuries have inhabited this continent. But we are a hospitable, and friendly people, and we welcome to our shores all men of good will. We do not want again slave traders nor thieves. We do not want whore-mongers nor gamblers. Those who come to us as friends, who wish to live beside us as equals, sharing our poverty and our conditions of life will be welcomed. Others will be sent home.

We wish to judge the white folk who have come to Africa with fairness. The British have enslaved and exploited us in the past; but, also, they have given us education and advice. In the future we will treat them as they deserve, but, not, necessarily, as they demand.

Americans have sent us missionaries, who have done us both good and evil. We do not want missionaries who thoughtlessly antagonize our religion and try, without consideration arbitrarily, to change our customs; but we would be glad to learn the thrift and skill of America insofar as the United States ~~and the people of South Africa~~ do not make color prejudice a central part of their ~~lives.~~ policy

We know that the French have done much for Africa; but that, also, there are things that they have not done, and evils to which they cling. So far as France, even in her colonies, stands by her fine ideal of liberty, equality and brotherhood, people from France are welcome to Nigeria.

One matter we must consider, ~~or~~ delicate as it si: how long can Nigeria ~~ns~~ permit her citizens to receive rrwards and titles from Great Britain? True it is that these honors may be bestowed fairly and with sound judgment; but often they may be given for political purposes and to influence our policy. This is a ~~mm~~ matter gravely to be considered.

40-3-25

We know that the French have done much for Africa; but that, also, there are things that they have not done, and evils to which they cling. So far as France frees her colonies, and stands by her fine ideal of liberty, equality and brotherhood, people from France are welcome to Nigeria.

We see in the Soviet Union and its allied states friends and helpers for peoples who have suffered as we have suffered from the oppression of their rulers. We hail the emancipation and struggles of their peoples. In China and India we recognize our colored brethen: peoples who have suffered from color caste in the past, and who, since, have gained freedom and independence.

Hail Peace and Plenty, for the World and for Africa.

The gathering of news from the world; the free expression of opinion; the unhampered creation of forms of art are prime needs of a nation. Remember that most nations today have difficulty in getting true reports of current events; are not allowed to hear what men think and are limited in knowing forms of art and literature which their governments do not like. Let this never occur in America. Watch the press. Insist on hearing the "other side". Resent the gagging of opinion or taste. Watch the beginnings of this tendency, before it is too late and you find yourselves [redacted] bound with monopoly.

January 22

40-2-3

The treatment of religion-- of all religion, whether it be that wich you believe or deem false is ever a delicate and holy task. From dawn of consciousness all men are trained to believe in what their group and their age calls Truth. It may be wrong in part, but it is believed by hundfeds or millions. That bdlief must betresged with respect. Carefully, thoughtfully must the real truth be taught and this task in Nigeria must be paramount.

22
14

The good of religions, not alone their mistakes must be taught. Conference and unddrstanding must be sought. Coopreation must be paramount

Witchcraft must nbot be derided. It is ancient as the hillls; it holds stores of wisdom; it is the source of literature and art; indeed it gave birth to science and still has much to teach

40-2-4

It is of course possible for ~~such~~ a state to buy food and materials from abroad and thus trade has always been a part of its interests. But foreign trade as compared with domestic production always entails certain considerations: goods bought abroad must always eventually be paid for by goods sold ~~abroad~~ to foreigners, and the ratio of exchange must therefore be carefully calculated. If the traders of goods or services are equal individuals or tribes of essentially equal status the ratio of exchange, that is, the prices, will be reached by haggling in the market and will, in the long run, be fair to all. But under the colonial system, it was the practice for the mother country to set the prices and ~~it~~ as white Europe despised black Africa and did not believe in the ability nor desert of black folk it soon became customary for whites to pay the lowest possible wages for African labor and the cheapest prices for materials. Thus the mother country grew rich and kept her home labor sayisfied by paying them higher wages out of their profits on colonial trade.

40-2-5

The United States is regarded as the richest country in the world and this is credited to its development of private initiative and development of private capital. This is not ~~xxx~~ the complete truth . The United States is rich because of its vaste store of natural materials like coal, iron, oil and other minerals; it almost unlimited amount of rich land, with forests and water power. This wealth we have wasted and are wasting. We have allowed it to be monopolized by private individuals until now their corporations rule the land. Socialism in the New Deal fought this and even today the ~~failing~~ capitalist system is being restored by money from public taxation ~~which is being~~ assigned as a gift to private individuals.

This nation is still rich but in grave danger unless real socialism prevails

40-2-6

40-2-7

They also granted home labor some education and political rights, provided labour supported government policies and fought as soldiers to gain and keep colonial territory. ~~Meantime poverty spread in the colonies; the natives were taxed not only for their own needs but for~~ the expenses of colonial government, pensions for colonial officials and special wages and privileges for white workers who came to the colonies ~~to help government, trade and industry.~~ In time ~~these~~ privileges, included segregated and comfortable

40-2-8

A

For many centuries peoples living in what is now called Nigeria, w were not hungry, had sufficient clothing and shelter, and were content. Widows were cared for, there were no orphans nor prostitutes; artists and artisans made beautiful things and poets sang and recorded history.. Now and then intertribal wars brought disaster, but there were long spaces of peace and plenty. Then came strangers fro abroad to explore and trade; but in time this trade degenerated into slave trading and tribal wars became slave raids. When the slave trade declined. Britai appeared as ruler, seeking to displace native rule. Poverty appeared in the colonies. More and more ~~so~~ what the natives raised and made was seized as taxes and used not so much for native needs

What must first freedom mean? Nigeria, an agricultural country, feeding, clothing and sheltering itself by the toil of its educated farmers, will need manufactures and skilled industries run by modern technical and scientific methods.. The current method of bringing industry to farming countries is by borrowing wealth from Europe; buying machines and tools with this wealth and then importing skilled technitians from abroad to migrate here and set up factories. With these factoriy hands and engineers come merchants to buy the manufactured products for sale abroad; and bringing with them goods made abroad to sell to the natives. This system which once seemed quite natufal and good for all was soon seen to be but little didderent from colonialism. The interest on borrowed capital was so high and thdterms so onerous, that the lending capitalists soon owned the country. It was thus that Algeria , Tunis and Egypt cmae under the complete control of Britain and France. It was this that would soon have happened to Ghana had not Nkrumah checkmated the trend; it was this that would have been the fate of Nigeria had it not been for the sacrifice and persistence of Macauley and Azikiwe. Moreover their work is not finished: it has just begun

40-2-9a

Modern miraculous industry calls for modern Science and skills. Learn these learn these in schools and by travel abroad; learn them from artisans welcomed from abroad, but welcome not white workers who will not recognize your equal rights and demand neither wage nor privilege which they are unwilling to share with all

Enter into ~~trade~~ TRADE; buy and sell to foreigners, developing the same skills which Africans were noted for centuries. But beware the ~~modern trader; the~~ Absentee investor who does not care how his wealth is invested so long as he gets support comfort and luxury; the adventurer who kills and enslaves, steals and cheats ~~so long as he~~ makes fortunes for his class and government. The outlaw ~~adventurer~~ who seized Uganda, Kenya and Nigeria, broke law and gospel, but when he enlarged the British Empire became a noble man and died in honor. Lugard did not found Nigeria -- it was founded in the great empires of the Sixteenth century.

Nigeria can finally say to the World:Africa is for the Africans: but we are a hospitable people, with plenty of lands and rich resourses. We need advice and help. And so We welcome to our shores all men of good will. . We do not welcome masters slavedrivers or thieves; we do not want playboys, gamblers or whoremongers. Those who come as friends, willing to live among us as equals, sharing our lack of wealth, giving us council and learning our wants and ways will be welcomed, as they find necessary work and space. Those who come to show off and exploit, to ~~get~~ enjoy cheap ~~house~~ menial service; to carouse and get something for nothing, would better stay away, ~~or~~ we will jail them or send them home. In the past the British have enslaved us and exploited our labor and land; but also they have helped in our education and yielded us even if reluctantly, independence and much sound advice. Americans have helped in education and skillls. We are well aware of the rivalry between these two nations in Africa and we fear it.. We are not going to continue to be under the control of the Brutish nor pass to the controll of America We are going to be independent and welcome British and Americans so far as they live under our control. We cannot forget that the United States are to tocay the chief centers of hate of Negroes and we await and demand a fundamentel change in this respect before we give them friendship or coopdration. . We know what the French have done for Africa and where they have failed. We hope for a happier future in A geria and the new French Community. We see in the Soviet Union and tis Communist allies, friends and striving to get rid of poverty and ignorance and disease. Especially do we stretch our arms to the People's Republic of China and to India, Pakistan, Burma and all Asia, who with us have long suffered color caste Hail, Peace and Plenty for the World and Zfrica.

40-2-10

~~NIGERIA~~

Nigeria must finally say to the world: Africa is for the Africans, for the black folk who for centuries have inhabited this continent. But we are a hospitable and friendly people and we welcome to our shores all men of good will. ~~But~~ we do not want again slave traders nor thieves. We do not want whore-mongers nor gamblers. Those who come to us as friends, who wish to live ~~beside~~ us as equals, sharing our poverty and our conditions of life will be welcomed. Others will be sent home.

We wish to judge the white folk who have come to Africa with fairness. The British have enslaved and exploited us in the past, but also, they have given us education and advice. In the future we will treat them as they deserve but not, necessarily, as they demand.

40-2-11

Americans have sent us missionaries, who have done us both good and evil. We do not ~~welcome such~~ want missionaries as ~~those~~ who antagonize our religion and ~~who tend~~ try arbitrarily to change our customs; but we would be glad to receive ~~those with~~ the thrift and skill of America insofar as they and the poeple of South Africa do not ~~seem~~ to make color prejudice a central part of their lives.

We know that the French have done much for Africa, but that also there are things that they have done and evils to which they cling. So far as France stands by her fine ideal of liberty, equality and brotherhood, they are welcome to Nigeria.

We see in the Soviet Union and its allied states friends and helpers for peoples who have suffered as we have suffered from the oppresion of their rulers. We hail the emancipation and struggles of their peoples. In China and India we recognize our colored brethen: peoples who have suffered from color caste in the past, who ~~since~~ have ~~(x)~~ gained freedom and independence ~~in the future~~.

Hail ~~the~~ Peace and Plenty for the world and for Africa.

for his sacrifice, and of course retains ownership of his original property. This is the original and simple concept of capital. But the concept and practice has greatly changed in modern days: first the original capital is often not owned wholly by an individual, but is the gift of the state and yet the profit goes into private hands. For instance, the state builds a harbor with public taxes and yet private persons or corporations reap the profit without adequate charge. Or a private corporation builds a railroad, sells it to the state for a price fixed by the corporation as much higher than it is worth, and the state tries to run the railroad, but must first pay the inflated price or "bonded indebtedness" with high interest. State conduct of the railroad results in a deficit which the public pays with high fares and freight charges. Or, again, the state gives a private corporation a monopoly in the use of streets and then the corporation makes a large profit which it calls its own, with no payment or very inadequate payment to the public. So that a new state like Nigeria must, from the beginning, be sure that the capital they borrow really belongs to the person or corporation which claims profit for its use.

The current method of bringing industry to farming countries is by borrowing wealth from Europe; buying machines and tools with this wealth and then importing skilled technicians from abroad to migrate here and set up factories. With these factory hands and engineers come merchants to buy the manufactured products for sale abroad; and bringing with them goods made abroad to sell to the natives. This system which once seemed quite natural and good for all was soon seen to be but little different from colonialism. The interest on borrowed capital was so high and the terms so onerous, that the lending capitalists soon owned the country. It was thus that Algeria, Tunis and Egypt came under the complete control of Britain and France. It was this that would soon have happened to Ghana had not Nkrumah checkmated the trend; it was this that would have been the fate of Nigeria had it not been for the sacrifice and persistence of Macauley and Azikiwe. Moreover, their work is not finished: it has just begun. Nigeria needs industry; and for

10A.2.19

industry Nigeria needs capital; and to use capital Nigeria needs skill, engineers, science. Capital must be saved. Each Nigerian, above what he eats, wears, and uses, must sacrifice and save. Every nation must save wealth for use as capital -- to make more goods for future use.

But considering the need; looking the present world crisis and threat straight in the face; considering how advantageous it would be if more capital was available now, some capital can and should be borrowed, if that can be done on favorable terms. It has long been the custom for western capitalists to gang up on poor countries in Asia and Africa and charge them exorbitant interest. Today they charge from five to ten percent, with other requirements which raise the charge to fifteen or twenty-five percent. But the Soviet Union and China often lend for two percent and sometimes for nothing. Nigeria should examine all terms offered and if they are clear and honest, with no strings attached, borrow at the best rates, the smallest sums sufficient for its needs.

Again, in the past, the nations which loan, usually sent their own nationals to direct colonial industry and furnish the direction and skill. For these they demanded special pay, preferred status, the right to govern even when the natives were disfranchised; and preferred places to live. All this privilege must go. If white folk cannot come to Nigeria and live on Nigerian wages, alongside Nigerian people, with the rights and no more rights than Nigerians enjoy, then White folk must stay out of Nigeria. Differences in custom, current ignorance of sanitation, and dire poverty, may make it difficult at present to carry out this equality of treatment; but that only indicates how quickly and thoroughly Nigeria must ride itself of poveryt, ignorance and disease, and what whites must sacrifice if they come here.

However, there is offered another way. Nigeria will find that the British and French and, especially, the North Americans suggest a quick by-path for Nigeria to become rich and happy. And that is for intelligent and well-to-do Nigerians to join the British and Americans and other white capitalists in exploiting the country and using cheap black labor and cheap land and its products, in making themselves and the white folk rich, and keeping most Nigerians especially the farmers and peasants, ignor-

40A.2.D

ant, poor and sick.

They say this should be done because it is the best and quickest way to help Nigeria upward. They point out that when men say that such a country is rich, they mean that their upper classes are rich but that the masses are poor, because the wealth they earn is used to support the rich in comfort and even luxury. They suggest that just as in the past, white Europe lived on black Africa, so in the future, the more prosperous black Nigerians and rich colored Americans become junior partners with white Europeans and live on the poverty, ignorance and sicknesses of the mass of Nigerians living in the country districts and the slums of the towns.

SOCIALISM

There are other folk in Nigeria and increasingly in Europe and Asia who say no, there is another answer. It has become customary in the 19th century in Europe and North America to build Progress on Poverty; to make a few cultured classes rich by letting them feed on a mass of the poor, and ignorant workers. This is not necessary and was not done in the past. In primitive Nigeria, no member of a tribe was hungry so long as the tribe had food. There were no homeless widows, nor helpless orphans. The tribe and clan fed the hungry and protected the helpless. The clan saved capital and invested it. The profits naturally belonged not to the individual who handled the transaction, but to the tribe which owned the wealth. To be sure the system was not perfect. Tribes were broken up by wars and wars became slave raids which further disrupted clans. Clans and nations moved to avoid disaster or gain new land or power. Disrupted members of tribes took refuge in towns without tribal protection and the ancient communal care failed often or disappeared. But it was an effective way of preventing poverty and spreading wisdom where and when it worked. Men remembered it, chiefs practiced it, and medicine men told about it. When now it is suggested that this common effort of the state be revived in some form, British and American scream "Socialism!" or "Communism!" But wise Nigerians are not frightened.

I have only to impress upon you that here there should be on your part little hesitancy. Socialism and Communism under the teaching of Karl Marx and Lenin are be-

40A.2.21

ginning to triumph and you should not hesitate in studying these doctrines and the triumph of private capital under Western Europe during the nineteenth century. Your logical development stems directly from the communalism of your fathers where capital or wealth used to produce wealth was owned by the chiefs who represented the tribe, just as today land and water are owned in a similar way and the profit made in early days through this capitalism belonged to all and not to any individual. Can and should socialism be restored in the great independent Dominion of Nigeria? Northern Nigeria with its ruling sultans and emirs; with its Moslem and primitive religion, its chiefs and medicine men, is still the stronghold of the ancient communalism. As such it is a most valuable counterweight to Eastern and Western Nigeria, which are centers of the new commercialism, where a new Bourgeoisie are seeking to exploit land and labor as is customary in the western world. The industrial and commercial Nigeria has embraced education and science, while the North has lagged in schools and defended primitive customs and dogma which hinder progress. The star of hope is that the North is beginning to encourage education and the commercial south is studying Socialism and Communism and what they may hold for future Nigeria.

Nigeria must build a welfare state and move toward a state where all men work to the best of their ability and receive as wage not everything that they want, but everything that they need for the greatest development of all the people. This will involve sacrifice. This will mean not the rule of the rich and the smart, but the uplift of the great mass of people out of which will come power and genius and ideals which will restore Africa to the place it once occupied in the forefront of the world.

In the hard and bitter strife toward this end you will find allies. Some few in Western Europe and Ngrth America. But not many, for they want so much your progress as prift from your free land and cheap labor. They are willing to share this loot with those of you who can be bought. But in nations like the Soviet Union and

40A.222

American Negroes. Most of these Negroes seem to insist that they are really quite well off in America; that racial segregation and color discrimination has almost disappeared, and that American Negroes are ready to join white folk as investors in African industry and as guides in American skills and methods.

Then comes some contradiction. Some other black Americans arrive, many of whom have suffered persecution in the United States and been refused passports to travel. They deny this rosy picture; they aver that, despite great progress, oppresion, color discrimination and segregation still persist in the United States, even despite the law; and that most of the black Americans who spread these pleasant stories are paid to do so by the State Department of the Government of the United States! Or by Big Business enterprise which wants to prevent Africans from learning of Socialism or seeing Communism in action. Under these circumstances the path of Nigeria is straight. Learn the facts. Listen to the truth. Believe what is Right and follow the good.

Freedom and independence do not involve isolation. Do not withdraw from the world: join it more closely than before, but join as equals. Educate your youth at home; send some of your bright and eager youth abroad for study and living in the chief nations of the world. Send students to Britain, to the United States, to Scandinavia, and Germany; also to the Soviet Union, and its allies, and, especially, to China, because the Yellow Race has suffered even more so than the Black Race from the cruelty and exploitation of the white race. Use education to rebind and heal the rifts of mankind and never forget that trade and commerce can be aids to human progress.

Africans are born traders. From the birth of Time the African market has set patterns for the world from the Nile to the Niger, from the Senegal to the Congo; from the Zambesi to the sea. The freedom of women began in the African market-place and still can be seen on the streets of Cairo, Accra, Lagos, Ibadan and Leopoldville. Against these African traders, and their market-place, is rising a terrible menace in the form of the European corporations: Unilevers of Britain, with a capital of a billion dollars and an annual income of three hundred millions of dollars; other giant corporations

40A.2 :23

of Belgium, France, and Switzerland, with the best and highest paid skill of the world, backed by the airplanes, armies and navies of most of the world's most powerful nations. This duel goes on today along the streets of every African town. The mass of retail traders, selling directly to consumers who are themselves either artisans or workers are the basis of the national economy. They correspond to the artisans and retail traders of the world, and like them, are being attacked by the Corporation which eventually, unless the State steps in, will drive them out of business, as it is driving out the retail merchants of the western world.

THE CORPORATION

What is the Corporation? It began in Western Europe in the Middle Ages, when a Group of persons secured the right to be legally regarded as a person with limited responsibilities, so that it could keep its gains made in trade and word for private use, but could shift a part of its losses on the State. It could thus afford to risk chances which would have ruined the lone trader. This artificial Body or Corporation entered into trade and if it lost, lost only what it risked; if it gained it made fabulous fortunes. The state soon saw these advantages and took part in the Corporations. If the State was an absolute monarchy, the King then shared the gains of the Corporation and taxed the people for its losses. But soon the other members of the corporations secured some of the gain or threatened withdrawal. Thus they shared some of the monarch's power and turned the State into an aristocracy.

Later the common folk forced themselves into corporations and aristocracies became democracies. When the wage contract became common -- that is, when the laborer was forced to sell the results of his labor to the capitalist, he had to form a defensive alliance, the Trade Union, to protect his rights. He changed the medieval guild which comprised both employer and worker and made a new group of laborers, after bitter opposition from the property owners. But in the late Nineteenth Century the labor union gained recognition and legal status with political power and education for workers. Then in the twentieth century the corporations of capitalists began to move in and control the labor

40A.2.24

unions by law, curtailing their activities; and by bribing their officials, until, today, many of the most powerful unions represent capital as much or more so, than labor. Nigeria must watch her unions; see that the workers control them by democratic process and that the power of their officers is not secretly increased by bribery from capitalists. It was the revolt of the workers at Paris, against capitalist-controlled unions, in 1945, which made the Fifth Pan-African Congress possible and started Nkrumah toward freeing Ghana.

This growth and change of corporations can be seen in Western Europe. Elizabeth of England incorporated the African slave trade. Her nobility forced themselves into power; the great merchant groups succeeded to power under the Stuarts, and with Cromwell the power of merchants decreased. Then democracy entered, reaching its zenith with 1776. Democracy fell before the oligarchy of the Slave Power but triumphed in Civil War and abolition.

Since 1876, however, a new set of corporations appeared in America, due to disfranchising Negroes and Poor Whites; on hoarding gold and monopoly of land and natural resources. The Corporation killed democracy in the United States, and now rules supreme, buying the presidency, cowing Congress and controlling Public Opinion through monopoly of news-gathering, ownership of the press, radio and television, and limiting the publication of books. Capital and invention now made the corporate form of enterprise invincible and it swept the world. Great Britain and France drove Germany out of competition in colonial power, and the United States pressed Britain to the wall and made a million a day profit out of the First World War. But the greed of the United States drove the world into bankruptcy, and Germany and Italy and Japan tried to seize the cheap colonial labor of the world and thus rule industry.

A new element appeared, the Socialist Union of Russia and neighboring peoples. They, under the stern Stalin, beat back the Germans and freed Europe and America at the sacrifice of 20,000,000 lives and a large part of their hard-earned savings. Stalin and Roosevelt, therefore, propsed an alliance between the Socialist East and Capitalist West,

40A.2.27

based on disarming Germany and making her pay a part of the cost of the war. But Churchill, cajoling Truman; and American corporations and Trade Unions, backed by the armed forces, forced a settlement which refused the Soviet Union help, furnished West Germany arms and capital, and gave her corporations immense new power. The United States ringed the Soviet Union with threatening bases, armed with modern weapons. These weapons now included atom and nuclear power, and for a time, the United States believed that it could make the world do its will. But America failed. The Soviets invented their own bomb. India freed itself from Britain so far as her own capitalists allowed; China threw off America's stoogs and, with American arms, drove Chiang-Kai-Chek off the mainland. She erected an independent Socialist Republic. Britain saw the handwriting on the wall. She yielded independence to Ghana and provincial status to Nigeria. France gave most of her colonial world partial independence.

Moreover, corporations in America and the West have lately increased their power and privilege. Formerly the corporation belonged to those furnishing its capital. Now only a part of those buying stock are real owners with a voice in controlling the policies or the funds of the corporations. The rest are merely shareholders receiving, when the real owners decree, dividends of such amount as the owners decide or none at all. Yet Big Businesses advertise how large a share of industry, the public owns! Beyond this, through corporations buying stock in other corporations, such holding companies can arrange to control whole industries through ownership of as little as a fifth of the invested capital. Thus democracy gradually disappears from industry and oligarchy or dictatorship takes control of work and wage, property and income. All this is made possible through elaborate secrecy. The ownership of property; the amount of individual or corporate income; the business transactions, the profits or losses are guarded by law and thus the basic facts of industry, knowledge of which is indispensable to intelligent judgment, can be known only in part.

40A.2.20

for this I have already consulted Dr. Dike of the Nigerian University College at Ibadan. He is, perhaps, the best know African scholar in African history. He and his scholars have given cheerful promise of cooperation. Other African Universities and Colleges have promised cooperation. But scientific truth is our aim and not mere racial propaganda; when, then, no African scholars are found who measure up to modern scientific standards, we shall draw no color line, and shall seek the best scholars, without regard to color, race or religion.

40-2-88

Nigeria must, finally, say to the world: Africa is for the Africans, for the black folk who for centuries have inhabited this continent. But we are a hospitable, and friendly people, and we welcome to our shores all men of good will. We do not want again slave traders nor thieves. We do not want whore-mongers nor gamblers. Those who come to us as friends, who wish to live beside us as equals, sharing our poverty and our conditions of life will be welcomed. Others will be sent home.

We wish to judge the white folk who have come to Africa with fairness. The British have enslaved and exploited us in the past; but, also, they have given us education and advice. In the future we will treat them as they deserve, but, not, necessarily, as they demand.

Americans have sent us missionaries, who have done us both good and evil. We do not want missionaries who antagonize our religion and try, arbitrarily, to change our customs; but we would be glad to receive the thrift and skill of America insofar as the United States and the people of South Africa do not make color prejudice a central part of their lives.

We know that the French have done much for Africa; but that, also, there are things that they have done, and evils to which they cling. So far as France stands by her fine ideal of liberty, equality and brotherhood, people from France are welcome to Nigeria.

appetite, but promiscuity defeats its aim of pleasure and healthy children. While women are designed to bear children, they cannot in civilised life be regarded as simply brood mares or toys for the pleasure of men. They have as much right to careers as men, and, after the normal child-bearing age, they should join in the world's work; they should even have the right if it suits their health or ambition, to surrender motherhood for work they can do better. In fine, from the year of about sixteen to twenty-six, the natural sex appetite is strong and should be indulged, legally and normally. These years are best for parenthood and make possible a normal companionship of children and parents which can build the normal family. Marriage should make public this procreation of children. But the marriage should be made terminable at will of either partner when it ceases to be satisfactory, provided the rights of husband, wife, and children, are fully assured. All this can be feasible by law and custom, if treated by law and decency and not hidden in secrecy, cheating and false shame.

68-2-04

One problem has resulted in paradox in modern civilisation. That is what is called "menial service". It is arising in Nigeria. What shall be the status and wage of those who do the intimate services which every man requires more or less from infancy through age: the care of infants, the bathing of bodies, the cooking and serving of food, the washing of clothes, the cleaning of living quarters, attending the sick, adorning the body, entertaining guest, and the like matters. These services are, on the one hand, matters of love and trained knowledge; on the other, the removal of dirt, manure, they are often regarded as the lowest work of mankind, fit only for slaves, or the lowest and worst treated of workers. Yet both these things they cannot be. What is holier and dirtier than a mother's care? What is more despised than menial service? This paradox must be reconciled. Nigerians of wealth and position are hiring many servants and paying them low wage. Nigerians of education and ambition refuse to become

We see in the Soviet Union and its allied states friends and helpers for peoples who have suffered as we have suffered from the oppression of their rulers. We hail the emancipation and struggles of their peoples. In China and India we recognize our colored brethern: peoples who have suffered from color caste in the past, and who, since, have gained freedom and independence.

Hail Peace and Plenty, for the World and for Africa.

40-2-94

the pamphlet.

FOOD, CLOTHES
AND SHELTER

Normally, the first duty of a people is to feed, clothe and shelter themselves. Nigeria is a well-situated state, with rich soil, great rivers, lakes and forests, a wealth of materials, vegetable and mineral and a generous seaboard. It has a large but not crowded population which it can support from its own soil, with its own sowing, and reaping; spinning and weaving; planning and building. Its people are not homogeneous, but not too different to preclude working together as one unified state with reconcilable aims and ideals. It is of course possible for such a state to buy food and materials from abroad and thus trade has always been a part of its interests. But foreign trade as compared with domestic production always entails certain considerations: goods bought abroad must always eventually be paid for by goods sold abroad, and the ratio of exchange must therefore be carefully calculated. If the traders of goods or services are equal individuals or tribes of essentially equal status the ratio of exchange, that is, the prices, will be reached by haggling in the market and will, in the long run, be fair to all. But under the colonial system, it was the practice for the mother country to set the prices and if white Europe despised black Africa and did not believe in the ability nor desert of black folk it soon became customary for whites to pay the lowest possible wages for African labor and the cheapest prices for materials. Thus the mother country grew rich and kept her home labor sayisfied by paying them higher wages out of their profits on colonial trade. They also granted home labor some education and political rights, provided labour supported government policies and fought as soldiers to gain and keep colonial territory. Meantime poverty spread in the colonies; the natives were taxed not only for their own needs but for the expenses of colonial government, pensions for colonial officials and special wages and privileges for white workers who came to the colonies to help government, trade and industry. In time these privileges included segregated and comfortable

40-2-31

homes and the right to vote and hold office even when the natives were disfranchised and housed in ghettoes. As the native peoples realized their plight; and as by efforts of missionaries some began to acquire education, there arose a demand for reform, which today in every part of Africa is resulting in colonial freedom.

FREE
NIGERIA

When now a nation like Nigeria becomes "free" just what does that mean? Under the natural laws of nature; with universal need for food, clothes and shelter, there can manifestly be no complete freedom for man anywhere nor at any time. Men must always plant and reap; search and dig and carry; spin and weave; cook, build and store; they must plan marriage, home and children. They must provide government: that is for order, cooperation and respect for others, so that all may live a good life and none be completely subordinate to the will of a few. Moreover, above and apart from this work to sustain life, there must remain leisure to make life worth living: for rest and play; for dance and song; for creative activity and any pursuit or game that men may choose and which does not hurt control them, nor limit nor prevent similar activities among others.

40-2-33

From primitive times the work of a tribe or nation will include foreign trade and that will call for increasing activity and thought as men come into contact with men. No people can live to themselves. Ever by accident or design peoples meet with each other, and while there are times when such contact means trouble and war, in the long run it is the contact of strange folk with others that leads to civilization; that brings new goods and methods; new thoughts and ideals. Thus foreign trade has ever been the beginning of progress. The west Coast early traded gold for salt with its northern neighbors. Spice for metals followed, and laborers for tools. This last exchange between Portuguese and Africans led to difficulties, at first unnoticed, but in the end of world wide significance. Intertribal wars were common in the early centuries. Quarrels over hunting grounds, over succession to power, over trade. They

often resulted in prisoners who became slaves of the visitors, and despised slaves if they differed in religion. ~~But~~ and Culture.

THE ~~AMERICAN~~ slave
FOREIGN TRADE

In the Fourteenth Century as Holland, France and Britain were growing rich on the loot of India, Portugal started to India down the coast of Africa, and began a trade in slaves which she sent back to Portugal. ~~This country was~~ Portugal had been impoverished by war and ~~public theft.~~ exploitation ~~Here their~~ labor was ~~breeded~~ barely needed on the farms. Negroes were imported as slaves This trade in human beings gave a new incentive to African intertribal wars. In the next century Spain sent an Italian west over the Atlantic to find a shorter way to India. Thus Columbus discovered America. Here a new market for African labor arose among the British, French and Spanish.

40-2-24

Thus, in the Fifteenth Century the African slave raids became an industry that spread over the continent and after the Seven Years War the British became attracted by the possibilities of gain by ~~trading in~~ selling African slaves to America. From their Assiento Treaty with Spain in 1703 ~~until the middle of the Nineteenth Century.~~ for 100 years Britain built up the trade in African slaves to be the most profitable trade on earth and the most disastrous to the African race. It is estimated that black Africa lost 100,000,000 souls in slave raids, ~~dwindling~~ the Middle Passage and captivity in America. Britain by theft in India and the profits of the slave trade accumulated an amount of capital that made its owners the most powerful people in the world; and America ~~with~~ became its visions of democracy, freedom and conquest of poverty became the center of a new modern slavery.

production was limited; and owned by the family and clan, not by individuals. The same was true in Europe until suddenly in the Sixteenth century, European traders got hold of fabulous treasure from two sources; and it fell into private hands: Europeans found vast wealth by plundering India, and by stealing peasants in West Africa and enslaving them in America. Americans raised tobacco, sugar and cotton and sold them over all the earth. The world was transformed. Incidental tribal wars of Africa became profitable slave raids which robbed the continent of 100,000,000 human beings, distorted their lives and customs, severly uprooted their political structure, their art, and clouded their ideals. Conquest by Europe overthrew the civilization of Asia: Europe began to gain rule over most of the world, by stealing gold and silver of ~~America~~, slave labor, and selling the goods which slaves made for profits so huge as to enable it to manufacture goods for sale, and trade these goods for the raw materials of the whole world. The skill of American and European labor increased the ability to manufacture and science and invention gave miraculous power to this new technique.

From 1800 Europe ruled the world. Africa and Asia and the islands of the Seven Seas bowed or were bent before it. It even partially deceived itself and under the spell of a new religion borrowed from Asia, justified theft and slavery, conquest and force as the one way in which superior White folk, could lead colored folk to civilization, if indeed they could be led. But the world did not stand still. The Christian church split in disagreement, the black slaves in the West Indies arose in continuous and increasing revolt, and the white peasants of Europe sought freedom from serfdom in the growing towns where the new capitalists hired them as servants, laborers, artisans and soldiers. The artisans in turn fought wars to gain more capital for the town dwellers.

40-2-32

AMERICAN DEMOCRACY

America is a curious tale of selfish greed and lofty hope. Spain, seeing in the Fifteenth Century how much gold and other treasure Portugal, Holland, Britain, and France were making in Africa and Asia by ~~way of~~ sailing south around Africa on the Atlantic Ocean; and what riches Italy had garnered in Asia by traversing the Mediterranean, was

often resulted in prisoners who became slaves of the victors, and despised slaves if they differed in religion.

THE AFRICAN
FOREIGN TRADE

In the Fourteenth Century as Holland, France and Britain were growing rich on the loot of India, Portugal started to India down the coast of Africa, and began a trade in slaves which she sent back to Portugal. This country had been impoverished by war and public theft. Here their labor was needed on the farms. This trade in human beings gave a new incentive to intertribal wars. In the next century Spain sent an Italian west over the Atlantic to find a shorter way to India. Thus Columbus discovered America. Here a new market for African labor arose among the British, French and Spanish.

40-2-35

Thus, in the Fifteenth Century the African slave raids became an industry that spread over the continent and after the Seven Years War the British became attracted by the possibilities of gain by trading in African slaves. From their Assiento Treaty with Spain in 1713 until the middle of the Nineteenth Century, for 84 years Britain built up the trade in African slaves to be the most profitable trade on earth and the most disastrous to the African race. It is estimated that black Africa lost 100,000,000 souls in slave raids, middle passage and captivity in America. Britain by theft in India and the profits of the slave trade accumulated an amount of capital that made its owners the most powerful people in the world; and America with its visions of democracy, freedom and conquest of poverty became the center of a new modern slavery.

to slavery — Abolitionists and the

~~the slave system~~ which arose from the protest of Free Negroes. When this alliance succeeded in restricting the further spread of slave territory in the United States, the South tried to secede from the Union and form a slave empire in the West Indies and South America. The North tried to hold them in the Union by force, ~~but in order to accomplish this they had to seek~~ the aid of Negro slaves and promise them freedom in return. ~~with the help of 200,000 black soldiers and laborers~~ Thus the Civil War became a war which abolished Negro slavery in the United States.

Britain, unable to make further profit out of the slave trade, gradually adopted Colonial Imperialism -- that is, instead of transporting labor from Africa to America, she sought to seize control of territory and people in Africa and Asia, and, raising raw material there with cheap labor, carried it to Europe and processed it into valuable goods which sold at huge profit. European workers increased their demand for wages and rights; after organising trade unions the workers won, but only by helping capital to gain and hold more colonial territory. Thus Britain gained control of countries like Nigeria. The British appeared, first as traders. Then helped by natives like Bishop Samuel Crowther, they explored more land and materials; finally they attempted political control, but met resistance from native rulers. They tried methods learned in Asia. Bringing in highwaymen and freebooters like Lugard and Chinese Gordan, they gained new colonial territory for the empire. Thus in Uganda, Lugard used his machine guns on Catholics, Protestants and Mohammedans fighting to conquer each other and subdue the native tribes. At last Lugard made Uganda a part of the British Empire. Then although still legally an outlaw he came to Nigeria and showed the British how to annex Nigeria by his "indirect rule"; that is, by bribing, cajoling and befriending rulers, and paying the salaries of chiefs until they acknowledged Britain as overlord, not by conquest, but by consent.

However, the Nigerians were not content. Increasingly they protested against the loss of their ancient liberties. Many used their ancient lore and customs, some secured education. The grandson of Samuel Crowther, the first black Anglican Bishop in West Africa, secured a place in the civil service and through his newspaper,

40-2-36

Macauley started the battle for freedom. He was later joined by a young Nigerian student, Nnamdi Azikiwe, now Governor General of Nigeria, who for 25 years fought a desperate battle for freedom until freedom came, November 1, 1960.

I witnessed with pride and hope the inauguration of the first black Governor-General and Commander-In-Chief of a Dominion of the British Commonwealth of nations. I hail Nigeria as the largest black nation of the world and as a worthy successor of the African imperial rule which began with the Songhay seven hundred years after Christ and became under Mohammed Askia, in the sixteenth century, an empire as large as all Europe today and as cultured as the Europe of that day, with its great University of Sankore and with "peace and plenty for all."

Then succeeded the rule of the Hausa with their seven industrial cities led by Kano and accompanied in development to the East by the kings of Kanem and the lords of Bornu. Westward then marched the Fulani, and there rolled up from the Gulf of Guinea, the Yoruba, the Ibo and the people of Benin. With these came industry, art and architecture which has taught the whole modern world. But all this marvelous development was distorted and overthrown by the British slave trade to America and followed in the nineteenth century by colonial imperialism which reduced this part of Africa to subjection to capitalist West Europe and North America.

40-2-37

THE PROBLEM OF CAPITAL

What does independence and freedom mean? Nigeria, an agricultural country, feeding, clothing and sheltering itself by the toil of its farmers, will need manufactures and skilled industries run by modern technical and scientific methods. For this Nigeria will need capital. All nations need capital. Capital accumulation is a great modern idea. This means simply that a nation must produce more than enough for its immediate needs so as to use the surplus for better and increased production in the future. How now can apital best be raised? The simplest way is that a worker refrains from consuming all he makes and saves the surplus. He thus deserves a profit

The non-slave -holding Southern whites began to refuse to fight for the slaveholders and deserted by the thousands; the Northern whigr laborers especially the foreigbers refused to enlist and mobbed the Negroes on the streets. But the Negroes, free and slave offered their services and in the end 500,000 were used as soldiers and stevedores, servants and spies. Other millions stood ready to enlist . The slave barons became frightened and even tried to enlist slaves on their side. But it was too late and they surrendered to the North.

(B)

Nigeria is a rich land in both senses of the word: it is rich because it has abundanch of rich soil, variety of tree and vine; abundance of minerals buried beneath and bright sun and floods of water above. It can if properly used feed and clothe and shelter thirty-six million Nigdrians and xxx other millions abroad. Then too Nigeria is rich in the sense that if it soil xxxxxxxxxx is raped and its workers starved and its materials stolen and taken abroad , the white folk of Britain, France and the United States may live not simply in comfort but in extravagant luxury while you starve. In this sense much of the world regards Nigeria rich because you are poor

40-2-38

for his sacrifice, and of course retains ownership of his original property. This is the original and simple concept of capital. But the concept and practice has greatly changed in modern days: first the original capital is often not owned wholly by an individual, but is the gift of the state and yet the profit goes into private hands. For instance, the state builds a harbor with public taxes and yet private persons or corporations reap the profit without adequate ~~charge~~ payment. Or a private corporation builds a railroad, sells it to the state for a price fixed by the corporation ~~as~~ and much higher than it is worth, ~~and~~ the state tries to run the railroad, but must first pay the inflated price or "bonded indebtedness" with high interest. State conduct of the railroad results in a deficit which the public pays with high fares and freight charges. Or, again, the state gives a private corporation a monopoly in the use of streets and ~~then~~ the corporation makes a large profit which it calls its own, with no payment or very inadequate payment to the public. So that a new state like Nigeria must, from the beginning, be sure that the capital they borrow really belongs to the person or corporation which claims profit for its use.

10-2-04

The current method of bringing industry to farming countries is by borrowing wealth from Europe; buying machines and tools with this wealth and then importing skilled technicians from abroad to migrate here and set up factories. With these factory hands and engineers come merchants to buy the manufactured products for sale abroad; and bringing with them goods made abroad to sell to the natives. This system which once seemed quite natural and good for all was soon seen to be but little different from colonialism. The interest on borrowed capital was so high and the terms so onerous, that the lending capitalists soon owned the country. It was thus that Algeria, Tunis and Egypt came under the complete control of Britain and France. It was this that would soon have happened to Ghana had not Nkrumah checkmated the trend; it was this that would have been the fate of Nigeria had it not been for the sacrifice and persistence of Macauley and Azikiwe. Moreover, their work is not finished: it has just begun. Nigeria needs industry; and for

(B)

industry Nigeria needs capital; and to use capital Nigeria needs skill, engineers, science. Capital must be saved. Each Nigerian, above what he eats, wears, and uses, must sacrifice and save. Every nation must save wealth for use as capital -- to make more goods for future use.

~~But~~ Considering the need; looking the present world crisis and threat straight in the face; considering how advantageous it would be if more capital was available now, some capital can and should be borrowed, if that can be done on favorable terms. It has long been the custom for western capitalists to gang up on poor countries in Asia and Africa and charge them exorbitant interest. Today they charge from five to ten percent, with other requirements which raise the charge to fifteen or twenty-five percent. But the Soviet Union and China often lend for two percent and sometimes for nothing. Nigeria should examine all terms offered and if they are clear and honest, with no strings attached, borrow at the best rates, the smallest sums sufficient for its needs.

Again, in the past, the nations which loan, usually sent their own nationals to direct colonial industry and furnish the direction and skill. For these they demanded special pay, preferred status, the right to govern even when the natives were disfranchised; and preferred places to live. All this privilege must go. If white folk cannot come to Nigeria and live on Nigerian wages, alongside Nigerian people, with the rights and no more rights than Nigerians enjoy, then White folk must stay out of Nigeria. Differences in custom, current ignorance of sanitation, and dire poverty, may make it difficult at present to carry out this equality of treatment; but that only indicates how quickly and thoroughly Nigeria must rid itself of poverty, ignorance and disease, and what whites must sacrifice if they come here.

40-2-40

However, there is offered another way. Nigeria will find that the British and French and, especially, the North Americans suggest a quick by-path for Nigeria to become rich and happy. And that is for intelligent and well-to-do Nigerians to join the British and Americans and other white capitalists in exploiting the country and using cheap black labor and cheap land and its products, in making themselves and the white folk rich, and keeping most Nigerians especially the farmers and peasants, ignor-

ant, poor and sick.

They say this should be done because it is the best and quickest way to help Nigeria upward. They point out that when men say that such a country is rich, they mean that their upper classes are rich but that the masses are poor, because the wealth they earn is used to support the rich in comfort and even luxury. They suggest that just as in the past, white Europe lived on black Africa, so in the future, the more prosperous black Nigerians and rich colored Americans become junior partners with white Europeans and live on the poverty, ignorance and sicknesses of the mass of Nigerians living in the country districts and the slums of the towns.

There are other folk in Nigeria and increasingly in Europe and Asia who SOCIALISM say no, there is another answer. It has become customary in the 19th century in Europe and North America to build Progress on Poverty; to make a few cultured classes rich by letting them feed on a mass of the poor, and ignorant workers. This is not necessary and was not done in the past. In primitive Nigeria, no member of a tribe was hungry so long as the tribe had food. There were no homeless widows, nor helpless orphans. The tribe and clan fed the hungry and protected the helpless. The clan saved capital and invested it. The profits naturally belonged not to the individual who handled the transaction, but to the tribe which owned the wealth. To be sure this system was not perfect. Tribes were broken up by wars and wars became slave raids which further disrupted clans. Clans and nations moved to avoid disaster or gain new land or power. Disrupted members of tribes took refuge in towns without tribal protection and the ancient communal care failed often or disappeared. But it was an effective way of preventing poverty and spreading wisdom where and when it worked. Men remembered it, chiefs practiced it, and medicine men told about it. When now it is suggested that this common effort of the state be revived in some form, British and American scream "Socialism!" or "Communism!" But wise Nigerians are not frightened.

I have only to impress upon you that here there should be on your part little hesitancy. Socialism and Communism under the teaching of Karl Marx and Lenin are be-

all over the world

ginning to triumph and you should not hesitate to study these doctrines and the rise of private capital under Western Europe during the nineteenth century. Your logical development should stem directly from the communalism of your fathers, where capital or wealth used to produce wealth was controlled by the chiefs who represented the tribe as real owner just as today land and water are owned in a similar way, and the profit made in early days through this capitalism belonged to all and not to any individual. Can and should socialism be restored in the great independent Dominion of Nigeria? Northern Nigeria with its ruling sultans and emirs; with its Mahammedan and primitive religion with its chiefs and medicine men, is still the stronghold of the ancient communalism. As such it is a most valuable counterweight to Eastern and Western Nigeria, which are centers of the new commercialism, where a new Bourgeoisie are seeking to exploit land and labor as is customary in the western world. The industrial and commercial Nigeria has embraced education and science, while the North has lagged in schools and defended primitive customs and dogma which hinder progress. The star of hope is that the North is beginning to encourage education and the commercial south is studying Socialism and Communism and what they may hold for future Nigeria.

40-2-42

Nigeria must build a welfare state and move toward a state where all men work to the best of their ability and receive as wage not everything that they want, but everything that they need for the greatest development of all the people. This will involve sacrifice. This will mean not the rule of the rich and the smart, but the uplift of the great mass of people out of which will come power and genius and ideals which will restore Africa to the place it once occupied in the forefront of the world.

In the hard and bitter strife toward this end you will find allies. Some few in Western Europe and North America. But not many, for they want not so much your progress as profit from your free land and cheap labor. They are willing to share this loot with those of you who can be bought. But in nations like the Soviet Union and

The Peoples Republic of China; in Czechoslovakia, Poland, East Germany, and Hungary, you will find allies and friends who will help you toward freedom and peace. ~~If Britain rejects Socialism, whatever it is, that is their right.~~ Britain and Scandinavia accept a partial socialism, but refuse as yet to accept the aims and methods of Communism. That is their right. If the United States fears Communism ~~and knows why~~ that is their business. If Cuba chooses Communism, they have the right so to choose. Whatever Nigeria accepts is not a name but a fact. Nigeria must prevent poverty; it must educate its children; it must heal its sick. Whatever path leads to these ends, Nigeria must follow, no matter what it is called. Nigerian students should study and travellers should visit and examine the way in which the nations of the West and East are settling the pressing problems of income and expense; of work and wage; of property, of crime; of education and employment. Deeds, not mere words settle these problems, and it matters not a jot whether the system which proves effective is called Capitalism, Socialism, or Communism. Nigeria must adopt those measures which solve her problems and ignore that which suits others but does not apply to her.

40-2-43

These people are not as they are often painted either fools or conspiritors but struggling and oppressed folk like you who are striving for a decent life. You should visit and get to know them

The Peoples Republic of China; in Czechoslovakia, Poland, East Germany, and Hungary, you will find allies and friends who will help you toward freedom and peace. If Britain rejects Socialism, whatever it is, that is their right. Britain and Scandinavia accept a partial socialism, but refuse as yet to accept the aims and methods of Communism. That is their right. If the United States fears Communism and knows why that is their business. If Cuba chooses Communism, they have the right so to choose. Whatever Nigeria accepts is not a name but a fact. Nigeria must prevent poverty; it must educate its children; it must heal its sick. Whatever path leads to these ends, Nigeria must follow, no matter what it is called. Nigerian students should study and travellers should visit and examine the way in which the nations of the West and East are settling the pressing problems of income and expense; of work and wage; of property, of crime; of education and employment. Deeds, not mere words settle these problems, and it matters not a jot whether the system which proves effective is called Capitalism, Socialism, or Communism. Nigeria must adopt those measures which solve her problems and ignore that which suits others but does not apply to her.

40-2-44

AMERICAN NEGROES

In seeking these answers, the attitude and words of American Negroes greatly puzzle Nigerians today. They know that millions of black Africans for 400 years were stolen from their homes and enslaved in America when not murdered or drowned at sea. In America they suffered every cruelty and degradation, while digging from the soil stolen from the Red Indians, wealth which made Europe rich and powerful and long masters of mankind. At length these black slaves gained partial freedom by their own revolts and by the help of white folk who grew ashamed of their own sin and pitied their victims' sufferings. They sued and sacrificed until black Americans and their white friends hoped that free black Americans might lead black Africa to freedom and independence. But before black America was really free, Black Africa arose to its feet and asserted a freedom and independence which is astonishing the world.

When now, after some efforts at returning to their motherland; after a series of Pan-African Congresses and two world wars, there begins a new visiting of Africa by

AMERICAN NEGROES

In seeking these answers, the attitude and words of American Negroes greatly puzzle Nigerians today. They know that millions of black Africans for 400 years were stolen from their homes and enslaved in America when not murdered or drowned at sea. In America they suffered every cruelty and degradation, while digging from the soil stolen from the Red Indians, wealth which made Europe rich and powerful and long masters of mankind. At length these black slaves gained partial freedom by their own revolts and by the help of white folk who grew ashamed of their own sin and pitied their victims' sufferings. They sued and sacrificed as black Americans and their white friends hoped that free black Americans might lead black Africa to freedom and independence. But before black America was really free, Black Africa arose to its feet and asserted a freedom and independence which is astonishing the world.

When now, after some efforts at returning to their motherland; after a series of Pan-African Congresses and two world wars, there begins a new visiting of Africa by

American Negroes. Most of these Negroes seem to insist that they are really quite well off in America; that racial segregation and color discrimination has almost disappeared, and that American Negroes are ready to join white folk as investors in African industry and as guides in American skills and methods.

Then comes some contradiction. Some other black Americans arrive, many of whom have suffered persecution in the United States and been refused passports to travel. They deny this rosy picture; they aver that, despite great progress, oppresion, color discrimination and segregation still persist in the United States, even despite the law; and that most of the black Americans who spread these pleasant stories are paid to do so by the State Department of the Government of the United States! Or by Big Business enterprise which wants to prevent Africans from learning of Socialism or seeing Communism in action. Under these circumstances the path of Nigeria is straight. Learn the facts. Listen to the truth. Believe what is Right and follow the good.

40-2-46

Freedom and independence do not involve isolation. Do not withdraw from the world: join it more closely than before, but join as equals. Educate your youth at home; send some of your bright and eager youth abroad for study and living in the chief nations of the world. Send students to Britain, to the United States, to Scandinavia, and Germany; also to the Soviet Union, and its allies, and, especially, to China, because the Yellow Race has suffered even more than the Black Race from the cruelty and exploitation of the white race. Use education to rebind and heal the rifts of mankind and never forget that trade and commerce can be aids to human progress.

THE AFRICAN WOMAN

Africans are born traders. From the birth of Time the African market has set patterns for the world from the Nile to the Niger, from the Senegal to the Congo; from the Zambesi to the sea. The freedom of women began in the African market-place and still can be seen on the streets of Cairo, Accra, Lagos, Ibadan and Leopoldville. Against ~~these~~ women African traders, and their market-place, is rising a terrible menace in the form of the European corporation: unilevers of Britain, with a capital of a million dollars and an annual income of three hundred millions of dollars; other giant corporations

(over)

Guard your women. The white man has for for two centuries been the threat of Negro womanhood. White men have raped and degraded colored women from Casablanca to Capetown; from Thailand to ~~Non De~~ Calcutta Americans are planning to send scouts to ~~Niger~~ West Africa Some will be honest friends hoping to learn and help. Most will be curios ity seemers. Teach them if you can. But many will be men seeking colored concubines; put hese in jail or deport them. Show them no mercy

of Belgium, France, and Switzerland, with the best and highest paid skill of the world, backed by the airplanes, armies and navies of most of the world's most powerful nations. This duel goes on today along the streets of every African town. The mass of retail traders, selling directly to consumers who are themselves either artisans or workers are the basis of the national economy. They correspond to the artisans and retail traders of the world, and like them, are being attacked by the Corporation which eventually, unless the State steps in, will drive them out of business, as it is driving out the retail merchants of the western world.

THE CORPORATION

What is the Corporation? It began in Western Europe in the Middle Ages, when a Group of persons secured the right to be legally regarded as a person with limited responsibilities, so that it could keep its gains made in trade and word for private use, but could shift a part of its losses on the State. It could thus afford to risk chances which would have ruined the lone trader. This artificial Body or Corporation entered into trade and if it lost, lost only what it risked; if it gained it made fabulous fortunes. The state soon saw these advantages and took part in the Corporations. If the State was an absolute monarchy, the King then shared the gains of the Corporation and taxed the people for its losses. But soon the other members of the corporations secured some of the gain or threatened withdrawal. Thus they shared some of the monarch's power and turned the State into an aristocracy.

Later the common folk forced themselves into corporations and aristocracies became democracies. When the wage contract became common -- that is, when the laborer was forced to sell the results of his labor to the capitalist, he had to form a defensive alliance, the Trade Union, to protect his rights. He changed the medieval guild which comprised both employer and worker and made a new group of laborers, after bitter opposition from the property owners. But in the late Nineteenth Century the labor union gained recognition and legal status with political power and education for workers. Then in the twentieth century the corporations of capitalists began to move in and control the labor

unions by law, curtailing their activities; and by bribing their officials, until, today, many of the most powerful unions represent capital as much or more so, than labor. Nigeria must watch her unions; see that the workers control them by democratic process and that the power of their officers is not secretly increased by bribery from capitalists. It was the revolt of the workers at Paris, against capitalist-controlled unions, in 1945, which made the Fifth Pan-African Congress possible and started Nkrumah toward freeing Ghana.

This growth and change of corporations can be seen in Western Europe. Elizabeth of England incorporated the African slave trade. Her nobility forced themselves into power; the great merchant groups succeeded to power under the Stuarts, and with Cromwell the power of merchants decreased. Then democracy entered, reaching its zenith with 1776. Democracy fell before the oligarchy of the Slave Power but triumphed in Civil War and abolition.

Since 1876, however, a new set of corporations appeared in America, due to disfranchising Negroes and Poor Whites; to hoarding gold and monopolizing land and natural resources. The Corporation killed democracy in the United States, and now rules supreme, buying the presidency, owning most high offices, cowing Congress and controlling Public Opinion through monopoly of news-gathering, ownership of the press, radio and television, and limiting the publication of books. Capital and invention now made the corporate form of enterprise invincible and it swept the world. Great Britain and France drove Germany out of competition in colonial power, and the United States pressed Britain to the wall and made a million a day profit out of the First World War. But the greed of the United States drove the world into bankruptcy, and Germany and Italy and Japan tried to seize the cheap colonial labor of the world in 1939 and thus rule industry.

A new element appeared, the Socialist Union of Russia and neighboring peoples. They, under the stern Stalin, beat back the Germans and freed Europe and America at the sacrifice of 20,000,000 lives and a large part of their hard-earned savings. Stalin and Roosevelt, therefore, proposed an alliance between the Socialist East and Capitalist West,

40-2-48

16 15 GUIDED BY MEANY AND

based on disarming Germany and making her pay a part of the cost of the war. But Churchill, BYRNES ~~and~~ ROTTEN BOROUGHS, THE CLAY and WITH cajoling Truman; and American corporations and Trade Unions, backed by the armed forces, forced a settlement which refused the Soviet Union help, furnished West Germany arms and capital, and gave her corporations immense new power. The United States ringed the Soviet Union with threatening bases, armed with modern weapons. These weapons now included atom and nuclear power, and for a time, the United States believed that it could make the world do its will. But America failed. The Soviets invented their own bomb. India freed itself from Britain so far as her own capitalists allowed; China threw off America's stoogs and, with American arms, drove Chiang-Kai-Chek off the mainland. She erected an independent Socialist Republic. Britain saw the handwriting on the wall. She yielded independence to Ghana and provincial status to Nigeria. France gave most of her colonial world partial independence.

Moreover, corporations in America and the West have lately increased their power and privilege. Formerly the corporation belonged to those furnishing its capital. Now only a part of those buying stock are real owners with a voice in controlling the policies ~~or the~~ and funds of the corporations. The rest are merely shareholders receiving, when the real owners decreee, dividends of such amount as the owners decide or none at all. Yet Big Businesses advertise how large a share of industry, the public owns! Beyond this, through corporations buying stock in other corporations, such holding companies can arrange to control whole industries through ownership of as little as a fifth of the invested capital. Thus democracy gradually disappears from industry and oligarchy or dictatorship takes control of work and wage, property and income. All this is made possible through elaborate secrecy. The ownership of property; the amount of individual or corporate income; the business transactions, the profits or losses are guarded by law and thus the basic facts of industry, knowledge of which is indispensable to intelligent judgment, can be known only in part.

40-2-49

This legal basis of work and wage is laid by lawyers. Lawyers make the law in legislatures; interpret it as judges, and guide individuals, and especially corporations in methods of breaking it. Physicians heal, preachers guide, engineers calculate; but by growing agreement and common understandingm lawyers not only make the law but break it; not only defend the innocent but set the guilty free; and this is regarded as right and justifiable.

Of course other professions are not all unselfish: physicians often forget their duty to heal disease and prevent disease and act like trade unions to prevent competition, raise fees and monopolize medicine. Civil servants often try to make money rather than carry on the business of the State honestly; preachers seek place and salary rather than moral conduct. In fact, human beings are not naturally good but are tempted to be selfish and forgetful of their neighbors. Especially since this awful era of world war, many have to come to think that the world belongs to the smart and that murder, gambling and theft are the quickest way to success. The history of mankind proves

Physicians heal, preachers, guide, engineers calculate; but by growing agreement and common understanding, lawyers not only make the law, but break it; not only defend the innocent, but set the guilty free; and this is regarded as right and justifiable.

THE FUNCTION OF LAWYERS

Of course, other professions are not all unselfish; physicians often forget their duty to heal disease and prevent disease and act like trade unions to prevent competition, raise fees and monopolize medicine. Civil servants often try to make money rather than carry on the business of the State honestly; preachers seek place and salary rather than moral conduct. In fact, human beings are not naturally good but are tempted to be selfish and forgetful of their neighbors. Especially since this awful era of world war, many have to come to think that the world belongs to the smart and that murder, gambling and theft are the quickest way to success. The history of mankind proves that this is not true. That is the reason that all peoples have adopted religions to teach morals and emphasize the public value of right conduct.

40-2-51

FOREIGN CORPORATIONS

How now shall Nigeria protect her retail trade and curb corporations, native and foreign, and foreign, of Britain, France, Switzerland and America, already doing large business within her borders, and restrain her own bourgeoisie from becoming junior partners in this foreign enterprise? Remeber that for the most part, these corporations are too large, powerful and widespread for Nigerians to think of gaining control of them. They are today a sort of super-government of the World. The utmost that now can be envisaged is that a few black employees may share their profits and have some weak voice in policy. Meantime, that policy will gradually kill the African markets and the host of small women traders, reducing them to poverty and unemployment. The State of Nigeria has, of course, the power to eject these corporations and confiscate their local capital. But that would be a fatal mistake at present. These corporations now perform a great function. They funnell world trade to Nigeria on a scale that no Nigerian enter-

that this is not true. That is the reason that all peoples have adopted religions to teach morals and emphasize the public value of Right Conduct.

How now shall Nigeria protect her retail trade and curb her corporations, native and foreign, of Britain, France, Switzerland and America, already doing large business within her borders, and restrain her own bourgeoisie from becoming junior partners in this foreign enterprise? Remember that for the most part these corporations are too large, powerful and widespread for Nigerians to think of gaining control of them. They are today a sort of super-government of the World. The utmost that now can be envisaged is a few black employees may share their profits and have some weak voice in policy. Meantime that policy will gradually kill the African markets and the host of small women traders, reducing them to poverty and unemployment. The state of Nigeria has, of course, the power to eject these corporations and confiscate their local capital. But that would be a fatal mistake at present. These corporations now perform a great function. They dominate world trade. Without their consent ~~funnell world trade to Nigeria on a scale that no Nigerian enterprise is able to do.~~ They have the power to hurt Nigeria in many ways: not only in trade and credit but in acquiring skill and technique; in finding foreign markets for African goods; in getting credit and setting fair prices. Nevertheless they are not all-powerful. The small retailers can undersell them unless they keep their prices reasonable and treat their black customers courteously.

Also Nigeria has much power. She can tax all corporations doing business within its borders on their property and privileges. In most western nations, corporations escape taxation by various devices, but especially because the people do not know the income of, or privileges enjoyed by, corporations. In the United States a teacher may pay 40 percent of his income in taxes, while the Standard Oil Company escapes with payment of one percent. Nigeria, tax your corporations, fairly but steadily! Also control your retail traders; enforce sanitary rules of manufacture and display; require steadily higher education of those buying and selling; allow no cheating nor deception. For both

Unilevers is a combination of British and German companies with capital of a billion dollars and profits of 250,00,000 dol,ars a year. Its 23,000 managers covder the earth and afre ruled by an oligarchy and backed by the ar mies and ships ofthe Br tish Commonwealth. There is the Imperial Chemical In dustries. It has spent since sdcond World Sar a billion and a half dollars on new plants and is ruled by a tight family group of I2 men. There is the U Union Miniere du Haut Katanga which mines 60% of the world"s cobzlt and II% of the worlds caoppdrIt is owned by Belgian , British and Amstican investors and is responsible for holding up the black Congo Republic and murdering its Prime Minister. Here is the fight of the future: Corporation against democracy

Nigeran enterprise cannot ~~can~~ function abroad ~~prise is able to do.~~ They have the power to hurt Nigeria in many ways: not only in trade and credit, but also in acquiring skill and technique; in finding foreign markets for African goods; in getting credit and setting fair prices.

Nevertheless, they are not all-powerful. The small retailers can undersell them unless they keep their prices reasonable and treat their black customers courteously. Also, Nigeria has much power. She can tax all corporations doing business within her borders on their property and privileges. In most western nations, corporations escape taxation by various devices, but especially because the people do not know the income of, or privileges enjoyed by, corporations. In the United States a teacher may pay 40 percent of his income in taxes, while the Standard Oil Company escapes with payment of one percent. Nigeria, tax your corporations, fairly but fully! Also, control your retail traders; enforce sanitary rules of manufacture and display; require steadily higher education of those buying and selling; allow no cheating nor deception. For both corporations and individuals enforce fair prices. In turn, give both the market-place and the sidewalk vendor, clean and accessible places for trade. Do not clutter the sidewalks, or fill the streets with waste and refuse. In short, so lift the standards of the street vendors, and so curb the profit and privileges of the corporations that they gradually approach substantial equality of opportunity to serve the folk.

40-2-53

And their lies the great truth which this people must seek: Service, not gain; not the spread of profit, but the increase of content and happiness. This is not utopian; it is not impossible. For five centuries Europe has taught the world that only the few can be rich, educated and live decently; and that this can happen only at the expense of keeping most people poor, ignorant and sick. Prophets and sages, working people, and poets, today are pointing out a better way: if all work hard at that which they can do best; if materials, goods and services are given all men, not in proportion to what they can take, but in proportion to what they need to make them healthy persons,

EDUCATION

To know the truth requires intelligence: not only native ability to think but information acquired from others, from words of the wise, from books and papers in which wisdom and events are recorded. Not only must such knowledge be had for work and trade, but even more for knowledge of the natural laws which rule this intricate and puzzling world in which we live. This is a world of regular law and not of haphazardous chance as the ignorant think. Sages have from the beginning of Time have tried to know Truth, and gradually over thousands of years of search and thought mankind has in the last few centuries, come to understand a great deal about the laws of nature -- not all to be sure; there is still much that remains mystery -- but in 1960 we know vastly more about the laws of the universe than we did in 1860 [illegible] when Bishop Crowther explored the Niger and Lagos was seized by the British when the black empire of the Sudan was rising to power. This information the mass of men must know; not simply the children, not simply men but women. All their lives people must be learning about themselves and the world about them.

40-2-54

This process must begin with the Young; but it must not end there. With the Young a large part of their time must be set aside for School, where they learn to Read, Write, and Count in primary school; and in secondary grades how to make use of words to convey meaning; and where men live and how. Children do not simply study, they also learn by doing; by helping their elders work. Then such youth as have the aptitude should go to college where they study the Universe as a whole, its Past and Present, its Laws and Probabilities, its Future, so far as it may be guessed. They then become through study or practice co-workers for carrying on life, laborers, artisans, scientists, lawyers, physicians, writers, artists; parents of children, makers of goods, processors of materials.

Curiously enough it has happened in the past and is true largely today, that the very persons who do the fundamental work of raising food and fibre get so little of the food they raise and the fibre they grow that these farmers are poor, ignorant and ragged.

20

Nations must defend themselves: from foes ~~from~~ without, from inner crime and turmoil. Increased civilization lessens the fear of outer attack, and yet even today, some armed defense is called for. Always inner police must be at call. But the cost of defense decreases as War ceases ~~to be resorted to~~ as men become educated and more and as crime decreases because of education and cure of disease. For Nigeria, friendliness with her neighbors is called for; intertribal quarrels must be lessened and union of nations rather than division into small and smaller parts ~~is called for~~. The Pan-African movement must someday unite all Africa into one great federation ~~nation~~, playing a leading roll in a ~~great and more~~ perfect United Nations. Meantime so long as South Africa breaks every law of human decency; so long as Portugal continues to lie about her murder and theft in ~~Portugese~~ Africa, so long Nigeria must be strong enough to boycott and refuse political ties with them. And if Britain France or Israel prepare nuclear force against Algeria or other helpless nations, Nigeria is justified in demanding atomic weapons of the Soviet Union and China

40-2-55

Let 22 48

then most of mankind can live in a contented, happy world. insert 22

It is not war that made Europe great; rather war has near ruined what men have done to make a decent world. Cry Peace, then, Peace and plenty for all.

Nigeria has many religions. This is fortunate, for it teaches tolerance.

RELIGION Had Nigerians been born in Spain, they would have been taught to hate Protestants; had they been born in Sweden, they would have feared Catholics; had they been born in the United States they would have been contemptuous of Moslems. But there are in Nigeria millions of Africans who still believe in the ancient faith of their forefathers, who saw God in mountain, tree and river; who believed in witchcraft and charms The followers of Mohammed know no color line; Christians know modern European culture; all Nigerian religions respect the faith of others and grant them the right to follow it. They know that a religion is an attempt to know the truth, and a belief in such truth as is beyond proof. This dogma may go so far as to deny Truth, even when it is proven; but if it does, in time it must give up dogma and recognize Science; just as Science admits freely that it does not know all, and perhaps never will. insert 22A

40-2-26

Meantime, the object of religion is to induce men to act right so that none will hurt another and all can find happiness.

What is happiness? It is primarily the gratification of the senses: seeing, hearing, touch, taste, ~~feeling~~ smell. But here, manifestly this is true: moderation must be the rule; temperance: you cannot see everything on earth; you cannot hear all the music of the spheres; you cannot feel every pleasure at once. So the wise man eats moderately, drinks sparingly, does not go on sprees. Especially, man must never seek happiness at the cost of pain and unhappiness to others. In a land like Nigeria, so long deprived of ordinary decencies, much more of happiness can be had, than is usual today. Many are apt to think that the Western world has enjoyed every happiness and should be imitated: that drunkenness, drug-taking, loud noise and hysteria are signs of culture. No, after all, eyes only see; ears only hear; the old dancing of your fathers is as lovely as new steps and lovelier than Rock and Roll. Man is just man. His capacities are limited and are loveliest when enjoyed in reasoned limit.

Rome copied, the brilliant robes worn by women, the children with a minimum of clothes were excellently adapted to Africa. Today Africans are being tempted to dress as Europeans do, regardless of whether these clothes are suitable or not. This is wrong. Resist "fashions" and insist on what is suitable. Instead of holding back a nation's whole industry until some fashion dictator decides whether a skirt should be long or short, wide or narrow, let individuals decide what suits them; instead of sending their designs and colors abroad for fabrication, let them be done at home in Lagos or Ibadan, and thus keep Nigerians at work.

40-2-57

Finally, what Nigeria and all Africa needs is knowledge of their past history and culture. Europe has grown powerful largely because its children for generations have been taught to believe in themselves. They have read the story of their past, seen pictures of the deeds of their fathers and heard legends of their people. Africans also heard of their past, but only in the dry regions like the Nile valley was the record kept in imperishable stone or written on papyrus. In the valleys of the Niger, Senegal and Congo, and on the West Coast, history lived in the minds of men, and was handed down over the centuries from father to son. The West interpreted this as fairy tale and not truth; also when the West wanted an excuse for oppressing and exploiting black folk, they said that Africans had no history and that this proved their inferiority. On the other hand, the West was tempted to exaggerate their own past and, especially, after the slave trade to forget or embroider the sordid story of colonialism. Thus the young African today, and the descendants of Africans in America, know little or nothing of their history or of the cultural inventions of their fathers. As a matter of fact, the transmitted lore of Africa is one of the finest cultural heritages of all time; it often borne the tests of science and the highest standards of literature and art.

To change this fatal ignorance of the present world I have undertaken to plan an Encyclopaedia Africana, in which scholars will set down in the light of the

In many ways the West, and particularly Britain and France, have seriously misled the world; perhaps the worst is gambling. The primitive world thought chance ruled life, and, for that reason, they cast lots and threw dice. But nowwe know that natural laws, and human effort, make history, and that dependence on luck and chance is misleading, especially for the mass of workers. Yet gambling has been made fashionable in London, Paris, and Rome, by the rich and high-born, through horse-racing, card-playing, and so-called "sports". This is bad enough, but beyond games of real chance, comes systematic cheating, which enables professional gamblers to use marked cards and other deceptions. Foremost today is the so-called "Stock-Market" where, under the pretext of distributing capital, whole nations are plunged into daily gambling with rigged results. Beyond that is the custom of establishing centers of gambling, prostitution and drug taking. Under the Colonial system, Britain did this at Singapore, after she had forced opium from India on helpless China. France made Hanoi and Saigon such centers. All three of these nations made Shanghai and its Bund a sink of iniquity until China arose and redeemed a nation. Hong Kong is still a cess-pool under the British. "Chinatowns" all over the World were encouraged to prove Chinese hopelessly debauched. What Nigeria should seek is right conduct; simple comfort without senseless luxury and show; work and wage, not stealing and gambling; walking and running gymnastics and games, rather than elaborate "sports"; music, not noise and hysteria; mothers, homes and childrens, not abortions, dens and prostitutes; refrigerators to preserve food, rather than automobiles to crowd the streets, kill the pedestrians, and carry hundreds whither they have no need to go. Think, listen, read, and do the right which you well know: This is the Will of all your gods; this is Peace on earth and Plenty.

Nations must defend themselves: from foes from without, from inner crime and turmoil. Increased civilization lessens the fear of outer attack, and yet, even today, some armed defense is called for. Always inner police must be at call. But the cost of defense decreases as War ceases; as men become educated and moral, and as crime

latest results of social science the history of mankind on the African continent will be recorded. The Ghana Academy of Learning, under the patronage of President Kwame Nkrumah initiated this project, and asked my help since I had planned such an encyclopaedia early in the century. The Governor-General of Nigeria has expressed his interest in this project and the cooperation of other African rulers will be asked. In order that this project shall be written from the African point of view and not from that of the colonial masters we shall seek African scholars, so far as we can find well-trained scientists of African descent. For this I have already consulted Dr. Dike of the Nigerian University College at Ibadan. He is perhaps the best known African scholar in African history. He and his scholars have given cheerful promise of cooperation. But scientific truth is our aim and not mere racial propaganda; when then no African scholars are found who measure up to modern scientific standards, we shall draw no color line and seek the best scholar, without regard to color, race or religion.

40-2-59

The African loves drama; his sense of theatre is inborn. Nigeria should encourage and lead this desire and as soon as possible escape from the present compulsion to see only foreign plays and films. Especially, the present dependence of the world on the decadence of Hollywood is deplorable and must as soon as possible be terminated. Nigeria must eventually make its own films and meantime seek decent films from those who have them.

The gathering of news from the world; the free expression of opinion; the unhampered creation of forms of art are prime needs of a nation. Remember that most nations today have difficulty in getting true reports of current events; are not allowed to hear what men think and are limited in knowing forms of art and literature which their governments do not like. Let this never occur. Watch the press. Insist on hearing the "other side". Resent the gagging of opinion or taste. Watch the beginnings of this tendency, before it is too late and you find yourselves gagged and bound with monopoly.

Insert 23

Nigeria must from the first strive to treat the problems of sex with commonsense and not mess them up as Europe has. You cannot worship virginity in women, when the natural function of women is to give birth to babies. You cannot regard the human body and sex relations as essentially nasty and still reproduce healthy human beings. Sex promiscuuty defeats its aim of pleasure and healthy children, and while women are designed to bear children, they cannot in civilized li fe be regarded as brood mares or purveyors of the pleasure of men. In finefrom the year of about sixteen to twenty-six, the n natural sex appetite is strong and should be endulged, legally and normally These years are best for parenthood and make possible a normal companion ship of children and parents which czn build the normal family. Marriage should make public this procreation of children. But the marriage should be made terminable at will of either partner when it ceases to be satsi-factory, provide the rights of husbsnd, wife and children are fully assur ed. All this can be feasable by law and custom, if treated by law and de cency and not hidden in sdcrecy, cheating and false shame.

40-2-60

Sex is a healthy, natural appetite, but

They have as much right to careers as men and after the normal child bearing age they should join in the world's work; they should even have the right if it suits their health or ambitions to surrender motherhood for work they can do better.

Insert 23 B

follow

Insert 23 B

One problem has resulted in paradox in modern civilizat. That is what is called "menial Service". It is arising in Nigeria. What shall be the status and wage of those who do the intimate services which everyman requires more or less from infancy through age: the care of infants, the bathing of bodies, the cooking and serving of food, the washing of clothes, the cleaning of living quarters, a attending the sick, adorning the body, entertaining guests, and like matters. These services are on the one hand, matters of love and trained knowledge; On the oth er , they are often regarded as the lowest work of mankind, fit only for slaves or the lowest and worst treated of workers. Yet both these things they cannot be. What is holier and dirtier than a mother's care? What is more despised than menial serv vice? This parodox must be reconciled. Nigerians of wealth and position are hiring many servants and paying them low wage. Nigerians of education and ambition refuse to become servants. What must be the end of this? Service needs education and skill and such folk can be had only for good pay and public respect. In all civilized lands the "servant" problem is unsolved and often seemingly unsoluble. Nigeria must solve it. she must rate meniel service high and pay it well, and in turn the servant must be trained and so capable as to deserve respect. This will take time and thought, but it is none the less pressing and pressing now. Here and there in the world one sees the beginnings of solution: in New York garbage collectors are paid more than most teachers; in Britain old and trusted servants are part of the family. In the Soviet Union, servants afe equal in status to any worker.

(back to 1.23)

decreases because of education and cure of disease. For Nigeria, friendliness with neighbors is called for; intertribal quarrels must be lessened and wider union of nations rather than division into small and smaller parts. The Pan-African movement must someday unite all Africa into one great federation, playing a leading roll in a perfect United Nations. Meantime, so long as South Africa breaks every law of human decency; so long as Portugal continues to lie about her murder and theft in Africa; so long Nigeria must be strong enough to boycott and refuse political ties with them. And, if Britain, France, or Israel prepare nuclear force against Algeria or other helpless nations, Nigeria is justified in demanding atomic weapons of the Soviet Union and China.

29-2-04

One peculiar development in the West and particularly in the United States is the dominance of advertising over production and distribution of goods. Advertising is letting the consumer know what the producer has to sell. Or at another step shows what the trader has bought from the producer and offers to sell the producer. But, today, in America, the advertiser dominates the market; he decides what shall be sold and at what price; the consumer is compelled to buy what the advertiser offers at the advertiser's price. The intricate methods by which the advertiser has acquired this power are intricate and hard to understand, but they involve large capital for useless display, highly paid skill in picture, word, and the government-backed monopoly of advertising media like newspapers and magazines, radio and television, and other methods which the government uses to put public profit into private hands. Nigeria should watch all approaches to this subtle transfer of power.

Another method of public aid to private gain is through what is called "Fashions". This is inducing the consumers, especially women, to wear what certain persons who monopolize publicity tell them is "fashionable". After a time respectable women are actually afraid to wear what is not "fashionable" whether it suits them or not. Now the people of Africa have for centuries become used to wearing clothes of a weight and texture, and color, peculiarly suited to their life and climate: the men's toga which

Rome copied, the brilliant robes worn by women, the children with a minimum of clothes were excellently adapted to Africa. Today Africans are being tempted to dress as Europeans do, regardless of whether these clothes are suitable or not. This is wrong. Resist "fashions" and insist on what is suitable. Instead of holding back a nation's whole industry until some fashion dictator decides whether a skirt should be long or short, wide or narrow, let individuals decide what suits them; instead of sending their designs and colors abroad for fabrication, let them be done at home in Lagos or Ibadan, and thus keep Nigerians at work. (insert 25)

Finally, what Nigeria and all Africa needs is knowledge of their past history and culture. Europe has grown powerful largely because its children for generations have been taught to believe in themselves. They have read the story of their past, seen pictures of the deeds of their fathers and heard legends of their people. Africans also heard of their past, but only in the dry regions like the Nile valley was the record kept in imperishable stone or written on papyrus. In the valleys of the Niger, Senegal and Congo, and on the West Coast, history lived in the minds of men, and was handed down over the centuries from father to son. The West interpreted this as fairy tale and not truth; also when the West wanted an excuse for oppressing and exploiting black folk, they said that Africans had no history and that this proved their inferiority. On the other hand, the West was tempted to exaggerate their own past and, especially, after the slave trade to forget or embroider the sordid story of colonialism. Thus the young African today, and the descendants of Africans in America, know little or nothing of their history or of the cultural inventions of their fathers. As a matter of fact, the transmitted lore of Africa is one of the finest cultural heritages of all time; it often borne the tests of science and the highest standards of literature and art.

To change this fatal ignorance of the present world I have undertaken to plan an Encyclopaedia Africana, in which scholars will set down in the light of the

Each Nigerian vilage and city should build its own little theatre where its own life is depicted, its own history told and the theatre of o other times and nations brought to teach and guide and inspire the people

40-2-65

Mar 25

The African loves drama; his sense of theatre is inborn. Nigeria should encourage and lead this desire and as soon as possible escape from the present compulsion to see only foreign plays and films. Especially, the present dependence of the world on the decadence of Hollywood is deplorable and must as soon as possible be terminated. Nigeria must eventually make its own films and meantime seek decent films from those who have them.

49-2-04

Watch city and suburb and do not let them kill nor oppress each other; do not \p pamper the city and starve the country. Protct the forest and keep it replanted.\P Protect wild life, both beast and bird; know the great world of insects and regulate it for the good of man and not for attack and disease. Watch and record the weath er, guide the rivers and harness poer so that nature as well as man furnish ~~power~~ and work. Give thought to the making of homes so that they become centers of protection, e education and pleasure and not airless and dirty dens of drudgery, dirt and pain

99-2-06

There is developing in Nigeria what is called a Bourgeoisie; that is a group of professional men, civil servants, merchants and white collar workers who are accumulating wealth, furnishing comfortable homes with servants, motor cars and many luxuries. This is copying after the white West and is normal and in many respects desirable. But it skirts fatal dangers unless watched guided and curbed. In all history, civilization has developed in cities. That is what the name means. It is natural that where men congregate in groups and come to know each other and learn from each other, here knowledge developes, inventions grow and men become builders of culture. But here too lurk dangers: the city group easily learns to use the peasant for the city's life and comfort without returning to the rural districts any of the human culture which its toil sustains. Almost invariably the country grows pooor and ignorsnt as the city grows rich and sophisticated. Then the inevitable bappens: the peasant tries to leave the farm and the city dweller tries to drive him back.

27-2-04

This is beginning to happen in Nigeria and it will increase in the future; and many will tell you that it is inevitable. Do not believe them. Educate your peasant; give them beauty and recreation. Make a life and career in the country as good as one in the city

decreases because of education and cure of disease. 40-2-73

Nigeria needs capital. All nations need capital. Capital accumulation is a great modern idea. This means simply that a nation must produce more than enough for its immediate needs so as to use the surplus for better and increased production in the future. How now can capital best be raised? The simplest way is that a worker refrains from consuming all he makes and saves the surplus. He thus deserves a profit for his sacrifice, and of course retains ownership of his original property. This is the original and simple concept of capital. But the concept and practice has greatly changed in modern days.: first the original capital is often not owned wholly by an individual, but is the gift of the state and yet the profit goes into private hands. For the state builds a harbor with public taxes and yet private persons or corporations reap the profit without adequate charge. Or a private corporation builds a railroad, sells it to the state for a price much higher than it is worth, and the state tries to run the railroad, but must first pay the inflated price with high interest. State conduct of the railroad results in a deficit which the public pays with high fares and frieght charges. Or again the state gives a private corporation a monopoly in the use of streets and then the corporation makes a large profit which it calls its own with no payment or very inadequate payment to the public. So that a new state like Nigeria must from the beginning be sure that the capital they borrow really belongs to the person or corporation which claims profit for its use.

The current method of bringing industry to farming countries is by borrowing wealth from Europe; buying machines and tools with this wealth and then importing skilled technicians

from abroad to migrate here and set up factories. With these factory hands and engineers come merchants to buy the manufactured products for sale abroad; and bringing with them goods made abroad to sell to the natives. This system which once seemed quite natural and good for all was soon seen to be but little different from colonialism. The interest on borrowed capital was so high and the terms so onerous, that the lending capitalists soon owned the country. It was thus that Algeria, Tunis and Egypt came under the complete control of Britain and France. It was this that would soon have happened to Ghana had not Nkrumah checkmated the trend; it was this that would have been the fate of Nigeria had it not been for the sacrifice and persistence of Macauley and Azikiwe. Moreover, their work is not finished: it has just begun. Nigeria needs industry; and for industry Nigeria needs capital; and to use capital Nigeria needs skill, engineers, science. Capital must be saved. Each Nigerian, above what he eats, wears, and uses, must sacrifice and save. Every nation must save wealth for use as capital -- to make more goods for future use.

40-2-25

But considering the need; looking the present world crisis and threat straight in the face;considering how advantageous it would be if more capital was available now, some capital can and should be borrowed, if that can be done on favorable terms. It has long been the custom for western capitalists to gang up on poor countries in Asia and Africa and charge them exorbitant interest. Today they charge from five to ten percent, with other requirements which raise the charge to fifteen or twenty-five percent. But the Soviet Union and China often lend for two percent and sometimes for nothing. Nigeria should examine all terms offered and if they are clear and honest, with no strings attached, borrow at the best rates, the smallest sums sufficient for its needs. Again, in the past, the nations which loan, usually sent their own nationals to direct colonial industry and furnish the direction and skill. For these they demanded special pay, preferred status, the right to govern even when the natives were disfranchised; and preferred places to live. All this privilege must go. If white folk cannot come to Nigeria and live on Nigerian wages, alongside Nigerian people, with the rights and no more rights than Nigerians enjoy, then White folk must stay out of Nigeria. Differences in custom, current ignorance of sanitation, and dire poverty, may make it difficult at

present to carry out this equality of treatment; but that only indicates how quickly and thoroughly Nigeria must rid itself of poverty, ignorance and disease, and what whites must sacrifice if they come here.

However, there is offered Nigerians another way. You will find that the British and French and, especially, the North Americans suggest a quick by-path for Nigeria to become rich and happy. And that is for intelligent and well-to-do Nigerians to join the British and Americans and other white capitalists in exploiting the country and using cheap black labor and cheap land and its products, in making themselves and the white folk rich, and keeping most Nigerians especially the farmers and peasants, ignorant, poor and sick.

They say this should be done because it is the best and quickest way to help Nigeria upward. They point out that when men say that such a country is rich, they mean that their upper classes are rich but that the masses are poor, because the wealth they earn is used to support the rich in comfort and even luxury. They suggest that just as in the past, white Europe lived on black Africa, so in the future, the more prosperous black Nigerians become junior partners with white Europeans and live on the poverty, ignorance and sicknesses of the mass of Nigerians living in the country districts and the slums of the towns. There are other folk in Nigeria and increasingly in Europe and Asia who say no, there is another answer. It has become customary in the 19th century in Europe and North America to build Progress on Poverty; to make a few cultured classes rich by letting them feed on a mass of the poor, and ignorant workers. This is not necessary and was not done in the past. In primitive Nigeria, no member of a tribe was hungry so long as the tribe had food. There were no homeless widows, nor helpless orphans. The tribe and clan fed the hungry and protected the helpless. The clan saved capital and invested it. The profits naturally belonged not to the individual who handled the transaction, but to the tribe which owned the wealth. To be sure the system was not perfect. Tribes were broken up by wars and wars became slave raids which further disrupted clans. Clans and nations moved to avoid disaster or gain new land or power.

Disrupted members of tribes took refuge in towns without tribal protection and the ancient communal care failed often or disappeared. But it was an effective way of preventing poverty and spreading wisdom where and when it worked. Men remembered it, chiefs practiced it, and medicine men told about it. When now it is suggested that this common effort of the state be revived in some form, British and American scream "Socialism!" or "Communism!". But wise Nigerians are not frightened.

40-2-77

I have only to impress upon you that here there should be on your part little hesitancy. Socialism and Communism under the teaching of Karl Marx and Lenin are beginning to triumph and you should not hesitate in ~~choosing between~~ Studying these doctrines and the ~~temporary~~ triumph of private capital under Western Europe during the nineteenth century. Your logical development stems directly from the communalism of your fathers where capital or wealth used to produce wealth was owned by the chiefs who represented the tribe, just as today land and water are owned in a similar way and the profit made in early days through this capitalism belonged to all and not to any individual. This socialism ~~can and should~~ can & should be restored in the great independent Dominion of Nigeria? Over

~~You~~ Nigeria must build a ~~socialism based on the~~ welfare state and move toward a ~~communism~~ where all men work ~~for the state~~ to the best of their ability and receive ~~from the state~~ as wage not everything that they want, but everything that they need for the greatest development of all the people. This will involve sacrifice. This will mean not the rule of the rich and the smart, but the uplift of the great mass of people out of which will come power and genius and ideals which will restore Africa to the place it once occupied in the forefront of the world.

In the hard and bitter strife toward this end you will find allies. Some few in Western Europe and North America. But not many, for they want not so much your progress as profit from your free land and cheap labor. They are willing to share this loot with those of you who can be bought. But in ~~the great and successful~~ nations like the Soviet Union and the Peoples Republic of China; Czechoslovakia, Poland, East Germany, and Hungary, ~~who are today leading the world~~ you will find allies and friends who will help you toward freedom and peace. If Britain rejects Socialism, whatever it is, that is their ~~business~~ right or any other nation

Northern Nigeria with its ruling sultans and emirs; with its Moslem and primitive religion is still the stronghold of the ancient communalism. As such it is a most valuable counterweight to Eastern and Western Nigeria which are centers of the new commercialism, where a new Bourgeoisie are seeking to exploit land and labor and reduce the peasants to subservient poverty. But the industrial and commercial Nigeria has embraced education and science, while the more primitive North has lagged in schools and defended primitive customs and dogma which hinder. The star of hope is that the North is beginning to encourage education and the commercial south is studying Socialism and Communism and what they may hold for future Nigeria

Britain and Scandinavia accept a partial socialism, but refuse as yet to accept the aims and methods of Communiasm. That is their right.

If the United States fears Communism and knows why that is their business. If Cuba chooses Communism, they have the right so to choose. Whatever Nigeria accepts is not a name but a fact. ~~Nigeria must~~ Nigeria must prevent poverty; it must educate the children; it must heal the sick. Whatever path leads to these ends, Nigeria must follow, no matter what it is called. Nigerian students should study and travellers should visit and examine the way in which the nations of the West and East are settling the pressing problems of income and expense; of work and wage; of property, of crime; of education and employment. Deeds, not mere words settle these problems, and it matters not a jot whether the system which proves effective is called Capitalism, Socialism, or Communism. Nigeria must adopt those measures which solves her problems and ignore that which suits others but does not apply to her.

In seeking these answers, the attitude and words of American Negroes greatly puzzle Nigerians today. They know that millions of black Africans for 400 years ~~from 1500 to 1900~~, were stolen from their homes and enslaved in America when not murdered or drowned at sea. In America they suffered every cruelty and degradation, while digging from the soil stolen from the Red Indians, wealth which made Europe rich and powerful and long masters of mankind. At length these black slaves gained partial freedom by their own revolt and by the help of white folk who grew ashamed of their own sin and pitied their victims' sufferings. They sued and sacrificed until black Americans and their white friends hoped that free black Americans might lead black Africa to freedom and independence. But before black America was really free, Black Africa arose to its feet and asserted a freedom and independence which is astonishing the world. When now, after some efforts at returning to their motherland, a series of Pan-African Congresses, and two world wars, there begins a new visiting of Africa by American Negroes. Most of these Negroes seem to insist that they are really quite well off in America; that racial segregation and color discrimination has almost disappeared and that American Negroes are ready to join white folk as investers in African industry and as guides in American skills and methods. Then comes some contradiction. Some other black Americans arrive, ~~who contradict this story,~~ They despite great progress aver that oppression, color discrimination and segregation still persist in the United States, even despite the law; and that most of the black Americans who spread these pleasant stories are paid to do so by the State Department of the Gov't-

Many of whom have suffered peesecution in the United States and be~~en~~
refused passports to travel. ~~and~~ They deny this rosy picture;

Government of the United States, or by Big Business enterprise which wants to prevent Africans from learning of Socialism or seeing Communism in action. Under these circumstances the path of Nigeria is straight. Learn the facts. Listen to the truth. Believe what is Right and follow the good.

40-2-79

Freedom and independence does not involve isolation. Do not withdraw from the world: join it more closely than before, but join as equals. Educate your youth at home, but send some of your bright and eager youth abroad for study and living in the chief nations of the world. Send students to Britain, to the United States, to Scandinavia, and also Germany, to the Soviet Union, and its allies, and especially, to China, because the Yellow Race has suffered even more so than the Black Race from the cruelty and exploitation of the white race. Use education to rebind and heal the rifts of mankind and never forget that trade and commerce can be made to human progress are the element of humanity. Africans are born traders. From the birth of Time the African market has set patterns for the world from the Nile to the Niger, from the Senegal to the Congo; from the Zambesi to the sea. The freedom of women began in the African market place and still can be seen on the streets of Cairo, Accra, Lagos, Ibadan and Leopoldville. Against these African traders, and their market place, is rising a terrible menace in the form of the European corporation: Unilevers of Britain, with a capital of a million dollars and an annual income of three hundred millions of dollars; other giant corporations of Belgium, France, and Switzerland, with the best and highest paid skill of the world, backed by the airplanes, armies and navies of most of the world's most powerful nations. This duel goes on today along the streets of every African town. The mass of retail traders, selling directly to consumers who are themselves either artisans or workers are the basis of national economy. They correspond to the artisans and retail traders of the world and like them are being attacked by the Corporation which eventually, unless the State steps in, will drive them out of business as it is driving out the retail merchants of the western world.

What is the Corporation? It began in Western Europe in the Middle Ages, when a Group of persons secured the right to be legally regarded as a person with limited

[The Corporation]

responsibilities, so that it could keep its gains made in trade and word for private use, but could shift a part of its losses on the State. It could thus afford to risk chances which would have ruined the lone trader. This artificial Body or Corporation entered into trade and if it lost, lost only what it risked; if it gained it made fabulous fortunes. The State soon saw these advantages and took part in the Corporations. If the State was an absolute monarchy, the King then shared the gains of the Corporation and taxed the people for its losses. But soon the other members of the corporations secured some of the gain or threatened withdrawal. Thus they shared some of the monarch's power and turned the State into an aristocracy. Later the common folk forced themselves into corporations and aristocracies became democracies. When the wage contract became common -- that is, when the laborer ~~sold the future~~ was forced to sell results of his labor to the capitalist, he had to form a defensive alliance, the Trade Union, to protect his rights. He changed the medieval guild which comprised both employer and worker and made a new group of laborers, after bitter opposition from the property owners. But in the late Nineteenth century the labor union gained recognition and legal status with political power and education for workers. Then in the twentieth century the corporations of capitalists began to move in and control the labor unions by law, curtailing their activities and by bribing their officials, until, today, many of the most powerful unions represent capital as much or more so, than labor. Nigeria must watch her unions; see that the workers controle them by democratic process and that the power of their officers is not secretly increased by bribery from capitalists. It was the revolt of the workers at Paris, against capitalist-controlled unions, in 1945, which made the Fifth Pan-African Congress possible and started Nkrumah toward freeing Ghana.

This growth and change of corporations can be seen in Western Europe. Elizabeth of England incorporated the African slave trade. Her nobility forced themselves into power; the great merchant groups succeeded to power under the Stuarts, and with Cromwell the power of merchants decreased. Then democracy entered, reaching its zenith with 1776. Democracy fell before the oligarchy of the Slave Power but triumphed in Civil War and abolition.

Since 1876, however, a new set of corporations appeared in America, due to disfranching Negroes and Poor Whites; on hoarding gold and monopoly of land and natural resources. The Corporation killed democracy in the United States, and now rules supreme, buying the presidency, cowing Congress and controlling Public Opinion through monopoly of news-gathering, ownership of the press, radio and television, and limiting the publication of books. Capital and invention now made the corporate form of enterprise invincible and it swept the world. Great Britain and France drove Germany out of competition in colonial power, and the United States pressed Britain to the wall and made a million a day profit out of the First World War. But the greed of the United States drove the world into bankruptcy, and Germany and Italy and Japan tried to seize the cheap colonial labor of the world and thus rule industry. ¶ A new element appeard, the Socialist Union of Russia and neighboring peoples. They, under the stern Stalin, beat back the Germans and freed Europe and America at the sacrifice of 20,000,000 lives and a large part of ~~her~~ their hard earned savings. Stalin and Roosevelt, therefore, proposed an alliance between the Socialist East and Capitalist West, based on disarming Germany and making her pay a part of the cost of the war. But Churchill, cajoling Truman; and American corporations and Trade Unions, backed by the armed forces, forced a settlement which refused the Soviet Union help, furnished West Germany arms and capital, and gave her corporations immense new power. The United States ringed the Soviet Union with threatening bases, armed with modern weapons. These weapons now included atom and nuclear power, and for a time, the United States believed that it could make the world do its will. But America failed. The Soviets invented their own bomb. India freed itself from Britain so far as her own capitalists allowed; China threw off ~~trained~~ America's stooge and drove ~~him~~ Chiang Kai Shek off the mainland with American arms. She erected an independent Socialist republic. Britain saw the handwriting on the wall. She yielded independence to Ghana and provincial status to Nigeria. France ~~yielded~~ gave more of her colonial world, [illegible] independence

40-2-81

corporations and individuals enforce fair prices. In turn give both the market place and the sidewalk vendor, clean and accessible places for trade. Do not clutter the sidewalks, or fill the street with waste and refuse. In short, so lift the standards of the street vendors, and so curb the profit and privileges of the corporations that they gradually approach substantial equality of opportunity to serve the folk.

And there lies the great truth which this people must seek: Service, not gain; not the spread of profit, but the increase of contentment and happiness. This is not utopian; it is not impossible. For five centuries Europe has taught the world that only the few can be rich, educated and live decently; and that this can happen only at the expense of keeping most people poor, ignorant and sick. Prophets and sages, working people, and poets, today are pointing out a better way: if all work hard at that which they can do best; if materials, goods and services are given all men not in proportion to what they can take, but in proportion to what they need to make them healthy persons, then most of mankind can live in a contented, happy world.

It is not war that made Europe great; rather war has near ruined what men have done to make a decent world. Cry Peace, then, Peace and plenty for all.

Nigeria has many religions. This is fortunate for it teaches tolerance. Had Nigerians been born in Spain, they would have been taught to hate Protestants; had they been born in Sweden, they would have disliked Catholics; had they been born in the United States they would have suspected Moslems. But in Nigeria millions of their fellows believe in the ancient faith of their forefathers, who saw God in mountain, tree and river; other millions believe in the religion of Mohammed which knows no color line; many are Christians who profess a high moral code; but all respect the faith of others and give them the right to follow it. They know that a religion is an attempt to know the truth and a belief in truth beyond proof. This dogma may go so far as to deny Truth but if it does in time it must give up dogma and recognize Science; just as Science admits freely that it does not know all, and perhaps never will. In the meantime the object of religion is to induce men to act right so that none will hurt another and all can find happiness. What is happiness? It is primarily the gratification of the senses: seeing, hearing, touch, taste, feeling. But here manifestly this is true:

moderation must be the rule; temperance: you cannot see everything on earth; you cannot hear all the music of the spheres; you cannot feel every pleasure at once. So the wise man eats moderately, drinks sparingly, does not go on sprees. Especially man must never seek happiness at the cost of pain and unhappiness to others. In a land like Nigeria, so long deprived of ordinary decencies, much more of happiness can be had. Many are apt to think that the Western world has enjoyed every happiness and should be imitated: that drunkenness, drug-taking, loud noise and hysteria are signs of culture. No, after all, eyes only see; ears only hear; the old dancing of your fathers is as lovely as new steps and lovelier than Rock and Roll. Man is just man. His capacities are limited and are loveliest when enjoyed in reasoned limit.

So what Nigeria should seek is right conduct; simple comfort without senseless luxury and show; work and wage, not stealing and gambling; walking and games rather than elaborate sports; music, not noise and hysteria; mothers and children, not prostitutes; refrigerators to preserve food, rather than automobiles to crowd the streets, kill the pedestrians, and carry hundreds where they have no need to go. Think, listen, read, and do the right which you well know: this is the Will of all your gods; this is Peace on earth and Plenty.

In many ways the West, and particularly Britain and France have seriously misled the world: perhaps the worst is in gambling. The primitive world thought ruled ruled life and for that reason they cast lots and threw dice. But now we know that natural laws, and human effort make history and that dependence on luck and chance is misleading, especially for the mass of workers. Yet gambling has been made fashionable in London, Paris and Rome through horse-racing, card-playing and so-called "sports" This is bad enough but beyond games of chance, comes systematic cheating, which enables professional gamblers to use marked cards and other methods of cheating. Foremost today is the so-called "Stock-Market" where unedr the pretext of distributing capital whole nations are plunged into daily gambling with rigged results. Beyond that is the custom of establishing centers of gambling, prostitution and drug taking under the Colonial system. Britain did this at Singapore after she had forced opium from India on helpless China. France made Hanoi and Saigon such centers. All three of these nations mad Shangai and its Bund a sink of iniquity until China arose and redeemed a nation. Britain has debauched the West Indies with horse-racing. Let Nigeria beware and resist gambling. Cultivate decdnt, amateur athletics and avoid professional " Sports "

then most of mankind can live in a contented, happy world.

It is not war that made Europe great; rather war has near ruined what men have done to make a decent world. Cry Peace, then, Peace and plenty for all.

RELIGION

Nigeria has many religions. This if fortunate, for it teaches tolerance. Had Nigerians been born in Spain, they would have been taught to hate Protestants; had they been born in Sweden, they would have feared Catholics; had they been born in the United States they would have been contemptuous of Moslems. But there are in Nigeria millions of Africans who still believe in the ancient faith of their forefathers, who saw God in mountain, tree and river. The followers of Mohammed know no color line; Christians know modern European cultures; all Nigerian religions respect the faith of others and grant them the right to follow it. They know that a religion is an attempt to know the truth, and a belief in such truth as is beyond proof. This dogma may go so far as to deny Truth, even when it is proven; but if it does, in time it must give up dogma and recognize Science; just as Science admits freely that it does not know all, and perhaps never will.

Meantime, the object of religion is to induce men to act right so that none will hurt another and all can find happiness.

What is happiness? It is primarily the gratification of the senses; seeing, hearing, touch, taste, feeling. But here, manifestly this is true: moderation must be the rule; temperance: you cannot see everything on earth; you cannot hear all the music of the spheres; you cannot feel every pleasure at once. So the wise man eats moderately, drinks sparingly, does not go on sprees. Especially, man must never seek happiness at the cost of pain and unhappiness to others. In a land like Nigeria, so long deprived of ordinary decencies, much more of happiness can be had, than is usual today. Many are apt to think that the Western world has enjoyed every happiness and should be imitated; that drunkenness, drug-taking, loud noise and hysteria are signs of culture. No, after all, eyes only see; ears only hear; the old dancing of your fathers is as lovely as new steps and lovelier than Rock and Roll. Man is just man. His capacities are limited and are loveliest when enjoyed in reasoned limit.

Think, listen, read, and do the right which you well know: This is the Will of all your gods; this is Peace on earth and Plenty.

Nations must defend themselves: from foes from without, from inner crime and turmoil. Increased civilization lessens the fear of outer attack, and yet, even today, some armed defense is called for. Always inner police must be at call. But the cost of defense decreases as War ceases; as men become educated and move, and as crime

98-2-04

For this I have already consulted Dr. Dike of the Nigerian University College at Ibadan. He is, perhaps, the best known African scholar in African history. He and his scholars have given cheerful promise of cooperation. Other African Universities and Colleges have promised cooperation. But scientific truth is our aim and not mere racial propaganda; when, then, no African scholars are found who measure up to modern scientific standards, we shall draw no color line, and shall seek the best scholar, without regard to color, race or religion.

W. E. Burghardt Du Bois.

BIOGRAPHY

W.E. BURGHARDT DU BOIS, born Great Barrington. February 23,1868, of Negro, Duth and Hugenot descent; educated in the public schools of Massachusetts, at Fisk University, Harvard, and the University of Berlin.

Has received honorary degrees from Atlanta, Fisk Howard, Wilberforce, Charles University of Prague, University of Moscow, University of Sophia and other institutions.

Married: Nina Gomer 1896 deceased 1950. Children: Burghardt Gomer, Nina Yolande, both deceased. Married 1951: Shirley Graham.

Professor of Greek and Latin. Wilberforce University. 1894–1896 Assistant Instructor of Sociology, University of Pennsylvania, 1896 1897

Professor of Economics and History, Atlanta University, 1897–1910
Director of Publications of N.A.A.C.P. and Editor of Crisis, 1910–1933.
Head of Dept. of Sociology, Atlanta University, 1939–1944
Head of Dept. of Special Research N A.A.C.P., 1944–1948
Vice-Chairman of Council of African Affairs, 1949–1954
Chairman of Peace Informational Bureau, 1950–1951
Editor of Atlanta University Studies, 1897–1911
Founder and Editor of Phylon, 1940–1944
Recipient of Internation Peace Prize, 1952
Recipient of Lenin Internation Peace Prize, 1959
Fellow of American Association of the Advancement of Science
Founder of Pan-African Congresses
Member of the National Institute of Arts and Letters
Knight Commander of the Liberian Order of African Redemption
Editor–in–Chief of the Encyclopedia of the Negro, 1933–1945
Head of the Ghana Secretariat for planning the Encyclopedia of the Negro, 1961—

Author of the 'Suppression of the Slave Trade', 1896
'The Philadelphia Negro', 1899,
'The Souls of Black Folk', 1903
'John Brown', 1909
Quest of the Silver Fleece', 1911
'The Negro', 1915
'Darkwater', 1920
'Gift of Black Folk, 1924

AFRICA AND THE FRENCH REVOLUTION

IF YOU should penetrate the campus of an American Ivy League college and challenging a Senior, ask what, in his opinion, was the influence of Africa on the French Revolution, he would answer in surprise if not pity, "None." If, after due apology, you ventured to approach his teacher of "historiography," provided such sacrilege were possible, you would be told that between African slavery in America and the greatest revolution of Europe, there was of course some connection, since both took place on the same earth; but nothing causal, nothing of real importance, since Africans have no history.

39-4a-11

Nevertheless, it is a perfectly defensible thesis of scientific history that Africans and African slavery in the West Indies were the main causes and influences of the American Revolution and of the French Revolution. And when, after long controversy and civil war, Negro slavery and serfdom were not suppressed, the United States turned from democracy to plutocracy and opened the path to colonial imperialism and made wide the way for the final world Revolutions in the 20th century.

Let us now look at the story. Columbus had a Negro pilot, and in the 16th century his son Diago was governor of the island of San Domingo and his slaves staged a revolt in 1522. A few years later Vasquez d'Allyon tried to settle in Virginia but his slaves revolted. From the 16th century on, the revolt of the black workers stolen in Africa and transported to America continued. This was proven by the fright of the planters shown by the increased severity of the laws; at the same time, their desire to pretend that the slave system for blacks was perfect and was not resented.

Early in the 16th century the Maroons appeared all over the West Indies. This was the name given to runaway slaves who took refuge in the mountains of Cuba, Haiti, Jamaica and Central America. They formed their own governments and even built cities. They fought with the Spanish, the British and the French; they made treaties which the Whites broke.

Meantime, by the middle of the 17th century Cromwell had seized Jamaica and the French had started sugar planting on their islands. White indentured servants were imported into the West Indies and the Africa slave trade increased. Between 1700 and 1776, 600,000 blacks were imported to the West Indies, Central and South America. French commerce quadrupled between 1714 and 1789. Dutch slaves revolted and gained their independence, and in Haiti a succession of black rulers in this land of mountains carried on continuous governmental organization which lasted through the 18th century and still exists.

San Domingo was an island of mountains rising in places 6,000 feet above sea level. The San Domingo planters and the British and French bourgeoisie were the new owners of some of the richest property in the world. Of these three the most important in 1790 were the planter of San Domingo. The island was beautiful. The climate was favorable, and crops grew the year round. The planters lived luxuriously, and spent their vacations or old age in Paris. In France they formed a powerful political force as their counterparts did in England. French women from the gutter as well as the middle class came to the colony. French aristocracy came to rebuild their shattered fortunes. They took Negro concubines. Colonial cities were centers of dirt, gambling and debauchery. In 1789, of 7,000 mulatto women in San Domingo, 5,000 were either prostitutes or mistresses. Failures from all countries flocked to San Domingo. No white person was a servant or did any work that he could get a Negro to do for him. The owners lived in barbaric luxury and the island produced more sugar, coffee, chocolate, indigo, timber and spices than all the rest of the West Indies put together. As early as 1685 Louis XIV had issued a Code Noir which made wives and children of Frenchmen free. By the beginning of the 18th century mulattoes began to accumulate property and educate their children in France. Their children began to return by 1763 and tried as freemen to take part in public affairs.

Meantime, the British were profiting by the slave trade and building up their mercantile system of colonial trade.

The French regarded the colonies as existing for the profit of France. Colonies must buy all manufactured goods in France and could sell their produce only to France. The goods must be transported in French ships.

Sugar must be refined in France. In 1664 France gave the rights of trade with San Domingo to a private company. The colonists refused and the governor had to case restrictions. This happened again in 1722. There was another insurrection, the governor was imprisoned and the privileges of the company modified. The colonists thought of separating from France.

Long before 1789 the French bourgeoisie was the most powerful force in France and the slave trade in the colonies, the basis of its power. The fortunes created at Bordeaux and at Nantes by the slave trade gave the bourgeoisie the pride that demanded "liberty." In 1666, 108 ships went from Nantes to Africa with 37,430 slaves trade valued at 37 million dollars and giving the owners from 15 to 20 per cent on their money. In 1700 Nantes was sending 50 ships a year to the West Indies with food, clothing and machinery. Nearly all the industries developed in France were based on the slave trade or the trade with America. Bordeaux grew rich by 1750 with 16 factories refining sugar. San Domingo was the special center of the Marseilles trade. A dozen other great towns refined sugar. Hides and cotton came from the West Indies. Two to six million Frenchmen depended for their livelihood upon colonial trade. In 1789 San Domingo received in its ports more ships than Marseilles. France used for the San Domingo trade 750 vessels employing 24,000 soldiers. In 1774 the colonies owed France 200 million and by 1789 between 3 and 5 million. The British envied San Domingo with alarm after the independence of America. San Domingo doubled its production between 1783 and 1789.

The British slave trade became an increasing source of profit and their monoply of colonial trade a matter of increasing importance. When, therefore, the American colonists tried to extricate themselves from British power they struck first at the slave trade. Already the Negro workers were beginning to take part in the struggle. Crispus Attucks led a mod in Boston and Daniel Webster said that the severance of America from the British empire dated from his death. The day of his death was a national American holiday for nearly a quarter of a century.

In 1776 Jefferson emphasized the slave trade as America's grievance against Great Britain. The American Revolution stopped the trade. In 1774, the Second Article

of the Continental Association said: "that we will neither import nor purchase slaves imported after the first day of December next, after which we will wholly discontinue the slave trade." This all agreed would stop slavery. As the war progressed Negroes took part. General Nathaniel Green writes: "The natural state of the country appears to me to consist more in the blacks than in the whites." American Negroes fought for freedom, perhaps a larger proportion of them than among whites. In the early battles of the revolutionary war Negro soldiers fought side by side with the whites. It was feared that their presence might encourage slaves in the South to accept the offer of freedom given by the British governor, Dunmore, of Virginia, and for a while Washington was induced to refuse colored enlistments. But this he soon gave up. Negroes fought throught the revolutionary war, mostly on the side of the Americans, but some on the side of the British. And Negro slavery was certainly one of the strongest arguments for the American Revolution. After American gained its freedom in 1783 it was felt in France and America that slavery in America was at an end.

The French Revolution has been written to largely from the white point of view that the part which the blacks played in this drama has been either forgotten or unknown.

A revolution is a transfer of power from the top aristocracy of a nation to lower and lower classes. Very often all the work and demand of and artistocracy is interpreted as transfer of power to the masses of people. This is usually untrue. Magna Carta was not a democratic movement. It was a successful attempt of the higher British artistocracy to wrest power from the King. The writ of habeas corpus did not mean that the working masses escaped unjust imprisonment; it was for the benefit of the rich middle class. And so in France the fall of the Bastille was a victory for unjustly treated aristocrats.

The freedom which France demanded in 1787 was freedom to build their current prosperity on the products of slave labor supported by a slave trade from Africa. Profits from this source were at their highest and French migrants were rushing to San Domingo to get rich. About this time the colored bastards whom the Code Noir had declared to be free and Negroes who had either earned or bought their freedom began to

demand French citizenship, and French theorists and dreamers backed them as Friends.

In 1788, France exported to French San Domingo 21 million dollars in flour, wine, and manufactures, with 580 vessels in this trade and 98 in the African trade, and 29,500 slaves were brought to San Domingo from Africa.

In 1789, the West Indian colony of San Domingo supplied two-thirds of the overseas trade to France and was the greatest individual market for the European slave trade. It was an integral part of the economic life of the age, the pride of France, and the envy of every imperialist nation. The whole structure rested on the labor of the half million black slaves.

39-4a-13

San Domingo was now incomparably the finest colony in the world and its possibilities were limitless. But without slaves San Domingo was doomed. The British colonies had enough slaves from all their trade and the British bourgeoisie who had no other West Indian interests set up a howl for the abolition of the slave trade. The rising British industrial bourgeoisie turned toward free trade and the exploitation of India and called the West Indies, "sterile rocks."

Adam Smith and Arthur Young condemned slave labor. India, after the loss of America, became a source of sugar. The production of cotton in India doubled in a few years. Indian free labor cost only a penny a day. There were hoards of gold, silver and jewels.

In 1786 Wilberforce began the anti-slave trade campaign. Pitt egged him on. Liberals in France, including the great names of the revolution, formed a society. The Friends of the Negro aimed at the abolition of slavery.

In the Estates General which met in 1789 the French aristocracy gave up many of their rights and formed a Constitutuent Assembly under the domination of the upper middle classes. They for three years made this bourgeoisie equal in power to the former aristocrats. Thus equality which came in France was equality for the property owners and not for the working, starving masses. For a year the mass of workers began to put forward their demands in the Legislative Assembly and then finally for three years came real revolution. The monarchy

was abolished. A Committee of Public Safety was established and pure democracy which allowed the masses to vote was proposed but not ratified. The King was killed and the parties fought for power. A reign of terror ensued which by 1794 was killing 354 people a month untill suddenly came Thermidor. Robespierre himself was killed. The power of the Paris Commune with its extreme democracy was stopped. Babeuf, the serf, was executed. But the people were starving and there must be a change. In which direction would the change go, to a further devolution of power to the workers. Certainly not, said the respectable people. They turned to Bonaparts who had just married the granddaughter of a Negro and finished an Italian campaign. They brought him back from his wild Egyptian venture and the coup d'etat of the 18th Brumarie which ended in the empire. This is the story we are told and Africa touches it nowhere, save that we say that the terror in France was copied in Haiti and that Napoleon gave Louisiana to America.

This is not the complete story. Let us go over the details again: when the revolution broke out in France in 1787 San Domingo had more than three-quarter million slaves. The cities of France were flourishing with the slave trade. The French who were gaining equality with the former aristocrats were basing this equality on the profits of the slave trade and on crops grown by black slaves. From the very beginning two parties appeared in France: the moral philosophers and the social theorists, demanding freedom of the slaves. On the other hand, the planters demand recognition as citizens and the exclusion of the poor whites and the mulattoes.

The planters supported the monarchy against the revolution. The poor whites supported the revolution against the King but opposed the mulattoes. The mulattoes sought alliance with either or both groups of whites. In 1789 the mulattoes sent Raymond and Oge to Paris with 6 million pounds in gold and a promise of this and one-fifth of the property which the mulattoes owned in San Domingo to pay the French public debit. These delegates were received by the Constituent Assembly, and the Assembly thus recognized the citizenship of free Negroes. The planters were opposed as were also the manufacturers and merchants of the great French cities. The Constituent Assembly voted by large majority not to interfere with the internal government of the colonies and refused

to abolish the slave trade. But on March 18, 1790, the Amis des Noirs secured a vote declaring free Negroes citizens. Planters in Martenique, Guadaloupe and San Domingo all decreed that the law recognizing the right to vote applied only to white persons. The planters and poor whites fought each other, but both were against the Negroes.

The planters of San Domingo by secret manipulation placed six of their number in the Constituent Assembly. When representatives of the free Negroes and mulattoes appeared in Paris to demand hearing they were received and backed by the organization called the Friends of Negroes. The Declaration of the Rights of Man was adopted.

Oge returned to America with British money, landing secretly in north San Domingo. He collected 300 men. He was attacked and took refuge in the Spanish part of the island; the governor surrendered him. Oge and Chavannes were sentenced while alive to have their aims, legs and spines broken and then be exposed to the sun. This was done in the presence of the northern provincial assembly gathered in state.

War started between the planters and the free Negroes. The planters, reinforced by poor whites from France pouring in to make money from slavery, numbered 40,000. The free Negroes and mulattoes were about 26,000. And, despite the supporting votes of the National Convention, the war was going against them.

Then the unexpected happened. The bolder slaves had formed bands of Maroons in the mountains and before 1700, became dangerous. Over 1,000 Maroons are reported in 1720, 3,000 in 1751. By 1750 their greatest chief was Macandel. He planned a rebellion but was captured and burned alive. The planters were determined that nothing would interfere with their method and the slave system. A half-million black Africans long self-trained in the mountaines of Haiti on August 22, 1791, in a midnight thunderstorm, attacked. Thiers tells us: "In an instant twelve hundred coffee and two hundred sugar plantations were in flames; the buildings, the machinery, the farmhouses, were reduced to ashes; and the unfortunate proprietors were hunted down, murdered or thrown into the flames, by the infuriated Negroes. The horrors of a servile war universally appeared. The unchained African signalized his ingenuity by the discovery of new methods and unhead-of modes of torture."

They killed, raped and murdered. They destroyed property. The smoke of the fires blotted out the sun for days. The richest colony of France lay in ruins. The world shuddered. The slave-holders were frightened to death. But only gradually on slow sailing ship, loaded with lies, did the truth about what was happening reach France. Only after months did it realize that the foundations of its wealth and prosperity had disappeared. It was this and not any demands from the masses of French workers or of European philanthropists that turned the reaction of Thermidor into a reality and in time brought the counter-revolution of the 18th Brumaire.

The Terror did not spread from France to Haiti in 1793. Already in 1791 it came to France from Haiti. It was Africa in America and Africans led by Toussaint L'Ouverture who struck the French Revolution after it had given freedom to property-holders, and faced it with chaos. They plunged into anarchy, tempered by murder, until the reaction of Thermidor restored property to power.

The revolt was all the more startling because while it had been in the fears and imagination of the colonists for two hundred years, it was always underamed of as an actual occurence. There had been numberless revolts, which had spread terror to whites all over the West Indies, Central America and the mainland of the United States; but once they were quickly suppressed, their details and facts minimized, the records destroyed and the memory forgotten.

In San Domingo itself the dangers of slave revolts was not unknown. For years runaway slaves had hidden in the mountains especially in the northeastern part of the island. There were serious slave revolts in 1679, 1691 and 1718, and in the middle of the eighteenth century a Negro, Macandel, carried out systematic poisoning which created a panic.

In Europe the organization of the lowest classes of workers and servants, peassants and labourers to gain political power and property was rare and cannot be compared to the corresponding organizations of the African slaves in the West Indies and South America. Many European revolts which are pictured as risings of the masses are nothing of the sort. The Protest revolution had no sympathy with the peasants and Martin Luther kicked them in the teeth when they revolted. There were revolts

of the suffering masses in Hungary, France and England but they were small compared with the concerted, long-continued rebellion of the black Maroons. While the blacks of San Domingo were in wild rebellion France faced two paths: one was that of Babeuf who came up from the bottom of modern class organization, the servant class; he saw the masses starving, he felt their misery and he sang the dirge of the dying. He struggled for a commune of the workers; equality not of property owners but of those who gave property its value. He prayed and struggled for his paris commune, but the mounting power of the property owners pushed and beat him back until he died. He died on the scaffold in 1796 but arose from the dead in 1848 and again in 1871 in France; in 1917 Russia; in 1939 in China and in 1961 in Cuba.

France repudiating Babeuf, in its unconscious frenzy, took refuge in the reaction of Thermidor, after abolishing monarchy. killing the King, and murdering their leaders. Thermidor was the rule of the property-holders displacing the aristocrats. But in San Domingo, horror faced Toussaint and his rebels. Toussaint revered the King, his Chieftain; he believed in discipline and authority. He deserted impious France and led his legions to the service of Charles IV of Spain. Slowly he and his successors in after years developed his ancient tribal commaunlism in San Domingo. Beyond these political provisions, he turned attention toward the economic; the island was divided into districts with inspectors who were to see that the freedmen returned to their work. A fifth part of the produce of each estate was to go to the workers. Commercial arrangements were made with the United States and England. He immediately issued a manifesto to all Negroes and mulattoes. "I am Toussaint L'Ouverture; my name is perhaps know to you. I have undertaken to avenge your wrongs. It is my desire that liberty and equality shall reign in San Domingo ! I am striving to this end. Come unite with us, brothers, and fight with us for the same cause."

Through the prowess of Toussaint, the Spanish pushed the French farther and farther back and in a short time secured possession of nearly the whole norther of the island and apart of south. The French commission found itself in a tight place and tried to extricate itself in June, 1793, by offering to free all slaves who would enroll in in the army. In August they went even further and proclamed universal emanicipation in San Domingo and this action was confirmed by the French National Convention, February 4, 1794.

The first proclamation had no influence upon Toussaint. As a Spanish general, he refused to recognize the authority of the French. But when the English invaded San Domingo, the aspect of things changed. They landed in September and soon had captured that city with its heavy artillery and two million dollars' worth of shipping in its harbor. Toussaint knew the British as slave traders, and he now suspected that Spain wanted vengeance on France rather than freedom for the slaves. When, therefore, the French government affirmed universal emanciption early in 1794, he returned to French allegiance to the open delight of the commission. they said, "Remember that distinctions of color are no more!"

The blacks under Toussaint now proceeded to restore San Domingo to France. The mere magic of his name did much without fighting. In April Toussaint left the Spanish army; in May the French Flag was flying at Gonaives. From now on Toussaint was know as L'Ouverture, the Savior. Gradually the whole northern part of the island was in his possession. As Sonthonax wrote in his diary, "These Negroes perform miracles of bravery."

In after years, the successors of Toussaint, Dessalines and Christophe developed communalism and made the Haitian state independent and owner of its land and crops; but the surrounding world whirled away: it monopolized wealth in private hands, organized military power in their hand and France, the United States and Britain forced Haiti today. Still high in its mountains roll the tom-toms of ancient Africa and its dreams.

People who achieved equality in the French revolution had neither liberty nor brotherhood of the black slaves of Haiti who were dying for the glory France. For two years a National Convention was in control, which abolished the monarchy and vainly planned an equalitarian democracy. They tried to free the slaves, their own reaction could not survive slavery and live.

Meantime, separated by a vast ocean, with news traveling by slow sailing vessels, aad couriers leaded with lies, France and San Domingo led for a long period almost separate lives, neither knowing exactly what was occurring in the other. The French commissioners representing the state arrived in San Domingo. They joined the mulattoes and free Negroes and revoked the abolition of the slavery of the blacks. Toussaint, leader of the blacks, went over to the Spaniards and the French planters appealed to the British.

The governor of the colony helplessly called on the revolting Negroes to surrender. In answer Toussaint wrote: "Sir, – We have never thought of failing in the duty and respect which we owe to the representative of the person of the King, nor even to any of his servants whatever; we have proofs of the fact in our hands; but do you, who are a just man as well as a general, pay us a visit; behole this land which we have watered with our sweat or rather, with our blood,-those edifices which we have raised, and that in the hope of a just reward! Have we obtained it? The King– the whole world-has bewailed our lot, and broken our chains; while in our part, we, humble victims, were ready for anything, not wishing to abandon our masters What do we say? We are mistaken; those, who next to God, should have proved our father, have been tyrants, monsters unworthy of the fruits of our labours; and do you, brave general, desife that as sheep we should throw ourselves into the jaw of the wolf? No! it is too late. God, who fights for the innocent is our guide; he will never abandon us. Accordingly, this is our motto- Death or Vitory.!"

Thus while the slaves arranged themselves with the King as symbolic head of the state, the new colonial assembly August 24,1791, instead of appealing to France, begged protection, especially for their property from England: "Fire lays waste our possessions, the hands of our Negroes in arms are already dyed with the blood of our brethren. Very prompt assistance is necessary to save the wreck of our fortunes-already half-destroyed; and confined within the towns, we look for your aid."

The British after five years were sick of their attempt to conquer Haiti. By September 30, 1796, out of the whole number of white troops, British and foreign, who had landed in Haiti since 1795, at least 15,000 men, only 3,000 were left alive. April 22, 1798, the British Commander Maitland evacuated all towns in Haiti except Mole St. Nicholas. He had only about a thousand troops alive.

The brilliant success of Toussaint not aroused the envy of the mulattoes, but the suspicion of France. The commissioner, Sonthonax,* who had returned from San Domingo, reported to the new government in the Director in France, the facts concerning Toussaint, and they thought it best to send a governor who would curb his power. Hedouville, the new governor, arrived April 20, 1798, and proposed to take charge of the negotiations with the

English; but Maitland, the English commander, was only too glad to affront France by dealing directly and exclusively with Toussaint and to attempt to gain for England by flattery and bribery what he could not take by force. After five years of fighting, the loss of thirty thousand men and the expenditure of one hundred million dollars he offered to surrender.

On October, 1, 1798, Toussaint entered Mole St. Nicholas as conqueror. The white troops saluted him. He was dined in the public square, on a silver service which was afterwards presented to him in the name of the King of England. A treaty was signed by which the English gave up the island, recognized Haiti as independent, and entered into a commercial agreement. Then they tried secretly to induce Toussaint to declare himself King, but he refused.

Paris between March 1793 and July 1794 passed through one of the supreme epochs of political history. In this few months of their nearest approach to power the masses did not forget the blacks. They felt towards them as brothers, and the old slave-owners whom they knew to be supporters of the counter-revolution, they hated as if Frenchmen themselves had suffered under the whip. There were many so moved by the sufferings of the slaves that they had long ceased to drink coffee, thinking of it as drenched with blood and sweat of men turned into brutes.

This was the France to which, in January 1794, three deputies sent by San Domingo to the Convention arrived. Bellay, a Negro slave, who had purchased his freedom, Mills, a Mulatto, and Dufay a white man. On February 3rd they attended their first session. What happened there was quite unpremeditated.

The Chairman of the Committee on Decress addressed the Convention, "Citizens, your Committee on Decress has verified the credentials of the deputies from San Domingo. It finds them in order, and I move that they be admitted to their places in Convention" Camboulas rose. "Since 1789 the aristocracy of birth and the aristocracy of religion have been destroyed; but the aristocracy of the skin still remain. That too is now at its last gap, and equality has been consecreted. A black man, a yellow man, are about to join this Convention in the name of the free citizens of San Domingo." The three

deputies of San Domingo entered the hall. The black face of Bellay and the yellow face of Mills excited long and repeated bursts of applause.

Lacroix of (Eure–et–Loire) followed. "The Assembly has been anxious to have within it some of those men of colour who have suffered oppression for so many years. Today it has two of them. I demand that their introduction be marked by the President's fraternal embrace."

Next day, Bellay, the Negro, delivered a long and fiery oration, pledging the blacks to the cause of the revolution and asking the Convention to declare slavery abolished. It was fitting that a Negro and ex–slave should make the speech which introduced one of the most important legislative acts ever passed by any political assembly. No one spoke after Bellay. Instead Levasseur (of Sarthe) moved: "When drawing up the constitution of the French people we paid no attention to the unhappy Negroes. Posterity will bear us a great reproach for that. Let us repair the wrong – let us proclaim the liberty of the Negroes. Mr. President, do not suffer the Convention to dishonor itself by a discussion." The Assembly rose in acclamation. The two deputies of color appeared on the tribune and embraced while the applause rolled round the hall from members and visitors. Lacroix led the Mulatto and the Negro to the President who gave them the presidential kiss, when the applause started again.

Cambon, a deputy, drew the attention of the House to an incident which had taken place among the spectators.

"A citizeness of colour who regularly attends the sittings of the Convention has just felt so keen a joy at seeing us give liberty to all her brethren that she has fainted (applause). I demand that this fact be mentioned in the minutes, and that this citizeness be admitted to the sitting and received at least this much recognition of her civic virtues." The motion was carried and the woman worked to the front bench of the amphitheatre and sat to the left of the President, drying her tears amidst another burst of cheering.

Lacroix, who had broken the day before, then proposed the draft of the decree. "I demand that the Minister

Marine be instructed to despatch at once advices to the Colonies to give them the happy news of their freedom, and I propose the following decree: The national Convetion declares slavery abolished in all the colonies. In consequence it declares that all men, without distinction of colour, domiciled in the colonies, are French citizens, and enjoy all the rights assured under the Constitution."

During this time, the leaders of French industry continued their protests outside the national Convention.

"There is no longer any ship-building in our ports, still less any construction of boats. The manufactories are deserted and the shops even are closed. Thus, thanks to your sublime decrees, every day is a holiday for the workers. We can count more than three hundred thousand in our different towns who have no other occupation than, arms folded, to talk about the news of the day, of the Rights of Man, and of the Constitution."

On June 5th, the day after the Celebrations of the King's birthday and the capture of Port-au-Prince, the English commanders at St. Kitts heard that seven French ships had escaped the British fleet and landed at Guadeloupe. In command was Victor Hugues, a Mullato, "One of the great personalities of the French revolution to who nothing was impossible," taken from his post as public prosecutor in Rochefort and sent to the West Indies. Hugues brought only 1,500 men, but he brought also the Convention's message to the blacks. There was no black army in the Windward islands as in San Domingo. He had to make one out of raw slaves. But he gave them the revolutionary message and dressed them in the colors of the Republic. The black army fell on the victorious British, began to drive them out of the French colonies, then carried the war into the British islands.

Toussaint got the news of the decree sometime in May. The fate of the French in San Domingo was hanging by a thread, but now that the decree of Sonthonax was ratified in France, Toussaint did not hesitate a moment but at once tlod Laveaux that he was willing to join him. Laveaux, overjoyed, accepted the offer and agreed to make him a Brigadier-General, and Toussaint responded with a vigor and audacity that left all San Domingo gasping. He sent to the destitute Laveaux some good ammunition from the Spanish stores. Then he persuaded those of his followers who were with him to change

over, and all agreed-French soldiers, ex-slaves of the rank-and-file and all his officers, blacks and white royalists who had deserted the Republic to join him. "His demeanour at Mass was so devout that D'Hermona watching him communicate one day commented that God if he came to earth could not visit a purer spirit than Toussaint L'Ouverture."

The Directory which ruled from 1794 to 1799 turned to Napoleon who hated blacks. Neverthless, he married the granddaughter of a Negro, Josephine, who was a leader of currect French society. On the other hand, he dismissed General Dumas from his army solely because of his color. Napoleon was rising to prominence. He conducted a brilliant campaign in Italy and then from the foot of the pyramids looked toward India, but the British blocked him until unemployment in England brought the Peace of Amiens.

The French planters appealed to Napolean. He took their side, saying: "the liberty of blacks is an insult to Europe." But Toussaint was powerful. Napoleon had to flatter and cajole him. After consultation with French bankers, Napoleon planned an American empire based on African slavery. He lured Toussaint to France and killed him. He gathered a vast army under his brother-in-law, Le Clero, who sailed for San Domigo in 1801. He took 5 squadrons with 80 vessels and 21,000 troops. The Africans and the fever conquered this army and left Dessalines and Christophe, successors of Toussaint, masters of Haiti.

Napoleon was unable to start colonial imperialism in America. That was accomplished in later years when American democracy restored African slavery in the cotton kingdom.

But the world hailed Toussaint, he was one of the great men of his time. He made an extraordinary impression upon those who knew him personally or studied his life, whether they were friends or enemies. August Comte included him with Washington, Plato, Buddha and Charlemagne as worthy to replace all the calendar saints. Morvins, biographer of Napoleon, calls him "a man of genius." Beauchamp refers to him as "one of the most extraordinary men of a period when so many extraordinary men appeared on the scene." Lamartine wrote a drama with Toussaint as his hero. Harriet Martineau wrote a

novel on his life. Whittier wrote about him. Sir Spencer St. John, consular agent in Haiti, called him "the one grand figure of a cruel war." Rainsford, a British officer, refers to him as "that only great man." Chateaubriand charges that Bonaparte not only murdered, but imitated him.

A Fresh planter said, "God in his terrestrial globe did not commune with a purer spirit." Wendell Phillips said, "You think me a fanatic, for you read history, not with your eyes, but with your prejudices. But fifty years hence, when Truth gets a hearing, the Muse of History will put Phocion for the Greek, Brutus for the Roman, Hampden for the English, LaFayette for France; choose Washington as the bright, consummate flower of our earliest civillization; and then, dipping her pen in the sunlight, will write in the clear blue,, above them all, the name of the soldier, the statesman, the martyr, Toussaint L'Ouverture." Wordsworth sang:

> "There's not a breathing of the common wind
> That will forget thee: thou hast great allies;
> Thy friends are exultatoins, agonies,
> And love, and Man's unconquerable mind."

In 1802 and 1803 nearly forty thousand French soldiers died of war and fever. Le Clerc himself died in November, 1803. Rochabeau succeeded to his command and was promised soldiers by Napoleon; but already in May, 1803, Great Britain started new war with France and communication between France and San Domingo was impossible. The black insurgents held the land; the British held the sea. In November, 1803, Rochambeau surrendered and white authority died in San Domingo forever.

The effect of all this was far-reaching. Napoleon gave up his dream of American empire and sold Louisiana for a song. As Ce Wit Talmadge said: "Thus, all of Montana and Dakotas, and most of Colorado and Minnesota, and all of Washintion and Oregon states, came to us as the indirect work of a despised Negro. Praise, if you will, the work of a Robert Livingstone or a Jefferson, but today let us not forget our debt to Toussaint L'Ouverture, who was indirectly the means of America's expansion by the Louisiana Purchase of 1803."

Page, Thomas Nelson. The Negro: The Southerner's Problem. N.Y.: Charles Scribner's Sons, 1905.

Review: "The Southerner's Problem" The Dial, Vol. 38, pp 315-318, May 1, 1905.

Rough draft; fragment

[came to title]

Mr. Thomas Nelson Page has ~~recently~~ collected in a book of 300 & more pages, certain articles contributed to McClure's magazine in answer & the unanswerable arguments of Carl Schurz, ~~& has~~ ~~in order to make~~ along with several ~~certain~~ earlier essays ~~writings~~ of his on the race problem. The result is a book with considerable ~~repetition~~ repetition and a notable lack of unity the central interest of which is psychological rather than scientific: that is at present too busy for the ~~South~~ South of a gentleman of chivalrous who while not a friend of the Negro race is certainly not to be counted an enemy.

A careful dissection of the book reveals some interesting evidences of growth & feeling. The first essay chronologically is Chapter VII written some fifteen years ago & published first in another volume. This essay is brought down & date by Chapter II with some repetition. Similarly Chapters VI & I elaborate Mr Page's only real contribution to the race problem in the years of his writing & observation — viz. the training & conduct of the house servant or the best Virginia plantations

49-5-44

Two chapters are given to special pleas on the subject of lynching & disfranchisement & a touchingly constructed & marvelously charitable ~~plea~~ plea in behalf of the present condition of the Negro. The book and such a solution of the Negro problem worthy for its ~~its~~ on its side for breadth & good temper on the one hand & the ~~the~~ the ~~the~~ ~~the~~ ~~the~~

but this is seriously marred by careless
~~and the most serious lapses are common~~
statements of fact and, this large reliance on the fundamentally by
& this affliction of the misstatements assertions of this book
authority William Hannibal Thomas. For instance
& assert that "murder might easily have been done"
in the Boston "riot" ~~against Mr. Washington~~ of some
years since is an unfortunate exaggeration; the story of
Sam Hose is not at all in accordance with the published
facts, since many honest men do not believe he was
guilty of any crime but murder. Even tho ~~it would be~~
~~redundant to characterize Thomas & refer to him as~~
~~a distinguished Negro, as his book is "perhaps the~~
~~most remarkable study of the Negro which has ap-~~
peared the character of Thomas & the reliability of his book
have been too often exposed & have them made the
basis of reiterated slander upon the American Negro.

found with 1909 material

There is something pathetic about Mr. Murphy's book. Here is a Southerner making a brave fight against Death; against physical death, for he has long been a sick man; against spiritual death, for he wants to be both a Southerner and a Christian. His book says, with careful, almost painful elaboration, and in slow and cautious movement: Let the Negro develope, break the chains, throw down the barriers, because after all he is but little more than a half-man and cannot possibly develop far enough to threaten your God-given supremacy. This is the main thesis of the Basis of Ascendency, through eleven chapters and 248 pages. One rises from the book with the same feeling that one rose from its predecessor, The Present South./ Jane Addams once voiced that feeling: she said the book was "too good not to be just a little better."

Odum, Howard W. Social and Mental Traits of the Negro. N.Y.: Columbia University Press, 1910.

Review: "A Study of the Race Problem"

Unpublished?

A STUDY OF THE RACE PROBLEM

BY

W. E. Burghardt DuBois, Ph.D.

There has been in recent years some tendency among the post-bellum generation of white Southern students to study the Negro problem scientifically. In history we have studies of slavery like Ballagh's, in Reconstruction such excellent monographs as Garner's, and lately we are having distinct race studies like Tillinghast's, and Mr. Odum's "Social and Mental Traits of the Negro."

Mr. Odum's book of 302 pages is published by Columbia University and consists of an introduction and eight chapters.

38-2-88

Mr. Odum, after prefacing his work by saying that "the Negro is too often judged only partially" (p.13), states that his conclusions are based on a study of fifty towns mostly in the lower South and of some twenty other towns studied partially. He warns his readers that "this work should not be taken as a general study and as necessarily embodying final conclusions." (p.20)

Here is certainly a promising state of mind. When, however, one looks for the fulfillment of the promise one is disappointed. The scope indicated ought to make a social study of 100,000 Negroes - the largest single study of which I have ever heard. The wealth of statistical material from such a study would be large and illuminating; yet I have searched this book in vain for a single page of

statistical matter relating to the fifty or the seventy towns. There are a few general statements as to educational conditions in the second chapter but nearly all the figures given are from the United States Census. The chapter on Crime presents the only statistical matter but this is not from the fifty towns studied but is a series of reports of arrests from less than a dozen large and small cities, reports apparently such as any one could collect by mail. Outside of data which cover less than twenty pages of the three hundred, there is no way of ascertaining the basis of fact from which Mr. Odum's conclusions are derived. The fifty towns are not named, there is no statement of the schedules used, there are no tables from the schedules, no intimation of the scope of the investigation or the things counted. Further than this there is inexcusable exaggeration, e.g.:

"Negroes are rarely open to reason" (p.50) Negro children "are different in every particular from white children" (pp.44-45) "So, too, among the Negroes there is no social ostracism for those who are habitually guilty of gross wrongs." (p.89), and the remarkable statement that the "majority of Negroes" are "at some stage in their lives" vagrants (pp 217-18)

Statements like these are of course such as no student could prove by a local study and if he thinks he finds proof looking toward it the proof must be carefully stated.

In addition to this there are curious contradictions. For instance:

"The average of intelligence among Negro teachers in town and country is low and their education is meagre . . .

"The colored teachers employed in the schools of the towns studied are of a much higher order than those just mentioned.

38-2-89

"The Negro teacher has little reasoning power or depth of originality. There is little of the principle of honor among them - they do not comprehend it."

"The average of intelligence is higher; they are better educated and more earnest in their work. They have a broader conception of of the needs of the children whom they are to teach. They have an honest purpose to serve well their people."

Which is the truth: the conclusions from "town and country" or from the "towns studied"?

Again,

"The better Negro teacher is the most honest and sincere leader to be found in all the race." (p.34)

"The young educated Negroes are not a force for good in the community but for evil." (p.41)

In the matter of Negro crime he says:

"There can be no doubt that crime and vice among the Negroes in Southern communities have assumed alarming proportions. That they are not decreasing can scarcely be doubted by those who know the situation best. On the other hand, it is generally believed that the extent of criminal offences among the Negroes is growing and that the nature of the most common crimes and the prevalence of vice is growing more serious." (p. 182-83)

"A careful study of the foregoing tables will show that it is difficulty to fix the exact criminal status of the Negro; the same difficulty is found in the further study of criminal records and in private research. Contradictions and exceptions are numerous, so that it is doubtful if the exact relations can be determined at the present stage of our knowledge." (p.206)

38-2-90

Not only is the author extreme in his statements and contradictory, but his lack of knowledge of well-known facts is extraordinary. He asserts, without any figures or statistics whatsoever of his own, and in flat contradiction to the United States Census and other well-known sources, that the worse diseases among Negroes are increasing in frequency (p.167), that property holding is not increasing (p.224), and that "it is doubtful if a single locality can be found in the South in which Negro labor is not growing more unsatisfactory" (p.279).

There is evidence too of peculiar mental methods: Negro education is condemned as largely a failure because of racial peculiarity and not because, as he himself showed, only 30% of the colored children were attending school and these mostly for a few months in the year.

38-2491

Most astounding of all are the omissions: for instance, so far as I can see there is not a word in the book of the immoral sexual offenses of white men with colored women. The moral situation of the Negroes is explained as a race trait, and yet Mr. Odum knows that the small towns of the South like those he studied are rotten with illicit sexual intercourse between the races. On top of all this failure to grasp facts or array them, the book is full of platitudes like this: "If the Negro would work regularly and spend his money judiciously, he would have a reasonable amount of prosperity" (p.221-22). "The Negroes love notoriety and distinction." "Social prejudices and caste ideas are entertained by the Negroes of the higher class" (p.269)

As a scientific study, then, we must dismiss this book as untrustworthy, and must wonder just why the Faculty of Political Science of Columbia should have published it. As a study in the

psychology of the race problem, the book has interest and value. It is largely the expression of the philosophy of the younger South. Three-fourths of the book is generalization born not of the study of "fifty towns" but arising from a long acquaintance with Southern life and thoughts. As such it has value; it reveals the instinct for investigation, the desire to be open-minded and the endeavor to be fair. As opinion, then, it is worth reading, but as science it is not.

A STUDY OF THE RACE PROBLEM

BY

W. E. Burghardt DuBois, Ph.D.

There has been in recent years some tendency among the post-bellum generation of white Southern students to study the Negro problem scientifically. In history we have studies of slavery like Ballagh's, in Reconstruction such excellent monographs as Garner's, and lately we are having distinct race studies like Tellinghast's, and Mr. Odum's "Social and Mental Traits of the Negro."

48-2-98

The tendency here manifest is good and no matter what our judgment of the work of particular individuals may be, it is reassuring when from the heat of prejudice and academic discussion an appeal is made to fact and science.

Mr. Odum's book of 302 pages is published by Columbia University and consists of an introduction and eight chapters. There are single chapters on education, religion and benevolent societies, the home life, crime and occupations, together with two chapters of conclusions.

Mr. Odum, after prefacing his work by saying that "the Negro is too often judged only partially" (p.13), states that his conclusions are based on a study of fifty towns mostly in the lower South, and he instances the difficulty of study because of the "suspicion and ridicule" of the whites and because "the blacks are very untrustworthy and suspicious". On account of its limitations, therefore,

he warns his readers that "this work should not be taken as a general study and as necessarily embodying final conclusions." (p.20)

Here is certainly a promising state of mind. When, however, one looks for the fulfillment of the promised one is disappointed. A study of fifty towns, "the average being about four thousand" inhabitants means 200,000 persons of whom at least a third may be presumed to be Negroes, to these we are to add "some twenty other towns" partially studied. This ought to make a social study of 100,000 Negroes - the largest single study of which I have ever heard. The wealth of statistical material from such a study would be large and illuminating; yet I have searched this book in vain for a single page of statistical matter relating to the fifty or the seventy towns. There are a few general statements as to educational conditions in the second chapter but nearly all the figures given are from the United States Census. The chapter on Crime presents the only statistical matter but this is not fromthe fifty towns studied but is a series of reports of arrests from less than a dozen large and small cities, reports apparently such as any one could collect by mail. Outside of data which cover less than 20 pages of the three hundred there is no way of ascertaining the basis of fact from which Mr. Odum's conclusions derived. The fifty towns are not named, there is no statement of the schedules used, there are no tables from the schedules, no intimation of the scope of the investigation or the things counted.

It is, however, possible for a student to make a careful social study and publish simply the general conclusions. This, however, as Mr. Odum himself says, is not advisable in this particular problem since we have a subject of opinions and a dearth of accurate knowledge.

In case, however, a student choses to keep to himself the statistical basis of a limited social study there must at any rate be certain characteristics of such a study:

1. The conclusions will be carefully stated and tentative.

2. They will be consistent with each other. No accurate student, for instance, after studying fifty communities out of a population of ten million could possibly make any of the folldwing statements made by Mr. Odum:

"Negroes are rarely open to reason" (p.50) Negro children are different in every particular from the white children" (pp.44-55). "The Negro shirks details and difficult tasks; he is incapable of turning his mind toward any other subject when once morbid curiosity holds his attention. He does not know the value of his word or the meaning of words in general. He utters phrases suited to his own fancy without regard to their meaning and forms conclusions in his mind which give him pleasure. He recognizes no causal relation between stability and prosperity, whether it be in reference to his local abode or his work. The Negro is improvident and extravagant." (p.39) "So, too, among the Negroes there is no social estracism for those who are habitually guilty of gross wrongs." (p.89). "The Negroes in their social life are, for the most part, careless in action and boisterous in their conversation. They are coarse and sensual in their association. The average young Negro does not know what it is to think seriously about better things and the average group never discusses for any length of time at their chance meetings anything of serious import." (pp. 233-34); and the remarkable statement that the "majority of Negroes" are "at some stage in their lives" vagrants. (pp 217-18)

48-2-100

Statements like these are of course such as no student could prove by a local study and if he thinks he finds proof looking toward it the proof must be carefully stated.

As a matter of fact, Mr. Odum does not believe these statements in the extreme form in which he continually puts them; This leads to remarkable contradiction of statements, for instance: "The average of intelligence among Negro teachers in town and country is low and their education is meagre . . . . . The Negro teacher has little reasoning power or depth of originality. There is little of the principle of honor among them - they do not comprehend it." "The colored teachers employed in the schools of the towns studied are of a much higher order than those just mentioned. The average of intelligence is higher; they are better educated and more earnest in their work. They have a broader conception of the needs of the children whom they are to teach. They have an honest purpose to serve well their people." Which is the truth: the conclusions from "town and country" or from the "towns studied?"

Again, "The better Negro teacher is the most honest and sincere leader to be found in all the race" ((p.34) "The young educated Negroes are not a force for good in the community but for evil." (p.41)

In the matter of Negro Crime he says: "There can be no doubt that crime and vice among the Negroes in Southern communities have assumed alarming proportions. That they are not decreasing can scarcely be doubted by those who know the situation best. On the other ha nd, it is generally believed that the extent of criminal offences among the Negroes is growing and that the nature of the most common crimes and the prevalence of vice is growing more serious." (p.182-83) "A careful study of the foregoing tables will show that it is diffi-

cult to fix the exact criminal status of the Negro; the same difficulty is found inthe further study of criminal records and in private research. Contradictions and exceptions are numerous, so that is doubtful if the exact relations can be determined at the present stage of our knowledge." (p.206)

Not only is the author extreme in his statements and contradictory, but his lack of knowledge of well-known facts is extraordinary. He asserts, without any figures or statistics whatsoever, that the worse diseases among Negroes are increasing in frequency (p.167) that property holding is not increasing (p.224) and that "it is doubtful if a single locality can be found in the South in which Negro labor is not growing more unsatisfactory." (p.279).

48-2-102

As a matter of fact, the Negro death rate from consumption decreased from 546 per hundred thousand to 491 between 1890 and 1900, according to the United States Census. While the Negro property holding shows the following rates of increase:

Homes and farms owned between 1890 and 1900, 40.9 per cent.
Property owned in North Carolina between 1900 and 1908, 124.2 %
Property owned in Virginia between 1900 and 1908, 61.6 per cent
Property owned in Georgia between 1900 and 1908, 91.5 per cent.
Negro Church property owned, between 1890 and 1906, 112.7 per cent.

There is evidence too of peculiar mental methods: Negro education is condemned as largely a failure because of racial peculiarity and not because as he himself showed only 30% of the colored children were attending school and these mostly for a few months in the year.

Most astounding of all are the omissions: for instance, so far as I can see there is not a word in the book of the immoral sexual offenses of white men with colored women. The moral situation of the Negroes is explained as a race trait, and yet Mr. Odum knows that the small towns of the South like those he studied are rotten with

illicit sexual intercourse between the races. On top of all this failure to grasp facts or array them, the book is full of platitudes like this: "If the Negro would work regularly and spend his money judiciously, he would have a reasonable amount of prosperity." (p.221-22) "The Negroes love notoriety and distinction." "Social prejudices and caste ideas are entertained by the Negroes of the higher class." (p.269)

As a scientific study, then, we must dismiss this book as untrustworthy, and must wonder just why the Faculty of Political Science of Columbia University should have published it. As a study in the psychology of the race problem, the book has interest and value. It is largely the expression of the philosophy of the younger South. Three-fourths of the book is generalization born not of the study of "fifty towns" but arising from a long acquaintance with Southern life and thoughts. As such it has value; it reveals the instinct for investigation, the desire to be open-minded and the endeavor to be fair. As opinion then, it is worth reading, but as science it is not.

Mecklin, John M. Democracy and Race Friction. N.Y.: Macmillan Co., 1914.

Review: "Another Study in Black"

The New Review, Vol. 2, No. 7, July 1914, pp. 410-414.

Race Prejudice 1914

Professor John M. Mecklin of the University of Pittsburgh has written a book of 273 pages on "Democracy and Race Friction."

So far as the race problem is concerned the book is symtomatic with the average of our national thought. As a social study it belongs to the "sociological " school with elaborate insistance on psychology and groups and a vast overworking of the word social.

38-2-193

The book is divided into nine chapters. The first chapter says that the people must be alike if they are to liwe together in peace and it hastens to add that if two groups live together there is going to be "group" antagonism.

The social conscience cannot tolerate two standards of values different in quality and yet equal in authority. The race discriminations which one meets at every turn in the South thus become in their last analysis a form of self-preservation adopted by the group mind of the white. They often appear to the outsider cruelly unjust, and in individual cases perhaps they are; but the group mind, which thinks in comprehensive and convenient terms, has identified with the white skin the exceedingly fundamental problem of the preservation of the unquestioned supremacy of social ideals which are instinctively felt to be necessary to the integrity and persistance of the civilization of the white.

The second and third chapters proceed to prove that the ten million American Negroes are a "race" and as such inferior to the white race. The proof is brain measurements, quotations from African travellers and a good deal of insistance on the lack of variability in the form of the head of the Negro. Haiti and the prevalence of come in for the usual emphasis.

Summing up the results of the analysis of the race traits of the Negro, we assert that facts tend to show not so much racial inferiority as fundamental racial indifferences..... After every allowance has been made for the effect of the social heritage and for the generally acknow-

ledged similiarity of all mankind, so far as general mental characteristics are concerned, there is still left in the case of the Negro, as in the case of other races, a residue of racial traits that must be looked upon as peculiar to him.

These differences are found only at the lower level of instinct, impulse.

38-2-169

Handicapped by such absolute race differences the fourth chapter says that the social heritage of the Negro has been quite shocking. This wretched social heritage comes from their African life and their life since slavery it seems. During slavery the blacks were according to a long quotation on page 155, chiefly entertained with pictures of beautiful colored plates of Audubon birds.

Chapter five goes on quite naturally to say that a people with such natural traits and heritage are the subject of race prejudice. This, however, is not bad although the reaction of the Negro toward it may be dangerous.

The militant race philosophy preached by a certain group of Negro writers and thinkers is not one that the sincere friend of the Negro would like to see him adopt.

However, all is not dark. Mr. Washington's philosophy of submission is at hand and therefore in line on salvation.

So far the book has followed the logical and old-fashioned development of the anti-Negro arguments. The author has been at pains to avoid extreme views and has modified his own with certain semblance of fairness He desires, however, to come out at a different point than the older race philosophers.

Chapter six, therefore, on "The Philosphhy of the Color Line" represents a certain squirming away from the inevitable of the earlier chapters. This leads him to the following point.

The philosophy of the color line should enable us to understand why the full and complete social integration of the Negro is impossible. Such social integration as does exist must be based upon mutual concessions and compromises. The conditions of the greatest harmony will be, as already suggested, where the weaker group accepts unconditionally the will of the stronger group. Conditions of friction will inevitably occur where the weaker group refuses to accept these conditions. "The most fruitful conditions of race friction may be expected where there is a constant insistence upon a theoretical equality of the weaker group which the stronger denies." Starting with racial antipathy as a fixed and irreducible element in the problem, it is undoubtedly true that the farther we get from slavery and the nearer an approximation of the theoretical claims of democracy, the more difficult social integration appears.

Having reached this empasse he proceeds in the next chapter with "Creating a Conscience." This conscience, however, it seems is to be created by the Negro race.

The facts cited in the chapter on the "color line" indicate that the social salvation of the Negro for an indefinite period in the future must be worked out within his own group. And, therefore, we have a chapter which revels in the various short-comings of colored men; their lack of unity, and a certain Lincoln Emancipation Celebration, their pride and particularly their sense of immorality . This, the author returns to again in this chapter with a peculiar smacking of lips. He has before recited the statistics of Washington hospitals, he repeats the assertions of southern white physicians, he laughs at Negro preaches and criticizes "immaturity and uncertainty of group ideals" among the Negro intellectuals. In fact, it is quite evident after this orgie that nothing can save the Negro but the Negro himself. However, the author glances at the supreme court and is much pleased with its decision.

28-2-200

The supreme court's interpretation of the fourteenth and fifteenth amendments has demonstrated another fact also, namely, the bankruptcy of the old theory of natural rights. The sublime assurance with which Summer, Garfield, Edmunds, and others assumed the essential equality of all men by virtue of certain natural rights, a "God-given franchise," which they did not take the trouble to define further, has disappeared. The most vigorous repudiation of the doctrine often comes from the sons of those who championed it. Their vision of an ideal social and political order based upon these "vague, irresponsible oracles of Nature" has now little more significance than an iridescent dream.

This, then, brings him to his last chapter and his great solution, "Equality Before the Law." He names three possible solutions.

Summing up our conclusions we remark first that the semblance of democracy may be preserved, as has been suggested, by maintaining the Negro in enjoyment of an artificial state of equality until, through a slow process of social selection and a gradual approximation to the type of the dominant group he is ready for complete assimilation. Such a solution is impossible. It presupposes for an indefinite length of time a mere modus vivendi injurious to both groups....

On the other hand it is conceivable that the principles of American democracy may perforce undergo modification to the extent of permitting a status based upon race traits and the resulting caste distinctions. In support of this view our attention is directed to the imperative need of a stable social order and the actual facts of race adjustment as they have taken place in the South since the civil war. Such a situation, however, apart from its violation of the spirit of democracy, serves only to perpetuate and to stereotype rather than to solve the problem. It would perpetuate it as slavery did or as peonage would do....

A third alternative is to accept the situation as it is, with all the complications arising from segregation and race antipathy, and to insist

upon a stern, evenhanded justice based upon equality of consideration. This implies, of course, that each individual as well as each racial group be free to find a natural level in society.

In other words, Mr. Mecklin, after having put the individual Negro out of the court and used nearly 300 pages to say that the whole problem is a problem of groups comes in his last chapter to a perfectly rational conclusion that this is not a problem of groups at all but a matter of each individual finding his natural level. But having once come to this conclusion how can we accept the situation as it is because the essense of the situation as it is means that the Negro should be treated not according to his deserts but according to that ever indefinite thing, the present status of his race. That the race to which he belongs should be assumed to be wholly of African blood and heritage, when as a matter of fact from twenty-five to forty percent of it is of Anglo-Saxon descent, and that finally, he is as a matter of fact judged not according to the real status of his race but according to what public opinion for the time being assumes to be the status of his race.

After all, this leads us to the inevitable conclusion that Mr. Mecklin's book is not worth while. It says nothing new, it is based on no first hand or intimate knowledge and the only thing worth while about it is its illogical conclusion.

(For Mr. Walling)

Phillips, Ulrich Bonnell. American Negro Slavery: A Survey... . N.Y.: D. Appleton + Co., 1918

Review: American Political Science Review, Vol. 12, November 1918, pp. 722-726.

AMERICAN NEGRO SLAVERY.

A Survey of the Supply, Employment and Control of Negro Labor as Determined by the Plantation Regime. By Ulrich Bonnell Phillips, Ph. D., Professor of American History in the University of Michigan. D. Appleton & Co., 1918, 8 vol. lX 529 pp.

Mr. Phillips' work is not a history of American slavery but an economic study of American slave holders and their land and crops. As such it gives evidence of wide reading and knowledge of the facts. Two hundred of its five hundred pages are mainly historical, treating of Africa and the slave trade and West Indian and American conditions. Two hundred other pages contain a series of essays on aspects of slavery - the cotton crop, plantation economy, etc. The other chapters are devoted to freedom and crime among slaves and slave codes.

34-1-100

Mr. Phillips was born and lived in earlier life on a Southern plantation (p. 313, note) and bases some of his information on this experience. To this he had added a knowledge of the standard authorities like Helps, Hakluyt, Nieboer, Kingsley and Ellis, and the less well-known Saco and Scelle. He has made wide use of southern newspapers and pamphlets and some manuscript materials, but has done little with any Negro sources most of which he regards as "of dubious value," (p. 445, note).

The result is a readable book but one curiously incomplete and unfortunately biassed. The Negro as a responsible human being has no place in the book. To be sure individual Negroes are treated here and there but mainly as exceptional or as illustrative facts for purposes outside themselves. Nowhere is there any adequate conception of "darkies," "niggers" and "negroes" (words liberally used throughout

the book) as making a living mass of humanity with all the usual human reactions.

This intrigues the reader, for a history of slavery would ordinarily deal largely with slaves and their point of view, while this book deals chiefly with the economics of slaveholders and is without exception from their point of view. Its thesis is that slavery was an ordinary human labor problem not unlike that of modern factory labor. It had little to do with humanity and even its sufferings were not different from the ordinary hardships of laboring people, (pp. 52, 181, 182).

34-1-101

This thesis, however, encounters the difficulty that most writers, even of the ultra-economic sort, have regarded slavery as a peculiar sort of labor problem because of its degradation of the laborer and the reflex action of this on the master class. Mr. Phillips sees this difficulty and notes the horrors of the Roman latifundia and Cato's code (p. 341) but he surmounts the difficulty by two premises, no where clearly stated, but always implicit in his narrative. The unstated major premise is that Negroes were not ordinary slaves nor indeed ordinary human beings, "The heartlessness of the Roman LATIFUNDIARII was the product partly of their absenteeism.....and partly of the lack of difference between masters and slaves in racial traits. In the ante-bellum South all these conditions were reversed."

Mr. Phillips recurs again and again to this inborn character of Negroes : they are "very fond of display," (pp. 1, 291) with a "proneness to superstition" and "acceptance of subordination," (p. 291); "chaffing, and chattering" (p. 292) with "humble nonchalance and a freedom from carking care," (p. 416). From the fourteenth to the twentieth century Mr. Phillips sees no difference in these predominant characteristics of the mass of Negroes and while he is finishing his book in a Y. M. C. A. Army hut in the South all he sees in the Negro soldier is

the "same easy-going amiable serio-comic obedience," and all he hears is the throwing of dice, (pp. Vlll, lX). This Negro nature is, to Mr. Phillips, fixed and unchangeable. A generation of freedom has brought little change (p. lX). Even the few exceptional Negroes whom he mentions are of interest mainly because of their unexpected "ambition" and not for any especial accomplishment, (p. 432). The fighting black maroons were overcome by "fright" (p. 466) and the Negroes' part in the public movements like the Revolution was "barely appreciable" (p. 116); indeed his whole picture is of "inert Negroes, the majority of whom are as yet perhaps less efficient in freedom than their forbears were as slaves!" (p. 396)

34-1-102

Having now rather by innuendo and assumption than dogmatic statement established these sub-human slaves, Mr. Phillips, by a similar method, evokes the slaveholding super-man.

Slavery, we are told, (p. 401) was "less a business than a life; it made fewer fortunes than it made men." Life among Negro slaves "promoted, and wellnigh necessitated the blending of foresight and firmness with kindliness and patience," (p. 344). In fact the whole slave system was "analogous in kind and in consequence to the domestication of the beasts of the field" (p. 344). With such masters, Mr. Phillips finds the treatment of slaves on the whole excellent. He notes the "interest of the master in the future of his workers," (p. 357). The surviving vestiges of slave quarters proove how comfortably they were housed (p. 298). Planters had to "guard their slaves' health and lives as among the most vital of their own interests" (p. 301) and the tradition of the mistreatment of slaves in the Southern South were simply spread by border state masters "in the amiable purpose of keeping their own slaves content" (p. 305).

"There was clearly no general prevalence of severity in the

régime," (p. 307). "The generality of the Negroes insisted upon possessing and being possessed in a cordial but respectful intimacy" (p. 307). White and black children were playmates; returning masters had their hands and feet kissed and the result of the whole system was no fatigue or over work, as the "sturdy sleekness as well as the joviality" of most of the slaves proved (p. 384). Slaves were rarely sold by a master, (p. 397) and if hired out their masters were most solicitous for their "moral and physical welfare" (p. 410). Among town slaves there was "much comfort and even luxuty" (p. 424).

34-1-103

The author quotes some cases where this idyllic picture seems a bit beside the truth but he immediately martials overwhelming witnesses to the contrary. As for instance, on page 251, he gives two inches to Fannie Kemble's picture of a wretched plantation and follows it with three pages of contradicting testimony. The various severe indictments of certain aspects of slavery Mr. Phillips touches lightly but surely. The breaking up of families by sale is dismissed by the statement that slave owners "deplore" it, (p. 202). Breeding for the domestic slave trade is dismissed as "extremely doubtful" (p. 362). Concubinage and illicit intercourse between master and servant receives but passing mention. Fugitive slaves are camouflaged as truants. As for over work, "anyone who has had experience with Negro labor may reasonably be sceptical when told that healthy, well-fed Negroes, whether slave or free, can by any routine insistence of the employer be driven beyond the point at which fatigue begins to be injurious" (p. 384).

After having painted this picture of the slave régime Mr. Phillips is too logical a thinker not to see that he has over-shot his mark for the ugly fact remains that this institution of born slaves, kindly masters, and favorable conditions in crops and land failed to succeed. Why was this? It was not, Mr. Phillips assures us, because of any especial moral delinquency of the South and he uses the "Tu quoque" ar-

gument against New England abolitionists and English philanthropists with inspiring if not convincing keenness, even to the extent of making Oglethrope "The manager" of the Royal African Company. He finds Cairnes' stinging indictment of the slave Barons full of "grotesqueries" (p. 356). He attacks Loria's socialistic explanation of the over valuation of slaves as a "fallacy" and finally he, himself, explains the economic failure of slavery as chiefly due to the fact that "the routine efficiency of slave labor itself, caused the South to spoil the market for its distinctive crops by producing greater quantities than the world would buy at remunerative prices. To this the solicitude of the masters for the health of their slaves contributed!" (p. 398)

34-1-104

Mr. Phillips elaborates this thesis and also offers other and apparently contradicting explanations; on the whole this is by far the weakest part of the book and leaves the reader much befogged.

The last chapters come as more or less illogical addenda to the main thesis. Under "Town Slaves" the servant problem of the whites is mainly treated. Under "Free Negroes" we are told of some slaves who won deserved freedom and the others who tasting freedom returned to the plantation. Slave crime includes the stories of such criminals as Denmark, Vesey and Toussaint L'Overture, and the treatment of slave codes shows, according to Mr. Phillips, that "the government of slaves was for the ninety and nine by men, and only for the hundredth by laws. There were injustice, oppression, brutality and heartburning in the regime, - but where in the struggling world are these absent? There were also gentleness, kind-hearted friendship and mutual loyalty to a degree hard for him to believe who regards the system with a theorist's eye and a partisan squint" (p. 514).

On the whole this book with its undoubted evidence of labor and research, its wealth of illustrative material and its moderate tone is deeply disappointing. It is a defense of American slavery - a de-

fense of an institution which was at best a mistake and at worst a crime made in a day when we need sharp and implacanle judgment against collective wrong doing by cultured and courteous men. The case against slavery is too strong to be moved by this kind of special pleading. The mere fact that it left to the world today a heritage of ignorance, crime, lynching, lawlessness and economic injustice to be struggled with by this and succeeding generations is a condemnation unanswered by Mr. Phillips and unanswerable.

34-1-105

Woolf, Leonard. Empire and Commerce in Africa. London: Labour Research Department, 1920.

Review: The Survey, vol. 44, no. 9, May 29, 1920, pp. 310-311.

EMPIRE AND COMMERCE IN AFRICA. A STUDY IN ECONOMIC IMPERIALISM BY LEONARD WOOLF. LABOUR RESEARCH DEPARTMENT, LONDON. PRICE

This is a book of great value and startling candor. It will remind some of a Veblen satire but it is more concrete and human than that. It's thesis is one that from now on must more and more force itself on the minds of thinkers and reformers: human history, social development and modern industry are matters of human want and will and not simply mechanical necessity due to the "logic of events". On this thesis Mr. Woolf traces the history of economic imperialism as a set of ideas governing the relations of Europe and Africa since 1876. These ideas may be briefly summed up in the phrase of Joseph Chamberlain spoken in 1896 - "It is not too much to say that commerce is the greatest of all political interests, and that that Government deserves most the popular approval which does most to increase our trade and to settle it on a firm foundation."

38-15-122

Mr. Woolf says: "It is almost impossible to visualize the total effect which the acceptance of this axiom in the last sixty years has had upon the world. It has turned whole nations into armies, and industry and commerce into weapons of economic war. It has caused more bloodshed than ever religion or dynasties caused in an equal number of years, when gods and kings, rather than commerce, were the "greatest of political interests." It was the chief cause of the war which we have just been fighting, and which in Asia men already talk of as the first act in the passing of the civilization of Europe. It has proved infinitely stronger than the other two great currents in nineteenth century history, democracy and nationalism, for everywhere in Europe democratic have yielded to economic ideals, and nationalism, wherever it has appeared, has applied itself most violently to economic ends. Within Europe the form and method of national commerce

and industry have been moulded by it, and it has built the barriers and set the limits of all international intercourse. These are only some of its more beneficent results upon the lives of Europeans, but its effects have been almost more violent outside Europe. For it has converted the whole of Africa and Asia into mere appendages of the European State, and the history of those two continents, the lives which men live in Nigeria or Abyssinia, in India and Siam and China, are largely determined by the conviction of Europeans that 'commerce is the greatest of European political interests.'"

Mr. Woolf's book is divided into three parts: in the fifty pages of part one he states his thesis; the main part of the book, part two, consists of 250 pages of social and historical investigations of the facts which prove his thesis. This part is admittedly incomplete. Morocco is omitted and Egypt, Tripoli and German Africa treated but incidentally and nothing is said of South or West Africa or of Portuguese. To treat all this as thoroughly and incisively as the author has done Algeria Tuine, Abyssinia and East Africa would, as he says, require many volumes. Yet eventually it should be done.

The part of Africa studied as a shuddering story of crime;lying, deception, stealing, cold-blooded murder - every crime of the calendar has marked the advance of Europe into Africa. And for waht? Part three announces this:

"The use of the State's power in Africa to support the economic interests of its citizens and to acquire African territory has poisoned international relations at their source during the last forty years. We have seen in these pages something of the state of feeling which these hostilities and competitions have produced at different times between France and Britain, Italy and France, and Britain and Germany. The fact that this policy more than once brought the world tothe verge of a

European war, and was a very material cause in pushing it over the brink in 1914, is perhaps not the most important point. The important point is that so long as policy is dominated by this hostility and competition of economic imperialism, and the power of the State is controlled and directed by the profit-making desires, there can be internationally no stability or security, no real harmony or co-operation. European policy in Africa may not have been the immediate cause of the Great War, but you cannot have a policy such as Europe pursued in Africa between 1880 and 1914 without great wars."

Empire and Commerce in Africa. By Leonard Woolf. The Labour Research Department.

Agadir. Joseph Caillaux. Albin Michel.

38-15-115

Here are seven books representing five interesting points of view, but all of them about Africa. First a scientific student of languages connects Africa in new ways with the discovery of America; then two officials, English and French, write in studied praise of the work of Europe in Africa, past, present and future; an orthodox historian sets down in careful and unemotional phrase the legal relation of Europe to the heart of the dark continent. Then comes revolt. Two reformers writing, one from the political and the other from the economic point of view say plain and biting words concerning the relations of black and white in this ancient continent; and finally, as commentary upon all of this, a prime minister of France, recently tried for treason, tells of the meaning of Agaidr.

No age of the world, ancient or modern has been able to escape

Africa. We may, according to our birth place or color or lineage, bewail this or feel a secret uplift because of it, but it is, in either case, true that from the beginning of human civilization on the Nile and Euphrates, around the shores of the Mediterranean, in central and in northern Europe and in America, continually each century at one time or another centers world interest in this old and mighty continent. And so again today Africa steps forward in the thought of men.

Professor Weiner shows us the amazing interaction of Africa, America and Europe in the early days of the slave trade. The layman cannot judge of the exact weight of the mass of material adduced because the extraordinary author is master of more languages than most people have heard of, much less know. The sources quoted in the eight and one-half pages of closely written bibliography include Spanish, French, English, Portuguese, Latin, Greek, German, Arabian and other works, and indicate extraordinary research and scholarship. The conclusions of Professor Weiner are striking: "When I began my scrutiny, I was firmly convinced, as is the universal belief, that tobacco, manioc, yams, sweet potatoes and peanuts were blessings bestowed upon the world by the Indians. A cursory study excluded the yams and the manioc. Soon the peanuts followed in their wake. Next came the sweet potatoes, and at last the tobacco. It turned out that American archaeology was to a great extent built on sand. But the most painful discovery was in the line of Indian religion. Here everything turned out to be topsy-turvy.

In this first volume I I show that the Negroes have had a far greater influence upon American civilization than has heretofore been suspected."

The average layman assumes that the horrors of the slave trade

38-15-14

and slavery have passed and that today we have the pacific economic and benevolent invasion of Africa from Europe for the purpose of its ultimate civilization. This is the uncritical attitude of Mr. Maugan, British consul at Monrovia. His study of Liberia tries on the one hand to say pleasant things concerning Liberia and on the other hand to show British merchants that now and here is their chance to exploit a rich land. The unspoken assumption is that what is for the good of the British merchant is for the good of Liberia. He sees the possibilities of Liberia and rightly complains that "for some curious reason, which I must confess has hitherto completely baffled me, it has usually been customary to write of Liberia and the Liberians in a tone of gentle melancholy; to descant upon the country and the people to whom it belongs as with a pen dipped in sighs, and generally to regard them with the despondent air of the good old Scotts mission doctor, who was wont to raise the spirits of his convalescent patients by reminding them of "hoo often they went off i' the relapse, ye ken."" But from the rest of the book it is evident that his encouragement with regard to Liberia is because of his knowledge as to what Liberia may mean as a possession to British wealth. He cannot, for instance, "conceive any situation more unfortunate than that of a country where the education of the masses has been overdone"! and consequently thinks that "it would seem highly undesirable that immigration from the United States to Liberia would, for the present at any rate, assume large proportions than it has done for may years past."

Mr Georges-Gaulis goes a step further. His work is a paean of praise of the French general who has just been admitted to the French Immortals and whose latest achievement has been the "pacification" of Morocco. Of this work the author is enthusiastic and says:

General Lyantey's work will remain. The attitude which he adopted

on the front of the field of action and which he persists in even today has caused his name to be inscribed on history's pages. The reconstruction of Morocco has been effected; it has already become the model for our Allies to follow.....

"I believe in action," said the general one day to an astonished Frenchman who had just come to Morocco And so forth, for a couple of hundred pages with only this ray of light. "Pacification and not conquest" is his motto, and he repeats this constantly just as he reiterates that there are no inferior races.

Professor Keith, formerly of the British Colonial Office and now at the University of Edinburgh writes of the international character of the Belgian Congo. This is the work of the orthodox British imperialist who without imagination or any great degree of sympathy with the natives, writes a book which contains a very short sketch of the Congo, followed by three chapters on the incertion of the Congo Free State, four more on the work of the State, and two on its well known failure. The remaining nine chapters have to do with the reorganization of the Congo Free State as a Belgian colony with a study of the new laws and arrangements and an examination of the relation of the Congo Free State to the Peace settlement. With most students of the war, Mr. Keith recognizes the close connection of Africa with that great catastrophe. "Whatever be the final verdict of history on the part played by the question of colonial expansion among the causes of the European War, two features have emerged in the course of the conflict which render the problem of the future of Central Africa of vital importance to the United Kingdom and its allies...."

While Mr. Keith acknowledges that all nations have sinned in thier treatment of the African races he thinks that the crimes of Germany

are the greatest. But chiefly, apparently because of her determination to have African colonies at the expense of England and France. "The demand is made that not only shall the former territories be restored, but that they shall be increased at the expense of France, Portugal, and Belgium so that all Central Africa from sea to sea shall be in the hands of Germany, which then b y means of submarine bases on either coast will effectively menace the ocean trade of the allies."

"The demand for so large accessions of territory, though justified also on commercial grounds, rests essentially on the second factor which has emerged in the course of the war, the realization of the military potentialities in the training under modern conditions of the natives of Africa."

23-15-119

The study of the Congo Free State bring clearly forward the restless personal ambition of Leopold and the extraordinary power which he snatched from under the nose of the civilized world and wielded in Central Africa. The Congo Free State was never international but was in fact a private project of the King of Belgium, for which he secured the recognition of the civilized world. That this was possible is extraordinary, but it rose over the rivalries of France, Germany and England. England could not interfere if she kept her hold on Egypt, while both France and Germany expected to inherit whatever Belgium secured. Could it not be said that the Great War resulted from the attempt to cash the blank check which Leopold handed Bismark in return for Germany recognition of the Congo Free State? "This left Leopold absolute monarch of 900,000 square miles of territory with 20 or 30 millions of people, unrestrained by any legislation or any effective legal requirement."

Here we begin to get an insight into the depths of degredation to which modern civilization has led the world in its relation to Africa,

but it takes plain speaking like that of E. D. Morel to expose the Congo atrocities. Mr. Morel's book is in part historical and in part a setting forth of selected stories of white atrocities all over Africa. He says: "The narrow, irregular streets of a Moorish town, into which shells from warships riding on the sparkling blue waters of the western Atlantic are falling in an incessant and murderous hail, smashing the white-walled, flat-roofed houses and splashing them all over with the blood of the white-clad inhabitants who sprawl in mangled heaps at the doors of their homes--between such a scene as this and the pitted, scarred battlefields of Europe to-day with the blasted stumps which once were trees, and the piles of masonry and timber which once were towns and villages, there appears at first thought no connecting link of circumstance. Yet it was the violence done to Casablanca which furnished the first direct incentive to that era of ambitions, covetousness and conflicts in Europe', whose fruits the people of Europe have been reaping for the past five years.

"Africa has always repaid her exploiters."

Morel himself is no particular lover of Africans. He has traveled in Africa, has written seven or eight books on aspects of the African problems and particularly was one of those who exposed Belgian misrule in the Congo. During the war, however, his liberalism was interpreted as sympathy for Germany and since the Belgian expose was due to him and the unfortunate Sir Roger Casement, his sympathy for Africa has been interpreted as part of a pro-German "plot." In truth, his attitude toward the black men is that of the liberal Englishman: that is to say, he is opposed to the past atrocities and wants Africa helped in every benevolent and philanthropic way. He has, however, no conception of a self governing, independent black Africa. Indeed, he suspects and rather dislikes the educated African and certainly has no faith in

his independent future. His attitude is best summed up in this word from his introduction. His book "seeks to lay down the fundamental principles of a humane and practical policy in the government of Africa by white men.

"We stand on the threshold of a new era. The moment is propitious for the birth of an international conscience in regard to Africa. Great social changes are in process of a development among the white peoples of the earth. The seat of power is shifting from the propertied classes to the producing masses. The latter will find themselves invested before long with executive duties in many spheres of government, with whose problems they are not familiar; among them the administration of dark-skinned peoples."

Mr. Morel, however, is frank in recognizing the terrific burden of the black man, - "the man of sorrows of the human family" and says that the problem of the native races today "centres henceforth upon the black man, as the African is called, although few Africans are wholly black." He says that the real crisis in the black man's existence comes today and that industrial exploitation if carried out ruthlessly may do what slavery, the slave trade and the political domination of Africa has hitherto failed to do, namely, - exterminate the race.

"A subsidiary purpose of the volume is to impress the reader with the remarkable manner in which the political history of Europe during the past half century has been affected by the reflex action upon European affairs of the proceedings of European Governments in Africa. Those to whom history appeals as a long chain of inter-connected links, who believe that wrong-doing by men and nations bring it inevitable aftermath, and that human records are stamped all over with the proofs of it, may be forgiven, perhaps, if they are tempted to see in the deso-

lation and misery into which Europe is plunged, the Nemesis of Europe's actions in Africa."

Mr Leonard Woolf is, if possible, even more outspoken . He has perhaps the advantage of a more detached scientific attitude than Mr. Morel in that he clearly sees the economic motives of Europe. He says that just as long as the modern white world is organized for individual profit just so long as they going to bring suffering and destruction upon the people of the earth. "Europe in the last century gained control over its physical environment with a rapidity and to a degree never attained before in any place or age. To dominate the earth, to ride the winds, and to harness fire and water are great and valuable achievements, but their greatness and value also depend upon whether the world's passions and beliefs are harnessed and under control. Some people seem to think that a maniac with a modern revolver in his hand is a nobler spectacle than a maniac with bow and arrow from the Stone Age. Perhaps he is, but at least it cannot be denied that he is infinitely more dangerous. So, too, the uncontrolled passions of fifty million men and women armed with twelve-inch guns and aeroplanes may be a finer thing to contemplate than the blind instincts of five thousand savages armed with tomahawks, but national passions firing off twelve-inch guns are more dangerous to humanity than tribal instinct directing a tomahawk. It is only because from our schooldays history is represented falsely to us as the logic of events rather than the logic of men's beliefs and desires that we are not driven by fear, if by nothing else -- to consider continually the possible results of national and communal beliefs and desires."

He goes on to show that "between 1880 and 1914 the States of

Britain, France and Germany each acquired an immense colonial empire outside Europe. These empires were empires in the literal sense of the word: they were founded by conquest, sometimes openly acknowledged, and sometimes disguised under various synonyms for civilization. The territories acquired were incorporated, usually against the wishes of their inhabitants, in the European State and the inhabitants were subjected to the autocratic rule of the European State. The territory acquirel by the British State in this way was about 3¼ million square miles, and the population subjected to its rule was about 46 million. The French State acquired 4 million square miles, and a population of over 50 million; the Germans State 1 million square miles, and a population of 15 million."

31-11-52

He strikes the keynote of all "Negro problems" when he says that "if the relations of Europe to Africa are to change, the beliefs and desires of Europeans in Africa and with regard to Africans must change. Hence when this class of thinker or reformer makes concrete proposals, they take the form, not of a change from imperialims to internationalism, but of a change in the social and economic relations between the African and the European. The 'native' is no longer to be regarded as the 'live-stock' on Europe's African estate, as the market for the shoddy of our factories and our cheap gin, or as the 'cheap labour' by means of which the concessionaire may supply Europe with rubber and ivory and himself with a fortune, but as a human being with a right to his own land and his own life, with a right even to be educated and to determine his own destiny, to be considered, in that fantastic scheme of human government which men have woven over the world, an end in himself rather than an instrument to other people's ends."

From this climax of arrangement of modern commercial empire we may

turn

turn by way of startling contrast to the complacent "apologia pro sua vita" by a man discredited in many respects but who knows his France and Europe well enough to adduce the theft of Morrocco as an excuse for his foreign policy.

In Joseph Caillaux's account of his foreign policies we get a rather illuminating even if ghastly glimpse of the way in which the peoples of the world have been the pawns of politics. The book surveys France's experience in her foreign affairs from 1877 to 1911. It proves beyond any doubt (albeit inadvertently) that the distribution of Africa has been the root of nearly all the various political controversies which have upset France, Germany , England and Russia for the last 40 years.

31-11-53

Africa WAS "the roots of the war"!

Here we are introduced to the very penetralia of high politics. France finds her interests in Morocco blocked by England. She therefore becomes willing to withdraw from Egypt in favor of Great Britain. Germany becomes incensed but signs with the rest a treaty at Algeciras, which neither France or England have any purpose to keep but it forms "a good working basis". The purpose of France to seize Morocco with the consent of Great Britain leads to the appearance of the German warship at Agadir. Thereupon a "showdown" is demanded. Germany finding that immediate war is impossible on account of her banking situation consents to receive an additional slice of Central Africa while France takes Morocco. Everything is settled except the Great War, but Caillaux in its great lambent light congratulates himself: he put it off three years!

Here we are back where we started. A continent with hundreds of millions of human beings has been made the foot ball of the nations until

the nations have suffered because of it the greatest revolution humanity has ever known. Whether this will teach us anything time only can tell.

31-11-54

ETERNAL AFRICA

Africa and the Discovery of America. Volume 1. By Leo Wiener. Innes & Sons.

The Republic of Liberia. By R. C. F. Maughan. Charles Scribner's Sons.

La France au Maroc. By Berthe Georges-Caulis. Librairie Armand Colin.

The Belgium Congo and The Berlin Act. By Arthur Berriedale Keith. The Clarendon Press.

The Black Man's Burden. By E. D. Morel. The National Labour Press.

Empire and Commerce in Africa. By Leonard Woolf. The Labour Research Department.

Agadir. Joseph Caillaux. Albin Michel.

Here are seven books representing five interesting points of view, but all of them about Africa. First a scientific student of languages connects Africa with the discovery of America then two officials, English and French write in studied praise of the work of Europe in Africa, past, present and future and an orthodox historian sets down in careful and unemotional phrase the legal relation of Europe to the heart of the dark continent. Then comes revolt. Two reformers writing at, one from the political and the other from the economic point of view say plain and biting words concerning the relations of black and white in this ancient continent and finally as commentary upon all of this a prime minister of France, recently tried for treason, tells of the meaning of Agadir. No age of the world, ancient or modern has been able to escape Africa. We may according to our birth place or color or lineage bewail this or feel a secret uplift because of it, but it is in either

case true that from the beginning of human civilization on the Nile and Euphrates, around the shores of the Mediterranean, in central and in northern Europe and in America continually each century centers world interest in this whole and mighty continent. Professor Weiner shows us the amazing interaction of Africa on America and Europe in the early days of the slave trade.

The layman cannot judge of the exact weight of the mass of material adduced because the extraordinary author is master of more languages than most people have heard of much less know. The sources quoted in the eight and one-half pages of closely written bibliography include Spanish, French, English, Portuguese, Latin, Greek, German, Arabian and other works, and comprehends extraordinary research and scholarship. Not only this, but the conclusions of Professor Weiner. When I began my scrutiny, I was firmly convinced, as is the universal belief, that tobacco, manioc, yams, sweet potatoes and peanuts were blessings bestowed upon the world by the Indians. A cursory study excluded the yams and the manioc. Soon the peanuts followed in their wake. Next came the sweet potatoes, and at last the tobacco. It turned out that American archaeology was to a great extent built on sand. But the most painful discovery was in the line of Indian religion. Here everything turned out to be topsy-turvy.

In this first volume I show that the Negroes have had a far greater influence upon American civilization than has heretofore been suspected. In the second volume I shall chiefly study the African fetichism, which, even with the elaborate books on the subject, is woefully misunderstood, and I shall show by documentary evidence to what extraordinary extent the Indian medicine-man owes his evolution to the African medicine-man, who, in his turn, derives his wisdom from the popular Arabic medical

32-15-104

science and religion.

The average layman assumes that the horrors of the slave trade and slavery passed and that today we have the pacific economic and benevolent invasion of Africa from Europe for the purpose of its ultimate civilization. This is the uncritical attitude of Mr. Maugan, British councellor at Monrovia. His study of Liberia tries on the one hand to say pleasant and suited things concerning Liberia and on the other hand to show British merchants that now and here is their chance to exploit rich land. The unspoken assumption is that what is for the good of the British merchant is for the good of Liberia. He sees the possibilities of Liberian and complains that for some curious reason, which I must confess has hitherto completely baffled me, it has usually been customary to write of Liberia and the Liberians in a tone of gentle melancholy; to descant upon the country and the people to whom it belongs as with a pen dipped in sighs, and generally to regard them with the despondent air of the good old Scotts mission doctor, who was wont to raise the spirits of his convalescent patients by reminding them of "hoo often they went off i' the relapse, ye ken." But from the rest of the book it is evident that his encouragement with regard to Liberia is because of his knowledge as to what Liberia may mean as a possession to British wealth. He cannot, for instance, "conceive any situation more unfortunate than that of a country where the education of the masses has been overdone." and consequently thinks that "it would seem highly undesirable that immigration from the United States to Liberia would, for the present at any rate, assume larger proportions than it has done for many years past."

Mr. Georges-Gaulis goes a step further. His work is an opinion of

pria

praise of the French general who has just been admitted to the French Immortals and whose large achievements have been the pacification of Morocco. Of this work the author is enthusiastic and says:

Turning from these fmore general works Professor Keith, formerly of the Colonial Office and now at the University of Edinburgh writes of the international character of the Belgian Congo. Here we leave science and the general aspects of European penetration and come to a specific and historical case.

38-15-106

This is the work of the orthodox British imperialist who without imagination or any great degree of sympathy with the natives, writes a book which contains a very short sketch of the Congo, followed by three chapters on the inception of the Congo Free State, four more on the work of the State, and two on its well known failure. The remaining nine chapters have to do with the reorganization of the Congo Free State as a Belgian colony with a study of the new laws and arrangements and an examination of the relation of the Congo Free State to the Peace settlement. With most students of the war, Mr. Keith recognizes the close connection of Africa with that great catastrophe. Whatever be the final verdict of history on the part played by the question of colonial expansion among the causes of the European War, two features have emerged in the course of the conflict which render the problem of the future of Central Africa of vital importance to the United Kingdome and its allies.....

While Mr. Keith acknowledges that all nations have sinned in their treatment of the African races he thinks that the crimes of Germany are the greatest. But chiefly, apparently becuase of the determination

to have African colonies at the expense of England and France. The demand is made that not only shall the former territories be restored, but that they shall be increased at the expense of France, Portugal, and Belgium so that all Central Africa from sea to sea shall be in the hands of Germany, which then by means of submarine bases on either coast will effectively menance the ocean trade of the allies.

The demand for so large accessions of territory, though justified also on commercial grounds, rests essentially on the second factor which has emerged in the course of the war, the realization of the military potentialities in the training under modern conditions of the natives of Africa.

28-15-107

The study of the Congo Free State brings clearly forward the restless personal abmition of Leapold and the extraordinary power which he snatched from under the nose of the civilized world and wielded in Central Africa. The Congo Free State was never international but was in fact a private project of the King of Belgium, for which he secured the recognition of the civilized world. That this was possible is extraordinary, but it rose over the rivalries of France, Germany and England. England could not interfere if she kept her hold on Egypt, while both France and Germany expected to inherit whatever Belgium secured. Could it not be said that the great war resulted from the attempt to cash the bank check which Liberia handed Bismarch in return for Germany recognition of the Congo Free State? This left Leopold absolute monarch of 900,000 square miles of territory with 20 or 30 millions of people, unrestrained by any legislation or any effective legal requirement. It was an astonishing gift of power and the world that gave it looked upon this as doing the most farsighted and philanthropic act. Colonel Strauch had recommended at the beginning that the Congo should be ruled through the established

local go

local government and through colored men and thus creating not a Belgian colony, but a powerful Negro state, and the suggestion was made 'that a confederation thus formed might grant concessions (with power to make good what they granted) to societies for the construction of works of public utility, or perhaps might be able to raise loans like Liberia and Sarawak, and construct their own public works'.

The King, however, was too eager to make money to attempt anything of this sort and the result is well known. The mineral wealth was given to a private company with both powers of exploitation and government for 99 years. The effort to seize the headwaters of the Nile nearly precipitated a European war in 1899. The land of the natives was practically confiscated, their labor was enslaved, they were almost without courts of justice and the population shrunk under a systematic murder and mutilation. The conscience of the world was appealed to but Belgium was able to make a spirited reply in which it drew some deadly parallels on Egnlish administration. A commission of inquiry strongly condemned the Belgian system, and then followed long negotiations between the King and his Parliament for transferring the colony to his state. This lasted from 1905-08, when Belgium took over a debt of 110 million francs and numbers of annuities and other obligations. Under the new colonial charter of 1908 the Congo is a Belgian colony but does not exist under the Constitution of Belgium but under a charter which is a simple law and can be changed by ordinary legislation. All powers of legislation are vested in the Parliament of Belgium, acting through the King and the local Congo government as mere temporary powers of legislation. The Congo natives of Belgium are "subjects" but not Belgian citizens. They are ruled through their chiefs but are subject to the same Slave Pass Laws which are used in South Africa. Their lands have not been restored to them and are still sub-

23-15-08

corporations, although reform in this respect is promised. They are receiving, however, some legal protection and the worst excesses of the law regime have probably passed.

Here we begin to get an insight into the depths of degredation to which modern civilization has led the world in its relation to Africa, but it takes plain speaking like that of E. D. Morel to oppose the Congo atrocities. Mt. Morel's book is in part historical and in part a study of selected stories of white atrocities all over Africa. He says: "The nattow, irregular streets of a Morrish town, into which shells from warships riding on the sparlking blue waters of the western Atlantic are falling in an in essant and muderous hail, smashing the white-walled, flat-roofed houses and splashing them all over with the blookd of the white-clad inhabitants who sprawl in mangled heaps at the doors of their homes-between such a scene as this and the pitted, scarred battlefields of Europe to-day with the blasted stumpts which once were trees, and the piles of masonry and timber which once were towns and villages, there appears at first thought no connecting link of circumstance. Yet it was the violence done to Casablanca which furnished the first direct incentive to that "era of ambitions, covetousness and conflickts in Europe," whose fruits the people of Europe have been reaping for the past five years.

38-15-10

Africa has always repaid her exploiters.

Morel himself is no lover of Africa. He has traveled in Africa, has written seven or eight books on aspects of the African problems and particularly was one of those who exposed Belgianmisrule in the Congo. During the war, howeve,r his liberalism was interpreted as sympathy for Germany and since the Belgian expose was due to him and the unfortunate Sir Roger Casement, his sympathy for Africa has been interpreted as part of a pro-German "plot." In truth, his attitude to-

is that of the liberal Englishman, that is to say, he is opposed to the past atrocities and wants Africa helped in every benevolent and philanthropic way. He has, however, no conception of a self governing, independent black Africa. Indeed, he suspects and rather dislikes the educated African and certainly has no faith in his independent future. His attitude is best summed up in this word from his introduction. His book, as he says, is "seeks to lay down the fundamental principles of a humane and practical policy in the government of Africa by white men.

"We stand on the threshold of a new era. The moment is propitious for the birth of an international conscience in regard to Africa. Great social changes are in process of a devel pment among the white peoples of the earth. The seat of power is shifting from the propertied classes to the producing masses. The latter will find themselves invested before long with executive duties in many spheres of government, with whose problems they are not familiar; among them the administration of dark-skinned peoples."

38-15-110

Mr. Morel, however, is frank in recognizing the terrific burden of the black man, - "the man of sorrows of the human family" and says that the problem of the native races today "centres henceforth upon the black man, as the African is called, although few Africans are wholly black." He says that the real crisis in the black man's existence comes today and that industrial exploitation if carried out ruthlessly may do what slavery, the slave trade and the political domination of Africa has hitherto failed to do, namely,- exterminate the race. The main part of his book is a series of expositions of the terrible results of European invasion of Africa: the Theft of the land in Rhodesia, the murder of the Herroes, the story of the Belgian and French Congo and the story of Portuguese slavery. To this he adds a statement of the seizure of Morrocco and Tripoli as illustrating political invasion and three chapters -

structive statement of the necessary European policy with regard to land and administration if the right is to prevail. He especially warns against the militarzation of the natives and shows how the League of Nations might take hold.

"A subsidiary purpose of the volume is to impress the reader with the remarkable manner in which the political history of Europe during the past half century has been affected by the reflex action upon European affairs of the proceedings of European Governments in Africa. Those to whom history appeals as a long chain of inter-connected links, who believe that wrong-doing by men and nations bring it inevitable aftermath, and that human records are stamped all over with the proofs of it, may be forgiven, perhaps, if they are tempted to see in the desolation and misery into which Europe is plunged, the Nemesis of Europe's actions in Africa."

Mr. Leonard Woolf is, if possible, even more outspoken. He has perhaps the advantage of a more detached scientific attitude in that he clearly sees the economic motives of Europe. He says that just as long as the modern white world gets the best profits and the best benefits just so long are they going to bring suffering and destruction upon the people of the earth. As Mr. Woolf says: Europe in the last century gained control over its physical environment with a rapidity and to a degree never attained before in any place or age. To dominate the earth, to ride the winds, and to harness fire and water are great and valuable achievements, but their greatness and value also depend upon whehter the world's passions and beliefs are harnessed and under control. Some people seem to think that a maniac with a modern revolver in his hand is a nobler spectacle than a maniac with bow and arrow from the Stone Age. Perhaps he is, but at least it cannot be denied that he is infinitely more dangerous. So, too, the uncontrolled passions of fifty million men and --

inch guns abd aeroplanes may be a finer thing to contemplate than the blind instincts of five thousand savages armed with tomahawks, but national passions firing off twelve-inch guns are more dangerous to humanity than tribal instinct directing a tomahawk. It is only because from our schooldays history is represented falsely to us as the logic of events rather than the logic of men's beliefs and desires that we are not driven OOby fear, if by nothing else -- to consider continually the possible results of national and communal beliefs and desires.

He goes on to show that between 1880 and 1914 the States of Britain, France, and Germany each acquired an immense colonial empire outside Europe. These empires were empires in the literal sense of the word: they were founded by conquest, sometimes openly acknowledged, and sometimes disguised under various synonyms for civilization. The territories acquired were incorporated, usually against the wishes of their inhabitants, in the European State, and the inhabitants were subjected to the autocratic rule of the European State. The territory acquired by the British State in this wayswas about 5½ million square miles, and the population subjected to its rule was about 46 million. The French State acquired 4 million square miles, and a population of over 50 million; the Germans State 1 million square miles, and a population of 15 million. The policy which led to the acquisition of this empire by Britain was the policty of Mr. Chamberlain and his followers. The motives have been sufficiently illustrated above from the declarations of Mr. Chamberlain himself. They were purely economic. In conquering the unexploited portions of Asia and Africa we were "pegging out claims for posterity," and the claims of posterity were for more markets. And the reasons which this school of policy gave for our "never losing the hold which we now have" over "our great Indian dependency" and over Egypt were the same, namely, the pro-

38-15-112

vision of markets and customers for the European citizens of the British State." He concludes that " if the relations of Europe to Africa are to change, the beliefs and desires of Europeans in Africa nand with regard to Africans must change. Hence when this class of thinker or reformer makes concrete proposals, they take the form, not of a change from imperialism to internationalism, but of a change in the social and economic relations between the African and the European. The "native" is no longer to be regarded as the "live-stock" on Europe's African estate, as the market for the shoddy of our factories and our cheap gin, or as the "cheap labour" by means of which the concessionaire may supply Europe with rubber and ivory and himself with a fotrune, but as a human being with a right to his own land and his own life, with a right even to be educated and to determine his own destiny, to be considered, in that fantastic scheme of human government which men have woven over the world, an end in himself rather than an instrument to other people's ends.

32-15-113

Finally in Joseph Caillaux's account of his foreign policies we get a rather illumin ting even if ghastly glimpse of the way in which the people of the world and of its have been the pawns of politics. This book although purporting to deal with Caillaux' foreign policy with regard to Agadir, surveys France's experience in her foreigh affairs from 1877 to 1911.

It proves beyond any doubt (albeit inadvertently) that the distribution of Africa has been the root of almost all the various political controversies which have upset France, Germany, England and Russia for the last 40 years.

Africa WAS "the roots of the war"!

Here we are introduced to the very of high politics. France find her interests in Morrocco blocked by England. She therefore becomes willing to withdraw from Egypt in favor of Great Britain. Germany be-

comes

comes insensed and signs with the rest a treat at Algeciras, but neither France or England have any purpose to keep the treaty thus signed, it's profession to form "a good working basis". The purpose of France to seize Morrocco with the consent of Great Britain leads to the appearance of the German warship at Agadir. Thereupon a "show down" is demanded. Germany finding that war is impossible on account of her banking situation consents to receive an additional slice of Central Africa while France takes Morrocco. Everything is settled except the great war by Caillaux in its great lambant light congratulates himself. He put it offthree years! here we are down where we started. A continent with hundreds of millions of human beings which has been made the foot ball of the nations until the nations have suffered because of it the greatest revolution humanity has ever known. Whether this revolution will teach us anything time only can tell.

Ovington, Mary White. The Shadow.
N.Y.: Harcourt, Brace & Howe, 1920.

Review: "The Shadow", The New
Republic, Vol. 25, February 23, 1921,
pp. 383-384.

THE SHADOW

The Shadow, by Mary White Ovington. New York: Harcourt, Brace and Howe.

Benjamin Brawley in a searching essay of some years ago called our attention to the "mob spirit in literature" which prevents our seriously touching the drama of the American Negro.

"As a matter of fact, the Negro in his problems and strivings offers to American writers the greatest opportunity that could possibly be given to them today....One can only imagine what a Victor Hugo, detached and philosophical, would have done with such a theme in a novel....And yet, with the Civil War fifty years in the distance, not one novel or one short story of the first rank has found its inspiration in this great theme. Instead of such work we have consistently had traditional tales, political tracts, and lurid melodramas."

What is true of literature is true of art: here with a tenth of us colored we see a colored face in an illustration, a painting or a bronze, on the stage or in a movie, but rarely and then usually in obvious caricature.

The reason is clear. We Americans have settled the race problem and we will not have our settlement tampered with. The truth of Art tampers. That is its mission. We refuse however even to conceive a black hero and white heroine, a white hero and black heroine. Too, we are impatient at "colored" grades in any relation to whites. And in characters wholly black we are frankly uninterested. The result is obvious: authors who aspire to be "best sellers" seek to avoid the race question, art or no art.

But it cannot be wholly avoided, being a dark and exceedingly stubborn, a sinister and amazing fact. In which case, for a long time we tried to ~~we may as we must~~ embalm the past or preach about the future: we ~~may~~ painted and repainted the glory of a type

of Negro long since dead or we ~~may~~ ranted about the inevitable character and fate of present the Negro, so long as, like Tom Dixon, we followed the lead of the Mob. So much for the past. But there are signs of change and "The Shadow" is a bright one. Miss Ovington in her novel on the race problem has avoided the chief difficulty of her task by making her heroine white in blood and only colored by adoption. This gains for Hertha immediately a sympathy which no Negro could claim from most American white readers. Former writers who have hit on this expedient have then over shot the mark by making the attendant Negroes as miserable and worthless as possible. If Miss Ovington were merely a propagandist in this work - and I hesitated to read it because I feared she was - she would have swung to the other extreme and made Hertha's Negro "relatives" paragons of goodness. With much skill, and resulting readableness the author avoids this and the real art of the novel lies in the fact that this white girl's life conflict lies in the fight between her wish to be free and white and her deep seated affection for her colored family. No matter what the truth may be, in Hertha's thought Ellen is a sister, Tom a big, sweet-hearted child and "mammy" a mother.

8-9-3

Here Miss Ovington touches with sure hand the crux of this human problem. Most folk are torn in such a case in two ways: if Negroes are human and sensitive as ~~I am~~ we are, Americans say, the horror of their situation is such boundless tragedy that sheer self-defence forbids any discussion of it on our part in poetry, ~~prose~~ essay or fiction. If on the other hand they do not feel their situation, then they are not human as ~~I am~~ we are, and why should I enlighten or arouse them even if that were possible? Miss Ovington's novel simply suggests that one who knew ~~a single family of~~ some of them intimately was, rightly or wrongly, so sure of their common humanity and endless suffering that the knowledge of it ~~made tragedy of~~ made cataclym to her own life.

The tragedy ~~which~~ then the book especially emphasizes is that between these races so old in their acquaintanceship and so close in common life, ~~#~~ between them today there can be no friendships. Tom is aghast to think of a place where he can talk simply to his white foster sister and the attempt to ~~bring~~ tell her news of ~~a~~ his mother's death nearly brings a lynching. On the other side the plight of the whites is equally tragic: the race hatred of Dick, the " " poor white, is a piteous madness and a disease and the life struggle of Landlord Merryvale begins rather than ends with his marriage to Hertha.

How curiously complicated it all is! What a treasure house for the story teller does Miss Ovington again open to us - but the Mob - the Mob!

The Negro himself, the author touches with delicate restraint. She does not attempt the racial conflict of Charles Chesnut's "Marrow of Tradition" or the inner analysis of Jessie Fauset's "Emmy" and "The Sleeper Wakes" - knowing that such penetralia are only for those born to the Veil. But she has written a deft and deeply interesting human story which with its knitting up of the problems of labor and race is perhaps even more a novel for the enlightenment of blacks than of whites. And for both its ultimate message is as simple as it is true no matter how much the Heathen rage:

"'Dearie,' the Irishwoman replied, 'you talk as if color were a state of mind.'

"'Isn't it?' Hertha asked."

Woodson, Carter G. History of the Negro Church. Washington: Associated Publishers, 1922.

Reviews: The Freeman, Vol. 6, October 24, 1922, pp. 92-93.

Review for Freeman

1922?

The Socialized Negro Church

If it were not a church we would be dissolved in amazement at, the organizing ability of American Negroes who have built in slavery and 50 free years an institution with four million members and six million guests, in 40,000 centers, worth 60 millions of dollars and administered by 200,000 leaders. One can imagine the toil and turmoil, the spiritual writhings, the bitter disappointments and wild triumphs. Back beyond the staid and lofty beauty of Calvary Baptist of Norfolk, Virginia, or the spacious efficiency of St. John's Methodist of Cleveland, Ohio one can descry the red flame of the African witch doctor and the sombre moon-lit sacrifice of the Voodoo priests wild with song. By what paths have slaves and cowering freedmen walked from that to this and what does it mean for the coming day?

34-7-19

Those who would study and learn of this thrilling fairy tale of social history will not read Mr. Woodson, for his book has nothing to do with it. Mr. Woodson is a monographist of the strict Harvard dry-as-dust school. He has now for six years been the editor, publisher, author and almost sole supporter of a most accurate and faithful Journal of Negro History which is not more unreadable than such publications usually are among white folk. In this way Mr. Woodson has collected and carefully cataloged and pigeon holed and enormous number of facts concerning Negro American history. These facts he is now marshalling, grouping and issuing in book form under various titles - "The Education of the Negro", "A Century of Negro Migration", "Early Negro Education in West Virginia", "The Negro In Our History" and now "The Negro Church". This rapid issue of books at the rate of one a year in the last four years has not improved their finish and readable-

ness, but the present book sins beyond this; it does not really touch at all its true subject. It is full of interesting, even apposite facts, set forth in careful, almost painful detail. Its very erudition - (he records "an extensive examination" of the correspondence of West Indian Methodist missionaries from 1750 to 1833!) - makes one wild for the result that should follow and does not. Here are the trees all elegantly cataloged and named and even their limbs counted, if not their leaves; - but of the forest, the great dim, green and golden forest with its whispers and sighs and storms, with its soul, in short, of this there is never a word.

34-7-20

Perhaps after all, history is unwriteable. I speak as one who has failed. If you think you sense and know the Past and if you then cunningly paint and interpret and reveal it you would have History, provided your facts fit. But they do not and the result is — fiction. Or, like Dr. Carter Woodson, you know each fact, you revel in it and nail it accurately down, and then you produce — a dictionary. Mr. Woodson has the main ascertainable facts of Negro church history all neatly docketed in his volume and arranged in order. Everything is there, except the church; except the inner spirit and motive of that marvellous faith and unreason which caught a million black folk on the shores of exile and made them dance and scream and shout the Sorrow Song; which raised from smoking entrails the witch figures of that old black preacher, whose trembling hands built a spiritual state within a state, guarded and groomed it and made it spawn a new freedom for a world-old race; made it built and guide, shelter and teach, lead and train a people. The Negro church is the mighty central fact of Negro American history. It is dependent, unique and Negro through and through despite all imitation. It is a great, an astonishing, a contradictory social triumph with its feet in the African jungle and its head in heaven.

Of all this Dr. Carter Woodson not only says nothing but understands nothing. He has set down instead a catalog of well-authenticated truth.

Mr. Woodson might properly contend that of all American questions the one demanding fact rather than fancy is that of American Negroes. Quite true and Dr. Woodson's services as a fact finder are invaluable. I use him often. But let's call it fact, source-stuff, raw material and not history. I admit that many eminent gentlemen much lighter in complexion and of wider reknown agree with Dr. Woodson's conception of history, and if he and they are correct, Dr. Woodson has done a very good and very thorough piece of work and my only suggestion would be that the index be made its table of contents.

Firbank, Ronald Prancing Nigger.

N.Y.: Brentano's, 1924.

Review: "Array of Books"

The Crisis, Vol. 28, No. 5,

September 1924, p. 219.

undated

American Negroes will neither read, nor if they read, understand Ronal Firbank's "Prancing Nigger". In the first place they will condem it unheard and unseen on account of its title just as they condemned the finest play in favor of the Negro yet written, Sheldon's "The Nigger". Those who bring themselves to read the book will not understand it because it is West Indian. Its whole setting and surrounding is in those beautiful exotic islands which we here so thoroughly misunderstand. But if the reader can forget its title and translate himself to the palms and glorious sunlight of the southern islands and look upon Mr. Firbanks as an artist and not a nordic propagandist they can have a delightful hour with this delicious book. In it the writer is unbound by convention, white or black. Mrs. Mouth assumes her "arange blastams" to marry her husband four years after the birth of her eldest daughter and the rich young white man who is the central figure in the story does not assume stage manners before little black Edna. He simply says "exquisite kid" and the author adds "she was in his arms". The whole book is just a delightful revel and now and then reaches a climax of drole humor as when pappy Paul announces to Mamma Luna "I have saw God and has spoken wid de President too", to which Mrs. Mouth quietly added "Dairs no trute at all in dat report".

Weatherford, W.D. The Negro from Africa to America. N.Y.: George H. Doran Co., 1924.

Review: "The Negro", The Nation, vol. 119, No. 3088, September 10, 1924, pp. 267-268.

The Negro from Africa to America. By W.D.Weatherford. George H.Doran Co.

This is a scrap book of 487 closely printed pages in rather small type. It gives evidence of extended research and hard work but from the very nature of the author's method the general reader will find it almost impossible to read through. It has no style or literary plan but is made up of quotations long and short, or of transcriptions ~~from~~ of authors' meanings. Yet Mr. Weatherford's book is not merely a doctor's thesis. With all its cumbersome content and slavish use of authorities it has its central thesis and perhaps the object of the book is best expressed by its last paragraph:

"To those who can discern the meaning of things it is clear that a new light is dawning. Men are coming to desire a larger knowledge of all other men. Wise men realize that each group has a contribution to make to the world's civilization, and the sooner all groups can be brought to efficiency the sooner will the whole world be blessed with such contributions. Neither individuals nor races work out their destinies alone, but in cooperation."

11-1-47

The book is divided into 17 rather long chapters which include a statement of the "central issue", two chapters on Africa, six chapters on slavery, two chapters on the social conditions of Negroes and then separate chapters on religion, law and education. There follow two chapters on self expression and leadership and one on constructive movements in racial cooperation. The final chapter is a bibliography with notes. One can see that the book is poorly balanced; slavery over-weights it, political development is almost absent and while there is much economic information, economic interpretation is often lacking. ~~Persons who wish to understand Mr. Weatherford's point of view will get a good idea of it from his first chapter.~~

Mr. Weatherford's main authorities are unfortunately Weale's "The Conflict of Color" and Stoddard's "Rising Tide of Color" which, latter he regards as"one of the most thoughtful books". Even when he quotes a

good book like Ellis' "Negro Culture in West Africa" he has a disparaging remark. His comment on Woodson's "Negro in Education" is done in two words while Stoddard's foolishness gets a whole page. The Atlanta University studies have to be mentioned and quoted although without comment, while the silly studies of the Negro done by the Phelps Stokes Fund are spread out in large type. Even Mr. Weatherford, however, can find nothing to say for them.

In addition to these disconcerting authorities the net impression of Weatherford's scheme of treatment is that of a well meaning man who in spite of himself is oleaginous and patronizing. He starts for instance: "I am interested in the Negro not because he is a Negro, but because he is a man. He has a personality just as I have and is capable of becoming a growing and progressing person." (what could be better?) And then he ends with this: "I have known some Negroes whose character was above reproach. Every Southern white man has known at least one such Negro."

There is no doubt but what Weatherford really represents an advance over the conventional Southern attitude. He is distinctly liberal ~~in his attitude~~ toward the Negro and he believes in liberal Southern movements. But beneath the whole argument, old assumptions, old beliefs continually persist. His chapters on Africa, for instance, are painfully inadequate and misleading and leave us with that ancient idea that the black man inherited "a loose moral life," no economic "efficiency" and that ~~their~~ his "laziness" and "emotional nature" ~~is~~ are something to be rid of. Havelock Ellis is not one of his authorities.

On the other hand he has made some researches on American slavery that are of value as, for instance, his stressing of the fact that the first Negroes brought to Virginia were not slaves but servants. He is painfully careful throughout his book to say very little about Reconstruction and the right to vote. Only seven of his five hundred pages are given to this great matter and here he regards the enfranchisement of the Negro as a "colossal blunder". He lays the lack of present

81-1-47

"understanding" between the races to the ballot: "It was just here that Reconstruction did its most deadly work. By setting the white man and the black man in the South in political opposition, there were antagonisms aroused which broke down all confidence and hence destroyed all mutual understanding." Has the world ever known "understanding" between masters and forcibly emancipated slaves?

After this tribute to the conventional Southern perversion of history he admits that it is impossible to stem the rising tide of democracy and suggests, in his brilliant way, higher property and intellectual qualifications for the ballot, in order to eliminate "a great majority of the Negroes and, of course, many of the whites. This is only right."!

On the whole one judges a book like this with favor. It is probably the best thing of its size and character that the average, stay-at-home South has produced about the Negro; but it is far from satisfactory. On the whole the book lacks frankness; it is often double-faced and contradictory; sometimes it is merely mushy; seldom is it strong; it is afraid of conclusions; it continually walks up to some wall of difficulty and then turning mumbly sheers off into vague phrases, meantime apparently losing sight of the wall entirely. In his interpretation of the Negro Mr. Weatherford is continually at fault. He has difficulty understand the self determining, intelligent black man who stands on both of his own feet. He is continually quoting the smoother phrases of the late Booker Washington and the present Dr. Moton. Yet here and there he has a word, a sentence or a paragraph which shows that he realizes more than he always says:

"As never before in his history the Negro is finding self expression. In music, poetry, art, in books and in the press he is saying what he thinks. He is no longer the silent, suffering, cringing person we once knew. He is boldly speaking his mind, and it behooves the American people to give earnest heed to his voice."

W. E. Burghardt DuBois

The net verdict on Weatherford's work must be favorable. It does not represent the heights of Southern white emancipation, for the average stay-at-home effort of the new "inter-racial" class. As such it is the best thing the white South has produced.

61-1-19

The Negro From Africa To America. By W. D. Weatherford, George H. Doran Company.

This is a scrap book of 487 closely printed pages in rather small type. It gives evidence of extended research and hard work but from the very nature of the author's method the general reader will find it almost impossible to read through. It has no style or literary plan but is made up of quotations long and short, or of transcriptions of authors' meanings. Yet Mr. Weatherford's book is not merely a doctor's thesis. With all its cumbersome content and slavish use of authorities it has its central thesis and perhaps the object of the book is best expressed by its last paragraph:

"To those who can discern the meaning of things it is clear that a new light is dawning. Men are coming to desire a larger knowledge of all other men. Wise men realize that each group has a contribution to make to the world's civilization, and the sooner all groups can be brought to efficiency the sooner will the whole world be blessed with such contributions. Neither individuals nor races work out their destinies alone, but in cooperation."

47-1-13

The book is divided into 17 rather long chapters which include a statement of the "central issue", two chapters on Africa, six chapters on slavery, two chapters on the social conditions of Negroes and then separate chapters on religion, law and education. There follow two chapters on self expression and leadership and one on constructive movements in racial cooperation. The final chapter is a bibliography with notes. One can see that the book is poorly balanced; slavery over-weights it, political development is almost absent and while there is much economic information, economic interpretation is often lacking.

Mr. Weatherford's main authorities are unfortunately Weale's "The Conflict of Color" and Stoddard's "Rising Tide of Color" which latter

he regards as "one of the most thoughtful books". Even when he quotes a good book like Ellis' "Negro Culture in West Africa" he has a disparaging remark. His comment on Woodson's "Negro in Education" is done in two words while Stoddard's foolishness gets a whole page. The Atlanta University studies have to be mentioned and quoted although without comment, while the silly studies of the Negro done by the Phelps Stokes Fund are spread out in large type. Even Mr. Weatherford, however, can find nothing to say for them.

In addition to these disconcerting authorities the net impression of Weatherford's scheme of treatment is that of a well meaning man who in spite of himself is oleaginous and patronizing. He starts, for instance: "I am interested in the Negro, not because he is a Negro, but because he is a man. He has a personality just as I have and is capable of becoming a growing and progressing person." What could be better? And then he ends with this: "I have known some Negroes whose character was above reproach. Every Southern white man has known at least one such Negro"!

There is no doubt but what Mr. Weatherford really represents an advance over the conventional Southern attitude. He is distinctly liberal toward the Negro and he believes in liberal Southern movements. But beneath the whole argument, old assumptions, old beliefs continually persist. His chapters on Africa, for instance, are painfully inadequate and misleading and leave us with that ancient idea that the black man inherited "a loose moral life", no economic "efficiency" and that his "laziness" and "emotional nature" are something to be rid of. Havelock Ellis is <u>not</u> one of his authorities. On the other hand he has made some researches on American slavery that are of value as, for instance, his stressing of the fact that the first Negroes brought to Virginia were not slaves but servants.

He is painfully careful throughout his book to say very little

about Reconstruction and the right to vote. Only seven of his five hundred pages are given to this great matter and here he regards the enfranchisement of the Negro as a "colossal blunder". He lays the lack of present "understanding" between the races to the ballot: "It was just here that Reconstruction did its most deadly work. By setting the white man and the black man in the South in political opposition, there were antagonisms aroused which broke down all confidence and hence destroyed all mutual understanding." Has the world ever known "understanding" between masters and forcibly emancipated slaves?

After this tribute to the conventional Southern perversion of history he admits that it is impossible to stem the rising tide of democracy and his brilliant suggestion is higher property and intellectual qualifications for the ballot, in order to eliminate "a great majority of the Negroes and, of course, many of the whites. This is only right."!

47-1-15

On the whole the book lacks frankness; it is often double-faced and contradictory; sometimes it is merely mushy; seldom is it strong; it is afraid of conclusions; it continually walks up to some wall of difficulty and then turning numbly sheers off into vague phrases, meantime apparently losing sight of the wall entirely. 91-1-16

undated

The Negro from Africa To America. By W. D. Weatherford. George H. Dorand Company.

This is a scrap book of 487 closely printed pages in rather small type. It gives evidence of extended research and hard work but from the very nature of the authors method the general reader will find it almost impossible to read through. Itnhas no style or literary plan but is made up of long quotations or of transcriptions from authors giving their meaning rather than their exact words. Yet Mr. Weatherford's book is not merely a doctor's thesis. With all its cumbersome content and wide use of authorities it has its central thesis and perhaps the object of the book is best expressed by its last paragraph:

38-12-91

"Conclusions. To those who can discern the meaning of things it is clear that a new light is dawning. Men are coming to desire a larger knowledge of all other men. Wise men realize that each group has a contribution to make to the world's civilization, and the sooner all groups can be brought to efficiency the sooner will the whole world be blessed with such contributions. Neither individuals nor races work out their destinies alone, but in cooperation. Dr. Bliss, of Beirut College, once said, "All the world needs all the rest of the world." Working togehter for the good of all each race may have its individual life and yet live in peace and harmony - yes, in helpfulness to the other races, which lives by its side. It behooves every true lover of his land to strive to know better all its peoples, to help each and all in the struggle upward, envying no man his success, hating none, blessing and blessed by all."

The book is divided into 17 rather long chapters which include a statement of the "central issue", two chapters on Africa, six chapters on slavery, two chapters on the social conditions of Negroes and then separate chapters on religion, law, and education. There follow two chapters on self expression and leadership and one on constructive

movements in racial cooperation. The final chapter is a bibliography with notes. Persons who wish to understand Mr. Weatherford's point of view will get a good idea of it from his first chapter. His authorities here are Weale who wrote "The Conflice of Color" in 1910 and Stoddard's "Rising Tide of Color" 'one of the most thoughtful books'. In addition to these disconcerting authorities the net impression of Weatherford's scheme of treatment is decidedly patronizing. He says for instance: "I am interested in the Negro not because he is a Negro, but because he is a man. He has a personality just as I have and is capable of becoming a growing and progressing person. All men are not born equal. Indeed, no two men are ever exactly equal. Equality is a matter of character and not of birth. The fact that any being has personality means that he may grow in character. I have known some Negroes whose character was above reproach. Everysouthern white man has known at least one such Negro. It is this which these forward movements represent."

38-12-92

There is no doubt but what Weatherford represents an advance over the bourbon southern attitude. He is distinctly liberal in his attitude toward the Negro and he believes in liberal southern movements. But beneath the whole argument he clings to certain old assumptions. His chapters on Africa, for instance, are painfully inadequate and misleading and leave us with that ancient idea that the black man "inherited a loose moral life" and that their "laziness and emotional nature is something to be rid of". His chapter on slavery is long and on the whole fair although of course he is at pains to show the better side of the system. Here and there he has come in his researches across many new matters or things not stressed before as, for instance, the statement, undoubtedly true, that the first Negroes brought to Virginia were not slaves but servants. He is rather careful throughout his book to say very little about reconstruction and the right to vote. He stresses economic and social conditions but has no chapter on political power and

expresses himself only incidentally as for instance when he remarks: That we should have better understanding now than then cannot be doubted, but so far it has not been attained. It was just here that reconstruction did its most deadly work. By setting the white man and the black man in the South in political opposition, there were antagonisms aroused which broke down all confidence and hence destroyed all mutual understanding. To resotre this understanding and bring white men and black men to a real knowledge of each other is perhaps the most fundamental task of our day.

3-12-23

But he acknowledges in his chapter on Negro self determination that it is "impossible to stem the rising tide of "democracy" and suggests higher property and intellectual qualifications for the ballot in order to eliminate "a great majority of the Negroes and of course many of the whites. This is only right."

Mr. Weatherford is a Y.M.C.A. man and he shows a good deal of the somewhat mushy results of his training. He tells of what love is going to do in the settlement of the race problem and in the last part of his book he mentions a notable will where an old ex-slave leaves his money to his old master's son because "Mr. Willy never failed me." He thinks that this shows the growing confidence in the race. On the whole one judges a book like this with favor. It is probably the best thing of its kind and character that the south has produced about the Negro but it is not satisfactory. It lacks frankness, it is afraid of conclusions, it continually walks up to some wall of difficulty and then turning numbly sheers off into vague phrases. Meantime apparently losing sight of the wall entirely. In his interpretation of the Negro Mr. Weatherford is seriously at falut. He cannot understand the self determining, intelligent black man who stands on both of his own feet. He is continually quoting the smoother phrases of the late Booker Washington and the present Dr. Moton. And yet here and there he has a word, a sentence or a paragraph which shows that he realizes more than he

always says.

"As never before in his history the Negro is finding self expression. In music, poetry, art, in books and in the press he is saying what he thinks. He is no longer the silent, suffering, cringing person we once knew. He is boldly speaking his mind, and it behooves the American people to give earnest heed to his voice. The Negro race has come to its own in self expression, and in so doing has proven that it is not a dying race but one filled with the strength of an advancing civilization."

38-12-94

The books which Mr. Weatherford recommends to readers are selected without much care. Weale and Stoddard are among the first. Even when he quotes a good book like Ellis' "Negro Culture in West Africa" he has a disparaging remark. His comment on Woodson's "Negro in Education" is done in two words while Stoddard's foolishness gets a whole page. The Atlanta University studies have to be mentioned and quoted although quite without comment, while the silly studies of the Negro done by the Phelps Stokes Fund are spread out in large type. Even Mr. Weatherford, however, can find nothing to say about them.

Excerpts from Jones, Thomas Jesse.

Education in Africa. 2 vols. N.Y.:

Phelps-Stoke Fund, 1922-1926.

Used in writing review "Education in Africa", The Crisis, Vol. 32, June 1926, pp. 86-89 ?

(P 1-5 MISSING)

T. J. Jones

Education in East Africa Report prepared by Thomas Jesse Jones, Ph.D. Phelps-Stokes Fund. 416 Pages.

"The purpose of the report submitted in this book is to present the conditions of Native education in East Africa, with suggestions for their improvement. Those responsible for appointing the Educational Commission to East Africa have had two ultimate objectives in mind: To help the Natives in the various countries and Colonies visited through encouraging more and better education of the right type, and, as a result, to promote, directly and indirectly, friendly interracial relations."

"Unfortunately, in the past, in Africa as in Europe and in America, the type of education provided has not generally been the type best fitted for the masses of the people." In the

"Probably the most important single task of the Commission to East Africa was to try to find the types of education best fitted to meet the twofold needs of the Negro masses and of the Negro leaders of Africa in the near future. In general, the members of the Commission are convinced that all education must be of a character to draw out the powers of the Native African and to fit him to meet the specific problems and needs of his individual and community life. In this connection, they have been profoundly impressed by the ideals of education developed by General Armstrong at the Hampton Institute in Virginia, immediately after the Civil War."

"I said just now that the most important requisite of our educational system is character training. What is character training? I confess that I have often been baffled in the attempt to define the nebulous curriculum of such a subject, but Dr. Jesse Jones hits the nail on the head. What he practically says is that there is no definite syllabus, but whatever system we adopt, and in every system we adopt, whether in

3d-23-9

infant schools, primary schools, trade schools or secondary schools, we must endeavor to graft the simple virtues on our children. These simple virtues are perseverance, thrift, temperance, self-control, reliability, honesty and respect for parents. As Dr. Jesse Jones says, these virtues cannot be taught out of books; they must develop by sound habits resulting from days, weeks and months of actual practice and repetition."

30-26-13

"In this respect a school is to be considered as a training ground for the larger work of life. The Commission to East Africa is enthusiastic in supporting this type of education for the masses, although recognizing that there must be provided also a training for the leaders which would include the historical, physical and social sciences, and the other disciplines which white civilization has found valuable. In fact, it should be self-evident that there is, and will be increasingly, need for highly trained Native leaders in religion, in education, in engineering, in medicine and in all the professions. The time has passed when the civilized world can say to any people, "Thus far and no further," where education is concerned. The doors of the great universities of Europe and America must be kept open to the rare Native of any nation who is qualified to enter and to profit by the instruction. It is clear, however, that the majority of the Native leaders can be better trained in Africa, where they become accustomed to the conditions with which they will have to cope in after life."

In various portions of the book Portugal and Portuguese colonies are spoken of slightingly. For instance, it is said "there are still labor conditions in certain parts of Africa, especially in the Portuguese colonies, that deserve more serious attention of governments than they have received, but there has been marked progress almost everywhere during the past decade."

Also on Page 5 the "unfortunate condition of the colony" of Portuguese East Africa is noted. "At present, however, the inter-colonial and international influence of Abyssinia is negative. Whatever the present condition of Abyssinia and Portuguese East Africa, it is certain that both of them will in the not distant future increasingly feel the virile forces of East Africa surging all about them."

35-26-14

"An even more emphatic evidence of the lack of a sound policy for the development of the Natives are the persistent and general reports of various forms of forced labor in different parts of the Colony."

"While the main emphasis of this Report falls upon the need for an education adapted to the conditions under which the majority of the African people live today, it must be emphatically stated that the Commission, one of whose members was a highly educated African holding a doctorate of philosophy from Columbia University, recognizes unhesitatingly that with the evolution of civilization in Africa education must include all that has been found necessary elsewhere, including advanced technical and agricultural training and professional knowledge of medicine, law and theology. But it is suggested that the first five objectives, with their vast implications for the welfare of the community, should influence even these and largely determine the type of professional training to be encouraged. The provision for teaching the great modern sciences, which will subsequently become necessary, should not therefore be limited by the traditional emphasis on literary subjects."

"Character development is to be the coloring of every educational activity. Hygiene and health are to be emphasized whenever there is an opportunity whether in the teaching of arithmetic or in the care of the dormitory. Agricultural and industrial skill are to be extolled in the sermon as well as in the field and shop. The

sanctity of the home is to be upheld in public as in private, the spiritual possibilities of recreation are to be presented in the classroom as well as on the playground. Similarly, the higher levels of collegiate and university education are to be rooted in a real regard for character, health, agriculture, industry, the home and play, as well as in the historical and scientific appreciation of the most intricate problems of life. Education is thus to be identical with life itself. It is to have the same elemental simplicity and reality and also the inextricable interdependence of the elements that constitute life."

30-26-15

"In view of the vital importance of religion, it may be helpful to suggest specific questions on the interaction of character and religion. Observation of religious activities in Africa suggests the value of the following type of questions:-Do the Native people understand the relation of religion to their daily activities? How does their conception of this relationship differ from that of their belief in idol or fetish? Has Christianity freed them of superstitious fears and the degrading elements of their customs? Inquire as to the interaction or potential interaction of religion and health, environment, family life and recreation."

"Advanced technical, agricultural and teacher training, and professional knowledge of medicine, law and theology are as essential to the complete school system in East Africa as they are in any other part of the world. It is, of course, true that the present need for this stage of education is very limited."

"Those responsible for educational policies in East Africa should realize that the millions of Native people must have Native leaders. Already unwise and ignorant leaders are teaching false doctrines that cause dissension, irritation and unrest. The Great War started ideas

and movements, suspicions and ambitions, hopes and desires that are extending and deepening among the masses. The increasing entrance of Europeans into the heart of Africa, whether in Government and missions, or as traders and settlers, is working radical changes in the life of the people. Gossip, rumors and propaganda are brought from Europe, Asia and America, and distributed in the huts and kraals of these primitive people. There is a crying need for wise leaders who both understand their own Native people and apprehend somewhat of the real meaning of civilization and Christianity. Such an understanding is by no means easy to obtain. It is a quality of statesmanship that requires the best that education has to impart. High-sounding literary phrases, in whatever language, must not be allowed to pass for education. The transfer of traditional methods that are failing in Europe and America cannot be accepted by Africa in its present acute demand for the realities of education."

"Higher education is also essential to provide knowledge of the physical sciences necessary to explore and exploit the great resources of soil, minerals and animal life in Africa. Chemistry will reveal the quality of soil and minerals. Physics will explain the principles of mechanics. Biology will give an insight into plant and animal life. Thus the Native Africans will not only be freed from the fears of superstitions, but will also be given a command of their environment that will be of value to themselves and to the Colony. The great campaigns for hygiene and sanitation required in Africa cannot be effectively carried on without the aid of a Native leadership trained in the sciences."

"Courses in hygiene, agriculture, industry and recreation will furnish much of the content required in the education of the religious leaders of the people."

"In addition to the types of leadership indirectly but vitally concerned with the character and religious life of the people, there

must also be leadership that is directly concerned with the Churches and the other agencies that explain the religious elements of life, and lead the people in the service of humanity because they are "inspired by the love of God."

30-26-17

"The apex of the educational system should be a central institution of colonial dimensions which would offer higher education to those who can profit by it. The success of the South African Native College in training Natives for professional work and in keeping them in South Africa points to the need for similar institutions elsewhere. It may be a decade or more before such an institution is needed in a colony, but the fact that it is in the scheme of things and will come, when necessary, will go far to create satisfaction among the Natives."

"As yet education in East Africa has not developed sufficiently to warrant the erection of a college in any one colony."

"Liberty, independence and self-determination, with their comparatively unknown or untried experiments, are far more attractive to idealistic temperaments than trusteeship, protectorate and colony, whose failures have been allowed to overshadow their successes. The thought of freedom seems to have far more charm than that of direction and discipline and order. The antagonism to paternalism would almost sweep away the contribution of fatherhood to the development of mankind."

"In Kenya Colony, the principle of trusteeship for the Natives, no less than in the Mandated Territory of Tanganyika, is unassailable. This is the Magna Charta of colonial policy."

"Every effort is being made to train the Natives for skilled occupations. The Natives have both the advantages and dangers of a vigorous, capable, determined European population mastering the natural resources by the machinery and methods of a progressive civilization."

"Colonial service in Africa has evidently attracted an unusually fine type of men. Unfortunately there are occasional exceptions to these high standards of manhood, not only in individual instances, but also in the general levels of colonial powers."

30-26-18

"It has long been the fashion to depreciate and to deprecate and often to condemn the influence of settlers, traders and other people of commercial and financial interests in Africa. The futility and folly of indiscriminate condemnation of these groups in Africa are to be judged on the same basis as the thoughtless criticism of the economic groups in Europe or America. These groups are in Africa for economic profit and for the material development of the country."

"Statistically the millions of Native people as against the mere tens and hundreds of Europeans of all classes in Africa establish the inevitable importance of Africans in all forms of cooperation. There are the African masses and there must be increasingly the African leadership. Native masses and Native leadership are the essential complements of African society. White leadership is a help, and an essential help, but it can never take the place of Native leadership. The inconsistency of Europeans is never more apparent than in their advocacy of racial segregation and at the same time their denial of facilities for the training of Native leaders. Sound policy requires the sincere cooperation of both white and Native leadership supplementing each other for colonial welfare."

"The response of Africans to all forms of training and education is certain evidence that every effort on their behalf is worth while. In America the educational attainments of Negroes are sufficient both in quantity and in quality to convince the most sceptical that education pays from every point of view."

"Missionaries and school authorities are without doubt better acquainted with these limitations of both the quantity and quality of

Native education than any other colonial class."

"The British Government has issued pronouncements of international significance for the complete elimination of any form of forced labor. The Land Tenure Commission has stated the principles to determine the delimitation of Native Reserves so that the Natives may be guaranteed a sufficiency of land, both for their present needs and for their estimated increase for the next generation. It now remains for the Colonial Office and the local Government to make these principles effective."

30-26-19

"With full recognition of the unfortunate and unfair elements of these relationships, it seems certain that the advantages to the Natives have been far greater than the disadvantages. Comparisons of Kenya with other parts of Africa, where non-Africans are not influential, are all favorable to the conditions of Natives in Kenya. In some respects the Colony partakes of the advantages of both non-tropical and of tropical colonies. It has been seen that the educational activities resemble those of non-tropical areas in extent and variety and that the policy to train Natives for skilled industrial pursuits follows the tropical policy."

"The organization of schools on settlers' farms is vital both to the settlers and to the Native workers employed by them. Such schools, properly organized and directed, can be of great value in the increase of agricultural skill and in the maintenance and improvement of the morals and morale of the Natives who are employed in large numbers by the settlers."

<u>Education in Africa</u> Report prepared by Thomas Jesse Jones. Phelps-Stokes Fund. 1922. 323 Pages.

This study was first proposed by the American Baptist Foreign Missionary Society and the cooperation of European governments and missions was obtained by J. H. Oldham, secretary of the International Missionary Council.

"The time has passed when the old thesis can be successfully maintained that a curriculum well suited to the needs of a group on a given scale of civilization in one country is necessarily the best for other groups on a different level of advancement in another country or section. This was the natural mistake generally made by New England in dealing with the Negro in the southern states of America immediately after emancipation. For the many as distinct from the few, the results were small in comparison with those that came later based on General Armstrong's vital work at Hampton where education was adapted directly to a people's needs. Here there was real education."

"There are physicians, lawyers and ministers who have completed the requirements of European universities. While the number is small, it is sufficient to prove the capacity of the people. The clerical tasks of government, industry and commerce are very largely entrusted to young African men. The mechanical operations on railroads and in construction are more and more being taken over by African workmen. Every mission gives emphatic testimony to the value of the Native teachers and ministers."

"The wholesale transfer of the educational conventions of Europe and America to the peoples of Africa has certainly not been an act of wisdom, however justly it may be defended as a proof of genuine interest in the Native people. Now that the futility of many of these conventions for advanced social groups has been recognized, is it not imperative that the Africans and their friends shall urge the greater

injustice of applying them to the widely diverse conditions of the primitive groups in Africa? The too frequent charges of the failure of Native education are traceable in part to the lack of educational adaptation to Native life."

"It is significant that some of the Indian leaders of thought have recently charged much of the unrest in India to the fact that the schools have too exclusively prepared the young Indians for literary and clerical occupations to the neglect of the activities that are more fundamental in the economic and social development of their great country. Thus there has been an over-supply of school graduates who are prepared to write and talk, and an under-supply of those who can till the soil and engage in the great and numerous mechanical operations of the country and share in the social improvement required by the masses of the people. Other complaints of African education have come from chiefs who have observed that their youth were estranged from their own people and no longer willing to cooperate in the life of their Native communities."

"The simple virtues urged as educational ends by mission and government teachers are perseverance, thoroughness, order, cleanliness, punctuality, thrift, temperance, self-control, reliability, honesty, and respect for parents."

"The type of organization must be determined by the educational ends to be attained and by the economic, social and educatbnal conditions of the area where the school system is located. The educational ends may be classified as follows:

1. The training of the masses of the people.
2. The education of Native leadershipl
3. The educational preparation of those who must pass the conventional tests required by professional schools."

"Education must be planned with full regard both for the elevation

of the masses and for the development and training of Native leaders. At present many missions do not seem to be conscious of this necessary differentiation. Some have been intent on offering education and religion to the masses of the people seemingly with no provisions for Native leadership. Others are maintaining schools of the so-called "higher types" with little evidence of preparing their students to serve the masses of the people. A fundamental requisite of effective training of the masses is the determination to produce Native leaders of moral force who will help extend education far and wide. Equally fundamental is the requisite that the education of Native leadership shall be definitely rooted in the needs of the masses of the people."

30-26-22

"The colonial chapters of this Report indicate the extent to which governments and missions have succeeded in this great responsibility. As yet they have really made only a beginning."

"In others the proportion of the Native youth in any kind of school is almost negligible. Even on the quantitative test, educational facilities in Africa are really only a promise of what should and what can be done for the masses in this great continent."

"There has also been much confusion as to the place and value of Native leaders in colonial development. The tendency to discount the Native leadership of a primitive people is almost universal. Such depreciation often exists on the part of one civilized group toward another as well as among uncivilized groups in inter-tribal relations. It is not strange that Europeans of education and power should fail to understand the possibilities of Natives as guides of their own people. Some Europeans seem even to resent the suggestion of Native participation in the leadership of their own people. These antagonistic attitudes toward Native leadership and even any degree of education for the Native people are based in part upon the general tendency to undervalue primitive peoples; but they are also due to the type of education that has

been too often attempted in the past. It is difficult to imagine greater errors than those that have been committed in the name of education not only in Africa, but also in Europe and America."

30-26-23

"'Learning by doing' is as vital in the training of teachers as in the preparation of any other group of workers."

"This institution should modify the present course, almost exclusively classical and literary and intended to prepare for an English college, to a course which would provide adequately for physical sciences, including chemistry, physics, biology, physiology and hygiene, and agriculture; social studies, including modern history, economics, and sociology; modern languages; the languages of the aborigines; ethics, psychology, and the art of teaching. Students should be shown how to minister to the community needs of the people by neighborhood activities under the direction of the college. The sympathetic attitude of the African people towards these changes is indicated by appropriations by Africans to found a department of science."

"The course is adapted to the preparation for the University of Durham's Arts course in theology and classics, English, Latin and Greek. The school has been affiliated with Durham University since 1876. Of the 548 pupils, about half have taken a University degree. In 1920 the course for Durham's modern B.A. superseded the old course in litteris antiquis.

BOOKS

Carl Van Vechten's "Nigger Heaven" is a blow in the face. It is an affront to the hospitality of black folk and to the intelligence of white. First; as to its title: My objection is based on no provincial dislike of the nickname. "Nigger" is an English word of wide use and definite connotation. As employed by Conrad, Sheldon, Allen and even Firbank, its use was justifiable. But the phrase, "Nigger Heaven", as applied to Harlem is a misnomer. "Nigger Heaven" does not mean, as Van Vechten once or twice intimates, (pages 15, 199) a haven for Negroes—a city of refuge for dark and tired souls; it means in common parlance, a nasty, sordid corner into which black folk are herded, and yet a place which they in crass ignorance are fools enough to enjoy. Harlem is no such place as that, and no one knows this better than Carl Van Vechten.

36-2-139

But after all, a title is only a title, and a book must be judged eventually by its fidelity to truth and its artistic merit. I find this novel neither truthful nor artistic. It is not a true picture of Harlem life, even allowing for some justifiable impressionistic exaggerations. It is a caricature. It is worse than the truth because it is a mass of half-truths. Probably some time and somewhere in Harlem every incident of the book has happened; and yet the resultant picture built out of these parts is ludricously out of focus and undeniably misleading. The author counts among his friends numbers of Negroes of all classes. He is an authority on dives and cabarets. But he masses this knowledge without rule or reason and seeks to express all of Harlem life in its cabarets.

To him the black cabaret is Harlem; around it all his characters gravitate. Here is their stage of action. Such a theory of Harlem

is nonsense. The overwhelming majority of black folk there never go to cabarets. The average colored man in Harlem is an everyday laborer, attending church, lodge and movie and as conservative and as conventional as ordinary working folk everywhere.

Something they have which is racial, something distinctively negroid can be found; but it is expressed by subtle, almost delicate nuance, and not by the wildly, barbaric drunken orgy in whose details Van Vechten revels. There is laughter, color and spontaneity at Harlem's core, but in the current cabaret financed and supported largely by white New York, this core is so overlaid and enwrapped with cheaper stuff that no one but a fool could mistake it for the genuine exhibition of the spirit of the people.

36-2-140

To all this the author has a right to reply that even if the title is an unhappy catchphrase for penny purposes and his picture of truth untruthful, that his book has a right to be judged primarily as a work of art. Does it please? Does it entertain? Is it a good and human story? In my opinion it is not; and I am one who likes stories and I do not insist that they be written solely for my point of view. "Nigger Heaven" is to me an astonishing and wearisome hodgepodge of laboriously stated facts, quotations and expressions illuminated here and there with something that comes near to being nothing but cheap melodrama. Real human feelings are laughed at. Love is degraded. The love of Byron and Mary is stark cruelty and that of Lasca and Byron is simply nasty. Compare this slum picture with Porgy. In his degradation Porgy is human and palpitating. But in "Nigger Heaven" there is not a single loveable character. There is scarcely a generous impulse or a single beautiful ideal. The characters are singularly wooden and inhuman. Van Vechten is not the great artist who with remorse scalped probes the awful depths of life. To him there are no depths. It is

the surface mud he slops about in. His womens' bodies have no souls; no children palpitate upon his hands; he has never looked upon his dead with bitter tears. Life to him is just one damned orgy after another with hate, hurt, gin and sadism.

Both Langston Hughes and Carl Van Vechten know Harlem cabarets but it is Hughes who whispers

"One said he heard the jazz band sob
When the little dawn was grey".

Van Vechten never heard a sob in a cabaret. All he hears is noise and brawling. Again and again and again with singular lack of invention he reverts to the same climax of two creatures tearing and scratching over "mah man"; lost souls who once had womens' bodies; and to Van Vechten this spells comedy, not tragedy.

39-2-141

I seem to see that Mr. Van Vechten began a good tale with the promising figure of Anatol, but that keeps turning aside to write in from his notebook every fact he has heard about Negroes and their problems; singularly irrelevant quotations, Haitian history, Chestnutt's novels, race-poetry, "blues" written by white folk. Into this mass he drops characters which are in most cases thinly disguises; and those who know the originals have only to compare their life and this death, to realize failure in truth and human interest. The final climax is an utterly senseless murder which drops without preparation or reason from the clouds.

I cannot for the life of me see in this work either sincerity or art, deep thought, or truthful industry. It seems to me that Mr. Van Vechten tried to do something bizarre and he certainly succeeded. I read "Nigger Heaven" and read it through because I had to. But I advise others who are impelled by a sense of duty or curiosity to drop the book gently in the grate and to try the Police Gazette.

Balch, Emily G., ed. Occupied Haiti. N.Y.: Writers' Pub. Co., 1927.

OCCUPIED HAITI

"Occupied Haiti" edited by Emily Greene Balch "being the report of a committee of six disinterested Americans, representing organizations exclusively American, who have personally studied conditions in Haiti, 1926, favor the restoration of the independence of the Negro republic". This is the book for which we all have long been waiting. The facts concerning the American occupation of Haiti have been meager and difficult to get at, and while the excellent work of Mr. Ernest Greening and Mr. J. W. Johnson have thrown a flood of light on Haitian conditions, there has not been until now a single volume which contained the whole story. The pilgrimage to Haiti which resulted in this book was started by the Women's International League for Peace and Freedom. The membership of the Committee were consisted of two colored women, Miss Charlotte Atwood of the Washington Public Schools and Mrs. A. W. Hunton, three white women, Miss Zonia Barber, former Professor in the University of Chicago, Miss Balch, a Professor in Wellesley College and Mrs. J. H. Watson of the Fellowship of Reconciliation. Paul H. Douglas of the University of Chicago was the sole male member of the Committee. The report beging with a short history of Haiti, followed by a political history of the occupation. It is a story of inexcuseable aggression, distortion of the truth, cheating and discrimination. "The excuse which is generally given for the American occupation of Haiti is that it was necessary to prevent foreign intervention". This was untrue. German cruisers have been swept from the seas, the French had absolutely no intention of interfering, England was too busy and

36-1-21

"it seems, therefore, that there was virtually no danger of foreign intervention. Nevertheless, Haiti was seized and a treaty forced upon her by armed soldiers. Haiti is now held by American officials receiving double salaries and costing the United States a million dollars a year. The report looks carefully into the economic and financial aspects of the American Occupation and shows the large profits which the National City Bank of New York City is making. There are two chapters on the land, showing how the way has been for driving out the Haitian peasants and monopolizing the land by foreign corporations. A high-priced Director of Agriculture at $10,000 a year has led as yet to no particular results. In general the American Occupation has done little or nothing for education in Haiti. In racial relations the United States has sent the worse class of Southerners to have charge of affairs, while the marines have spread prostitution and veneral disease. Civil liberty is gone. Private letters are ppened, editors are imprisoned and the Committee finally concludes:

36-1-22

"From the point of view of United States interests, in the most "hard-boiled" sense, there is little to be said for the continuance of our Occupation of Haiti. American investments there have in general not proved a source of legitimate profits, but of loss, and there is now nothing to justify, from the selfish point of view, the continued expenditure of United States money in administering the country.

"From the point of view of Haiti's interests, it is not true that we are in Haiti solely as disinterested benefactors, nor that we can show clean hands in our business dealings there. If our officials have tried to benefit the people of Haiti, (as we believe they have), it is also true that the Occupation has cared for American financial interests there, of a none too creditable sort, at the expense of our poor and weak neighbors.

"Happily it is not the case that the United States is confined to the alternative of either occupying Haiti, or else regarding her necessities with indifference and unconcern. It is perfectly possible to be a good neighbor and help Haiti to attain health, education, public improvements and public order, by other less drastic, and ultimately more effective methods than military control.

"The authors of this report believe that the Occupation should be ended for the sake of Haiti, for the sake of the United States, and especially for the sake of good relations among all American republics, and finally because it is in itself an unjustified use of power."

36-1-23

Olivier, Sidney. The Anatomy of African Misery. London: Hogarth Press, 1927.

Review: "Books I Have Read Recently", Amsterdam News, August 22, 1927, p. 4.

By far the most interesting recent book on Africa is "The Anatomy of African Misery" by Lord Olivier. We all talk about South Africa. Some of us recognize it on the map. Others know that there is a Negro problem down there that has some resemblance to ours, but they are not clear as to just how it resembles our problem and how it differs. This book will tell them. The man who wrote it was former Governor of Jamaica. He is not simply a "friend" of the Negro race, he is an intelligent student of their difficulties and in this book of 234 pages published in England he explains the Negro problem of South Africa.

It is a problem that differs in several fundamental respects from our problem in the United States. Instead of having a population predominately white with less than one-tenth of Negro descent, the Union of South Africa has a population predominately black and brown out of which less than 25% are white. The black population for the most part is without education and is only recently getting leadership. This shows that the white people are in great fear of Negroes and this fear is shown in the way in which they are trying to put even the lowest of the whites above the best of the blacks. Lord Olivier says:

The matured and combined result of this economic and political history has been to establish throughout South Africa, but most uncompromisingly in the Bantu lands outside of the Cape Province, colonised by the Boers, a discrimination between white man's status and Kaffir status—and, correspondingly, white man's work and Kaffir's work—the latter including all unskilled manual labour. The white man commands, directs, supervises; the black man works. Further, the employer in all classes, acting in accordance with the essential principles of capitalist economics, has consistently taken advantage

27-4-29

of the cheapness of the subsistence needs of the Kaffir, of his ignorance of the ways of white civilization and of his political impotence to keep down the wages of all unskilled labour to levels at which the white man cannot live on them. Agriculture predominated, and in other nascent industries it could not be permitted that wages should tempt black labour away from the farms."

To all this has been added the great investments in diamonds and gold mines and the consequent exploitation of labor. Here there is a tremendous discrimination in wages:

"The white man's wages, then, for all employments on the Rand, average seven times those of the black, including rations and housing, and in mining work with machines, done by Kaffirs bossed by white men, the proportion is from ten to one upwards. The proportion of the wages of skilled to unskilled labour in England in similar work averages fifteen to eleven—in the engineering trades about fourteen to ten. The high white wages, it is uncompromisingly recognized and stated, can only be paid on condition of natives alone being employed for all unskilled and semi-skilled labour, and being paid at a sweated wage.

The mining industry sets the standard of wages for all White South African skilled labour, and a ratio between white and black wages of from over ten to one down to six to one runs through the whole structure of industry. This direct dependence of the white worker's very high wages (the highest in the Old World) upon the very low wages of the native labourer is the secret of the philosophy of the industrial colour bar, extensively applied previously in practice, and recently embodied in legislation at the demand of the white South African Labour Party."

One can imagine from this the situation in this land and the way it is differing. No wonder that a native South African white author writes:

"The attitude of the colonists is absolutely suicidal.

37-4-80

They rely solely on machine guns for their supremacy. All the labour of the country is performed by natives: the whites are degenerating very quickly; they have been morally defeated by the native's power of suffering, by his tenacity of life, and lastly but most importantly, of the black man's sense of humour."

Buell, Raymond Leslie. The Native Problem in Africa. 2 vols. N.Y.: MacMillan Co., 1928.

Review: "Africa", The World Tomorrow, Vol. II, pp. 420-421, October 1928.

Fragment

natives and native life to this economic régime. The fact is patent that capitalistic industry as organized at present does work and achieve surprisingly successful results in Europe and America. But all men know that these results are becoming in great measure dependent upon the profits of capitalistic industry in Africa, Asia and other parts of the colored world. Especially in Africa, modern industry is ~~not~~ working; untold ill and the difficulty with Mr. Buell's otherwise excellent work, is that he either does not realize this or does not think it wise resolutely to face this aspect of the problem.

30-1-125

The unfortunate results of this point of view show themselves all through the book. Continually, we face the most puzzling impasses; and when Mr. Buell has pointed out the difficulty in one case, in the next case, where this trouble does not appear, some other equally baffling difficulty does show itself. For instance, in Kenya and East Africa the main difficulty would seem to lie in compelling the natives to give up their land and to work for the resident whites. But in West Africa the natives have their land, and compulsory labor is at a minimum. Yet the difficulty there lies in social and industrial leadership. Shall it be that of the dominant whites, minority or of educated natives?

If the dominant whites lead, we have a situation like South Africa travelling backwards from every modern ideal; if a Negro elite is educated, as French Africa has tried to do, this involves a social equality of whites and blacks in government, which Anglo-Saxons, (and Mr. Buell as one), does not like. Moreover, ~~will the~~ can a black elite lift the black mass? The English doubt the results of black leadership of the blacks, but Mr. Buell has to acknowledge that in Liberia there is less tension between the educated blacks

White, Newman I. American Negro Folk Songs. Cambridge, Mass.: Harvard University Press, 1928.

Review: Unpublished?

AMERICAN NEGRO FOLK SONGS. By Newman I. White.

Harvard University Press. $5.00.

Reviewed by W. E. Burghardt Du Bois.

The significance of the American Negro can be noted by the character of the persons who are making him a study. For a long time only foreign visitors noticed him and his work and his songs. Then the Abolitionists began to study him. Just before the war he began to study himself. After the war, those brought into close contact with him through the schools, edited his songs and contributed to polemical literature.

Today, two sets of persons are studying the American Negro: the Negro himself through his trained intelligensia and the young Southern white man who is becoming aware of the interesting sociological development involved in this contact of races.

Newman White belongs to the second set of students and in this volume he has studied the American Negro folk songs. It is a work of industry and patience done after the most dogged scientific method. It is neither interesting nor readable, but it is a kind of work worth doing if we are to understand the esthetic development of black folk in America.

Naturally, Mr. White apologizes for the South and this somewhat disturbs his scientific calm. He believes that the white South was interested in the religious development of the Negro and that the Negro slave was not always or even usually a child of sorrow. But allowing for all this natural bias, Mr. White has written with poise and knowledge a book which for a long time must remain a landmark for those who study the Negro.

49-33-63

His main thesis is that the American Negro has created a folk song which is not simply the imitation of white music or thoroughly African by heritage. Mr. White has collected nearly some eight hundred songs of all sorts: religious songs, narratives, dance songs, animal songs, work songs, songs about women, songs from the gutter, songs of race consciousness, and "blues". One could almost wish that he had not been so thorough and had sifted out a good deal that seems of little real significance or importance. Especially does one miss in this book the artistic feeling for beauty which must interpret song. And yet this plowing up of the ground must be done by artisan if not by artist and Mr. White's work proves his own dictum that since the World War "A new element had entered into the history of the Negro folk songs. The white man's interest was now for the first time predominantly objective and scientific. No longer patronizing or purely sentimental."

E. C. L. Adams' "Nigger to Nigger". Scribners.

The author of "Congaree Sketches" has given us another volume of the philosophy of Negroes in the Congaree section of South Carolina. The work of Mr. Adams must not be confounded with Harlem cabaret stuff or with the impossible "Rainbow 'Round My Shoulder". The stuff published here is serious and often beautiful and the outlook upon life is everything that a black man could wish. Take, for instance, a bit from "The Yallaw Bastard".

"De door is shet to me. Hemmed in on every side, I has nothin' but dreams. An' my thoughts is floatin' out, floatin' far above de tall tree tops, here an' dere, listenin' to de wind's soft tune above de tree tops an' de clouds. Across de stars dey wander for a lonely moment, an' den back again an' down, down, down into de mire. For de door is shet to me. Hemmed in, hemmed in on every side."

Metfessel and Seashore. "Phonophotography in Folk Music". University of North Carolina Press.

This is an interesting attempt made possible by a grant of the Laura Spelman Rockefeller Memorial to photograph Negro songs.

"This group of songs constitutes the first sustained effort to preserve selections from a particular type of folk music by the method of phonophotography. The camera has been substituted for the conventional phonograph, and scientific notation has been substituted for the conventional musical notation.

47-4-174

"In this age of extraordinary spread of civilization into the remotest parts of the earth, primitive folk traits are being obliteratedand lost at an amazing pace. Shall we preserve the native songs of our Indians, our Negroes, our Hawaiians, our Filipinos? Shall the scientific collection of the songs of the most primitive peoples be taken seriously, together with other anthropological collecting? Let us hope that the present trial of instruments and methods of collecting songs in the field may arouse investigators to a recognition of the great value of this type of collections and the necessity of doing it at an early date, unless we shall forever lose the opportunity of recording permanently some of the most interesting expressions of folk life which are now being wiped out by the march of civilization."

We are glad to welcome again the annual "Black Opals", published by young colored writers of Philadelphia and edited by Nellie R. Bright, Arthur H. Fauset, Allan R. Freelon and James H. Young. It consists of three drawings and twenty poems. The poems are of a high order, particularly the opening one by Marjorie Marshall.

Olivier, Sir Sidney. White Capital and Colored Labor. Revised ed. London: Hogarth Press, 1929.

Review: "The Negro in Literature: May to September 1929" The Crisis, Vol. 36, No. 11, pp. 376-377, 392. November 1929

Aptheker # 863

Sir Sidney Olivier's "White Capital and Colored Labor" was a little book published by English Socialist in 1906. It was soon recognized as the best and fairest statement of the problems of the emancipated British Negro and there has long been wide demand for its reprinting. Lord Olivier (as the author is now known) has at last this year brought out a new edition, rewritten and revised. The book is now an octavo of 348 pages published by the Hogarth Press of London at $3.00. In this book the author has formulated the judgments impressed upon him by forty-seven years of close contact with the industrial and social problems of mixed communities of white and colored men in the course of service in the government of Africa and West Indian Colonies and as a Cabinet Minister, the Secretary of State for India.

The book is indispensable to students of Negro problems.

Black Manhattan. By James Weldon Johnson. Alfred A. Knopf, Publisher, New York, $2.50.

Mr. Johnson says in his preface: "It has not been my intention to make this book in any strict sense a history." This is true. The book is, in fact, a three-part essay, of which the second part, from chapter seven to chapter eleven, is the most gripping and characteristic.

This is the story of how the flower of Negro art forced itself up from the manure of the New York "Tenderloin". There are few more fascinating stories, and Mr. Johnson tells it from the point of view of one who in its most important years was a part of it; who lived through it and helped to make it; who was personally acquainted with its chief characters, and who felt perhaps more than others, its inner rhythm and meaning.

42-6-98

The first six chapters are historical, bringing together much that is familiar to colored readers but important enough for retelling. It discusses the history of the Negro in Manhattan from the early 17th Century, down until the Civil War, discussing especially Negro education and the growth of Negro journalism.

But this part of the book with its research and figures might have been done by any careful student. With chapter seven, the tempo changes and James Weldon Johnson, the poet and genial good-fellow among men, shakes off the trammels of the historian, and begins to speak with authority and throbbing interest of Harlem:

"Harlem is today the Negro metropolis and as such is everywhere known. In the history of New York the name Harlem has changed from Dutch to Irish to Jewish to Negro; but it is through this last change that it has gained its most widespread fame. Throughout coloured America Harlem is the recognized Negro capital. Indeed, it is Mecca for the sightseer,

the pleasure-seeker, the curious, the adventurous, the enterprising, the ambitious, and the talented of the entire Negro world; for the lure of it has reached down to every island of the Carib Sea and penetrated even into Africa. It is almost as well-known to the white world, for it has been much talked and written about."

Johnson begins his intimate sketch of Harlem with the horseracing of the 80's, the baseball players who followed them, then, the pugilists. This brings him to a description of the black Bohemia of the 90's:

"New York's black Bohemia constituted a part of the famous old Tenderloin; and, naturally, it nourished a number of the ever present vices; chief among them, gambling and prostitution. But it nourished other things; and one of these things was artistic effort. It is in the growth of this artistic effort that we are here interested."

Here in chapter 8, begins the kernel of Johnson's book and the best contribution ever made to the history of Negro art, and especially of the drama. There is the story of the early attempts at dramatic presentation, as early as 1821; an excellent account of Ira Aldridge and the record of the Negro minstrels, white and black. In chapter 9, comes the tale of the singers, the Luca family and the celebrated Sam Lucas, and finally, by way of climax, Williams and Walker, Cole and Johnson, and Ernest Hogan.

Mr. Johnson is at his best in these chapters for a simple reason which he modestly does not mention that it was during the time of these actors, comedians and singers, that he left his law and school-teaching in Florida and came to New York to join his brother, Rosamond Johnson. He furnished the lyrics to many popular songs, and the literary flavor to some of the plays. He was a part of that first climax of Negro art in New York. The story of it is fascinating and complete, and runs through chapters 9, 10 and 11. One sees and lives with the efforts of Will Marion Cook, Abby Mitchel, the "Black Patti", Jesse Shipp, Alexander Rogers, Ada Overton Walker. The story is brought down to our own day

with references to Harry Burleigh, Jim Europe and W. C. Handy, "The father of the blues."

Chapters 12 and 13 go back to history but vivid history because again it was history that Mr. Johnson saw and knew. There is an account of the San Juan Hill riot of 1900 and of the way in which that became part of the warp and woof of the controversy which for years ranged about Booker T. Washington. The whole history of that controversy, naturally, has not been written but those who wish a sane and carefully balanced account should read chapter 12 of Mr. Johnson's book. I had rather dreaded this part of his narrative when I knew that he was going to write it because it is still so delicate and controversial a subject. But I read the chapter last night with a sense of relief and great satisfaction. I do not believe the story of the San Juan Hill riot, the Niagara movement, and the birth of the N. A. A. C. P., could have been more justly written in so short a space.

201-9-44

In this same section of his book Mr. Johnson chronicles the emergence of black Harlem. The way in which through a real estate war the Negro suddenly transported himself from the Tenderloin to one of the best residential sections of the city without riot or bloodshed, but against enormous odds, until at last he built himself a city within a city. Chapter 14 is a description of Harlem. It is almost as good as a visit, careful, discriminating and vivid:

"Within the past ten years Harlem has acquired a world-wide reputation It has gained a place in the list of famous sections of great cities. It is known in Europe and the Orient, and it is talked about by natives in the interior of Africa. It is farthest known as being exotic, colourful and sensuous; a place of laughing, singing, and dancing: a place where life wakes up at night.

"But, of course, no one can seriously think that the two hundred

thousand and more Negroes in Harlem spend their nights on any such pleasance. Of a necessity the vast majority of them are ordinary, hard-working people, who spend their time in just about the same way that other ordinary, hard-working people do. Most of them have never seen the inside of a nightclub. The great bulk of them are confronted with the stern necessity of making a living, of making both ends meet, of finding money to pay the rent and keep the children fed and clothed neatly enough to attend school; their waking hours are almost entirely consumed in this unromantic task."

Having now done his real task, in the last chapters, with one exception, the author wanders, foot-free, and comments on Negro theater and song during the last ten years. The one chapter which is an exception, is chapter 18, which treats of black New York in the world war and of the inter-connected rise of Marcus Garvey. With his comment on the newer Negro plays, even including Green Pastures, there is the story of the literary and artistic emergence of the Negro and an estimate of the younger writers, and all is concluded by this word of the last chapter:

"Harlem is still in the process of making. It is still new and mixed; so mixed that one may get many different views--which is all right so long as one view is not taken to be the whole picture. This many-sided aspect, however, makes it one of the most interesting communities in America. But Harlem is more than a community; it is a large-scale laboratory experiment in the race problem, and from it a good many facts have been found."

All together, this is a book to be read and enjoyed, covering for the most part a field quite new to Americans, and done in genial almost colloquial English, clear in meaning, and exhilarating in tone.

Embree
[1931]

Brown America. The story of a new race. Edwin R. Embree. New York: Viking Press.

Mr. Embree has made a book of the Negro problem interesting because of the novelty of his approach. Born in the South, he knows the kind of talk that Southerners decline to listen to, and, on the other hand, as the grandson of the founder of Berea College, an Abolitionist who was mobbed twenty-two times, Mr. Embree is a Liberal and knows what the South must learn and think about if it is going to be civilized. His approach, therefore, to the main subjects is most interesting. What, for instance, one can say to the South about the Negro in Reconstruction, the question of miscegeneration, the problem of racial absorption and lynching. Mr. Embree's approach to Reconstruction is perhaps the most dramatic thing in the book. Without questioning the questionable assaults of men like Bowers, the author quotes a disgraceful instance of grafting, and then almost as an aside, remarks that this refers to New York City and not to the South. After that, he has a chance to say:

"Whatever their faults and foibles, these Reconstruction legislatures have a good deal to their credit. They instituted school laws with mandatory provisions for control and support and so gave the South its first adequate public school system. They opened the ballot boxes and jury systems to white men who had been debarred previously from an exercise of these functions by property qualifications. They extended local home rule in southern states, abolished the whipping post, branding irons, and stocks, and established precedents of not invading the rights of persons—honorable precedents which have been sadly neglected in modern American practice."

16-11-34

In the matter of race mixture, his very title shows his thesis that a new race is already growing up in the United States compounded of black, white and Indian blood, and gaining a subtle psychology and recognizable racial characteristics. He deliberately turns aside to tell of the struggles of John G. Fee and then gives an excellent account of Negro education, with the quite innocent comment:

"Colored students were, of course, received on equal terms with white. My grandfather even insisted on having at least one Negro on the faculty as an overt evidence of lack of all discrimination. Things went well. The students got along together. Attending the preparatory school as a boy, it never occurred to me that it was anything out of the ordinary to study and recite with Negroes. Some of them were brighter than I was; some of them were duller. It all seemed very natural."

16-11-35

His treatment of Negro health and Negro labor, and especially of the current color discrimination, are all good, and he has a most sympathetic interpretation of Negro music and art. The book ends with a thoughtful note, because after all the logical summuration of his whole argument is that Negroes should be treated as men according to their deserts, and if they are treated as men, there naturally must be social contact and intermingling. But Embree says:

"My fear is not that the Negro will not be absorbed into American life, but that he may be so completely "Americanized" that, ceasing to have any characteristic individuality, he will simply swell the ranks of standardized mediocrity. This nation, in my opinion, can better have a little irregularity, even a little disorderliness and lack of complete prosperity, rather than flatten out into a dull uniformity."

Johnson, James Weldon. Negro Americans, What Now? N.Y. Viking Press, 1934.

"Negro Americans, What Now?", by James Weldon Johnson. The Viking Press, 103 pages, $1.25.

37-8-57

James Weldon Johnson, professor of creative literature at Fisk University, formerly Secretary of the National Association for the Advancement of Colored People, and before that in the consular service of the United States is an author and publicist whose word merits attention.

Turning from his literary work which has included poetry, history, music and autobiography, Mr. Johnson now addresses himself primarily to the American Negro and asks what he is going to do about his present situation? He does not "devote any part of this booklet to cataloguing the wrongs we suffer, and the humiliations that are put upon us," but asks: "What to do about them?"

The book is in 4 parts; the first part examining the possible choices that are before the Negro; the second, his resources; the third, techniques and policies, followed by the conclusion.

Mr. Johnson points out that the Negro may leave the United States or be forced to leave; that he may attempt physical force by himself or in collusion with the Communists; or he may face the question of isolation or integration, that is, whether he will build up a separate inner organization or seek to integrate himself entirely in national life.

The author points out the power of the Negro: his numerical strength, the Negro church, the Negro press, and numerous other organizations; and suggests that all these organizations ought to be concentrated under a super-power which he thinks might be the National Association for the Advancement of Colored People.

He is firmly of opinion that of the choices offered the Negro that only integration with the nation is possible, and that all Negro resources should be used to accomplish this.

He is firmly of opinion that of the choices offered the Negro that only integration with the nation is possible, and that all Negro resources should be used to accomplish this.

The technical method should be by education so that the Negro youth would know, first, the world about him, and secondly, his own relation to it and the accomplishments of his race. Then, the education of white people to understand the Negro, the use of politics, labor and business to advance the Negro group and bring that integration into American life. This calls for leadership, for a disposition among young Negroes to choose the proper leader; for patronage of Negro literature and art; and above all, for a million dollars to be used in propaganda.

37-8-58

In this program there is nothing essentially new, although it is put in a fresh and telling way with references to current events and problems.

As a feasible program, it invites criticism from two points of view. First of all, Mr. Johnson fails to realize the vast economic changes through which the world is going today; and secondly, he does not, to my mind, satisfactorily treat the subject of segregation and integration. To take the last first, I am sure that unwittingly, he misinterprets my stand on segregation. I repeat, therefore, a statement which I asked the National Association to adopt a year ago:

"The segreation of human beings purely on a basis of race and color, is not only stupid or unjust, but positively dangerous, since it is a path that leads straight to national jealousies, racial antagonisms, and war.

"The National Association for the Advancement of Colored People, therefore, has always opposed the underlying principle of racial segregation, and will oppose it. But, on the other hand, it has with equal clearness recognized that when a group, like the American Negro, suffers continuous and systematic segregation, against which argument and appeal are either useless or slow in effecting changes, that Negro Americans

must make up their minds to associate themselves for their own uplift and self-respect, and to make every effort to build their segregated institutions, like churches, schools and universities, fraternities and business organizations, into just as efficient human organizations as it is possible to make them. And that they should do this, not with the idea of perpetuating artificial separations of mankind, but rather with the distinct object of proving their own efficiency, showing their own ability and discipline, and demonstrating how useless and wasteful race segregation is. Particularly today, in the economic re-building of the nations of the world, the American Negro, while he fights segregation and discrimination in the right to work, must after all work and not allow the segregated situations forced upon him by race prejudice to be used for his separation and starvation."

37-8-59

The Association did not adopt this and yet by no stretch of imagination could this be called a brief in favor of segregation. It is, however, a realistic appraisal of our present condition. I have deep respect for Mr. Johnson when he says: "I will not allow one prejudiced person or one million or one hundred million to blight my life. I will not let prejudice or any of its intended humiliations or injustices bear me down to spiritual defeat." Booker Washington once made a similar statement. And yet the fact is that Mr. Washington, Mr. Johnson and I are quite helpless in the matter. There isn't any doubt about it, whether we will or no, color prejudice in America sears our souls; it shrivels up our finer qualities and provincializes our outlook.

I think Mr. Johnson has escaped this terrible result more than most of us. He remains genial and calm. As for myself, I am perfectly aware that Negro prejudice in America has made me far less a rounded human being that I should have liked to have been. Nevertheless, all Negroes face the fact that even if they want to be integrated in American life, the overwhelming mass of the nation does not want them and in its present spirit will not have them. Therefore, it is wrong to say that we have that possibility of solution before us. We have not. What we have to decide is,

whether we will leave this country or fight for our rights, or join the revolution, or organize ourselves inside the country separately and peaceably as far as such organization is necessary and possible.

Beyond this, we must remember that insofar as Mr. Johnson's solution depends on the accumulation of capital by Negroes and the exploitation of workers, it lags behind the clearer thought of the day. We must as Negroes envisage a mass of people without rich capitalists, with a minimum of privately owned capital, and with a maximum of capital owned by our own group; and we must strive as a group for the right to share in the increasing capital owned by the city, state and nation. Our whole attention has got to be concentrated on this program of poverty and co-operation. It is a difficult one, I freely admit, but the path to it does not lie in a million dollars worth of advertising. It lies in so organizing our power as consumers and our technique as producers that working within the great economic framework of the United States we begin to achieve solidarity with the laboring masses.

Woodson, Carter G. The Negro Professional Man and the Community. Washington, D.C.: Association for the Study of Negro Life and History, 1934.

Review: Unpublished?

Carter G. Woodson: The Negro Professional Man and the Community, with special emphasis on the physician and the lawyer. Association for the Study of Negro Life and History. Washington, 1934.

37-8-23

Free Negroes of the North, and to some extent of the South, furnished a professional class before the war. In the South, the group was naturally handicapped by laws which made it difficult for them to practice.

"Some of the actual figures of that early period will give a better picture of the situation. For example, Boston had two ordained Negro preachers in 1830, Connecticut had twelve such ministers and five musicians in 1850. At that time, Louisiana had one architect, six doctors, four engineers, one minister, four musicians, one music teacher, and fifteen teachers. Most of these were in New Orleans, there being the one architect, four of the six doctors in the state, one of the engineers, the one minister, the four musicians, the one teacher of music, and twelve of the fifteen teachers in that city. In New York City, in 1850, there were nine doctors, three druggists, four lawyers, twenty-one ministers, twenty-four musicians, and eight teachers. (pp. 4-5. Woodson.)

"In South Carolina, a Negro named Caesar, in 1792, practiced so successfully with his herbs and roots as a physician, that the Assembly purchased his fredom and provided him with an annuity." (Woodson, p. 6.)

A Pennsylvania newspaper in 1740, advertises for a runaway Negro, Simon, who can "bleed and draw teeth." (p. 5. Woodson.)

There were a few regularly registered physicians: James Derham in New Orleans, who had a practice of $3,000 a year in 1880.

"Visiting Dr. Derham some time later, a distinguished physician, Dr. Benjamin Rush, made this observation, "I have conversed with him upon most of the acute and epidemic diseases of the country where he lives, and was pleased to find him perfectly acquainted with the modern simple mode of practice on these diseases. I expected to have suggested some new

(Carter G. Woodson: The Negro Professional Man and the Community.)

medicines to him; but he suggested many more to me. He is very modest and engaging in his manners. He speaks French fluently, and has some knowledge of the Spanish language." (p. 7. Woodson.)

37-8-24

Dr. James McCune Smith of New York, studied medicine at the University of Glasgow, and began practicing in New York in 1837. He owned two drugstores, and discussed successfully the Negro deathrate.

There were colored dentists in Savannah and Atlanta before the war, and a pharmasist in Charleston.

"The career of Dr. Thomas Bayne, a noted dentist in the South, is almost romantic. He escaped as a fugitive slave from Norfolk by way of a boat to England, and returned to America at Boston. In that city, he soon acquired what would be considered today a secondary education, and then entered upon the study of dentistry. After completing his course, he practiced a while, but did not find this lucrative enough to resist the temptation to return to Norfolk for a political career immediately after the Civil War. He became one of the sharpest politicians of his time." (p. 9. Woodson.)

Dr. John V. DeGrasse and Dr. Thomas J. White, completed a course in medicine in 1849; and in 1854, Degrasse became a member of the Boston Medical Society. Four or five Negroes studied at the Harvard Medical School before the Civil War, and a number of other medical schools had Negro students. John S. Rock, who was the first Negro admitted to practice before the Supreme Court after the war, practiced both medicine and dentistry before he took his law course. Robert Morris practiced in Boston with great success, and acquired considerable property. ~~With~~ Edwin M. Bannister was one of the founders of the art movement in Rhode Island, which resulted in the School of Design. Edmonia Lewis, became a popular sculptor. Elizabeth Greenfield, began singing in 1851, and Ira

(Carter G. Woodson: The Negro Professional Man and the Community.)

Aldridge, born in 1804, had a distinguished career in England, and on the Continent. "His efforts were crowned with such distinction as the Gold Medal awarded by the King of Prussia, Maltese Cross with a Medal of Merit from the City of Berne, Grand Cross of the Order of Leopold from the Emperor of Austria, and another medal of the Royal Saxe-Ernst House Order from the Royal Academy of England. He was honored, moreover, with membership in the Imperial Academy of Arts and Sciences of St. Petersburg." (pp. 13-14. Woodson.)

37-8-25

In teaching, the Negroes made an early start.

"Some of these outstanding instances are interesting. We hear of the first school in the District of Columbia in 1807, established by George Bell, Nicholas Franklin, and Moses Liverpool; of Henry Smothers' School; of those of Louise Park Costin, Arabella Jones, Mary Wormley, John F. Cook, Benjamin McCoy, James Enoch Ambush, and Dr. John H. Fleet. We see the same sort of effort in Baltimore with Daniel Coker as its first Negro teacher of prominence to proceed independently. We learn, too, of Charles L. Reason in Philadelphia, and of Alexander Crummell in New York City. There were hundreds of Negro teachers in the United States in 1860, and 32,629 children of the free people of color attending school." (p. 15. Woodson.)

Negro ministers distinguished themselves.

"These were such as the unusual Lemuel Haynes, of the Congregational Church serving whites in New England, John Chavis, a preacher to both races in Virginia and North Carolina, the learned Alexander Crummell of the Episcopal Church, the radical Henry Highland Garnett of the Presbyterian Church, and the eloquent Samuel Ringgold Ward of the same connection. In spite of the restrictions at this time in the South, however, George Bentley was preaching to white Baptists in Giles County, Tennessee, and James Willis , another of the same denomination, was serving both races on frontier in Mississippi." (pp. 15-16. Woodson.)

(Carter G. Woodson: The Negro Professional Man and the Community.)

There were a number of Negro newspapers:

"As editors, Negroes of the ante-bellum period had surpassed their records as authors. In 1827, John B. Russworm and Samuel B. Cornish began the publication of The Freedom's Journal, appearing afterward as Rights of All. Ten years later, P. A. Bell was publishing The Weekly Advocate. From 1837 to 1842, Bell and Cornish edited The Colored Man's Journal, while Samuel Ruggles sent from his press The Mirror of Liberty. In 1847, one year after the appearance of Thomas Van Rensselaer's Ram's Horn, Frederick Douglass started The North Star at Rochester, while G. Allen and Henry Highland Garnett were appealing to the country through The National Watchman of Troy, New York. That same year, Martin R. Delany brought out The Pittsburgh Mystery, and others The Elevator at Albany, New York. That At Syracuse appeared The Impartial Citizen, established by Samuel R. Ward in 1848, three years after which L. H. Putnam came before the public in New York City with The Colored Man's Journal. Then came The Philadelphia Freeman, The Philadelphia Citizen, The New York Phalanx, The Baltimore Elevator, and The Cincinnati Central Star. Of a higher order was The Anglo-African, a magazine published in New York in 1859 by Thomas Hamilton, who was succeeded in editorship by Robert Hamilton and Henry Highland Garnett." (p. 17. Woodson.)

Middleton, Lamar. The Rape of Africa.
N.Y.: H. Smith & R. Haas, 1936.

Review: "Stealing a Continent",
The New Republic, Vol. 87,
No 1125, June 24, 1936, p. 210.

Africa

"The Rape of Africa", by Lamar Middleton, Harris and Smith and Robert Haas, New York, 1936. (331 pages.)

Professional historians will not like Mr. Middleton's book. It has long been a point of honor with historians trained in modern seminar methods to allow themselves no expression of moral indignation. They seek the aloofness and imperturbility of the biologist who dissects bugs, or the geologist who hammers stones. The difficulty is, however, that history does not deal simply with bugs and stones, but with human beings, and if it is written honestly and truthfully, it is impossible to be entirely and continuously unperturbed or to avoid sometimes getting plain mad.

Of course, if the indignation precedes a knowledge of the facts, or supplants honest and endless effort to know the truth, history becomes dangerous pasttime. But surely no more dangerous than the attitude of those obvious to human suffering, who write history in terms of material production and military power. If, after studying the history of Africa in the last sixty years, and studying it carefully and exhaustively, a writer can put down these facts with cold detachment, without bias or moral indignation, he is not a human being, and the object of many writers of history seems to be just that: to avoid being human.

47-11-26

"The Rape of Africa" is a horrible tale, even when its worst chapter is left out. Mr. Middleton does not, for instance, attempt to touch the slave trade: that extraordinary and unforgettable degradation of a continent which characterised the centuries that produced Raphael, Luther, Corneille, Shakespeare and Milton; and which witnessed the greatest growth and triumph of the Christian Church.

Mr. Middleton begins with the partition of Africa in 1877 and follows the establishment of the Congo Free State and its aftermath; the seizure of the diamonds and coal of South Africa; the fight over the Nile Valley; the Berlin Conference; the black Mahdi and the loss and re-capture of Khartum. He traces the red path of the British East Africa Company; the Italian-Abyssinian Treaty of Uccialli; the ruthless dreams of Cecil Rhodes; the scramble for Morocco, and ends

it all with the World War and Treaty of Versailles. May we quote one of a score of illustrious facts, in the case of Egypt in 1885:

> "Every political and economic consideration demanded that Britain remain top-dog in Egypt; any ethical consideration of what right England had at all in the country, or for that matter anywhere else in Africa, was of course irrelevant, and in the middle-class mind at home a thought both disloyal and impertinent. With the revealing directness characteristic of the best of his documents, Granville countered the renewed discontent of the Egyptians with the observation that 'it should be made clear to the Egyptian ministers and governors of the provinces that the responsibility which for the time rests on England obliges Her Majesty's Government to insist on the adoption of the policy which they recommend; and that it will be necessary that those ministers and governors who do not follow this course should cease to hold office."

Mr. Middleton comes to the conclusion with which many others have agreed; that the seed of world war was and is today in Africa, and that the reason of it is that the degradation of a race and exploitation of a continent, just as the degradation and exploitation of an industrial class is direct bid for crime and for the envirious fighting and suicide based on the loot of crime.

What we somehow fail to remember is that cruelties and crimes like those perpetuated in Africa are the direct result of that so-called scientific attitude of the writers of history, who tell the story of European imperialism in such a way that the average citizen of England, France and Germany regards it as a fine and glorious thing and a wonderful explanation of civilization.

And Mr. Middleton telling this story, frankly and in popular phrase, with no biting of tongue, gets indignant about it. His indignation rises to a climax in his final words:

> "The drift to war over Africa is unmistakable. That cheering outlook is the result of sixty years of duplicity and chicanery practised by the chancelleries of Europe. If a continent has been stolen from 140,000,000 natives, it is assuaging to remember that the fraud was committed in the holy cause of civilization; and that in compensation the African is tasting the transcendent delights of chain-gangs, taxes, military conscriptions, missionaries, flogging, gin, rum, jack-in-the boxes and other boons of Occidental invention."

I agree with Mr. Middleton. I think he has done a fine job, and I would to God that hundreds of thousands of Americans had the courage at least to read his story.

Caste and Class in a Southern Town. By John Dollard. Published for the Institute of Human Relations by the Yale University Press, 1937. $3.50

Reviewed by W. E. B. Du Bois

The story goes - I cannot vouch for its complete accuracy - that Dr. Hortense Powdermaker of the Yale Institute of Human Relations went to Indianolia, Mississippi, to make a sociological study of race relations taking Dr. John Dollard with her as a co-worker. Mass material was collected but Dr. Dollard, an expert psycho-analyst, got his material together first and rushed publication while the mass of sociological material still remains unpublished. This if true was unfortunate. Dr. Dollard's study is one of the most interesting and penetrating that has been made concerning the South and is marked by courage and real insight; but it lacks the proper sociological background and setting. One learns little about the population of Sunflower County, the progressive changes of its racial divisions, the age and sex classes and especially the basic land work and economic data. It would have been extraordinarily illuminating if this brilliant psycho-analytical interpretation could have been built on a thorough economic foundation.

As it is, the reader finds himself floating a bit in the air despite Dr. Dollard's repeated disclaimers. The tendency in the book is to make this study of a small spot in the Mississippi ~~Delta~~ bottom-land region, symptomatic and characteristic of the Negro population of the United States. Generalizations built on a few interviews with local Negroes almost inevitably tend, in absence of similar studies elsewhere, to become statements concerning the Negro race in Mississippi, the South, the United States, the world.

With this general criticism in mind, what Dr. Dollard has done is to settle down in a little southern town for several months and study caste as a psychic phenomenon in the light of Freudian psychology. He considers the general situation in a group

where there is a small Negro middle class, a large white middle class, practically no hereditary white aristocracy, an overwhelmingly large class of Negro peasants and a large class of competing poor whites.

He frankly faces the matter of bias in the investigator himself and in the testimony which he is collecting. The reader gets the distinct impression that more or less unconsciously the attitudes of the middle class whites weigh largest in his mind and that he is not altogether to be absolved from the very usual and widespread suspicion of the testimony of educated Negroes. Nevertheless his efforts are evidently honest and perhaps he approaches the unbiased scientific attitude as well as one could expect from a person unacquainted with the white South. In such a person astonishment that Civil War animosities still live, is apt to bulk large and this is clear in his chapter on "Attitudes toward the North".

His distinction of class and caste is illuminating and carefully worked out. First, there is a general chapter on the subject and in three following chapters, he takes up the "gains" or social advantages which the white middle class gets in income, sex and prestige. These chapters are the kernel of the book and they give at once the most frank and penetrating analysis of southern mentality which I have ever read. Their message will not be popular and will probably be bitterly resented in the South. They contain on the whole nothing essentially new as far as fact is concerned; but they raise fairly well known facts as to wage, levels of living, treatment, sex commerce and caste restrictions, from the level of the apparently unsupported statement of one observer to the higher plane of adjustment to widely known patterns of psychological reaction; so that their essential truth is recognizable because of their universality. Take, for instance, the matter of sex relations between white and colored people in the South: it has often been said that white men and colored women have contacts and that voluntary contacts of

white women and colored men are not unknown; but what Dollard points out is that these reactions follow human and well known patterns. White men by virtue of their caste position have access to two classes of women and that the very attempt to guard white women draws a burden of sex feeling toward Negro women and arouses in retaliation not only the resentment of Negro men but the jealousy of white women and retaliatory impulses in both and that this complicated interaction explains much of the situation in this little town and in the South.

Other chapters follow: caste in education, politics and religion paint by far the most favorable but by no means satisfactory situation in education and least satisfactory and most paradoxical in politics. Then follows the description of the reaction; the accommodation attitudes and submissions of Negroes; the fact that limited retaliation upon whites increases to a certain extent aggression of Negroes upon Negroes and that white aggression upon Negroes is at bottom a defense of income, of ownership of women and inflated ego carried out by actions which actually carry the war into dark territory for the ultimate sake of white integrity. All this is naturally defended by beliefs whose significance is not that they are true but that they are frantiely stated and believed in: the inherent inferiority of the Negro; in the impossibility of Negro education, and all that.

The gains of lower class Negroes by reason of economic irresponsibility and sex license are noted and the methodology of race prejudice arising from reaction to frustration and aggression and the lifting of tabu on hostilities; and particularly the ease of identification of the victim through color.

In an appendix there is a short study of the poor whites by Leonard W. Doob which is rather too narrow and limited to be particularly illuminating. Dr. Dollard's book marks a distinct advance in the study of the Souther scene. It fails to be completely satisfactory because of lack of underlying and explanatory sociological data; but when we can apply to the Southern situation not only sociological study but psychological interpretation we shall have made a distinct advance toward apprehending the truth.

Buell G. Gallagher: AMERICAN CASTE AND THE NEGRO COLLEGE

The title of this book does not do it exact justice for it is much more than a discussion of the Negro college. It is an interesting and intelligent estimate of the American caste system with historical and psychological insight. It is a study of education; education in general and the education of the Negro. It is especially a development of the idea of the functional college; that is, of the college which seeks to use education "as the means of critical analysis and the tool of social reconstruction."

Even this summary does not adequately show the wide reading and straight thinking together with practical experience, which has gone into this book. The first chapter poses the question as to what the slightly over one hundred institutions for higher learning of the Negro are going to do with their opportunity. Then comes a study of the nature of prejudice as shown by the historic rise of race feeling in the world and the development of racial antagonism in the United States against the Negro. The third chapter studies prejudice at work and especially the stereotypes and minor difficulties and irritations. The fourth chapter surveys the fully developed color caste system as we have it today, charting it in detail with interesting plans and statistics and making no effort to minimize the facts. With this goes a study of pathological results of caste, and the reaction of the Negro arising from the very fact of segregated training.

This caste system raises dilemmas for both white folk and black which are discussed in the sixth and seventh chapters and in the eighth the matter is summed up in the argument that even the Achilles of prejudice has a vulnerable heel. Then comes the argument of the place and opportunity for a functional college among Negroes as contrasted with the old classical type, the industrial school, the opportunist

program and the school of pure inquiry. There is a strong chapter on democracy as a method of college administration and of the relation of the college to its wider campus of surrounding colored and white folk. A final chapter discusses teaching in a college "without caste".

There are two interesting appendices: one a thought provoking study of the economics of lynching and another a statement as to the so-called intelligence tests. Throughout the book there are all sorts of excursions, illustrations and comparisons, among which stands out the comparison of Odum of 1910 and Odum of 1936. Any one who wishes a discussion of education as it looks to a deeply interested teacher of today and as it is illustrated in the case of one group of Americans, will have here opportunity to read an excellent book on the subject done in vivid English and backed by earnest convictions.

Hortense Powdermaker, AFTER FREEDOM, A cultural Study of the Deep South, New Y[redacted]
Viking Press, 1939. 408 plus xvii pages.

Miss Powdermaker's study of Indianola, Mississippi shows a very complete and thorough digestion of the raw material upon which the study is based. It indicates the newest technique in studying group and cultural problems in this country: first came the statistical study, which tried to count facts but ended usually in a more or less foggy abstraction of figures, some of which were interpreted more or less thoroughly and others left entirely without interpretation. Then came the sociological study with statistical samples which is the prevailing mode today. Miss Powdermaker's study marks the advent of cultural anthropology into the study of the American Negro problem. She attempts "to apply to a segment of contemporary American society the training and methods of a cultural anthropologist and whatever perspective had been gained through field work in civilizations other than our own." She sees "no reason why anthropology should not be used to help make our civilization, as well as savage ones, intelligible." In pursuit of this goal Miss Powdermaker has made a very careful and consistent study, with every effort to suppress bias, sticking almost too straitly to her subject and revealing in the finished story few obtrusions of the mass of irrelevant and contradictory data which she must have collected.

The first query which naturally arises in the mind of the reader is: why there should be two books on this one little center, one by Dollard, a psychological sociologist, and the other by this cultural anthropologist; both agreeing in manner of treatment and in main conclusions; and why we should still lack the factual background which a thorough statistical study might easily supply. Evidently there is here a suppressed story of scholarly bickering which need not detain us and yet intrigues us, and concerning which Miss Powdermaker is rather loftily unconcerned merely remarking that she makes "no references" to Dollard's study, since her

41-12-92

manuscript was written first. This is a better, clearer study than Dollard's but less human especially in treatment of sex.

Nothing gives more eloquent testimony of the extraordinary atmosphere of fear and even violence that rests upon this community than the care with which the student approach had to be made; the explanations, the warnings; and last but not least, the fact that the author, sensing offense, capitalizes the word white "because the word Negro is capitalized throughout the book."; The book is confined mainly to a consideration of the colored group with only passing reference to the whites, "as a social atmosphere". It is based on repeated interviews with nearly one hundred Negroes over the better part of a year, and on two hundred and fifty-six questionnaires sent out among the whites. After an introduction concerning the approach and method of study, Miss Powdermaker divides her book into six parts: a seventy page study of the general social scene, of which fifty-five pages are devoted to the whites. The rest of the book deals almost exclusively with the Negroes.

The economic background is given sixty-five pages about equally divided between town and plantation. Cotton culture and land ownership are here considered, interrelation of the town and country group stressed, and the fact that the New Deal has brought to this part of Mississippi "the rather incongrous elements of paternal benevolence and revolutionary change."

The Negro family occupies fifty pages with stress upon its predominantly matriarchal type save in the small upper class. "The personnel of these matriarchal families is variable and even casual. Step-children, illegitimate children, adopted children, mingle with the children of the house. No matter how small or how crowded the home is, there is always room for a stray child, an elderly grandmother, an indigent aunt, a homeless friend."

The existence of an upper class is almost ignored by Dollard, but Miss Powdermaker recognizes its significance "This small, exclusive group is regarded with respect and a certain wonder by the rest of the colored population. Middle-class women

who are comparatively uninhibited in their own sexual behavior speak in tones of awe about a woman of the upper class who lives a severely strict life and has never been touched by the breath of scandal. It is in part this wondering respect which enables the upper class to exert an influence in the community far greater than its numbers would seem to warrant. They are leaders of real power."

Ninety-nine pages are given to the Negro church, an unnecessarily long treatment with nothing particular new and yet a subject which would naturally attract an anthropologist. Education, on the other hand, is given only twenty-five pages and treated as a "faith" rather than a fact. Here, however, some figures of encouraging accomplishment are given.

The Negro's response to the whole situation occupies the last fifty pages and is interesting and important. "Among the younger generation, those in their teens, twenties, and thirties, resentment is keen and outspoken. These agree with the middle-aged in feeling that they are equal to the Whites and in desiring equal treatment. They differ in not possessing or wanting to possess the tact and diplomacy of their elders."

The treatment of acculturation is well-done and students will appreciate the answers of the whites to the questionnaires concerning Negroes printed in the appendix. They are informing as well as astonishing. It is, for instance, interesting to note that nearly forty per cent of the whites believed that Negroes "are no different essentially from other people" and that fourteen per cent admit that Negroes are rapidly reaching the cultural and intellectual level of the whites. On the other hand, nearly a quarter of the whites find Negroes "abhorrent"; while three-fourths believe that his place is in manual work and eighty-four per cent think they are inferior to white people in innate capacity.

One finishes Miss Powdermaker's study with the feeling that when in the future we can interpret statistics concerning Negroes with the trained insight of psychologists and anthropologists, eventually in spite of the plight of historical writing, we shall have a clearer picture of the American Negro and stronger incentives to

methods of social uplift.

Thompson, Edgar T., ed. Race Relations and the Race Problem. Durham, N.C.: Duke University Press, 1939.

Review: Annals of the American Academy of Political and Social Sciences, Vol. 207, January 1940, pp. 255-256.

RACE RELATIONS AND THE RACE PROBLEM: A DEFINITION AND AN ANALYSIS

Edgar T. Thompson, Editor

Duke University Press, 1939

This book issued by Duke University emphasizes the fact that Southern white institutions are beginning to become aware that their surrounding problem of race is a dignified and important subject of study. Led by the University of North Carolina some attention is being paid in these institutions to the Negro. The present symposium is contributed to by eleven writers, two of whom are colored, and about half of the whites Northerners. It is a study of the American Negro from the biological, economic and psychological point of view. Perhaps the psychological aspect is the newest and the most important and is illustrated by Copeland's chapter on the Negro as a "Contrast Conception; in Guy Johnson's "Patterns of Race Conflict" and in the study of American "Caste" by Warner and Davis. Robert Park has an interesting study of the general pattern of race relations in ancient and modern times and says that it is the "essence of race relations that they are the relations of strangers," of people thrown together for various reasons who "have not been sufficiently knit together by intermarriage and interbreeding to constitute a single ethnic community", but he believes that "race conflicts in the modern world, which is already or presently will be a single great society, will be more and more in the future confused with, and eventually superseded by, the conflicts of classes."

In the biological field, S. J. Holmes points out that the Negro has survived and improved his health status but that the question of his further survival depends upon the increase of the Negro in country and city. In the Northern city for economic reasons he is not reproducing his numbers. In the Southern country districts he is surpassing the whites but again for economic reasons he is rapidly leaving the country districts.

Reuter and Vance discuss economic aspects, the racial competition for jobs, the decline of the Black Belt. Reuter says "The caste system in view of the relative capacities and

incapacities of the Negroes and poor whites, tends to push the poor whites below the Negroes in the scale - to make of the Negroes a sort of intermediate caste between the levels of the white population."

The most interesting chapter is chapter six by Copeland. The essence of racial antagonism is brought out here historically in an unusually illuminating way. It shows how the social ideology of the white South "has virtually created two sociological races - white and black - two natural groups which cannot be mixed. It makes of the opposition between them an irrevocable conflict. Thus, the ideology "naturalizes" the social order, giving an ultimate sanction to the relative status assumed by the races, and at the same time provides a basis for white-caste cohesion. In the process the Negro is posed as a counter-race, an inner enemy, the antithesis of white society. The name, the antonym of white, denotes a contrast conception."

Other chapters are of no great interest nor do they bring much that is new. Charles Johnson continues to look for salvation in a division of the Negro into economic classes adhering to white capital and labor and thus obscuring caste, but he does not foretell where this class conflict is going to land us.

Sorokin, Pitirim. Social and Cultural Dynamics, Vol. IV, Basic Problems, Principles and Methods. New York: American Book Company, 1941.

Unpublished ?

Sorokin — undated

I can only judge Sorokin's Social and Cultural Dynamics as set forth in Volume IV Basic Problems, Principles and Methods by looking back over my own intellectual history. In the last quarter of the nineteenth century when I was receiving my education we seemed fairly clear on a basic division in the world between mind and matter; and we assumed, not without argument and some mystification, that mind could and would exercise compelling influence upon matter; that thought stood in causal relationship with the material world. I remember too the pleasurable shock which I got when my attention in college was turned to a direct study of mind and the possibility of actually investigating thought processes and even the ego itself was presented to me. There was, of course, immediately present the basic puzzle as to how far the knower could study and measure knowing and that, if I mistake not, is still a basic paradox in Sorokin's sociology.

We have come far since those days. We have reduced cause to sequence and our study of mind is really an attempt to follow the interaction of individual ~~thoughts~~ elements. One thing I got out of contact with William James and Josiah Royce and that was an approach to a rather pitiless logic when it came to the use of names of things. I remember that when Edward Cummings, the first instructor in Sociology, the humble predecessor of Sorokin, came to Harvard, he lectured to us about "Society" and I immediately took him to task for discussing a mental entity which had no integrating ego. He pushed my argument aside, as I have always thought, rather inadequately. But if we assume that society is not an existence of itself but the total result of individual human thinking and acting; and that thought and action take place in the midst of physical forces and in close connection with them, then we have a basis of inquiry and deduction.

Now comes Mr. Sorokin with a conception of a "pure causal system" and then of a "pure meaningful system" which at first strikes me as a worthwhile restatement of the old mind and matter problem. I am not certain, however, as to the connection

28-13-126

between these systems and of his conception of "System" itself. His first problem seems to be the question as to how far the happenings in the world are systematic or unorganized and he starts off with an investigation of what he calls the "socio-cultural system" and its properties; and he proposes to investigate the total culture of an area; how that culture changes and why it changes. He fights fierce battles with real and imaginary opponents as to whether the change comes from the physical environment or whether it comes from immanent force within the system. Or to put it another way, whether human action along cultural patterns is determined by the mechanical world or by its own inner rational thinking.

But all this argument leaves unsatisfied. I cannot find out by reading this volume with some care exactly what a "System" is. Perhaps the author would say that for more certain orientation as to his meaning here, I ought to read the three preceeding volumes and doubtless that is true. Nevertheless, there are certain assumptions here concerning systems which, as I see it, no explanations can justify. Sorokin's system seems to be an entity, a reality, a self-sufficing and self-propelling thing, in which he sees thought and force and development and is only exasperated and uncertain because of the amount of action and thought which is not systematic and which forms what he calls a "congeries", an unhappy designation, which somehow means little to me.

38-13-177

As I see it Sorokin has done a service to modern sociological thought by insisting to great length upon the role of thinking in the world. He stands over against those persons who conceive the world primarily as a mechanical system and would confine its interpretation to a minute emparical examination of the facts of the mechanism, even though with Lundberg they have to express these facts in rather vague psychological form. Yet here is a chance and a chance that is being following up by excellent scholars, of measuring what is actually happening, not only in the so-called physical world, but also in the psychic world; and out of that deducing whatever of rythm and possible law we may. The difficulty and fatal limitation of

this procedure is the rather impatient assumption that in the long run all the facts of the world can be reduced to quantitative measurement; that if this is not true, other facts or imaginings are outside the province of empirical science. This is by far too cavalier an expulsion from the domain of science of purposeful thinking, and of ethics, religion, politics and history as the world long has perceived them. What the empirical scientists, of course, might do in a case like this would be frankly to say that we have a world of mechanical sequence which we can measure quantitatively; but that in that world there is an area (how large or how small we cannot say) where chance rules; that is, where the disposition and allocation of force does not apparently depend on antecedent conditions. The mechanist might properly maintain that this area is small and that it will in time be proven smaller if not apparently non-existent. In which case the paradox of knowing the knowing still persists.

38-13-178

On the other hand, thinkers like Sorokin, bring to our mind the tremendous meaning of the great developments of human thinking; the sweep of purposive reason and the way in which these thoughts have apparently developed culture and cultural systems. Looking at the world as a whole, the part of it which is of interest to us as living beings and which always has apparently guided most of our thought and action is infinitely larger than the mechanical details of its action; and therefore Sorokin has a right to insist upon the predominant influence and meaning of thought in the world. However, he cannot escape the difficulty of deciding or imagining exactly what the interaction between meaning and motion is. No amount of intricate argument about social systems and cultural systems and the way in which these through their vehicles and agents become fused, offers any escape from the basic paradox. All we can say is this: human thought has, according to age-long assumption and according to our firm conviction today, led to a systematic ordering of human action even in its mechanical aspect; that all human action is not rationally ordered and probably never will be, but so far as it does from time to time more or less

complete systems it is of great interest to study these systems and to see whether or not they themselves in their formation and development tend toward larger rythms and patterns.

On the other hand, it is to my mind lost time to pretend that we can today see those vast patterns, those super-rythms of the imagination of men like Spengler and Sorokin, and thus predicts with anything like scientific accuracy the future of the world. We can see resemblances; we can see repetitions; we can think through vast possibilities; but our basis of fact is too small to call such quesswork, science. This basis of fact can be enlarged; we can know more about the economic thought of today and of the past; we can know more about individual and group psychology; our chemical and biological knowledge is growing. Applying these measurements to human action we can see how the purposive direction of thought is limited and guided. Even in this matter of rational thinking we can do something much better than Sorokin has attempted. It takes a naive mind to base exact measurement of human development upon the Encyclopaedia Britannica. General ideas we may obtain but mathematical measurements never. All this assumption and procedure does not penetrate nor explain the basic question as to how far knowing can know itself and as to what possible causal relation there can be between thought and action.

Nevertheless, frankly facing the paradox, we have a right to assume that thought does do a degree, perhaps to a much smaller degree than we used to say, influence the development of this world; that such influence is shown in meaningful systems of coherent action and that these systems themselves in some dimly comprehended manner may make super-systems of which today we can only dream.

Davis, Allison, Burleigh B. Gardner, and Mary R. Gardner. Deep South. Chicago: University of Chicago Press, 1941.

Review: Annals of the American Academy of Political and Social Sciences, Vol. 209, March 1942, pp. 274-275.

Deep South, A Social Anthropological Study of Caste and Class. By Allison Davis, Burleigh B. Gardner and Mary R. Gardner. Directed by W. Lloyd Warner. University of Chicago Press, Chicago, Illinois. xv plus 558 pp.

This is a study carried out under the auspices of Harvard University and directed by a former professor of Harvard now at the University of Chicago. The field work was done by a colored married couple and white married couple with some other assistance. They lived in the area studied a little over a year and a half and became so far as possible integral members of the social group which they were studying. The study is divided into two parts: the first of which ~~they study of~~ is taken up color caste and the class systems in the white caste and the colored caste. The second and slightly larger part is a study of economic conditions.

In the study of the caste system there is not much that is new but it gains in authority by having its judgments and conclusions confined to a comparatively small area and seeking to make a pretty exhaustive study of the area. The general conclusion is summarized on the last page of the ~~study~~ book:

> Life in the communities of Deep South follows an ordered pattern. The inhabitants live in a social world clearly divided into two ranks, the white caste and the Negro caste. These color-castes share disproportionately in the privileges and obligations of labor, school, and government and participate in separate families, associations, cliques, and churches. Only in the economic sphere do the caste sanctions relax, and then but for a few persons and in limited relationships. Within the castes are social classes, not so rigidly defined as the castes but serving to organize individuals and groups on the basis of "higher" and "lower" status, and thus to restrict intimate social access. Both the caste system and the class system are changing through time; both are responsive to shifts in the economy, in the social dogmas, and in other areas of the social organization. Both are persisting, observable systems, however, recognized by the people who live in the communitites; they form Deep South's mold of existence.

Most of the picture of the white caste is fairly well-known although there are some interesting studies of the movement of people from lower to upper class

416-5-78

relationships and a new but no very conclusive study of cliques. Chapter nine on social cliques in the colored society is newer material and deserving of study. The maps of the social cliques attempted on pages 212 and 213 are of interest and the attitude of the white people toward Negro social distinctions is interestingly portrayed "The very nature of the caste system is such that white people must, perforce, view Negroes in terms of their relation to that system rather than in relation to the system of social classes. It is far more important to the preservation of white rank for whites to evaluate Negroes as 'uppity' as contrasted with 'good', rather than as 'better class' or 'common class'; except when these class differences are felt to constitute a threat to 'correct' Negro-white Relations. Yet, to the Negro community the distinctions of social class determine thought and action to a high degree."

Stress is put upon the fact that Negroes recognize their own class distinctions and yet in accordance with the democratic ideal try to deny them; that their patterning after the white caste makes social distinctions dependent partly on color and hair and yet this has to be modified by education and income. The study of the economic system is important. It shows that the opportunity for advance on the part of the landless Negro laborer was in this part of the South better before 1885 than since. Today this region is in the grip of the cotton economy and so deeply has this worked upon cultural patterns that no ordinary effort can displace it. These cultural patterns include the intimidation of labor, the disfranchisement of Negroes and the use of arrest and incarceration as a means of social control. Whipping and lynching have played their part here.

As a contribution to our knowledge of sociology and interaction of a small deeply divided human group this book deserves high place.

MR. SOROKIN'S SYSTEMS

Rushton Coulborn and W. E. B. Du Bois

I

Time was when "mind over matter" was the formula which explained the functioning of society and the making of history. For somewhat over a century, ending some seventy-five years ago mind reigned over matter in the minds of men. But then a reaction set in and it continues to this day: men's minds became unsettled and they began to fear that the reign of their minds had been a fantasy of their minds. Losing confidence, some men railed violently against their minds, which is to say, against themselves: Pareto arrived, drawing attention to what he called the "non-logico-experimental" in behavior. Others drew distinctions between the few wise and the many foolish, each such seer overtly or covertly placing himself among the few wise. This influential company was led by Bergson and gained its strength from what had once been thought the aberrations of some of the great German philosophers. And there were some who pinned their hopes not so much to dominance over matter of the rare charismatic mind, as to a mystic union of mind with matter, thought with life; these too could claim Bergson as their leader.

Now comes Mr. Sorokin, offering a full statement, as plain as his terminology permits, of his method of thinking about the functioning of society and the making of history, baring his method for contemplation.[1] He is not un-Bergsonian, but we think he gravitates back toward the dominance of mind in general to an extent which is rare today. For this we like him.

---

[1] Pitirim A. Sorokin, Social and Cultural Dynamics Vol. I, Fluctuation of Forms of Art, pp. xx, 745; Vol. II, Fluctuation of Systems of Truth, Ethics and Law pp. xvii, 727; Vol. III, Fluctuation of Social Relationships, War and Revolution, pp. xvii, 636; Basic Problems, Principles and Methods pp. xv, 804. (American Sociology Series; Gen. ed. Kimball Young. New York, Cincinnati &c, 1937-1941. American Book Co.)

He sees the functioning of society and the making of history as man's struggle to know himself and to know the cosmos, passing eternally through a three-fold rhythm of epistemological phases. The process may be described shortly as "Intuition over Sensation, Reason and Matter -- Reason over Intuition, Sensation and Matter -- Sensation over Reason, Intuition and Matter." In-so-far as the process has been successful both society and culture are brigaded into "systems" of persons and things, "agents" and "vehicles", the systems having "meaning" and thus carrying in themselves the causes of social and cultural life. It is important that Sorokin's systems are not directly causal by reason of intrinsic traits of their components (agents and vehicles), as is the case with physical and biological systems; they are causal by reason of meanings assigned to them as systems by social convention, their components' intrinsic qualities being without necessary connection with the meanings. Otherwise Sorokin's systems are like all systems: they are distinguished by interdependence of the parts upon one another and upon the whole, of the whole upon the parts. Sorokin's systems, social and cultural, exist first in the "pure" state; that is, they exist in mind -- whether in the individual mind alone is not perfectly clear. They then acquire their agents and vehicles and thus enter the "empirical" world. But the social-historical process has not been wholly successful and therefore there exist cultural and social "congeries", which are non-system, mere juxtaposition in time and space of persons and things, having no meaningful connection -- absolutely none. Congeries, then, are not causal; they cannot grow or decline. The growth and decline of systems, on the other hand, are the functioning of society and the making of history.

This is a philosophy of history. It is the more important for its obvious activistic significance. If history is the product of man's struggle to know himself and his world, then Sorokin's exposition of man

and his world is a direct contribution in the broadest way to human social vitality. If Sorokin's exposition is wholly correct (which he would be the last to claim), then future history and the successful growth of society will be assured when men behave in the way Sorokin has defined as successful and eschew the behavior which Sorokin regards as unsuccessful. It is to be noted that Sorokin establishes a dichotomy as between men's social and cultural behavior. It is to be noted too that Sorokin's treatment of the place of the individual in society and culture is unusual as a consequence of the distinction between system and congeries. Sorokin allows that the degree of integration of systems varies greatly -- he urges this strongly -- but, to further the purposes (meanings) of society and history, the individual acts 'in system'; if he acts 'in congeries', he is anti-social, anti-historical. The chief lesson to be learned, then, from Sorokin's philosophy of history-- its value as a principle of action and guide to successful social-historical behavior -- is located in the distinction between system and congeries and in the nature, and especially in the manner and degree of integration, of systems.

II

System and congeries at first sight appear to resemble somewhat the Greek <u>polis</u> and <u>idia</u> and, on the positive side, system and <u>polis</u>, there is certainly a real similarity. On the negative, however, although a citizen who concerned himself only with his <u>idia</u> was an idiot, the <u>idia</u> were unquestionably in a systematic relationship with politics, even if the interdependence of the two was loose. What, then, is the absolute congeries, whose components are absolutely and utterly unrelated to one another? When does an individual act wholly alone and isolated -- except indeed when living solitary on an island where there is no society?

Take the limiting case, the case of eremiticism. A hermit is a person who cuts himself off from society and seeks to live alone. He has, of course, his culture, which differs fundamentally from the culture of the society from which he is seeking to secede and this difference is his reason for seeking to secede. As between the culture of the hermit and the culture of the surrounding society there should, by Sorokin's argument, be a congeries-relationship, which is to say, no relationship. And with the next to limiting case, the case of monasticism, there is a group of persons seceding. In the sphere of culture the situation is identical with that of eremiticism. But with monasticism congeries exists, if Sorokin is right, in the social sphere also, for the monks constitute a little society, a social system, as the single hermit does not. Yet is there in reality absolute scission as between the hermit or monks on the one hand and the surrounding society on the other? We think not. Both hermit and monks become examples to other persons: they exhibit -- many of them with positive purpose -- a new system of life, which those adhering to the old system may substitute for the old system. This is not true of every aspect of monastic or eremitic life, but, as against such aspects as are not offered as models, monks at least are prepared to perform for the benefit of the surrounding society certain special functions, the pursuit of scholarship, for example. We think that monks by their special functions and by their example, hermits by their example alone, are 'in system' with the rest of society and not 'in congeries.' The relation of the monks' special functions to the functions of the rest of society is indeed similar to the relation of idia to politics. The limiting case of the hermit, isolating himself from society, becomes the exception which is no exception and so proves the rule of system. Therefore, we believe, Sorokin's congeries is a figment of his brilliant imagination. In real society and culture there

30-4-69

is no such thing as congeries. It is an interesting concept, valuable in the cognitive process, but true only at a non-existent, mathematical infinity.

Now hermits and monks originate in significant numbers in those periods of history in which a society of one sort of civilization is disintegrating and in some cases giving place to a new society having another sort of civilization. At such a time the systems, cultural and social, of the old society are breaking down, while those of the new society have not yet attained large growth. It is certainly the case then that society and culture are weak and have loosely integrated systems. Thus the true significance of eremitic and monastic life is the looseness of their integration with the surrounding life in a period characterized by loose integration — and, by contrast, the closeness of their internal integration as an example to promote the re-growth of the society into the forms of the new civilization; hence monastic emphasis upon discipline, in part self-discipline, and eremitic emphasis exclusively upon self-discipline. Although, then, Sorokin is here shown to be wrong in his notion of congeries as something which is the direct opposite of system, he is strongly supported in the importance he attaches to system as such.

And yet the importance of system and the fact that its importance has hitherto perhaps been insufficiently realized by social scientists should not lead to the de-humanizing of the social sciences; that is to say, the scholar must not, now that Sorokin has made this matter clear, tend to forget that systems are created by human beings and that those human-beings, the agents of systems, dominate the systems and make and break them. We believe that there is a danger that the scholar may make this error, that Sorokin himself makes it in some measure. The active and dominant part played by hermits and monks, besides advertising the

importance of systems, also shows human beings creating, modifying and destroying systems.

When Sorokin says that certain systems, when transposed into the empirical sphere "...often lose their identity with their pure system and degenerate into something quite different, under the influence of the natural properties and relationship of their vehicles -- including imperfect human beings",[1] we detect in his reasoning a tendency toward the mechanistic, which is not only erroneous in itself, but is at variance with the humanistic basis of Sorokin's theory as stated and applied in other parts of his work. It is probably true that some pure systems -- not, perhaps, that whole class of systems here meant by Sorokin -- are warped in passage into the empirical sphere by "imperfect human beings,' although we think that the epithet 'imperfect' would be more appropriate in theology than in social science; but we do not think that human beings, perfect or imperfect, may with scientific soundness be included among the vehicles. The vehicles, surely, are inanimate, material things, or, if living, not human. A human being in society, on Sorokin's own showing, is an agent. As such, a human being who causes a system to degenerate is playing an active part in society. If the system is in itself valuable to society, then the human being in question may be damaging society, but that phenomenon itself is of great importance and worthy of serious study; to dismiss it as something of the same order as obstruction by vehicles is loose thinking.

In another part of Sorokin's lapse toward mechanism he says "... a mere paper (appointing A to be commander in chief) and an insignificant insigne confer upon an individual a tremendous power; .... harmless energies -- for instance, sound and noise (diplomatic exchange of words

---

[1] Ibid., IV, p. 42.

and disagreements -- produce the devastations of war; a little to form the famous Christian "filiogue", split the whole Christian world into the Eastern and Western Christianity; "[1] -- and a number of other such statements. On the rare occasions when such statements as these are true statements of cause and effect they are examples of something which Sorokin a few paragraphs further on correctly identifies as fetishism or idolatry[2] -- in which the symbol is mistaken through stupidity for the fact. Normally symbols are not causes; they are merely vehicles of meanings which become causes, as Sorokin is well aware. Why then the loose thinking of these passages -- passages in which the vital distinction between agent and vehicle is slurred over, the two are equated, the controlling function of the agent is denied and the vehicle is accorded a place in causality which it attains only most exceptionally? The answer is perhaps that Sorokin himself has here lapsed into fetishism: his theory, the vehicle of his mind, has got out of his mind's control and caused him to say things which the proper application of the theory does not allow.

36-4-72

III

Reasons have now been adduced for rejecting Sorokin's congeries, for accepting his view of the importance of system and for avoiding mechanistic misinterpretations of his theory.

It may be argued in reply, however, that the bases of this criticism have been found only in periods of transition from one civilization to another. It is therefore necessary to illustrate the same arguments from a period which is not one of transition. Some further development of the

---

[1] Ibid., IV, 40.

[2] Ibid., IV, 43 n. 39.

criticism will appear in this process.

In more normal periods of history the chaotic collapse of systems is not the salient aspect of society and culture. The growth and decline of systems and the substitution for declining systems of new systems at a more or less regular tempo of evolutionary character confront the student instead. In the passage quoted first above Sorokin is explaining what is in fact an early stage in the normal, characteristic evolution of all social and cultural systems, although he professes only to be doing so for complex and delicate systems. The warping of such systems at that stage is done through their infestation with congeries, he says, and presumably the decline and dissolution of systems in the last stages of their evolution is also done through their infestation -- amounting perhaps to swamping -- with congeries. And the congeries are introduced indifferently by vehicles and agents. In the interval between the early and late stages of evolution of a system -- that is, after its passage into empirical existence and before it enters upon its decline -- there is a period, presumably, of positive growth when congeries are not introduced, perhaps some of the earlier congeries are eliminated.

36-4-73

Is not this picture of the social process too simple? Is it not also essentially mechanistic by reason of the congeries concept itself, that concept standing as it does between the human agent and the system? According to Sorokin there is one way and one only in which the agent changes the system at the two crucial stages of the system's existence: he breaks, or annuls absolutely various elements or parts of the system; the only alternative action of the agent must be positive operation of the system. It is obviously true enough that the agent may operate the system positively -- and this is the defense of Sorokin's concept of system as such. But even this is inadequate, leaving the concept of

system incomplete and therefore vague. Neither would it be enough to enlarge the concept by saying that the agent may add to the system or subtract from the system -- and Sorokin, by his congeries, allows only subtraction. The changing of systems is indeed the essence of the normal, evolutionary social and cultural process and for that Sorokin's congeries is really a ridiculous explanation.

The truth seems to be that Sorokin's theory, since his system and congeries pervade it throughout, is not a theory of social and cultural dynamics. Rather it is a theory of social and cultural statics: his concept of system tells much, perhaps all, about an imaginary society which never changes -- a society in which the agents merely operate the systems. When the theory approaches the vital problem of change it collapses. The place of vehicles in the theory appears to be more satisfactory; at least the inorganic function of vehicles can be understood in arithmetical terms. Organic change, however, comes from the agents and the function of agents deserves examination in an example which will also clarify further the function of vehicles.

Consider the Mercantile System of economics. In the minds of its great protagonists, such as J. B. Colbert, a pure system, within Sorokin's meaning of the term, undoubtedly existed. But when the empirical system developed it approximated only roughly to the pure system. The vehicles, that is, the commodities of trade, the ships in the trade, the presence or absence of the precious metals in various places, the suitability of various climates for agriculture or for manufacture -- these did not fit at all easily into the scheme of the pure system. Hence the agents, the myriad human beings operating the system, modified it and the empirical system differed from the pure system. ~~Sorokin's view of breakdown does, of course, include the congeries notion, plainly stated, and there is no question here.~~ The

part played here by the vehicles was entirely passive: they offered inertia to the process theoretically conceived in the pure system. But the agents played an active part; indeed they created something new -- new links or details to take the place of those of the pure system which were incapable of empiricization.

Even the inertia exerted by refractory vehicles is not accurately expressed by the concept of congeries, for congeries, being non-system pure and simple, does not allow for the great quantitative variation of inertia in the cases of various refractory vehicles. As for the creative acts of the agents, they bear no possible relation to the congeries concept, unless it be argued that before the creation of a new link in the system the old link must be broken; and, if this be so, it merely shows once again the utter inadequacy of congeries as a guide to the part played by agents in changing a system.

To pass over for a moment the period of growth of the empirical system, where does disintegration of the system begin? And another question: where does disintegration of the old empirical system cease and empiricization of a new pure system begin? Consider again the same example.

The new pure system which succeeded the Mercantile System was the laissez-faire system of Adam Smith. No great difficulty arises, then, in answering the second question in theoretical terms: as soon as the Mercantilist 'rules of trade' began to be abolished the new system was becoming empirical. And yet this theoretical statement does not correspond with any clear chronology. In the German Zollverein, it is true, there was, in the 'twenties of the nineteenth century, a fairly sharp transition from Mercantilism to laissez-faire. But in England the transition was much slower, and for many decades features of both systems existed side by side, while in Germany there was a sudden reversion in

the 'forties to tariffs which were not unlike some of the Mercantilistic rules of trade. In France true Mercantilism gave place directly, if spasmodically, to protective tariffs without the other rules of trade. Later, in the time of Napoleon III, France tried a partial laissez-faire — and the instances of combination, confusion, reversal of process could be multiplied. Only England tried for a substantial period true laissez-faire, and that during the later nineteenth and early twentieth centuries.

36-4-26

To give a single, clear, useful answer in this context to the first of the questions above, using Sorokin's analysis, is almost completely impossible. In the eighteenth century the rules of trade departed so far from their original seventeenth century form as to be scarcely recognizable and it would be just as sensible to argue that eighteenth century recognition (where it occurred) of the right of colonies to manufacture was: (1) disintegration of Mercantilism, which is to say, the appearance of congeries in the old empirical system; or (2) adaptation of the old system to circumstances, which is to say, warping of the old system by passage from the pure to the empirical. It can even be argued (3) that it was the first step toward laissez-faire — an approach to a practical, as distinct from a theoretical, answer to the second question above.

All this confusion can be avoided by rejecting congeries, by distinguishing clearly between agents and vehicles and by viewing the systematic process strictly humanistically. There is in reality no discernible dividing line between the warping and the disintegration or between disintegration and re-integration by the introduction of the new system into empirical existence. Thus the growth period of the first empirical system is likewise comprehended in a humanistic view of the systematic process. It is a single, continuous process: the

agents are confronted with certain vehicles, which may indeed themselves change in a minor measure with the passage of time or at the choice of the agents; the agents construct a pure system and change it step by step in an evolutionary manner; since fitting vehicles to system is a dynamic, not a static, process, the pure system, the theory, is also changed, perhaps not so often as the empirical system, but the two do in practice more or less keep abreast of one another. After all the one is hypothesis and the other the destiny of hypothesis.

We say that the agents construct a pure system and change it step by step. In Sorokin's thought the creation of a new pure system looks at first sight like the act of a single individual; it looks like a Lamarckian "sport" in the social or cultural sphere. And the individuals in question look rather like Bergson's mystics, Nietzsche's supermen, or Schopenhauer's geniuses and saints.[1] The social assignment of meaning to systems, as postulated by Sorokin, is not at all inconsistent with prior creation of the new pure system by charisma and the absence of assignment to the agents of systems of a creative function in them tends to suggest that creation is reserved in Sorokin's mind for the few. Indeed Sorokin does specifically, if not very explicibly, subscribe to charisma as an explanation of the transition from one civilization to another. We do not think there is more than difference of degree between transition from one total civilization to another and transition from one economic system to another; nor do we accept charisma in either. We think on the contrary that in all transitions and in all growth of systems the process of creating the elements of the new pure system is a

For a broader treatment of the idea as used by other contemporaries as well as Toynbee and Bergson see Coulborn "Historian's Consolation in Philosophy," Southern Review, Vol. 7, 40 sqq.

continuous process performed co-operatively by all the agents, just as is true of experimentation with the empirical system. To Colbert and Adam Smith could be added a score of well-known intermediary persons and to that score could be added hundreds of thousands of persons whose names were not recorded in history, but whose thoughts and acts accumulated to make the thoughts and acts of Colbert and Adam Smith possible; and all together were the creators of systems, pure and empirical.

IV

Enquiry must now be directed to the dichotomy of the social and the cultural which Sorokin seeks to set up. A social system is to him any real system, such as the family or the state. A cultural system is, on the other hand, discrete: Language, Science, Religion, Fine Arts and Ethics are his five main cultural systems and all other cultural systems and subsystems are mixtures of these or derivations from them. Thus the system of politics is a derivative of the system of Ethics. It will occur, no doubt, to many readers of Sorokin that the cultural system 'politics' and the social system 'the state' have an obvious connection -- and this is quite clear to Sorokin himself. The state, for Sorokin, is a social system which "bears" the cultural system politics; thus the State is a "specialized" social system while there are other social systems, such as the family, the university and what-not, which are "encyclopaedic", bearing many cultural systems.

Apriori there appears to be nothing wrong with the theoretical concept of cultural systems existing of themselves or with the idea of social systems bearing certain aspects of the culture, either in a specialized or an encyclopaedic manner. We think, however, that always where there is a social system there tends to be a cultural system and

vice versa. Even such a small social system as the family does tend to create its specific culture, different in a few small, perhaps minuscule, ways, from any expressions of the culture to be found elsewhere in the society. Surely, too, there is, for example, a Harvard attitude of mind, which may properly be called a cultural system -- if it be admitted that we have disposed of the absolute congeries postulated by Sorokin. No doubt the Harvard cultural system is poorly integrated; yet we believe that it exists. As between Professors Sorokin and Crane Brinton there may not be much culturally in common and yet we think there is a little: both of them have, for example, confessed to some respect for the ideas of Pareto. And who shall say that, if the one altered his opinion of Pareto, that would have no effect upon the culture of the other? Conversely, it is clear that the existence of a religion tends to produce a church or similar institution. And learned societies, which are social systems, do develop in association with Language, Science, Fine Arts and Ethics,[1] which are cultural systems.

When, however, the relation of total culture to total society arises, Sorokin's views appear to us fantastic. He finds it possible to discover an integrating super-system for the five main systems of culture, but no integrating super-system for social systems, although in some way which he never makes clear the cultural super-system is a super-system for the social systems also. It would be easy to think that this is merely the result of Sorokin's refusal to recognize that where there exists a cultural system there tends also to exist a social system. But this is only a part of his error. His cultural super-

---

[1]It is not to be assumed that we accept as correct the particular five main systems of culture which Sorokin postulates.

system itself is, in our opinion, an absurd aberration -- no less forceful term is adequate to qualify it. He says that the five main cultural systems are integrated into what is in effect an attitude of mind; that the prevailing attitude of mind is not stable but passes continuously through a three-fold rhythm, each phase of the rhythm corresponding with one of the three basic methods of knowing. The phases are the ideational, corresponding with intuition; Idealistic, corresponding with reason; and Sensate, corresponding with sense-perception.

These are the three epistemological phases described in the opening of this article as the phases of man's struggle to know himself and to know the cosmos. We will grant at once that the culture of any civilized society does in fact pass through a series of phases in which the three methods of knowing are successively paramount -- Sorokin, himself, does not say that they are more than paramount.[1]

But these three attitudes of mind, based upon the three methods of knowledge are <u>qualities</u> of the culture; they are not systems in Sorokin's use of the word. They bear perhaps a relationship to the culture similar to the relationship the culture bears to the society -- using the words culture and society as Sorokin uses them. If the culture is an attribute of the society, then the prevailing attitude of mind is an attitude of the culture: it is the direction -- the aim -- man gives from time to time to his culture in using it to know himself and to know the cosmos. Without doubt the existence of this three fold epistemological processus is something very important to an understanding of the growth and decline of the culture and of the society that bears it. In this part of his

---

[1]He admits, that is to say, that in any one phase the two other methods of knowing exist; but according to him they exist as congeries to the predominating one.

theory Sorokin is indeed contributing to an understanding of the dynamics, as distinct from the statics, of society and culture. He is showing, at any rate in part, how culture and society change, but he is not describing the culture, still less the society, in their static aspect -- and at this point of the argument it is the completion of the static aspect of society and culture which is required.

This large error may be corrected and the omission filled by returning first to the relation of culture to society.

The various detailed cultural systems, main and subsidiary, are, if you like, "borne" by the various detailed social systems in an illogical, unsystematic sort of way, in spite of what we have called (modestly, we think) the "tendency" for social and cultural systems to correspond. But where the total culture and the total society are concerned the correspondence must be complete and exact. Regard the irregularities of correspondence in detail as errors, distortions; these errors are certainly obliterated in the total view. Where the society ceases its culture ceases; where the culture ceases the society ceases.[1] From this it follows that Sorokin is right in his search for unity as between society and culture in his super-system, but wrong in the sort of unity he expects to find. There is no reason why the conceptional distinction between culture and society, if a correct distinction, should not contrive to exist in the super-system. The unity is simply unity in time and space of two things, of which one is an attribute of the other.

We feel convinced that Sorokin's difficulty here is again really, if indirectly, his congeries. Having postulated the existence of congeries,

---

[1]For the cessation of the society through thinning out of its culture see the penetrating, if not wholly correct, argument of A. J. Toynbee concerning the linen and lines (A Study of History Vol V. (London, 1939) pp. 208-210.)

he cannot possibly admit that any total society is a system; indeed he had difficulty with the total culture. The total society, particularly our Western Society at the present day, is politically divided into separate sovereignties; its economic system is obviously at sixes and sevens; the once united Christian Church has been rent into scores of sects by schism. Here, if anywhere, then, Sorokin must find congeries dominant over system. It might well be argued against Sorokin that the culture is little better integrated; but the culture, consisting of discrete systems, may also be thought to be less immediately damaged by material and physical disintegration — and this latter was the view Sorokin evidently decided to take. Whereas, for example, liberal political parties, as social systems, are numerous and separate and distinct from one another, the cultural system 'liberalism' may nevertheless be regarded as one system pervading the entire society. This, we think, is the direction of Sorokin's argument. Even in the total culture, however, he has discovered some congeries, which he has acribed to persistence in the age of, say, the Sensate ideology, of fragments of the ideational and the idealistic ideologies. He has finally decided that the congeries in the culture are not numerous and extensive enough to prevent systematization of the major part of the culture, whereas the congeries in the society are such that the society as a whole must be regarded as without system except that reflected upon it by its bearing the culture.

If this be a correct diagnosis of Sorokin's thought on this matter, it becomes clear at once that his difficulty arises once again out of the erroneous concept of absolute congeries. Strike out congeries and it is immediately evident that there is no more impediment to system in the society than in the culture, nor to system in the total society and the total culture than in minor social institutions and minor cultural

28-4-92

fields. Granted, then, that there is system in the total culture and in the total society, before the process of change of these systems is analyzed, the systems themselves ought logically to be identified and described. Yet, since Sorokin has discerned the process of change of the total culture, it may be possible to identify the total culture by searching for the cultural entity which undergoes that process. Our present culture, says Sorokin, is in the Sensate phase; before that it was -- in the Age of Reason and the Renaissance -- in the Idealistic phase; before that it was -- in the Middle Ages, dominated by Christian belief -- in the Ideational phase. What cultural entity, then, began with the Christian Ideation, proceeded through the Idealism of the Renaissance and the Age of Reason and has now reached the Sensatism of great wealth, great buildings and engines, great states and great wars? Answer: the Western Culture. And what total Society bears the Western Culture? Answer: The Western Society which succeeded the Graeco-Roman, or Hellenic Society and still exists today. There is indeed no difficulty in identifying the 'super-systems', cultural and social. They are well known to history, namely the civilisations, Western, Graeco-Roman, Syrian, Minoan, Egyptian, Hindu, Sinic and so on.

V

In the last analysis what value shall be set upon Mr. Sorokin's social theory and philosophy of history? Sorokin comes in an age which has rejected the simple theory of mind over matter; that theory reigned in the Idealistic phase of our civilization. Decadence, though not fully admitted by many scholars to be the fundamental characteristic of our age, oppresses the minds of almost all social scientists -- at least of all those who are awake. Sorokin affirms the decadence of the age, but his congeries, the concept he uses most directly and most generally to explain decadence has been shown to be unreal and futile. And his con-

8 1 3 9

cept of system itself is in one direction sufficiently exaggerated to become mechanistic, while that same exaggeration together with failure in several ways to study the process of change as such implies an acceptance of charisma; and in our opinion charisma is the most vicious error, both intellectually and morally, both theoretically and activistically, which infests contemporary philosophy.

But these strictures must not obscure Sorokin's great virtue in studying system, which is to say cause and effect, in social and cultural matters. There are many social scientists, especially historians, who lazily and impertinently say that cause and effect are not their business; there are others who feebly protest that they are incapable of unravelling anything so difficult as cause and effect; there are vast numbers who have but the most naive notions of what is meant by cause and effect. This asinine frivolity -- to pass the mildest kind of judgment upon it--must cease if the decadence of the age is not to become definitive and irreversible. We think that Sorokin's meaningful-causal system is in essence correct, if its exaggeration be avoided and if it be conceived of in truly dynamic terms. Hence Sorokin makes a real contribution to the needs of the age and puts to shame the triflers.

36-4-83

And this is not all. The processus Ideational -- Idealistic -- Sensate in the life of civilizations is a great discovery even if Sorokin did seek to make of it something which it is not. It will be a fitting end to this article and a proper tribute to Sorokin as a scholar to enquire a little further into it with a view to showing its true place in

in the interpretation of history, since Sorokin himself has so astonishingly misapplied it.[1]

---

[1] In Social and Cultural Dynamics the processus has been fully tested only for the Graeco-Roman and Western Civilizations, but Sorokin supposes that it could also be tested successfully for all other civilisations. See Vol. II, p. 122., Vol. III, p. 131 and Vol. IV, pp. 424-425 and 770-773. Since Sorokin steadfastly refuses to recognise a civilization as a system, he is precluded from discussing the question whether in a single civilisation the processus is passed through once or more than once; he even avoids treatment of the three phases of the processus considered together. But he is unable to avoid the statement, repeated several times, that the Graeco-Roman and Western cultures have passed through the processus (rhythm) "at least" twice. It is a temptation to the critic to think that he brigaded the two civilisations together and added the phrase "at least" deliberately in order to keep vague the relation of the processus to the civilization whose existence he desires to deny. But this may not be just to Sorokin. There is a case for considering the Graeco-Roman and Western Civilizations as one -- also a case for considering them as three; a little light is shed on these questions in the text below ad fin. But it is improbable that Sorokin's "at least" is explained by doubt about the unity or duality of the Graeco-Roman and Western cultures. It is possibly explained by lurking doubts connected with the obvious fact that in any one phase of the processus the modes of thought of the other phases do find expression, sometimes rather insistently, for a limited period in limited places. Sorokin has, in fact, attempted to explain this difficulty in Vol. IV, pp. 145-155 and the attempt is worthy of serious consideration. Perhaps more light is shed on the difficulty, however, by Toynbee's doctrine of Withdrawal and Return (See A Study of History, Vol. III, pp. 248-376.) According to Toynbee, a single region or nation of a civilised society sometimes cuts itself adrift to a large extent from the rest of the society (Withdrawal) in order to evolve a solution to a particular historic problem, after which it is again merged in the general society, bringing the solution with it (Return). In Withdrawal, we suggest, such a region or nation may well pass, in so far as the problem with which it is grappling is concerned, into the next, or even the third, phase of the processus; on Return it will be drawn back into the dominant phase of the moment. We are disposed to think that Withdrawal and Return is both a much more frequent and at the same time a much more partial and particular phenomenon than it is described by Toynbee; that is to say, that it is really concerned, not with the major aspects of the society's life, but with minor and partial aspects and that in this sense it occurs constantly and so explains the constant local and temporary appearance of Idealism in the Ideational phase of a civilization, Sensation in the Idealistic phase and so on. We do not think this alters the fact that each civilisation in its total career passes once through each phase of Sorokin's processus.

36-4-84

It is really a pity that Sorokin so railed at Toynbee, Speyler, Mauss, Florus and other scholars whose theories are based upon recognition of civilisations as the intelligible units for historical study, for, if he could but have reconciled himself to their views, he must himself have seen that he was in reality making a great expansion and confirmation of their theories. It is our duty to reconcile Sorokin with these, his natural intellectual brothers. We must therefore point out — and this for the last time — that his congeries conceals the systematic, dynamic, connection between the three phases of his processus and the like connection between the mode of thought characteristic of the dominant phase and the two 'recessive' modes of thought.

It is true that at a given moment of time there may be a total culture, a super-system which is predominantly Ideational, Idealistic or Sensate. It is not true that, for example, at a moment when the culture is predominantly Ideational minor systems of an Idealistic and of a Sensate character exist in congeries to — that is, in total scission from — the predominant Ideational super-system. Surely no human mind can think in terms of ideation, which is to say, intuition or belief, alone; to attain, develop and defend the belief there must be some sense-perception and some reasoning. In other words the mind must employ — in systematic relation with one another — all three methods of cognition. It is perfectly true that one of the three methods may predominate over the other two: a man may start with his belief, supporting it with certain things he perceives sensually and knitting his sense-perceptions to his beliefs with a structure of reason; or he may start with ratiocination, but that ratiocination must make use of some things ascertained by the senses and it will inevitably lead to certain conclusions which are beliefs (and one of them in this case is surely a faith

in reason); or a man may start with sense-perception and attune his mind to an all-embracing sensitivity to the world about him, but he cannot thereafter avoid reflection and reasoning about the multifarious sense-impressions he absorbs and that reasoning will lead him to some conclusions, at least to a general attitude toward life, which is his belief. Here, then, are three different approaches toward life, all of which make use of the three methods of knowing, but with different emphases.

We think Sorokin is right in supposing that the culture of any civilized people is dominated successively by each one of these three different approaches to life. But because to Sorokin the three phases are in congeries with one another he cannot say that the processus from one to another is systematic -- which to our way of thinking is axiomatic. Yet we think that he does subscribe to every essential point in the argument which would establish system in relationship of the phases, avoiding only the word systematic.[1] We would be prepared to say, further, that the processus is universal for all civilizations, which Sorokin, pressed by his critics, does not venture to say. As to whether it is eternal, which Sorokin also forbears to say, it is rather coeval with those societies and cultures which are properly to be described as civilized.

The intrinsically systematic relationship of the successive phases may be illustrated by a short enquiry into the transition from Ideational to Idealistic. Men of faith who predominate in the Ideational phase cannot, as has been shown, avoid reason and sense-perception in development of their faith. In the course of time, supposing the factual content of the faith to be unvarying, men will nevertheless differ with

---

[1] See in particular, op. cit., Vol. IV, pp. 423-432.

one another in the way in which they apply their reason to support their faith and the very fact that the faith itself cannot be modified will cause men's minds to become more and more absorbed in their controversies about its support in terms of reason. Inevitably there comes a day when controversy has become so important to them that some of them break the uniformity of the faith itself in order the better to defend a certain structure of reasoning. From that day the faith ceases to be inviolable and is progressively penetrated more and more by ideals derived from the reasoning process itself. Thus the Idealistic phase is reached. And analogously the Sensate phase is reached after the Idealistic phase.

So, in the history of Sinic Civilization, from early Chou times all Chinese accepted one faith in a certain optimum form of society, but they soon began to differ as to how best to prove by reason that this was in fact the optimum form of society. Their controversies eventually became so important that history records for us the names of the more famous doctors and some of their doctrines: Confucious and Mencius, Chuang Tzu and other Taoists, the devoters of Fa Chia, in all the so-called "humdred schools." But in the age of the hundred schools each school had its own ideals which had penetrated and modified the original faith, so that it was no longer unquestioned. The transition from Ideationalism to Idealism had occurred.

In our own Western Civilization the contrast between the proofs of the Christian faith offered in terms of reason by Thomas Aquinas and by such of his successors as Duns Scotus provoked men like Marsiglio and, still more, Wyclif and Hus, to attempt modifications of the faith itself. The transition from Ideationalism to Idealism was beginning. It lasted through the Reformation and was perhaps complete only with the one full-blooded Idealism of Rousseau.

We think, then, that we have shown the relation of Sorokin's threefold processus to the vitalistic or humanistic theories of civilization held by Toynbee, Spengler and others. But there is one special problem in these theories upon which the processus has an important bearing: it is the problem of what happens when one civilization perishes and another succeeds it. It has been shown that in the Idealistic phase of a civilisation the beliefs which were unquestioned in the Ideational phase are penetrated and transformed by idealism arising out of the dominant process of reasoning. Whether reason thus tends to destroy or to purify the beliefs there is not space here to consider, but we do suggest that a modified version of the beliefs survives the Idealistic phase.

In the Sensate phase the same beliefs have been attenuated, whether by damage or by purifying, sufficiently to make possible their substantial transformation into different beliefs, or indeed their entire destruction and replacement by new beliefs; once again, it is not possible here to go into the question whether the process of the Sensate phase ought to be considered a merely negative process by comparison with the positive processes of the Ideational and Idealistic phases. The upshot of this argument is that when there appears a substantial and systematic body of new beliefs there is a new civilization and the old civilization is ended. A caution should be entered here: history suggests that when one civilization ends and another succeeds it there is not only common ground -- common beliefs - between the two,[1] but also that the amount of common ground varies greatly in different cases of transition. The triumph of Christianity between the first and fifth centuries A.D., for

---

[1] A. J. Toynbee in his A Study of History (Vol. I, London, 1934, pp. 130 sqq) draws attention to this fact with his theory of Apparentation and Affiliation. Important as Toynbee's contribution to the subject is, it must be noted that it gives no way of measuring the closeness of relationship between two civilizations.

example, constitutes a vastly greater contrast as between Hellenic and Western Civilization than the contrast between the first and second Chinese civilizations which was generated by the changes which occurred between 221 and 589 A.D.

It is remarkable and not to be forgotten in assessing Sorokin as a scholar that every point in the above critical examination of his three-fold processus and its correct use in the interpretation of history is to be found in his own argument, either stated or implied, even though some points are distorted by his errors. This is true even of the suggestion that the Sensate phase is negative. We are entitled to conclude therefore that his congeries and other errors are no more than aberrations, such as any strenuous thinker may commit out of the very strain of his creative thinking. The aberrations have not vitated Sorokin's creative thinking. The value of that thinking is there for those with the ability to find it. They are perhaps few, as Sorokin rather plainly hints. But Sorokin himself ranks with Toynbee, Bergson, Croce and the few other great contemporary social scientists. Mr. Sorokin too is among the prophets.

Woodson, Carter G., ed. Works of Francis James Grimke. 4 vols. Washington, D.C.: Associated Pub., 1942.

Review: The United States: 1865-1900, Vol. 3, January 1944 - December 1944. Pp. 83-85.

Dr. Woodson, the founder and editor of the Journal of Negro History has put America under obligation by his editing and publishing of the works of Francis J. Grimke, Washington, 1942. The publication is in four volumes containing his addresses, his sermons, his essays and letters.

Mr. Grimke was not a man widely known outside of his particular circle of associates in the Presbyterian Church, but he was an extraordinary and influential character. Like so many so-called American Negroes he was a Southern white man, the son of one of the most prominent of the families of South Carolina, with a small amount of Negro blood on his mulatto mother's side. He legally was born a slave and was left by his father as the property of the father's eldest son. Eventually that son tried to sell the boy into slavery and young Grimke ran away and became valet to a white rebel officer in the Civil War. He finally came North. He was a student at Lincoln University and Princeton Theological Seminary. Eventually he was ordained as a Presbyterian minister.

For more than forty years he was pastor of the Fifteenth Street Presbyterian Church in Washington which was a group of intelligent, well-educated colored people and formed for nearly a half century one of the most interesting groups of the sort in the United States. Here Dr. Grimke was not only a minister, but a friend, a guide and an extraordinary example of what a social leader may be. In character he was puritanic, and austere and yet a most kindly and thoughtful man. He had great courage and was outspoken even to his cost.

As a result in his sermons and writings there was almost no phase of the problem of races in the United States which he did

not touch and there were few of the leaders among the colored people whom he did not personally know. In addition to that he was brought into more or less direct connection with the white leaders of religion and social life throughout the United States.

It is difficult to make any small selection of his works which would be characteristic. In his addresses he touches the lives of Bishop Payne, Alexander Cromwell, Fredrick Douglass, and also of white leaders like Garrison, Whittier, and John Brown. He criticizes the press, he excoriates mob violence and lynching, he exposes the hypocrasies of the pulpit and harangues political parties. He ceaselessly demands equality of rights and bewails race prejudice.

His criticizm of the visit of Billy Sunday to Washington may still be read; "He was brought here by the whites for the benefit of the whites and if he has helped them in anyway, let us be thankful, for they needed help from some source." He gave special sermons for his flock on the training of children, on marriage, on true womanhood, and on the home. His thoughts and meditations, while deeply religious and even theological, show particularly purity and unselfishness of spirit.

Perhaps his letters will best show his value to this generation. He corresponded with Edward Blyden of West Africa, with Richard Greener, the first Negro graduate of Harvard, with George Downing, William H. Crogman, Booker T. Washington, and Robert Moton. He was vividly alive to all current events and to all changes in the aspects of the race problem. But above all he was an understanding and deeply sympathetic friend to a large group of people in Washington and throughout the country on whom the burden of race discrimination added to human and family problems of all kinds made their lives most difficult and discouraging.

46-6-65

It was for instance, Dr. Grimke who married Fredrick Douglass to his white wife, Helen M. ~~Pickford~~ Pitts, and who defended and deeply admired both of them. Of William Jennings Bryan, he wrote; "One of the things I have long held against Mr. Bryan is the fact that he has never so far as I know had anything to say on the Negro question." Perhaps as his last words it may be appropiate to quote Volume IV:

Washington, D. C., April 2, 1926.

Editor of THE CAPITAL CITY PRESBYTERIAN:

...You won't like what I have said, I know, but whether you like it or not, it deals with an evil, which, as Christian men you ought to face, and deal with, not as your prejudices dictate, but as the religion which you profess and the Master whom you are serving require it to be dealt with. The fact that race prejudice cropped out in connection with a communion service, in the very presence, as it were, of the suffering and death of the Lord Jesus Christ who died to destroy all enmities, to break down all walls of segregation and to make us brethren, makes it all the more glaring and reprehensible.

Yours for a Christianity pure and undefiled,

Francis J. Grimke.

Wright, Richard. Black Boy: A Record of Childhood and Youth. N.Y.: Harper & Bros., 1945.

Review: "Richard Wright Looks Back" New York Herald Tribune Books, Vol. 21, No. 28, March 4, 1945, p. 2.

Rough draft

For New York Herald Tribune

Black Boy
A Record of Childhood and Youth
By Richard Wright
Harper and Brothers, 228 pp.

Arranged by later

This is a difficult book to read. It tells a harsh and forbidding story and makes one wonder just exactly what its relation to truth is. The title "A Record of Childhood and Youth" makes one at first think that the story is autobiographical. It probably is, at least in part. But mainly it is probably intended to be fiction or fictionalized biography. At any rate the reader must regard it as creative writing rather than simply a record of life. Consequently he must ask: How far has the artist achieved the impression that he set out to make? The result to my mind is not successful. It is overdrawn. It is terrible, whether or not it is true. As an artist certainly the writer ought to have lightened his picture even if simply to make the shadows darker and more horrible. As it is, one reads and re-reads this novel with the growing realization that there is not a single lovable person within its pages. Everybody is wrong: white people and black people, ministers and teachers, old people and young people.

The hero which Wright draws, and maybe it is himself, is in his childhood a loathsome brat, fowl-mouthed and ~~bitter~~ a drunkard. The family which he paints is a distressing aggregation. Even toward his mother he never expresses love or affection. Sometimes he comes almost to sympathy. He wonders why this poor woman, deserted by her husband, toiling and baffled, broken by paralysis and disappointment should suffer as she does. But his wonder is intellectual inability to explain the suffering. It doesn't seem for a moment to be personal sorrow at this poor, bowed figure of pain and ignorance. The father is painted as gross and bestial with little of human sensibility. The grandmother is a religious fanatic, apparently sincere but ~~terrible~~ brutal. He fights with his aunt. And here again the artist in Wright seems to fail. He repeats the same incident of fighting his aunt with a knife to keep her from beating him. He tells the tale of his grandfather: a disappointed veteran of the Civil War, but tells it without sympathy. The Negroes whom he paints have almost no redeeming qualities. Some work hard, some are sly, many are resentful; but there is none who is ambitious, successful or really intelligent.

After this sordid, shadowy picture, we gradually come upon the solution. The hero is interested in himself, is tremendously self-centered to the exclusion of everybody and everything. The suffering of others is put down simply as a measure of his own suffering and resentment. There is scarcely a ray of light in his childhood: he is hungry, he is beaten, he is cold and unsheltered. Above all, a naturally shy and introverted personality is forced back upon itself until he becomes almost psychopathic. The world is himself and his suffering. He hates and distrusts it. He says "I was rapidly learning to distrust everything and everybody."

He writes of a mother who wanted him to marry her daughter "The main value in their lives was simple, clean, good living and when they thought they had found those same qualities in one of their race, they instinctively embraced him, liked him, and asked no questions. But such simple unaffected trust flabbergasted me. It was impossible!"

He tells of his own pitiful confusion when as an imaginative, eager child he could not speak his thought:"I knew how to write as well as any pupil in the classroom, and no doubt I could read better than any of them, and I could talk fluently and expressively when I was sure of myself. Then why did strange faces make me freeze? I sat with my ears and neck burning, hearing the pupils whisper about me, hating myself, hating them."

Then here and there for a moment, he forgets his role as artist and becomes commentator and prophet. Born on a plantation, living in Elaine, Arkansas and the slums of Memphis, he knows the whole Negro race!"After I had outlived the shocks of childhood, after the habit of reflextion had been born in me, I used to mull over the strange absence of real kindness in Negroes, how unstable was our tenderness, how lacking in genuine passion we were, how void of great hope, how timid our joy, how bare our traditions, how hollow our memories, how lacking we were in those intangible sentiments that bind man to man, and how shallow was even our despair."

Not only is there this misjudgment of black folk and the difficult repulsive characters among them that he is thrown with, but the same thing takes place with white folk. There is not a single broadminded, openhearted white person in his book ~~that he ever comes across~~. One or two start out seemingly willing to be decent, but as he says of one white family for whom he

worked "They cursed each other in an amazingly offhand manner and nobody seemed to mind. As they hurled invectives, they barely looked at each other. I was tense each moment, trying to anticipate their wishes and avoid a curse, and I did not suspect that the tension I had begun to feel that morning would lift itself into the passion of my life."

From the world of whites and the world of blacks he grows up curiously segregated "I knew of no Negroes who read the books I liked, and I wondered if any Negroes ever thought of them. I knew that there were Negro doctors, lawyers, newspapermen, but I never saw any of them."

36-6-35

One rises from the reading of such a book with mixed thought. Richard Wright uses vigorously and straightforward English; often there is real beauty in his words even when they are mingled with sadism "There was the disdain that filled me as I tortured a delicate, blue-pink crawfish that huddled fearfully in the mudsill of a rusty tin can. There was the aching glory in masses of clouds burning gold and purple from an invisible sun. There was the liquid alarm I saw in the blood-red glare of the sun's afterglow mirrored in the squared panes of whitewashed frame houses. There was the languor I felt when I heard green leaves rustling with a rainlike sound."

Yet at the result one is baffled. Evidently this is an historical record, Bad as the world is, such concentrated meanness, filth and despair never completely filled it or any particular part of it. But if the book is meant to be a creative picture and a warning, even then, it misses its possible success because it is so patently and terribly overdrawn. Nothing that Wright says is in itself unbelieveable or impossible; it is the total picture that is false.

Aptheker, Herbert. To Be Free: Studies in American Negro History. N.Y.: International Publishers, 1948.

Review: "Freedom's Partisans" Masses & Mainstream Vol. 1, No. 4, June 1948, pp. 76-79.

To Be Free: Studies in American Negro History. By Herbert Aptheker. International Publishers. $2.75.

In this small book, Herbert Aptheker has made some of the most important of the new contributions to the history of the Negro in America. As he says in his introduction:

> The Negro's past runs through the warp and woof of the fabric that is America. His history must be understood not only because it is the history of some fifteen million American citizens, but also because American life as a whole cannot be understood without knowing that history.

And he goes on to remark that what is needed now is prolonged and rigorous research into the still largely untapped source materials. Nothing can replace this basic procedure, if Negro history is to be lifted above the level of fantasy, mythology, wish-fulfillment and bigotry. This book makes a notable contribution and touches and changed many aspects of heretofore received Negro history.

First, it shows that the Maroons, the guerilla movement of slave rebels which we think of as being confined to the West Indies and Central America, were really prevalent in the United States during the whole period of slavery. Then he takes up the extent to which slaves bought their freedom, and the legal basis of this curious procedure. He traces in the Abolition movement the rise of militancy, which culminated with John Brown and the Civil War, and show how far the idea of fighting for freedom was prevalent, both among Negroes and whites. He examines the reports of Negro casualties in the Civil War, and shows how they have been underestimated and why the casualties were so great. The author makes some inquiry as to the number of Negroes in the Union Navy, and has an interesting chapter on the effort at organization among Negroes during

the year 1865. His book ends with a study of the almost urknown Negro leader in Mississippi, Charles Caldwell. It will be seen that here is a series of studies throwing new light upon American Negro history.

The number of groups of Negroes, who in the South itself, in its swamps, and mountains, fought continuously for freedom from 1672 to 1864 is astonishing and contradicts "the ancient cliche still reiterated that American Negro slavery was characterized by placidity." The figures about the buying of freedom by slaves are interesting and especially the fact that the slave code recognised certain rights of property among Negroes in nearly all of the colonies, and that from the earliest days an astonishing number of Negroes bought their freedom. For instance, it was said in 1830 that of the Negroes in Cincinnati 476 had purchased themselves at an average of $450 each, representing a total expenditure of almost $250,000,000.

Mr. Aptheker names a number of persons who bought themselves and others. Alethia Turner, once a slave of Thomas Jefferson, bought herself, her sister, ten children and five grandchildren at a cost of $5,250. John C. Stanley, a free Negro of North Carolina, bought and paid for 23 persons. Sometimes Negroes raised this money by lectures in the North, and many of the most distinguished Negro leaders, like Richard Allen, Fanny Coppin, and James Dorham had their freedom bought and paid for by themselves or their friends.

The story of militancy in Abolitionism is of great interest. Even among Quakers resistance to slavery was tolerated. In New England and the rest of the United States at the time of the Haitian Revolution, among white people North and South, and Negroes like Horton, Young and David Walker, fighting for freedom was defended. William Lloyd Garrison advocated it time and time again as did Theodore Parker, David Bugrles, Congressman Giddings, Henry Highland Garnett, until the climax was reached in the martyrdom of John Brown, the insurrectionary movement among Negroes during the Civil War, and their acceptance as recognised soldiers.

Mr. Aptheker points out that the usually received figures as to losses among Negro soldiers during the Civil War need revision. In addition to soldiers, an estimate says that something like 200,000 to 250,000 men and women were in the army's ranks as workers and spies of some sort. In the Union Navy, an estimate made in 1902 says that the number of Negroes enlisted was 29,411.

Most interesting in the book is the account of conventions which took place among Southern Negroes in 1865, in practically every Southern state. They made intelligent demands, rejecting colonization, welcoming the support of white allies, and protesting against unfair labor practices. They asked for the right to vote, to testify in courts, to own land, and to obtain an education, to bear arms, to receive better wages and to eliminat all invidious distinctions based upon race.

The book closes with the remarkable martyrdom of Charles Caldwell, who fought inconspicuously but consistently for freedom and stood up to white men as only a brave black man could do. The whites, said his widow, marcher into her house and went where his and his brother's dead bodies lay and cursed them, and danced, and threw open the windows and sung their songs and challenged the dead to get up and meet them.

This is an inspiring book. It is small enough to be read of an evening, but its carefully arranged notes and references may well be the starting point to a new series of studies of the role of the Negro in American history.

BOOK REVIEW

The Story of John Hope. By Ridgley Torrence. New York: The Macmillan Company, 1948. ~~$4.00~~ $5.00, pp. 398

35-2-337

Among the men I have known, John Hope was probably my closest friend. We were born in the same year; we met in 1896 when we were twenty-eight years old, and our friendship lasted until his death in 1936. In a very real sense it still lasts.

Among my many unrealized literary plans was the idea of a tripartite life of John Hope, Henry Hunt, and Charles Young, three great and good men with whom I had long and intimate acquaintance. As I read The Story of John Hope, I am not so sure that I should have undertaken any of these biographies. I was too near the woods in which I and they wandered to estimate the broader outlines of the forest. Certainly, in the case of Hope, my emphasis would have been different from that of Torrence, and probably for the general reader less interesting. I would have touched less heavily on the ancestry. Curiously enough, as much as we talked and confided in each other, I knew almost nothing of Hope's forebears. Among us of mingled bloods in America there are subjects we do not discuss. That poignant picture of three generations of women, whom the laws of this Christian democracy would not permit to marry the fathers of their children, would have turned my pen to flame. It is astonishing to learn how cynically Southern whites, close friends of his father, robbed the colored family; but it is a bit surprising to find thrifty and pious Scotch, equally ready to forget blood and decency. I [illegible] a single member of family or

friends left progeny as noble as John Hope. But I am glad that Torrence did it. I am glad that in so many other matters he dwelt on aspects of Hope's life and on groups of facts which few have before this realized. The biography has involved a mass of material and long months of painstaking inquiry and devoted labor.

Turning from the task of the biographer, and thinking of his subject, it is heartbreaking to remember how much of Hope's time and effort went to earning the right to study. It seems almost incredible to learn of a bright Negro boy actually starving to death at Brown University in the last decade of the nineteenth century; and to follow John Hope in his search to support himself in school by menial service, dogged ever by the anomaly of his white face. Torrence does not over-emphasize, as many have done, this contradiction of appearance and racial identity.

35-2-338

There was nothing extraordinary in Hope's being a Negro. He did not consciously choose to be a Negro. He was a Negro. Because being a Negro, or a German, or a Chinese is primarily a matter of friends, surroundings, habits of life; and not merely a question of appearance or biology. For a boy raised to regard himself as colored; to have colored relatives, friends, and neighbors; always to have been taught to look upon "whites" as mainly belonging to an alien, antagonistic body of human beings, for such a boy to desert his folk even in spirit and loyalty, much less in physical withdrawal, would have been more unnatural than to remain true to his race despite appearance. To white people, naturally a course of action, thus natural and expected, seemed inexplicable, if not Quixotic. We, within the Veil, see analogous phenomena in reverse: obviously negroid folk who by action and choice are white.

The life of John Hope fell into five distinctly marked parts: his childhood and youth in Augusta, Georgia---a period so marked that a standing student joke used to be Hope's, "When I was in Augusta...;" his New

England education; his teaching at Nashville; his long service at Morehouse College; his presidency of Atlanta University. In this biography the Augusta life is very completely covered. His school experience at Groton and Brown is well done, with much new information sensed but not known. To think of a man as popular and well-bred as Hope never being invited to join a fraternity. What insufferable little snobs these hypocritical New Englanders were. At nearly the same time I was at Harvard, but, of course, as an outspoken fighter of white folk I was scarcely even aware that there were any fraternities; I was more interested in scholastic philosophy. Hope was a genial, kind-hearted gentleman---what difference did that make?

25-2-339

Again, the decision of Hope to go South to work was quite natural. Where else would a man normally choose to work save among his own? The little college where he began his teaching career, I knew well; often I had visited its lovely campus, some six or eight years before Hope went there. It was a mission school, well-run, but poverty stricken, with no prospects of real help. It died eventually after long, cruel years of suffering. It was fortunate that Hope's loyalty did not keep him there.

The real life of John Hope was at Morehouse College in the years from 1898 to 1929. I went to Atlanta in 1896, and from then until 1910, Hope and I were weekly, often daily companions. Even after I left for New York in 1910, we corresponded often and met two or three times a year. These were the high years in the lives of both of us; years of dreams and adventure, of experimenting and daring. We were foils for each other---Hope with his deliberation, his sympathy, his human insight; I with my energy and hurry to get things done. Hope was painfully conscientious; he labored and sweated with his decisions in fear lest he was wronging somebody. He was shy and selfishly modest. I can sympathize with Mrs. Hope when I read how he agonized and delayed over proposing, and even when accepted, warned of how worthless a fellow she might be choosing. With us were Hugh Proctor, a bit pompous

and orthodox, but effective; Dr. William Penn, who kept us all well and laughing; and George Towns, of even and kindly temper, but wide knowledge of all happenings round-about.

In the period 1910-1929, I saw the National Association for the Advancement of Colored People born and broadening, but Atlanta University, my second interest, dying from lack of funds. I saw the Money Masters supporting Tuskegee, and then turning to Morehouse. I was desperately afraid that Hope would fall completely into their net. But when he came to Harpers Ferry, to that epoch-making second meeting of the Niagara Movement, I knew that he had escaped. The merger of Morehouse, Spelman, and Atlanta into the new Atlanta University in 1929 had my enthusiastic support.

35-2-340

My chief criticism of the Torrence biography would be failure entirely to grasp the meaning and bitter problems of the life of John Hope from 1929 to 1936. I understand, in part, why Torrence did not emphasize this period as much as it deserved. It was a very difficult period in the world, in Atlanta, in Hope's heart. Perhaps the whole story can never be told. One part, however, Torrence has stressed and that is Hope's world travel. This was a godsend for the biographer, for it documented a period when documents on many matters of high importance failed, or could not be used. His correspondence on these trips reveal a Hope which even I did not know fully. Much of his repressed inner life was poured forth here more fully than elsewhere. I touched this part of his life only once, and that was when we were together in France in 1918, just after the armistice. We wandered together in Paris and on shattered battlefields; we planned the first Pan-African Congress.

My contacts with Hope, after my return to Atlanta in 1934, were disappointing. He was busy, terribly and inexcusably busy; he was not well. I had returned from a great tourney, to sit apart and aloft, and dream again as we had dreamed a quarter century before. It was not to be. I seemed

scarcely to have arrived; I seemed hardly to have greeted him anew---then he was dead. I was ready to believe that if John Hope and I could have worked unhampered at Atlanta University from 1934 to this day, we might have transformed the South. Probably I was crazy. At any rate, I am very glad that so competent an artist as Ridgley Torrence has painted the picture of John Hope so faithfully, and perhaps as clearly as could be expected, so that I and all men may never forget his lineaments.

Ideas Have Consequences. By Richard M. Weaver. Chicago: University of Chicago Press, 1948. Pp. 190.

The thesis of this book is: The world is intelligible. Man is free. Those consequences which we are today expiating are the product not of biological or other necessity, but of unintelligent choices. We see hecatombs of slaughter; entire nations desolated by war; half of mankind looking upon the other half as criminal. Western man has made an evil decision which has become the cause of other evil decisions.

The author is evidently a man of religious convictions, trained in metaphysics which were used to call philosophy. He dislikes the specialism and "fragmentation" of modern science; believes that "democracy" has replaced Faith and Authority and tried to substitute equalitarianism for the Gentleman of high ideals; for these reasons modern civilization has failed.

The author's development of this thesis runs as follows: There is a source of Truth higher than man. The denial of everything transcending experience is the denial of Truth. There is no knowledge at the level of sensation. Science, the careful study of nature, denies the transcendental and leads men to regard nature as a self-regulating mechanism. Religion, therefore, becomes ambiguous and man, instead of being divine protagonist in a great drama, becomes merely a wealth-seeking, wealth-consuming animal.

Having asserted this thesis, Mr. Weaver, without pausing to prove it or to concede that it needs proof, launches into a devastating attack upon modern civilization:

> Man becomes a fatalist: his life is practiced without theory; his institutions crumble; wars must be fought, but immersion in matter unfits him to deal with problems of matter.
>
> In the Middle Ages the philosophic doctor was the possessor of the highest learning. He was succeeded by the Gentleman, the idealist. The American South cherished this ideal and gave it fresh strength.
>
> The world today has no use for a liberally educated class, because generalization has been abandoned for specialization.

45-2-49

Ideas which have their origin in the periphery of knowledge are false and stand in the way of integration of knowledge.

Modern thought keeps the individual busy with induction and running away from first principles.

Man is told that knowledge is power and knowledge consists of a great many small things. He is left swamped with multiplicities and no longer sees his way.

The final degradation of the Baconian philosophy is that knowledge becomes power in the service of appetite.

Comfort becomes a goal when distinctions of rank are abolished and privileges destroyed.

The author's chief wrath falls especially on democracy:

Equality is a disorganizing concept.

Equalitarian democracy lacks authority; education has no aim; homo sapiens becomes homo faber.

No man was ever created free and no two men were ever created equal.

Democracy does not recognize worth but demands conformity. Democracies if logical should choose rulers by lot.

If democracy cannot exist without education, this means democracy cannot exist without aristocracy.

Programs like the four freedoms codify error.

Having now laid down his thesis, and having indicted modern civilization, and especially democracy, as the cause, Mr. Weaver turns to remedies:

Consciously, Man has three levels of thought: immediate needs; general beliefs; a metaphysical dream of the world.

Logic depends upon dream; reason depends on faith.

Man can know and can will.

We must drive a wedge between the material and the transcendental.

Some source of authority must be found; the only source is knowledge and knowledge means distinction and hierarchy.

Modern man is impious.

Every attack upon religion is an attack upon mind.

Optimism will prevail until the world admits tragedy and cannot admit tragedy until it distinguishes between good and evil.

Coming to particulars, the author says:

> The right of private property is the last right remaining. Private property is the last domain of privacy. We must have small properties, independent farms.
>
> The state is not responsible for the poor or the criminal.
>
> Woman will regain her superiority when she finds privacy in the home.

One reads a book like this with a certain amazement and impatience. The author tends to aphorism and brilliance of phrase, so that I have quoted largely verbatim, and still realize that phrases taken out of context may be misleading. Yet the main thesis is clear: Man has the power to control this world and has deliberately turned from Truth to error and landed us in a mess. The less spectacular fact is that man assumes that his ideas and wishes have influence on the course of history, and human beings have usually worked on this assumption; but of course scientific proof of this assumption is impossible. Moreover, the bald statement that there is a source of truth higher than sensation, which man has deliberately ignored, simply goes beyond any known facts.

There was a time in this world when a single mind like that of Aristotle could comprehend most known knowledge; but it is not the fault of the modern world but rather its glory that the vast accumulations of knowledge are such that no single mind dare assume it is master of them. The result, as Mr. Weaver reiterates, is unfortunate; but this is no deliberate fault, but a situation to which we must give increasing thought. It will avail us nothing to toss away our hard-won knowledge and go off on a spree of unproven "Faith."

It is timely to rail at our assumptions of progress and power; but to regard the mediaeval gentleman, or his successor the Southern slaveholder, as better than the follower of modern democracy is nonsense. Our democracy is indeed pitiful in its accomplishment, but that is chiefly because we have not tried it, and not because human equality is not a defensible concept. The doctrine of equality does not deny authority nor hierarchy, based on knowledge or moral character; but it does deny that the peasants of France belonged

35-2-42

45-2-51

permanently in the gutter, just because some jackass happened to be his father's son. Equality does not mean that slaves should rule Southern white men; but it does deny that a white man should own me body and soul, just because he can spout Cicero.

When the author raves of the age of faith, the Cathedral builders, and the complacent mediaeval doctors of philosophy, he forgets of what a small segment of the nation he is talking; he ignores the abject poverty, ignorance and degradation of most Englishmen, Frenchmen, and Germans, and regards a handful of aristocrats as the whole nation. It is better that the majority of men should have food and shelter, even if they yet lack commonsense. The doctrine of equality aims to loose wasted ability, so that out of a far vaster sample of mankind than any previous age has used, we may in time achieve leadership, reverence, and authority based on fact, and not on chance and exploitation.

"IDEAS HAVE CONSEQUENCES" by Richard M. Weaver. University of Chicago Press, 1948

190 pp.

The thesis of this book is ~~(copy A)~~

The author is evidently a man of religious convictions, trained in metaphysics which we used to call philosophy. He dislikes the specialism and "fragmentation" of modern science; believes that "democracy" has replaced Faith and Authority and tried to substitute equalitarianism for the Gentleman of high ideals; for these reasons modern civilization has failed

His development of this thesis runs as follows:

There is a source of Truth, higher than man.

The denial of everything transcending experience is the denial of Truth

There is no knowledge at the level of sensation

Science, the careful study of nature, denies the transcendental and leads men to regard nature as a self-regulating mechanism

Religion therefore becomes ambiguous and man instead of being divine protagonist in a great drama becomes merely a wealth-seeking, wealth-consuming animal

Having asserted this thesis, Mr. Weaver, without pausing to prove it or to concede that it needs proof, launches into a devastating attack upon modern civilization.

Man becomes a fatalist: his life is practice without theory; his institutions crumble; wars must be fought, but immersion in matter unfits him to deal with problems of matter

~~There are no goals of labor like that of the cathedral-builders~~

~~Wars now are not crusades but jobs~~

In the Middle Ages the philosophic doctor was the possessor of the highest learning. He was succeeded by the Gentleman, the idealist. The American South cherished this ideal and gave it fresh strength

The world today has no use for a liberally educated class, because generalization has been abandoned for specialization

~~Wisdom not popularity qualifies for rule as the atomic bomb proves~~

Ideas which have their origin in the periphery of knowledge, are false and stand in the way of integration of knowledge

~~Egotism guides Art and Work and abhors discipline and form~~

Modern thought keeps the individual busy with induction and running away from first first principles

Man is told that knowledge is power and knowledge consists of a great many small things. He is left swamped with multiplicities and no longer sees his way.

35-2-331

The world is intelligible. Man is free. Those consequences which we are expiating, are the product not of biological or other necessity, but of unintelligent choices. Today

We have for many years moved with a brash confidence, that mankind has achieved a position of independence which rendered the ancient restraints needless.

We see hecatombs of slaughter; entire nations desolated by war; half of mankind looking upon the other half as criminal

Western man has made an evil decision, which has become the cause of other evil decisions

The final degradation of the Baconian philosophy is that knowledge becomes power in the service of appetite

Comfort becomes a goal when distinctions of rank are abolished and privileges destroyed

The author's chief wrath falls especially on democracy:

Equality is a disorganizing concept

Equalitarian democracy lacks authority; education has no aim; homo sapiens becomes homo faber

No man was ever created free and no two men were ever created equal

~~Teh inability of pure democracy to stand for something intelligible leaves it merely a verbal deception~~

35-2-332

Democracy does not recognize worth but demands conformity. Democracies if logical should choose rulers by lot.

If democracy cannot exist without education, this means democracy cannot exist without aristocracy

Programs like the four freedoms codify error

Having now laid down his thesis, and having indicted modern civilization, and especially democracy, as the cause, Mr. Weaver turns to remedies:

Consciously, Man has three levels of thought: immediate needs; general beliefs; a metaphysical dream of the world
Logic depends upon dream; reason depends on faith

Man can know and can will
We must drive a wedge between the material and the transcendental

Some source of authority must be found; the only source is knowledge and knowledge means distinction and hierarchy

Modern man is impious

Ever y attack upon religion is an attack upon mind

Optimism will prevail until the world admits tragedy and cannot admit tragedy until it distinguishes between good and evil

~~There is no knowledge at the level of sensation~~

Coming to particulars, the authors says:

The right of private property is the last ~~metaphysical~~ right remaining.

Private property is the last domain of privacy

We must have small properties, independent farms

The state is not responsible for the poor or the criminal

Woman will regain her superiority when she finds privacy in the home

Gandhi's Autobiography: The Story of My Experiments with Truth.
by M. K. Gandhi. Public Affairs Press. $5.00.

The autobiography of Gandhi is not a chronicle, defence nor exposition. Comparatively few facts of his life are given and one must know something of the main current to understand this narrative.

"What has set you on this adventure?" a friend asked. "Writing an autobiography is a practice peculiar to the West. I know of nobody in the East having written one, except amongst those who have come under Western influence."

This argument had some effect on me. But it is not my purpose to attempt a real autobiography. I simply want to tell the story of my numerous experiments with truth, and as my life consists of nothing but those experiments, it is true that the story will take the shape of an autobiography.

We see, in his years from birth in 1869 through High School in 1884, a shy, lonely, sensitive boy seeking to understand himself and the world and calling the elusive inner self,--God.

He was deeply imaginative: "I used to be haunted by the fear of thieves, ghosts, and serpents. I did not dare to stir out of doors at night. Darkness was a terror to me. It was almost impossible for me to sleep in the dark, as I would imagine ghosts coming from one direction, thieves from another and serpents from a third."

35-2-343

His unconscious thought was strongly influenced by his caste and family. Foremost was his pious mother, who observed meticulously all the religious customs of his clan, fasting frequently. There was the strictly honest father from whom Gandhi learned that lying and stealing were cardinal sins; and there was the refusal of the clan ever to eat meat, arising partly from love of animals and partly from obscurer reasons. Above all child marriage, which made this boy a husband at thirteen, probably so surfeited his natural appetites that they appeared as evil in themselves and made him vow celibacy at the age of 37 and regard pleasures of palate and taste as sources of temptation and evil; and sacrifice and self-denial as an end in themselves.

His days of education in an Indian college, for a year, and three years in England were times when his inherited beliefs were put to severe test. He was never what one would call today, a broadly educated man. He studied literature, and knew a few books intimately like Tolstoi's KINGDOM OF GOD, Ruskin's UNTO THIS LAST" and more especially the Hindu BHAGAVADGITA, which became his bible. He knew little or nothing of Latin or Greek,

nothing of the European Renaissance, nothing of romance nor fiction and not much poetry. Above all he studied almost modern science although he mentions a course in chemistry. On the other hand, education to him meant character-training; inculcation of good habits and high thoughts; it meant religion, in the sense of seeking by devout introspection and broad human contact, the truth of the world and particularly of one's inner self.

What I want to achieve,--what I have been striving and pining to achieve these thirty years,--is self-realization, to see God face to face, to attain MOKSHA.

es-2-344

His autobiography therefore becomes a catalog of inner questionings and struggles; soul-tearing conflicts and hesitances, which left him pitifully in doubt or devotedly determined. This was shown in college both in India and England, and came to crisis over the matter of eating meat. Back beyond memory it had been to him a sin to eat meat. Then came the days of reform in India and the stirring toward escape from the British yoke. Students sang:

> Behold the mighty Englishman
> He rules the Indian small,
> Because being a meat-eater
> He is five cubits tall.

Gandhi experimented with eating meat and drinking; he sought to become an English "gentleman" in dress and habit; but this was against his inherited customs, his vows and his income. He had promised his mother that if she would consent to his going to England, he would not eat meat, nor touch women, nor drink wine. But beyond this, if he was to be true to himself-- to this inner

self which was God and Truth,--he could not afford expensive top-hats, dancing lessons or even tram-rides. He must buckle down to a simple, inexpensive life, walking instead of riding, cooking his own meals and studying hard. He was not a bright, quick student and was handicapped by his indifferent Indian preparation. Never-the-less, in England he spent no time on broad preparation in classics, mathematics and science, but hurried to the study of law, as soon as he had passed his matriculation examination. He was finally called to the bar in 1891. Meantime he was disciplining himself for life; he tried public speaking to advocate vegetarianism, but was not successful; he experimented with his diet; he sought inner truth and avoided all deception.

35-2-335

In 1891, he faced life at the age of 24 by returning to India. He faced the porblem of oppression and of finding an attitude toward it while earning a living. He was a lawyer, but no speaker and with no experience. He began practice in his birthplace and then moved to the largest city of Bombay, meeting problems of whether it was right to pay fees for procuring clients and just what the relation of his work was toward guilt and injustice; and meeting unjust British officials. In the midst of these struggles and problems, added to the fact of very small income and the open opposition of half his caste, still unreconciled to his trip to England, came the call to Africa. There for the main part of 12 years he was destined to find his inner soul and forge his weapons for attacking human oppression.

It was no accident that Africa not Asia, showed Gandhi his way. That old and tragic continent was, in the closing years of the nineteenth century, the critical center of the triumphant imperialism of expanding Europe. Here with gold, diamonds and slaves, Europe was collecting the finance capital and gathering the raw materials and buying the tools and machinery to forge her chains across the whole world. In India, the British grip of an older century was so firm, and set there seemed no crevice in its armor open to attack. There was a sort of helpless fatalism even among leading Indians. When Gandhi wrote a note of protest against insult and assault, an old lawyer said: 'Such things are the common experience of many vakils and barristers. He is still fresh from England, and hot-blooded. He does not know British officers. If he would earn something and have an easy time here, let him tear up the note and pocket the insult!'

35-2-336

In the new South Africa, the Indian coolie was not the main problem but a new side issue, with patterns for meeting it yet unformed. The Indian had come in as a laborer and had begun to develop as a successful merchant. He must be rid of. Gandhi came to help in a minor suit for a debt. In the Orange Free State and the Transvaal he studied the situation as he read books and helped in his leisurely law case. He saw the Indians divided by group, religion and work. He advocated unity, and organization. With his cas settled by arbitration and starting home, Gandhi was detained in Natal by the proposed disfranchisement of Indians. He now began to seek ways of fighting, oppression. He secured admission

35-2-337

to the supreme court despite opposition; he sent petitions to the legislature and formed the Natal Indian Congress, working also for sanitation and education among the Indians. He settled the problem of taking money for this public service by refusing to accept anything but expenses outside his law income for actual cases. Especially he frowned on excessive propaganda and over-statement. He worked and talked with the whites, seeking inter-racial understanding. To the suprise of all he won his agitation and stopped the movement for disfranchisement. He now saw a life work in South Africa and returned to India to bring his family, lingering there six months to tell India of the struggles of their fellows in South Africa.

The result was that when he returned to South Africa with his family, he was beaten by a mob and nearly lynched in resentment against his stories of injustice. This experience clarified his thinking about force in human relations. He refused to prosecute his assailants despite the backing of the British Colonial Office. He declared in his own mind and action against violence as a weapon of social progress. Beyond this he began to gird himself for work by taking a step toward the simple life: doing his own laundry and cutting his own hair, after white barbers refused. He attacked the problem of education his own and other Indian children and yielded to his life-long like of nursing and healing by working a short time each day in a hospital. His close contact with poor indentured Indians brought him nearer the problem of poverty and closer to the ideal of celibacy, so as to leave time and thought for public service.

Now however came one of those contradictory occurrences which so often faced Gandhi with reality and made him readjust his ethical and religious theories. The Boer War broke out. Gandhi's sympathies were with the Boers. But he was a British subject and believed the British Empire a benefit to the world. But he still repudiated force as a method of progress. After long thought and self-examination, he compromised. He offered to help England in the war, but not by fighting, rather by organizing an ambulance corps. He collected a body of 1100 men who served six months after reluctant permission was secured. Their work impressed England and South Africa; and Indians believed that their grievances in South Africa would now be redressed. He had now been in South Africa six years and decided he was needed in India. He was sent home with tears and a mass of gifts which he decided not to keep. Despite his wife's protest, he turned them into a trust fund for community service.

35-2-338

In India, Gandhi began that service which in the end was his salvation and his greatest gift to man. He studied Man. He travelled all over India and travelled in the dirty, crowded third-class so as to meet and know the masses. Probably no modern leader ever had so complete and intimate contact with and knowledge of the great mass of his fellows as Mohandas Gandhi. From 1901 to the end of his days he was almost continuously moving about India in every part and every city, in pilgrimage, investigation and study, in conference and conversation, until he became a social

institution personally known to three hundred million people. There was nothing to equal this in the world's history; and the power and influence thus gained, enabled Gandhi to influence the men and inaugurate action to an extent seldom known before. Whatever Gandhi lacked in broad education in the humanities and science he more than made up in his knowledge of mankind, his mastery of Sociology.

35-2-339

The trip to India in 1901, was but preliminary to his real return. There was still further work in Africa to profect his philosophy and his search for religious truth. "I have gone through deep self-introspection, searched myself through and through, and examined and analysed every psychological situation. Yet I am far from claiming any finality or infallibility about my conclusions. One claim I do indeed make and it is this. For me they appear to be absolutely correct, and seem for the time being to be final. 'I worship God as Truth only, I have not yet found Him, but I am seeking after Him. I am prepared to sacrifice the things dearest to me in pursuit of this quest.'"

After two years in India in which he came closer to the National Congress and objected to the predominance of the English language, simplified his dress and went to Burma and Benares, he was summoned to South Africa to induce the Colonial Secretary to take sides with the Indians. In this he failed but because he took his ambulance corps into the Zulu "rebellion," he learned of the grievances of the natives and shuddered at this "man-hunt". Legislation against Indian immigrants was threatened and Gandhi began his movement

called at first "Passive Resistance" and later "Satyagraha," - Force, born of Truth and Love. He went to England to protest, but in vain. Thousands including Gandhi went to jail, but steadfast refusal to obey the law resulted finally in victory because of the outbreak of war

Gandhi advised Indians to aid in the war. Illness brought new struggles with diet, and final reluctant yield to goat's milk: struggle against orthodox medicine and home remedies, even though this for a time jeopardized the lives of wife and children. But mainly these matters, however much they tried the souls of Gandhi and his friends, sunk to relative unimportance compared with his renewed travelling over all India and his entrance into the great battle for the final freedom for India from British rule.

35-2-340

There came a mill strike at won in 21 days after Gandhi fasted against strikers' violence. The investigation of pesant degradation in Bihar; the famine in Kheda and the war conference for recruits. In 1919 came the infamous Rowlatt Acts, when Gandhi ceased to be British and stood for Indian self-rule. He began the long fight for religious tolerance and unity in India and the beginning of his realization of the blight that European industrial monopoly had on the poor Indian peasant. India rose to follow him: 36,000 delegates met the Indian Congress at Amtitzar in 1919.

As British intransigeance increased Gandhi fought back the harder with the astounding 24 hour general strike; with mass refusal to cooperative with government and finally with the great

Salt March in 1930. The battle rages back and forth, Gandhi by fast and exortation seeking to stamp out violence; the British by jailing practically every Indian leader of any influence, including Gandhi many times, until he just escapted dying in prison. He was released and arose from the dead to be called into conference by the Viceroy, walking up the palace steps as Churchill sneered, "a Half-naked fakir."

35-2-341

Here the autobiography stops, Gandhi's search for God ended in his overthrow of British imperialism and his failure to unite Hindu and Mohammedan. His voice was the voice of India in birth-pain.

"Let hundreds like me perish, but let truth prevail! For it is an unbroken torture to me that I am still so far from Him, who, as I fully know, governs every breath of my life, and whose offspring I am. I know that it is the evil passions within that keep me so far from Him, and yet I cannot get away from them."

W. E. B. Du Bois

GANDHI'S AUTOBIOGRAPHY

Gandhi's Autobiography: The Story of My Experiments with Truth.

by M. K. Gandhi. Public Affairs Press. $5.00.

38-13-53

The autobiography of Gandhi is not a chronicle, defence nor exposition. Comparatively few facts of his life are given and one must know something of the main current to understand this narrative.

"What has set you on this adventure?" a friend asked. "Writing an autobiography is a practice peculiar to the West. I know of nobody in the East having written one, except amongst those who have come under Western influence."

" This argument had some effect on me. But it is not my purpose to attempt a real autobiography. I simply want to tell the story of my numerous experiments with truth, and as my life consists of nothing but those experiments, it is true that the story will take the shape of an autobiography. "

We see, in his years from birth in 1869 through High School in 1884, a shy, lonely, sensitive boy seeking to understand himself and the world and calling the elusive inner self,--God.

He was deeply imaginative: "I used to be haunted by the fear of thieves, ghosts, and serpents. I did not dare to stir out of doors at night. Darkness was a terror to me. It was almost impossible for me to sleep in the dark, as I would imagine ghosts coming from one direction, thieves from another and serpents from a third."

38-13-54

His ~~unconscious~~ thought was strongly influenced by his caste and family. Foremost was his pious mother, who observed meticulously all the religious customs of his clan, fasting frequently. There was the strictly honest father from whom Gandhi learned that lying and stealing were cardinal sins; and there was the refusal of the clan ever to eat meat, arising partly from love of animals and partly from obscurer reasons. Above all child marriage, which made this boy a husband at thirteen, probably so surfeited his natural appetites that they appeared as evil in themselves and made him vow celibacy at the age of 37 and regard all pleasures of palate and taste as sources of temptation and evil; and sacrifice and self-denial as an end in themselves.

His days of education in an Indian college, for a year, and three years in England, were times when his inherited beliefs were put to severe test. He was never what one would call today, a broadly educated man. He studied literature, and knew a few books intimately like Tolstoi's KINGDOM OF GOD, Ruskin's UNTO THIS LAST, and more especially the Hindu BHAGAVADGITA, which became his bible. He knew little or nothing of Latin or Greek,

nothing of the European Renaissance, nothing of romance nor fiction and not much poetry. Above all he studied almost no modern science although he mentions a course in chemistry. On the other hand, education to him meant character-training; inculcation of good habits and high thoughts; it meant religion, in the sense of seeking, by devout introspection and broad human contact, the truth of the world and particularly of one's inner self.

"What I want to achieve,--what I have been striving and pining to achieve these thirty years,--is self-realization, to see God face to face, to attain MOKSHA."

His autobiography therefore becomes a catalog of inner questionings and struggles; soul-tearing conflicts and hesitances, which left him pitifully in doubt or ~~devotedly~~ heroically determined. This was shown in college both in India and England, and came to crisis over the matter of eating meat. Back beyond memory it had been to him a sin to eat meat. Then came the days of reform in India and the stirring toward escape from the British yoke. Students sang:

Behold the mighty Englishman
He rules the Indian small,
Because being a meat-eater
He is five cubits tall.

Gandhi experimented with eating meat and drinking; he sought ~~to dress, manners~~ to become an English "gentleman" in dress and habit; but this was against his inherited customs, his vows and his income. He had promised his mother that if she would consent to his going to England, he would not eat meat, nor touch women, nor drink wine. But beyond this, if he was to be true to himself-- to this inner

88-13-55

self which was God and Truth,--he could not afford expensive top-hats, dancing lessons or even tram-rides. He must buckle down to a simple, inexpensive life, walking instead of riding, cooking his own meals and studying hard. He was not a bright, quick student and was handicapped by his indifferent Indian preparation. Never-the-less, in England he spent no time on broad preparation in classics, mathematics and science, but hurried to the study of law, as soon as he had passed his matriculation examination. He was finally called to the bar in 1891. Meantime he was disciplining himself for life; he tried public speaking to advocate vegetarianism, but was not successful; he experimented with his diet; he sought inner truth and avoided all deception.

In 1891, he faced life, at the age of 24, by returning to India. He faced the problem of oppression and of finding an attitude toward it while earning a living. He was a lawyer, but no speaker and with no experience. He began practice in his birthplace and then moved to the largest city of Bombay, meeting problems of whether it was right to pay fees for procuring clients and just what the relation of his work was toward guilt and injustice; and meeting unjust British officials. In the midst of these struggles and problems, added to the fact of very small income and the open opposition of half his caste, still unreconciled to his trip to England, came the call to Africa. There for the main part of 12 years he was destined to find his inner soul and forge his weapons for attacking human oppression.

38-13-56

It was no accident that Africa not Asia, showed Gandhi his way. That old and tragic continent was, in the closing years of the nineteenth century, the critical center of the triumphant imperialism of expanding Europe. Here with gold, diamonds and slaves, Europe was collecting the finance capital and gathering the raw materials and buying the tools and machinery to forge her chains across the whole world. In India, the British grip of an older century was so firm, and set, there seemed no crevice in its armor open to attack. There was a sort of helpless fatalism even among leading Indians. When Gandhi wrote a note of protest against insult and assault, an old lawyer said: "Such things are the common experience of many vakils and barristers. He is still fresh from England, and hot-blooded. He does not know British officers. If he would earn something and have an easy time here, let him tear up the note and pocket the insult!"

38-13-57

In the new South Africa, the Indian coolie was not the main problem but a new side issue, with patterns for meeting it yet unformed. The Indian had come in as a laborer and had begun to develop as a successful merchant. He must be ~~rid of~~ eliminated. Gandhi came to help in a minor suit for a debt. In the Orange Free State and the Transvaal he studied the situation as he read books and helped in his leisurely law case. He saw the Indians divided by group, religion and work. He advocated unity, and organization. With his case settled by arbitration and starting home, Gandhi was detained in Natal by the proposed disfranchisement of Indians. He now began to seek ways of fighting oppression. He secured admission

to the supreme court despite opposition; he sent petitions to the legislature and formed the Natal Indian Congrass, working also for sanitation and education among the Indians. He settled the problem of taking money for this public service by refusing to accept anything but expenses outside his law income for actual cases. Especially he frowned on excessive propaganda and over-statement. He worked and talked with the whites, seeking inter-racial understanding. He now saw a life work in South Africa and returned to India to bring his family, lingering there six months to tell India of the struggles of their fellows in South Africa.

The result was that when he returned to South Africa with his family, he was beaten by a mob and nearly lynched in resentment against his stories of injustice. This experience clarified his thinking about force in human relations. He refused to prosecute his assailants despite the backing of the British Colonial Office. He declared in his own mind and action against ~~violence~~ force as a weapon of social progress. Beyond this he began to gird himself for work by taking a step toward the simple life: doing his own laundry and cutting his own hair, after white barbers refused. He attacked the problem of education his own and other Indian children and yielded to his life-long like of nursing and healing by working a short time each day in a hospital. His close contact with poor indentured Indians brought him nearer the problem of poverty and closer to the ideal of celibacy, so as to leave time and thought for public service.

38-13-58

Now however came one of those contradictory occurrences which so often faced Gandhi with reality and made him readjust his ethical and religious theories. The Boer War broke out. Gandhi's sympathies were with the Boers. But he was a British subject and believed the British Empire a benefit to the world. ~~But~~ He still repudiated force as a method of progress. After long thought and self-examination, he compromised. He offered to help England in the war, but not by fighting, rather by organizing an ambulance corps. He collected a body of 1100 men who served six months after reluctant permission was secured. Their work impressed England and South Africa; and Indians believed that their grievances in South Africa would now be redressed. He had now been in South Africa six years and decided he was needed in India. He was sent home with tears and a mass of gifts which he decided not to keep. Despite his wife's protest, he turned them into a trust fund for community service.

38-13-59

In India, Gandhi began that service which in the end was his salvation and his greatest gift to man. He studied Man. He travelled all over India and travelled in the dirty, crowded third-class, so as to meet and know the masses. Probably no modern leader ever had ~~so~~ more complete and intimate contact with and knowledge of the great mass of his fellows as Mohandas Gandhi. From 1901 to the end of his days he was almost continuously moving about India in every part and every city, in pilgrimage, investigation and study, in conference and conversation, until he became a social

institution, personally known to three hundred million people. There is nothing to equal this in the world's history; and the power and influence thus gained, enabled Gandhi to influence the men and inaugurate action to an extent seldom known before. Whatever Gandhi lacked in broad education in the humanities and science he more than made up in his knowledge of mankind, ~~his mastery of Sociology.~~

The trip to India in 1901, was but preliminary to his real return. There was still further work in Africa to perfect his philosophy and his search for religious truth. "I have gone through deep self-introspection, searched myself through and through, and examined and analysed every psychological situation. Yet I am far from claiming any finality or infallibility about my conclusions. One claim I do indeed make and it is this. For me they appear to be absolutely correct, and seem for the time being to be final. 'I worship God as Truth only, I have not yet found Him, but I am seeking after Him. I am prepared to sacrifice the things dearest to me in pursuit of this quest.'"

38-1360

After two years in India, in which he came closer to the National Congress and objected to the predominance of the English language, simplified his dress and went to Burma and Benares, he was summoned to South Africa to induce the Colonial Secretary to take sides with the Indians. In this he failed, but because he took his ambulance corps into the Zulu "rebellion," he learned of the grievances of the natives and shuddered at this "man-hunt". Legislation against Indian immigrants was threatened and Gandhi began his movement

called at first "Passive Resistance" and later "Satyagraha," Force, born of Truth and Love. He went to England to protest, but in vain. Thousands including Gandhi went to jail, but steadfast refusal to obey the law resulted finally in victory because of the outbreak of war.

Gandhi advised Indians to aid in the war. Illness brought new struggles with diet, and final reluctant yield to my doctor's goat's milk; struggle against orthodox medicine, and trial of home remedies, even though this for a time jeopardized the lives of wife and children. But mainly these matters, however much they tried the souls of Gandhi and his friends, sunk to relative unimportance compared with his renewed travelling over all India and his entrance into the great battle for the final freedom for India from British rule.

38-13-61

There came a mill strike at won in 21 days after Gandhi fasted against strikers' violence; The investigation of peasant degradation in Bihar; the famine in Kheda and the war conference for recruits. In 1919 came the infamous Rowlatt Acts, when Gandhi ceased to be British and stood for Indian self-rule. He began the long fight for religious tolerance and unity in India and the beginning of his realization of the blight that European industrial monopoly had on the poor Indian peasant. India rose to follow him: 36,000 delegates met the Indian Congress at Amtitzar in 1919.

As British intransigeance increased, Gandhi fought back the harder with the astounding 24 hour general strike; with mass refusal to cooperate with government and finally with the great

Salt March in 1930. The battle raged back and forth, Gandhi ~~by~~ fasting and exhorting ~~seeking to stamp out violence~~; the British ~~by~~ jailing practically every Indian leader of any influence, including Gandhi many times, until he just escaped dying in prison. He was released and arose from the dead to be called into conference by the Viceroy, walking up the palace steps as Churchill sneered, "a half-naked fakir."

Here the autobiography stops. Gandhi's search for God ended in his overthrow of ~~British imperialism~~ and his failure to unite Hindu and Mohammedan. ~~His~~ Gandhi's voice was the voice of India in birth-pain.

"Let hundreds like me perish, but let truth prevail! For it is an unbroken torture to me that I am still so far from Him, who, as ~~I fully~~ know, governs every breath of my life, and whose offspring I am. I know that it is the evil passions within that keep me so far from Him, and yet I cannot get away from them."

W. E. B. Du Bois

38-1362

BIOGRAPHY OF GANDHI

(Copy pages 3,4,--Passages marked in red) Copy page 5. Pages 6,7,8.)

The Gandhi's were originally grocers but for three generations were Prime Ministers in several Indian States. The grandfather was a man of principle. He had four sons by his first wife and two by his second. The fifth of these sons was Karamchand Gandhi, who was the father of Mohandas Gandhi. His father married four times , his wives' dying in succession. He had by his marriages; three daughters, and three sons of which Mohandas was the youngest. The father was truthful, brave and generous but short-tempered,--" He might have been even given to carnal pleasures for he married a fourth time when he was over 40; but he was incorruptible and had earned a name for strict impartially"

23.38-68

He left little property and had no education beyond the fifth grade. The outstanding impression of Gandhi's mother was that of saintliness. She was deeply religious and carried out faithfully her daily prayers. She was especially faithful in fasting and fasted often. Gandhi was born October 2, 1869 at Porbandar in Eastern India on the shore of the Arabian sea. "I recollect having been put to school, it was with some difficulty that I got through the multiplication tables." (copy page 15) Copy page 18.

He was betrothed 3 times although he did not know of it, but two of the girls died and therefore he was betrothed a third time in his seventh year and married in his thirteenth. The marriage included elaborate ceremonies and considerable expenditure . It was only through preparations for the event that his attention was brought to it . "I do not think it meant to me anything more than the prospect of good clothes to wear, drum beating, marriage processions, rich dinners and a strange girl to play with ." He says that the sex impulse came later. copy page 20.

His wife was illiterate, he was anxious to teach her, but said that lust left no time, and at any rate teaching had to be done against her will.

In Hindu society, the custom of child-marriage mitigated to some extent because the young people do not live together long. The child-wife spends more than half her time in her own family. In Hindu society marriage and study go hand-in-hand. Gandhi had no great regard for his ability and was astonished if he won prizes or scholarships, but he was very jealous of his character, and the least little blimish drew tears. He took no part in any of the games, principally because his sinus. Once he was unjustly accused of lying which deeply pained him until the matter was explained. He says good handwriting is a necessary part of education. One of his first moral battles was with regard to meat and wine. He was told, we are a weak people because we do not eat meat the English are able to rule over us because they are meat-eaters . (page33)

In his plan abhorrent meat-eating more than perhaps any other part of India, this was the tradition in which he was born and bred. He knew that his parents would be shocked to death if they knew that he had eaten meat. He ate meat on several occasions and then declared that he would not eat meat ? but only openly and until he could do that he would abstain from it.

23-38-69

He tells of one incident with women (copy page 37) He was a suspicious husband. A Hindu wife may not seek divorce from the law court. Law has no remedy for her . I have never desired to smoke and have always regarded the habit of smoking as barbarous, dirty, and harmful.. Once he stole a little money and then confessed in writing to his father with great humility . He asked punichment and pledged himself never to steal in the future. (page 42) He liked to nurse the sick and nurse his father in his last illness; but there again never forgave himself because he was absent, in bed with his wife at the actual time of his fathers' death. (pages 45,46)

He came to tolerate all religion except Christianity because Christian ministers used to stand on a corner and abuse the Hindus for their Gods. He came to think of christianity as a religion that compelled people to wear European clothes, eat meat and drink liquor. He passed a matriculation

examination in 1887 and then there was a question as to whether he should study law or medicine. Finally it was decided that he should take law in England, but his clan objected, both to the journey and to English customs. Finally he went and swore an oath not to touch wine, woman, or meat. After that his mother gave permission. He left his wife and baby and started for Bombay. Meantime the people of his caste had a meeting and said that within their opinion the proposal to go to England was not proper, that religion forbade voyages abroad. On his determination to go, he was pronounced an outcast. He landed in England, late in September in a white flannel suit In England he tried to be a gentleman, in dress and custom, he took dancing lessons, he had new clothes made including a chimney pot hat, and an evening suit. He began experiments in diatetics and expecially in vegetarianism (copy 82) It was only afterward in South Africa that he got over this sinus, although never completely. It was impossible to speak impromptu. The hesitancy in speech, once an annoyance became a pleasure, it taught him economy of words . "My sinus has been in reality my shield and buckler it has allowed me to grow, it has helped me in my discernment of truth."

23-88-70

Forty years ago there were few Indian students in England, it was a practice for them to pretend they were bachelors even though they were married this pretense he also practised but finally made very abject apology to his hostess and the young lady with whom he had been going out . He tried reading the bible but could not get through the whole testament. The new teatament, especially the sermon on the mountain went straight to his heart. He compared it with the Gita. In 1890 he attended a vegetarian conference in Portsmouth which was a seaboard city of loose morals, here again he was tempted , (copy page 95,96)

He attended the great exibihition at Paris in 1890 and saw the Eiffel Tower (page 103) He passed his examinations and was called to the bar June 10, 1891

and on June 12, sailed for home. He found it difficult to practice and was torn with doubts and anxiety. "A great Indian lawyer assured me it takes no unusual skill to be an ordinary lawyer. Common honesty and industry, are enough to enable him to make a living . He made one close friend and says of him (page 113) He found on his return that his caste was divided into two camps: one who wanted to readmit him and the other in getting him out. He did not try to seek admission to the section that wanted to keep him out and avoided their rules on excummication ; according to these none of my realtions, neither my sister nor brother-in-law can entertain me, and he could not drink water at their houses . In this way he retained the affection of both camps but one part of the general body still regarded him as an excummicate- copy page 116, copy page 118.

He began the practice of law in Bombay and also started the study of Indian law . He refused to pay commission to agents for getting his cases and in that way lost many. In one case he tried to cross examine a witness but was too timid and gave up the case. He was, however, successful in drafting memorials. He tried to get a job teaching English, but was refused because he did not have a graduate degree. His Bombay office closed after six months . Leaving Bombay he went to Rajkot, near his birthplace and there got on moderately well drafting applications and memorials. He earned about $90.00 a month but he had to compromise on the matter of getting------

While here he became painfully conscious of the attitude of British officals. At one time presuming upon his acquaintance with an offical in England he tried to have an interview and was forcably ejected. He wrote a note of protest but an Indian friend said to him (copy page 126)

Next he got an offer to represent a firm in South Africa. He was to be gone not more than a year and have his return fare and five hundred dollars with board. (copy page 130) He went to South Africa in April 1893, on the

23-38-71

way he stoped at Lamu, in Kenya and saw the Indian clerks, "I also saw the Africans and tried to acquaint myself with their ways of life which interested me very much ." He stoped at Zanzibar and was taken by the captain to a Negro house of ill-fame. We were each shown into a room, I simply stood there dumb with shame, Heaven knows what the poor woman must have thought of me ." He landed at Durban and came to be known eventually as "the coolie barrister" There came some moral questions as to wearing the turban. On his way to Pretoria he was put off the train on account of color. Indians travelling first or second class had to expect trouble from the officals and white passengers. Further on the way he had trouble about seats on account of color discrimination. There he was again told of color discrimination.

(copy 146) Gandhi, however, protested and naturally got a first class ticket to Pretoria . In Pretoria he had to search for a stopping place- (copy 149) His christian friend, remonstrated with him for wearing a necklace, because ~~of~~ the superstition contained them . However he refused to discard it. It was put around his neck by his mother as a matter of love, what christian wanted to convince him that salvation was impossible unless I ~~x~~ accepted christianity, which represented the truth, and that my sins would not be washed away except by the intercession of Jesus, that all good works were useless. Gandhi answered-~~x~~ (page 156) He began to organize the Indians of the Transvaal, and attempted his first public speeches. He suggested the formation of an association to approach the authorities in respect to the hardships of Indians--(copy page 160)

The Orange Free State there was discriminatory legislation, especially there and in the Transvaal in regard to poll tax. He had difficulty about ? and once was pushed and kicked into the street for walking on the sidewalk. (copy page 163) He stayed a year in the Transvaal, the religious

spirit within him became a living force and he acquired a knowledge of legal practice, finally a case in which he was taking part was compromised advantageously . "My joy was boundless, I had learned the true practice of law, I had learned to find out the better side of human nature and to enter mens' hearts." He attended one Christian convention and his white companion had a hard time because of Gandhi-- his colored companion, there again he could not believe that Jesus was the only incarnate Son of God, if God could have sons, all of us were his sons . He returned to Durban and began to make preparations to return home, but became interested in the fight of the Indians in Natal to elect members to the Natal legislative assembly. He was asked to stay and help the fight and agreed to so long as he was not paid fees for public work. (copy 175)

28-38-73

A petition was written out and published against the proposed bill to disfranchise Indians. Nevertheless the bill was passed and it was decided to send a monster petition to the Secretary of State for the Colonies in London Ten thousand signarutes were obtained in a fortnight. The petition recieved the support of the London Times and other papers. It was now necessary for him to stay and continue his work in Natal, but he insisted not to accept any salary for public work and to have for his support a gaurantee of private law work. This was gauranteed and he settled in Natal. When he applied for admissio as an advocate to the Supreme Court, this was held up by the law society, who did not want colored people admitted as lawyers; after a considerable agitation he was admitted by the chief Justice, but had to take off his turban. Of this compromise he says (page 184) His practice as a lawyer was subordinate occupation , his chief work was the formation of the Natal Indian Congress, May 22, 1894 he learned at the outset not to carry on public work with borrowed money, the accounts of the Natal Indian Congress were carefully kept .

The Colonial born Indian Educational Association was formed under the auspices of the Congress. Another feature of the Congress was propaganda

acquaintaing the people of South Africa and England and India with the real state of things in Natal. All this activity won the Indians numerous friends in South Africa and obtained active sympathy of all parties in India. (page 19

In this case, as he worked not to punish the empolyer but to get a new employer for the coolie after release, he succeeded and this case came to be widely known. A regular stream of indentured laborers began to pour into Gandhi's office. They usually came hat-in-hand, this hurt Gandhi, he said (page 192) In 1894 the government sought to impose an annual tax of £25 on indentured Indians , if they refused to return to India after their indenture had expired or refused to renew the indenture. The Indian Viceroy disapproved the £25 tax, but agreed to a poll tax of £3, which was too great for large families . A fierce campaign was organized against this tax, but it was 20 years before the fight succeeded in getting the tax remedied but as Gandhi says "the truth triumphs in the end" (copy 197) He again came in contact with Indians and pointed out that Buddha loved all living beings but one fails to notice this in the life of Jesus. As a house-holder he has difficulty with servants , I have never known how to keep anyone as a servant, in one case, a trusted servant brought catasrophe to the house and Gandhi had to discharge him.

He stayed 3 years in South Africa and in 1896 asked to go home for 6 months. He had established a fairly good practice; so he made up his mind to go home, fetch his wife and children and return to settle in South Africa. He began studying native languages as it was a conviction that Indians ought to speak their own tongue. He says that the fight in South Africa was made by illiterate people, the fight was for the poor and the poor took their full share of it. One of his first efforts was to publish a clean pamphlet in which he drew a purposely subdued picture of the condition of Indians in South Africa. The language I used was more moderate than in pamphlets which he had referred to before, as I knew that things heard out from a distance appeared bigger than they are. The plague broke out in Bombay, and there was panic.

23-3-74

Gandhi was put on a committee to look into sanitary conditions and he laid a special emphasis on the cleanliness of latrines and made inspection on every street; he found among the well-to-do much ~~exxx~~ carelessness, (copy page 211) copy page 212)

He nursed his sick brother- in-law night and day and at the same time trying to keep up his work . His aptitude for nursing gradually developed into a passion, so that it often led him to neglect his work .. He attended a public meeting in Bombay, but found himself unable to read the speech that he had written, loud enough for people to hear . Another person read it and the audience listened with applause to what he said about South Africa, . He went to Poona and Bombay and met the great leader Gokhale, he spoke singularly on the situation in South Africa. There were of course, differences of opinion about South Africa in India among the Indians. He proceeded to Madras, the audience listened with great attention (copy page 222)

23-38-25

From Madras, he went to Calcutta in the extreme east of India, a white friend ~~xxxxx~~ invited him to the Bengal Club, without realizing that Indians could not enter the drawing room of the club. He tried to arrange a public meeting, but before this was done he was recalled to Durban , South Africa, where parliament was to open in January. He sailed in December with his wife and two sons and a nephew; there was a wild storm at sea, but that was nothing to the storm which arose when he tried to land at Durban, they were kept a long time in harbour by quarentine rules and effort was made to get him to return to India (copy page 233) The charges against him was that in India I had made unmerited condemnation of the Natal whites and that I was trying to bring in two ship loads of passengers to settle. He spoke to the ~~x~~ captain and other officers (copy 234, 235)

After 23 days the ships were permitted to enter the harbor and the passengers to land; but a mob was awaiting and youngsters recognized Gandhi. He was surrounded in the house where he had taken refuge, outside the people

sang "Hang old Gandhi on the sour apple tree". He was nearly lynched.

Finally he was spirited away to a place of safety. The Secretary of State for Colonies asked the Natal government to prosecute the assailants but Gandhi said, " I do not want to prosecute anyone"and he refused to do so. This refusal produced a profound impression upon the whites of Durban. After three or four days, Gandhi settled down in his house and began his practice. He went about raising funds for the Natal Indian Congress and succeeded. He was, however, convinced that it was not good to run public institutions on permanent funds, it should be conducted with the approval and from the funds of the public ; and when it ceases to have public support it causes dislike to exist. (copy page 244)

23-38-76

Gandhi had landed at Durban in January 1897, first of all he had difficulty about educating his children. They might have gone to a European school but that would have been a matter of favor as other Indian children could not go there so he refused. (copy page 246, 248)

Gandhi progressed with his profession but now wanted to simplify his life He wanted humanitarian work of a permanent nature, and gave several hours a day as nurse in the hospital. He helped deliver his wife's last child and said (copy page 251)

He now began to consider seriously the matter of celibacy (page 253) The final resolution came in 1906 when he was 37 years old, (page 256, 257,258, 259) He had started in earlier life on a life of ease and comfort but then began to cut down expenses, he began to do his own laundry, just as he freed himself from the slavery of the washerwoman, he threw off his dependence on the barber. This was brought about first by the refusal of a South African barber to serve him (copy 263) When the Boer War opened, his sympathy was with the Boers, but his loyalty to British rule drove him to participation with the British. He felt that he could demand his rights as a British citizen. It was his duty to help defend the British Empire, he therefore collected as many comrades as possible and got their servances accepted as an ambulance corps.

The corps was 1,100 strong with 40 leaders, about 300 were free Indians and the rest indentured servants. The work was much applauded. The Indian community became better organized, Gandhi got in closer touch with the indentured Indians, and united Hindus, Mohammedians, Christians, and others. Everybody believed that the Indian grievances were now sure to be redressed.

The weak points among the Indians was their lack of sanitation. They were slovenly in their habits and their houses and surroundings were not kept clean. Gandhi started to correct this, and the Indian community began to recognize the necessity of keeping their houses clean; also he gained the esteam of the authorities. They saw that although I made it my business to ventilate grievances and press for rights, I was no less keen and insistent upon self purification (copy 268)

On release from war duty, again he returned to India, there was plenty still to be done in South Africa, "but I was afraid that my main business might become merely money making ". A large number of gifts were poured upon him when he left in 1899, and after severe thought and disagreement with his wife he decided that he could not keep the things, therefore the gifts received in 1896 and 1901 were all returned and a trust scheme was prepared so that the money could be used for the service of the community (copy page 272)

In India he spent some time in going about the country, and in 1901 met with the Indian Congress at Calcutta; this was his first experience with the Congress. There he wanted to emphaisze conditions in South Africa, but an influential friend said, "We will pass your resolution, but what rights have we in our own country, so long as we have no power here, you cannot fare better in the colonies."

23-38-77

At the congress he came across problems of untouchability and the lack of sanitation, and the unwillingness of many of the visitors to help clean up the place . (copy 275) Gandhi helped in clerical ways ~~xxxxxx~~ with the Congress, came to know its working and met most of the leaders. He was oppressed by the way in which the English language displaced the native tongue. His resolution went through unanimously, but he was not satisfied because there was lack of discussion and understanding. His own speech was short and unsatisfactory, but the fact that the Congress had endorsed the South African resolution gave him some satisfaction.

He stayed in Calcutta a month and saw the Durbar of the Viceroy. He was oppressed by the fact that they wore jewels and ornamentations in order to carry favor with the English. (284) He spent considerable time with Takhale, and had great regard for him. He was affronted at the sacrifice of sheep at the Kali temple and said (290, 293) He made the long journey from Calcutta to Rajkot, some fifteen hundred miles through the heart of India traveling third class, (294) Not only were the railway authorities indifferent but the people themselves were careless with rubbish on the floor, smoking everywhere,betel nuts and tobacco chewing, shouting and yelling and using foul language, (205)

23-32-78

Gandhi was seriously ill in 1918-19 and had to give up third class travel but that was a matter of constant pain and shame. He went on a pilgrimage at Benares and greatly pained at the dirt, the flies, and the noise, there was not atmosphere of meditation and communion , save in a few cases. Cunning shipkeepers were selling sweets and toys . I went to the Well of Knowledge, I searched here for God but failed to find him, I was not, therefore, in a particular good mood. The priest in charge swore at him when he gave only a small coin. "This insult will take you straight to hell, said the priest , . This did not perturb me .

He settled in Bombay at the invitation of Gokhale for public work and some law practice, but finally set up his office at Rajkot, where he went to school

as a child. He complained at the of the English officials . The assistants court toured the country but made the clients incur double expenses and often if was hard for them to find a place to live . He complained to the officials with no results . How could a man have an idea of the hardships of poor India, one accustomed to measure things in gold soverigns, could not calculate in tiny bits of copper.

Finally he removed his office to Bombay, his second son, ten years of age had formerly had small pox and now a severe attack of typhoid and pneumonia. The doctor ordered eggs and chicken broth, but there came the usual moral battle with Gandhi. Gandhi won, refused the food and used the hydropathic treatment. Today he says the son is the healthiest of my boys, who can say whether his recovery was due to God's grace or the careful dietary and nursing? For my part I was sure that God had saved my honour.

23-38-29

A cable came from South Africa asking him to come because Chamberlain was expected. He went promptly, but this involved separation from his wife and children. " I think it is wrong to expect certainties in this world, where all else but God that is truth is an uncertainty. The quest for that truth is the SUMMUM BONUM of life." Chamberlain had come to South Africa to get a gift of £35,000,000 from them, consequently he was not disposed to interfere in the Indian question.

The Indians taunted him, at your insistence this community helped in the war and see the result now , but Gandhi said, I do not regret my advice , I maintain that we did well in taking part in the war. The fact that Mr. Chamberlain refused to see Mr. Gandhi and the offical in charge insulted him, were he said nothing in the face of the humiliation of the whole community.

Therefore he set up his office in Johannesburg and was admitted to the Transvaal Supreme Court. There came then the problem of saving. He had hitherto the spirit of self sacrifice tempered by the desire to lay up somethingfor the future. He was induced to take out an insurance policy in an American company

for $3,000. He now concluded that he would have to stay a long time in South Africa and decided to keep the family there and earn enough to support them. He decided that his widow would be supported by the clan and that in getting my life insured I had robbed my wife and children of their self reliance Why should they not be expected to take care of themselves? What happens to the families of the numberless poor in the world? Why should I now count myself as one of them.

He came now under the influence of theosophy, but did not become a member. The chief thing about theosophy was to cultivate and promote the idea of brotherhood. He started reading Hindu philosophy especially on tendencies caused by previous birth and re-birth. He especially read and committed to memory the Bhagadaedevita. It became an infallible guide of conduct, especially its teaching about non-possession of property and equability under insult. Property should not be regarded as one's own, but simply something held as a trustee. He therefore allowed the insurance policy to elapse, convinced that God who created my wife and children as well as myself would take care of them. His brother, head of the clan , was distressed but later convinced of Gandhi's correctness. Sacrifice and simplicity were now being realized and the passion power of vegetarianism as a mission. He loaned some of the funds entrusted to him to promote a vegetarian restaurant, they were lost and he made up the deficit from the funds which he had on hand, he realized that he had been wrong.

He did not incur debt which he abhorred, but also realized that reforming zeal (?) ought not to make him exceed his limits . He experimented with his diet; instead of having three meals and afternoon tea, he dropped the breakfast and tried baths, and other earth and water treatments. I believe that man has little need to drug himself. He wrote a book against milk, advocating a diet of sun-baked fruit and nuts, restraint of sexual and other passions becomes easy for a man who lives off such food. Nevertheless on a recruiting campaign he became ill and finally was induced to take goat's milk; and therefore, unwillingly modified some of his anti-milk attitude.

He then began to collect evidence against the Asiatic department in Johannesburg, alleging bribary on the part of persons admitted. He put the matter before the police commissioner, who was a just man, he knew that it was difficult in South Africa to get a white jury to convict a white man against a colored man; but he was willing to try.

There was strong evidence againce the officals but the jury acquitted them Nevertheless, eventually they were kept out of the Asiatic department, which was an indirect victory. (copy page 337, 338)

He realtes another disagreement with his wife concerning the cleaning of night-vessels in guests' rooms. He threatened to put her out of the house because she did not do this work cheerfully. (page 339) This was in 1896, in 1906 he says that with the gradual disappearance in me of the carnal appetite my domestic life became and is becoming more and more peaceful, sweet and happy (page 340)

Of God,Gandhi says, "I have not seen Him, neither have I known Him. I have made the world's faith in God my own, and as my faith is ineffaceable, I regard that faith as amounting to experience. However, as it may be said that to describe faith as experience is totamper with truth, it may perhaps be more corrent to say that I have no word for characterizing my belief in God.

Writing my biography is in itself one of the experiments with truth. He spends as much as $375.00 a month supporting The Journal of Indian Opinion, The South African Indian lived in Ghettoes where sanitation was neglected. So far as white citizens were concerned, large amounts were spent for the preservation of their health. The result was the plague among the Indians. The people were in terrible fright.

Influenced by Ruskin's UNTO THIS LAST, he understood the teaching to be that the good of the individual is contained in the good of all. That a lawyer's warok has the s me value as the barbers'. that a life of labour is a life worth living. This last was new and he immediately proceeded to put into practice. He therefore began the experiment of living with a group on a farm and publishing the paper there. This Phoenix settlement was sta ted in 1904, he meant to gradually give up his practice and live at the settlement entirely earning his livlihood by manual work , but as a matter of fact could only stay there for brief periods .

He gave up all hope now of returning to India and sent for his wife and children. His third son broke his arm on the journey and there was the usual controversy as to healing; which Gandhi undertook himself and was successful. In the light of Ruskin's teaching, he began to decrease the expenses of living using as little furniture as possible, bringing children under that discipline. Making their own bread. He writes as to sacrifice the literary education of the children. He talked to them and walked with them, if he had had a little more time he could have given them an ideal education, as a result his eldest son often complained of his lack of education . Then there was the problem of whether the children should be educated in English or in the vernacular.

He said thatthough his sons had suffered for want of a full literary education, they do know their mother-tongue.

He looked into the matter of the so-called Zulu rebellion in Natal. He believed then that the British Empire existed for the welfare of the world and offered his services on the ambulance corps . On reaching the scene of the rebellion, I saw there was nothing to justify the name. There was no resistence. Simply a Zulu chief had advised non-payment of a new tax. My heart was with the Zulu and he and the Indians nursed the wounded, who were not wounded in battle but by flogging and inattention. This rebellion was full of new expereinces, it was not a war but a man-hunt. Thereupon he

decided that he could not live both after the flesh and the spirit and took the final vow of celibacy. Then came the period of PASSIVE RESISTENCE and the inventi n of a phrase to indicate it . The history of thie Passive Resistence is the history of the remainder of his life in South Africa, Fasting and diet now played a more important part in his life; and he was bothered by the fact that fasting itself might make the food yield greater relish. His object was to achieve restraint and conquest of the palate. One should eat, not in order to please the palate, but just to keep the body going. His wife nearly died but stood with him in refusing to take beef tea after an operation.

His first experience of jail life came in 1908, just about the time when Gandhi gave up milk and cereals and started on the experiment of a fruit diet; he commenced fasting as a means of self-restraint. He never felt the need of text books in literary training, children take in more and with less labor than through their to their ears eyes. Spiritual training is of the most important . He made the children memorize and recite hymns and read to them from books on moral training, but was satisfied that as physical training was to be imparted through physical exercise, and intellectual through intellectual exercise, so the training of the spirit was possible only through the exercise ing of the spirit, and that depended on the life and character of the teacher.

Once he struck a recalcitrant pupil and was very penitent. I repent that violence. I am afraid I exhibited before him that day not the spirit, but the brute in me.

When two inmates of his settlement had moral relapse, he undertook to fast for seven days as a penitence for it . (page 420)

At the conclusion of the non-violent struggle in 1914 , Gokhale asked him to return to India by way of London, on the way he and his English friend threw away into the sea two costly binoculars, because of discussion as to whether such costly instruments should be retained. (page 422)

He reached London two days after war had been declared in August 1914, he felt that the Indians in England ought to do their bit in war and therefore

volunteered for ambulance work. In India his attitude was questioned (page 427,428) However, even in offering to serve in the war he had to make use of non-violence, non-cooperation when the officer over his ambulance corps gave orders which the Indian thought were beyond his power, the result was inclusive as Gandhi was sick . There was a controversy on milk before he got well he compromised for a while by taking some other food beside fruit and nuts but no milk.

He then returned to India and noticed a kind of distance between the English and Indian passengers which he had not observed before . He reached Bombay after an exile of ten years. In practicing law in South Africa, Gandhi never lied and never knowingly took an unjust case . In one instance when a mistake on the part of his own client was discovered, he insisted on confessing it but nevertheless won his case. When he returned to Bombay he found that his farm group was in the village of Tagore. The Indians objected to Gandhi's willingness to compromise; on landing in Bombay he changed his clothes to the Indian shirt and dhoti, and traveled third class. Officals looked upon third class passengers not as fellow men but as so many sheep , talked to them contemptiously and brooked no reply or argument. Among the farm group he advocated and practised self help with teachers and students . He continued to have difficulty as third calss passenger and complained about it.

Gokhale died and his companions were divided as to admiting Gandhi . Finally he did not become formerly a member but worked with them without bitterness . On the boat to Rangoon, in Burma he was a deck passenger and appealed against the stink and filth . In 1915 he attended the Kumbha fair, held every 12 years . The journey there from Calcutta was trying. Seventeen hundred thousand people were on this pilgrimage. They could not all be hypocrits or merely sight-seers. Countless numbers among them must have gone there to earn merit and for self purification . It is difficult, if not impossible to say to what extent this kind of faith uplifts the soul.

Gandhi was not sure whether it was right or wrong to visit Hardvar and therefore pledged himself in penance while in India never to take more than five articles of food/in 24 hours, and never eat after dark. He had an argument with the priest about certain external symbols of Hinduism, like the sacred thread which he did not wear . He refused to wear the threat but again grew the lock of hair which was in question. He founded a non-cooperative colony in 1915 at Ahmedabad, and met there the problem of untouchability , admiting one untouchable family .

All had their meals in a common kitchen and lived as one family . This raised a storm, but funds came in . In 1916 came the effort to do away with the tax on indentured emigrants from Natal. Evantual abolition was promised. Gandhi started agitation for immediate abolition, he held large meeting all over India with secret service men following him, the third class travel was trying; fianlly the agitation won and indentured emigration from India was stopped. In 1917 came the fight on the Indigo plantations. It was a long fight and when Gandhi was ordered out of the province he refused to go.

23-38-25

(copy 505,506)

The case was eventually withdrawn and this was the first great ~~xi~~ victory for civil disobedience; Gandhi refused to take any pay for his services and the small expenses were contributed. Crowds of peasants proceeded to make complaints . Gandhi tried to win the planters over by pleading with them and by gentleness, he saw the need of village and started primary schools. They lasted for a time but finally were given up. His hope of putting this constructive work on a permanent footing was not fulfilled. Then came the quention of the position of labor in Ahmedabad , especially in the mills owned by Indians. Gandhi advised the laborers ~~Indians~~ to go on strike without violence without molesting scabs, without depending on alms .

Meantime he tells of refusal to kill snakes in his rural colony, for 25 years in a ~~x~~ fairly regular practice of not killing, there was complete

immunity form harm. A weaving shed was begun in the colony,the mill hands kept their strike for two weeks with restraint and monster daily meetings . Then they began to show signs of flagging. Gandhi met it by declaring a fast unless the strikers should rally again I will not touch any food. He tried to set the mill-owners at ease, saying there was not any necessity for them to withdraw from thier positions: The fast was not against them . Finally an atmosphere of good will was created and a settlement was reached after a 21 days strike. (copy page 530) After the strike of the mill hands came the Kheda struggle . This was on account of a famine and a demand for suspension of taxes could the people could recover.

23-32-26

The Governor would not listen and the people led by Gandhi delcared that they would not pay the government the full or remaining revenue for the year. And that the government could take whatever legal steps they wished . The government hesitated and then began to use coercion and began to seize the cattle and other movables. The final result was a compromise where the poorer people were going to be given immunity and the richer ones made to pay. It turned out however, that very few of the peasants were judged to be poor ; so that while a triumph of non-violent cooperation was celebrated it was not a complete triumph.

The home rule agitation touched the peasants but the Kheda campaign compelled the educated public workers to establish contact with the actual life of the peasant. A war conference was called at Delhi. Leaders of Mohammedanists were not invited and Gandhi protested beginning his fight to unite Mohammedans and Hindus . There were other difficulties with regard to the secret treaties between England and Italy, but finally Gandhi took part in the conference , supported the resolution on recrituing; but he found that the people were unwilling to cooperate and would not even furnish carts, so that the leaders of the campaign had to walk 20 miles a day often . They

said you are a votery of non-violence, how could you ask us to take up arms? (copy 547) (copy 549)

Gandhi nearly ruined his health during the recruiting campaign and again had controversy concerning (?) food. While he was sick the war ended and the recruiting stopped to his great relief . At the beginning of the protest against the Rowlatt bills Gandhi succumbed to the physician and took goats' milk. I adhered to the letter of my vow and sacrificed its spirit.(557)

He called a meeting with regard to the Rowlatt bills and began agitation. He addressed letters to the Viceroy . It was difficult to know how to offer civil disobedience against the Rowlatt bill when it was finally passed, but he finally decided upon a general hartal --that is a day of fasting and praying for 24 hours . It was observed on the 6th of April all over India and opposition to the small (?) tax was fixed upon as another weapon . Prohibited literature was sold, Gandhi was arrested, but there was riots and disturbances and marshal law, finally finding that the laborers would not keep the peace Gandhi suspended non-violence and cooperation,(copy 574,575,) (copy 589, 599, 607,615,616)

Hughes, Langston and Arna Bontemps, eds.

The Poetry of the Negro. Garden City, N.Y.: Doubleday + Co., 1949.

Review: Liberty Book News, New York, March 1949

January 21, 1949

Mailed to Liberty Book Club

Poets are the makers of language. Language is a main part of culture. Poets then are the ones who try, often unsuccessfully to voice the inner life of a group, a nation or an age, and make clear the reality behind the everyday, unlovely truth. It is not easy to do this; but once done successfully in any age or situation, the result is deathless. The millions of Africans transported to the Americas in the 15th, 16th 17th and especially the 18th centuries, became the foundation of a world revolution that differentiates the modern from all previous worlds. The full expression of their experience would be an extraordinary and revealing feat of literature. The suffering, the illiteracy, the enforced silence, has made this almost impossible.

35 - 3 - 262

But one hundred Negroes writing over the lapse of two hundred years have tried to make this tragedy and comedy understandable. This task has been difficult. Many Americans of education are scarcely aware of these attempts; and a history of American lietrature might, and often does ignore them. But the Liberty Book Club knows their meaning and recognizes its value. It has therefore chosen "The Poetry of the Negro," a definitive anthology edited by Langston Hughes and Arna Bontemps as its February choice. I think the choice was a happy one.

There are in these pages, some poems of which no man of culture in the 20th century can be ignorant: "O black and unknown bards;" Little brown baby"; "Song of the Son"; "I too sing America"; "Yet do I marvel"; and the bitter cry: "If we must die!" There are others that strike not so much with beauty as with truth; there is the elaborated hidden thought; the gay dance of words to placate the mighty; and the head turned away as if to avoid the too obvious. There are messages from the Caribbean and South America; and a few voices from those white folk who looked on and understood: Walt Whitman; William Blake, William Wordsworth and

Elizabeth Barret Browning. All this makes a good book.

The value of an anthology like this lies in its success in extracting from a wide volume of writing, the significant voices and phrases which carry a real message. Not all rhyme is poetry, nor all short lines and turgent adjectives. But when in any literature there can be found depth of feeling and revelation of souls in strife, revolt or laughter, there is something to be preserved and made part of the nations message to man. Despite long effort to ignore the words of American Negroes and discount their experience, no honest heart can read this anthology and deny that this is an integral part of American life which can never be forgotten nor left to die. This book should be widely read.

1949

Ralph Lincoln, Editor, MOST OF THE WORLD: The Peoples of Africa, Latin America and the East today. New York University Press, 1949, $5.50 917 pages.

35-3-257

This is a large book, almost too large for convenient handling or reading but bears upon a subject which has a certain unity and ought to be treated; perhaps today it is best to attempt it in one volume.

The subject is the plight of those peoples who are not recognized as part of European civilization. These peoples include the whole of Africa; the so-called Middle East; India and China and Japan; South America, although, the southern part has been omitted. Central America and Mexico and logically the West Indies, but they are not included for reasons not disclosed.

The primary difficulty in a treatise of this sort, written by fifteen different scholars, is to get a factual and sympathetic statement concerning these different areas, and at the same time scholarly and objective conclusions.

The results of the effort in this case have not been uniformly happy. It goes without saying that an American scholar has certain inborn prejudices concerning South America, Asia and Africa which make it difficult for him to be fair or to have the basic knowledge to interpret a different culture.

Raymond Kennedy seems to have done this successfully in the chapter on Southeast Asia and Indonesia. But on the other hand, Meyerhoff, who surveys the natural resources of the world, cannot escapt the conviction that the value of a land and people consists mainly in what they can export to Europe; and too, he has a touch of the current Red scare. John Gillen in Mestizo America aboids the Negro problem. To him, the problem of South America is chiefly that of Indians and whites; and although he mentions the Negro here and there, he does not really face that problem. That is the reason, perhaps that the Caribbean area is omitted since the Negro

35-3-258

cannot be ignored there.

The study of Brazil by Charles Wagley is also a study of an outsider but one who evidently has broad knowledge of his subject and a more thoroughgoing understanding ans sympathy with the problems of Brazil. He does not hesitate to face and discuss the Negro problem. It is as good a st dy as an outsider could have made and probably more intelligible to Americans than a Brazilian might have made.

On the other hand, the study of China by a Chinese scholar, L. K, Hfu, is not at all satisfactory to the reader. It is curiously confusing in detail and largely ign res the current revol tion of the Communists. Perhaps it was written a little too early to record an unexpected Communists' success.

The study of Race Relations and policies in Southern and Eastern Africa by H. J. Simmons, a white South African, is nothing less than a disaster. He is in no sense a scholar and despite evident effort cannot put himself in the position of a Negro or even of a European who believes in world democracy. His thesis is that the white settlers and their future prospects are of paramount importance to the natives, notwithstanding the fact that these natives outnumber the whites five or six to one. He assumes that white domination is certain to continue and therefore inevitable race discrimination. He finally lands himself into this curious contradiction: there are limits to the extent to which mass depression of the Africans can be migigated by a transfer of income from the privileged whites; therefore the social service needed by the Negroes can only be obtained if the structure of society is modified so as to allow the non-European to develop and apply his abilities; which the whites will not allow. There are African scholars in South Africa and white scholars with more courage than this author. It is too bad that their abilities were not used.

35-3-259

William R. Bascom treats West and Central Africa. He is an American who has spent four years off and on in Africa, and thereby has imbibed the British attitude; so that he says, quite naively, that the section on West and Central Africa was mimeographed by the author and forwarded "to the governments concerned for comment." But the comment of black folk was not asked. In West and Central Africa there are a considerable number of Negro scholars and college trained men, some from the best English and American universities. Apparently thier knowledge has not been called for, and certainly the bibliography shows little use of their work. This is unfortunate since this part of Africa is the yeast which may revivify the black continent.

The author repeats the legend of Liberia being ruled by American Negroes, which is not true; the rulers of Liberia today without exception are all of native descent and while some of them have, some half dozen generations back blood of immigrants who came from America in the early 19th century, all of these have for generations inter-married with the native stock and themselves in many cases, were not American Negroes of long settlement. What you have in Liberia is the over-lordship of a small educated and well-to-do portion of the population; but that group is not predominently American.

North Africa, by Carlton S. Coon, is not a very successful study, nor does Mr. Coon seem to know his subjects well enough to interpret at once Morocco, Algeria, Tunesia and Libya to the public. He leaves out the large Negro infiltration into North Africa almost entirely, making practically no mention of it even in Morocco. He writes as a traveler and observer rather than as a scholar who knows the cultural background and history.

The story of the Middle East is pieced together by two American scholars

35-3-260

with considerable skill. One gets an unusually good picture of the diversity of the interests and cultures here, and that makes the omission of a map the more inexplicible. The schematic drawings are good but could be better understood with a map. Here again, however, the Negro element in Egypt and Arabia is played down or omitted and this cannot be done if one is to understand the cultural inter-action between Africa and the East. One would never remember from this treatment that black Sultans sat on the throne of Egypt between the day of the Crusades and the Suez Canal.

The chapter on India and Pakistan is well done by American scholars long resident in the East and who base their study upon a wide use of Indian scholarship. It is one of the best statements of the problems of India extant.

The section on Japan and the Japanese is not satisfactory and does not impress one as a thoroughgoing study of the objects and cultural status of the Japanese in the later 19th and early 20th centuries. It does have a very good description of their everyday life.

On the whole then, here is a timely book which students of current world problems and especially of democracy should read. The latest figures concerning production, education, and social services can be found here better given that in most other available books. Then too, these problems of these peoples outside of the main current of civilization are here emphasized in the way necessary for our understanding. There is much to criticize in the various chapters but also much to praise. It is on the cultural side--that is those imponderable things, difficult to count, concerning attitude toward life, the effect of suppression and insult, the meaning of being outside the world and looked upon as valuable only for a few peoples of the European West, in this matter the book leaves much to be desired.

35-3-261

Perhaps it is a counsel of perfection to think that predominently American scholarship could accomplish such a thing for the world. What is needed is the use of native scholarship and at the same time the rare ability of a native to make himself clear to an American audience.

Mirror for Man

The Relation of Anthropology to Modern Life

By

Clyde Kluckhohn. Whittlesey House, 1949 313 pp.

This is a book of three hundred pages, written interestingly for the layman rather than for professionals. It is composed of ten chapters, and treats customs, excavation, physical measurement, the conception of race, the place of language in understanding individuals, and the general work of the anthropologist in our own nation and in the world.

35 - 3 - 01

The author's conception of the field of anthropology is admittedly broad, and sociologists, psychologists, historians, economists and political scientists would probably find difficulty in agreeing with his scope and definition; but as he himself says, this is comparatively of minor importance and a problem to be settled in the future rather than now.

Today it is of interest to remember that human customs are important. They indicate a way in which a group of people deal with life and that way is their "culture." So that culture is a way of knowledge stored up for future use and Americans are at a period in their history when, faced with the facts of cultural differences, they are having difficulty in assimilating this knowledge.

Archeology and the study of pre-historic man lead us through various physical measurements to considering heredity and interpreting human evolution which as the author emphasizes cannot be interpreted today solely in terms of the survival of the fittest.

The fifth chapter will be of interest to most Americans. The number of races has been variously estimated from two to two hundred, and as the author says there is no field of science where misunderstandings among

educated people are so flagrant and so serious. Some differences among men, particularly differences in skin color, hair form and nose shape, lead to differences of treatment and of estimate; this fact is to be noticed especially in the 19th century; it did not play so great a part earlier. Why is this?

35-3-02

The authors' explanation is not altogether convincing. He attributes the interest in racial differences to the advance and popularity of biological science and emphasizes the fact that it is not only biological heredity but social conditions that determines the personality and individuality of human beings; and because an individual inherits biologically it does not mean that the whole group to which we belong inherits in the same way. As he says, there is no Aryan race; there are Aryan languages. There is no Italian race, there is an Italian nation. There is no Jewish race, there is a Jewish religion and Jewish culture. All human populations are too mixed and variable to be grouped definitely into biological races. Nevertheless there are different stocks of human beings as shown by physical differences, although these differences do not prove that the variants also share mental and emotional capacities. One anthropologist says that less than one per cent of the total number of genes is involved in the differenciation between the two distant races. But in this explanation of the influence of biological science in race controversy, as it seems to me, the author leaves out the economic influences; he is rather critical of Marxian philosophy.

To my mind, nothing substanciates Marx better than the influence of economics on race theory. It was the African slave trade and the vast industry and economy built upon it through slavery in America that formed the economic basis of race difference. Income depended on having the Negro inferior. Religion, science and art bowed to income. The world changed from regarding Negroes as heathens to regarding a black skin as sufficient

35-3-03

reason for slavery. On this the cotton kingdom was built and from the cotton kingdom came capitalism and from capitalism the fixed inferiority of Negroes. The American Civil War made the first attack on this concept. Failure to realize this is a serious defect of this otherwise excellent book.

In the final chapters the author touches the work of anthropologists and should add sociologists and psychologists, as engineers in industry and directors of industrial policies. As men of all nations struggle to adjust themselves to the new demands of the international situation, they steadily modify their conceptions of themselves and of others; slowly but surely a new social order and new personalities will emerge from the process. For American culture the author has hopes. "It will be the fault not of Angels, but of ourselves if our problems are not for a large part resolved, given our biological and material wealth and our adapted genius." And finally looking at the world he says, "human life should remain as a home of many rooms; but the world with all its variousness can still be one in its allegiance to the elementary common purposes shared by all people."

Foner, Philip S., ed. The Life and Writings of Frederick Douglass. Vols. I and II. N.Y.: International Pub., 1950.

Review: "A People's Leader", Masses & Mainstream, Vol. 3, May 1950, pp. 86-89.

Del Bois Book Review

THE LIFE AND WRITINGS OF FREDERICK DOUGLASS

BY

PHILIP S. FONER

Volume I, Early Years

Volume II, Pre-Civil War Decade--1850-1860

International Publishers, $4.50 per volume

Philip Foner's "Life and Writings of Frederick Douglass", puts all America under deep obligations. The first two volumes reveal a scholarly, painstaking work, which is in happy contrast to the neglect of Douglass by American historians. Foner says in the preface to his first volume:

insert

James Ford Rhodes' HISTORY OF THE UNITED STATES devotes seven volumes to the period 1850-1870. Yet Rhodes leaves even the careful student with the impression that Douglass was just another of the many minor figures with which this exhaustive work is filled. John B. McMaster treats Douglass even more casually in the ten volumes of his, HISTORY OF THE PEOPLE OF THE UNITED STATES, referring to him only once briefly and then not even taking the trouble to spell his name correctly. Edward Channing's six volumes had little room for mention and none for interpretation of Douglass' role. Professor Dwight L. Dumond of the University of Michigan, in his book, THE ANTI-SLAVERY ORIGINS OF THE CIVIL WAR, finds space to present obscure white Abolitionists like Augustus Wattles and Calvin Waterbury, but Douglass is not so much as mentioned.

It has been difficult for America to see Frederick Douglass in his correct prospective: he was a Negro and therefore set in a special category; he was certainly an unusual Negro, but how was one to compare him with white folk? There were no accepted standards of comparison. Of course his

49-32-8

remarkable gift of speech brought from the first enthusiastic prase. An editor describing a Providence, Rhode Island, meeting in 1841, said:

inset

The fugitive Douglass was up when we entered. This is an extraordinary man. He was cut out for a hero. In a rising for Liberty he would have been a Toussaint or a Hamilton. He has the 'heart to conceive, the head to contrive, and the hand to execute!' A commanding person over six feet, we should say, in height, and of most many proportions. His head would strike a phrenologist amid a sea of them in Exeter Hall, and his voice would ring like a trumpet in the field. Let the South congratulate herself that he is a fugitive. It would not have been safe for her if he had remained about the plantation a year or two longer...As a speaker he has few equals. It is not declamation--but oratory power of debate. He has wit, argument, sarcasm, pathos--all that first rate men show in their master efforts. His voice is highly melodious and rich, and his enunciation quite elegant, and yet he has been but two or three years out of the house of bondage.

The recognition of his powers of oratory continued, especially in Ireland, Scotland and England. But oratory is in a sense superficial; what was the man beneath. Foner traces his intellectual growth, with perhaps not enough emphasis on the continuous study that gave Douglass more than a college training in seven years from his learning to read. The European trip broadened and matured him. He was glad to see the birthplace of Robert Burns:

inset

But never could I have had the opinion of the man or his genius, which I now entertain, without my present knowledge of the country, to which he belonged--the times in which he lived, and the broad Scotch tongue in which he wrote.

He was revolted by the misery of the Irish:

inset

I spent nearly six weeks in Doblin, and the scenes I there witnessed were such as to make me "blush, and hang my head to think myself a man." I speak truly when I say, I dreaded to go out of the house. The streets were almost literally alive with beggars, displaying the greatest wretchedness--some of them mere stumps of men, without feet, without legs, without hands, without arms--and others still more horribly deformed.

Soon he was developing to a man who could see the evils of the world and not simply the plight of his own people:

inset

...though I am more closely connected and identified with one class of outraged, oppressed and enslaved people, I cannot allow myself to be insensible to the wrongs and sufferings of any part of the great family of man. I am not only an American slave, but a man, and as such, am bound to use my powers for the welfare of the whole human brotherhood.

Particularly was his growth helped by meeting men and being treated as an equal. He talked and ate with some of the great figures of his day and returned to the United States, not a Negro, but a world citizen.

Douglass' return ~~to the United States~~ emphasised this anomaly in his independence of thought and action. It was difficult for his former associates in the Abolition cause to accept their adopted freedman as a fellow travellor with his own ideas of program. In Foner's volumes one can follow the details of his life and compare them with what he was thinking and saying. ~~Foner has followed out~~ many points in Douglass' life hitherto not clear ~~and then~~ are shown, his own thought in letters and editorials. Those of us who have always thought of Douglass principly as a speaker will be amazed at the virility and clarity of his writing.

49-32-10

Frederick Douglass' editorials, speeches, and letters in the ten-year period covered by this volume are among the most penetrating and eloquent of any ~~A~~merican. They stamp him as one of the greatest minds of his time, a master strategist and tactician, and a people's leader of superb statesmanship. Here is the mature Douglass, seasoned in ten years of activity in the two-front struggle against slavery in the South and against every form of prejudice and discrimination in the ~~N~~orth.

He grew as he worked and wrote: from the lecture platform he went into the editor's chair; he assumed more and more leadership of the Free Negroes, a difficult and intelligent group. From his outlook as an abolitionist he wrote:

> Standing as we do upon the watch-tower of human freedom, we can not be deterred from an expression of our approbation of any movement, however humble, to improve and elevate the character of any members of the human family.

He was active in the crusade against alcohol; he announced himself a Chartist and endorsed the land reform momement, declaring that "the welfare of the world demands the abrogation of monopolis." "What justice is there," he asked, "in the general Government giving away, as it does, the millions upon millions of acres of public lands, to aid soulless railroad corporations to get rich?"

He opposed capital punichment and was a pioneer for Women's Rights and dared attend that conference at Seneca Falls in 1848 with Lucretia Mott. But above all he ever continued the foe of slavery, ~~but~~ And always, ~~wise~~ too clearer and clearer as to the course of battle against it:

> This struggle may be a moral one, or it may be a physical one, and it may be both moral and physical, but it must be a struggle. Power concedes nothing without a demand. It never did and it never will. Find out just what any pwople will quietly submit to and you have found out the exact measure of injustice and wrong which will be imposed upon them, and these will continue till they are resisted with either words or blows, or with both. The limits of tyrants are prescribed by the endurance of those whom they oppress.

This line of thinking brought his break with Garrison which Foner follows with careful analysis. Douglass changed gradually from moral suasion to fighting and scared Boston in 1849 when he said: "I should welcome the intelligence tomorrow, should it come, that the slaves had risen in the South, and that the sable arms which had been engaged in beautifying and adorning the South, were engaged in spreading death and devastation."

Yet it was Garrison who was intransigeant: Harriet Beecher Stowe wrote to Garrison=Concerning Douglass':

> I was much gratified with the growth and development both of his mind and heart. I am satisfied that his change of sentiments was not a mere political one but a genuine growth of his own conviction. A vigorous reflective mind like his cast among those holding new sentiments is naturally led to modified views.

Garrison was not moved and hit distinctly below the belt; but Douglass moved on into politics; into both the Free Soil and Liberty Parties and finally with some reluctance, voted with the Republicans. He listened sympathetically to John Brown and wrote:

> To have been acquainted with John Brown, shared his counsels, enjoyed his confidence, and sympathized with the great objects of his

life and death, I esteem as among the highest privileges of my life. And so he moved into the great decade of the Civil War where Foner's third volume will follow him. These first two volumes are clear, exhausive and convincing. The figure of a great man rises from them.

[Rough draft]

The Choice Before South Africa, by E.S. Sachs, New York: Philosophical Library, 1952. $5.75. pp. ix, 220.

This book today has peculiar value because it is written by a labor leader of Boer descent who has been persecuted for his leadership and particularly for his liberalism toward the native workers. He says frankly:

"South Africa will either carry through a democratic revolution, or within a generation it will become a nation of poor whites and starving blacks. It is clear that oppressed colonial people must be accorded full democratic rights, or they will take them by force....

"The whole African Continent is awakening. In the East, West, South and in Central Africa we are witnessing events which a few years ago seemed inconceivable."

This does not mean that Mr. Sachs is not loyal to his country and to the Africaans group; but as a labor leader he sees as they do not the utter impossibility of the present policy led by Malan.

The book has a preface by Tom Driberg, Member of the Labor minority in the present British parliament, and an introduction which is a sort of apologia for Sach's career. It points out, "While the civilised world is trying to formulate a 'Charter of Human Rights' the Nationalist Government has imposed upon the people of South Africa a 'Charter of Inhuman Wrongs', and explains that normally Sachs has devoted his time and energy to the needs of 20,000 garment workers, the trade union of which he is secretary, and to helping as he can other trade unions, and the trade union movement as a whole. He has had to resist all sorts of attacks by the present government against his union and against him. Their favorite method is to call him a "Communist" and arrest him on all sorts of charges; but he insists: "I write because I love South Africa and all her people, and because I wish to see South Africa

46-11-104

a great nation."

The book is divided into three parts: the first explains historically the rise of Africaans nationalism; the second goes into the present economic life; and the third outlines the relation of trade unions and the labor movement to the government. He explains that in South Africa there is a pyramid of racial hatred which is terrifying. "Almost everyone hates and is hated in turn. Not only is there deep-rooted enmity between English and Afrikanders, between Europeans and non-Europeans, but even among the non-Europeans themselves there is much racial discord, the Colored people looking down upon the Bantu and many of the Bantu looking with contempt upon the Colored people. Many Indians, themselves subject to most terrible persecution, regard the other non-Europeans as inferiors, while some Colored and Bantu people consider the Indians as aliens."

He insists that the English-Boer Wars were "a great outrage in human history", and outlines the attempted revolution of the Boers against the British Empire in 1914. The rise of the Nationalist Party and the doctrine of race segregation followed, and a long history of outrages against the native workers. He declares that the Nationalist government has destroyed all safety valves and explosion is inevitable. The attempt of the Nationalist Party is to impute all difficulties to one set of problems which they cover with the slogan "Kaffir-coolie-Communist".

He gives credit to many South African liberals but declares that they have not tried to establish close contact with the trade unions and other worker's organizations. He especially criticises the role of the church and the extraordinary reaction of the Dutch church.

Exploiting the wave of anti-Communism which is sweeping the world,

291-11-47

South Africa passed an Act which includes a definition of "Communist" wide enough to embrace any liberal who advocates racial tolerance, and any trade unionist who urges higher wages for the workers.

The great injustice in South Africa lies in depriving the native of his land and restricting him in such a way that he must work for the white farmers at low wages; or if he goes to the city and works in manufacturing he must suffer discrimination in housing, wages and treatment.

In the trade union movement Sachs contends that there has not been that complete exclusion of colored and native workers by the white trade unionists that the world has been given to believe. While most of the unions do exclude non-Europeans, nevertheless there has been some sympathy and cooperation, and despite the law some of the unions have colored members. He goes over the disheartening history of strikes on the part of the non-Europeans, and points out that the methods used by the Nazis in Germany were identical in every respect to those used by enemies of trade unions in South Africa.

Many times Mr. Sachs has been arrested and accused, and many times has secured damages for libel. A Commission of Inquiry wasted over $15,000 of his union's money in legal costs and finally found Sachs guilty because he "had on a certain occasion at a conference invited the delegates who were of different races to his home where he entertained them together."

The present Nationalist Party which is ruling South Africa did not go into office by a majority of votes, but because the country was gerrymandered in favor of the farmers as against the city dwellers. Thus they gained control by a vote of 442,000 against an opposition of over 515,000.

He says, finally, "We oppress the non-European people, humiliate and dispossess them, and then become terrified of the 'black menace'. Anyone who is not a fool or a political knave and is possessed of ordinary intelligence

40-11-109

will readily grasp the simple truth that the way to remove the fear of the 'black menace' is to stop oppressing and humiliating the non-European people. The millions of non-Europeans do not want to dominate the Europeans. They want land, education, work, decent living standards, and democratic rights for themselves. In the state of ignorance and confusion which prevails, most Europeans erroneously maintain that if the Natives are granted democratic rights and since the Native people are a majority, they will behave towards the Europeans as the Europeans behave towards them."

The Choice Before South Africa, by E. S. Sachs, New York: Philosophical Library, 1952. $5.75. pp. ix, 220.

This book today has peculiar value because it is written by a labor leader of Boer descent who has been persecuted for his leadership and particularly for his liberalism toward the native workers. He says frankly,

"South Africa will either carry through a democratic revolution, or within a generation it will become a nation of poor whites and starving blacks. It is clear that oppressed colonial people must be accorded full democratic rights, or they will take them by force... Once people are forced into the position of having to fight for democratic rights, those who sit in the saddle of reaction find themselves in an extremely uncomfortable position...

"The whole African Continent is awakening. In the East, West, South and in Central Africa we are witnessing events which a few years ago seemed inconceivable."

This does not mean that Mr. Sachs is not loyal to his ~~kixkxy~~ country and to the Afric~~xxx~~ AANS group, but as a labor leader he sees as they do not the utter impossibility of the present policy led by Malan.

The book has a preface by Tom Driberg, Member of the ~~Parliament~~ Labor minority in the present British parliament, ~~It then has an~~ and an introduction ~~which~~ which is a sort of apologia for Sachs' career. It points out "While the civilised world is trying to formulate a 'Charter of Human Rights' the Nationalist Government has imposed upon the people of South Africa a 'Charter of Inhuman Wrongs'", and explains that normally Sachs has devoted his time and energy to the needs of 20,000 garment workers, the trade union of which he is secretary, and to helping as he can other trade unions, and the trade union movement as a whole. He has had to resist all sorts of attacks by the ~~Nationalist Parliament~~ present government against ~~him~~ his union and against him. Their favorite method is to call him a "Communist"

but he insists!

and arrest him on all sorts of charges. He says: "I write because I love South Africa and all her people, and because I wish to see South Africa a great nation."

The book is divided into three parts: the first explains the rise of Afrikaans nationalism historically; the second goes into the present economic life; and the third specifically outlines the relation of the trade unions and the labor movement to the government. He explains that in South Africa there is a pyramid of racial hatred which is terrifying. "Almost everyone hates and is hated in turn. Not only is there deep-rooted enmity between English and Afrikaners, between Europeans and and non-Europeans, but even among the non-Europeans themselves there is much racial discord, the Coloured people looking down upon the Bantu and many of the Bantu looking with contempt upon the Colored people. Many Indians, themselves subject to most terrible persecution, regard the other non-Europeans as inferiors, while some Coloured and Bantu people consider the Indians as aliens."

36-11-48

He insists that the English-Boer Wars were [illegible] and "a great outrage in human history", and outlines the attempted revolution of the Boers against the British Empire in 1914, and then outlines the rise of the Nationalist Party and the doctrine of race segregation and blood and the long history of outrages against the native workers. He declares that the Nationalist government has destroyed all safety valves and explosion is inevitable. The attempt of the Nationalist Party to impute all difficulties to one set of problems which they cover with the slogan "Kaffir-coolie-Communist"

He gives credit to many South African liberals but declares that they have not tried to establish close contact with the trade unions and other worker's organizations. He especially criticizes the role of the church and the extraordinary reaction of the Dutch church.

Exploiting the wave of anti-Communism which is sweeping the world South Africa passed an Act which includes a definition of Communist wide enough to

embrace any liberal who advocates racial tolerance, and any trade unionist who urges higher wages for the workers.

His outline of the conomic development of the country is revealing, showing the overwhelming majority of 9,045,659 native, colored and Asiatics, of whom 2,372,690 are seeking to exercise absolute rule.

He shows how the mining economy has is gradually yielding to the new industries and that this might revolutionize the country if it were allowed to develop normally.

The great injustice is depriving the native of his land and restricting him in such a way that he must work for the white farmers at low wages, or if he goes to the city and works in manufacturing he must suffer discrimination in housing, wages and treatment.

In the trade union movement Sachs contends that there has not been that complete exclusion of colored and native workers by the white trade unionists that the world has been given to believe. While most of the unions do exclude non-Europeans, nevertheless there has been some sympathy and cooperation and despite the law some of the unions have colored members. He goes over the disheartening history of strikes on the part of the non-Europeans and points out that the methods used by the Nazis in Germany were identical in every respect to those used by enemies of trade unions in South Africa.

Many times Mr. Sachs has been arrested and accused, and many times has secured damages for libel. A Commission of Inquiry wasted over $15,000 of the Union's money in legal costs and finally found Sachs guilty because he "had on a certain occasion at a conference invited the delgates who were of different races to his home where he entertained them together."

~~He shows that~~ The present Nationalist Party which is ruling South Africa did not go into office by the majority of votes but because the country was gerrymandered in favor of the farmers as against the city dwellers. Thus they gained control by a vote of 442,000 against an opposition of 515,000.

He ~~shows~~ says finally, "We oppress the non-European people, humiliate and dispossess them and then become terrified of the 'black menace'. Anyone who is not a fool or a political knave and is possessed of ordinary intelligence will readily grasp the simple truth that the way to remove the fear of the 'black meance' is to stop oppressing and humiliating the non-European people. The millions of non-Europeans do not want to dominate the Europeans. They want land, education, work, decent living standards and democratic rights for themselves. In the state of ignorance and confusion which prevails, most Europeans erroneously maintain that if the Natives are granted democratic rights and since the Native people are a majority, they will behave towards the Europeans as the Europeans behave towards them."

TARUC OF THE HUKBALAHAPS

by W.E.B. Du Bois

Born of the People. By Luis Taruc. With a Foreword by Paul Robeson. International Publishers, New York, 1953. 286 Pages with glossary and biographical notes.

There is a widely believed legend that the treatment of the peoples of the Phillipines by the United States has been an ideal case of contact between a white industrial nation and a colored colonial people, with philanthropy, missions and education. This autobiography of a Phillipino peasant, Luis Taruc, is bitter proof to the contrary.

36-11-52

Our own historical annals should have taught us this long ago. The description of the United States as a colonial power of the classic type is not a Russian lie. As early as 1889 our liberal newspaper editor, William Allen White, wrote in his Emporia Gazette: "Only Anglo-Saxons can govern themselves... It is the Anglo-Saxon manifest destiny to go forth as the world conqueror. He will take possession of the islands of the sea - this is what fate holds for the chosen people." Young Senator Beveridge echoed this in his first speech: "The Philippines are ours forever... And just beyond the Philippines are China's illimitable markets. We will not retreat from either. The Pacific is the ocean of the commerce of the future and most future wars will be conflicts for commerce... We will not renounce our part in the mission of our race, trustees under God, of the civilisation of the world... that power is and will forever be the American Republic..."

Thus we made our debut as Colonial Imperialists, and Taruc tells us to what ends we have come. He is the son of Phillipino peasants, born in Papanga in 1913. He was "born of the people", a serf of the landlord. "Perhaps the biggest fact in my life was the landlord. When I was still

crawling in the dust of the barrio street, I remember the landlords coming into the barrio, shouting 'Hoy, Punetal (Hey, you so-and-so) and making the peasants run to carry out their demands. Our people would have to catch the fattest hen, get milk and eggs, and bring the biggest fish to the landlord. If they delayed, or perhaps did not do things to the landlord's liking, they were fined, or given extra work. In an extreme case they might be evicted. And where would they go for justice? The landlord owned the barrio. He was the justice, too."

His grandfathers had owned land but the landgrabbers got it. His father's only defense was "his goodness". He was "so soft-spoken, so humble, so kind," who would never think of harming anyone. Luis grew up resentful. "I saw that you need more than a good heart, that you need a good head, if you must fight for your rights. I determined to study, to gain knowledge, to know how to fight if I had to." His schooling was a grim fight with starvation, but he finished High School in 1932, in the midst of depression, with hunger strikes. He tried to enter the law school at the University of Manila, and to support himself he dug ditches until his strength failed. He returned to his peasant home to work as a tailor. When the Americans had come to oust the Spaniards, all had hoped for democracy and land reform. But laborers were still getting five cents a day, and the American Sugar Trust was in the saddle.

Taruc dreamed of becoming Robin Hood. He heard of Socialism and Communism and listened to their speakers. When he himself began to speak publicly he found himself talking Socialism before he quite knew what it meant. Strikes and disorder spread. "The tide that reached Pampanga was now sweeping the whole world. It was the anti-fascist spirit of the people.

Filipino peasants and workers, as well as the industrial workers of other nations, were awake to the menace of fascism. From our fields we had watched the Spanish people in their heroic single-handed struggle to the death against Hitler, Mussolini and Franco, and the unquenchable struggle of the Chinese people against the Japanese agressors." In December, 1941, when the Japanese attacked, the peasants offered help. "Labor battalions were organized to cooperate with the American and Philippine armies. Casto Alejandrino, the Socialist mayor of Arayat, contacted by the U.S. engineers, promised 5,000 workers in twenty-four hours. The entire number was organised in less than that time." ~~They helped to construct defenses and camouflaged positions from Concepcion to Candaba."~~

The Communist Party, to which Taruc now belonged, asked:
1. National unity for an Anti-Japanese United Front; all able-bodied citizens to fight or work; all the rich to contribute their wealth, and the intellectuals their knowledge; death to traitors, and the establishment of free governments in the liberated areas; the people should be armed; and the Communist Party pledged loyalty to the cause of democracy and to the governments of the Philippines and the United States.

When finally the Americans withdrew there began the long struggle of the Philippine peasants against Japan. This was the birth of what came to be called the Hukbalahap movement. It was not altogether a new thing. The tide of revolution in the Philippine islands goes back a long time, through two hundred recorded uprisings and revolts, sometimes against foreign oppression, sometimes against their own tyrants.

For three long years the struggle kept up, not simply against Japanese but against Philippines who sold out to the enemy and to the landlords;

and above all against American influence and even American troops. For Americans were working in the guerilla movement but they demanded a special place and exceptional treatment. They wanted sugar, milk and chickens. They could not conceive of themselves on a par with the people.

The story of this fight of the Hukbalahaps is a saga of classic proportions, which must be read in Taruc's autobiography to be appreciated. A people's army grew and spread, it fought and failed and fought and was victorious. It saved the Philippines from complete conquest by Japan, and yet when "liberation" came from the returning Americans, Taruc and the guerillas found the Americans suspicious enemies rathern than friends.

"It was in barrio San Jose Matulid, Mexico, Pampanga, that I first saw American soldiers— on January 28. We met them with a large banner inscribed, 'Welcome American Soldiers,' and signed, 'Hukbalahap.' The Americans were young, well-fed in appearance, and very self-confident. They had everything we had dreamed of for the past three years: new, modern guns, inexhaustible ammunition, armored vehicles, medicine, clothing, and supplies. In that barrio, as in every barrio of Central Luzon, the people took them into their homes, fed them, treated them as liberators."

Gradually the mask was thrown aside. The American army did not propose to encourage Philippine rebellion against authority. They did not wish to furnish the guerillas arms, or let them retain those which they were using. When the first set conference came they gave Taruc and his fellow fighters "a very cool reception. The first thing they said was that they didn't like 'civilians with guns.'" Taruc adds, "All the way back to San Fernando I thought about the years of struggle, the lives spent, the suffering, to obtain and to use those guns against the enemy of the Americans as well as of the Filipinos."

"Our disappointment on that occasion, deep as it was, did not prepare us for the horror, the terror, and the persecution that was to follow." We trusted the Americans, although many of their representatives had given us good reason not to. In our united front frame of mind, we thought of them as allies in a war against a fascist enemy. We had not even considered that our allies themselves would turn to using fascist methods.

36-11-91

"On February 5, our squadrons in Manila, where the battle was still at its height, were suddenly ordered disarmed by the American army. Astonished, our comrades refused. Instead they packed up and started back to Luzon. Just beyond the city our squadrons were halted and disarmed at the point of guns by American MP's under the personal authority of Colonel Eaton, whom I had met and spoken to only a few days before in Calasiao. Two squadrons were disarmed in Obando and another at Meycauayan. Our comrades were stunned. Some of the GI's with whom they had fought side by side into Manila were present and cried when they witnessed what was happening; others gripped our comrades' hands and said it was all a mistake, the arms were sure to be returned in a couple of days."

Instead of that, 109 members of one squadron were forced to dig their graves and then shot and clubbed to death.

The Philippines were then finally re-organized under Roxas, and Philippine independence proclaimed July 4th, 1946. Reaction had a free hand, and a pacification campaign was started, which meant that the Hukbalahaps were now the hunted bandits. All sorts of charges were made against them, and on testimony of the landlords the jails were crowded with these captured fighters.

Roxas tried to make compromise with Taruc, who was offered a seat in Congress and many personal opportunities for gain. These he refused. There followed a campaign of suppression, of persecution, starting with Roxas and continuing with his successor, Quirino. "The Spanish execution squads, the butcheries carried out by the American army when it crushed the first Philippine Republic, even the terrors of the Japanese, were all exceeded by the orgy of killing, torture, burning and looting that was let loose upon Central Luon. It will remain forever an ugly stain upon our nation. In every town the jails overflowed with arrested peasants. Zoning was carried out in many barrios, and everyone suspected of being an active Huk or PKM was dragged off to the MP prisons, beaten and tortured."

36-11-92

Roxas paid his debt to the Americans by accepting the Bell Act, which allowed American goods of any kind and in any quantity to enter the Philippines free, while only a few Philippine raw materials under quota could be sent to the United States. The value of the pesa was fixed to that of the American dollar, andAmerican capitalists had the right to enter the Philippines without restriction to participate in any business including public facilities, on an equal basis with the Philippines, and to exploit natural resources. In addition to this, American military forces were given the right to maintain bases in the country for a period of 99 years. American officers were to train Philippine forces.

Roxas died in 1948 at a United States Army air base, and the Vice President, Quirino, succeeded him. He tried again to compromise with the Hukbalahaps and conferred with Taruc in Manila. Taruc was allowed the seat in Congress to which he had been previously elected, but soon the terror launched by Quirino exceeded that of Roxas, with murder,

torture, rape. So the battle still goes on, and as Taruc says:

"How, then, does American imperialism affect our people? For over half a century the Philippines has become largely the private landed estate of a handful of big businessmen who live ten thousand miles away in the United States. They acquired possession by taking us away from a previous owner, Spain, as the spoils of war in 1898, and they made sure of their possession by using the iron fist in 1899 to crush with blood our revolutionary movement for real independence. Since then, posing as our friends and benefactors, they have robbed and plundered our wealth, and they held back the achievement of our democracy and freedom. When they pretended to give us independence, in 1946, it was only as a smokescreen to hide an even greater domination."

36-11-93

Despite the American education, one half the Philippines are still illiterate, and large numbers of the rest can hardly read or write. Tuberculosis and beri beri are widespread. The Philippine moves about in an American made world. He grows pineapples and sends it to California to be canned. He grows coconut and then buys toilet soap made in New Jersey out of coconut oil. He uses sugar grown at home and refined in America.

But Taruc and his followers still fight. The last words of his book are:

"The final pages of this book are being written in a very small nipa hut, somewhere on the slope of a mountain above the central plain of the island of Luzon. It is a temporary shelter, newly built, and it may have to be abandoned quickly, perhaps today, perhaps this afternoon. Perhaps even as I sit here writing, an alarm will come. The enemy is not far away.

"Here in this small hut on the side of a mountain, looking out upon the soil that bred me, upon the land of the people of whom I was born, I complete this book, which is more their record than mine. The struggle of which I have written, and to which I have tried to contribute, is still not completed, but it will be, and the people will triumph."

Quarles, Benjamin. The Negro in the Civil War. Boston: Little, Brown + Co., 1953.

Review: Liberty Book News, December 1953.

Du Bois, Oct. 13, 1953
Liberty Book Club

The Negro and the Civil War, by Benjamin Quarles. Little Brown & Co., Boston
379 pgs. $5.

There have been several attempts, most of them right after the Civil War, to tell the story of the Negroes' participation in that war, and its significance. A small book by William Wells Brown in 1867; Joseph T. Wilson's "Black Phalanx" in 1882, and George W. Williams' "History of the Negro Troops" in 1888.

However, this book by Benjamin Quarles is by far the most reliable and well-balanced. Quarles is Professor of History at Dillard University, a colored institution in New Orleans. He notes that a few careful historians have seen the Negro as a figure in the Civil War, but that most such writers have "neglected to approach the period with the Negro in mind. It is my hope to set the record straight."

Quarles has carried out this job with careful and thorough examination of original sources, correcting many false legends but pointing out that in this great struggle a quarter of a million Negroes in the North, trained by their own convention movements and in the Abolition Crusade, drove the nation into a stand against slavery. The 3½ million Southern Negroes became in part laborers and stevedores in the armies, both Confederate and Union; another part carried out a general strike by abandoning the plantations and moving bodily into the Northern armies. The third group became the great mass of laborers, servants and spies who served and guided the Northern armies. The last group formed 1/8 of the Northern army and navy. The increase of military power from 1863 on came solely from Negro volunteers.

The development of this extraordinary history is fascinating and has been well told. It begins with the tale of that terrible assault on Fort Wagner by raw and untrained Negro troops; and the death and burial of young Colonel Shaw.

-56-11-94

There was at the beginning of the war a curious effort of black men to secure recognition in the Confederate ranks. Some rich free Negroes gave money. Blind Tom gave concerts, and free Negroes of Louisiana actually bore arms. But the South thought it could do without them.

The North tried first to return fugitive slaves. It was Ben Butler who retained them as "contraband war" and as one writer said, "an epigram abolished slavery in the United States." This mass migration of Negro workers "was an exodus whose Moses was multiple" and "like the oncoming of cities."

The story of Lincoln's attitude toward slavery is especially well worked out, and the gradual way in which Negroes got the right to bear arms. During the war more than 200,000 Negro civilians were in the service of Northern armies as laborers, teamsters, cooks, servants and spies. Especially were Negroes called upon, as sickness followed the Federal troops. By February, 1862, more than 60,000 Northern soldiers were sick every day, and the death rate amounted to 27 regiments a year.

As Emancipation loomed, towards the end of the war, Lincoln wanted to colonize the Negroes, but it was a Boston group of Negroes who gave him the answer: "When we want to settle outside the United States we will pay for the territory; when we are ready to leave we will pay for our travel. Just now we do not want to go. If anybody else wants us to go they will have to make us."

The South was furious when Emancipation came. Jefferson Davis said it was "the most execrable measure recorded in the history of guilty man." And they killed the black soldiers they captured, when they could.

By April 26, 1865, there were 166 Negro regiments. Yet for a long time the United States discriminated against the Negroes in pay. The Negro soldiers were often given unserviceable arms, excessive fatigue duty, and poor

8 1 9 6 6

hospitalization. Only 100 Negro officers were commissioned during the war.

At the very last the South, led by General Lee, tried to recruit Negro soldiers on the Confederate side but they were too late.

Intelligent Americans ought to read this careful and restrained revision of the kind of history that has been fed this country for 90 years. It was Woodward in his "Meet General Grant" who said blithely, that American Negro slaves alone in history raised no hand to help their own emancipation.

Perhaps this author is too cautious in trying not to offend the sensibilities of the white south. Perhaps he tries a bit too hard to make his conclusions understatements. Yet this probably is the best if not the only way to get Americans to read the truth.

Nelson, William Howard. Strength
for Struggle. N.Y.: Fleming H. Revell
Press, 1953.

Reviews: Unpublished

STRENGTH FOR STRUGGLE, by William Howard Melish, Minister of the Church of the Holy Trinity, Brooklyn, New York.

This is a book of sermons and as such may repel many Americans. Let us then hasten to say that herein is [redacted] more than preaching. This is the story of the celebrated Melish case known around the world; told not only as an historical record but revealed in the thought and activity and the deep religious faith of the young man who was its central figure.

The main facts of this case include the action of young Melish as an officer of the American-Soviet Friendship Council, and as one who welcomed to his pulpit the Dean of Canterbury. It covers the threshing out of the facts before ecclesiastic and civil courts when a great preacher who served mankind a half century was dismissed because his son advocated Peace with the Soviet Union. It tells of the final determination of this young man to stand his ground and be frightened neither by bishops nor attorneys-general.

In addition to this it shows how a modern Christian church may grow and function as a living social institution; how it may welcome to its pews Negroes, Puerto-Ricans and Jews; how it may serve the young people of the community in their desire for recreation and knowledge; and how it may stand before the nation as a center for world peace instead of war, and freedom of speech instead of fear and coercion.

For this and other reasons every person who wants to realise the inner struggle which is tearing the heart of the world today should read and obtain "Strength for Struggle."

Strong, Anna Louise. The Stalin Era.
N.Y.: Mainstream Pub., 1956.

Review: "World Changer", Masses & Mainstream, Vol. 10, No. 1, January 1957, pp. 1-5.

JOSEPH STALIN

By W, E. B. Du Bois

"The Stalin Era," by Anna Louise Strong, just published by Mainstream Publishers, ought to be required reading for all confused and frustrated commentators on socialism in this day, and especially for editors of newspapers. These passages from the foreword deserve committing to memory:

"Tens of millions of people built the world's first socialist state, but he /Stalin/ was the engineer."

"...all the evils endured through the socialist building led by Stalin, whether these came by necessity, error or crime, were far, far less than the evils they suffered by deliberate will of the Western world in the wars of intervention and the Hitler invasion, less even than they suffered through America's delay in the promised 'second front.'"

I stress these passages because they are voiced by one of the few Americans who have the authority to speak. Most current commentators on Communism, Russia, Stalin, and Hungary talk without real knowledge. The New York Times says frankly that we do not know just what has happened in Hungary; yet in editorials and news, it talks definitely and without restraint.

In contrast to this, Anna Louise Strong is an American from birth and tradition, whose father showed her the paths of integrity. She lived in the Soviet Union during most of the Stalin era; she speaks the Russian language, married a Russian citizen, and has visited almost every part of this vast empire and its allied states. She knew Stalin personally and many of his co-workers; she sat in the court-room and heard the celebrated trials of 1936 and listened while the accused confessed.

"Was the story credible? Most of the press outside the U.S.S.R. called it a frame-up. Most people who sat in the court-room, including the foreign

49-6-54

correspondents, thought the story true."

Miss Strong helped edit an English language newspaper in Moscow; she saw the five-year plans develop; she knew of the Hitler invasion and debacle, at first hand. There is no person better equipped by training and experience to judge the Stalin era than this author. Most modern writers on Russia have been hopelessly prejudiced for or against Russia. Anna Louise Strong had reason for prejudice, for the Soviet Union, after her long services, treated her with crass injustice and abruptly expelled her from the country. But Miss Strong was broader than prejudice. She knew that the builders of this new nation and new economy were neither angels nor devils, but striving people who, despite ages of injustice and oppression, despite the organized and united attacks of the chief civilized nations of the modern world, including the United States, suffered, toiled, and persisted until they built the world's first socialistic state. That many innocent persons, including herself, suffered in this process, was regrettable and even in cases terrible, but the total result was a glorious victory in the uplift of mankind.

Writing then with authority, knowledge, and restraint, this author follows clearly in less than 150 printed pages of simple, concise English, the attempt to establish socialism in one country instead of espousing world revolution. "It was Joseph Stalin who formulated in August, 1924, the idea of building socialism in Russia without any outside help." In this effort Stalin went counter to the thought of the dead Lenin and of the living Trotsky; and even to his own former belief. Russia was a land of ignorant peasants; it had but a small class of trained artisans. Yet this half-educated son of a western Asiatic serf became head of the Russian Communists, despite Lenin's doubts and Trotsky's bitter enmity. He became the leader of a new Russia. "He rose, I think, through two characteristics that all men have who are leaders, and a third characteristic that only the greatest have. He had a deep sense of what

I can only call the 'will of the people'; he had matchless technique in releasing that will in action. Lastly, he had the conviction, and was able to give it to others, that his actions carried mankind forward to a better day." When Anna Louise Strong wanted a better paper to work on her complaint went to Stalin himself.

"I was thunderstruck to find myself at a table with Stalin, Kaganovich and Voroshilov, as well as the persons against whom I complained. The small Politburo, steering-committee for the USSR, was taking up my complaint. I was ashamed.

"From that time, I regarded Stalin as the best committee man I had ever met, a man who could bring diverse views into harmony with a speed amounting to genius, and awaken and encourage the will to act by indicating, out of many views, a correct path."

Miss Strong takes up the first Five-Year Plan, which she saw as it developed in toil, trouble, and repeated failure, until in 1933, Stalin could report that the Soviet Union had become the second industrial nation of the world. This result was accomplished in sacrifice and suffering. "But never before in history was so great an advance so swift. Had the pace been less swift, the Soviet people believed that not only their Socialism would have been postponed but their existence as a nation would have been in danger." Stalin did not pause, but rushed into a second Five-Year Plan, which revolutionized agriculture in Russia. "I saw collectivization break like a storm on the Lower Volga in autumn of 1929. It was a revolution that made deeper changes than did the revolution of 1917, of which it was the ripened fruit.... Kulaks fought the movement bitterly by all means up to arson and murder. The middle peasantry, the real backbone of farming, had been split between hope of becoming kulaks and the wish for machinery from the state. But now that the Five-Year Plan promised tractors, this great mass of peasants began moving by villages, town-

44-6-56

ships and counties, into the collective farms." By 1935, the new farming had won with crop rotation, irrigation, and vastly increased crops. The peasants learned to read and write. Theywent in for science and art. Farms had their own theaters.

A new people was born; national cultures developed; women emerged from subjection; the power of the church was overthrown; the Stakhanov rivalry in progress of work in factories arose. The youth went east and north to open up the bare provinces. A girl won the world record in parachute jumping and cried: "The sky of our country is the highest sky in the world." In December 1936 a new Constitution was adopted which echoed the words of Stalin: "Neither language nor color of skin nor cultural backwardness nor the stage of political development can justify national and race inequality." Miss Strong quotes Romain Rolland, who "spoke from the placid Lake of Geneva: 'This gives life to the great slogans that until now were but dreams of mankind -- liberty, equality, fraternity.'"

Then came reaction; Miss Strong calls the excesses of 1936 to 1937 "The Great Madness." She says: "I do not think anyone anywhere knows the full story of the excesses that occurred in the USSR in 1936-38, or can yet assess properly the blame." The enemies of socialism called this a failure of the Communist effort. Khruschchev laid the blame on personal dictatorship, but Miss Strong regards it as only the Russian phase of a world-wide sickness: the Spanish war; the capitalist depression; the Hitler "Fifth Column"; Chamberlain and Daladier; American Big Business selling scrap iron to Japan; Quislings and Lavals -- the cult of "subversion." Russia had suffered and was afraid. From 1918 to 1922, she had been repelling the attacks of foreign nations and ferreting out her own traitors. In her first Five-Year Plan she met sabotage among foreign merchants and Russian workers; coal mines were wrecked; machines deliberately ruined; but the Soviets saw the great harvests of 1933 and were confident.

49-6-57

Then in 1934, Kirov, a high Communist official and close friend of Stalin, was murdered by a Communist. Investigation involved a number of Communist leaders; agents and plotters from neighboring states were involved. "A sense of insecurity spread among the Soviet people, replacing that exultant sense of progress they had felt in 1934. It was not due alone, and not even primarily, to personal fear of arrest or to concern for friends. It was due to the knowledge that the enemy had penetrated high into the citadel of leadership, that nobody knew who was loyal." Perhaps the last word on this era was written by Howard K. Smith, who, as the Second World War opened, said: "Had Russia not liquidated a few thousand bureaucrats and officers, there is little doubt that the Red Army would have collapsed in two months."

The author's story of the Soviet Union and the Second World War is gripping. Hitler turned on the state headed by Stalin "the mightiest assault in human history." Nine million men fought from Murmansk to Odessa. Europe and America predicted that the Soviet Union would collapse within a month. Cynics like Harry Truman hoped both Nazis and Bolsheviks would be killed off. Churchill and Roosevelt held off the Second Front, the allied attack on the German rear, for three awful years until Stalingrad heralded Russian victory. Stalin saved Europe and turned to join hands of friendship and alliance with his tardy allies. The cost had been tremendous -- twenty-five million people homeless; twenty-eight thousand towns and villages wholly or partially destroyed; 38,500 miles of railway torn up; twenty million Russians dead in war or want. Their losses were a hundred times as great as those of the Americans. Stalin at Yalta was uplifted: "Churchill in his history of the war, tells of the almost naive toast that Stalin drank at Yalta 'to the firmness of our Three Power Alliance,' saying 'May it be strong and stable. May we be as frank as possible .... Allies should not deceive each other.... In the history of diplomacy I know of no such close alliance of three great powers as this.'

"'I had never expected that he could be so expansive,' comments Churchill,

85-9-46

the hard-boiled imperialist."

Then came the rivalry of victorious America: we killed 250,000 Japanese by a new weapon; Russia was frozen out of the far-eastern peace-making; Chiang Kai-shek was brought into the treaty making at a cost of 300 millions; Russia was refused the six billion dollar loan she was expecting from the United States for her desperately needed reconstruction. "Then Roosevelt died, and Truman stopped even Lend Lease aid so suddenly that Russia-bound shipments were taken off ships in New York harbor. When Russia, listing her losses, asked for 'the first billion' of that loan, the State Department 'lost' the letter for nearly a year. Many Russians died of hunger in that victory year, for lack of that loan."

The dream of alliance and peaceful cooperation died in the Cold War. The Korean War began the new policy of "containing" Communism by force. Stalin continued to beg for peace but his offers were scoffed at. When he died, President Eisenhower was officially announced as "preparing an aggressive effort to exploit the Soviet's situation -- to use all tools of propaganda, and more, to encourage strife within Russia and split off its satellites."

Whether Stalin deteriorated in his later years or not may be argued; but Miss Strong says: "I do not think anyone can read his last work on Economic Problems of Socialism in the USSR, and think that Stalin's intellect had grown senile."

Again she quotes Howard K. Smith; "Stalin did more to change the world in the first half of this century than any other man who lived in it." She adds: "Let that stand as his worldwide epitaph."

ECONOMICS AND REFORM

A Review by W. E. B. Du Bois

I have known Abram Harris for at least thirty years and saw much of him when he was a young professor of the social sciences at Howard University. He had a brilliant mind and was an omnivorous reader. I doubt if any living scholar knows the work of Karl Marx as well as Harris. But the literary output of Harris has been small, and always, to my mind, far less than his scholarship warranted. As a Negro, naturally, he was interested in the Negro problem. He wrote, with Spero, "The Negro Worker" in 1931, an excellent study of the Negro and the labor movement. In 1936, Harris published a study of Negro banking which was a small part of a wider and more comprehensive scheme of studying Africa and the rise of capitalism and the development of an American Negro middle class. This plan was never carried out and it was left to Eric Williams and Franklin Frazier to broaden and extend. Meantime Harris became increasingly interested in Karl Marx, Communism, and the whole modern capitalist development. He read widely and published fifty or more articles and reviews, but no major work until 1958, when he published his current book ("Economics and Social Reform," with a foreword by Frank H. Knight. Harper & Bros., New York. 357 pp., with index. $5.00).

To me this book is a great disappointment, partly because it is a conventional textbook of the sort which I do not think helps the education of youth. It is, to be sure, a learned treatise based on an astonishing amount of research I possess no knowledge of this literature which would enable me to evaluate its ~~its~~ accuracy or comprehensiveness ~~of~~. But I do know something of modern social problems and of the attempts of thinkers and workers to solve them. To this fundamental part of human history and thought, it seems to me that Harris adds

nothing. He devotes a fourth of his book to John Stuart Mill, examining meticulously what this great nineteenth century philosopher said about reform, but devoting almost no space to just what it was that Mill proposed to reform. Harris then devotes fifty pages to Commons of the twentieth century, in an article which he wrote fifteen years ago. Of the greatest event of the twentieth century, the Russian Revolution and the resultant establishment of a Communist state, Harris says almost nothing. The word "Russia" or "Soviet Union" does not appear in his index.

To Karl Marx, Harris devotes thirty-seven pages, although this is the field of his greatest competence, and his most intensive study. This study of Marx is to me most inadequate, and I cannot see what it will add to the average student's knowledge of the most pressing problems of our day. Harris' study of Veblen seems to me querulous and unappreciative; and his study of German socialism incomplete. The effect of this book on me is a feeling of its incompleteness and lack of logical conception. I cannot see why it was written and at what the author was aiming.

If I should presume to judge what Harris had in mind while writing this book, it would be this: frightened, with so many others, at the witch-hunt, he became weary and disappointed with his work at Howard University and welcomed security and status at the University of Chicago. He gave up the scientific study of Karl Marx and Communism and settled down to ten years of silence and teaching, with desultory essays. Then, bringing together parts of his twenty years of study, he made a book that followed no logical pattern but tried to portray Mill as a twentieth century prophet without showing how vastly the social problems had changed since his day. Harris then filled in with Commons and Veblen and ended with an extraordinary exposition of Mussolini's corporate state, emphasising as its exponent a little known Catholic priest and

Davidson, Basil. The Lost Cities of Africa. Boston: Little, Brown + Co., 1959.

366 pages; $6.50

42-54-219

This excellent book has a rather misleading title. The title of its introduction, "The Rediscovery of Africa" should be the title of the book and while the author says much of the lost cities of Africa, the book is really an indispensable account of what has been done by ethnology, archaeology, and chemistry to rebuild our conception of the history of the African continent.

Mr. Davidson, who as written 2 other books on Africa and one on China, has travelled widely in the world and speaks with authority. He reminds us that for centuries Africa was a land of fable and legend, the seat of great kingdoms and great wealth and especially of the mysterious kingdom of Prester John. However, in the last 200 years there has come a different belief due to the fact that Africa had been the seatof a slave trade to America and to the East.

Men of experience and learning declared that Africa was without a past and without history, that its peoples had always lived in savagery and in century long stagnation. Numerous traces of early African civilization were ignored or attributed to other peoples. Today, however, archaeology has triumphed and it is certain that there was a civilization in Africa not only highly developed, but of distinctly African origin and culture. It is known that Punt and Kush were advanced African cultures in the Nile valley more than a thousand years before Christ. It is not so well known that a great development of African civilization took place south of the Sahara in medieval times when the kingdoms of Melle and Songhay were alive. At the same time there were mercantile centers on the African coast where a thriving trade was carried on between Africa, India, and China; and in addition to that we have long known of the mysterious states in the Interior, like the kingdoms of the Monomotapa and Zimbabwe.

42-54-219A

Mr. Davidson has added to our present knowledge the astonishing results of recent archaeological exploration. The book is not easy reading because the author is

42-5A-220

careful not to express certain and clear conclusions. He gives evidence on both sides of those who would minimize African culture and of enthusiastic defenders of it. His own conclusions are often left rather uncertain, but they do sustain the growing idea that the culture of Africa is peculiar and different from that of Europe and Asia and yet tremendously significant and developed to a high degree. There was not only agriculture and irrigation, there was widespread commerce, domestic and foreign and there was an astonishing development of law and government. The difference from Europe and the individuality of African history calls for new and intent study. We are deeply indebted to Mr. Davidson for guiding us in this direction.

Ruchames, Louis, ed. A John Brown Reader. N.Y.: Abelard-Schuman, 1959.

Review: Unpublished?

JOHN BROWN

By W.E.B. Du Bois (June, 1960)

A John Brown Reader, The Story of John Brown in His Own Words, In the Words of Those Who Knew Him, and in the Poetry and Prose of the Literary Heritage, Edited by Louis Ruchames, Abelard-Schuman, 431 pages, $7.50.

Several books on John Brown have commenorated the 100th year of his martyrdom. One of the most interesting is A John Brown Reader. It has first, one hundred pages of his own words, intimate letters, homely stories of his life, letters to his wife and children and frank statements of his beliefs and plans. These are his words to the Court, November 2, 1859:

I have, may it please the Court, a few words to say. In the first place, I deny everything but what I have all along admitted,--the design on my part to free the slaves. I intended certainly to have made a clean thing of that matter, as I did last winter, when I went into Missouri and there took slaves without the snapping of a gun on either side, moved them through the country, and finally left them in Canada. I designed to have done the same thing again, on a larger scale. That was all I intended. I never did intend murder, or treason, or the destruction of property, or to excite or incite slaves to rebellion, or to make insurrection.

I have another objection; and that is, it is unjust that I should suffer such a penalty. Had I interfered in the manner which I admit, and which I admit has been fairly proved (for I admire the truthfulness and candor of the greater portion of the witnesses who have testified in this case),--had I so interfered in behalf of the rich, the powerful, the intelligent, the so-called great, or in behalf of any of their friends,--either father, mother, brother, sister, wife, or children, or any of that class,--and suffered and sacrificed what I have in this interference, it would have been all right; and every man in this court would have deemed it an act worthy of reward rather than punishment.

This court acknowledges, as I suppose, the validity of the law of God. I see a book kissed here which I suppose to be the Bible, or at least the New Testament. That teaches me that all things whatsoever I would that men should do to me, I should do even so to them. It teaches me, further, to 'remember them that are in bonds, as bound with them.' I endeavored to act up to that instruction. I say, I am yet too young to understand that God is any respecter of persons. I believe that to have interfered as I have done--as I have always freely admitted I have done--in behalf of His despised poor, was not wrong, but right. Now, if it is deemed necessary that I should forfeit my life for the furtherance of the ends of justice, and mingle my blood further with the blood of my children and with the blood of millions in this slave country whose rights are disregarded by wicked, cruel, and unjust enactments,--I submit; so let it be done!

1-8-61

Part two is the testimony of people who knew him -- his eldest son, two other sons, eye witnesses to the Potawatomie tragedy and the testimony of one of his companions at Harper's Ferry. T

The third part, called The Literary Heritage, takes over 150 pages and is a tribute from some of the great names in American history and literature -- Salmon P. Chase, Theodore Parker, Victor Hugo, William D. Howells, Moncur D. Conway, Ralph Waldo Emerson, Henry Thoreau, Oliver Wendell Holmes, Frederick Douglass, James Whitcomb Riley, Carl Sandburg, Clarence Darrow and Truman Nelson.

It is significant that in a day when the whole meaning of Negro slavery in United States history is being played down and forgotten; at a time when the war for slavery is being pictured actually as a struggle for liberty, that there should be emphasized the career of a man, poor, simple and believing deeply in the right, who said that the ownership of one human being by another was wrong and that just because it was wrong it must be stopped by every possible means.

John Brown's plan was not crazy. It was a well-thought-out effort to enable four million slaves to save themselves. Its temporary failure did not prove it was wrong, and its eventual triumph was the Emancipation Proclamation of 1863.

Clarence Darrow says:

> His life was one of toil and hardship and poverty. In his earlier years, he was a farmer, a wool grower, a merchant, a tanner, and with all a fairly successful man. Up to his middle life, the demands of business and the claims of a large family took nearly all his time and strength; but more and more the crime of slavery obsessed his mind until, casting all else aside and forgetting even those of his own household, he answered all carpers 'as another dreamer years ago.' He turned to the helpless and the poor and waiving aside his kin, he said 'These are my brethren and sisters.' For the same eternal voice has called to the devoted souls, 'Unless you desert Father and Mother, Brethren and kindred, you cannot be my disciples.' His own slender means, with all that he could beg and borrow, was from that time devoted to the cause for which he gave his life; and while he lay in the poor, Virginia jail waiting for the end, he could

not spare the money to bring his family to his side to give their kind ministrations before he mounted the gallows that choked out his life and immortalized his name. His work was so important that he had no time to get money, and no thought of its value. Unlike many other reformers, he went about his Master's work in such great haste that he did not even wait to accumulate enough money to save the world before he began his task.

Most of John Brown's biographers tell us when and why he became the champion of the black, but they do not tell us right. His love of the slave was a part of that fire that, although it seems to slumber, still now and then, through the long and dreary night, kindles a divine spark in the minds of earth's noble souls, which lights the dark and devious pathways of the human race to nobler heights.

Persons who want to realize what John Brown meant in American history should read this book.

THE SURVEYOR

by Truman Nelson, 1960

National Guardian, Vol. 12, #34, June 6, 1960, p. 9.

5/16/60
Guardian
C. K. Nelson

THE SURVEYOR, by TRUMAN NELSON. DOUBLEDAY & CO., N.Y. 1960. 667 pp. $5.95

This is an extraordinary book. It is the story of John Brown in Kansas. Some will classify it as a novel, but the novel has varied widely in meaning since its first use in English in the 16th Century. It was pure entertainment and I can remember when I was twelve or so entertaining my fellow students in the church stables back of my home with stories which I invented and which they like. The love story followed and as I grew came Dickens and Dumas and the factual studies of Zola.

In our day the novel has come to supplement history and to tell facts which history either deliberately omitted or never could know. Just what did Napoleon think before Waterloo? No one knows exactly. Yet he did think Here enters the historical novel. THE SURVEYOR is of this type. It gives a picture of John Brown resulting from intensive studies which no person but Truman Nelson has ever made. They are intricate and detailed studies. They took time and infinite trouble to make and they demand time and thought to read. For this reason THE SURVEYOR will be dismissed by impatient seekers for entertainment and invention, and be refused review by many modern critics as being neither conventional history nor popular romance.

Yet this is a great book. It is as described, tumultuously written. Nelson has used words and figures recklessly because he wanted to paint a tangled, unusual picture, futurist in impression. He is not telling a tale which develops logically, regularly or continuously ; but he is trying meticulously to fix what actually took place out there on the borders of civilisation where slavery and freedom fought a bloody duel embellished and made possible by the color of men's skins and the stealing of toil.

The individuals involved were a curious mixture of characteristics and

the difficulty heretofore with all studies of bleeding Kansas and of the South is that most of these folk were made lay figures with set, unchanging characters whose meeting, action and talking never could be real. Nelson's characters on the other hand are changing, and devloping and never altogether reasonable even to themselves which is saying they are human. To paint their pictures calls for plain English without prim pussyfooting and thus Nelson's prose swings from poetry to nastiness, from dirty plainness to the vagueness of dream.

Especially is this book valuable as history because it lays down a body of fact to answer a question whcih has been curiously distorted, often deliberately, sometimes through sheer ignorance, and that is just what was the American slave system? Southerners have naturally built up a picture of a benevolent paternalism and of cultured gentlemen, with contented servants under life tenure, living in pillared mansions amid flowers and song. Literature and theatre have been drenched with this twaddle. Nelson paints with facts another picture of the "Slave Barons" and their "Border Ruffians." The slave-holding patriarchs on the edge of bankruptcy despite free land and slave labor began to develop in its back yard a set of slave drivers with whip and scorpion; men without morals or decency, leaders like Atchison and Shannon with a mob of abandoned ruffians deliberate raising of Negroes for sale in Virginia and Kentucky. Back of them were filibusterers like Walker, scum who demanded the re-opening of the African slave trade and imperialists like Jefferson Davis planning a slave empire from Maryland to Brazil. Their logical cronies were Northern land-grabbers like Robinson and Lane compelled to use free labor for their railroads, contemptuous of "niggers" and determined to build a new capitalism, dealing in slave grown materials from the South. This combination John Brown put to rout in Kansas and started Civil War in the nation which could only be stopped by freeing the slaves.

The border ruffian of this era was everything from an ignorant scoundrel

to a greedy adventurer wandering starved and irresponsible from the East or staggering up drunk and blood thirsty from the Slave South. The Southerner brought with him the determination to get more land for slavery as the black belt began to fade under senseless misuse. Slavery and its leaders were convinced that the rich black 10,000 square miles of territory directly west of Missouri would be slave land or they would disrupt the Union in seizing it. Many Northern and foreign born opposed this, but with one condition and that was that if Kansas became free it would be free of Negroes as well as slaves.

A few, and especially one man joined this opposition but with a difference because of an inborn and a steadfast belief from which he never wavered. John Brown not only regarded slavery as wrong, but Negroes as men. He came to Kansas almost by mistake because his work was in the East as he said, "God put the Alleghany Mountains from New York to the Southern States for the emancipation of the Negro race. I know these mountains well and could take a body of men in there and never be dislodged."

He came West as a wool merchant, but always working on his great life plan and his sons had left Ohio to make a living in Kansas. They found Kansas a path to freedom and called in their father for help. John Brown came hesitantly disguised as a surveyor and in Kansas realised that here might lie a path to Harpers Ferry. Nelson then paints a John Brown that none who have written of him before ever conceived: a hesitant man of vast determination, a man who wept and wondered whither he was going and why and yet never really wavered from the great end of his life.

The family were of different gift and understanding and yet they formed a marvelous group. They walked into all kinds of trouble trying to walk straight, tr ing to understand the faint-hearted, the cowards and criminals who surround them led by demagogs. One said, "I have such a fire burning in my soul I wish I could overflow like hot lava on that bogus crowd. When I think of the southern chivalry in their frock coats and their kid gloves and their embroidered

vests, taking it for granted that the country will keep their slaves in bondage for them . . . "

The Southern leaders answered with bitter invectives: "They have been sent by managers who operate a business from Faneuil Hall in Boston to run stolen niggers up to Canada and then ship them back South on Yankee slave ships to be sold all over again."

John Brown stuck to his plan. "You boys seem determined to make me out an old fogy with his nose in the Bible all of the time. I beg to remind you that I have also read every book on insurrection that I could lay my hands on from the Roman warfare up through Toussaint L'Ouverture and the European revolution of '48. You seem to forget that I was in Europe in '49 when the event was barely off the stage and that I talked to many of the actors face to face."

Pandemonium followed stirred up by Atchison, once Senator. "The drunken Ruffians running through the streets with books on their bayonets, or chopping with their belt axes every stick of furniture, precious domestic utensils, groceries, trunks, clothing, anything they could get their hands on . . . putting up their flags with the tigers and lone stars on them, the South Carolina flags, the banners of blood red. And all the while there were Free State officials running around, serving them, delivering their own men into the Ruffians' hands."

And then came the deed at which the world since has cursed and shuddered. "The Old Man stepped out in front of the men. 'What can we do?' asks my friend Mr. Hanway. 'Why, we can do what we have come for . . . fight!' . . . 'We can surprise them in their drunken slumbers and turn their cheap victory into a bloody rout. If they are leaving, as Mr. Hanway suggests, we can go to work even more effectively.'

" 'Doing what?' demanded Hanway.

"The Old Man shook an angry fist at him. 'We can attack best while their

forces are scattering. We can burn their wagons, stampede their horses, explode their powder. Poison their water supplies, trail them and dog them every step of the way. Parch the earth all about them. Steal their weapons while they sleep and if we manage to get them in a tight place . . . why, then we can stand fast in the gap and abattle for the Lord.' "

Th The steps of this four year battle are followed with astonishing care and detail; the historical actions are unearthed and fitted together, the thoughts and motives are reasoned out, the words are skillfully inverted to finish this broad and effective picture, John Brown hesitated and gestured . His favorite son had been murdered; his eldest son driven to the borders of insanity. In the end freedom won in Kansas. The whole territory turned to John Brown. But he turned east where his great work wwas waiting. The family followed. Nelson pictures that last drive. The old man kept stopping them to hunt along the road. Finally he emerged with a fugitive slave.

"The boys picked their father up and lifted him into the wagon along with the fugitive. John studied his father's face, fearful that he was seriously ill. He had never seen him like this, or even the least bit feeble before. A ray of warmth, a mite of the sun, the morning star, touched joy, satisfaction, and the most irrepressible optimism. He patted the Negro affectionately on the shouldern and said, --Young man, for some years now I have been watching for stout men like yourself to rise up and join me and my sons in a plan for the immediate and complete emancipation of the Negro race. I see now I cannot bring it off in Kansas but God gave the strength of the Allegheny Mountains for freedom. They are full of natural forts and hiding places. My plan is to take no more than twenty-five picked men and begin on a small scale at some such place as Harpers Ferry in Virginia . . .

" 'Yes,' said the Negro."

So ends the slow and tortuous part of this story which doubtless Truman Nelson will later carry to its great end. Meantime such people as can read

and have time to learn might use a part of it in digging doggedly through this astonishing book.

W. E. B. Du Bois

THE AMERICAN REVOLUTION, 1763 - 1783

by Herbert Aptheker, 1960

Political Affairs, Vol. 39, July 1960, pp. 63-64.

THE AMERICAN REVOLUTION 1763-1783, by Herbert Aptheker.

The second volume of A History of the American People: An interpretation. International Publishers, N.Y. 304 pp. $3.50

Those who would understand how the United States became the nation that it is should by all means read Herbert Aptheker's interpretation. The first two volumes, short and concise, are now in print. This is not the conventional chronicle of facts, but an attempt to show what well known facts mean or in case of disagreement to set the facts straight.

The first thing that the reader realizes is the extraordinary amount of source material which these books cover. Aptheker has not only read and digested the great and well known works on American history by men like Sparks, Bancroft, Force, and the founding fathers: Adams, Jefferson and Madison, but also the immense literature of secondary interpreters covering not only the nation but various states and corresponding European history, like Channing, Hart and Beard; Coupland, Drake, Greene, Harlow, Jameson, Kraus, and Van Doren. To this Aptheker has added careful reading of articles in 23 of the leading reviews of the United States and Britain which contain some of the latest and most valuable interpretations. The works of the founding fathers and their letters and collections of newspapers in the Library of Congress and the library of Columbia University have been consulted.

To the digestion of this tremendous mass of material, Aptheker has added a Marxian interpretation of American history together with a common sense view of events which hitherto have been curiously muddled, forgotten or deliberately distorted. First, of course, for me stands the recognition and interpretation of the meaning of slavery and the Negro in American history.

This was pleasantly clear in his first volume, THE COLONIAL ERA where the author pointed out what every American historian has tried to forget or belittle, the presence in the United States of Negroes forming a fifth or more of its population. In this book on the American Revolution, Aptheker notes the Negro as an American from the first and devotes one of his longest chapters to the "Negro in the Revolution" as soldier, rebel and spy.

"The evidence shows that the activities of that 20 per cent of the population in Revolutionary America who were Negroes is of fundamental importance for an understanding of the Revolution. On the labor power of those 600,000 rested to a very large degree the economic viability of the nascent Republic and without it the new nation could not have been conceived."

An important contribution of Aptheker in this study is his insistence that the American Revolution was a real revolution in the Marxian sense of the word. He combats the idea of many writers that there was a minimum of class division and class struggle in colonial history; that the American colonies were examples of complete democracy. He asserts that the fact that laborers and artisans united with slaveholders and gentlemen to fight for American indebtedness was no proof that there was not beneath the Revolutionary War the basic struggle between the rich and poor.

He studies carefully the Declaration of Independence, its theory and its limitations; and sees it as a great document despite the fact that it left out Negroes and women.

The author has excellent studies of Tories and traitors and of the military conduct of the Revolution. He shows the curious interplay of geography and good luck which enabled a weak an unorganized folk to oppose successfully a great empire. The relation of independence in America to democracy in England is carefully followed and rationalized and one of his longest chapters is a study of the intricacies of diplomacy between American rebels and European Royalists

interbound with African slavery and the destruction of the native Indians.

The final chapter is on the economic effects of the Revolution with the study of feudal vestiges in the colonies, the land distribution, development of indentured servitude and private property as the surge to a new Capitalism.

This book is essential reading for those who would have a clear conception of what the American Revolution meant and not be misled by attempts of organizations like the D.A.R. to picture the Revolution as a triumph of a new aristocracy; or by the recent frantic Southern effort to forget slavery, deify the slaveholder and glorify the greatest blot on American history.

This work attracted me because it is the only hi[redacted] know which treats the black man as an integral part of the nation rather than as an outside appendage. The 6000,000 American Negroes of 1775, formed a fifth of the nation and over a fourth of the working class. For two centuries their unpaid labor was the foundation of American capitalism and formed the wealth of Southern planters and Northern merchants. These Negroes worked beside 300,000 white "indentured" slaves, separated from them by racist ideology while Indians were burned alive for the glory of God and witches and heretics killed and exiled. Negroes fought at Lexington and Bunker Hill; some 5,000 were soldiers during the American Revolution. They contributed to American culture and literature. Failure to free them after the first Revolution led to a second Revolution eighty years after, which was a bloody Civil War. What other history tells this tale?

A NEW HISTORY OF THE AMERICAN PEOPLE

Herber Aptheker is writing a new history of the American PeopleThe sThe first volume,"The Colonial Era"(I58 pp) appeared in I959; the second "The American Revolution)(304 pp.) in I960. Other volumes will follow. This work attracted me because it is the only history of America that I know which recognizes the Black Man as an integral part of the nation from the beginning. Of the total population of the nation at the beginning of the Revolution, twenty percent were Negroes, some 600,000 persons. In the sl,ave trade fabulous profits were made; but the heart of Africas contribution to America lay in the unpaid and forced labor of millions of Negroes for over two centuries. By I720, American Negro slavery was a well-developed, single crop, commokdity producing, commercilized system of enslavement. A racist philosophy ideology rationalized and sustained the system and led to the intense exploitation and brutality which characterized it for fifteen decades. It was a basic source of wealth for Southern planters and Northern merchants. Contrary to legend it led to repeated slave revolts from I709 to I850. The black slaves took active part in American history. They formed more than a quarter of the working class. They fought for freedom in courts of law and on the battle field. They fought at Concord and Lexington; Bunker Hill and Tirconderoga and croased the Delaware with Washington. At least 5000 fought as regualar soldiers and thousans more served as servants and laborers. They owned land and voted and failure to free them in the Revolution produced in 80myears a second revolution in the shape of a blody Civil War.

INTRODUCTION

by W. E. B. Du Bois

There are in the United States of America, fifteen millions or more of native-born citizens, something less than a tenth of the nation, who form largely a segregated caste, with restricted legal rights, and many illegal disabilities. They are descendants of the Africans brought to America during the sixteenth, seventeenth, eighteenth and nineteenth centuries and reduced to slave labor. This group has no complete biological unity, but varies in color from white to black, and comprises a great variety of physical characteristics, since many are the off-spring of white European-Americans as well as of Africans. Similarly, there is an equal and perhaps even larger number of white Americans who also descend from Negroes but who are not counted in the colored group nor subject to caste restrictions because of the preponderance of white blood conceals their descent.

The so-called American Negro group, therefore, while it is in no sense absolutely set off physically from its fellow Americans, has nevertheless a strong, hereditary cultural unity, born of slavery, of common suffering, prolonged prescription and curtailment of political and civil rights; and especially because of economic and social disabilities. Largely from this fact have arisen their cultural gifts to America -- their rhythm, music and folk-song; their religious faith and customs; their contribution to American art and literature; their defense of their country in every war, on land and sea; and especially the hard, continuous toil upon which the prosperity and wealth of this continent has largely been built.

The group has long been internally divided by dilemma as to whether its striving upward, should be aimed at strengthening its inner-cultural and group bonds, both for intrinsic progress and for offensive power against caste; or whether it should seek escape wherever and however possible into the surrounding American culture. Decision in this matter

has been largely determined by outer compulsion rather than inner plan; for rabid and prolonged policies of segregation and discrimination have involuntarily welded the mass almost into a nation with an nation with its own schools, churches, hospitals, newspapers and often other business enterprises.

The result has been to make American Negroes to wide extent provincial, introvertive, self-conscious and narrowly race loyal; but it has also inspired them to frantic and often successful effort to achieve, to deserve, to show the world their capacity to share modern civilization. As a result there is almost no area of American civilization in which the Negro has not made creditable showing in the face of all his handicaps.

If however the effect of the color caste system on the American Negro has been both good and bad, its effect on white America has been disastrous. It has repeatedly led the greatest modern attempt at democratic government to deny its political ideals, to falsify its philanthropic assertions and to make its religion a vast hypocrisy. A nation which boldly declared "All men equal", proceeded to build its economy on chattel slavery; masters who declared race-mixture impossible, sold their own children into slavery and left a mulatto progeny which neither law nor science can today disentangle; churches which excused slavery as calling the heathen to God, refused to recognize the freedom of converts or admit them to equal communion. Sectional strife over the vast profits of slave labor and conscientious revolt against making human beings real estate led to bloody civil war, and to a partial emancipation of slaves which nevertheless even to this day is not complete. Poverty, ignorance, disease and crime has been forced on these unfortunate victims of greed to an extent far beyond any social necessity; and a great nation, which today ought to be in the forefront of the march toward peace and democracy, finds itself continuously making common cause with race hate, prejudiced exploitation

and oppression of the common man. Its high and noble words are turned against it, because they are contradicted in every syllable by the treatment of the American Negro for three hundred and twenty-seven years.

In the Constitution of the United States, Negroes are referred to as follows although the world "slave" is carefully avoided before the thirteenth amendment. Article I (1787) Section 2, apportionment of members of the House of Representatives : "Representatives and direct taxes shall be apportioned among the several States which may be included within this Union, according to their respective numbers,[2] which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons."[3] "Other persons" means Negro slaves. Article I, Section, 9 "The migration or importation of such persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person." Each person" refers to Negro slaves. Article IV, (1787) Section 2, "No person held to service or labor in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered upoon claim of the party to whom such service or labor may be due.", This refers particularly to fugitive slaves. Article XIII (1865) Section 1. "Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. Section 2. Congress shall have power to enforce this article by appropriate legislation." Article XIV, (1868) Section 1. "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or

46-7-1941

immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws. Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, representatives in Congress, the executive or judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State. Section3. No person shall be a senator or representative in Congress, or elector of President or Vice-President, or hold any office, civil or military, under the United States, or under any State, who having previously taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each house, remove such disability. Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article." Article XV, (1870) Section 1. "The rights of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude. Section 2. The Congress shall have power to enforce this article by appropriate legislation."

We appeal to the world to witness that this attitude of America is far more dangerous to mankind than the Atom bomb; and far far more clamorous for attention than disarmament or treaty. To disarm the hide-bound minds of men is the only path to peace; and as long as Great Britain and the United States profess democracy with one hand and deny it to millions with the other, they convince none of their sincerity, least of all themselves. Not only that, but there encourage the aggression of smaller nations: so long as the Union of South Africa defends Humanity and lets two million whites enslave ten million colored people, its voice spells hypocrisy. So long as Belgium holds in both economic and intellectual bondage, a territory seventy-five times her own size and larger in population, no one can sympathize with her loss of dividends based on serf labor at twenty-five to fifty cents a day. Seven million "white" Australiams cannot yell themselves into championship of democracy for seven hundred million Asiatics.

46-7-146

Therefore, Peoples of the World, we American Negroes appeal to you; our treatment in America is not merely an internal question of the United States. It is a basic problem of humanity; of democracy; of discrimination because of race and color; and as such it demands your attention and action. No nation is so great that the world can afford to let it continue to be deliberately unjust, cruel and unfair toward its own citizens.

This is our plea to the world; and to show its validity; we are presenting you with the proof. The National Association for the Advancement

of Colored People, with more than a half million members, has asked four scholars under my editorship to present chapters showing in detail the status of American Negroes in the past and today, in law, administration and social condition; and the relation of this situation to the Charter of the United Nations.

Milton R. Konvitz who writes Chapter one is a white American of Jewish descent. He is associate professor and director of research. School of Industrial and Labor Relations, Cornell University; he is a member of national legal committee, NAACP; and author of The Constitution and Civil Rights (Columbia University Press, 1946), and The Alien and the Asiatic in American Law (Cornell University Press, 1946).

The writer of the second chapter is an American Negro, Earl B. Dickerson of Chicago. Mr. Dickerson is a practising lawyer and formerly a member of the legislature of the state of Illinois.

The third chapter is by William R. Ming, Jr. of the federal Office of Price Administration and recently had been made a member of the institute of social and scientists and lawyers of the University of Chicago.

Rayford R. Logan the writer of the fourth chapter is a Harvard doctor of philosophy and history; 1st Lieutenant in World War I and now professor of history at Howard University. He has written Diplomatic Relations of the United States and Haiti. The Operation of the Mandate System in Africa; and The Negro in the Post-War World. He was editor and contributor to What the Negro Wants.

[1946?]

OUTLINE

Preliminary Analysis:

Subject: The Denial of Legal Rights of American Negroes from 1787 to 1914

It is apparent from the outline submitted by Dr. W. E. B. DuBois that Mr. Martin Konvitz will discuss in Part I the legal rights of American Negroes under the Constitution of the United States, the federal and State statues, and the court decisions. Part II is to be continuous and discuss the denial of these rights. Therefore, to the extent that it is logical, Part II should not discuss substantive legal rights of Negroes as such, but should be concerned with techniques used in the denial of basic legal rights to American Negroes.

Part II should conform to the following outline:

I. Techniques Utilized in the Denial of Legal Rights of American Negroes.

- A. State statutory enactments contravening constitutional guarantees
- B. Violation of legal rights of American Negroes by cooperative action of private individuals
- C. Mob Action and violance
- D. Compromise and qualification by Court decisions

II. The Critical Period: 1787 to 1865

- A. The American Constitution as the organic law
  - 1. The Free Negro as a "citizen"
  - 2. An Analysis of the Court decisions
  - 3. An analysis of the customs & mores condoning infringement of rights of American Negroes
- B. The Negro under State law
  - 1. State violation of the Constitution
  - 2. The "Black Codes"

III. Revolution, Reconstruction and Reaction: the period between 1865 and 1876

- A. Fundamental Changes in the Organic Law: the 13th, 14th, and 15th Amendments

46-7-190

B. The Supreme Court and the Amendments

1. The Slaughter-House Cases

2. The Civil Rights Cases

3. The Cruickshank Case

4. Other Supreme Court Cases

C. Reaction under the Slavery Amendments

IV. The Period of Retrenchment: 1876 to 1914

A. Enactment of State Civil Rights Laws

B. The Supreme Court decisions during the period

V. Summary and Conclusion

30-15c -59

~~IX.~~ THE DENIAL OF LEGAL RIGHTS OF AMERICAN NEGROES FROM 1787 to 1914

Chapter II

by

Earl B. Dickerson

In any community the positive law will define the legal rights of its citizens; but the enjoyment of these defined legal rights and the security they confer will depend entirely on the existing sanctions that prevent their violation by elements in the community because of race or color of the persons involved. It is a sad commentary on American constitutional jurisprudence that because of the absence of effective sanctions there exists a pitiable chasm between the doctrinal idealism of constitutional guarantees and the practical realization of constitutional protection. And in no phase of American life is this paradox more patently illustrated than in the status of American Negroes. Any discussion of the substantive legal rights of American Negroes would be fatuous indeed if it failed to consider the factors that have contributed to the insecurity of this large segment of the American population and the techniques that have been used to put the Negro outside the scope of full American citizenship.

There are in fact four principal methods used in depriving an American Negro citizen of the rights guaranteed him by the literal language of the organic law of the land.-- the American Constitution.

First, there are the statutory enactments that nullify constitutional guarantees. In this category will fall the state

and federal laws providing for racial segregation in public schools,(1) state laws providing for segregation in public conveyances,(2) and race discriminations in the exercise of the franchise.(3)

(1) Cummings v. County Board of Education, 175 U. S. 538, 20 S. Ct. 197 (1889); Gong Lum v. Rice, 275 U. S. 78, 48 S. Ct. 91 (1927); Gaines v. Canada, Registrar, etc., 305 U. S. 337, 59 S. Ct. 232 (1938); Note, 82 Univ. of Pa. Law Rev. 157 (1933). Berea College v. Kentucky, 211 U. S. 45, 29 S. Ct. 33 (1908).
State Enactments: Alabama School Code (1927) Secs. 124, 207; Arkansas Digest Stat. (Crawford & Moses, 1921) Sec. 8915; Delaware Revised Code (1915) Sec. 2296; Delaware Laws 1921, C. 160, Art. 2, Secs. 23, 34. See also Delaware Laws 1929, Chap. 222; Georgia Code Annotated (Mitchie, 1926) Secs. 1551 (8), 1551 (89), 1551 (118); Kentucky Stat. Annotated (Carroll, Supp. 1934) Sec. 4399-43; Mississippi Code Annotated (1930) Sec. 6586; Missouri Revised Stat. (1929) Sec. 9216; North Carolina Code Annotated (Mitchie, 1931) 5384; Oklahoma Comp. Stat. (1921) Secs. 10,567, 10, 574, South Carolina Code (1932) Sec. 5406; Tennessee Code (Will. Shan. & Harsh, 1932) Sec. 2377, Supp. (1932) Sec. 2393-9 (high schools); Texas Annotated Rev. Civ. Stat. (Vernon, 1925) Arts. 2719, 2900; Virginia Code Annotated (Mitchie, 1930) Sec. 680; West Virginia Code (1931) Chap. 18, Art. 5, Sec. 14.

Federal Enactments: District of Columbia Code (Supp. 1933) Title 7, Secs. 249, 252.

(2) L. N. O. & T. Ry Co. v. Mississippi, 133 U. S. 587, 10 S. Ct. 348 (1890); Plessy v. Ferguson, 163 U. S. 537, 16 S. Ct. 1138 (1896); Chesapeake & O. Ry. Co. v. Kentucky, 179 U. S. 388, 21 S. Ct. 101 (1900); Compare Chiles v. C. & O. Ry. Co. 218 U. S. 71, 30 S. Ct. 667 (1910) and Mitchell v. United States, 313 U. S. 80, 61 S. Ct. 873 (1941) See McCabe v. A. T. & S. F. R. Co. 235 U. S. 151, 35 S. Ct. 69 (1941).

(3) Williams v. Mississippi, 170 U. S. 213, 18 S. Ct. 583 (1898); But see Guinn v. United States, 238 U. S. 347, 35 S. Ct. 926 (1915); Myers v. Anderson, 238 U. S. 368, 35 S. Ct. 932; Lane v. Wilson, 307 U. S. 268, 59 S. Ct. 872 (1939). Compare Grovey v. Townsend, 295 U. S. 45, 55 S. Ct. 622 (1935).

30-15c-16

In this category also will fall the state laws prohibiting marriage between white and colored persons,(4) and the laws discriminating against Negroes in the selection of jurors.(5)

Second, there are the acts and conspiracies of private individuals which contravene legal rights of American Negro citizens. One example of this method is the restrictive race covenant among white property owners which prevents Negro citizens from acquiring adequate housing facilities;(6) another example is private action under color of law.(7) This method is commonly manifested also, in job discrimination against Negroes in certain industries,(8) and in the converse situation of enforced labor which result in the form of slavery known as peonage.(9)

Third, actual mob violence. A popular manifestation of this method is found in the peculiar American institution called "lynching".(10)

(8) Hodges v. United States, 204 U. S. 1, 27 S. Ct. 623 (1906); Steele v. L. & N. R. R. Co., 323 U.S. 192, 65 S. Ct. 226 (1944).

(9) Bailey v. Alabama, 219 U. S. 219, 31 S. Ct. 145 (1911); Clyatt v. United States, 197 U. S. 207, 25 S. Ct. 429 (1905); United States v. Reynolds, 235 U. S. 133, 35 S. Ct. 86 (1914).

(10) United States v. Shipp, 203 U. S. 563, 27 S. Ct. 165 (1906); Riggins v. United States, 199 U. S. 547, 26 S. Ct. 147 (1905).

Mob violence has also been used in a variety of instances as a means of preventing Negro citizens from exercising their rights under the law.(11)

Finally, there are the decisions of the state courts and of the Supreme Court of the United States which have restricted the rights of American Negroes under the state and federal constitutions.(12) The most notable of these are the decisions of the Supreme Court under the 13th, 14th and 15th Amendments.(13) To the extent that the utilization of one of these techniques has been successful, the legal rights of American Negroes have been proscribed and limited. And to the extent that the American courts have failed to see the elements of injustice in their decisions where the rights of colored citizens are involved, the step was taken in the creation of a second-rate citizenship in American society. It is to the cases presented to the American courts, therefore, that we must turn in order to understand properly the process through which the legal status of the American Negro has evolved.

First, a resort must be made to social and political history. During the period between 1787 and 1865 the Supreme Court decided very few cases concerned with the rights of American Negroes.(14)

(11) Ex parte Yarborough, 110 U. S. 651, 4 S. Ct. 152 (1884); United States v. Cruikshank, 92 U. S. 542, 23 L. Ed. 588 (1876).

(12) Draper v. Cambridge, 20 Ind. 268 (1863); Dred Scott v. Sanford, 19 How. 393, 15 L. Ed. 691 (1867).

(13) The Civil Rights Cases, 109 U. S. 3, 3 S. Ct. 18 (1883); United States v. Reese, 92 U. S. 214, 23 L. Ed. 563 (1876); United States v. Harris, 106 U. S. 629, 1 S. Ct. 601 (1883).

(14) Edward F. Waite, The Negro in the Supreme Court (1946) 30 Minn. Law Rev. 219.

30-152-14

During this same period, however, the state courts decided the bulk of the cases dealing with property rights in slaves, and the right to manumission of slaves based on the testamentary dispositions of their masters.(15) The state courts were also deciding numerous cases defining the legal rights of American Negroes under state law.(16) These cases reveal that during this span of nearly eighty years, the pattern of race discrimination was possible within the scope of the law and became a part of American thinking both politically and socially despite the obvious contradictions in the professed idealisms of the American way of life.

Perhaps it would be fair to say that the presence of the Negro on the American scene after the formation of the Union was an anomaly in an otherwise free society, and that questions concerning him would present legal problems that would be difficult to resolve. The enslavement of the Negro and the denial of full citizenship to a black man ran counter to all the concepts of equality and individual human worth that had found expression in documents written by Americans -- documents that had stirred the souls of men the world over. The Negro was a source of emotional conflict; to give him justice required more than legal reasoning in the cases presented to the courts. It required moral courage.

(15) See Helen T. Catterall, Judicial Cases Concerning American Slavery and the Negro. Washington, D. C: Carnegie Institute of Washington (1937) 5 Vols.

(16) See Charles S. Mangum, Jr., The Legal Status of the Negro. Chapel Hill: The University of North Carolina Press (1940).

30-15c-57

It should be remembered that the slavery question was carefully considered in the Convention at Philadelphia in 1787. When the Constitution went into effect in 1789 it contained provisions that clearly show concessions made to the slave-holding interests. For instance, the importation of slaves was allowed to continue until 1808;(17) three-fifths of the slaves were to be counted in determining the apportionment of representatives and direct taxes(18) -- this, even though in the same states that profited from these concessions the slave , of course, was not a citizen.

Nowhere in the express provisions of the Constitution is there to be found any distinction between a white citizen and a Negro citizen. And it should be recalled here that there were white citizens and Negro citizens at the time the Constitution was debated and adopted. Citizenship within the meaning of that instrument depended on state citizenship.(19) As a matter of logic, it cannot be denied that if a Negro was not a citizen of a state, he was not a citizen under the Constitution of the United States.(20) But does it follow that he had no rights under the Constitution? This question can be answered only by an examination of basic constitutional doctrines, and an appraisal of the status of the Negro as a freeman at the time the American union was formed together with his status as a slave.

(17) Article I, Sec. 9, Constitution of the United States.

(18) Article I, Sec. 2, Ibid.

(19) Article IV, Sec. 2, Ibid.

(20) It should be admitted that there is a wide area of dispute on this question. But for the views taken here, this conclusion is acceptable.

Although all the incidents of slavery under the Roman Law were not followed in America, our system of forced servitude rather resembled that of the Romans than the villienage of the ancient common law.(21) In fact, it has been said that slavery never existed by the common law of England.(22) The slave while in servitude possessed no civil rights. He was an item of property; he was not a person in the juridical sense. But the status of the free Negro differed. He could vote in nine of the thirteen original states.(23) He could own property.(24) He bore arms.(25) And he paid taxes.(26) Even in the deep South the free Negro could own and alienate property. And in none of the state constitutions in force at the time the United States Constitution was adopted was there any express provision denying citizenship to a free Negro.(27)

Now applying these elementary historical facts to the question, should there be any doubt that the American Negro possessed rights that were protected by the Constitution? For instance, would ~~not~~ the Fifth Amendment have protected a Negro and his property from deprivation without due process of law? Could ~~not~~ the federal government deprive

the free Negro of his freedom? These questions can be answered affirmatively only by a warping of language, law and history. Undoubtedly, the American Negro possessed validly enforceable rights under the Constitution before the adoption of the thirteenth, fourteenth, and fifteenth amendments.

Yet, he progressively became an outcast. During the first four decades of the 19th Century -- at a time when the struggle for human freedom was advancing the world over -- the American Negro was being enslaved by the law of his own state. By 1834 the free Negro was specifically excluded from citizenship in every state in the South. The free colored man became a paradox. While he was not slave because he was free, he was not a citizen because he was black.

It is in this turmoil of ideological conflict that the Dred Scott Case came into prominence. And it is not an exaggeration to say that never in the history of the Supreme Court has it had before it a case more pregnant with moral issues permeating the very soul of American life. Potentially, the case touched the vital core of American political and social history. It is not surprising, therefore, that the decision in Dred Scott v. Sanford,(28) served to flame the emotional state of public opinion to a point that later broke into a civil war.

This decision is worthy of detailed treatment because it has been said that the majority opinion stated the law as it existed. It is more accurate to say that the decision summarized the American mentality toward the Negro with all its basic immorality, with all its disregard of human values.

Dred Scott, the slave of an army surgeon, a Dr. Emerson, had been taken by his master into Illinois and thence into the Louisiana Territory

(28) (1856) 19 Howard 393.

30-15c-55

(now Minnesota), which under the Northwest Territory Ordinance of 1787 and under the Missouri Compromise Act of 1820 was free territory. Later, his master took him back into the slave state of Missouri. In the autumn of 1846, after the death of Dr. Emerson, Scott began suit against the widow of his former master alleging that the trip into Illinois and the Louisiana Territory made him a freeman. In 1850 he obtained a verdict which was appealed to the State Supreme Court where it was held that under the laws of Missouri he resumed his character of slave on his return irrespective of his status while out of the state. Then, in November 1853 a group of anti-slavery lawyers began a suit in his behalf in the federal court alleging that Sanford, the then owner of Scott to whom a fictitious sale had been arranged in order that diversity of citizenship could give the federal court jurisdiction, had committed an assault on Scott, his wife, and his two minor daughters. Sanford entered a plea to the jurisdiction of the court on the ground that Scott was a Negro, a former slave, and hence not a citizen with the right to bring a suit in the courts of the United States. This plea was found bad on demurrer, and after an agreed statement of facts was submitted, judgment was entered for the defendant. Scott then sued out a writ of error to the Supreme Court. The record presented three questions for determination: first, whether a free black man was a citizen of the United States so as to be competent to sue in the Courts of the United States; second, whether a slave carried voluntarily by his master into a free state and returning voluntarily with his master to his home was a free man by virtue of such temporary residence; and third, whether the eighth Section of the Missouri Act of 1820, prohibiting slavery north of latitude 36' 30", was constitutional.

Although the facts presented some intricate and interesting questions on the conflicts of laws, as well as questions of procedure, the case attracted nationwide attention as a cause celebre between the slave-owning interests and the abolitionists. The decision, though due in the fall of 1856, was postponed until the end of the presidential campaign of that year. In the meantime, the slavery question gathered greater emotional fervor while nine judges, five of them slave-owners, debated the question whether Scott's journey from the slave state of Missouri to the free territory of Louisiana legally worked a transmutation from servitude to liberty.

No one with full appreciation for the weaknesses of human nature could have failed to predict the decision. When the decision was finally rendered it surpassed the worst fears of the anti-slavery elements in the country. The court, speaking through Chief Justice Taney held that Scott had no right to bring an action in the courts of the United States because he was not a citizen. When the federal constitution was adopted Negroes were considered inferior and not fit to associate with members of the white race in any political relationship, and as a narrated historical fact, the "negro has no rights which the white man was bound to respect ..." (29) The court went on to hold that the Missouri Compromise Act of 1820 was unconstitutional since Congress was without power to prohibit slavery in the territories acquired after the adoption of the Constitution.

(29) See 3 Warren, The Supreme Court in United States History, pp. 1-41

Aside from its historical importance which has not been adequately evaluated, the decision in the Dred Scott Case revealed an underlying lack of morality on the part of the highest judges in the land and cast a stigma on the entire American judiciary. It was a resort to specious and erroneous argument in support of slavery and its incidents. Significantly, it can be pointed out that the decision, though never overruled, has never been cited as an authoritative precedent for any substantive point of law.(30)

After the Dred Scott decision the Supreme Court had two occasions to pass on the "Negro question" before the adoption of the Fourteenth Amendment. These were Ableman v. Booth(31) and Ex parte Kentucky v. Dennison.(32)

In the Booth Case there was a conviction under the Fugitive Slave Law, and the Wisconsin Supreme Court ordered the release of Booth on habeas corpus on the ground that the federal act was unconstitutional. A writ of error was issued by the Supreme Court of the United States and later followed by an opinion holding that the statute was constitutional in all its provisions.(33) The Dennison Case was concerned with a Kentucky statute which made it a crime to assist a slave to escape. One Lago was indicted for assisting a slave to escape from Kentucky. He sought refuge in Ohio, and on

(33) See 3 Warren, op. Cit. pp. 42-79

demand from the state of Kentucky that he be surrendered for trial, the governor of Ohio refused extradition. Kentucky applied to the Supreme Court for a writ of mandamus to force the governor of Ohio to turn the defendant over to prosecution authorities on the theory that the Constitution made it a duty of the governor of Ohio to comply with the demand. Again speaking by Chief Justice Taney, the Supreme Court recognized the duty but held that it was a moral one which could not be enforced by mandamus.

30-15c-53

In the meantime, the American Negro was going before the state courts for justice under state law. He was getting decisions which in some cases were humorous and in others poignantly cruel. Yet they reflect the legal status of the American Negro.

Surprisingly enough, the state courts were early called upon to decide what constituted this biologically legal enigma called "the Negro". In South Carolina a court held that the word "Negro" had the fixed meaning of the word "slave".(34) By sombre legal decisions in the southern states, a Negro was presumed to be a slave; he had the burden of rebutting this presumption.(35) The suffering that this harsh rule of law imposed on industrious Negroes who had purchased their freedom has been the subject of many soul-stirring American slavery novels. But the quandaries of the judicial process became evident when a case was presented in which the person involved did not look like a Negro. In such a case, the court said, there was no basis for the presumption.(36)

(34) Ex parte Leland, 1 Nott. & McCord 460 (S. C. 1819).

(35) Daniel v. Guy, 19 Ark. 121 (1857)

(36 See Ibid.

In the effort to categorize the various shades of pigmentation to which the Negro is heir, the courts have been forced to solve some rather difficult problems involving the color of human beings. In 1859 a case arose in Ohio under the separate school law of 1853. In that statute the words "white" and "colored" were used in providing separate schools for white and Negro children. The question for the court was whether these words had their popular meaning. The court thought that the words were used in their popular sense, and held that where the children were three-eighths Negro and five eighths white, but distinctly colored in appearance, they were to be regarded as colored children and not eligible to be admitted to a school for whites.(37)

As far north as the state of Maine, the courts were concerned with the construction of anti-miscegenation statutes -- laws which have been condemned as legally condoning concubinage and bastardy.(38) In Bailey v. Fiske,(39) the court had before it the question whether a person who was approximately one-sixteenth African was a Negro within the meaning of a statute which prohibited intermarriage of whites and Negroes. It was held that the person involved was not a Negro.

One case decided by the Supreme Judicial Court of Massachusetts in 1810 shows that judges will pay due respect to the admixture of Negro and white persons. The case was Inhabitants of Medway v. Inhabitants of Natick,(40) where the question was whether a person

(37) Van Camp v. Bd. of Education, 9 Ohio St. 406 (1859)

(40) (1810) 7 Mass. 88

who was the child of white and mulatto parents was a Negro within the terms of a pre-Civil War statute that prohibited the marriage of white persons with Negroes or mulattoes. Clearly, by ordinary definitions such a person was not a mulatto. But was he a Negro ? The court held that the statute did not prohibit the marriage.

30-15c-52

And as far south as Louisiana, South Carolina, and Mississippi the court paid judicial notice to the stigma of being black by adopting the rule of law that to call a white man a Negro was actionable slander per se.(41) That seems to be the prevailing law today.(42)

In his efforts to obtain equal facilities for the education of his children, the Negro met with the unique American rationalization that educational facilities can be separate but equal. In Massachusetts where a Negro could vote, and where he had to pay taxes to support the government, it was held in 1849 that though public schools must be maintained and made accessible to all colored children, the fact that they had to travel a greater distance to reach their school than did white children similarly situated was immaterial, providing the distance was not unreasonably longer !(43) In the southern states, and in the nation's capitol, the District of Columbia, separate schools for Negro and white children were provided for by statute.(44) These statutes have been

(41) Dobard v. Nunez, 6 La. Ann. 294 (1851); Scott v. Peebles, 2 Sm. & M. 546 (Miss. 1844); Eden v. Legare, 1 Bay 171 (S. C. 1791)

(42) See comparatively recent cases allowing recovery in Mangum, op. cit., pp. 18-25.

(43) Roberts v. City of Boston, 59 Mass. 198 (1849)

(44) See Mangum, op. cit., pp. 79-137

held not to violate the due process clause of either the Fifth or Fourteenth Amendments.(45)

Of course it is not possible to present here an exhaustive treatment of the cases, but these few instances show the atmosphere in which the Negro has had to struggle for equality before the law. It is apparent that within the political and legal structure of American life it was possible to deny him that equality throughout the period from 1787 to 1865. And this denial was possible despite his rights under the organic laws of the land. Now turning to the period after the Civil War when the American Negro was made a citizen by constitutional amendment, it will be found that by a narrow construction of federal power he has been deprived of full participation in the democracy to which he was supposedly elevated. For a proper understanding of the factors that contributed to this result, the decisions of the Supreme Court must be analysed in the context of historical events between 1865 and 1883.

After the Emancipation Proclamation went into effect on January 1, 1863, there followed an intensified period of congressional activity to eradicate slavery and its incidents. First was the adoption and ratification of the Thirteenth Amendment on December 18, 1865; and later, the Fourteenth Amendment on July 28, 1868, and the Fifteenth Amendment on March 30, 1870. Second was the enactment of the Civil Rights Enforcement Act of May 31, 1870 and the Civil Rights Act of March 1, 1875. In substance, the effect of these amendments and these statutes was to eradicate slavery and protect the newly emancipated slaves in the exercise of their rights of citizenship. It is almost impossible to conceive that it was not also intended to protect the emancipated slave from all encroachment upon his rights. Yet the Supreme Court soon decided that there was a limit on the power of the federal government to protect the citizenship it created.

(45) Ibid.

At the outset it should be admitted that this narrow construction of federal power emanates as a doctrine from the Slaughter House Cases (46) long before the question of Negro rights under the war amendments came to the Supreme Court. Briefly stated, the cases stand for the principle that there are privileges and immunities of a citizen of the United States as distinguished from a citizen of a state. Where the rights involved are state rights, the federal government has no legislative or judicial power to intervene and protect those rights.

30-15c-50

As a constitutional law concept, the decision in the Slaughter House Cases is undoubtedly a landmark in Supreme Court History. But there is a legitimate question whether the doctrine has not been misapplied where the rights involved are created by federal law; for instance, citizenship created by constitutional amendment. Despite this broad ground of questionable application, the doctrine has played a decisive part in cases that have limited the sphere of legal protection of the American Negro. The following chronological summary of the Supreme Court decisions on the legal rights of American Negroes under the war amendments dramatically illustrates the various ways in which the rights of American Negroes were assaulted in the attempt to limit them to a second class citizenship. And that these assaults were successful cannot be denied.

October Term, 1875

(1) U. S. v. Cruikshank, 92 U. S. 542.
Cruikshank and several other white men broke up by violent means a Negro political meeting in Louisiana. They were arrested under section six of the Enforcement Act of May 30, 1870, tried and convicted in the Circuit Court of the United States for the District of Louisiana. On appeal to the Supreme Court they were acquitted on the ground that the Fourteenth Amendment did not justify such legislation by Congress. The citizen must not look to the Federal Government for protection against the invasion of his rights by the private acts of others. Decision against Federal intervention.

October Term, 1879

(2) Strauder v. West Virginia, 100 U. S. 303.
Strauder, a Negro, was indicted, tried, and convicted for

(46) (1873) 16 Wall. 36

30-15c-49

the crime of murder in a State court. All Negroes were excluded from the grand and petit juries by West Virginia Statutes of 1872-1873. The defendant contended that this was in conflict with U.S. Revised Statutes, Section 1977. This section embodied portions of the Enforcement Act of 1870 and the Civil Rights Act of 1875. Upon proceedings in the United States Supreme Court the State court was reversed and the West Virginia Act of 1872-1873 declared unconstitutional. Field and Clifford,JJ., dissented. Decision in favor of Federal intervention.

(3) Virginia v. Rives, 100 U. S. 313.
Two Negro men were indicted for the murder of a white man and tried in a State court before a jury composed only of white men. Defendants moved for a modification of the venire so as to allow one-third of the same to be composed of Negroes. This motion was denied. Defendants then petitioned for a removal to the United States Circuit Court under the Civil Rights Act of 1875. This petition was also denied. Thereupon they were tried and convicted. A petition in the United States Circuit Court for the writ of habeas corpus was allowed and the case docketed therein. The Commonwealth of Virginia then petitioned the Supreme Court of the United States for a writ of mandamus to compel the return of the prisoners to the custody of the State. The petition was granted on the ground that the defendants could not as a matter of right demand a mixed jury, the court declaring that the Fourteenth Amendment is not violated if, when the jury is all white, it cannot be shown that Negroes were excluded solely on the ground of race or color. Decision against Federal intervention.

(4) Ex parte Virginia, 100 U. S. 339
J. D. Coles, Esq., Judge of the County Court of Pittsylvania County, Virginia, was arrested by Federal indictment in the District Court of the United States for the Western District of Virginia for failing to select Negroes as grand and petit jurors to serve in the county courts of the above-mentioned county. This arrest was made under section four of the Civil Rights Act of 1875. Petitions to the Supreme Court of the United States for the writ of habeas corpus were filed by both Coles and the Commonwealth of Virginia. These petitions were denied and the cause remanded to the District Court for trial.

Field and Clifford, JJ., dissented. The merits of the case, that is as to whether Judge Coles was guilty of discrimination against Negroes in the selection of jurymen, solely on the ground of race or color, were not involved in these proceedings. The decision went only so far as to declare section four of the Civil Rights Act of 1875 constitutional. Decision in favor of Federal intervention.

30-15c -48

October Term, 1880

(5) Neal v. Delaware, 103 U. S. 370 .
The defendant, a Negro, was indicted and arraigned for trial in a Delaware State court for the crime of rape upon a white woman. The Delaware Constitution of 1831, section one, article four, and the Delaware Revised Statutes of 1853, section 109, thereunder enacted, limited the selection of grand and petit jurors to the white race. On the ground of this discrimination the defendant moved to quash the indictment. This motion was denied. The defendant was thereupon tried and convicted and sentenced to be hanged. Upon a writ of error to the Delaware court the United States Supreme Court declared the law under which the juries had been drawn for the trial of the case, to be in violation of the Fourteenth Amendment and ordered the release of the prisoner. Waite, C.J. and Field, J., dissented. Decision in favor of Federal intervention.

October Term, 1882

(6) Pace v. Alabama, 106 U. S. 583.
The defendant was tried and convicted in a State court of Alabama under Section 4189 of the Code of Alabama, which provided for a severer punishment in cases of fornication and adultery between Negroes and whites than between members of the same race. Upon writ of error, the United States Supreme Court declared that this was not a denial of equal protection of the laws under the Fourteenth Amendment. Decision against Federal intervention.

(7) Bush v. Kentucky, 107 U. S. 110
The defendant, a Negro, was indicted for murder and arraigned for trial under II Revised Statutes of Kentucky of 1852, p. 75, which excluded Negroes from all jury service. A motion to set aside the panel of petit jurors on the ground of discrimination was overruled. Petitions for removal to the United States Circuit Court was also denied. The defendant was thereupon tried, convicted, and sentenced to death. Upon writ of error, the United States Supreme Court declared the indictment void, as the law under which was found violated the equal protection clause of the Fourteenth Amendment. Field, J., Waite, C.J., and Gray, J., dissented. Decision in favor of Federal intervention.

October Term, 1883

(8) The Civil Rights Cases, 109 U. S. 3.
These were five separate causes of action, each involving the same Federal question, namely, the constitutionality of sections one and two of the Civil Rights Act of 1875. They were thus treated as one case by the United States Supreme Court. The facts may be briefly summarized as follows:

30-15c-47

i. The denial of hotel accommodations to certain Negroes in the State of Kansas.
ii. The denial of hotel accommodations to a Negro in the State of Missouri.
iii. The denial to a Negro of a seat in the dress circle of Maquire's Theatre in San Francisco.
iv. The denial to a person (presumably a Negro) the "full enjoyment" of the accommodations of the Grand Opera House in New York City.
v. The refusal by a conductor on a passenger train to allow a Negro woman to travel in the "ladies' car" on a train of the Memphis and Charleston Railroad Company.

These acts of discrimination by private persons were severally set up as violations of sections one and two of the Civil Rights Act, which, by its terms, protected the Negro from the invasion of his newly given rights by the acts of private individuals as well as by action of the States. The primary question in the case was the constitutionality of this act of Congress. A further interpretation of the Thirteenth Amendment was also involved. In making the decision the court but elaborated the doctrine foreshadowed in the Slaughter House Cases, supra, and formulated in United States v. Cruikshank, supra, and in Virginia v. Rives, supra, that Congress had no power under the Fourteenth Amendment to initiate direct and affirmative legislation and thus invade and destroy the police power of the States. It could only enact general laws which would regulate the enforcement of the prohibitions contained in the Amendment when they were violated by the States. It is powerless to establish a Federal Code regulating or controlling the acts of private persons in the States. Harlan, J., dissented. Decision against Federal intervention.

October Term, 1889

(9) Beatty v. Benton, 135 U. S. 244.

In 1854 a Negro named Carrie transferred by deed a lot in Augusta , Georgia, to a white man. Under a statute of 1818-1819, Negroes could not hold real property in Georgia. Litigation over this property began in 1879 in the State courts, the outcome of which was the declaration that the deed of Carrie was void by virtue of said antebellum statute. The aggrieved party attempted to set up the Federal question that this was in contravention of the equal protection clause of the Fourteenth Amendment. Upon writ of error the United States Supreme Court decided that no Federal question was presented, and dismissed the writ. Decision against Federal intervention.

October Term, 1894

(10) Andrews v. Swartz, 156 U. S. 272.
Anderson, a Negro, was indicted, tried, and convicted in a New Jersey State court for murder, and sentenced to death. He then petitioned the United States Circuit Court for a writ of habeas corpus on the ground that Negroes had been excluded from the grand and petit juries which dealt with his case. The Circuit Court denied the petition. On appeal the Supreme Court declared that the petitioner had used the wrong method of procedure, since the regular trial of a State court cannot be reviewed by habeas corpus proceedings. Decision against Federal intervention.

October Term, 1895

(11) Gibson v. Mississippi, 162 U. S. 565.
The defendant, a Negro, was indicted for murder and arraigned in a State court. He petitioned for the removal of the cause to the Federal Court on the ground that Negroes were excluded from the grand and petit juries. The petition was denied and the defendant forthwith tried and convicted. The ruling of the State court was upheld by the United States Supreme Court on writ of error. No proof was offered of discrimination against Negroes "solely on the ground of race or color." Decision against Federal intervention.

(12) Charley Smith v. Mississippi, 162 U. S. 592.
The defendant, a Negro, was indicted for murder and arraigned in a State court for trial. He moved to quash the indictment on the ground that Negroes were excluded from the grand and petit juries. No proof of discrimination was offered. The motion was overruled and the defendant tried and convicted. Upon writ of error the United States Supreme Court affirmed the decision. Decision against Federal intervention.

(13) Murray v. Louisiana, 163 U. S. 101.
The defendant, a Negro, was indicted, tried, and convicted of murder by white juries. The same procedure was had as in the foregoing case. Decision against Federal intervention.

(14) Plessy v. Ferguson, 163 U. S. 537.
Plessy, a person of African descent, was arrested, tried, and convicted in the Criminal District Court for the Parish of New Orleans for violating the Louisiana Statute of 1890 (No. 111, p. 152), which provided that Negroes and white persons should travel in separate compartments on the passenger trains in that State. Upon proceedings had in the United States Supreme Court by way of prohibition and certiorari to test the constitutionality of said statute, it was held to be a valid exercise of the police power of the State, and therefore not in violation of the equal protection clause of the Fourteenth Amendment, Harlan, J., dissented. Decision against Federal intervention.

October Term, 1897

(15) Williams v. Mississippi, 170 U. S. 213.
The defendant, a Negro, was indicted for the crime of murder, and arraigned before juries composed entirely of white men. A motion to quash the indictment on the ground of race discrimination was overruled. A petition for removal to the United States Circuit Court for the same alleged reason was denied. No proof of such discrimination was offered. The defendant was therupon tried, convicted, and sentenced to death. Upon writ of error the United States Supreme Court affirmed the decision. Decision against Federal intervention.

October Term, 1899

(16) Cummings v. Board of Education, 175 U. S. 528.
The Ware High School of Richmond County, Georgia, a public institution for Negroes only, was suspended "for economic reasons", while the high shcool for whites in the same county was continued in operation. Cummings, a Negro taxpayer, complained of discrimination against the Negroes as being in violation of the "priviliges and immunities" and the "equal protection" clauses of the Fourteenth Amendment. The trial did not show any abuse of discretion allowed by law to the county Board of Education. The constitutionality of all laws providing separate accommodations for whites and blacks in the public schools of the States was attacked in the argument of counsel, but the question was not presented in the record. Upon writ of error the United States Supreme Court affirmed the decision of the Supreme Court of Georgia upholding the action of the county Board of Education. Decision against Federal intervention.

(17) Carter v. Texas, 177 U. S. 442.
The defendant, a Negro, was indicted and arraigned in a State court for trial for the crime of murder. He moved to quash the indictment of the ground that Negroes were excluded from the grand jury on account of their race or color. He offered to introduce proof in support of this motion. The court refused to allow the introduction of proof and overruled the motion. The defendant was forthwith tried and convicted. Upon writ of error the United States Supreme Court reversed the decision of the State Court and remanded the case on the ground that the trial court erred in refusing to receive proof in support of said motion. Decision in favor of Federal intervention.

October Term, 1902

(18) Tarrance v. Florida, 188 U. S. 519
The defendant, a Negro, was indicted and arraigned for trial for the crime of murder. The juries were composed entirely of white men. He moved to quash the indictment on the ground of racial discrimination. No proof was

30-15c-4/4

offered in support of the motion. He was forthwith tried and convicted. Upon writ of error the United States Supreme Court affirmed the decision of the State court. Decision against Federal intervention.

(19) Brownfield v. South Carolina, 189 U. S. 426.
The defendant, a Negro, was indicted for the crime of murder before a grand jury composed entirely of white men. He moved to quash the indictment because of alleged exclusion of Negroes therefrom on account of their race or color. The motion further set up that the Negroes constituted four-fifths of the population of the county. No proof of discrimination was offered. The defendant was tried and convicted and the proceedings of the State court were affirmed, upon writ of error, by the United States Supreme Court. Decision against Federal intervention.

(20) Giles v. Harris, 189, U. S. 475.
Giles, a Negro, instituted proceedings to test the constitutionality of the suffrage clauses of the Constitution of Alabama of 1901. The interpretation of the Fifteenth Amendment was the paramount issue, although the "equal protection" clause of the Fourteenth Amendment was involved. An adverse decision was given in the State courts. The defendant prosecuted a writ of error to the Supreme Court of Alabama, which was dismissed for want of jurisdiction by the United States Supreme Court. The record did not present a Federal question. Brewer, Brown, and Harlan, JJ., dissented. Decision against Federal intervention.

October Term, 1903

(21) Rogers v. Alabama, 192 U.S. 226
The defendant, a Negro, was indicted and arraigned for the crime of murder. The juries were composed entirely of white men. He moved to quash t he indictment on the ground that Negroes were excluded from the juries on account of their race or color. The motion was stricken from the files for prolixity and the defendant tried and convicted. Upon writ of error the United States Supreme Court decided that the motion was relevant, properly presented a Federal question, and though perhaps including some superfluous matter, should not have been stricken from the files on the ground of local practice. Proof should have been allowed to have been introduced under the motion. The State court was reversed and the cause remanded. Decision in favor of Federal intervention.

(22) Giles v. Teasley, 193 U. S. 146
This was a second attempt by Giles, a Negro, to test the constitutionality of the suffrage clauses of the Constitution of Alabama of 1901. The Fifteenth Amendment, as before, was predominantly involved, the Fourteenth being of only secondary importance. The case was decided adversely in the State Courts. Upon writ of error the United States Supreme Court dismissed the proceedings on the ground that the record did not present a Federal question. The pleadings of the plaintiff were inconsistent, one allegation neutralizing the other. Harlan, J., dissented. Decision against Federal intervention.

October Term, 1905

(23) Martin v. Texas, 200 U. S. 316
The defendant, a Negro, was indicted for the crime of murder and arraigned for trial. He moved to quash the indictment on the ground that all Negroes had been excluded from the grand and petit juries because of race or color. No proof of discrimination was offered. The motion was overruled and the defendant tried, convicted, and sentenced to death. The United States Supreme Court, upon writ of error, reiterated its former opinions that the defendant could not, as a matter of right, demand a mixed jury. Decision against Federal intervention.

October Term, 1906

(24) Hodges v. United States, 203, U. S. 81
Hodges and several other white men were indicted by a grand jury in the District Court of the United States for the Eastern District of Arkansas on the charge of threatening and intimidating eight Negro laborers in a certain lumber yard. The indictment was found under U. S. Revised Statutes Sections 1977-1999, 5508 and 5510, which embodied portions of the Civil Rights Act of 1866, the Enforcement Act of 1870, the Ku Klux Act of 1871, and the Civil Rights Act of 1875. The interpretation of all three of the War Amendments was involved, the Thirteenth being predominant. The defendants demurred to the indictment as presenting no Federal question. This was overruled and the defendants forthwith tried and convicted. Upon writ of error the Supreme Court reversed the District Court and remanded the cause with instructions to sustain the demurrer. The alleged offence having been committed by private persons was not within the jurisdiction of a Federal Court. Harlan and Day, JJ., dissented. Decision against Federal intervention.

October Term, 1908.

(25) Berea College v. Kentucky, 211 U. S. 45
Berea College, a Kentucky corporation, was indicted under section one of the Acts of Kentucky of 1904, Chap. 85, which provided that no person or corporation should operate

30-15c-42

any school or college in which persons of the white and the Negro races were both received as pupils. The facts were undisputed, Berea College being such a mixed school. The only point in the case was the constitutionality of the above-mentioned law under the Fourteenth Amendment. The trial in the State court resulted in a conviction and fine. Upon being brought to the United States Supreme Court by writ of error, the case turned upon the point that the defendant was a corporation and not a person, and hence being a creature of the State was subject to its control in this particular. The question as to the power of the State to enforce the separation of the races in schools per se was not decided. Only that portion of the Act which referred to the restrictions on corporations was declared unconstitutional. The Supreme Court -- like other forces -- follows the line of least resistance. If a case be disposed of on a lesser point, the greater will not be decided. One cannot but doubt the logic and ultimate justice of such a rule. Harlan, J., dissented. Decision against Federal intervention.

(26) Thomas v. Texas, 212 U. S. 278.
The defendant, a Negro, was indicted and arraigned on the charge of murder. He moved to quash the indictment on the ground that all Negroes had been excluded from the grand and petit juries. No proof of discrimination was offered. The motion was overruled and the defendant tried, convicted, and sentenced to death. Upon writ of error the United States Supreme Court affirmed the decision of the State Court on the ground aforementioned that discrimination will not be presumed. Decision against Federal intervention.

October Term, 1909

(27) Marbles v. Creecy, 215 U. S. 63.
A requisition was issued by the Governor of Mississippi to the Governor of Missouri for the return of Marbles, a Negro, who was charged with the crime of assault with intent to murder. He had fled to the State of Missouri. Upon being arrested in the latter State, by virtue of said requisition, he petitioned for a writ of habeas corpus in the United States Circuit Court, setting up the alleged fact that it was not possible that he could receive a fair trial should he be returned to the State of Mississippi, on account of his race or color. No proof was offered that such a state of affairs would come to pass. The petition was denied by the Circuit Court. Upon appeal to the United States Supreme Court the decision was affirmed and the prisoner ordered to be surrendered. Decision against Federal intervention.

30-156-36

(28) Franklin v. South Carolina, 218 U. S. 161.
Pink Franklin, a Negro, shot and killed one Valentine, a constable, who was attempting to arrest him for the violation of a certain South Carolina statute. He was indicted for murder, tried, convicted, and sentenced to death. No Negroes were on the juries. At the trial a motion was made to quash the indictment on this ground. No statement of race discrimination was made and no proof of such discrimination offered. Upon writ of error the Supreme Court of the United States affirmed the judgment of the State Court. Decision against Federal intervention.(47)

October Term, 1909

(29) Chiles v. C. & O. Ry. Co., 218 U. S. 71, 30 S.Ct. 677 (1910)
The plaintiff in error, a Negro, had a first-class ticket from Washington, D. C. to Lexington, Kentucky. He changed cars at Ashland, Kentucky, and there went into a car reserved for white persons exclusively. Pursuant to a regulation of the railway company he was required to remove into a compartment in another car set apart for colored passengers. This he did under protest, only when a policeman had been summoned to eject him. He sued for damages, basing his claims on his rights as an interstate passenger. It was held that in the absence of Congressional legislation the carrier could make reasonable regulations for the conduct of its business. As to what was "reasonable" it was said that this "cannot depend upon a passenger being state or interstate". Decision against Federal intervention.

October Term, 1913

(30) Butts v. Merchants and Miners Transportation Co., 230 U. S. 126, 33 S. Ct. 964 (1913)

A Negro woman, holding a first class ticket on a coastwise vessel from Boston to Norfolk and return, sued under Sections 1 and 2 of the Civil Rights Act of 1875. She asked for damages, alleging deprivation, on account of color, of the privileges accorded other first class passengers who were white. The unanimous court recognized the Civil Rights Cases, supra, as authoritatively declaring the applicable law, on the ground that the terms of the Act in question, it being a criminal statute, were not separable. The act is invalid in this instance as well as when applied in the states. Decision against federal intervention.

(31) McCabe v. A. T. & S. F. R. Co., 235 U. S. 151, 35 S. Ct. 69. (19
Petition for injunctive relief by five Negroes who brought suit in behalf of other Negroes in Oklahoma alleging that under a state statute public carriers were authorized to provide separate cars for whites with diners and sleepers and none for Negro passengers. Relief was denied on the grounds that the petition did not state a cause for relief since the petitioners did not allege that they had ever travelled on the trains in question. Decision against Federal intervention.

(47) Extracted from: Charles Wallace Collins, The Fourteenth Amendment and the States, Boston: Little Brown & Company, (1912) pp. 48-62.

OCTOBER TERM, 1915

(32) Guinn v. United States, 238 U. S. 347, 35 S. Ct. 926 (1915) A 1910 amendment to the Oklahoma constitution exempted from a literacy test for voters every person "who was, on January 1st 1866, or at any time prior thereto, entitled to vote under any form of government", or was a "lineal descendant of such person". It was apparent that the purpose of the constitutional amendment was to prevent Negroes who were disfranchised in 1866 from voting since they could not qualify to the exception. The Supreme Court brushed aside the device as contrary to the 15th Amendment. Decision in favor of Federal intervention.

30-15c-37

Admittedly, it would not be intellectually fair to criticize these decisions without recognizing that the American Union comprises a dual form of government. The sovereignity of the states and the ideal of untrammelled local government are to be appreciated. But the conclusion is inescapable that in these cases the Supreme Court has shown a complete lack of realism and failed to grasp the practical fact that the civil rights of Negroes stem from citizenship created by federal law. The dictum of Mr. Justice Bradley in The Civil Rights Cases, supra, that race discrimination is not an incident of slavery is just as realistic as a statement to a slave that his chains are not incidents of his servitude. And to tell a Negro who has suffered from mob violence because of state inaction that he must look to the state for protection sounds very much like telling a woman who has been seduced that her future protection lies in the hands of her seducer! Such, in substance, has been the realism of Supreme Court decisions defining the rights of American Negroes. Justice to the Negro has really been sacrificed to the political theory of states rights.

As a result, by 1914 the eve of the First World War, the legal status of the American Negro had degenerated to the pattern that existed before the Civil War. In the states where before 1863 he had been considered an item of property, he was denied equal protection of the laws; in those states where he had met some semblance of fairness, an effort was made to guarantee his rights by express enactments.

For instance, in eighteen of the northern and western states civil rights acts were adopted after 1884 to protect Negro citizens from discrimination.(48)

(48) Mangum, op. cit. pp. 34-77.

These laws have suffered the vicissitudes of judicial interpretation, as would be expected of any statute. Their effectiveness is in fact a reflection on the race attitudes in the states rather than on the sense of justice in the courts. On the other hand, it is significant that in the southern states where the legal rights of Negroes have met greater abuse, no civil rights statutes have ever been adopted.(49)

30-15c-38

This fact portrays the fallacy inherent in the argument that the legal rights of American Negroes can be entrusted to the states. It is almost idiotic to expect that states where the citizenship of Negroes had to be established by force would later honor that citizenship by law. As a complement to the doctrine that the federal government could not protect civil rights in the states, the Supreme Court developed the doctrine that private action condoned by state inaction was not within the scope of the Fourteenth Amendment. It was in this peculiar quagmire of incapacity and inaction that the American Negro found himself in his search for justice within the framework of American law.

Chapter I

THE NEGRO IN AMERICAN LAW

By Milton R. Konvitz

30-15d-10

This chapter will not deal with the inequalities that exist despite the law. It will be concerned with the inequalities that exist because of the law; the inequalities that are legal, that are sanctioned by the United States Supreme Court and by the laws of legislatures. We shall also consider to what extent inequalities have been declared against the law.

I. The Negro and the Supreme Court

1. The Negro's right to live where he pleases.

There are many municipalities where a Negro cannot buy land; there are large sections in nearly every city and town where he cannot buy or rent a house or shop. Have owners the legal right to refuse to sell or rent property to a Negro solely because of his color or race?

Although in the case of Buchanan v. Warly the Supreme Court in 1917 held that a municipality may not by ordinance segregate the Negro from the white residents, the constitutional restraint thus placed on a government agency is not imposed on individual owners. In the case, Corrigan v. Buckley, which came before the Court in 1926 and involved a covenant in a deed prohibiting for 21 years the sale of the property involved to any Negro, the Court held that under the constitution the Negro has no protection against the action of an individual owner. Individual owners may therefore enter into contracts respecting the control and disposition of their property with the purpose of excluding the Negro [redacted] from its use and enjoyment.

The more recent decision of the court in Hansberry v. Lee has been hailed as a great victory for the Negro. Actually it was nothing of the kind. In that case it appeared that 500 Chicago landowners had made an agreement stipulating that for a specified period no part of their lands should be sold or leased to Negroes. The defendant was one of the owners; petitioners were Negroes who had acquired and were occupying a portion of the land. Petitioners claimed that the owners' agreement by its own terms had required the signature of 95 percent of the owners and that the required percentage of owners had not signed. Defendant claimed that 95 percent of the owners had signed, as had been determined in an earlier Illinois suit. To this answer petitioners replied that they were not bound by the Illinois decision, since they had not been parties to that suit. A lower federal court had found as a fact that only 54 percent had signed but held that petitioners were none the less bound by the Illinois decision. The Supreme Court held simply that petitioners were not bound by the Illinois decision, since they had not been parties in the suit before the state court. Nothing in the decision or in the opinion by Mr. Justice Stone may in any way be construed as changing the law laid down in 1926.

Under the law as it stands today, then, while the government may not enforce racial segregation, private agreements barring Negroes from neighborhoods or homes will be enforced by the courts. It has been argued often that contractual segregation should also be declared unconstitutional. The court had an opportunity in Hansberry v. Lee to adopt this position, thereby outlawing segregation howsoever instituted, but the court avoided the issue altogether by deciding the case on an incidental point.

2. The Negro's right to an education

As early as 1899 the Supreme Court, in Cumming v. Board of

Education, upheld segregation in schools. But the leading case is Berea College v. Kentucky, decided in 1908.

In 1904 the Kentucky legislature passed an act prohibiting any corporation or individual from maintaining an educational institution for both races. It did permit a school to maintain separate branches for the two races, provided they were at least 25 miles apart. The act was aimed directly at Berea College, established fifty years before and opened to Negro pupils after the Civil War. After the act was passed the college authorities reluctantly transferred their Negro pupils to Negro colleges. The college authorities undertook to test the constitutionality of the act. The Supreme Court held the act constitutional. Berea College was an incorporated institution, operating under a charter; a charter, being a legislative grant, may be amended by the legislature; the purpose of the act of 1904 was to amend the charter of the corporation; therefore, the act was constitutional.

Mr. Justice Harlan dissented and took pains to ridicule the reasoning of his associates. The obvious purpose of the legislature, he said, was not simply to prohibit mixed teaching by corporations but by anyone; the act did not purport to amend charters. The court, he said, should directly decide whether the act is constitutional in so far as it makes it a crime to operate a private school for both white and Negro pupils. He thought the act was contrary to the Fourteenth Amendment. Why not forbid white and Negro children from coming together in Sunday School or Church? The right not to be interfered with in one's religion is no more sacred than the right to impart and receive instruction not harmful to the public. "Have we become so inoculated with prejudice of race that an American government, professedly based on the principles of freedom, and charged with the protection of all citizens alike, can make distinctions between citizens

in the matter of their voluntary meeting for innocent purposes simply because of their respective races?"

The institution involved was a private school. A private school claimed the right to teach both white and Negro students; the law intervened to deny that right; the Supreme Court upheld the law. It is a case where the law compelled segregation.

30-154-8

In 1938 the court considered segregation in a public university. In Gaines v. Canada, petitioner, a Missouri citizen and a graduate of Lincoln University (for Negroes), wanted to study law at the University of Missouri and qualified for admission but was rejected. A state act provided that, pending the full development of Lincoln University, the board of curators might send a student to the university of an adjacent state to study any subjects provided for at the University of Missouri but not taught at Lincoln, the board to pay reasonable tuition fees. The curators offered to send the Negro petitioner to a law school in an adjacent state but he insisted on admission to the University of Missouri School for law. The state court, construing the state constitution, held it mandatory to segregate Negro students. The Supreme Court decided in favor of the petitioner and Chief Justice Hughes wrote, "We are of the opinion that the ruling was error, and that petitioner was entitled to be admitted to the law school of the state university in the absence of other and proper provision for his legal training within the state."

The court did not hold that the Negro student must be admitted to the University of Missouri School of Law as a white student would be admitted. It held only that either he must be admitted or the state must provide other proper facilities within the state. The Negro won the right not to be sent out of the state for his education; he was not accorded the right to an education in a public institution regardless

of his color.

3. The Negro's right to vote

The poll-tax has been universally condemned as an undemocratic obstacle to a free election. Yet in the case of Breedlove v. Suttles, decided by the Supreme Court in 1937, the court upheld the Georgia poll-tax law, saying, "Payment as a prerequisite is not required for the purpose of denying or abridging the privilege of voting." To make payment of the tax a prerequisite to voting is not, held the court, to infringe the Fourteenth Amendment; it "is a familiar and reasonable regulation long enforced in many states and for more than a century in Georgia." The court approved the poll-tax law as not only constitutional but as a reasonable piece of legislation.

The poll-tax is a bar to voting in final elections. As to the primary, the chief bar has been the pure-white [redacted] party rule. In southern states nomination in the Democratic Party primary election is equivalent to final election. In southern states the Democratic Party conducted primary elections from which Negroes were rigorously excluded. Repeatedly the Democratic Party attempted to show in cases brought to the Supreme Court that the Party was a private organization from which could be excluded any group not wanted by the Party, and that the primary conducted by the Party was a private affair. In 1945, in Smith v. Allwright, the court declared that the Democratic Party of Texas could not exclude Negroes from voting in the Party's primary election.

4. The Negro's right to public facilities

Just as some state laws compel segregation in schools, colleges, and universities, some state laws compel segregation in public conveyances. Such laws, in so far as they do not apply to interstate traffic, are constitutional. The Supreme Court has so ruled time and again. In another part of this chapter will be listed the states which require

segregation --- Jim Crowism --- in railway transportation. In these states failure by the railway companies to enforce the terms of the laws is a misdemeanor, and a passenger or conductor who violates the law is guilty of a crime. Some states have Jim Crow laws which apply also to street cars. In some, compulsory segregation is extended to cover all forms of public transportation.

30-15 dl-31

In 1896, in Plessy v. Ferguson, the court considered a Louisiana act which required equal but separate accommodations and provided a penalty for passengers who sit in a car or compartment assigned to the other race. The petitioner, an octoroon, in whom "Negro blood" was not discernible, sat in a white car and was arrested. The court held the Louisiana act constitutional; it was a reasonable exercise of the state's police power. It was argued that segregation implies inferiority. To this the court replied that this is true solely because the Negro chooses to put that construction upon it.

Mr. Justice Harlan dissented, pointing out that the Thirteenth Amendment not only ended slavery but forbade the imposition of anything constituting a badge of servitude; that the Fourteenth Amendment gives Negroes the right to be exempt from "unfriendly legislation", "legal discriminations, implying inferiority in civil society, lessening the security of their enjoyment of the rights which others enjoy, and discriminations which are steps towards reducing them to the condition of a subject race." To the argument that there was no discrimination because the law of separation applies to both races alike, Harlan replied that obviously the purpose of the act was not to exclude the white from the Negro cars but to exclude the Negro from the white cars. He maintained that if a white man and a Negro want to occupy the same public conveyance on a public highway it is their right to do so, and no government can prevent them without infringement of the personal liberty of each.

Page 7

Why, asked Harlen, may not the principle of the decision apply to sidewalks, to a separation of Protestants and Catholics? "What," he asked, "can more certainly arouse race hate, what more certainly create and perpetuate a feeling of distrust between these races, than state enactments, which, in fact, proceed on the ground that colored citizens are so inferior and degraded that they cannot be allowed to sit in publich coaches occupied by white citizens?" The act declares Negroes to be criminals if they ride in a white man's coach. Negroes, said Harlan, should never cease objecting to such a law. If evils will result from commingling, greater evils will result from the infringement of civil rights. "The thin disguise of 'equal accommodations'...will not mislead anyone, nor atone for the wrong done this day."

It was not until 1946, in the Irene Morgan case, that the court held unconstitutional a state Jim Crow law. But the Virginia law involved in that case was held unconstitutional only because it attempted to impose Jim Crow regulations on interstate passengers. It is significant that the basis for the decision is not equal protection of the law, or due processof the law, but the exclusive right of Congress to regulate interstate commerce. Jim Crowism in interstate traffic is still constitutional.

5. The Negro's right to join a labor union

In several recent cases the Supreme Court has recognized the right of Negro workers to freely join labor unions without discrimination because of their race or color. In the Steele and Tunstall cases the court held that since the Railway Labor Act authorizes a union, chosen by a majority of the workers, to represent the entire craft, the union selected as the bargaining unit must represent all workers without discrimination because of race or color. In the Railway Mail Association case the court held that a state may by legislation declare the right to join a labor union without discrimination because of race, color, creed or national

origin, a civil right and protect this right by criminal sanctions.

6. Summary

The Negro has been successful before the Supreme Court in cases involving procedure in criminal trials, the treatment of persons suspected of the commission of crimes, the right to be indicted or tried by a jury from which members of one's own race are not systematically excluded. But these cases have not involved the rights of Negroes as such: the decisions of the court have simply extended to the Negro the constitutional right of all citizens to trials conducted according to "due process." In cases involving the rights of Negroes as Negroes --- to live where they please, to be free from segregation in schools and universities, to vote without the poll-tax restriction, to ride in interstate commerce in public conveyances without subjection to Jim Crowism --- in these cases the Negro has been unsuccessful, even when, as in recent years, the Supreme Court has consisted of a liberal majority.

30-15d-4

II. Protection of Civil Rights by Federal Law

Recently Tom Clark, United States Attorney General, speaking of federal action in cases involving mob violence against Negroes, has said: "Federal action in most of these cases hangs upon a very thin thread of law. It is like trying to fight a modern atomic war with a Civil War musket.... The time has come when Congress may have to pass legislation to insure to all citizens the guarantees under the Constitution". And Theron L. Caudle, Assistant Attorney General and head of the Criminal Division of the Department of Justice, has recently said: "...We hope to point out to Congress the inadequacy and defects of present federal statutes. Legislation is needed. We have no desire to assume jurisdiction over local affairs nor to interfere with local criminal administration, but where the community is lax in meeting its obligation to afford just and equal protection of the laws to its every individual member, that individual has --- and should have --- the right to look to his Federal Government for protection of himself and his neighbors. Our democracy suffers a grievous, if not fatal, blow when the processes of law and order are broken down by mob action because a few in the community lack the will to accept its obligation to keep those processes intact when the Federal Government is powerless."

The legal impotence of the Federal government to protect an individual in the enjoyment of fundamental rights can be quickly demonstrated.

Following the Civil War, the Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution were adopted, which outlawed slavery, conferred citizenship on the Negro, and provided that no person shall be deprived of life, liberty or property without due process of law. Congress also adopted five statutes which attempted to implement the constitutional guarantees. Before long, however, the Supreme Court held

that the Constitution protects only rights which stem from federal, as distinguished from state, citizenship, and that for the protection of civil rights the citizen must look to his state. Furthermore, it was held that Congress may not enact statutes which will define and protect civil rights against invasion by an individual, as distinguished from a public official. These decisions took the heart out of the Congressional legislation; before long most of civil rights acts were repealed by Congress. There are left only two important acts, and these are sharply limited in scope.

30-152-3

One of the statutes is section 51 of the Criminal Code, which provides that if several persons conspire to injure or threaten a citizen in the exercise of any right or privilege secured to him by the Constitution or laws of the United States, they shall be guilty of a crime. As construed by the Supreme Court, this act protects a citizen (aliens are not covered by this act) in the exercise of only very few rights. It does not protect him in the enjoyment of life, liberty or property, mentioned in the Fourteenth Amendment. These are not rights federally secured against invasion by private persons but only against invasion by the states. The act affords no protection against lynch mobs. What rights are federally secured, and thus protected against invasion by a conspiracy of two or more private persons? The cases have enumerated the following: protection in the execution and enforcement of federal judicial decrees, protection as a witness in a federal court, access to federal courts, the right to vote for federal officers, the right to run for federal offices, and cognate rights.

The other statute is section 52 of the Criminal Code, which, until 1940, was used in only two reported cases. Its usefulness may be measured in part by this fact. The act provides that, whoever, under color of state law, wilfully subjects any inhabitant to the deprivation of any rights, privileges or immunities secured or protected by the

Constitution and laws of the United States, or to different punishments, pains or penalties, on account of his alienage, color or race, shall be guilty of a crime. This act is directed only against state and local officers; it is not directed against non-official action. If a state or local officer, acting in an official capacity, deprives a person, because he is an alien or a Negro, of his life, liberty or property without due process of law, of his freedom of speech, or press, or assembly, or other constitutional right, his action, because it constitutes in effect state action, prohibited by the Fourteenth Amendment, is a violation of the statute.

30-152-41

The effectiveness of this statute was considerably weakened by the decision of the Supreme Court in 1945 in the Screws case, in which it was held that the deprivation of rights, under section 52, must be wilful; otherwise the officer's action does not come within the prohibition of the statute.

Again, mob violence is not covered by this act, unless a state or local officer is shown to be a part of the mob, and he acts as an officer wilfully to deprive a person of a federally-secured right.

The extent to which the effectiveness of this act has been weakened by the Screws case may be seen from the following statement made by the head of the Criminal Division of the Department of Justice: "The uncertainty caused by the court's interpretation of the statute [in the Screws case] has [sic] placed great obstacles in the way of the District Attorney and he can no longer undertake a prosecution for violation of this section with any degree of confidence, no matter how heinous is the offensive conduct charged, for the very reason that the government must carry the burden of proving that the act was committed solely for the purpose of denying the victim of a federal right."

In the light of the foregoing analysis of the scope of sections 51 and 52, it is easy to agree with the head of the Criminal Division of the Department of Justice when he says that "sections 51 and 52 are indeed imperfect statutory authority upon which to ground a consistent and vigorous program for the protection of the rights of all."

30-154-2

III. State Statutes Prohibiting Discrimination

As we have seen, the Supreme Court has held that Congress has no power to define and protect civil rights. Only states may do this. A citizen must look to his state for the recognition of civil rights. The only thing he may demand is that the state shall not discriminate against him in the definition and protection of civil rights on account of his race or color. But the great limitation on this principle of nondiscriminatory state action is to be found in the decisions of the Supreme Court that segregation is not discrimination.

Following the decision in 1883 that civil rights are matters for the state governments, and not for Congress, state legislatures adopted civil rights acts. There are now eighteen states which have such acts, of varying scope and effectiveness. These eighteen states are: California, Colorado, Connecticut, Illinois, Indiana, Iowa, Kansas, Massachusetts, Michigan, Minnesota, Nebraska, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Washington, and Wisconsin.

The courts almost uniformly have construed these acts narrowly, and infringe private property rights. because, they say, the acts are in derogation of the common law. Frequent legislative amendment is required to overcome the adverse decisions of courts.

In California the person aggrieved has only the right of civil suit; in nine states provision is made for both civil and criminal penalties; seven states provide only for criminal sanctions; in New Jersey the person aggrieved sues for a money judgment, but the award is paid to the state. Only in New Jersey, New York, and Illinois are public officials charged with the duty of enforcement of civil rights acts.

The statutes generally provide that there shall be no discrimination against persons, because of their race or color, in public conveyances, schools, places of public accommodation (as hotels, restaurants) and

places of public amusement. The degrees of specificity in the statutes vary considerably: the Illinois act mentions department stores, clothing stores, hat stores, shoe stores; the New York act mentions beauty parlors; the Michigan act mentions escalators; while at the other extreme is the Washington act, which does not at all itemize or define places of public accommodation, resort or amusement.

30-152-33

There is no civil rights act for the District of Columbia. On the contrary, ~~as will be seen in the next section,~~ laws of Congress impose Jim Crow restrictions on the Negro citizens of the District. A District of Columbia civil rights bill has been before Congress for several years.

New York, New Jersey, and Massachusetts have recently adopted acts against discrimination in private employment. These acts create a new civil right: freedom from discrimination in private employment.

IV State Statutes Compelling or Allowing Segregation or Discrimination

Since civil rights pertain to the jurisdiction of the individual states, some states, as we have seen, have adopted acts to define the scope of civil rights and to afford a measure of protection in their enjoyment. On the other hand, twenty states have adopted acts compelling segregation in various relations or activities. Ten states, by inaction, have left the matter to private discretion.

In twenty states segregation of pupils in schools is mandatory or expressly permitted. In three states the statutes require separate schools even for the deaf, dumb, and blind. In six states the statutes call for separate schools for the blind. Sixteen states require segregation in juvenile delinquent and reform schools; in nine states separate trade and agricultural schools are required. Three states require separate school libraries. Florida stipulates that textbooks used by Negro pupils shall be stored separately. Separate colleges are mandatory in twelve states. Separate teacher-training schools are required in fourteen states. In four states a Negro may not teach white pupils and a white person may not teach Negro pupils; one of these states provides that only white persons born in the United States, whose parents could speak English and who themselves have spoken English since childhood, may teach white pupils.

In fourteen states the law require separate railroad facilities. Three states stipulate that separate sleeping compartments and bedding are to be used by Negro train passengers. Separate waiting rooms are required in eight states. Separation in buses is required in eleven states; ten states have the same requirement affecting street-car transportation. Three states provide for separation on steamboats.

Two states require separation of the races at circuses and tent shows. Three states require separation in parks, playgrounds and on beaches. Three states require separation in billiard and pool rooms. Arkansas requires separation at race tracks. In Tennessee and Virginia separation at theatres and public balls is required.

30-152-30

There are laws which require separation of the races in hospitals. In eleven states even mental defectives must be separated by race. In Alabama a female white nurse may not take care of a Negro male patient.

Separation is required by eleven states in penal and correctional institutions. Separate bathing facilities in such institutions are required by laws in Alabama and Tennessee. Separate tables in such institutions are required by a statute of Arkansas, and separate beds by statutes in two states.

There are laws which require separation of the races in a multitude of relations --- too many to be mentioned here. Several examples will make clear the scope of the Jim Crowism imposed by law: Oklahoma requires separate telephone booths for Negroes; a Texas statute prohibits whites and Negroes from engaging together in boxing matches; Arkansas requires a separation of the races in voting places; in Georgia a Negro minister may marry only Negro couples; in South Carolina Negroes and whites may not work together in the same room in cotton textile factories, nor may they use the same doors of entrance and exit at the same time, nor may they use the same pay windows or stairways at the same time.

If a state does not have an act calling for segregation with respect to a specific matter, it is not to be assumed that with respect to that matter there is no segregation. Many of the Southern and Border states do not have laws requiring segregation in theatres and other places of public amusement; yet the races do not mingle there, and the Negro cannot compel admission because the states have no civil rights acts.

As Myrdal has pointed out, these Jim Crow laws effectively tighten and freeze segregation and discrimination. Before this Jim Crow legislation was enacted there was a tendency on the part of white people to treat Negroes somewhat differently, depending upon class and education. " This tendency was broken by the laws which applied to all Negroes. The legislation thus solidified the caste line and minimized the importance of class differences in the Negro group."

Congress has refused to pass laws to declare the poll tax illegal; to make lynching more effectively subject to federal law; to make discrimination in private employment in interstate commerce a crime; to define and guarantee civil rights in the District of Columbia. The Supreme Court has failed to declare Jim Crowism in interstate commerce unconstitutional; to outlaw segregation in schools as a denial of due process or equal protection of the laws; to outlaw the restrictive covenant in the sale or rental of property; to declare the poll-tax an unconstitutional tax on a federally-guaranteed right or privilege. The Supreme Court has placed the Negro at the mercy of the individual states; they alone have the power to define and guarantee civil rights. The Negro is a citizen of the United States, yet the thread that ties him to the federal government, when it is a question of protecting his life, liberty or property, is so thin that the government is compelled to admit its impotence.

Chapter III

THE PRESENT LEGAL AND SOCIAL STATUS OF THE NEGRO

By

William R. Ming, Jr.

30-156-72

The present legal and social status of the Negro in the United States can be best described in terms of the appalling contrast between the breadth of the rights which are guaranteed by law to every person and those few which Negroes, generally, are permitted to enjoy. Frequently it is said that the Negro has been relegated to "second class citizenship." That, however, is an overly simplified description of the plight of a minority when the political and social institutions of their country fail miserably to protect their lives, liberties or property.

Written sources of law, whether they be constitutions and statutes, state or federal, or opinions of courts, or regulations or orders of administrative bodies furnish clues to, but do not reflect, the real status of Negroes. Rather, it is the laws in operation which determine that status and it cannot be seriously questioned that the political institutions fall far short of achieving the ideals which the laws express.

Examined together the body of laws of the United States are consistent with "The American Creed". That credo has been expressed in a variety of ways but the most succinct, perhaps, is that found in the phrase graven over the entrance to the Supreme Court of the United States. There "Equal Justice Under Law" is boldly proclaimed. The same idea is expressed in the description of the government of the United States as "one of laws, and not of men" and in a host of other platitudes. The classical proclamation of this ideal, of course, is found in the Declaration of Independence and the Constitution of the United States. More nearly contemporary, but equally idealistic, is the justly celebrated statement of the "Four Freedoms".

Significantly, this creed authorizes no distinctions based on race, color, or previous condition of servitude. Yet discriminations based solely on race are the rule in all parts of the country. Nevertheless, so integral a part of the national consciousness is this creed that those, like the Negroes, most sinned against in its name, embrace it, and those, like the dominant majority, who deviate most from it in their political and social conduct feel obligated to explain their actions and to justify them in reference to that creed.

30-15b-71

To explain this paradox would require a thorough analysis of the history and political and social foundations of the United States. It would be necessary to measure the psychological reactions produced in its people by the environments from which they came, and the one in which they live, and to consider a host of other factors which appear to affect political and social groups generally. The basis, however, does not alter the fact. In the eyes of the organic law Negroes are the equals of all other persons and, legally, each individual Negro is the equal of each non-Negro similarly situated. In few situations, however, have the laws and the mores of any community been so far apart.

The legal status of Negroes in the United States actually was determined by the 13th, 14th and 15th Amendments soon after the Civil War. Essentially, once slavery had been outlawed and the effects of the Dred Scott decision abolished, the relative legal status of the Negro was fixed and it was fixed in accordance with the ethical precepts of "The American Creed".

True, there have been a number of major decisions by the Supreme Court of the United States since that time which have defined that status in particular situations. But, the necessity for such judicial determinations is, itself, a measure of the status of

Negroes since, in the main, the cases involved action by political instrumentalities, not individual persons, designed to deny fundamental rights to an oppressed minority. Moreover, the facts of these cases serve to depict the actual place of the Negro in the community in which he lives.

30-156 - 25

For example, after twice invalidating the efforts of the Texas Legislature to bar Negroes from the Democratic primary elections in that state,[1/] the power of the State Democratic Convention to achieve the same result was uphold in Grovey v. Townsend.[2/] That anachronistic rule was short-lived. Led by the N.A.A.C.P., a determined group of Texas Negroes demonstrated that in a "one party" system the "white primary" made a mockery of votes by Negroes in any general election. As a result, the Supreme Court overruled the Grovey case and opened the primary polls to Negroes in Smith v. Allwright.[3/] Although limited by its terms to Texas the judgment in that case really affected the whole South since the "white primary" was the pride of many states.[4/]

The rights of Negroes accused of crimes, to freedom from duress and to a fair trial likewise have been judicially recognized, at least in the highest court, on numerous occasions. Perhaps the most celebrated of these cases was the "Scottsboro Case."[5/]

1/ Nixon v. Herndon, 273 U.S. 536 (192).
Nixon v. Condon, 286 U.S. 73 (192).

2/ 295 U.S. 45 (1935).

3/ 321 U.S. 649 (1944).

4/ Lane v. Wilson, 307 U.S. 268 (1939) was equally significant, though less broad in immediate effect. There, the Supreme Court held invalid an Oklahoma registration statute passed after the "Grandfather Clause" had been knocked out which allowed only a 12 day period for the registration of all persons formerly barred from the polls. The statute contained no reference to race but it permanently disfranchised those not registered within the 12 days and only Negroes had been previously barred.

5/ Powell v. Alabama, 287 U.S. 45 (1932).

There, failure of an Alabama trial court to provide counsel for nine young, illiterate Negroes charged with the rape of two white women of questionable virtue was held to make the conviction invalid. A second conviction was set aside because of the systematic exclusion of Negroes from both grand and trial juries.[6] In the latter case the Court relied on a long line of precedents and applied a rule generally followed though hedged about with numerous technicalities.[7]

After a false start,[8] the Supreme Court recognized that the trial of a Negro might be only a form, a face-saving substitute for a lynch mob. In Moore v. Dempsey[9] the court reviewed the trial of several Negroes sentenced to death for the alleged murder of a white man during race riots in Elaine, Arkansas. It was found that the entire judicial machinery which had conducted and reviewed the trial was so dominated by mob violence that there had been no trial worthy of the name.

Similarly, judicial disapproval has been expressed when convictions were shown to have been based on confessions literally beaten out of Negro suspects. But it should be noticed that in every such case the torturers were officers of the state, deputy sheriffs and the like. Moreover, that fact was relied on to justify sustaining

6/ Norris v. Alabama, 294 U.S. 587 (1935).

7/ See e.g. Strauder v. West Virginia, 100 U.S. 303 (1880); Ex parte Virginia, 100 U.S. 339 (1880); Hale v. Kentucky, 303 U.S. 613 (1938); and Pierre v. Louisiana, 305 U.S. (1939). For a complete and authoritative discussion of the problem see Jefferson, "Race Discrimination in Jury Service", 19 Boston Univ. Law Rev. 413 (1939).

8/ See Frank v. Mangum, 237 U.S. 309 (1915) upholding the conviction for murder of a Jew in Georgia in a trial held with a barely restrained mob demanding the prisoner's life. Holmes and Hughes JJ., dissented.

9/ 261 U.S. 86 (1928).

convictions so obtained. Nevertheless, in Brown v. Mississippi [10] the Supreme Court was impelled by the horrors of the record before it to observe that:

> Because a state may dispense with a jury trial, it does not follow that it may substitute trial by ordeal. The rack and torture chamber may not be substituted for the witness stand.

Although that decision determined and applied the law of the land, the real status of Negroes is aptly demonstrated by the fact that the deputies had boasted in open court of beating the helpless Negroes until they confessed to a crime that ~~ever~~ other evidence made plain they could not have committed.

An equally illuminating demonstration of this calloused disregard for human rights which frequently characterizes the relationship between Negroes and those who administer the laws is found in Chambers v. Florida. [11] In that case, also peace officers boasted in open court of tying Negro suspects to trees and flogging them with chains until mumbled admissions of crimes of which they had no knowledge stopped their captors short of murder in the guise of law enforcement.

But even more shocking than such conduct by state officers is the fact that it usually goes unpunished. [12] Moreover, this immunity for those who commit violent crimes against Negroes is not limited to "guardians of the law." That even private persons enjoy it serves to

---

10/ 297 U.S. 278 (1936).

11/ 309 U.S. 227 (1940).

12/ See Screws v. United States, 325 U.S. 91 (1945), for a extended discussion of the power of the federal government to punish such conduct by state officers even when the state does not do so. In that case a Georgia sheriff and two deputies, after having purported to arrest a Negro for theft of a tire, beat him to death in the court house square. The three "peace" officers were indicted for, and convicted of, violation of a federal statute prohibiting deprivation of constitutional rights. The conviction was reversed by a divided court with four justices holding that the trial judge had erred in not instructing the jury that the petitioners were guilty only if they intended to deprive the deceased of his constitutional rights. Three justices dissented on the ground that this was not "state action" within the meaning of the 14th Amendment on which the federal statute is based because the action of the officers was clearly violative of state law. Only Mr. Justice Murphy thought the conviction ought to be confirmed.

illustrate the real place of the Negro in the community.

The spectacle of the unwillingness of law enforcement officers to seek out, much less prosecute or punish, members of lynch mobs is a ghastly, but familiar, demonstration of the failure of the law to protect Negroes. Of equal significance is the apparent inability, or worse, of some officers to hold their Negro prisoners against blood thirsty lynch mobs. And, on occasion, this sanction of violence as a means of "keeping Negroes in their place" results in tolerance of murder in its most aggravated form.

Such a case occurred in Conroe, Texas in 1941. Bob White, a Negro, had been accused of rape of a white woman. Twice, trial courts had found him guilty but each conviction had been set aside for insufficiency of the evidence. As the Court adjourned for lunch on the first day of the third trial the deputies guarding him withdrew. At once, the husband of the alleged victim approached the prisoner and shot and killed him in full view of the judge, jury and spectators. The husband was immediately arraigned and tried for murder. Next day he was acquitted and the prosecutor congratulated him!

Although the reported decisions of courts are a fruitful source of material they represent only a tiny fraction of the cases which demonstrate that the threat of unrestrained and unprovoked violence is ever-present. Some of the newspaper files tells a portion of the story but no source material contains it all.[13/] Moreover, even the Negro weeklies which will report the beating of a Negro cannot be expected to find much news value in governmental non-action in case after case.[14/]

13/ See I American Dilemma, Myrdal, Harper, 1942, pp. 558-569.

14/ An exceptional case may be that of Isaac Woodard, a Negro veteran of World War II. In February 1946 he was blinded by an unprovoked beating at the hands of a South Carolina peace officer. State officials took no action at all but the Department of Justice announced that it would seek an indictment.

This apathy of the executive arm of the government is matched by that of the legislative in this connection. Almost continuously since 1921 a fight has been waged to secure passage of a federal anti-lynch law. But the refusal of the Senate of the United States to amend its archaic rules or to invoke cloture has permitted a small group of determined Southern senators to "talk to death" each such measure presented.

30-156 - 22

There can be no quarrel with the basic doctrines enunciated by the Supreme Court of the United States in the cases involving the civil liberties of Negroes. But it must be remembered always that in only a few of the situations in which those rights are denied do the victims find redress in that tribunal. For the vast majority of Negroes, it is the constable, and the deputy sheriff or local judges who are the arbiters of civil rights and the cases cited are descriptive of the law at that level.

But even the higher sources of law are not consistent so far as the Negro is concerned. In part, this is due to the fact that within the territorial limits of the United States laws are made by forty-nine separate political soverignties and innumerable subdivions thereof. Notwithstanding the fact that the states and the federal government are not completely independent one from the other under the terms of the Constitution of the United States, differences in their laws are a continuous source of both practical and logical difficulties.

The effect of the federal form of government on the status of Negroes must be considered in light of the historical, economic, social and political differences between various parts of the country. For example, the independence of state law and the technicalities of the rules as to unrepealed, although obsolete legislation, has led to efforts to enforce the "Black Codes" of the "Ante-bellum South" under contemporary conditions. Similarly, local conditions, customs and

activities have produced strange laws patterned after those of the slavery period such as the curfews for Negroes which are in effect in many southern urban communities.

The classic example, of course, is the "Jim Crow" law which compels segregation of Negroes in, or their exclusion from, all such places of public accommodation as restaurants, hotels, theaters, busses, railroad cars, etc. Such statutes are in effect in all of the states in the south.[15/] With these, however, must be contrasted the "Civil Right Acts" of many of the northern and western states[16/] which prohibit segregation of Negroes in, or their exclusion from, public places.

The "Jim Crow" statutes are enforced by criminal penalties, while violation of some of the "Civil Rights" laws are punishable by criminal sanctions, some by civil penalties, and some by either or both. It should be noted, however, that while the South rigorously enforces its proscription, enforcement of the "Civil Rights Acts" is a hit or miss affair. This fact, too, is demonstrative of the hiatus between the actual legal status of Negroes and that described in the law books.

Both groups of laws have been upheld as within the police power of the several states.[17/] The Supreme Court, however, has recently recognized that enforcement of a state's segregation law against a Negro travelling interstate by bus imposes a burden on interstate

commerce in contravention of the negative implication of the "commerce clause" of the federal Constitution.[18/]

So anomalous is the power to compel public separation of persons according to color in a nation which proclaims "Equal Justice Under Law" that the proponents of segregation have been at great pains to justify it. Thus, to achieve the necessary rationalization with the "American Creed" the concept of "separate but equal" has been developed. Put another way, in an effort to reconcile constitutional limitations and social aims the American courts have developed the proposition that even though certain rights must be accorded to all persons, those rights may be provided for persons of different races, i.e. Negroes and non-Negroes, in separate places. On that basis the law can equably contemplate separate rail cars for Negroes and whites, although carriers by law must serve all who apply, approve separate schools for Negroes and non-Negroes, though public education must be afforded to all who seek it and in some states all must accept it, and so on.

This legal segregation is probably the key to the enigma of the status of the Negro in the United States. In reliance upon it the grossest forms of denials of basic human rights can be justified or ignored if the majority believes them desirable. Once the basic promise is accepted the requirements of even the "American Creed" can be said to have been met without alteration or improvement in the place assigned to Negroes in the United States.

The operation of the premise, with its basic fallacies, is readily observable in any state or local community. Fundamental rights

---

18/ Morgan v. Virginia, U.S. , 66 S. Ct. 1050 (1946). Subsequently, both rail and bus carriers have continued segregation allegedly pursuant to the carrier's regulations as distinguished from state laws. Numerous suits testing the legality of the practice are pending in various courts. Significantly, no carrier has purported to enforce such a regulation in any state save one having a "Jim Crow" law in effect.

and privileges can be afforded, or denied, to the persons who make up that community depending on the race of that particular person. Moreover, individual differences or distinctions are immaterial. In this case the law sanctions definition of an individual's rights and duties in terms of the racial group with which he is identified.

30-156-68

Examples of how the rule works are readily at hand. Contrast the crowded, dirty, freezing in winter, and sweltering in summer, "Jim Crow" cars of the southern railroads with the accommodations afforded to white persons paying no more than equal fares. Or, consider the one-room schools, often unheated, poorly furnished and frequently equally poorly taught, to which most rural Negroes go for their education as another illustration. Equally illuminating is a comparison of the budgets for white and Negro schools.[19/] Or, wait with a Negro soldier on a three day pass while successive busses admit only a few Negroes at a time as his leave runs out. The fact is that the law permits facilities to be separate but it does not succeed in making them equal.

Yet the law is clear; Negroes are entitled to Equal rights. In Missouri ex rel. Gaines v. Canada[20/] the Supreme Court ruled that the existence of a separate school system, which did not include a law school for Negroes, did not excuse the state from providing a legal education for any of its Negro citizens who might apply, but Gaines was not ordered admitted to the state university law school. The equal protection of the law required by the 14th Amendment, was deemed

---

19/ See Myrdal, op. cit. pp. 337-344.

20/ 305 U.S. 337 (1938).

satisfied by establishment of new and separate law school for Negroes.[21] So too in Mitchell v. United States[22] refusal of a carrier to furnish Pullman accommodations to a Negro because no separate car was available for him was held to violate the Interstate Commerce Act. It is common knowledge, however, that the efforts to evade the effect of that ruling range from flat refusals to sell space to assignment of drawing rooms, etc., to Negro passengers at berth rates to prevent their presence in open cars with whites.

Some measure of the stubborn resistance to the legal requirement may be found in the history of the effort to equalize the salaries of Negro and white teachers. In Alston v. School Board of City of Norfolk,[23] the court ruled that discrimination in salaries paid to teachers of equal qualifications was violative of constitutional limitations. Nevertheless, a long series of suits in other states, and sometimes in several counties in the same state, were still necessary.[24]

So it goes, with the law clear as to the rights of Negroes and the facts equally clear that these rights are regularly denied.

21/ During the last decade one border state realistically refused to increase the expense of maintenance of a dual school system by extension to the professional school level. Instead, the court ordered the Negro applicant admitted to the law school of the state university See Pearson, et al. v. Murray, 169 Md. 478, 182 A. 592. But North Carolina followed the lead of Missouri, and Louisiana and Texas are apparently planning to do so.

22/ 313 U.S. 80 (1941).

23/ 112 F. (2d) 992 (4th C.C.A. 1940).

24/ See "Teachers' Salaries in Black and White", Legal Defense and Educational Fund, Inc. (1942), for the story of this campaign, still being waged.

As might be expected, the proponents of segregation ignore the facts and argue vehemently the logic of it. Probably no place, however, is the fundamental fallacy and the circuity of their reasoning so aptly demonstrated as in the defense of the statutes which prohibit marriage between Negroes and whites. And it is here that the "separate but equal" argument reaches its fullest flowering. How, says the South, can it be other than equal when not only are Negroes forbidden to marry whites but whites are likewise forbidden to marry Negroes!

The political and legal system of the United States appears to be unable or unwilling to cope with this hiatus between the theoretical and actual status of the Negro. In fact, the relation between the political and legal institutions themselves and the Negroes serves further to demonstrate the place of the Negro in the United States. For example, it is well settled, and not now seriously questioned, that exclusion of Negroes from grand or trial jury invalidates any indictment or verdict directed against a Negro. Nevertheless, with the degree of uniformity dependent upon the caprices of local law enforcement officers, Negroes generally do not sit on juries considering charges against other Negroes. Sometimes the result is accomplished by flatly excluding Negroes from the jury lists without regard to the qualifications of the Negroes in the community. Equally effective, however, is the use of the peremptory challenge and the challenge for cause with the rulings being made by a judge frequently anxious to secure a "lily-white" jury. In those same courts, inevitably, the length of sentences imposed upon malefactors of different races are as diversified as the statutes limiting punishments will permit with Negroes generally receiving the maximum punishment which may be imposed. Skeptics as to the validity of a generalization of such breadth need examine only the records of the local criminal courts in any part of the country.

These refusals to follow the doctrine of equality of all men are typical. Moreover, similar discriminations are practiced in every nook and cranny of the complex American civilization and while geographical location may affect the severity and uniformity of the practices, in no area are Negroes free from them.[25]

Such discriminations follow inevitably when a minority group is excluded from participation in the selection of the persons chosen to govern in a republic. Even in a "government of laws and not of men" the law alone is not a sufficient control to prevent excesses by government officials who, in fact, represent only the majority group. It may be regarded as a political truism that where elected officials are subject to no control at the polls their conduct in office too often is dictated by individual and group prejudices and not by legal requirements.

It is notorious that in the South, where the majority of Negroes still live, they are practically disfranchised. That this is contrary to the law goes without argument. No stronger statement of the desired social end can be made than that contained in the 15th Amendment to the Constitution which provides that no person shall be denied the right to vote by any state on account of race, color, or previous condition of servitude. Pursuant thereto the Supreme Court of the United States has declared invalid the "grandfather clause", the "white primary", and other ingenuous as well as sophisticated devices aimed at providing the cloak of legality for prohibiting Negroes from exercising the right to vote.[26]

25/ See Myrdal, op. cit. p. 526, et seq.

26/ See Guinn v. United States, 238 U.S. 347 (1915), and Lane v. Wilson, supra. The "poll tax", however, is not regarded as falling beneath this ban, Breedlove v. Suttles, 302 U.S. 277 (1937). Likewise, Congress has refused to pass federal legislation to prohibit this pernicious device for disfranchising the poor, white and black alike.

But terrorism, economic as well as physicial, is a more potent deterrent to voting by Negroes than state laws as Bilbo's 1946 campaign serves to demonstrate, and by one device or another Negroes are denied the right to vote.

30-156 -65

In the North there is a higher degree of participation by Negroes in the selection of government officers and this fact is reflected in the relationships between those officers and Negroes. But even there the exclusion of Negroes from holding office serves to prevent their actually sharing in the decisions and operation of the political institutions. This is true with respect to state and local governments as well as the national government.

A mere handful of representatives of black ghettoes in northern cities make up the total of Negroes holding public office. It should go without saying that in the South where Negroes are denied the right to vote the holding of offices by Negroes ended with the withdrawal of the Union Army from the South. The general level of ability of elected officials of the United States, particularly at the local level, belies any justification for this result based on comparative merits. That is particularly true in the South where a comparison between the Negro teachers and businessmen in any community and the law enforcement officials in the same place serves to show that all citizens lose when race, not ability, is the criterion for selection of public officials.

But this discrimination is not limited to elected officials. Even in the Federal Government appointments to public office are as few as elections thereto. Negroes presently serve only as "Recorder of Deeds of the District of Columbia" and "Governor of the Virgin Islands". In the main, the only state and local official positions to which Negroes are appointed are those in the segregated school systems, and even then in most communities the top administrative jobs

are closed to Negroes. In addition, there are a few local elected or appointed judges and prosecutors. But these few officers of government represent the total of Negroes among the host of persons responsible for the conduct of our vast political institutions. It is small wonder that under these circumstances Negroes fail to achieve the equality in their relationship with the government which the law guarantees them.

Other aspects of the relationship between the body politic and the Negro display the same lack of equality of treatment. One of the most outstanding demonstrations of the real status of Negro in the United States came when the Army of the United States was mobilized. Inevitably, for total war, 10% of the population of the country was an important factor in building an Army. The Selective Training and Service Act of 1940, true to the "American Creed" prohibited discrimination in selection or training based on race, creed or color. Five years later, however, when the Army began to demobilize, even the War Department recognized that its policy of segregation of Negro troops in separate units with the inevitable accompanying discriminations had prevented the most effective utilization of nearly 10% of its troops. With a few minor exceptions these units were of the service type. They were important in terms of overall Army operations but in an Army where a premium was placed on specialization and technical training it was only accidental if these segregated units provided the means of utilization of the services and skills of any given Negro soldier or officer. The resultant and inevitable waste in man-power, to say nothing of the effect on the mal-utilized individuals and others around them was a high price to pay to satisfy emotional prejudices. It is characteristic, however, of the status of Negroes, that so practical a consideration is rarely given any weight.

Equally significant in determing the legal and social status

of Negroes is a consideration of the areas in which neither the laws nor the political institutions even purport to protect this minority. As a simple illustration one may take the problem of the restrictions on the areas in which Negroes may live. In practically every city and town, both North and South, where any real number of Negroes live, they are herded together in one or more congested areas. No walls surround them but the limitations on their expansion are just as real. What is more, in most cases, individual Negroes cannot escape from these ghettoes, save to move to another, no matter what their individu economic status may be.

No federal or local statute compels this result. In fact, the Supreme Court has construed the 14th Amendment as prohibiting local ordinances requiring residential segregation of Negroes and whites.[27/]

Terrorism and violence, of course, have been used as a means of enforcing residential segregation.[28/] The most effective and most often used device for this purpose, however, is the so-called, "restrictive convenant" by means of which private persons agree not to sell their property to, or permit its use by, Negroes. Such limitations are frequently contained in the deeds executed by the subdividers of residential land or are mutually agreed to by groups of property owners living in the same area.

So long as the signers of these agreements comply with their terms, neither the law nor the courts have any concern with them since, save for condemnation for public purposes, owners may dispose of their property to whom they choose or refuse to sell to anyone if they like.

27/ Buchanan v. Warley, 245 U.S. 60 (1917).

28/ See, for example, "The President's Conference on Home Building and Home Ownership, Report of Committee on Negro Housing," P.46 (1932)

But changes in economic circumstances frequently dictate shifts in social attitudes. Property owners once anxious to keep Negroes "out of the block" change their minds when some Negro makes a substantial offer for the property particularly when the offer is above that of any white prospect. Frequently, at that point, adjacent property owners seek the aid of the courts to enforce their private rule of residential segregation and the injunction has proved a potent means of achieving that end.

It is anomalous, but true, that in most states the courts, at the request of private persons, will use all of their judicial power to keep Negroes out of residential areas when the state legislature or the city council could not do so.[29/] The announced jusificati for segregation by judicial fiat is that it is not the state which dictates that result but the private persons who entered into the covenant.[30/] Any court so holding, however, ignores the fact that it is the power of the state exercised by the court which accomplishes the segregation and it is well settled that the limitations of the 14th Amendment apply to courts as well as to the legislative and executive arms of government.[31/]

29/ See e.g. Koehler v. Rowland, 275 Mo. 573, 205 S.W. 217 (1918); Chandler v. Ziegler, 88 Colo. 1, 291 Pac. 822 (1930); Cornish v. O'Donoghue, 30 F. (2d) 983 (1929). Some states have refused to enforce agreements not to sell the land but even these jurisdictions uphold restrictions on use by Negroes. See e.g. Lettau v. Ellis, 122 Ca App. 115, 295 Pac. 95 (1931). The Supreme Court avoided decision on this question in Hansberry v. Lee, 311 U.S. 32 (1940) by ruling that petitioner had been denied his "day in court" when an Illinois court asked to enforce such a covenant refused to hear evidence on its invalidity because the same covenant had been upheld earlier in Burke v. Kleiman, 271 Ill. App. 519, 189 N.E. 372 (1934). In that case there had been a stipulation as to the facts and no attack on the validity of the covenant. Instead the defendants merely sought to show that circumstances (race of the occupants of the surrounding area) had so changed as to make specific performance of the covenant inequitable. Following the decision in the Hansberry case the covenant was set aside on the ground that it had not been executed by the requisite number of property owners in the area.

30/ See Corrigan v. Buckley, 271 U.S. 323 (1926).

31/ Ex parte Virginia, 100 U.S. 339 (1880).

In any event, the law does not even purport to prevent private persons from compelling Negroes to live in overcrowded slums despite the resulting disease, death and crime for which the whole community must pay. The problem has become increasingly aggravated by the present housing shortage, but even in the field of public housing the law either ignores, or assists in maintaining, residential segregation.

The most important area in which the law furnishes no protection for Negroes is in that of economic activity. And it is, perhaps, in this failing for which the government must be most criticized since the economic adversity of most Negroes has prevented them in large measure from securing for themselves the education and protection which the state has obligated itself to provide, but has refused to furnish. Moreover, it is now apparent that the Emancipation Proclamation and the 13th, 14th, and 15th Amendments were not sufficient to overcome the handicap of 250 years of chattel slavery in the economic struggle which characterizes an industrial civilization. Governmental non-action in this area, however, is partly determinative of the present legal and social status of the Negro.

The economic history of Negroes in the United States is well-known and well documented.[32/] They were first imported as slaves to furnish agricultural labor and the great bulk of Negroes still fill that same role nearly a century after emancipation. The general trend in the United States toward urbanization starting at the turn of the

---

32/ See Myrdal, op. cit., Part IV, and source materials there cited for a complete discussion of the present economic status of the Negro.

century however, affected Negroes as well as whites. The migration of several million Negroes to the cities of the North during and after the first World War added that number to the industrial and services labor pool and reduced by that number the Negroes available for agricultural labor. In addition, and perhaps more important, for the children of those migrants job opportunities were limited to industry, the service trades, and their white collar adjuncts. And it is in these occupations in which discriminations against Negroes are regularly practiced.

Save for a small number of skilled craftsmen, chiefly in the building trades, the great bulk of Negroes before 1929 were unskilled, or at best semi-skilled, workers. In industry they earned their livelihood in the back-breaking, man-killing, jobs which go to unskilled laborers particularly in heavy industry. The foundries, the steel mills and the packing plants were all, literally, consumers of Negro labor. The service trades, too, afforded some opportunities for unskilled workers and the traditional domestic service furnished an avenue of employment particularly for Negro women. But there were few Negroes in industry in skilled jobs, and practically none in the offices. Since pay was usually commensurate with skill Negro industrial workers found themselves tied to the lowest paid, dirtiest and most menial jobs.

Innumerable explanations have been offered to account for the low place of Negroes in industry. Whatever the explanation or justification, whether it be lack of previous training and formal education, or objections of white workers, or simply racial prejudices or a combination of all these it is significant that, in the main, on the job training and promotions were generally denied Negro workers even when employment was forthcoming.

30-156-18

The years of depression after 1929 served to accentuate the marginal character of the Negro's place in industry. The phrase "last hired, first fired" was the bitterly euphemistic, but accurate, description colloquially given to that status. The advent of World War II, however, produced a considerable change. But this very change and the means by which it was accomplished demonstrate the economic discriminations practiced against Negroes and the governmental ineptitude in dealing with them.

In the early days of defense activities which preceded Pearl Harbor the rapid hiring of large numbers of industrial workers served only to increase the proportinate percentage of Negroes on public and private relief rolls since only white workers were hired. Urgent pleas and demands by interested Negroes and white persons, groups and organizations, served only to publicize the discriminatory refusal of employers to hire Negro workers. Finally in 1941 the threat of a march by Negroes on the Capital resulted in creation by executive order of the President of a committee to preven government agencies and government contractors from engaging in other than fair employment practices.[33/] These were roughly defined as refusal to hire, or upgrade, any person because of race, color, religion, nationality or sex or to discriminate in wages paid for equal work on any such basis.

This Fair Employment Practices Committee had no power to impose sanctions nor could it seek the aid of the courts for enforcement either of the executive order generally or any committee orders in particular cases. The Fair Employment Practices Committee did have power, however, to hear and investigate complaints of discriminat and those investigations furnished entire confirmation of the dis-

---

33/ Executive Order 8802, 6. F.R. 3109 (1941).

criminations regularly practiced against Negroes by employers.

The justifications offered for such discriminations were varied. One of the most frequent reasons offered was that white workers would not work side by side with Negro workers even in the North. That this was generally untrue was easily demonstrated but, in any event, it probably marks the greatest length most employers ever went in fixing personnel policies on the basis of the emotions of their employees.

As the labor supply grew tighter and tighter, however, and the demand for war goods grew greater and greater even Negroes were hired as industry strove to meet the demands of a great war machine. But even the compulsion of a war economy never served to eliminate all the discriminations. In many areas and in many plants not even the discrimination in hiring was terminated and in only a few plants could Negro workers expect working conditions, including pay and opportunities for advancement, commensurate with those of white workers of no greater skill and experience.

Shackled by its lack of power the Fair Employment Practices Committee struggled to carry out its presidential directive but not even so far as the federal government as an employer was concerned did its efforts meet with more than slight success. In any event, with no statutory authority for its activities, the Fair Employment Practices Committee barely survived V-E day. By the simple device of refusing further appropriation to the committee, the Congress, in June 1945, eliminated even this minor threat to continued discrimination against Negro workers.

As early as 1943 determined efforts had been made to secure passage of a federal statute to outlaw discriminatory employment practices. Both major parties endorsed the idea in their 1944 platforms but the 79th Congress was barely lukewarm in its reaction to

the proposal.

Some opponents of the measure sought to justify their postion on the ground that government should not dictate to employers as to whom they should hire. Others argued that white workers had no such protection. But such critics entirely overlooked the fact that Negro workers share all the problems of white workers and, in addition, must vie with the discriminations practised against them solely because of their race. It is this latter group of burdens which a Fair Employment Practices Committee would help them share. Put another way, such a measure would serve to equalize Negro and white workers in their efforts to secure a livelihood. It would not prefer one group over the other but would rather serve to eliminate the preferences based solely on race.

There can be no doubt that this is a proper field for governmental action. Comparable measures regulating the relationship between employers and employees, such as the Wagner Act, are too well-known to require extended discussion. In fact, some of these very measures in strengthening the position of organized labor have resulted in creating opportunities for discrimination against Negro workers.[34/]

34/ See Steele v. Louisville & N.R. Co., 323 U.S. 192 (1944), and Tunstall v. Brotherhood of Locomotive, etc., 323 U.S. 210 (1944), holding that a labor organization acting by authority of the Railway Labor Act as the exclusive bargaining agent of a craft or class of railway employees was under a duty to represent all the employees in the craft without discrimination as to race. In both of these cases the unions excluded Negroes from membership and had entered into contracts with employers discriminating against Negro members of the craft. In view of the unions' position as exclusive bargaining agents Negro employees would have been without redress but for judical intervention on their behalf. See In the Matter of Bethlehem-Alameda Shipyard, Inc., 53 N. L. R. B. 999, 1015-17 (1943) for a discussion of the effect of exclusion of Negroes from membership by a union in determination of the appropriate unit for choice of collective bargaining representative under the Wagner Act.

These cases serve to illustrate that Negroes suffer from discriminations in this field at the hands of unions as well as at those of employers. When the former act with the aid of governmental sanctions the need for governmental protection for the minority becomes all the more apparent.

This refusal of the government to furnish protection for Negro workers is consistent, however, with the pattern of the legal and social status of Negroes. The basic law never authorizes differences based on race; in fact it generally forbids such discriminati but the political institutions, the courts, the legislatures and the executive arm fall far short of achieving that end. As a result, Negroes are denied the right to work, prevented from securing education, their basic civil rights to protection of life and property are ignored, and they are excluded from participation in their government, all in violation of the plain requirements of the organic law.

Under all these circumstances the legal and social status of Negroes in the United States can be best described as that of a minority whose physical presence is tolerated and whose rights receive lip-service, but who rarely secure the protection the Constitution and laws of the United States guarantee to all within its jurisdiction.

The Charter of the United Nations

And its Provisions for Human Rights and the Rights of Minorities

And Decisions already Taken under this Charter

By Rayford W. Logan

30-15a -29

Provisions in international agreements for the protection of human rights or of minorities are a relatively modern concept. For all practical purposes the protection of minorities was first written into an international agreement in the Treaty of Berlin, 1878, which prescribed regulations for the protection of Jews in Romania.. But not even the signatories insisted too strongly upon the strict enforcement of these provisions.[1] Meanwhile, Russia, one of the signatories, and many other nations including the United States continued to treat minorities with little regard for the principles of equality and justice.

This failure to protect by individual treaty the minority within a country undoubtedly made many humanitarians eager to have included provisions in the Covenant of the League of Nations that would guarantee the rights of minorities. But the desire of the Jews, in particular, to have incorporated a clause in favor of religious equality would have made it difficult to exclude a clause, proposed by the Japanese, in favor of racial equality. The adamant opposition of some statesmen to this latter provision resulted in the exclusion of any clause in the Covenant of the League of Nations recognizing human rights or the protection of minorities.[2]

But the situation in Central and Eastern Europe was such that some kind of protection for the minorities there had to be devised. Repeating the procedure of the Treaty with Romania of 1878, the vic-

---

2. David Hunter Miller, My Diary at the Conference of Paris (New York, 1924-1926), passim.

torious Powers imposed treaties upon Poland, Czechoslovakia, Jugoslavia, Romania, Greece, Australia, Bulgaria, Hungary and Turkey which defined the rights of minorities. But these treaties took a new step in that they placed the guaranty of these rights under the supervision of the Council of the League of Nations. One can not fail to be impressed by (1) the contrast between the detailed definition of these rights in these minorities treaties and the absence of such definition in the Covenant of the League of Nations and (2) the obligation imposed upon small and defeated nations to protect their minorities and the failure or refusal of the large and victorious nations to accept those obligations for themselves.[3]

The enforcement of the provisions for the protection of minorities left much to be desired. But the Council of the League of Nations did take one step that should be kept in mind if the machinery for the protection of minorities is to be, at the very minimum, at least as extensive as that which existed after World War I. The Council of the League of Nations voted that any Member of the Council could call the attention of the Council to any infraction or danger of infraction of the minorities provisions. In addition, the Council adopted a resolution on October 22, 1920 as follows: "Evidently this right does not in any way exclude the right of minorities themselves, or even of States not represented on the Council, to call the attention of the League of Nations to any infraction or danger of infraction."[4] This right of petition to a principal organ of the international machinery for the maintenance of peace and security must be, at the very least, maintained.

30-15a-76

The determination of the drafters of the Charter of the United Nations to universalize the protection of human rights and of minorities which had previously rested upon agreements with individual nations is manifest from the language of the charter and the frequency with which that language is repeated. The Preamble states: "We the peoples of the United Nations determined...to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small,..."

Article 1, paragraph 3, employs language that has probably been more frequently quoted than any other expression from the Charter. It states that one of the purposes of the United Nations is "to achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion;..." This last ideal of "respect for human rights and for fundamental freedoms for all, without disctinction as to race, sex, language or religion" is repeated in the identical words three times, namely, in Article 13, paragraph 1 (b), Article 55, and Article 76 (c). Article 62, paragraph 2, uses the same language with the omission of the words "without distinction as to race, sex, language or religion," but with the inclusion clearly implied. Thus, the Charter in six different places reveals the concern of the drafters that there should be no mistaking their determination to establish the ideal of equal treatment of all men and women in all the lands.

Not only did the Charter, by contrast to the Covenant, contain the unequivocal statements just cited, but the Charter also contains the stipulations by which these ideals are to be achieved. The Charter did

not
leave it to the individual nations to decide for themselves whether they accepted the obligation to protect human and minority rights by writing this obligation into a treaty. The Charter, moreover, established the agency by which this protection is to be implemented, namely, the General Assembly (Article 13).

30-15c-77

It should be noted that there is placed upon the General Assembly the obligation to initiate studies and make recommendations for the protection of human rights and fundamental freedoms for all. The Economic and Social Council may make or initiate studies and reports to the same end. This distinction is vital since it makes evident that spokesmen for minorities should be able to present petitions to the General Assembly regardless of action taken by the Economic and Social Council or any of its sub-commissions.

Page 5

Subsequent action by the United Nations also reveals the desire to make effective at the earliest possible date the provisions in the Charter dealing with human and minority rights. The Economic and Social Council, in language almost identical with that of the Preparatory Commission, adopted a resolution of February 16 and 18, 1946 as follows:

"Section A.

"1. The Economic and Social Council, being charged under the Charter with the responsibility of promoting universal respect for, and observance of, human right [sic] and fundamental freedoms for all without distinction as to race, sex, language or religion, and requiring advice and assistance to enable it to discharge this responsibility,

Establishes a Commission on Human Rights

"2. The work of the Commission shall be directed towards submitting proposals, recommendations and reports to the Council regarding:

(a) an international bill of rights;

(b) international declarations or conventions on civil liberties, the status of women, freedom of information and similar matters;

(c) the protection of minorities;

(d) the prevention of discrimination on grounds of race, sex, language or religion.

"3. The Commission shall make studies and recommendations and provide information and other services at the request of the Economic and Social Council.

"4. The Commission may propose to the Council any changes in its terms of reference.

"5. The Commission may make recommendations to the Council concerning any subcommission which it considers should be established.

"6. Initially, the Commission shall consist of a nucleus of nine members appointed in their individual capacity for a term of office expiring on 31 March 1947. They are eligible for reappointment. In addition to exercising the functions enumerated in paragraph [sic] 2, 3, and 4, the Commission thus constituted shall make recommendation on the definitive composition of the Commission to the second session of the Council.

"Section B.

"1. The Economic and Social Council, considering that the Commission on Human Rights will require special advice on problems relating to the status of women,

Establishes a Subcommission on the Status of Women

"2. The subcommission shall report proposals, recommendations, and reports to the Commission on Human Rights regarding the status of women.

"3. The subcommission may submit proposals to the Council, through

the Commission on Human Rights, covering its terms of reference." Paragraph 4 of Section B is mutatis mutandis like paragraph 6 of Section A.[5]

The Economic and Social Council elaborated and refined its machinery and procedures by a resolution adopted on June 21, 1946 as follows:

"Resolution adopted June 21, 1946.

"The Economic and Social Council, having considered the report of the nuclear Commission on Human Rights of 21 May 1946 (document E/38/ Rev. 1)

Decides as follows:

1. Functions

"The functions of the Commission on Human Rights shall be those set forth in the terms of reference of the Commission, approved by the Economic and Social Council in its resolution of 16 February 1946, with the addition to paragraph 2 of that resolution of a new sub-paragraph (e) as follows:

"(e) any other matter concerning human rights not covered by items (a), (b), (c), and (d).

2. Composition

"(a) The Commission on Human Rights shall consist of one representative from each of eighteen members of the United Nations selected by the Council.

"(b) With a view to securing a balanced representation in the various fields covered by the Commission, the Secretary-General shall consult with the Governments so selected before the representatives are finally nominated by these governments and confirmed by the Council.

"(c) Except for the initial period, ~~xxxxxxxx~~ the term of office shall be for three years. For the initial period, one-third of the members shall serve for two years, one-third for three years, and one-

5. Journal of the Economic and Social Council (April 10, 1946), pp. 123-125.

third for four years, the term of each member to be determined by lot.

"(d) Retiring members shall be eligible for re-election.

"(e) In the event that a member of the Commission is unable to serve for the full three-year term, the vacancy thus arising shall be filled by a representative designated by the Member Government, subject to the provisions of paragraph (b) above.

30-152-79

3. Working Group of Experts

"The Commission is authorized to call in ad hoc working groups of non-governmental experts in specialized fields or individual experts, without further reference to the Council, but with the approval of the President of the Council and the Secretary-General.

4. Documentation

"The Secretary-General is requested to make arrangements for:

"(a) the compilation and publication of a year-book on law and usage relating to human rights, the first edition of which shall include all declarations and bills on human rights now in force in the various countries;

"(b) the collection and publication of information on the activities concerning human rights of all organs of the United Nations;

"(c) the collection and publication of information concerning human rights arising from trials of war criminals, quislings, and traitors, and in particular from the Nuremberg and Tokyo trials;

"(d) the preparation and publication of a survey of the development of human rights;

"(e) the collection and publication of plans and declarations on human rights by specialized agencies and non-governmental national and international organizations.

5. Information Groups

"Members of the United Nations are invited to consider the desirability of establishing information groups or local human rights committees within their respective countries to collaborate with them in furthering the work of the Commission on Human Rights.

30-154-80

6. Human Rights in International Treaties

"Pending the adoption of an international bill of rights, the general principle shall be accepted that international treaties involving basic human rights, including to the fullest extent practicable treaties of peace, shall conform to the fundamental standards relative to such rights set forth in the Charter.

7. Provisions for Implementation

"Considering that the purpose of the United Nations with regard to the promotion and observance of human rights, as defined in the Charter of the United Nations, can only be fulfilled if provisions are made for the implementation of human rights and of an international bill of rights, the Council requests the Commission on Human Rights to submit at an early date suggestions regarding the ways and means for the effective implementation of human rights and fundamental freedoms, with a view to assisting the Economic and Social Council in working out arrangements for such implementation with other appropriate organs of the United Nations.

8. Sub-Commission on Freedom of Information and of the Press

"(a) The Commission on Human Rights is empowered to establish a Sub-Commission on Freedom of Information and of the Press.

"(b) The function of the Sub-Commission shall be, in the first instance, to examine what rights, obligations, and practices should be included in the concept of freedom of information and report to the Commission on Human Rights on any issues that may arise from such examination.

9. Sub-Commission on Protection of Minorities

"(a) The Commission on Human Rights is empowered to establish a Sub-Commission on the Protection of Minorities.

(b) Unless the Commission otherwise decides, the function of the Sub-Commission shall be, in the first instance, to examine what provisions should be adopted in the definition of the principles which are to be applied in the field of protection of minorities, and to deal with urgent problems in this field by making recommendations to the Commission.

10. Sub-Commission on the Prevention of Discrimination

"(a) The Commission on Human Rights is empowered to establish a Sub-Commission on the prevention of discrimination on the grounds of race, sex, language or religion.

"(b) Unless the Commission otherwise decides, the function of the Sub-Commission shall be, in the first instance, to examine what provisions should be adopted in the definition of the principles which are to be applied in the field of the prevention of discrimination, and to deal with the urgent problems in this field by making recommendations to the Commission."[6]

The Economic and Social Council also adopted on June 21, 1946, resolutions creating a Temporary Social Commission of eighteen members and giving the Commission on the Status of Women the status of a full commission with a membership of fifteen.[7]

These resolutions demonstrate that there has been no relaxation in the desire to carry out the evident intent of the drafters of the Charter. The crux of the problem lies in the method of implementation.

---

6. Ibid., (July 13, 1946), pp. 520-528.

7. Loc. cit.

The major obstacle in the way of any effective implementation of the evident intent of the drafters of the Charter and of the resolutions of the Economic and Social Council just cited is Article 2, paragraph 7, which provides: "Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement under the present Charter."

Unless the evident determination to protect human and minority rights is to be nullified by this paragraph, the expression "matters which are essentially within the domestic jurisdiction of any state" must be liberally interpreted.

Recent history especially has demonstrated that many questions which could rigidly be classified as "matters which are essentially within the domestic jurisdiction" of a nation fall within the scope of the purpose of the United Nations "to maintain international peace and security" (Article 1, paragraph 1). The treatment of Jews in Germany was one of the causes of the Second World War. The treatment of minorities in Poland and other Central and Eastern European countries is one of the principal causes of international friction today. The existence of a pro-Fascist government in Spain is considered by many Members of the United Nations as a threat to international peace and security. Indians ~~and~~ in Bombay and Calcutta have proclaimed a boycott against pending legislation against Indians in the Union of South Africa and India, as a Member of the United Nations, is protesting against the treatment of Indians in the Union.

One could multiply these instances in which questions that are apparently within the domestic jurisdiction of a nation constitute a threat to international peace and security. It is not surprising, then,

that M. F. Dehousse, the Belgian delegate to the first session of the Economic and Social Council, stated on January 23, 1946: "...if human rights are systematically denied or violated in one or other part of the world; there can be no doubt that such a situation, with which we are only too well acquainted, will, after a more or less brief period of confusion and anarchy, lead again to war."[8]

30-15-83

We submit that the well-nigh universal violation of the principle of "respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion" as far as Negroes are concerned comes within the category of the situation outlined by M. Dehousse.

We believe, therefore, that such questions fall within the scope of the last clause of Article 2, paragraph 7, which adds: "But this principle shall not prejudice the application of enforcement measures under Chapter VII." The first Article (39) of this Chapter stipulates: "The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security."

Page 14

Not only should Article 2, paragraph 7, be interpreted in such a way as to make possible action under the Charter, but spokesmen for minorities should have the opportunity to present to the General Assembly petitions on behalf of those minorities in order to assure that the attention of the Security Council will be directed promptly to such threats to international peace and security.

As pointed out above, p. 2, the Council of the League of Nations adopted on October 22, 1920, a resolution giving minorities the right to call the attention of the League of Nations to any infraction or danger of infraction of the rights guaranteed by the minorities treaties. The Council further voted on October 25, 1920, that it was desirable that

8. Ibid., p. 9.

that the President of the Council and two members appointed by him "should proceed to consider any petition or communication addressed to the League of Nations with regard to an infraction or danger of infraction of the clauses for the protection of minorities. This enquiry should be held as soon as the petition or communication in question had been brought to the notice of the Members of the Council."[9]

We urge that these petitions on behalf of minorities anywhere be receivable by the General Assembly because all Members of the United Nations have the right to speak in the General Assembly. The General Assembly has just voted that there be discussion of the veto. By the same token, we urge that the General Assembly, "the sounding board of the conscience of mankind," be given the fullest opportunity to discuss petitions on behalf of minorities. The General Assembly, except in so far as it is limited by Article 12, could then make a recommendation to the Security Council which, in turn, according to the view presented above could take action in cases where the violation of human or minority rights constitutes a threat to international peace and security.

We note, further, that petitions may be addressed to the Trusteeship Council on behalf of peoples in trust territories. Under the Covenant of the League of Nations this right was not specifically stated, but the Council in January, 1923, adopted procedures by which written petitions were receivable by the Permanent Mandates Commission.[10] Article 87 of the Charter of the United Nations has formalized this right of petition by providing that "The General Assembly and, under its au-

---

9. League of Nations, Protection of Lingusitic, Racial or Religious Minorities, pp. 7-12.

10. For a discussion of this point, see Quincy Wright, Mandates under the Leggue of Nations (Chicago, 1930), pp. 169 ff.

thority, the Trusteeship Council, in carrying out their functions, may... (b) accept petitions and examine them in consultation with the administering authority;..." Moreover, the rules of procedure drawn up by the Preparatory Commission for consideration by the Trusteeship Council, make possible oral petitions.

30-15a - 85

It is important to note that Article 87 clearly stipulates that the General Assembly as well as the Trusteeship Council may receive petitions on behalf of peoples in trust territories. It would be highly inconsistent, to say the least, if petitions on behalf of peoples in independent nations could not be received by the General Assembly.

This right of petition on behalf of minorities to the General Assembly is all the more necessary in view of the action taken by the Economic and Social Council with respect to Article 71 of the Charter of the United Nations. This Article states: "The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations and, where appropriate, with national organizations after consultation with the Member of the United Nations concerned."

Senator Tom Connally, Chairman of the Senate Committee on Foreign Relations and a Delegate to the First Session of the General Assembly, explained on February 16, 1946, to that Session his understanding of what the drafters of the Charter of the United Nations had in mind when they approved Article 71. He declared: "They wanted to make available, they wanted to make available [sic] to the Economic and Social Council advice and consultation from any kind of organization that was worthy

and had information."[11]

But the General Assembly voted on February 16, 1946 that "The Economic and Social Council should as soon as possible adopt suitable arrangements enabling the World Federation of Trade Union and the International Cooperative Alliance as well as other international non-governmental organizations whose experience the Economic and Social Council will find necessary to use to collaborate for purposes of consultation with the Economic and Social Council."[12]

Thus, no national non-governmental organizations were approved by the General Assembly for consultation under Article 71. This defect should be remedied at this second meeting of the First Session of the General Assembly. But in addition, for the reasons pointed out above, petitions on behalf of minorities should be receivable by the General Assembly itself. This receivability by the General Assembly if finally made absolutely necessary in view of the decision of the Economic and Social Council on June 21, 1946, that "It should also be recognized as a basic principle that the arrangements should not be such as to overburden the Council or transform it into a general forum for discussion instead of a body for co-ordination of policy and action, as is contemplated in the Charter."[13]

Since the Economic and Social Council does not desire to provide an open forum for the discussion of human rights and the protection of minorities, it is clear that the General Assembly must not deny this opportunity for free discussion of an ideal that is clearly enunciated and frequently repeated in the Charter of the United Nations.

A Summary of this Petition

by W. E. Burghardt Du Bois

This petition to the Assembly of the United Nations presents a factual and annotated statement of the Legal Rights of American Negroes under the Constitution of the United States and the various states and under the federal and state statutes and court decisions. It shows not simply that basic law has often been unfair but even that legal rights have been denied. We have traced the legal status of American Negroes since the adoption of the Constitution up to the beginning of the First World War; then we have presented the legal and social status of American Negroes from 1917 to the present; finally we have sought to point out the applicability of the Charter of the United Nations to the situation of this minority, because of the provisions of that Charter with regard to Human Rights and the Rights of Minorities.

It remains to put this legal and factual picture into the frame of international and national development so as to show something of the larger trends of thought and action which has brought us to the present status.

It is all a strange and contradictory story. It cannot be regarded as mainly either a theoretical problem of morals or a scientific problem of race. From either of these points of view, the rise of slavery in America is simply inexplicable. Looking at the facts frankly, slavery evidently was a matter of economics, a question of income and labor, rather than a problem of right and wrong, or of the physical differences in men. Once slavery began to be the source of vast income for men and nations, there followed frantic search for moral and racial justification. Such excuses were found and men did not inquire too carefully into either

35-2-207

their logic or their truth.

The twenty Negroes brought to Virginia in 1619, were not the first who had landed on this continent. For a century small numbers of Negroes had arrived as servants, as laborers, as free adventurers. The Southwestern part of the present United States was first traversed by a African Negro explorer. Negroes accompanied early explorers like D'Ayllon and Menendez in the Southeastern United States. But just as the earlier black visitors to the West Indies were servants and adventurers and then later began to appear as laborers on the sugar plantations, so in Virginia, these imported laborers in 1619 were wanted for the raising of tobacco which was the money crop for Virginia.

In the minds of the early planters, there was no distinction as to labor whether it was white or black; in law there was at first no discrimination. But as imported white labor became scarcer and more protected by law it became less profitable than Negro labor which flooded the markets because of British slave traders and because the Negroes were increasingly stripped of legal defense. For these reasons America became a land of black slavery, and there arose first, the fabulously rich sugar empire; then the cotton kingdom, and finally colonial imperialism.

Then came the inevitable fight between free labor and democracy on the one hand, and slave labor with its huge profits on the other. Black slaves were the spear-head of this fight. They were the first in America to stage the "sit-down" strike; to slow up and sabotage the work of the plantation. They revolted time after time and no matter what recorded history may say, the enacted laws against slave revolt are eloquent testimony as to what these revolts meant all over America.

The slaves themselves especially imperiled the whole slave system by running away. It was the fugitive slave more than the revolting slave who threatened investment and income; and the organization for helping fugitive slaves through Free Northern Negroes and their white friends, in the guise of an underground movement, was of tremendous influence.

Finally it was the Negro soldier as a co-fighter with the whites for independence from the British economic empire which began emancipation. The British bid for his help and the colonials against their first impulse had to bid in return and virtually to promise the Negro soldier freedom after the Revolutionary War. It was for the protection of American Negro sailors as well as white that the war of 1812 was precipitated and, after independence from England was accomplished, freedom for the black laboring class, and enfranchisement for the whites and blacks was in sight.

35-2-308

In the meantime, however, white labor had continued to regard the United States as a place of refuge; as place for free land; for continuous employment and high wage; for freedom of thought and faith. It was here, however, that the employers intervened; not because of any moral obliquity but because the Industrial Revolution, based upon the crops raised by slave labor in the Caribbean and in the southern United States, was made possible by world trade and a new and astonishing technique; and finally was made triumphant by a vast transportation of slave labor through the English slave-trade in the eighteenth and early nineteenth century.

This new mass of slaves became competitors of white labor and drove them for refuge into the arm of employers, whose interests were founded on slave labor. The doctrine of race in-

feriority was used to convince white labor that they had right to be free and to vote, while the Negroes must be slaves or depress the wage of whites; western free soil became additional lure and compensation, if it could be restricted to free labor.

On the other hand the fight of the slave-holders against democracy increased with the spread of the wealth and power of the Cotton Kingdom. Through political power based on slaves they became the dominant political force in the United States; they were successful in expanding into Mexico and tried to penetrate the Caribbean. Finally they demanded for slavery a part of the free soil of the West, and because of this last excessive, and in fact impossible effort, a Civil War to preserve and extend slavery ensued.

35-2-309

This fight for slave labor was echoed in the law. The free Negro was systemically discouraged, disfranchised and reduced to serfdom. He became by law the easy victim of the kidnapper and one with the Fugitive slave. The Church influenced by wealth and respectibility was predominately on the side of the slave owners and every effort was made to make the degradation of the Negro as a race final, as the Dred Scott decision proved.

But from the beginning, the outcome of the Civil War was inevitable and this not mainly on account of the predominant wealth and power of the North; it was because of the clear fact that the Southern slave economy was built on black labor. If at any time the slaves or any large part of them, as workers ceased to support the South; and if even more decisively , as fighters they joined the North, there was no way in the world for the South to win.

Just as soon then as slaves became spies for the invading Northern armies; laborers for their camps and fortifications,

and finally produced 200,000 trained and efficient soldiers with arms in their hands, and with the possibility of a million more, the fate of the slave South was sealed.

Victory however brought dilemma; if victory meant full economic freedom for labor in the South, white and black, if it meant land and education, and eventually votes, then the slave empire was doomed, and the profits of Northern industry built on the Southern slave foundation would also be seriously curtailed. Northern industry had a stake in the cotton kingdom and in the cheap slave labor that supported it. It had expanded for war industries during the fighting, encouraged by government subsidy and protected by a huge tarif rampart. When war profits declined there was still prospect of tremendous post-war profits on cotton and other products of Southern agriculture. Therefore, what the north wanted was not the freedom and higher wage of black labor, but its control under such forms of law as would keep it cheap; and also stop its open competition with northern labor. The moral protest of abolitionists must be appeased buy profitable industry was determined to control wages and government.

The result was an attempt at reconstruction in which black labor allied with white labor established schools; tried to divide up the land and to put a new social legislation in force. On the other hand, the power of Southern land owners soon joined with northern industry to disfranchise the Negro; keep him from access to free land or to capital and to build up the present caste system for blacks founded on peonage, intimidation and mob violence.

It is this fact that underlies many of the contradictions in the social and political development of the United States since the Civil War. Despite our resources and our miraculous technique;

despite comparatively high wage paid many of our workers and their consequent high standard of living, we are nevertheless ruled by wealth, monopoly and big business organization to an astounding degree. Our railway transportation is built upon monumental economic injustice both to passengers, shippers and to different sections of the land. The monopoly of land and natural resources throughout the United States both in cities, and in farming districts is a disgraceful aftermath to the vast land heritage with which this nation started.

35-2-31

The result was in 1876 that the democratic process of government was crippled throughout the whole nation. This came about not simply through the disfranchisement of Negroes but through the fact that the political power of the disfranchised Negroes and of a large number of equally disfranchised whites was preserved as the basis of political power, but the wielding of that power was left in the hands and under the control of the successors to the planter dynasty in the South. There remained then a block of one hundred and thirty-four electoral votes and votes in Congress which could not be subjected to democratic control or changed in accord with democratic methods. It made party government ineffective since a Third Party could never hope for success with the Bourbon South tied to reaction.

The federal government has continually cast its influence with imperial aggression throughout the world and withdrawn their sympathy from the colored peoples and from the small nations. It has become through investment a part of the imperialistic block which is controlling the colonies of the world. When we tried to join the allies in the First World War, our efforts were seriously interfered with by the assumed necessity of ex-

tending caste legislation into our armed forces. It was often alleged that American troops in France spent more time trying to keep Negro troops in subordination than in fighting the Germans. During the Second World War, there was, in the East, in Great Britain, and on the battlefields of France and Italy, the same interference with military efficiency by the necessity of segregating and wherever possible subordinating the Negro personnel of the American army.

35-2-812

Now and then a strong political leader has been able to force back the power of monopoly and waste, and make some start toward preservation of natural resources and their restoration to the mass of the people. But such effort has never been able to last long. Threatened collapse and disaster gave the late president Roosevelt a chance to develop a New Deal of socialist planning for juster distribution of income under scientific guidance. But here and in each case where reaction intervened, it was a reaction based on a South aptly called our "Number One social problem": a region of poor, ignorant and diseased people black and white, with exaggerated political power in the hands of a few resting on disfranchisement of voters, control of wealth and income, not simply by the South but by the investing North.

This paradox and contradiction enters into our actions, thoughts and plans. After the First World War, we were alienated from the proposed League of Nations because of sympathy for imperialism and because of race antipathy to Japan and because we objected to the compulsory protection of minorities in Europe. We joined Great Britain in determined refusal to recognize equality of races and nations; our tendency was toward isolation until we saw a chance to make inflated profits from the want which came upon

the world. This effort of America to make profit out of the disaster in Europe was one of the causes of the depression of the thirties.

As the Second World War loomed the federal government despite the feelings of the mass of people, followed the captains of industry into attitudes of sympathy toward both fascism in Italy and naziism in Germany. When the utter unreasonableness of fascist demands forced the United States in self-defense to enter the war, then at last the real feelings of the people were loosed and we again found ourselves in the forefront of democratic progress.

35-2-313

But today the paradox again looms after the Second World War. We have recrudescence of race hate and caste restrictions in the United States and of these dangerous tendencies not simply for the United States itself but for all nations. When will nations learn that their enemies are not usually without but within? It is not Russia that threatens the United States but Mississippi; not Stalin and Molotov but Bilbo and Rankin; internal injustice done to one's brothers is far more dangerous than the aggression of strangers from abroad.

We appeal then to the United Nations to step to the very edge of their authority in protecting this minority of citizens in the United States, in order that the world may be at peace. We point out that the recent killing of a nephew of the ruler of a sovereign state by a Florida policeman, who thought that he was an American Negro and could thus be murdered with impunity, illustrates the danger of this situation. The United States has explicitly and clearly refused to defend the rights of its own citizens in a wide field of cases. Consequently in the case of foreigners, especially of those whose skin shows any pigment, there is always the danger

that they will be discriminated against, insulted, assaulted and killed, in this land because when this happens to an American citizen of Negro descent, the United States admits that it exercises only limited jurisdiction. Perhaps it would not be too much to ask the United Nations through the world court to take the protection of such deliberately unprotected citizens under international jurisdiction and control.

35-2-814

We appeal to the world to witness that the attitude of America toward American Negroes is far more dangerous to mankind than the Atom bomb; and far, far more clamorous for attention than disarmament or treaty. To disarm the hidebound minds of men is the only path to peace; and as long as Great Britain and the United States profess democracy with one hand and deny it to millions with the other, they convince none of their sincerity, least of all themselves. Not only that, but they encourage the aggression of smaller nations: so long as the Union of South Africa defends Humanity and lets two million whites enslave ten million colored people, its voice spells hypocrisy. So long as Belgium holds in both economic and intellectual bondage, a territory seventy-five times her own size and larger in population, no one can sympathize with her loss of dividends based on serf labor at twenty-five to fifty cents a day. Seven million "white" Australians cannot yell themselves into championship of democracy for seven hundred million Asiatics.

Therefore, Peoples of the World, we American Negroes appeal to you; our treatment in America is not merely an internal question of the United States. It is a basic problem of humanity; of democracy; of discrimination because of race and color; and as such it demands your attention and action. No nation is so great that the world can afford to let it continue to be deliberately unjust, cruel and unfair toward its own citizens.

INTRODUCTION (W.E.B. DuBois)

Page 1, line 17 change to "proscription"

" " " 22 May I suggest "and in the air" be added to "on land and sea".

" 2 " 3 Comment: Slaves were not "real estate" but personal property or chattels personal.

" 3 " 8 Change to "28". Query that sentence: Is it completely accurate to charge the U.S. with racial discrimination and exploitation for 328 years when the fine words in the Declaration of Independence are less than 200 years old.

" 7 Strike "to date" in 1946 lynch figures.

" 8 " 8 The correct name of FEPC is "Fair Employment Practice Committee". Note: All reference to FEPC throughout these chapters have erroneously added an "s" to the word "Practice".

" 8 Biographical sketch of Ming should spell out U.S. Office of Price Administration.

CHAPTER I (Konvitz)

Although I am sure Konvitz wants his chapter to be uncluttered with lengthly citations, I think every case he cites should include somewhere in the chapter the volume and page reference.

Page 1 Buchanan v. Warly I think "Warly" is spelled "Warley".

Page 2 line 6 Typographical error. Add "a"

" 2 First sentence last paragraph is very ambiguous. The word "government" is not clear. Also the courts and instruments of the state do "enforce racial segregation". What this sentence probably means is that while courts are prohibited from enforcing statutes or ordnances providing for residential segregation, private agreements having the same purpose are given validity.

Pages 11-14 Protection of Civil Rights by Federal Law

I think we must be very careful about accepting the theory that the Department of Justice does not have sufficient authority under existing laws (Sections 51 and 52 of Title 18, U.S. Code) to safeguard civil rights. The Department has virtually nullified Section 51 by administrative interpretation and is anxious to exculpate itself with respect to its abominable record in the whole field.

A number of people who have given some thought to this question, including Mr. Ming, regard the statements here attributed to Attorney-General Clark and his assistant, Caudle, as being an alibi and a dodge. A number of people who will attend the meeting called in January by the National Lawyers Guild on civil rights will come prepared to contend that the Justice Department has more legal authority than it admits.

I would strongly recommend that Thurgood Marshall and others be consulted before final approval be given to Section 2 of Mr. Konvitz's chapter.

Page 12 line 7 Change "belong" to "before". I think also that this paragraph should cite the case relied on.

CHAPTER III (William R. Ming)

Page 11, sentence beginning line 4 is not clear. Needs punctuation between the word "space" and "to".

" 20 Fair Employment Practices. "S" should be stricken wherever FEPC appears in chapter.

A PETITION TO THE HUMAN RIGHTS COMMISSION OF THE SOCIAL AND ECONOMIC COUNCIL OF THE UNITED NATIONS; AND TO THE GENERAL ASSEMBLY OF THE UNITED NATIONS; AND TO THE SEVERAL DELEGATIONS OF THE MEMBER STATES OF THE UNITED NATIONS

1949

Mimeographed petition and draft manuscript

41-8B-4

A PETITION TO THE HUMAN RIGHTS COMMISSION OF THE SOCIAL AND ECONOMIC COUNCIL OF THE UNITED NATIONS; and to the GENERAL ASSEMBLY of the UNITED NATIONS; and to the SEVERAL DELEGATIONS OF THE MEMBER STATES of the UNITED NATIONS.

The signers of this petition wish to lay before the Assembly of the United Nations, a case of injustice done by the United States of America against its own citizens. We are bringing this case to your attention and begging you to give it your earnest thought and discussion, not because we are disloyal to this nation, but especially because we are citizens of this land and loyal to the freedom and democracy which it professes far and wide to observe.

This case of callous injustice is typical of the treatment which thousands of our fellows receive, who have slaved and toiled and fought for this country and yet are denied justice in its courts or consideration in its deeds.

In the state of Georgia alone, where this latest injustice is taking place, over 500 Negroes in the last sixty years have been publicly lynched, by mobs without trial; the latest victim being murdered this very year. Last year an election was held in the state in which the man elected governor publicly promised to break the laws of this land and deprive a million black citizens in his state the right to vote. In this state a legal caste system is in vogue which condemns American citizens to unequal education, unequal treatment for disease, segregates them in living quarters and discriminates against them in the right to work at decent wage. The governor promised to maintain this 'race segregation' " at all hazards."

In this same state of Georgia, the following incidents occurred in 1947; a Colored mother of 14 children, 12 of whom are living, lost her husband, Jackson Ingram, a share-cropper, who died in August.

41-813-5

With her children she tried to carry on the tilling of her farm in Schley county which was rented from C.M.Dillinger, a white man living in the town of Americus. Her neighbor was a white man named John Stratford, also a share-cropper. No fences were provided between the two farms or even between the farms and highway and often cattle strayed across the boundaries. On November 4, 1947 Stratford called the woman, cursed her and told her to drive hers mules and pigs off his farm. She hurriedly left her washing and children and ran to his farm to find her stock. She found that her mule and pigs, and also stock belonging to her landlord, were on Stratford's place. As she entered his lot to drive them back, he met her, armed with a shotgun and began to pound her over the head with it. She begged him to stop and seized the gun. He kept beating her, until the blood ran, with a knife which he tried unsuccessfully to open. Her two little sons 13 and 12 stood by crying and pleading, until at last a third son 16, ran from the house, seized the gun, struck Strattford over the head with it and Stratford died.

Mrs. Ingram immediately reported the death to the sheriff. She and her two oldest sons were arrested and put in jail, leaving nine little children alone in the cottage. On January 26, 1948, she and her two sons were tried by a jury on which no Negro sat, and sentenced to be hanged for murder. Her landlord, Dillinger, seized all her stock, tools and growing crops. Colored people of the state and nation rallied to her defense and finally, April 5, the same court which sentenced her to death, changed the sentence to life imprisonment. This sentence the three are now serving.

This crucifixion of Mrs. Rosa Lee Ingram is of one piece with Georgia's treatment of Colored women. In 1946, twenty-five white lynchers in Walton county, Georgia killed two untried colored men, and then wantonly shot their wives to death because the women recognized the murderers. No one has ever been indicted nor punished for this outrage.

41-818-6

Thus it is clear that the part of this nation which boasts its reverence for womanhood is the part where the women of Africa were slaves and concubines of white Americans for two and a half centuries; where their daughters in states like Virginia became human brood mares to raise domestic slaves when the African trade stopped ; and where their granddaughters became mothers of millions of mulattoes.

Today these colored women and their children bear the chief burden of the share-cropping system, where Southern slavery still lingers. The women work the fields for endless hours and their children are driven from their poor schools into the cotton fields under labor contracts which disgrace humanity and debar them from all social security or wage floors. Thus pauperism, compulsory illiteracy and disfranchisement by poll taxes, make the rural Negro family the most depressed in the world. It was such a family that Mrs. Rosa Lee Ingram tried to defend and for this she toils for life in a Georgia prison camp.

Schley County has 3,000 colored and 2,000 white inhabitants, all native born and rural. Only 455 votes were cast in the county in 1942 and of these only 100 were colored. The colored people are almost totally disfranchised, hold no political offices of any kind, never serve on juries, and work mostly as share-croppers on land owned by whites. Of the 750 farms 600 are worked by tenants. The money income of Negro families is probably less than $200 a year; their schools are poor and short in term. Twenty-four dollars per child is spent for white children and four dollars for colored, white school buildings are worth $1000 each and colored $600. Four Negroes have been lynched in this county without trial since 1900. It can be affirmed that in this county no Negro " has any rights which a white man is bound to respect."

In this case , we submit, every canon of law and decency, much less of justice has been violated. A boy of 16 struck an armed white man who was attacking his

41-88-7.

mother. They, mother and two teen-age sons were tried by a jury of hostile whites, with no representative of their race. Their meager property was seized and the children are today subsisting on charity.

The Federal government has made no move; the governor of Georgia has done nothing. The President of the United States, when approached by a delegation from 8 states, would not talk to them and through his secretary said he had never heard of the case. The Chief of the Civil Rights Division of the United States Department of Justice, A.A. Rosen said: " This sort of thing is in the papers every week. It's shocking to me personally, but it is a matter to be settled internally by the State. " He pleaded lack of jurisdiction and no available funds.

The formula upon which this nation rests in the ignoring and mishandling of cases like this, is the legal fiction that a sovereign government can if it will renounce all responsibility for securing justice to its citizens and leave such matters entirely in the hands of subordinate and irresponsible local corporations, even when such bodies openly transgress the law of the land. In the face of this, the United States of America declares its practice of democracy before the world and sits in the United Nations which has promised in its fundamental Charter to promote and encourage " respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion."

We are painfully aware that allmatters of this sort, have by vote of the General Assembly been put under the jurisdiction of the Social and Economic Council ; and that this Council has established the Commission on Human Rights to consider such cases. But the world knows what the Commission on Human Rights has done or rather has not done to fulfill its functions. We arenevertheless handing this petition to the Commission which in this case as in the past will either bluntly refuse us the right to present it, or will receive the document and hide it in

41-58-8

its files as though it represented treason or revolution.

We will not rest with this attempt to conceal injustice and deny the right of petition. We charge that the Human Rights Commission under Eleanor Roosevelt its chairman and John Humphreys, its secretary, have consistently and deliberately ignored scientific procedure and just treatment to the hurt and hounded of the world. Instead of receiving complaints and giving them carefull investigation and, when facts are ascertained, world publicity, they have buried the complaints and drowned themselves in a flood of generalities by seeking to re-write in verbal platitudes of tens of thousands of words, those statements on Human Rights which the American Declaration of Independence and the French Declaration of the Rights of Man set down a century and a half ago in imperishable phrase which no man can better today.

Hiding in this forest of verbiage, the Commission on Human Rights has worse than wasted three fatal years, until no sufferer has the slightest confidence in either its ability or honest intentions. It is not so much a question of the phraseology of an universal treaty on which all nations can agree, as the much more practical matter as to how far nations are living up to their own laws and professions. Even members of the Commission are becoming disgusted at the tactics of delay. Johnathan Daniels has recently said: " That if some means of grappling with the practical problem of petitions was not found, and the sub-Commission devoted itself only to theorizing in 'textbook style', its members might just as well quit work and go home."

The sincere and scientific way to work out a Bill of Rights would be to examine carefully and thoroughly specific instances of injustice and from such basis of proven fact to build up methods of prevention and redress; instead of reverting

41-813-9.

to the outmoded scholasticism of seeking universal truth and eternal verities.

We appeal in this case to the Social and Economic Council and ask them to insist that the fundamental right of petition be affirmed and enforced in the Human Rights Commission. And Further than this, we appeal to the General Assembly itself and to every member of it, to place on the agenda of its next meeting and publicly discuss, the relation of democracy in the United States of America to its citizens of Negro descent. We affirm that if the Assembly can and should discuss at length matters affecting the fifteen million Jews of the world, the thirteen millions of Czechoslavakia, the seven and a half million people of Greece; the ten millions of Arabia, the six millions of Austria, and the four million of Finland, it might find a half hour to discuss fifteen million of Negro Americans without disrupting the Charter of the United Nations or affronting the dignity and sovereignty of the United States.

Any nation has the right by law to curtail, for the greater good of the nation, the individual liberties of its citizens; but no country has the right to break faith with itself and deny its citizens rights which its own laws guarantee and its own declarations proclaim; and when it does this, is not this action a matter of International concern? Division of powers between nation and locality may satisfy the metaphysics of practical administration but it cannot divest a nation before the world of its responsibility for elementary justice to its citizens. This was admitted years ago when Louisiana lynched Italians and arrogantly refused punishment or reparation. The nation after years of vain quibbling was compelled by International law to pay damages to their kin. The state of Georgia with its illiteracy and lawlessness is not a nation in the eyes of the United Nations, but the United States of America is a nation and as such bears sole responsibility of the miscarriage of justice in the case of Mrs. Rosa Lee Ingram.

41-813-10

It may semm a very little thing for 59 nations of the world to take note of the injustice done a poor colored woman in Georgia, when such vast problems confront them; and yet after all, is it in the end so small a thing to " do justly, to love mercy and to walk humbly" in setting this mad world aright?
" Not by might, nor by power, but by my spirit: " Saith the Lord:

We Americans can send Communists to jail and drive honest citizens to sucicide but can we stand before the world and defend the life imprisonment of Mrs. Rosa Lee Ingram as an example of the democracy which the United Nations is teaching?

The undersigned colored women of the United States, Legal citizens, voters, wives and mothers have commissioned Dr. W.E.B. DuBois to draw up this petition, because he has devoted much of his life to the cause of Negro equality.
We endorse and subscribe to his words and urge action on the part of all nations who have signed the Charter of the United Nations.

The signers of this petition wish to lay before the Assembly of the United Nations a case of injustice done by the United States of America against its own citizens. We are bringing this case to your attention and begging you to give it your earnest thought and discussion, not because we are enemies of this nation, but rather because we are citizens of thisland and loyal to the freedom and democracy which it professes far and wide to observe. We bring this case of ~~cruel and~~ callous injustice to your attention, because it is typical of the treatment which thousands of our fellows, who have slaved and toiled and fought for this country and yet are denied justice in its courts or consideration in its deeds. In the state of Georgia alone, where this latest injustice is taking place, our 500 Negroes in the last last 6 years, the last victims being murdered ~~last~~ this very year when ~~men and women were murdered in broad daylight and no single person ever indicted or even punished for the crime.~~ Last year an election was held in thsi state in which the man elected governor publicly promised to break the laws of this land and deprive a million such citizens of the right to vote. In this state a caste system is in vogue which condemns American citizens of ~~equal~~ unequal education, unequal treatment for disease, ~~in and~~ segregates them in living quarters and discrimination against them in the right to work at decent wage.

In this same state of georgia, the following facts occurred in 1948.

A black mother of I4 children, I2 of whom are living, lost her husband a share-cropper who died by death in August, 1947. With her children, she tried to carry on the tilling of her farm in the neighboring county town of Schley which she rented from a white physician, living in Americus. Her neighbor was a white tenant named Stralford also a share-cropper. No fences were provided between the two farms, or even between the farms and the highway, and often cattle strayed acroos the boundaries. On Nov. 4, 1947, Stralford called the black woman, ~~waylaid~~, cursed her and told her to drive her mules and pigs off his farm. She hurriedly left her washing and children, and ran to his farm to find her stock. He met her, ~~He was~~ armed with a shotgun and began to pound her over the head with it. She begged him to stop and seized his gun. He kept beating her with a knife, which he used often, until the blood ran. Her two sons of 13 & 12 stood crying and pleading, until at last the oldest, 16, ran from the house seized the gun, struck Stralford with it over the head with it and killed him.

Mrs Ingram immediately reported the death to the sherif. She and her two oldest sons were arrested and put in jail, leaving 10 children of alone in the cottage. On Jan 26, 1948 she and her two boys were tried by a jury on which no Negro sat, and sentenced to be hanged. ~~Her landlord without court order~~ seized all her stock, tools and growing crops for murder. Black folk of the state and nation rallied to her defence and finally, Mrs I the same court which sentenced her to death changed the sentence to life imprisonment. This sentence the three are now serving.

In this case, we submit, every canon of law and decency, much less justice has been violated ~~Two children~~ killed an armed man who was brutally attacking their mother. They were ~~hastily~~ tried by a jury composed of hostile whites with no representative of their race. Their meager property was seized and the children are today existing on ~~the~~ charity ~~of black folk throughout the United States.~~ The Federal government has made no move; the Governor of Georgia has done nothing, and the President of the United States when approached by delegates from ~~8~~ state would not ~~receive~~ them and had never heard of the case ~~The chief of the Carnegie Endowment for U.S.~~ The Department of Justice ~~admitted~~ said

The ~~legal~~ formula upon which this nation rests in the ignoring and mishandling of this ~~case~~, is the legal fiction that a sovereign government can if it will renounce all responsibility for securing justice to its citizens and leave such matters entirely in the hands of subordinate and irresponsible corporations, even when such bodies openly transgress the law of the land. And in the face of this, the United States of America ~~can advertise~~ declares its practice of democracy befroe the world and sit in the United Nations which has promised in its fundamental Charter ~~to promote and encourage~~

35-3-512

We are painfully aware that all matters of this sort, have by vote of the General Assembly been put under the jurisdiction of the Social and Economic Council; and that this Council has established the Commission on Hum an Rights to consider such cases ~~like this.~~ But the world knows what the Commission on Human Rights has done or rather what it has not done to fulfil its functions. We are handing this petition to the Commision ~~This Commission~~ which in ~~this~~ this case as in the past will either bluntly refuse us the right to present it ~~petition~~ or will receive the ~~it~~ document and hide it in its files as though it represented treason or revolution.

We will not rest with this attempt to subborn injustice and deny the right of petition. We charge that the Human Right Commission under Eleanor Roosevelt its chairman and John Humphreys do secretly have consistently and deliberately ignored scientific procedure and just treatment to the hurt and hounded of the world. Instesd of receiving just complaints and giving them careful investigation and, when facts are ascertained, world publicity, they have buried the complaints and drowned ~~lost~~ themselves in in a flood of generalities ~~using tons of thousands of words~~ by seeking to re-wriete in verbal platitudes those statements of human rights which the American Declaration of Independance and the French Declaration of the Rughts of man

35-3-216

The chief of the Civil Rights Division of the United States Department of Justice, A.A. Rosen said: "This sort of thing is in the papers every week. It's shocking to me personally, but it is a matter to be settled ~~by the states~~ internally by the State" He pleaded lack of jurisdiction and no available funds.

35-3-218

to promote and encourage " respect for human rights and for fundamendal freedoms for all without distinction as to race, sex, language and or religion "

We appeal in this case to the Social and Economic Council and ask them to insist that the fundamental right of petition be affirmed and enforced in the Human Rights Commission. And further than this we appeal to the Assembly itself and to every member of it [illegible] to discuss publicly the relation of democracy in the United States of America to its fifteen millions citizens of Negro descent. We affirm that if the Assembly can discuss at length matters affecting the the I5 million Jews of the world, the seven and a half people of Greece; the I0 milli mnxs of Arabia, the six millions of Austria, the 8 millions of Belgium, the I3 millions of Czechoslovakia, the four millions of Finland the 9 millions of Holland and the 4 millions of Switzerland, it might find a half hour to discuss I5 millions of Negro Americans without disrupting the United Nations charter or affronting the dignity and safety of the United States

35-3-219

Any nation has a right by law to curtail the individual's liberties for the greater good of the nation; but no country has the right to break faith with itself and deny its own citizens rights which its own laws guarantee and it own declaration proclaim and when it does this, is not the matter of international concern

35-3-312

Division of powers between nation and locality may satisfy the metaphysics of law, but it cannot divest the nation of its responsibility for elementary justice before the world. This was admitted years ago when Louisiana lynched Italians and the nation after vain quibbling was compelled to pay damages to their kin. The state of Georgia with its illiteracy and lawlessness is not a nation in the eyes of the United Nations. The United States of America is a nation and as such bears sole responsibility of the miscarriage of justice in the case of Rosa Ingram

Iti may seem a very little thing for the nations of the world to take note of the injustice done a little black woman in Georgia, when such vast problems confront the world; and yet it may not after all prove in the end so small a thing to "do justly and to love mercy and to walk humbly" in setting this mad world aright

We can send Communists to jail and drive honest citizens to suicide but can we stand before the world ad defend the life imprison of Rosa Ingram as an example of the democracy we are teaching the world?

35-3-313

It is not so much a questi on of the phraseology of an universal treaty on which a all nations can agree as the much more practical question as to how far a nation is liv ing up to its own laws and professions

The sincere and scientific way to work out a bill of rifghts is to examine care fully and thoroughly specific instances of injustice and from such basis of proven fact to build up methods of prevention and redress instead of reverting to the outmoded scholasticism of universal truthe and eternal verities

PETITION OF RIGHT TO THE PRESIDENT, THE CONGRESS AND THE SUPREME COURT OF THE UNITED STATES OF AMERICA

c. 1957

Written by W. E. B. Du Bois

PETITION OF RIGHT

TO THE PRESIDENT,
THE CONGRESS AND THE SUPREME COURT OF THE UNITED STATES OF AMERICA:

We, the citizens of the United States, do hereby reaffirm and instruct you to defend the rights established by the Declaration of Independence of 1776 and the Constitution, comprising its original body, the Bill of Rights and other amendments thereto, and including the right of the people through Congress as our representative to amend such provisions as may be deemed necessary. One by one these principles have become stepping stones in the advance of civilization and it is our intention to continue this advance and not to allow this nation to go backward or to weaken itself. We intend not to give up one inch of this goodly heritage but to secure and improve upon it as the foundation for the future, whatever economic changes may come. We intend to see that changes should be brought about by constitutional planning and that all the constitutional rights of the citizens shall be retained during and after such changeover.

42-53-2

First, it is one purpose of this Petition to stand behind the Supreme Court in its recent decisions which have defended the Constitution and Bill of Rights against attack. Nothing could have done more to revive the confidence of this nation in its own heritage. We support the decisions of the Supreme Court in the McCollum, Everson, Watkins, Halperin, Jencks, Nelson, Cole and Yates cases.

Second, we agree with the American Civil Liberties Union that the decision in the obscenity case of June, 1957, infringes on the 1st Amendment. We agree with the dissent of Justices Douglas and Black that "The First Amendment was designed to preclude courts as well as legislatures from weighing the values of speech against silence." The right to regulate obscenity is one of the rights society retains for itself and is not a federal function, though anti-social obscenity must be curbed by social means. The tendency of government to interfere with mental privacy must not be encouraged. Any tampering with the 1st Amendment or any other of the Bill of Rights in this time of confusion and antagonisms between minorities of race, creed or color is too dangerous to the maintenance of democratic rights to be permitted.

Third, we are on the eve of economic changes caused by new forms of atomic energy, automation, competition with socialist countries, saturation of foreign markets for capital and other goods as at present invested, economic recession at home, and various other causes. It is therefore necessary to have a program for constitutional planning so the problems can be worked out during the process of economic changeover by means of a fuller democracy for all groups, which is the only way to guarantee progressive changes rather than retrogressive ones due to the uneven levels of development in this country. We, therefore, ask that all political parties and minority groups take their stand upon the constitutional path in order to work out their conflicts in a civilized, non-violent manner. Armed conflict between groups or between the government and the citizens in this day of modern weapons is unthinkable. We remind the executive that the standing army is not to be used against the citizens of this country peaceably assembled according to their rights under the 1st Amendment. This army is supported by the taxpayers only for use against a foreign foe, not for use against themselves.

Fourth: War and Peace. We ask for an immediate end to nuclear tests as a clear and present danger to health and to good-will between nations. An ending of nuclear tests has been asked by the Pope, by the Quakers and other religious bodies, by thousands of scientists and other citizens in various countries, as well as our own. We further ask that our government bring pressure on the United Nations to abolish the use of all nuclear and atomic weapons in war, as well as of bacteriological warfare, the use of poison and lethal gasses, and any other cruel and unusual weapons not heretofore used in conventional warfare. Such means directly menace women, children and non-combatants and are massacre not instruments of warfare as such. As a next step, we ask that our government bring pressure upon the United Nations to have each country renounce war as an instrument of national policy.

Fifth: As an alternative to war and economic depression, we propose to strengthen this country by gradually planning its distribution and production through constitutional means, thereby providing peace and prosperity by the same measures, and abolishing the causes of war, depression and foreign aggression. We submit that this nation is being weakened and is being handicapped by letting other powers advance faster than we because they take advantage of public ownership of the means of production and distribution, while we are paralyzed by cnnflicts between classes, castes, races, creeds and outmoded means of production.

As an alternative to war, we propose a planned program of foreign trade with all countries where such trade would benefit the American economy at home. We suggest that investment of American capital be made through means of the United Nations in order to remove the stigma of imperialism, which is causing hatred of our country abradd and getting us involved in foreign entanglements leading to war and aggression.

42-58-73

Sixth: We ask that atomic energy be now directed toward peaceful purposes for the benefit of the American people, and that production and distribution should be under the ownership and control of the government solely, with strict regulation of such waste materials and radiation so as not to in any way threaten the health of the public. We ask that solar energy be defeloped rather than atomic energy, in any cases where there is the possible danger to human life and health, now or in future. We ask that Congress pass a bill appropriating funds for the development of nuclear and solar energy for domestic use by the government only, and withdrawing subsidy from privately owned corporations as soon as this can be arranged in fairness to such corporations. We submit that this nation is lagging behind the rest of the world in economic progress because the government is refusing to develop power for public use.

At the same time, we ask that Congress appropriate adequate funds for hydroelectric development and building of dams in the west and the south and elsewhere as required, such facilities to be owned and operated by federal or locally elected authorities, as in the case of TVA. Government subsidies are to be withdrawn from power utilities privately owned, and these funds are to be used for publicly owned plants. Better planning will reduce costs to the users, including industry.

Seventh: As part of a constitutional, planned economic program, we ask that Congress pass bills providing for public ownership and operation of such sick industries as the corporations find themselves unable to operate at a profit, at the same time withdrawing public subsidy from such sick industries as cannot operate independently of the aid of the taxpayers' funds. This is to be done legally in negotiation with the present owners with "just compensation," as provided by the 5th Amendment. Other industries will benefit from the rationalization and improvement of service under public operation and ownership in the case of public utilities and key industries. This would be indirectly another form of subsidization to private industry, but in this case it would be leading toward a socially owned and planned economy instead of to more sickness and dependence upon government of private industry anarchically unplanned or artificially regulated by monopoly prices.

In case of public ownership, all employees of the sick industries are to be taken care of by federal aid or state aid in case the state is the operator. Pensions, unemployment insurance, health and welfare aids, are to be provided, so that no employe or his family will suffer through the changeover but will be benefitted. Stock and bond holders of the corporation will then hold safe government bonds instead of a precarious investment in a degenerating company for a limited time, and these bonds can be paid when due or if desired may be renewed if the government finds this advisable.

1. Public Ownership and operation of the railroads. The railroad system is a sick industry. We ask that Congress authorize negotiations for the purchase of such roads as are unable to provide adequate public transportation and profit for the investors.

At the same time, Congress is to withdraw subsidies from privately ownexd railroads, such funds to be used to improve its own public transportation system. This is to be done gradually giving the railroads time to put their affairs in order and to stand on their own feet if they wish. In nearly every country but ours government ownexs the railroads.

2. Public transportation is a sick industry in every field. Itis breaking down to the point where the public welfare is menaced. Instead of subsidizing the private corporations which have proved their inability to provide for the public welfare in this field, federal and local governments are asked to purchase the sick utilities and to operate them for the public good. This includes bus systems, some freight systems, commuter systems by rail and bus, subways, etc. Toll roads are to be abolished and a system of free federal and state highways opened to traffic. The federal government will have to assume the obligations under the present bond issues for toll roads, by negotiation.

At the same time, the government must guarantee to the public new research into cnntrol of poisonous diesel gas, monoxide exhaust gas from motors, new forms of electric power for motor vehicles, etc. to remove the health hazard in city and suburb.

3. Agriculture is a sick industry, which is part of the unbalanced economy now being heavily subsidized by government in almost every field but without intelligent planning for the public good and for the future. To help solve the emergency, in which the family size farm is being destroyed and the farm families driven to the cities to increase the unemployment problem, we propose that the government withdraw its aid from the big farms and corporate farm enterprises which use cheap laborand are able to purchase in wholesale amounts, with regulations to cut production by such big farms, and with strict enforcement of the minimum wage law to be inclusive of farm workers, including migrants and all foreign elements from Mexico, Puerto Rico etc.

Production should be cut at the top levelof the big farms. At the same time, the family-size farm must be preserved during this time of emergency until it can be integrated into a planned economy in which it will have its own place permanently as the traditional Jeffersonian American way of life, preferred by many persons to any other. This is possible now due to the fact that the problem is no longer one of production but of distribution. This fact is recognized even by the Communist Party, and its resolution on June 20, 1957, is a warning to those who wish to see the small-farmer dispossessed in this country and will do nothing to save him: "The DMarxists recognize a long-range trend in agriculture, inevitably to force the small and even moderately successful medium-sized family farm operator off the land. They propose to resist this trend and its effects, however, doing so in alliance with all non-monopoly sections of the agricultural population and labor... Marxist analysis....puts Communists out in front as defenders of the traditional 'family farm'--a startling fact to those who have misrepresented the Communists as desiring to deprive farmers of their land." The Republicans and Democrats should be willing to do as much for the oldest American way of life among their own voting constituents.

As an immediate measure, we upropose to save the family-size farm by providing federal aid in loans through a cooperative bank, to enable the small farmer to establish a network of marketing and supply cooperatives to cut costs and get more quickly from farm to table with perishable products, where vitamines are lost by storage and transit. We propose that these health-food cooperatives be established in cities and towns so the citizens who realize the need for safe foods in vitamine-fresh condition will have a source available and farmers nearby their quick market.

We further propose that the family-size farm should consentrate on producing foods for health particularly, and that as members of a cooperative they should guarantee to the public certain standards of production, which are at present being violated especially by Big Farms, using chemical fertilizers and forced methods of hormone production for milk, eggs etc. which are harmful to man and animal alike. These health-food cooperatives should handle only organically fertilized products and products guaranteed not to be sprayed with poisonous substances, insecticides etc.

We propose also that farmers should be given government loans for cooperative operation of farms, so they can purchase machinery at wholesale prices as the big corporation farms now do, as well as getting their other purchases wholesale. Since 1950 there has been a decline of over a third of the smallest commercial farms, and an increase of more than a fourth of the largest commercial farms.

In other words, we propose federal aid to the family farm in one way or another, and that in future this should be a part of the economy of the country, either privately owned and operated by a man and his family, or by aid of cooperative methods.

In the south particularly, the small farm still exists in many regions, but monopoly methods of production, pricing and distribution are pushingthe small farmers out of existence.

42-53-25

4. Cooperatives are a good democratic base for any form of government, and should be encouraged in all fields, particularly in case ofthe unemployed or in the case of specialcraftsmen in handicraft industries. Automation in big factories makes the need for a new form of operation of small enterprises imperative if the hand skills are to be kept alive at all. Cooperatives can also make use of automation in many cases, while the ownership is in the group.

As part of the rationalization of agriculture, we ask that Congress investigate the operation of the Pure Food and Drug Laws, and add new safeguards, particularly in the case of public restaurants and in the processing and refining of foods. Instead of permitting dangerous substances to be used to keep food from spoiling, we propose that regulations for providing "pure food"should include hastening the fresh product to the table, instead of providing storage qualities for it. Research must be done into the effects of insecticides, preservatives, etc. and vitamine-loss, and the results made available to the public.

Eighth: Federal Aid to Education. Public Education is also a sick part of our social system--so is private education, which says it needs public funds to keep going. The Federal Aid to Education program must be put into effect, with aid for building schools as well as for other facilities, to be given to all public schools without restrictions but to no sectarian or parochial schools, as this is in violation of the separation of church and state of the 1st Amendment. A break-upof public education is a reversion to semi-feudal conditions where groups polarize around various centers in opposition to each other with no common form of civilization, in which children are trained. A breakdown of the public school system is a sign of the breakdown of our society internally and of the intensification of conflicts.of interest. Race, caste, creed and social problems cannot be resolved by more separation but only by a larger concern for the public interest and the widening of public operation and ownership of schools as well as industries. The alternative is crime, hatred, violence, and might even result in civil war and chaos and disintegration from within.

Ninth. The Status of Women and Children. We oppose the so-called "Equal Rights Amendment", which is intended to destroy protective labor legislation for women and provision for alimony and economic aid to wives. It would put women on an identical basis with men, which is anti-social in effect, as women must have special protection due to maternal function. We support the general point of view of the Commission on the Status of Women of the United Nations, which insists upon maternity benefits for working women, etc. The political rights of women are identical with those of men, but their economic and social rights can only be made equal by adding protection into the balance due to maternal function. The rights of the child, born and unborn, ihhere in the woman. Her rights are dual, not single rights. Society owes its women this protection at work, in the home, and at all times, to strengthen and preserve the race. All children benefit, hence all men.

We support the Joint Resolution on Women's Status proposed to Congress by the women of the labor unions and liberal women's groups, which would provide that the rights of women shall not be denied because of sex, interpreted to mean that included in these rights are the right to special protection because of maternal function. It would make possible removing the many unjust discriminations still on the statute books of the forty-eight states, without invalidating the woman's position that equal rights requires protection. Every child has the right to a mother's care and every woman has the right to the choice whether to have a family or a career or both.

1. A MATERNITY ACT must be passed by Congress, therefore, which guarantees and improves aid for working mothers, including medical and hospital care; maternity leave and benefits for all women workers and guaranteed re-employment following confinement. Legislation must insure that every woman worker in inter- and intra-state commerce is protected against over-long hours, unsafe and unsanitary working conditions, and equal pay for equal work. This would follow the lines of the Emergency Maternity Act operative during the war. A large majority of women are now employed and their families are partly or largely dependent upon them. The health of women and their pregnancy must be guaranteed by providing that unsuitable labor will not be required of them, such as lifting, too much standing, as in the case of clerks in stores, sick leave, and jobs biologically injurious to them.

42-58-76

2. The right to work must be guaranteed to women, such as a Fair Employment Practice Act provision guaranateeing them against discrimination because of sex, marital status or race. A Women's Equal Pay Bill must provide equal pay for equal work, and it must be extended to cover women farm workers, migrant workers and foreign-born workers. Social Security benefits must be extended to paid domestic workers. They must have Unemployment Insurance, Old-Age insurance and Workmen's Compensation.

3. Women must insist upon better government support in expanding and improving the activities of the Women's Bureau of the Department of Labor.

4. American women must support the work of the United Nations Commission onthe Status of Women. It is women, children and laborwho provide the strongest common links between peoples and nations. American government support to the above Commission must be improved.

5. Federal Child Care facilities must be provided, not as charity but as part of the child's rightful inheritance in a society capable now of abundance and fair treatment of all. A National Child Care Act must guarantee this. Public funds must provide free nursery care for every child whose mother needs this assistance. After school recreation must be provided. There must be adequate home services for sickness of mother or children. Hot school lunches and free milk for children in urban and rural areas are essential, and must be geared in with the farm program where the family-size farm is given preference in supplyingsuch programs with foods guaranteed produced by healthful methods, with no preservatives or chemicals etc. or additives. Farm copperatives are tc be geared in with health work for children, as well as for such of the public as prefers safe, nutritious food.

Juvenile delinquency grows out of the fact that working mothers are unable to care for their children properly. Solving this urgent problem, requires the above protection for women and children, and the home. It also requires special schools and training for the children who are unable to integrate into the social life of the community and school due to uneven levels of development ranging from tribalism, semi-feudalism, gangsterism and broken homes,to capitalism, with all its evils and its advances. Suitable jobs must be available for youngsters who need the security of knowing they can earn something to help themselves or their families, for after-school or Saturdays, particularly for delinquents, as a form of therapy and social integration.

Tenth: Public Health Congress must providea public health program for those who need it, in which preventive medicine and research along this line is to be stressed. Mobile health service and clinics are necessary, withhealth insurance.

A Federal Health Insurance Plan must be put into effect for those who need it, while those who prefer private insurance plans and private doctors will be permitted to continue with this method. Federal aid must be given in training doctors in public health work.

Eleventh: Insurance. This part of the economy flourishes under depression as well as prosperity apparently, but if it should become a sick part of the economy, the federal government will have to take over the obligations of the insurance companies at some time in future as part of a plan for old-age pensions and unemployment insurance, for all citizens. In fairness to those who have paid up insurance, they should receive the amount they have put into the insurance, after deducting the regular old-age pension for everyone.

42-57B-7

Twelfth: Old Age Pensions must be provided for all men who need them over the age of sixty and for all women over fifty, the age of the menopause, at the rate of $150 a month, with the right to live in and own their own homes, the rato to be increased as the national economy finds its way out of the debt and morass of the present confused and complicated economy. Housewives are to be included in this pension plan, if the individual wishes it. Pensioners must receive free medical care and nursing. No tax, local or federal, should be taken from any person over the above age, with incomes under $300 a month.

Thirteenth: Crime Prevention. Crime is rooted in our insecure economic system and in the uneven level of social development, which brings in cheap, foreign labor to keep down the level of native labor, thereby resulting in animosities, unemployment, and unfair competition. Meantime, a Crime Prevention Bureau should be set up to study this problem and to find jobs for men and youth who need them, an employment office which would be responsible to employer and employe. Democratizing the labor unions would give the rank and file a means of rooting out gangster elements by their own machinery.

Fourteenth: The Right to Travel is an inalienable right of citizenship. Congress must pass a bill establishing this right for every citizen not deprived of his civic rights by law in criminal proceedings. The Bill S 3344 introduced by Senator Hennings is a step in this direction, but it deprives the right to a passport and to travel to citizens on political grounds. We submit that neither Congress, nor the executive through its Passport Bureau, nor the courts, have the right to set themselves up as an inquisition priesthood to decide who is orthodox enough to travel and who is not because of beliefs or opinions.

Fifteenth: Loyalty Oaths are remnants of medieval tradition and unworthy of the 20th century mind and its form of society. They are a form of indenture over the human mind and an indication of childishness and fear of one's fellow-man. We hold that loyalty oaths are unconstitutional except in the case of public officials who are held responsible for the preservation by law of the constitution. We have the methods of impeachment, recall and indictment for remedy, and these should be used when public officials refuse to carry out their commitments. The public school system must teach government by law and not by private oaths or injunction. Loyalty oaths take us back to feudal loyalties, not to respect for law and the duties of civic citizenship.

Sixteenth: The Privacy of the Individual is being more and more violated. Every public figure has the right to a private life inviolate from public inquisition. Safeguards must be enforced against wire-tapping, censorship of mail and spying. A code of honor and ethics must be established by press, television, radio and all avenues of public communication protecting the privacy of the individual. Penalties for slander and libel and exposure to public ridicule must be sharpened, including the right of persons in the entertainment world to be safe from "confidential exposes," and threats to their privacy. "Subliminal influences" in advertising are an invasion of the privacy of the mind and the Federal Communications Commission must be responsible for curbing the tendency toward using public communications to destroy privacy.

For the protection of the rights of the citizen, Congress must establish a fund by means of which the individual may secure legal aid and court costs in cases of slander, libel, and damage due to public inquisition, for redress of grievance, in cases where the individual is unable to defend himself from this vast octopus because of financial helplessness.

Seventeenth: The Abolition of Capital Punishment. We ask that Congress abolish capital punishment, an immunity not to be suspended in time of martial law. In a time of disintegration and change, this has become necessary, so that the individual may not bethe victim of temporary dictatorships and injustices. This will make safer and more civilized the changeover which will inevitably come in our economic system.

Eighteenth. Freedom of Thought and Opinion. "Thought-control" is a reversion to medieval darkness and it was the cause of the Protestant Reformation four hundred years ago, at which time the Protestants established the right of the individual to have his own private thoughts and opinions, free from inquisition of any kind. The govemment had no right to set itself up as a priesthood to establish an orthodoxy of political, religious, or other beliefs, but only to act in cases of overt acts and by due process of law. Catholics must not force Protestants to submit to the confessional, public or private, in exchange for the right which Protestants have granted them to allow thought-control within their own religion. The 5th Amendment was the Protestant law abolishing the confessional in legal terms.

a charter for

We stand for/freedom of thought and opinion for the citizen, including the artist, scientist, and intellectual. This is to grant him immunity from inquisition by government of any kind now and in future, as provided in the constitutional tradition of this country. Society must grant this protection to its creative members, who are few in number and without voting strength. Upon this freedom of thought the future of science and the arts depends. Taking away freedom of thought for the artist or intellectual is depriving him of his tool, of his only means of functioning. In the division of labor, he has a special job which is entirely opposite to that of the manual worker, the politician, or the housewife, or those who do not depend upon the freedom of thought to work and function. His means of production is his mind and this must not be crippled by society, or destroyed by oppression and stupid attempts to control his mental functioning. The commissar in Russia seemsto function as the Orthodox priest formerly did, but in that country the Protestant Reformation was skipped over and freedom of thought and opinion has not yet been achieved as it was in more advanced societies.

Nineteenth: A Federal Arts Project must be established but without any form of dictatorship over the recipients of aid. The universities have failed to provide fellowshipsor publication facilities for writers, poets, playwrights etc. and artists, and the publishing business is already a sick industry, like so many others. Due to high costs, it is unable to encourage new talent and to take chances on publishing books that may not sell well. The blossoming of American civilization must not be nipped in the bud because of the economic squeeze which prevents its creative minds from working and reaching the public with their products. Fellowships must be available to enable them to work, which could be supervised by special boards or universities or by the organizations of writers and artists and scientists.

The income tax inequities must be removed from the self-employed artist, writer, scientist and resear ch worker, and his work must be put in a special category which will enable him to use his income for the future years of work during which he will have no income.

Twentieth. Property Rights. The 5th Amendment provides, "nor shall private property be taken for public use without just compensation." The XIV Amendment provides: "nor shall any State deprive any person of life, liberty, or property without due process of law."

We submit that the above principle of "just compensation" and due ppocess of law shall be maintained during any changeover of the economy and after as well. We have plenty of wealth now being wasted or not utilized to pay just compensation. However, in order to prevent a restoration of a monopoly system of ownership of the key industries, the present income tax laws will have to be used according to the XVI Amendment, graduated according to ability to pay as now. In 1949 there were 13,822 persons who declared incomes of $100,000 or more, and we propose heavy tax upon incomes above that amount as is done in England. For incomes over $50,000 a year we propose a lighter tax but sufficient to prevent accumulation of capital for anti-social purposes.

42-58-79

Income from large private incomes can be earmarked for the benefit of the arts and sciences through fellowships, special aid, etc. Thus such persons would feel themselves patrons of the arts rather than merelybeing taxed too heavily.

The cost of building all manufacturing facilities existing in 1939 was $40 billion; by 1945 it had added $26 billion, two-thirds paid for by the government. In 1957 government receipts were $70,988,697,330. Public ownership of the key industries will prevent war and depression, as it will eliminate the need for "defense spending" on a large scale as we will not then be trying to prevent other countries from becoming socialist.

In 1952 six and a half million persons owned stock in corporations, about 7% of the population, of adults. About 98.6 per cent of workers owned no stock at all. These stockholders would continue to own stock, but with government ownership of the industry with the right to pay back the principal. The public debt of the United States in 1957awas $270,527,171,896, or $1,580.72 per capita. This means that a large percentage of investment in this country in bonds is in U.S. bonds already, on which a great deal of interest is being paid regularly. This debt can be retired by paying the owners their guaranteed annual amount, deducting it from their credit with the U.S. Treasury. Thus they will lose nothing that they now have.

The Federal Reserve Bank now received over eight billion a year in interest and it is not a government bank but privately controlled. We ask that the Treasury take back its power to coin and print notes and money and resume the control of the Federal Reserve Bank which was vested in the private interests by President Wilson in 1913. This would be done at a suitable time when the public interest requires it. As the Price System results in inflation and is not a true index of purchasing power, after public ownership of industry, it may be desireable to establish a system of energy certificates, as recommended by the Technocrats, to be able to judge the exact needs of the population in relation to production. This would not invalidate the money system on government debts, however, unless at a fair rate of exchange.

In 1953 only 5 per cent of families had annual income of $10,000 or more; 69% had income of less than $5,000. In 1956 the per capita income was $1,940 for the continental U.S. The U.S. Bureau of Labor Statistics has stated that a family of four needed in 1951 $4,166 a year for a minimum standard, that in that year 64% of American families had incomes below that level. We propose to plan an economy of abundance in which every American family of four be guaranteed $6,000 a year income, plus other income according to the ability of the earner and the family needs. Those with incomes of above $15,000 a year will be taxed to prevent too much inequality in income from causing trouble in a socially owned society.

While taking over industry in public ownership, we intend that Congress shall reaffirm and stand by the inviolate rights of small private property and personal property, whether the form be socialism or a mixed economy. This is possible in an economy of abundance where collective ownership is no longer necessary to improve productive capacities, and where it is necessary only to have public ownership of the strategic sectors of industry to prevent capitalism from arising again. Each person must be guaranteed under the constitution, as now, the right to own his own home and garden of several acres in town and country for residential use only, not for rent; his own cooperative apartment; or the right to rent house or apartment for his own use

Each person or family will be guaranteed the right to own and operate a family-size farm or as much as can be tilled by the owner, depending upon the locality and the nature of his crop. He will be guaranteed the right to $6,000 a year income for a family of four and integrated into the production schedule nationally. Rural power, better schools, mobile clinics and libraries, will be provided, and life in the country will be made the little paradise dreamed of by American families since the Pilgrims arrived on Plymouth rock with this idea in their minds.

42-573-90

Each person or family will hae the rightto own and operate small enterprises employing no outside labor, and to own and operate cooperatively any enterprise in which no more than a thousand persons are owners and producers.

No enterprise employing more than 14 persons may be privately owned and operated.

The standard of living of the population will be planned and constantly improved as the machinery of production and distribution are improved.

The right to inheritance of the above small property is to be safeguarded, such as of residential houses and family farms, but rent for profit is not to be allowed. Private industry will be heavily taxed above a certain amount of income, in order to prevent accumulation of private capital which might restore capitalism.

The above petition outlines a way of bringing about a planned economy based upon production from each according to his ability, and distribution to each according to his need and labor, by way of the present Constitution. The right of the people to organize and vote is safeguarded as at present, as opposition parties are the only known way to prevent tyranny, bureaucracy, stagnation, injustice, unfairness to minorities, illegalities and other abuses of power.

While, we believe it fair and advisable to pay just compensation and to purchase the key means of production for the public good from willing sellers as industries become sick and profits disappear, we also remind Congress and the courts of the constitutional precedents existing nowfor public ownership as follows:

1. The Louisiana Purchase by Jefferson and the government ownership of the Public Domain, including national parks, under which for many years the right of homesteading provided the citizens a share in the public domain. We propose now to restore the public domain and the rights of the citizens to share therein for their own use, but not for profit. We propose that the American Indians should not be deprived of their present lands and rights, but that they should beassisted in improving their conditions, as the American Indian society is also a sick socie ty today in need of improvement.

The right of Eminent Domain and condemnation of private property for public use exists, which has been widely used in acquiring property for expressways against the will of the owners in recent years, for example. We propose to safeguard the rights of the owners as much as possible, and no private property shall be taken unless for good and sufficient reason where no alternative is feasible.

2. We have the public postal service, the army, navy, air force and other military establishments. In some cases, the government had engaged in the production of its own supplies instead of paying higher rates for private contracts. Private industry is today so heavily subsidized by the taxpayers through direct subsidy and war and defense contracts, that if the government should merely start up its own industries, the private interests would be unable to compete and probably would fold up in dispair, in which case they would lose their investment entirely instead of receiving compensation as we now propose to avoid this bankruptcy and social disorder. If the monopoly interests refuse to sell voluntarily to the government and are unable to provide goods for sensible prices, the government in self-defense need only begin to establish its own plants and this would quickly show the superiority of public ownership and operation.

We have observed that the more farseeing managers and owners of industry already see the writing on the wall and know that sooner or later the public will vote for socially owned and controlled key industries. It is our purpose not to push the present capitalists to the wall, but to provide an easy transition in which no one will suffer unduly. The capitalist interests would have nothing to gain by a Fascist dictatorship or violence, and everything to lose. For them Fascism is as suicidal as atomic war. Hence, this petition is offering them a treaty by means of which a changeover can be effected without danger to the life and liberty and personal means of livelihood of those who at present own the means of production and distribution. At present, social ownership bythe above terms in the United States is not Utopian, but necessary and it is inherent in the history of our economy and society.

42-5B-81

3. We remind Congress of the 13th Amendment passed in 1865, abolishing slavery with no compensation whatsoever. It was a Republican Congress and President which thus destroyed the rights of private property in the South to a high percentage, leaving the planters bankrupt of their investment in four million slaves. Congress refused to offer compensation for emancipated slaes, or it is possible the Civil War might have been avoided. The Southerners looked upon emancipation as unconstitutional asno just compensation was offered or contemplated. However, by their secession from the Union they may be considered to have ~~the~~ lost the rights of citizenship under the Constitution temporarily.

By thisprecedent, ifthe present owners set up a Fascist dictatorship opposed to the Constitution and Bill of Rights, the constitutional precedent exists for them to have their property confiscated without compensation due to treason to the Union and war upon the United States. We appeal to both sides to bring about a civilized changeover, so that no such measures should be put into effect in this country, as they are wasteful and unnecessary in an economy of abundance where democracy for all can be guaranteed. At the present time, the southern states are strong for public ownership but they have been unable to solve their racial and economic problems under the present form of economy and caste society, the basis of which is to constantly bring in cheaper labor in order to take jobs away from those with higher standards, thereby pitting one part of the labor force against another, and one race or foreign element against another. So long as the South remains semi-feudal, it cannot solve its racial and economic problems, and the industrial revolution there now coming about would be better developed by public ownership now rather than later, as the competition with the higher standards of the north can only bring about serious dislocation and antagonism between the two sections. Hence, the south has a stake in public ownership which would quickly bringabout a prosperous industry and economy, while preserving farm life for those who prefer it. The north has an equal stake, in order to preserve its own standards and not be reduced to the level of the more backward south, where northern industries are running away in order to exploit cheap labor, Negro and white, as well as women.

We ask that Republicans and Democrats study this Petition and work out a program by means of which a civilized constitutional transition to a better life can be worked out through political competition only. We ask that the radical and socialist and communist parties and groups in exchange for legalization of constitutionally guaranteed activities, make a treaty for co-existence with other groups during and after the changeover, and that they openly state their blueprint and program for socialism in the United States so the voters and citizens will know what to expect and who their enemies and friends are. We ask that all parties, right, left and middle, confine their program to constitutional methods and support the principles of the above Petition in one degree or another, the timing to be worked out for the good of all by proper planning. Whichever party provides the public with the best program and blueprint for a good society in future, deserves the leadership of this nation and will have it, but always with a system of checks and balances and opposition parties to keep it in line with the public welfare.

Name and Address

Date:

A PETITION TO THE PRESIDENT OF THE UNITED STATES, THE HONORABLE JOHN F. KENNEDY

February 1961

K

A PETITION

To: The President of the United States,

The Honorable John F. Kennedy

Feb. 1961

Dear Mr. President:

We come to you as Negro citizens conscious of our responsibility to add our contribution to the solution of the momentous problems confronting our country, conscious of our responsibility to ourselves, our children and to all those who comprise our great nation.

You, Mr. President, have said that our country has lost prestige in the councils of the world. We believe that this is true and that there is a definite relationship between this fact and the attitude of government toward us, its Negro nationals. Some of us cast our vote impelled by the hope your words generated, and guided by the fact that we cannot live as formerly.

Obstacles and racial barriers have been raised that not only prevent our enjoyment of rights and privileges without which none can give their best to the growth and development of our country but are as well an impeachment of our democracy, destructive of national morality and injurious to our integrity as a people.

We petition you, Mr. President:

Arouse the nation from the self-destroying lethargy into which it has been cast through acceptance of the un-American, subversive and dehumanising race relations. End the practice of gradualism. Use the Executive Order, the vast political powers which devolve upon you as Chief Executive decisively to change the policies of State and Federal governments in their relations with Negro citizens. Substitution of the doctrine of States Rights for the Constitution in relations with Negro citizens must be stopped. American citizenship rights are paramount. Their priority must be respected. End segregation and jim-crow now.

38-10-2

Mr. President, use unsparingly the persuasive moral strength inherent in the office of President to end bias and prejudice in human relations. Use your great influence to bring respect for the inalienable rights of man. Mobilize science and the arts to render shattering blows to the myth of white superiority in every area of our cultural life.

Mr. President, order an end to discriminatory practices based on race, nationality, creed or color in the realm of employment and job tenure, voting, housing and education. These shameful features of our national life astound and shock the world. Their continued existence prevents the fulfillment of our obligations under the charter of the United Nations. It is impossible that they should not affect our prestige before the world.

Mr. President, the time is right for a new Emancipation Proclamation. President Abraham Lincoln showed the way. But the task was left unfinished. Our democracy must embrace all or it will embrace none.

Therefore, we petition you to:

1. Order an end to all practices and propagation of superiority based on race, nationality, creed or color enforced by legal and police powers of the Federal government.

2. Appoint a Negro to a new Cabinet post to be known as Secretary of Civil Rights to safeguard the rights of the Negro against encroachments by any state agencies under the guise of "states rights" or the fiction of racial superiority.

3. Call a national "End Segregation Conference" now to be attended by Negro and white leaders of labor, the Church, education and culture to map out a moral crusade against racist ideology.

4. Declare the Negro ghettoes that disgrace every metropolitan area distressed communities and formulate programs of relief and rehabilitation to eliminate the poverty, misery, illiteracy and chronic ill health.

38-10-3

5. Cut off all grants of federal funds to colleges and universities which practice or propagate segregation or discrimination based on race, creed or color.

6. Cancel all contracts with companies, corporations or individuals which apply any form of segregation or discrimination in their employment practices.

7. Establish the right of Negro citizens in every state to vote for any candidate for the Federal office of President, Vice-President, presidential elector members of Senate or House of Representatives, or in any special or primary election held solely or in fact for the purpose of selecting any such candidate.

8. Order an appropriate bi-racial Federal Committee or Commission on Housing to be established in every city and state with a substantial non-white population to study racial problems in housing, receive and investigate complaints alleging discrimination.

9. Direct all Federal agencies to shape their policies and practices to make the maximum contribution to the achievement of this goal.

10. Direct that all the recommendations of the Civil Rights Commissions made to provide equality in housing and other sections of national life be immediately implemented and carried into action.

Yours is the hour of destiny, Mr. President. What we ask is within your power. We urge you to act now.

ESSAYS

"GEORGIA: INVISIBLE EMPIRE STATE"

[A FRAGMENT OF A DRAFT]

THESE UNITED STATES,

ERNEST GRUENING, ED.

2 VOLS., NEW YORK:

BONI AND LIVERIGHT, 1924

PP. 322-345

mother. Here is the man of the world who knows it all and owns it all. Everywhere are the typeless of any land and clime and race, hurrying, uncertain things, inarticulate, too true.

These people are caught in the evil web of the world just as millions have been caught before. Their struggle to work and live has been complicated by hateful memories and deliberate selfish greed. The natural forces of redeeming human nature which ever strive to unleash the soul from evil - these forces in Georgia are themselves in leash. What can the forces for uplift and reform do in Georgia.

One almost despairs at religion here for Georgia is already terribly religious. Churches crowd on churches and sects on sect. Religion is a matter of daily talk and personal recommendation. When the Ku Klux Klan ~~recently sent out its orders to voters its candidate was recommended as~~ a member of a prominent church and ~~Sunday school leader.~~* Georgia religion is orthodox. It is "fundamental". It hates Jews and Unitarians. It suspects Catholics. Georgians are "converted" noisily; they "live in Christ"; they "feel the spirit", and all that. No, there is little hope in Georgia religion at present, despite a light here and there.

33-6-34

Nevertheless, there are brave men in Georgia, men and women whose souls are hurt even to death by this merciless and ruthless exploitation of race hatred. They are gripped by terrific forces; they turn, they twist, they sweat in soul. But what can they do? It is fairly easy to be "radical" in New York or Boston or Chicago. It is a recognized sign of sense to suggest new things. One can fight there for convictions and while it costs to oppose power, yet it can be done. It even gains some applause and worth-while friends. But in Atlanta? The students of white Emory College recently invited a student of black Morehouse college to lead a Y.M. C.A. meeting. It was a little thing - almost insignificant. But in Georgia it was almost epoch making. Ten years ago it would have meant riot. To-day it called for rare courage. When the Southern Baptists met in Atlanta

yesterday they did not segregate Negro visitors. Such a thing has seldom if ever happened before in Georgia. It is precisely the comparative insignificance of these little things that shows the huge horror of the problem - the bitter fight between Georgia in 1924 and civilization.

Some little things a liberal public opinion in Georgia may start to do. But the politico-economic alliance stands like a rock wall in the path of real reform. In certain lines like education, sanitation and various lines of social uplift, social reformers may work with some success. It is a groping but a sincere one. A determined group called "inter-racial" asks for reform. Most of them would mean by this the stopping of lynching and mobs, decent wages, the abolition of personal insult based on color.

33-6-35

Most of them would not think of demanding the ballot for blacks or the abolition of "Jim Crow" cars or civil rights in parks, libraries and theatres or the right of a man to invite his black friend to dinner. Some there are who in their souls would dare all this, but they may not whisper it aloud - it would spoil everything; it would end their crusade. Few of these reformers yet fully envisage the economic nexus, the real enemy encased in enormous Profit. They think reform will come by right thinking, by religion, by higher culture and they do not realize that none of these will work their end effectively as long as it pays to exalt and maintain race prejudice.

Of the spiritual dilemmas that face men today I know of none more baffling than that which faces the conscientious, educated, forward-looking white man of Georgia. On the one hand is natural loyalty to what his fathers believed, to what his friends never question; then his own difficulty in knowing or understanding the black world and his inbred distrust of its ability and real wish; there is his natural faith in his own ability and the ability of his race; there is the subtle surrounding and continuous

propaganda - gossip, newspapers, books, sermons and "science"; there is his eager desire to see his section take a proud place in the civilized world. There is his job, his one party, his white primary & his social status so easily lost if he is once dubbed a "nigger lover". Facing all this is lynching, mob murder, ignorance, silly self praise of people pitifully degenerate in so many cases, exploitation of the poor and weak and insult, insult, insult heaped on the blacks. What shall such a man do? What <u>can</u> he do?

If he talks, if he attacks, if he admits, immediately the North and the Negro echo and repeat his words and tell the world. Immediately the South mobilizes in fierce denial abroad, in bitter denunciation at home; social pressure, salary threat, the appeal of wife and children, everything, everybody hisses at him except perhaps some helpless Negro friends or some coward who advises "moderation".

Why cannot such Liberals strike hands with the Liberal North? Because of Civil war memories still skillfully manipulated by Southern politicians and Northern investors and the supposed radicalism of the North on the Negro. To obviate this the Northern Liberals are either dumb on the blacks or fall over themselves to concede cheerfully to the Bourbon politicians the very foundation principles of decency and justice for which the Southern Liberals sought aid and comfot. Many a disgusted Georgian has appealed for a Northern ally and received a hypocrite or a fool who denounced the ballot in the black laborers' hands and excused lynching "for the usual crime". It was Northern votes and not Southern that "Jim-Crowed" Negro visitors to the Atlanta session of the Charities conference. They thought they were being polite! It is a commonplace thing to say that in Georgia and the South it is the Northern settler that is most <u>intransigeant</u> on the Negro problem. This is usually true - and why? Because the Northern settler is there for the most part to make money and he soon learns that Negro prejudice is the greatest money-maker

in Georgia.

Thus Georgia rides the whirlwind. Thus in the midst of the beauty of this land is the unholy compact between Northern capital and Southern race prejudice which has so successfully set example to all the South. This pact represents a treaty of peace between that part of the poor whites who have succeeded the slave holders in the domination of the South with that part of the North formerly represented by the carpet baggers; and these two together are exploiting white and black labor. In order to do this they must keep the laborers divided, putting white and black against each other. The best and easiest method of doing this is to encourage race prejudice. Race prejudice therefore in Georgia, so far as the real leaders of the state are concerned, is an artificial thing kept up for revenue only.

33-6-37

On the other hand, so far as the great mass of the laborin whites is concerned, it is a thing of passionate belief and concern which is kept at fever heat by vested interests and at the same time not a single institution in the state, neither church nor school nor newspaper nor lecture platform, is prepared to teach the mass anything different. Even the labor union is inhibited. The result is a much more hopeless situation so far as race prejudice is concerned than as though the thing rested on natural likes and dislikes of ordinary, uneducated people.

Nor can philanthropy and social uplift hope for much aid from art and culture, in the midst of this soul-shattering spiritual battle. Where but in Georgia and Atlanta could culture evolve for the facade of a public library this list of the world's great? "Aesop, Homer, Virgil, Carnegie, Dante, Milton, Poe!" Where but in Georgia, the state of Alexander Stephens, could the descendants of his contemporaries erect a monument to the Confederate dead with the inscription:

"They died fighting for liberty!"

Yet the Voice, the eternal Voice rises and sings in this wilderness. The present thing cannot endure because it is impossible. The hope of successful revolt in Georgia must lie in this ~~situation~~ economic paradox itself. The very contradictions ~~and paradoxes~~ of the situation must bring its own reactions Suppose a man of the people, that is, of the white people, arose in Georgia and said to himself, "We are being exploited, tremendously and shamelessly exploited. The mill hands, the mechanics, the railroad workers, all of the great mass of working people lack even the primitive protection of modern days such as limited hours of labor, protection for women and children in industry and from industry, protection of helpless girls in society, industrial accident insurance and so on." Suppose such a man should say, "It is worth while to arouse the workers and get them to vote in better industrial conditions". What would happen?

33-6-38

There was once such a man in Georgia, Tom Watson. He was a leader of the white laborers. He tried to unite these laborers to fight against the capitalists. He organized the populist party in Georgia and invited the blacks to help. It was a critical situation that developed in the early nineties before Negroes were as completely disfranchised as later. In the first campaign it was easy to beat the populists by the fraud of "counting them out". Immediately the captains of industry mobilized their forces. By newspaper, by word of mouth, by lodge communications it was conveyed to the white workers that not only would Negroes benefit from any attempt to better the present industrial situation but they would displace, gradually, the white workers by underbidding them; that any benefits for white workers must come secretly and in such a way that Negroes could not share in the benefits; thus immediately the emphasis was put on race discrimination. And this race difference grew and expanded until in most cases the whole knowledge and thought of the workers and voters went into keeping Negroes down, rather than raising themselves up.

Internal dissension resulted in the labor ranks. The Negroes were

then blamed for not voting solidly with white labor; for selling out to capital; for underbidding labor. The whole movement swung into intense Negro hatred; and the net result was that the white labor vote was swung completely into a movement finally and completely to disfranchise Negro labor. The mob shot down Watson's Negro leaders in their tracks and the only way in which Tom Watson could survive politically was to out-Herod Herod in his hatred of Negroes and diatribes against them and in new catchwords like attacks on the Catholics and Jews. He kept even to his death dangerous political power but with his labor party cut in two and forced into additional disfranchisement by the "White Primary", he could never again seriously menace the machine.

33-6-39

A second kind of revolt can always come from dissension in the high seats of power. When in Cleveland's day Hoke Smith opposed "free silver", he was read out of Georgia democracy and his path to the United States Senate blocked. Immediately Smith espoused the cause of "Labor" and made a frontal attack on capital and the great corporations of Georgia. The white labor vote flocked to him and instead of the "White Primary" being the ordinary parade, a bitter internal political fight developed. Smith and his opponents quickly came to terms. In the midst of the campaign Smith dexterously switched his attack on monopoly to an attack on Negroes as the cause of monopoly and since this old game had often been played, he played it harder and more fiercely. He went so far that the state was aroused as never before. Race bitterness seethed, and white labor took the bit into its teeth. It demanded economic disfranchisement of the Negro to follow political. The Negro must be kept from buying land, his education must be curtailed, his occupations limited.

This was overshooting the mark and destroying the whole bi-racial labor situation upon which the Secret Empire of Georgia is based. Quick

and severe measures were called for. The minds of the mob must be turned again and turned from political and economic thought to pure race hatred. Immediately the sex motif arose to leadership. All subconsciously, sex hovers about race in Georgia. Every Negro question at times becomes a matter of sex. Continually the secrecy, the veiled suggestion, the open warning pivots on sex; gossip rages and horrible stories are spread. The ignorant, the superstitious feed on such flame and go mad with anger and hate. There is something horrible in the air that swells at times and bursts. The world goes stark mad.

33-6-40

So in the Smith campaign. Everything was suddenly swept away and submerged into the wildest stories of rape and murder of women. Atlanta papers rushed out five editions in a single day each with a new horror afterward proven either absolutely fictitious or crassly exaggerated. But what mattered that? On a Saturday night after the "White Primary" the white Atlanta laborers arose and murdered every Negro they could find on the streets. Three days war and rapine raged the streets of the Empire City and then sank to awful silence. Hoke Smith became governor and Senator and at the same time the industrial and political machine was safe.

14

A third sort of economic revolt may arise when for some special reason or on some particular occasion hatred between white employees and employers transcends ~~race~~ color antagonism. Once or twice the mob, out of hand, has thus faced the employers and investors. This was the Leo Frank case. Leo Frank owned a factory and in his factory a girl was found murdered. The mob spirit glowed and grumbled. A Negro suspect was offered as bail but the mob would not be diverted and sought higher game. Around the factories of Atlanta their mood was ugly, threatening.

For a moment the employers were aghast for the trivial thing was assuming vast proportions. Then suddenly they sensed a new race antagonism that offered them new escape. Frank was a Jew. Crucify the

Jew! The Jews were crowding in too largely anyway to share the spoils of Secret Empire. They were mill owners in Augusta, merchant princes in Atlanta, land barons in Albany. They had long deserved repression and here was a chance. Crucify the Jew! The method of escape tempted the leaders and yet they hesitated After all the Jew was a white man and a powerful one at that. The white group must not split and divide its power against the Negro but meanwhile the white mob had caught the new shibboleth and it began to howl: "Crucify the Jew!"

Suddenly the white Georgia world was torn in three: The jew, the Jew-sacrificing whites, the Jew-defending white. How easy the abyss had yawned at their feet and all the easier for their persistent Negro-baiting of many years. Georgia was all too used to race-cleavage as an investment, as a pastime. Yet now Georgia was afraid. There was something ominous, terrible in this new race hate. Its venom seethed up almost in a night. Ther Governor interfered to protect Frank, the Jew. He was literally driven from the state and the Prosecuting Attorney who had sought to convict Frank was elected to his place. Sobered by power the new Governor sought to oil the sullen waters. A principle was involved. Frank was after all a white man. And before the white-man-murdering mob Georgia must pause. Lynching is a matter not of races but of one race: "Niggers" are lynched in Georgia. "Niggers" must be lynched. Periodically the mob must have its "nigger" to lynch and burn. This is in the nature of things. But a white man - even though a Jew! Of course Jews were in many ways unacceptable - "Crucify the Jew!" No, no, not that - hardly that, for Jews are white and "white" is sacred; besides -- and suddenly Frank was lynched.

That Marietta mob, padding like sullen beasts, blear-eyed, drunk, thick-headed, infinitely determined, snatched the man from the willingly opened jail and murdered him. His torn and bloody body lay in awful state. Atlanta rushed to see the sight -- Atlanta, Empress of the New South, gilded and gay on her seven hills; Atlanta that shares only with New York the glory of Metropolitan opera, -- rushed to gaze in automobiles, - ladies and gentlemen and children. The crowd surged but Southern "chivalry" rose to its wonted heights: The mayor of Atlanta leaped on the roof of a shed and waved wild arms: "Gentlemen", he gasped: "Gentlemen", he cried, "Be careful - you're jostling the ladies!"

All these occasions of revolt against the present political and industrial situation, except the first, ignored the Negro, and the first

was early diverted from its purpose. Yet, In truth there can be no succe economic revolt in Georgia which does not include the black man.

Sixty years after slavery and despite lynching and race prejudice propaganda, despite low wages and insult, Georgia Negroes own two million acres of land, ~~or 3125 square miles.~~ a space nearly as large as the kingdom of Montenegro or the island of Crete. Their taxable property saved from low wage and systematic cheating has writhed up from twelve millions of dollars in 1890 to over sixty millions today; and now and then even the remnant of their political power strikes a blow.

Once, in Atlanta, for instance, some dozen years ago, the candidate of the "White Primary" who was Mayor of the city was found drunk in a bawdy-house just before election and was arrested by the police before they recognized their distinguished prisoner. This proved too much for the city to swallow and in the regular election they threw off their disfranchising vows to the "White Primary" and, assisted by the small number of registered colored voters, elected a decent man as mayor.

Again but last year in Savannah a fight within the "White "Primary" between the corrupt gang and decency gave twelve hundred Negro voters the balance of power. Determined efforts were made to intimidate the Negro voters. Skull and cross bones signed by the "Ku Klux Klan" were posted on the doors of eight of the prominent Negro churches with the legend, "This is a white man's fight; keep away". Warning slips were put under the doors of colored citizens. It was in vain. The colored voters voters held their own political meetings, financed their own campaign, went into the election and of their twelve hundred votes it was estimated that less than one hundred went for the gang, and the reform mayor was elected. *

And now I go with puzzled sadness. I ride out of the Present into the Future - out of ~~the~~ rich and raging Atlanta to the hills, to northward. I have known Georgia a quarter of a century. I have visited all its ends and corners. I am not of it. My writing this is to many Georgia

minds an insult to the State, not because of my words but because of my race. In some places in this state I could be killed for it. And yet, looking on the pale red hills that rise and roll above Atlanta, I see past reasons in future hope. Sorrow has known these hills. Sorrow and poverty for two long centuries. The dregs, the hopeless dregs of that jail delivery settled here -- the lees of the hot wine of new black slavery.

The hills twist and yawn. Slowly the climate changes - cold pines replace the yellow monarchs of the South. There is no cotton. From the door of hewn log cabins wild faces appear, -- dead white faces and drawn, thin forms, grim visages. Here live the remnants of the poor whites. They fight and hate. Some half starve here; some go down and triumph in Atlanta and as they triumph they riot in joy and revenge. They feed greed with their blood.

I am in the hot, crowded and dirty "Jim Crow" car, where I belong. A black woman with endless babies is faring forth from Georgia, "north". Two of the babies are sitting on parts of me. I am not comfortable. Then I look out the window.

Somehow it seems to me that here in the "Jim-Crow" car and there in the log cabin lies the future of Georgia - in the intelligence and union of these raped laborers, white and black, on this soil wet with their blood and tears. They hate and despise each other today. They lynch and murder body and soul. They are separated by the width of a world. And yet - and yet, stranger things have happened under the sun than understanding between those who are born blind.

Behold the end of Georgia and its high beginning! The earth is playing with the sun. It lifts its glad face and buries it again in the perfume of the flowers; it rears its massive shoulders and drops them to the dew. It rolls and leaps and then with pause, uprears its bulk to heaven. The hair of its forests brushes the far horizon, and peace and beauty come into

their own. I hear the falling waters singing to the hills. The morning is pale with sunshine. "Behold the beautiful land which the Lord thy God hath given thee".

32-3-25

"The Answer of Africa", Chapter II In

<u>What Is Civilization?</u>, Maurice

Maeterlinck, <u>et. al.</u>, N.Y.:

Duffield Co., 1926, pp. 43-57.

THE ANSWER OF AFRICA

W. E. Burghardt Du Bois

Three things Africa has given the world, and they form the essence of African culture: Beginnings, the village unit, and art in sculpture and music.

Long before the last two thousand years, which we call the years of modern civilization, lay the beginnings of human culture. For ten thousand years,—perhaps fifty thousand years and more,—mankind struggled with the first steps of advance; struggled and wavered, forged forward, retreated, fell, and arose again. This was a period fateful for all mankind,—for all culture. It was far more tremendous in its ultimate significance than anything that has happened since.

It was during these years that the black race, in its own land, Africa, and in all the paths by which it wended its way thither, seems always to have been first. Wherever one sees the first faint steps of human culture, the first successful fight against wild beasts, the striving against weather and disease, there one sees black men. To be sure, they were not the only beginners, but they seem to have been the successful and the persistent ones. Thus Africa appears as the Father of mankind, and the people who eventually settled there, wherever they may have wandered before and since—along the Ganges, the Euphrates, and the Nile, in Cyprus and about the Mediterranean shores,—form the largest and often the only group of human beings successfully advancing from animal savagery toward primitive civilization. The ancient world looked upon them continually as creators of human culture and rang with their

51-51-84

tributes. Hammurabi, law giver of Babylonia, is called "to go forth like the sun over the Black race." The Greeks sent Zeus and Poseidon to feast annually with the "Blameless Blacks", and the Roman historians tell us that the Blacks "conceive themselves to be of greater antiquity than any other nation. They suppose themselves also to be the inventors of divine worship, of festivals, of solemn assemblies, of sacrifices, and every religious practice. They affirm that the Egyptians are one of their colonies."

Out of many things that these beginnings emphasize, we may select one: the discovery of the use of iron. Probably the properties of iron have been discovered in the world many times and in many places, but it seems likely that while Europe was still in its stone age and while neither Egypt nor Western Asia nor ancient China knew iron, the black Africans had invented the art of smelting. It was a moment big with promise for the uplift of the human race. No effective industry, no sure defense was possible for mankind with laboriously chipped stone tools. Copper and bronze made great advance over stone, but only hard iron founded modern industry; and this marvelous discovery was made by African Negroes.

The second thing that came out of the early strife of black folk was the village unit. I shall never forget my first glimpse of an African village. The night before, we had ridden the bar in the moonlight with the curious singing of lithe black boys. Above on the great headland twinkled Monrovia; below lay the black and silent forests beside a sombre sea. But this morning down by the sea and down by the forests suddenly we walked out into a little town. It was a town of the Vais. It was a thing of clay, colored cream and purple, clean, quiet, small, with perhaps a dozen or more homes. Authority was here and religion, industry and trade, education and art. It was not a complete thing from a modern point of view. It had little or no

48-15-16

machinery; it lay almost defenseless against surrounding malaria. Of news service with the greater world, there was none. Though its whole inner being had been changed and in some respects upset by a new surrounding and invading economy, this little village was a mighty thing; it had come down from a mighty past. Its beginning stretched back in time thousands and thousands of years; it gathered to itself traditions and customs springing almost from the birth of the world. In space alone it stretched back along a path leading from the low thunder of the sea on the black West Coast to the great central plateau of Africa with forest, lake, and sand, two hundred miles away. Perhaps the great successive movements of this vast continent, so veiled today in mystery, had brought it even further seaward from the regions of the Mountains of the moon, past Ethiopia and Nubia, Melle and Songhay, Haussaland and Benin, those shadowy empires of the past. Perhaps even this little village here once knew Atlantis itself, and Greece and Phoenicia.

No matter whence the African village came and how it is to-day distorted and changed, and has been in the past glorified and degraded, it is a singularly persistent and eternal thing. Again and agin this village with its conical huts, its central fire, its grassy streets, its fields of grain and fruit, and its cattle has been reborn in Africa and has spread itself over the endless miles of the continent. Even the African city as it rose time and time again was a city of villages. Ancient Jenne, whence comes our modern word Guinea, "had seven thousand villages so near to one another that the chief of Jenne had no need of messengers," but cried his messages from gate to gate and village to village until within a few moments they had gone a hundred miles to Lake Dibo.

We know the village unit the world over and among all people, but among most folk the village early lost itself in some larger unit,

4/8-15-17

and civilization became a matter of city and state and nation. But the African village, because of geography and climate, because perhaps of some curious inner tenacity and strength of tradition, persisted and did on a small scale what the world has continually attempted on a wider scale and never satisfactorily accomplished. The African village socialized the individual completely, and yet because the village was small this socialization did not submerge and kill individuality. When the city socializes the modern man he becomes mechanical, and cities tend to be all alike. When the nation attempts to socialize the modern man the result is often a soulless Leviathan. The African village attempted a small part of the task of the modern city and state, and accomplished that part more successfully. It lost thereby breadth and power, it failed to integrate into a larger permanent imperialism. It never succumbed wholly to a militarism of its own but for that very reason it tasted slavery of every sort to others. But it was and is and perhaps will long be in its limited way a perfect human thing.

In the African village were bred religion, industry, government, education, and art, and these were bred as integral inter-related things. The primitive religion of Africa as developed by the African village underlies the religions of the world. Egyptian religion was in its beginning and later development of purely Negro character and mulatto Egyptian priests on the stones of Egypt continually receive their symbols of authority from the black priests of Ethiopia. The Negro religion thus developed had something about it that was grim and terrible, and for that very reason it powerfully expressed the feelings of the first fighters in the world. The fire and desert, water and jungle of Africa, the beast and bird and serpent, the devil of disease with his flies and insects and worms and the infinitesimal germs that creep in the skin and veins and marrow of men,—all these are personified by the African fetish. Fetish is primitive philosophy

48-15-18

of life. It is a spiritual explanation of physical evil and it explains by making all things spirit, both the good and the bad, and by seeking spiritual cure for physical ill.

The religion of the black man spread among all the Mediterranean races. Shango, god of the West Coast, hurler of thunder-bolts and lord of the storms, render of trees and slayer of men, cruel and savage and yet beneficent, was prototype of Zeus and Jupiter and Thor.

The African villagers from early days wove cloth, baked earthenware, manufactured instruments and arms, baskets and shoes, soap and glass. They worked in iron, copper, brass, bronze, gold, silver, bone, and ivory. They built in fibre, wood, and stone. They developed an original division of industry, a division first by families and clans, so that even the militarized Zulus are to this day divided according to ancient industrial designation like "the men of iron" and "sons of corn cleaners." Beyond that, division of industry appeared among the villages so that they were grouped according to their reciprocal activities and became complements one to another. One village specialized in fishing, another in wine, another in metals, and still another in trade,—importing from without. Sometimes the division was even more delicate: One Congo village carves elephant tusks, another makes a particular style of hat, and others swords, copper rings, wood carvings, and burnt clay pitchers.

Out of this industry developed the African market-place which knit the continent together with paths and trade centres, from the Gulf of Guinea to Zanzibar and from Walfish Bay to Europe. The trade of African villages early reached the world,--Egypt, Persia, and India, Cyprus, Greece, and Rome, Byzantium, Spain, and Italy.

What the village system lacked in breadth and vision it gained in depth and personal knowledge. There was no monopoly, no poverty, no prostitution, and the only privilege was the definite, regulated,

48-15-19

and usually limited privilege of the chief and head men, given in return for public service and revocable for failure. This primal village life has to-day largely disintegrated before the white invader, before manchine goods and imperial compulsion, but it played its part in the world and was a rare contribution to civilization.

For stubbornly clinging to this fine and narrow village type of government and association, Africa has paid with dispersion and slavery. Dispersion came because the Village could not corral and hold its strongly developed individualities as could the state and empire. So that from days before the dawn of history down to our era s tream of black men have passed out of black Africa and into the world and profoundly influenced civilization by their genius. There was Nefertari, the black queen of Egypt who drove out the Hyksos and was, as Flinters Petrie says, "the most venerated figure of Egyptian history"; there was the black Mutemua, mother of the great Amen-hote III who built the temple at Luxor and whose direct descendant was the royal princess whp by marriage made Tut-ankh-amen Pharaoh of Egypt. As the late Professor Chamberlain wrote: "Besides these marked individual instances, there is the fact that the Egyptian race itself in general had a considerable element of Negro blood, and one of the prime reasons why no civilization of the type of that of the Nile arose in other parts of the continent, if such a thing were possible, was that Egypt acted as a sort of channel by which the genius of Negroland was drafted off into the service of Mediterranean and Asiatic culture."

The second and more terrible way in whicm Africa paid for her individualistic village culture was by the slave trade; Christian Europe traded in human beings for four hundred years. The slave trade alone cost Africa in dead and stolen nearly one hundred million souls. And yet people to-day ask the cause of the stagnation of culture in that land since 1600!

48-15-20

Nevertheless for all this there was compensation, and this compensation was African art. The sense of beauty is the last and best gift of Africa to the world and the true essence of the black man's soul. African art is the offspring of the African climate and the Negro soul. The sunshine of central Africa cloaks you like a golden blanket; it hangs heavy about your shoulders; it envelopes you; it smothers you in a soft but mighty embrace. The rain of African is a consuming flood, a river pouring out of heaven, without banks or current. In Africa the swift, the energetic are the dead. In Africa the "lazy" survive and live. This African laziness is several things; it is shelter from the penetrating rain; it is defense from malaria. And it brings with it leisure and dreams and human intercourse.

Deep in forest fastness and by the banks of low, vast rivers, in the deep tense quiet of the endless jungle, the human soul whispered its folk tales, carved its pictures, sang its rhythmic songs, and danced and danced. The languages of Africa grew and developed for their unique work, "so simple and clear in their phonology, so logical in their syntax.". From these has descended one of the richest masses of oral tradition of poetry and folk lore which the world knows. To this was early added the art of sculpture.

We have long known of the African artist. Traces of his work have been found in prehistoric Europe, in parts of Asia, and, of course, in Egypt. Later rich centres of African art were brought to European knowledge on the African western coast. It was long customary to think of this art first as imitation, secondly as inexpressibly crude and funny; but to-day more recent interpretations show that the primitive art of Africa is one of the greatest expressions of the human soul in all time, "that black men invented art as they invented fire," that they spread their ideas of art among their white neighbors, and that their earliest expressions had an originality and fidelity of purpose that the primitive world never surpassed.

48-15-21

Finally, out of Africa and out of the soul of Black folk came music and rhythm. The African not only sang beautiful melodies but he invented part singing, and his instinct for rhythm developed syncopation. He early made musical instruments, and especially did he make the drum a living and speaking thing. His songs "rich as is their weave of rhythm and polyphony are not the only music of the African, but through other instruments of his own invention the black man achieves the independence of human voice that presupposes a conception of music as an art, demanding an understanding of tone qualities and again a sense for the structural building of rhythmic and melodic balances of sound."

THE AMERICAN NEGRO

Prepared in 1928 for the Encyclopaedia Britannica, 14th edition, but not published.

Draft manuscripts, bibliography, fragments

THE AMERICAN NEGRO

BY W. E. Burghardt Du Bois. Ph.D. (Harv.)

1. Origin, Growth and Physique

The greatest migration of human beings within historic times, was the migration of black men from Africa to America from the sixteenth to the nineteenth century. While there are no exact figures, the total migration has been variously estimated as certainly not less than 5,000,000, and possibly more than 10,000,000 Africans.

These Negroes came from all parts of Africa—the Soudan, Central and South and West Africa. Traces of Arab and Malay blood could be seen as well as that of the tall Nilotic Negroes, the Bantu, the yellow Hottentot and the African dwarfs. The Negroes drawn from this wide area centered for shipment on the west coast of Africa along the Gulf of Guinea, and these west coast Africans were consequently most frequently represented on the slave ships.

In the United States the growth of this Negro population has been steady. Bancroft estimates the colonial Negro population as follows:

1714--- 59,000
1727 --- 78,000
1754---293,000

The United States censuses give the following figures:

Date	Total Negroes	Per Cent of Increase
1790	757,208	
1800	1,002,037	32.3
1810	1,377,808	37.5
1820	1,771,656	28.6
1830	2,328,642	31.4
1840	2,873,648	23.4
1850	3,638,808	26.6
1860	4,441,830	22
1870	4,880,009	9.9
1880	6,580,793	34.9
1890	7,488,676	13.8
1900	8,833,994	18.0
1910	9,827,763	11.2
1920	10,463,131	6.5

46-2-144

The variations in the rate of increase are due to many causes, beside faulty enumerating as in 1870. The illicit slave trade and a high birth rate increased numbers up to 1850. Emancipation and its struggles decreased the rate of growth, and recent large migration to northern cities has further decreased it. Today Negroes form 9.9 per cent of the population of the country.

While their birth rate has decreased, their death rate has also. In Reconstruction days, the Negro had a death rate of between 34 to 40 per cent a thousand; today it is about 17 per thousand. The greatest decrease in death rate has been effected in tuberculosis. Out of every 100,000 colored persons, 418 died of tuberculosis in 1911; and only 235 in 1926. Infant mortality, while still high, is dropping and typhoid fever and pneumonia have declined. On the other hand, the mortality from venereal disease is still high and from diseases of the heart and kidneys. Part of this is due to the change from country to city life in the last few decades.

The American Negroes are developing a definite physical type. They do not, of course, look alike. They range from what people call the "typical" Negro to the "typical" white man; but in a recent measurement of 30 physical traits, the variability of the American Negro is shown to be notably low in the majority of cases and to show in the main the characteristics of a homogeneous race. This is due as much to social heredity as to marriage within the group.

The Negro population is distributed throughout the nation, although its largest concentration is still in the former slave states. The center of Negro population was in Virginia in 1790. In 1880 it moved 443 miles Southwest to Walker County in the extreme Northwestern Georgia. In 1900 and 1910 it was in the extreme northeast of Alabama, moving slightly westward.

In 1920 the census showed 8,912,231 Negroes in the South; 1,472,309 in the North; and 78,591 in the far West. Since 1920 the number of Negroes in the North has greatly increased through migration so that there are probably in the North and West today, 2,000,000 or more Negroes, while the Negro population of the South has increased but little, remaining at about 9,000,000.

The proportion of Negroes in the various states varies greatly. There is not a single state in which Negroes do not live, although there are very few in states like New Hampshire and North and South Dakota. On the other hand, they formed in 1920 a majority of the population of South Carolina and Mississippi, and from 25 to 50 per cent of the population of the District of Columbia, Virginia, North Carolina, Georgia, Florida, Alabama, Arkansas, and Louisiana. Other states with from 10 to 25 per cent, were Delaware, Maryland, Tennessee and Texas. In the South Atlantic and South Central states the Negroes formed from between 20 to 30 per cent of the population and from 2 to 3 per cent in the Middle Atlantic and North Central states. The recent migration has been chiefly to cities; and New York, Chicago, Philadelphia, Indianapolis, Detroit, Cleveland, St. Louis and Kansas City have received a large influx.

46-2-146

THE AMERICAN NEGRO

Problems of Social Contact

Economic conditions in England in the 17th Century had filled the jails and workhouses with paupers and vagrants. Systematic effort was made to send these to America as indentured servants. Convicts and prostitutes were added and it was reported in 1680 that the stream of forced, kidnapped and voluntary white servants reached a total of 10,000 a year. The Thirty Years war brought some German workers and servants.

But this supply was limited by the home demand for labor and the difficulty of establishing in America a caste for white servants. On the other hand, the supply of black labor under the Dutch, and especially the English slave traders was almost unlimited. The Colonial law which at first applied to all "servants", white and black, began late in the 17th Century and early in the 18th to recognize a distinction between black servants for life and white servants for a term of years.

36-2-60

By 1750 black slavery became a thoroughly established institution in the United States. Nevertheless, all Negroes were not slaves and for years, up until the rise of the Cotton Kingdom, it was recognized in law and custom that a free Negro could become a citizen, landholder and voter. Free Negroes voted in at least five colonies at the time the Constitution was adopted; they paid $8,322 in taxes in Virginia alone in 1833, and in 1830 there are recorded in the United States 3,777 free Negro owners of slaves, most of the slaves being members of their own families whom they had thus emancipated from whites.

Between 1790 and 1830 the percentage of free Negroes increased. The influence of the Revolutionary War nearly doubled the number between 1790 and 1800, and there was an increase of nearly 72% between 1800-1810, and smaller increases of 25 and 36% between 1810 and 1820 and 1820 and

1830. After that, there was a determined attempt to get rid of free Negroes, either by re-enslavement or colonization, and by making manumission difficult. As a result of economic pressure and Civil War, the great mass of the Negro slaves were freed by military order in 1863 and the whole status of slavery abolished by Constitutional Amendment December 18, 1865.

The presence of black slaves in America gave rise, first, to the slave codes, and then to the problem of civil and political rights of freed Negroes.

It was impossible to keep the black population in slavery; their own resistance; the limitation of fertile land; the increasing need of higher technique with tools and machinery, and the competition of white labor, overthrew the slave system in the West Indies and in the United States.

The so-called Negro problems arose in the United States with the freeing of the slaves. Economically, the Negroes were still in slavery after Emancipation. They had no capital, no land, very little skill, and no political rights. If they had been left thus with a mere edit of emancipation, slavery would have persisted in the United States without a legal slave trade and with increased competition revolt and turmoil. An attempt was made to give the freedman a little land and capital: "Forty acres and mule". This failed, because the original idea of paying for this through a seizure of enemy property, was not practicable. The legislation of the South at the time showed determination to re-establish Negro slavery in everything but in name.

The enfranchising of the Negro was not simply a method of forcing this economic emancipation, it was the only political expedient which could ensure the peaceful return of the rebellious Southern

states back into the Union. The result justified the experiment. There was extravagance, bribery, crime, vagrancy and disease during Reconstruction, but most of this was the inevitable accompaniment of emancipation. On the other hand, as a white contemporary said: The Negroes "obeyed the Constitution of the United States and annulled the bonds of states, counties and cities which had been issued to carry on the war of rebellion and maintain armies in the field against the Union. They instituted a public school system in a realm where public schools had been unknown. They opened the ballot box and jury box to thousands of white men who had been debarred from them by a lack of earthly possessions. They introduced home rule in the South. They abolished the whipping post, the branding iron, the stocks and other barbarous forms of punishment which had up to that time prevailed. They reduced capital felonies from about twenty to two or three. In an age of extravagance they were extravagant in the sums appropriated for public works. In all of that time no man's rights of persons were invaded under the forms of law."

30-2-62

The white South immediately began to bargain with the commercial and industrial North for the restoration of political power to white folk. While the bargain was being negotiated, Negroes were gradually forced from the ballot box by force and fraud. Finally, beginning in 1890, a series of laws was passed and acquiesced in by the North which purported to disfranchise the poor and the illiterate; in reality they excepted white people from the operation of these restrictions by a "Grandfather Clause", and put the right of registration in the hands of petty local officials who proceeded almost without exception to disfranchise nearly all Negroes and to admit all whites.

The result has been the present legal caste system in the South and also a peculiar nullification of Democracy throughout the United

States; because the Southern states count the whole population, white and black, as the basis of their representation in Congress, but allow only the whites to vote, so that the Southern whites have thus double political power. Further than that, and in order to insure no political difference among the whites which might re-enfranchise the Negroes, the dominant political party of the South has proceeded by means of this disfranching machinery more white voters than Negro voters. The singular result is that although the population of the 11 Southern states has increased 100% in the last forty years, the number of voters, even with the recent addition of women, has increased only 50%. And in 5 of the Southern states of the far South there has been practically no increase. Also, it actually happens that today nine thousand voters in South Carolina exercise as much power in Congress as ninety thousand voters in Ohio.

30-2-63

Next to the political problem, the problem which has always most perplexed white America, is that of the amalgamation of the white and black races. The increase of mixed bloods was one of the earliest problems. There were the early intermarriages of white men and free Negro women, especially in Virginia and Maryland. Mulatto children were early born of white women servants and even of free white women, especially in the time when status was determined by land holding and there were some free Negro landholders. Finally, there was the large percentage of mulattoes born from the union of white men and their slave women.

Laws on the subject early became frequent. The earlier laws were aimed at free white women and made their children slaves. As conditions changed and most mulatto children were the offspring of masters and slave women, the law simply prevented legal marriage and, reversing all precedent, made the children follow the condition of the mother. Such laws actually encouraged mulatto children and the

result is today large proportion of white blood in the so-called Negro race and much unacknowledged Negro blood among the whites.

The number of legal mixed marriages between white and colored people has never been large on account of the social stigma. In Boston, Massachusetts, for instance, there were 600 such marriages between 1855 and 1887. Michigan had 111 such marriages, 1874-1893, and Rhode Island 58, 1881-1893.

No successful attempt to count the number of mulattoes in the United States has ever been made. The admittedly uncomplete figures of the census gave 15.2% of the Negroes in 1890, 20.9% in 1910, and 15.9% in 1920. Herskovits after careful measurements believes that over 70% of the American Negroes have some white blood.

Cs. 36.2-64

III

SOCIAL AND SPIRITUAL DEVELOPMENT

As a result of four centuries of migration, three centuries of enslavement, and 65 years of restricted American citizenship, we have in the United States, not simply a social problem, but a developing dark nation within a modern white nation. A large group of people closely intermingled physically with the rest of the nation, and sharing the same language and culture, is nevertheless, socially separate from the nation. This setting off is not complete. There is some intermarriage; there is very large economic inter-dependence; and despite the grouping of Negroes in sections and neighborhoods, large numbers of them live side by side with white people as neighbors.

36-2-65

And yet, more than any other portions of American citizens, the American Negro forms a nation to himself. This arose, historically, by the pressure of slavery which tried, and nearly succeeded in making slave and black man synonymous in the United States. After emancipation, ignorance and poverty continued the isolation of slavery; and today, color caste and social ostracism without, together with group loyalty and organization within, tend to maintain and complete the closed circle.

Color caste in the United States at present involves distinctions based on race and color. These distinctions are not always definite and they vary from place to place and from decade to decade. We may distinguish three main regions: The Southern South, containing today approximately 70% of the Negroes, the Border States, containing 10-12%, and the North and West, containing 18-20%.

In the Southern South by law and custom:

1. The overwhelming majority of the qualified

Negroes cannot vote.

2. They live usually in the least desirable districts with streets mostly unpaved and with limited city facilities, like sewage, lighting and policing.

3. Their wages are low, and they are restricted mainly to menial occupations, hard physical labor, or the lower grades of skilled labor.

4. There can be no legal inter-marriage between whites and persons of Negro descent, and a betrayed colored girl has in practice no relief in the courts.

5. They are not recognized as citizens in civil life: they usually cannot join white religious or cultural organizations; they are either not admitted or only admitted on special terms to public places, public assemblies, churches, lectures, theatres, concerts, museums, parks and libraries. Sometimes, separate institutions or parts of institutions are set aside for them, but in that case the facilities are poorer and less effective. They are not admitted to hotels, restaurants and places of public entertainment.

36-2-66

6. There is an entirely separate system of public schools, with poorer equipment, poorer financial support, and usually without high schools or night schools. White colleges do not admit them, even when they are supported by the state. In such cases, there is usually state institution with limited equipment and curtailed curriculum for their accommodation.

7. In the courts they receive a distinct standard of justice. They seldom sit on juries, even when Negroes are being tried. They are liable to longer and harsher sentences and often are in danger of mob violence and even lynch law. From 1885-1926, 2,911 Negroes accused of crime have been lynched by mobs without trial.

8. So far as possible in every walk of life Negroes are segregated; they have separate rooms in railway stations; separate and inferior cars or parts of cars on railway trains; separate seats in street cars; and sometimes they are allowed only on the freight elevators of public buildings. They invariably pay equal prices for inferior accommodations and are equally taxed on their property.

9. They are subject to other more or less intangible and indefinite discriminations, and lack of protection; as for instance, their women are liable to insult; their property and wages are peculiarly open to exploitation; they are required to show more or less public deference to white folk.

30-2-67

In many of these discrimimations there are personal and local exceptions, and in the last ten years mob violence and lynching have becoms less frequent. There is increasing chance of justice in the courts, and the city schools, and in some cases, the country schools have been improved.

These, however, are still exceptional cases, and as a rule, all Negroes, no matter what their training, position and trait, are subject to the above disabilities. Beyond the limits of these legal and customary caste distinctions, there is much good will and kindliness, and a great deal of personal charity and help.

In the Border States, the Negroes suffer less restriction. Usually, they have the right to vote, although economic pressure is brought to bear. There is less personal insult and discrimination; but there are still separate churches, often separate libraries and parks, or at least limited facilities in public places. The schools in the Border States are separate but show less discrimination, and in general, public funds are spent more equably. The Negro quarters in towns and cities are better served with public facilities. Inter-marriage is prohibited. The economic condition is somewhat

better, the wages being higher, and the opportunities for work wider.

In the North, there is the minimum of discrimination, but it is still there. In some regions, contiguous to the South, there are separate schools, but the per capita expenditure is usually equal to that of the white schools. In the North in general, there is no discrimination in schools, parks or libraries. There is usually considerable discrimination in semi-public institutions, like hotels and restaurants. Most of the Northern states have no laws against inter-marriage. Voting is free, and while Negroes are not confined to particular residence sections, nevertheless, it is difficult for them to rent good homes or to secure mortgage accommodations in buying them.

36-2-48

There is no segregation in trains or street cars and public and personal insult is rare. Usually, Negroes keep to their own churches. The economic difficulties persist. They have trouble in finding better classes of work; working with white workers on their own merits; joining trades unions, or having a chance for advancement. Here, however, there are again considerable and individual exceptions. In other words, while there is a color line in the North, it tends to fade out here and there, and is not a rigid caste system, as in the South. Also, in the North, there is always some social intercourse between the races, usually in art and literary and musical circles.

From such outward pressure it was natural for the Negro to turn inward toward himself and to develop widespread social organization. Historically, this began with their churches. For two centuries the church has been the great center of American Negro life. The Negro church is not simply a religious organization. It is the only surviving social institution of the Negroes which had

its roots in the African forests and survived slavery. Out of the churches developed eventually the Negro secret and fraternal organizations, practical insurance and benevolence, and the beginnings of economic co-operation.

Next to the churches come the beneficial and insurance societies, of which there are probably 100, some of which are large and flourishing organizations. The secret societies, including Masons, Odd Fellows, Pithians, Elks, etc., own between five and ten million dollars worth of property and collect at least $2,000,000 a year. There are various co-operative benevolences, including homes and orphanages, hospitals and cemeteries. There are economic organizations, including some fifty small banks, a large number of building and loan associations, and in all about 70,000 commercial enterprises with an annual overturn of $1,500,000,000.

By means of these organizations and individual enterprise, the American Negro has built up a group economy, so that Negro professional men and most of the Negro business men, serve almost exclusively a Negro clinetele, while the mass of the Negroes increasingly patronize Negro professional men and Negro business. Thus, the Negro group today is serving itself with religious ministration, medical care, legal advice, and education; and partially with homes, food, books, newspapers, bank credit, photographers, hotels, beauty parlors, drug stores, undertakers, etc. This economic circle is by means closed. The mass of colored people still work for white people. Negro professional men have white people among their clinets, and Negro business men serve some white customers. Still the growing tendency is to form a fairly complete circle. The greatest gap remaining is the matter of capital and technical management.

Education and intelligence among American Negroes show remarkable increase. The official figures for illiteracy are incomplete, but they indicate the trend. Of American Negroes 10 years of age and over, there were unable to read and write: 1870, 79.9%; 1880, 70%; 1890, 57.1%; 1900, 44.5%; 1910, 30.4%; 1920, 22.9%. The urban Negro population showed only 13.4% of illiteracy in 1920, which was about equal to the illiteracy of the foreign-born.

The educational facilities offered to American Negroes are still greatly limited. There are at present 31 exclusively Negro colleges with about 3,300 students and about 1,500 other Negro students are in white colleges.

The wealth and property of the Negro-American group has steadily grown. One estimate makes their total property $1,800,000,000, and their land ownership 34,000 square miles, or an area nearly as large as that of Portugal, and larger than the whole of Ireland.

36-2-70

There is no accurate measure of crime in the United States. The crime census of 1923 indicates us that American Negroes, having 9.3% of the population, 18 years of age and over, furnished 23.3% of the commitments to prisons and jails. This is partially accounted for by the fact that it is easier in the United States to commit a Negro for alleged offenses than to commit a white person. On the other hand, crime among Negroes is decreasing. In 1910, for every 100,000 of the Negro population, 1,823 were committed to prisons during the year. Thirteen years later, the proportion had fallen to 1,306, a decrease of over 25%. Of the commitments one-fifth are for disorderly conduct, one-eighth for drunkenness, one-tenth for stealing, and one-thirteenth for vagrancy.

What has been the spiritual and social result for America of this racial reaction and inner group development? The contributions

of American Negroes to the making of America have been many and continuous. First, as a labor force they laid the foundation of the enormous economic development which made modern America. They worked not simply as slaves in the furnishing of the four great crops, tobacco, rice, sugar and cotton, which with the slave trade, formed the beginning of modern international trade, but they worked also as artisans, pioneers and inventors.

Previous to the full establishment of slavery, they were with the earliest of explorers, and possibly the Negro race was in America even before Columbus. Nuflo de Olana, a Negro, was with Balboa when he discovered the Pacific Ocean; many were with Cortes, De Soto and other Spanish explorers. Negro artisans helped Menendez found St. Augustine in 1565. Stephen Dorantes, a Negro, was with the Narvaez expedition, was himself the discoverer of what is now Arizona, New Mexico and the Southwest of the United States in 1539.

Negro soldiers have fought in all American wars. A few of them were in the Colonial Wars. About 4,000 were in the Continnental Army during the war for American independence, which was as large a proportion (9%) of American Negroes as of American whites; although seven-eighths of the blacks were in slavery. In the War of 1812, Negroes distinguished themselves on the high seas and Battle of Lake Erie, among the land forces, and particularly at the Battle of New Orleans, where they formed over one-eighth of the soldiers in line. In the Civil War, they not only furnished a large number of laborers, helpers and spies, but also 180,000 enrolled soldiers, which represented over 4% of the total Negro population, slave and free. The free white North furnished 10%. In the World War, the Negro forming one-tenth of the population, furnished 13% of the soldiers called to the colors; 342,277 Negroes were accepted for full military service.

36-2-71

The Negro by his insistent struggle to be free in the United States has broadened the basis of Democracy in America and in the world. This was not only by means of a continuous series of slave insurrections in the West Indies and on the continent culminating in the freedom of Haiti and the consequent gift of the vast territory of Louisiana to the United States; but it was also carried out by the systematic running away of slaves under organized Negro leadership, and by a continuous appeal by Negroes to the conscience of America from the early 18th Century down to the Civil War.

36-2-72

After the Civil War it was Negro loyalty and the Negro vote alone that restored the South to the Union, established a new Democracy, both for white people and black, established the first system of popular education in the South, and began a new social legislation. Negro women as workers have done much to free the American working women from the harem idea of cloistered ease.

Many distinguished Americans have been of Negro descent. The first National Holiday of the United States was the Fifth of March which marked the death of Crispus Attucks, a mulatto, in the initial clash of the Revolutionary War. Frederick Douglass shares with William Lloyd Garrison the honors of the fight for the emancipation of slaves. Sojourner Truth was a singularly successful Abolitionist and radical agitator. Prince Hall, a Negro, was a pioneer Mason, deriving his authority directly from England. Granville Wood was an inventor of parts of the telephone, and Matseliger's inventions revolutionized shoemaking. Elijah McCoy was the inventor of modern locomotive lubrication. Booker T. Washington was a pioneer in industrial education and a statesman in inter-racial adjustment. Mat Henson went to the North Pole with Peary.

There have been two Negro Senators and 21 Congressmen and several judges on the Bench. Charles Young, a West Point graduate, was one of the best officers in the American army. Many other Americans, including statesmen of the highest rank, churchmen and artists, have been of Negro descent, although this fact was seldomed mentioned in their careers.

36-2-73

The psychological results of the racial situation in America are extraordinary, especially in the Negro group. A spirit of revolt strives with an inferiority complex. Counsels of despair oppose a determination to survive at all costs. The push upward wavers as to its objects and ideals. Out of this, however, comes one inescapable result: the beginnings of literature and art. First and foremost comes, of course, the Negro folk-song. To this must be added the Negro rhythm in other forms of music and in dancing and the recent development of the Negro idiom of white composers like Dvorak and the colored composers like Handy, Burleigh and Dett.

Turning to literature, we think first of the appeal of the color problems to white writers of American literature. It is not too much to say that without the Negro, white American literature would have lost its main theme. The early colonial writers wrote about him and the masters of the nineteenth century, and in recent literature both North and South, the Negro still holds a foremost place. Negro folk lore is the only folk lore save the Indian indigenous to American soil.

Even more significant, however, is the effect of the racial situation on the literature written by Negroes. We may tentatively distinguish four waves of this movement; from the end of the 18th Century, to the days of Reconstruction was a period of rather diffident groping; from 1875 to the World War, there was a surge of

BIBLIOGRAPHY

The literature on Negro slavery and the slave trade is large and well-known. On the development of the American Negro himself, the following works may be noted:

The United States Census, Bulletin Number 8, on "Negroes in the United States", 1904, "Negro Population, 1790 to 1915", 1918. Other references to the Negro are distributed throughout the various census volumes.

For sources of American Negro history, consult "The Journal of Negro History", edited by Carter G. Woodson, 1916 to date.

36-2-82

General histories of the American Negro are: George W. Williams', "History of the Negro Race in America", 1882; Carter G. Woodson, "Negro in Our History", 4th Edition, 1927; Benjamin Brawley, "Social History of the American Negro", 1921; W. E. B. Du Bois, "Gift of Black Folk", 1924.

Other volumes especially to be recommended in studying the American Negro are: The Atlanta University Publications, 1896 to 1913; "The New Negro"; edited by Alain Locke, 1925; A. A. Taylor, "Reconstruction in South Carolina", 1924; "The Negro in Literature and Art", revised edition, 1921; W. E. B. Du Bois, "Souls of Black Folk", 1903, "Darkwater", 1920; "The Philadelphia Negro", 1899; C. S. Johnson and others, "The Negro in Chicago", 1922; C. H. Wesley, "Negro Labor in the United States", 1927; Carter G. Woodson, "A Century of Negro Migration", 1918; "Mind of the Negro, 1900 to 1860", 1926, and "Negro Orators and Their Orations", 1925.

There are several collections of Negro biographies. Among them: W. J. Simmons' "Men of Mark", 1887; E. L. Haynes' "Unsung Heroes", 1921; R. W. Bullock's "In Spite of Handicaps", 1927; H. Q. Brown's "Homespun Heroines", 1926; Who's Who in Colored America, 1915; M. W. Ovington's "Portraits in Color", 1927. The most notable autobiographies are:

"The Life and Times of Frederick Douglass"; and Booker T. Washington's "Up From Slavery".

The leading white writers who have made recent studies in the Negro's problems are: E. P. Reuter, "The American Race Problem", 1927; Melville J. Herskovits, "American Negro", 1928; L. I. Dublin, "Health and Wealth", Chapter 12, 1928; H. A. Miller, "Races, Nations and Classes"; F. G. Detweiler, "Negro Press in the United States", 1922; R. T. Kerlin, "Voice of the Negro, 1919", 1920.

36-2-83

THE AMERICAN NEGRO

By W. E. Burghardt Du Bois. Ph.D (Harv.)

1. Origin, Growth and Physique

The greatest migration of human beings within historic times, was the migration of black men from Africa to America from the sixteenth to the nineteenth century. While there are no exact figures, the total migration has been variously estimated as certainly not less than 5,000,000, and possibly more than 10,000,000 Africans.

These Negroes came from all parts of Africa—the Soudan, Central and South and West Africa. Traces of Arab and Malay blood could be seen as well as that of the tall Nilotic Negroes, the Bantu, the yellow Hottentot and the African dwarfs. The Negroes drawn from this wide area centered for shipment on the west coast of Africa along the Gulf of Guinea, and these west coast Africans were consequently most frequently represented on the slave ships.

The usual assumption concerning this race is that it reporesents a pure Negro type. This is an error. Outside the question of what the pure Negro type is, the Negro-American represents a very wide and thorough blending of nearly all African peoples from north to south; and more than that, it is to a far larger extent than many realize, a blending of European and African blood.

Not only was there the immense demand for slaves which had its outlet on the west coast, but the slave caravans were streaming up through the desert to the Mediterranean coast and down the valley of the Nile to the centers of Mohammedanism. Africa lost in kidnapping, war and disease, perhaps a hundred million souls. It was a rape of a continent to an extent never paralleled in ancient or modern times.

In the American trade there was not only the horrors of the slave raid, but also of what was called the "middle passage". As Sir William Dolben said, "The Negroes were chained to each other hand and foot, and stowed so close that they were not allowed above a foot and a half for each in breadth. Thus crammed together like herrings in a barrel, they contracted putrid and fatal disorders; so that they who came to inspect them in a morning had occasionally to pick dead slaves out of their rows, and to unchain their carcasses from the bodies of their wretched fellow-sufferers to whom they had been fastened."

In the United States the growth of the Negro population has been steady. Bancroft estimates the colonial population as follows:

36-2-42

1714--- 59,000
1727--- 78,000
1754---293,000

The United States censuses give the following figures:

Date	Total Negroes	Per Cent of Increase
1790	757,208	
1800	1,002,037	32.3
1810	1,377,808	37.5
1820	1,771,656	28.6
1830	2,328,642	31.4
1840	2,873,648	23.4
1850	3,638,808	26.6
1860	4,441,830	22
1870	4,880,009	9.9
1880	6,580,793	34.9
1890	7,488,676	13.8
1900	8,833,994	18.0
1910	9,827,763	11.2
1920	10,463,131	6.5

The variations in the rate of increase are due to many causes, beside faulty enumerating as in 1870. The illicit slave trade and a high birth rate increased numbers up to 1850. Emancipation and its struggles decreased the rate of growth, and recent large migration to northern cities has further decreased it. Today Negroes form 9.9 per cent of the population of the country. While their birth rate has decreased, their death rate has also. In Reconstruction days, the Negro

had a death rate of between 34 to 40 per cent a thousand; today it is about 17 per thousand.

The greatest decrease in death rate has been effected in tuberculosis. Out of every 100,000 colored persons, 418 died of tuberculosis in 1911; and only 235 in 1926. Infant mortality, while still high, is dropping and typhoid fever and pneumonia have declined. On the other hand, the mortality from venereal disease is still high and from diseases of the heart and kidneys. Part of this is due to the change from country to city life in the last few decades.

36-243

The sex composition of the American Negroes has changed considerably. The existence of males, reaching the United States under the slave system was large, and even as late as 1820 there were a thousand one hundred and thirty-four males to every thousand females. This dropped to a thousand and three in 1830 and 996 in 1860. There was 992 in 1920. The corresponding figures for the whites in 1920 was a thousand and forty-four males to every thousand females, showing more unstabled population due to white emigration.

The age composition shows decreasing population of children under fourteen and an increasing population of adults forty-five years of age and more. Negroes marry somewhat earlier than whites and their marriages are broken by death and divorce a little more frequently.

The American Negroes are developing a definite physical type. They do not, of course, look alike. They range from what people call the "typical" Negro to the "typical" white man; but in a recent measurement of 30 physical traits, the variability of the American Negro is shown to be notably low in the majority of cases and to show in the main the characteristics of a pomogeneous race. This is due, of course, to the social heredity as well as marriage within the group.

The Negro population is distributed throughout the nation

36-2-44

although its largest concentration is still in the former slave states. In 1790, 91.1 per cent were in the South and all but 2.2 per cent of them in the South Atlantic division. The proportion increased until in 1830, 92.8 per cent of the Negroes were in the South and all but 2.2 per cent of them in the South Atlantic division. The proportion increased until in 1830, 92.8 per cent of the Negroes were in the South, but on the other hand, 21.5 had moved into the new East South Central cotton belt and 5.6 to the newer Southwest. The proportion living in the North was only 7.2 per cent. Since then the proportion of Negroes in the South has slowly declined; and of those in the South, the proportion in the East South Central section increased until after the war and then decreased a little, while the proportion in the Southwest greatly increased and the proportion in the North increased 10.5 per cent. One-half of one per cent in 1910 were in the West.

The so-called black belt represents a concentration of Negro population in the South due to cotton culture and rich land. Counties with 50 per cent or more of blacks had a Negro population as follows:

Date	Counties in which the percentage Negro was	
	50 to 74.9%	75 or more
1910	2,870,001	1,062,483
1900	2,966,976	1,090,483
1890	1,603,400	952,570
1880	2,674,953	717,282

The center of Negro population was in Virginia in 1790. In 1880 it moved 443 miles Southwest to Walker County in the extreme Northwestern Georgia. In 1900 and 1910 it was in the extreme northeast of Alabama, moving slightly westward. In 1920 the census showed 8,912,231 in the South; 1,472,309 in the North; and 78,591 in the far West. Since 1920 the number of Negroes in the North has greatly increased through migration so that there are probably in the North and

West today, 2,000,000 or more Negroes, while the Negro population of the Sout has increased but little, remaining at about 9,000,000.

The proportion of Negroes in the various states varies greatly. There is not a single state in which Negroes do not live, although there are very few in states like New Hampshire and North and South Dakota.

On the other hand, they formed in 1920 a majority of the population of South Carolina and Mississippi, and from 25 to 50 per cent of the population of the District of Columbia, Virginia, North Carolina, Georgia, Florida, Alabama, Arkansas, and Louisiana. Other states with from 10 to 25 per cent, were Delaware, Maryland, Tennessee and Texas. In the South Atlantic and South Central states the Negroes formed from between 20 and 30 per cent of the population and from 2 to 3 per cent in the Middle Atlantic and North Central states.

The recent migration has been chiefly to cities; and New York, Chicago, Philadelphia, Indianapolis, Detroit, Cleveland, St. Louis and Kansas City have received a large influx.

46-2-115

THE AMERICAN NEGRO

Problems of Social Contact

The establishment of the legal status of slavery in the confines of the United States was gradual. Not all the Negroes imported were by any means slaves. As early as 1790, there were nearly 60,000 free Negroes in the United States, and the number thereafter increased as follows:

36-2-46

	Number	Percent of all Negroes	Decennial increase Percent
1860	488,070	11.0	12.3
1850	434,495	11.9	12.5
1840	386,293	13.4	20.9
1830	319,599	13.7	36.8
1820	233,634	13.2	25.3
1810	186,446	13.5	71.9
1800	108,435	10.8	82.2
1790	59,557	7.9	

That there were free Negroes in the United States before 1790 is clear from numerous accounts of their activities. Moreover, while the main mass of the Negroes imported were regarded and treated as slaves, the legal status of slavery in the United States was not recognized until many years after the importation began. Indeed, the earlier assumption was that imported black labor stood upon exactly the same basis as imported white labor.

Economic conditions in England in the 17th Century had filled the jails and workhouses with paupers and vagrants. Systematic effort was made to send these to America as indentured servants. Convicts and prostitutes were added and it was reported in 1680 that the stream of forced, kidnapped and voluntary workers reached a total of 10,000 a year. The Thirty Years war brought some German workers and servants.

But this supply was limited by the home demand for labor and the difficulty of establishing in America a caste for white servants. On the other hand, the supply of black labor under the Dutch, and

especially the English slave traitors was almost unlimited. The Colonial law which at first applied to all "servants", white and black, began late in the 17th Century and early in the 18th to recognize a distinction between black servants for life and white servants for a term of years.

By 1750 black slavery became a thoroughly established institution in the United States. Nevertheless, all Negroes were not slaves and for years up went the rice of the Cotton Kingdom, and it was recognized in law and custom that a free Negro could become a citizen landholder and voter. They voted in at least five colonies at the time the Constitution was adopted; they had $8,322 in taxes in Virginia alone in 1833 and in 1830 there are recorded 3,777 Free Negro owners of slaves, most of the slaves being members of their own families whom they had thus emancipated.

36-2-47

Between 1790 and 1830 the percentage of free Negroes increased. The influence of the Revolutionary War nearly doubled the number between 1790 and 1800, and there was an increase of nearly 72% between 1800-1810, and smaller increases of 25 and 36% between 1810 and 1820 and 1820 and 1830. After that, there was a determined attempt to get rid of free Negroes, either by re-enslavement or colonization, and by making manipulation difficult. As a result of economic pressure and Civil War, the great mass of the Negro slaves were freed by military order in 1863 and the whole status of slavery abolished.

Negro slavery in America was the beginning of the expansion of International Trade which followed the discovery of America. A vast amount of free fertile land had been opened to the world, which white servants and Negro slaves began to cultivate. Out of slave labor flowed four great crops: rice, cotton, tobacco and sugar; so cheap that they appealed to a world wide demand. They, together with

the trade in black labor, were the beginning of a new vastly profitable international trade. When to this was added the economic revolution of the 19th Century in the technique of industry, the modern world was born.

It was, however, impossible to keep the black population in slavery; their own resistance; the limitation of fertile land; the need of higher technique with tools and machinery, and the competition of white labor, overthrew the slave system in the West Indies and in the United States.

36-2-48

The so-called Negro problems arose in the United States with the freeing of the slaves. Economically, the Negroes were still in slavery after Emancipation. They had no capital, no land, very little skill, and no political rights. If they had been left thus with a mere edict of emancipation, slavery would have persisted in the United States without a slave trade and with increased revolt and turmoil. An attempt was made to give the freedman a little land and capital: "Forty acres and mule". This failed, because the original idea of paying for this through a seizure of enemy property, was nor practicable.

The alternative was to give the Negro political power, and through this he forced himself into freedom by the establishment of public schools, by protecting himself as a wage laborer, and beginning a new social legislation. His political power was quickly curtailed and he was largely disfranchised by indirect methods, but he had already gone too far toward freedom to be entirely re-enslaved. There persisted, however, the problem of restoration of his political rights and the question of his economic and social status.

The disfranchisement of Negro citizens by direct and indirect methods has curiously complicated the working out of Democratic Government in the United States. During slavery in determining the basis of congressional representation, five slaves counted as three white men; after emancipation came, each Negro counted as one.

But the Negroes were kept from voting at first by force and intimidation, then by fraud and finally by a series of laws which puported to disfranchise the illiterate, the propertyless, and those who did not pay their poll tax. At the same time, until this part of the law was declared unconstitutional, hereditary descent from one who had the right to vote before emancipation entitled a person to register. The result of these laws was to disfranchise the majority of Negroes. Meantime, however, the Negroes have increased in wealth and intelligence. Nevertheless, in a state like Louisiana, where over 100,000 adult Negroes can read and write, and where Negroes own large amounts of property, only 980 were allowed to register. And in Mississippi, only 850 were registered out of a total literate population, twenty-one years of age and over, of 290,000. Moreover, this disfranchisement of Negroes is accompanied by a more or less voluntary disfranchisement of whites through a white primary system which forces through public opinion and economic pressure over white voters to enter a single party primary and to promise to abide by the results. That is, to disfranchise themselves from all choice in the real elections. The singular result is that although the population of 11 Southern states has increased 100% since 1888, the number of voters in the Presidential Elections has increased only 50%, and that disfranchised woman suffrage. In five states of the Southern South with an equally large increase in population, the number of voters has remained stationary. Thus, the continued disfranchisement of the Negro American in the South is hastening a crisis similar to the Routine Bureau crisis of the time of the first Reform Bill, which actually happens that today nine thousand voters in South Carolina exercise as much power in Congress as 90,000 voters in Ohio.

The problem which has always most perplexed white America, is the question of the amalgamation of the white and black races in

36-2-49

America. Years of propaganda has led the whites to associate slavery and black blood and to regard mulattoes as degenerates. The increase of mixed bloods became, therefore, one of the first problems that came to the front. There were the early intermarriages of white men and free Negro women, especially in Virginia and Maryland. Mulatto children were early born of white women servants and even of free white women, especially in the time when status was determined by land holding and there were some free Negro landholders. And finally there was the large percentage of mulattoes born from the union of white men and their slave women.

36-2-50

Laws on the subject early became frequent. The earlier laws were aimed at free white women and made their children slaves. As conditions changed and most mulatto children were the offspring of masters and slave women, the law simply prevented legal marriage and, reversing all precedent, made the children follow the condition of the mother. Such laws actually encouraged mulatto children and the result was a large proportion of white blood in the so-called Negro race and much unacknowledge Negro blood among the whites.

The number of legal mixed marriages between white and colored people has never been large on account of the social stigma. In Boston, Massachusetts, for instance, there were 600 such marriages between 1855 and 1887. Michigan had 111 such marriages, 1874-1893, and Rhode Island 58, 1881-1893.

No successful attempt to count the number of mulattoes in the United States has ever been made. The admittedly uncomplete figures of the census are:

Date	Black	Mulatto	
		Number	Per cent
1920	8,802,577	1,660,554	15.9
1910	7,777,077	2,050,686	20.9
1890	6,377,980	1,132,060	15.2
1870	4,295,960	584,049	12.0
1860	3,853,467	588,363	13.2
1850	3,233,057	405,751	11.2

36-2-51

A recent study by Herskovits, concludes that only 20 per cent of American Negroes today are unmixed, while 80 per cent are mixed with white or American Indian stocks, or both.

III SOCIAL AND SPIRITUAL DEVELOPMENT

As a result of four centuries of migration, two centuries of enslavement, and 65 years of restricted American citizenship, we have in the United States, not simply a social problem, but a developing dark nation within a modern white nation. The European ideal of a nation is a physically homogeneous group speaking the same language and having approximately the same culture. Under pressure of the facts this has been modified so as to include in nations, geographically separate, groups not homogeneous in blood, culture or language; today more of less autonomy for such groups has begun to be recognized.

In the case of the American Negro, on the other hand, we have a still newer idea, and that is that of a large group of people physically closely intermingled with the rest of the nation, and sharing the same language and culture, but nevertheless, a group which socially and spiritually is largely separate from the nation. Their setting off from the nation is not complete. There is some intermarriage; there is very large economic inter-dependence; and despite the grouping of Negroes in sections and neighborhoods, large numbers of them live side by side with white people as physical neighbors.

And yet, more than any other portion of American citizens, and perhaps all things considered, more than any similar European group, the American Negro forms a nation to himself. This arose, historically, by the pressure of slavery which tried, and nearly succeeded in making slave and black man synonymous in the United States. After emancipation, ignorance and poverty continued the isolation of slavery; and today, the color caste and social ostracism without, together with group loyalty and organization within, tend to maintain and complete the closed circle.

Color caste in the United States at present involves

distinctions based on race and color. These distinctions are not always definite and they vary from place to place and from decade to decade. We may distinguish three main regions: The Southern South containing approximately 70% of the Negroes, the Border States containing 10-12%, and the North and West, containing 18-20%.

1. In the Southern South by law and custom, the majority of the qualified Negroes cannot vote.

2. They live usually in the least desirable districts with streets mostly unpaved and limited city facilities, like sewage, lighting and policing.

3. Their wages are low, and they are restricted mainly to menial occupations, hard physical labor, or the lower grades of skilled labor.

4. There can be no legal inter-marriage between whites and persons of Negro descent, and a betrayed colored girl has in practice no relief in the courts.

5. They are not recognized as citizens in civic life: they usually cannot join white religious or cultural organizations; they are either not admitted or only admitted on special terms to public places, public assemblies, churches, lectures, theatres, concerts, museums, parks and libraries. Sometimes, separate institutions, like hospitals, libraries and parks are set apart for them, but in that case the facilities are poorer and smaller. They are not admitted to hotels, restaurants and places of public entertainment.

6. There is an entirely separate system of public schools, with poorer equipment, poorer financial support, and usually without high schools or night schools. White colleges do not admit them, even when they are supported by the state. In such case, there is usually state institution with limited equipment and resources for their accommodation.

7. In the courts they receive a distinct standard of justice.

They seldom set on juries, even when Negroes are being tried. They are liable to longer and harsher sentences and often are in danger of mob violence and even lynch law.

8. So far as possible in every walk of life they are segregated; they have separate rooms in railway stations, separate and inferior cars or parts of cars on railway trains, separate seats in street cars, and sometimes they are allowed only on the freight elevators of public buildings. They invariably pay equal prices for such inferior accommodations and are equally taxed on their property.

30-18-32

9. They are subject to other more or less intangible and indefinite discriminations, and lack of protection; as for instance, their women and often liable to insult; their property and wages are peculiarly open to exploitation; they are required to show more or less deference to white folk by taking off their hats or yielding the road, etc.

In many of these discriminations there are personal and local exceptions, and in the last ten years mob violence and lynching have become less frequent. There is more chance of justice in the courts, and the city schools, and in some cases, the country schools have been improved. These, however, are still exceptional cases, and as a rule, all Negroes, no matter what their training, position and trait, are subject to most of the above disabilities. Without the limits of these legal and customary caste distinctions, there is much good will and kindness, and a good deal of personal charity and help.

In the Border States, the Negroes suffer less restriction. Usually, they have the right to vote, although economic pressure is brought to bear. There is less of the personal insult and discrimination, but there are still separate churches, often separate libraries and parks, or at least limited facilities in the public places. The schools in the Border States show less discrimination, and

in general, public funds are spent more equably. The Negro quarters in towns and cities are better served with public facilities. Intermarriage is prohibited. The economic condition is better, the wages being higher, and the opportunities for work wider.

In the North, there is the minimum of discrimination, but it is still there. In some regions, like the southern parts of Ohio, Illinois and Indiana, there are separate schools, but the per capita expenditure is usually equal to that of the white schools. In the North in general, there is no discrimination in schools, parks or libraries. There is usually considerable discrimination in semi-public institutions, like hotels and restaurants. Most of the Northern states have no laws against inter-marriage. Voting is free, and while Negroes are not confined to particular residence sections, nevertheless, it is difficult and not impossible for them to rent good homes or mortgage accommodations in buying them, although they are continually overcoming such difficulties.

30-18-33

There is no segregation in trains or street cars and public and personal insult is rare. Usually, they still keep to their own churches. The economic difficulties persist. They have trouble in finding better classes of work; working with white workers on their own merits; joining trades unions, or having a chance for advancement. Here, however, there are again considerable and individual exceptions. In other words, while there is color line in the North, it tends to fade out here and there, and is not a rigid caste system, as in the South. Also, in the North, there is always some social intercourse between the races, usually in art and literary and musical circles.

It is, of course, difficult to express definitely just what the social ostracism of American Negroes has meant in the past and just what it means now. Its manifestations are subtle and its changes almost imperceptibly gradual. And yet perhaps a statement something

like this will illustrate the situation:

Up until twenty years ago, it was impossible, even in a city like New York, for colored persons to appear at public dinner and more especially, at a dinner where both men and women were present, without either open insult or caustic comment in the press; up until ten years ago it was good form, even in the freest parts of the United States and in the better circles of American Negroes, for the leaders to assert publicly and vehemently, that they did not wish to be treated as social equals by their white fellow Americans.

30-18-3K

This situation still holds true in the South and the Border States, and even in some parts of the North; but in other parts of the North, Negroes now and then are not only made welcome at public social occasion, and it has become common for Negro leaders to say frankly that like everybody else, they wish social equality wherever it is freely and voluntarily extended; and that under no circumstances, except by compulsion, will they accept a status of social inferiority.

From such outward pressure there has arisen widespread social organization among American Negroes. Historically, this began with their churches. For two centuries

(1)

THE AMERICAN NEGRO

By W. E. Burghardt Du Bois. Ph.D (Harv.)

1. Origin, Growth and Physique

The greatest migration of human beings within historic times, was the migration of black men from Africa to America from the sixteenth to the nineteenth century. While there are no exact figures, the total migration has been variously estimated as certainly not less than 5,000,000, and possibly more than 10,000,000 Africans.

These Negroes came from all parts of Africa—the Soudan, Central and South and West Africa. Traces of Arab and Malay blood could be seen as well as that of the tall Nilotic Negroes, the Bantu, the yellow Hottentot and the African dwarfs. The Negroes drawn from this wide area centered for shipment on the west coast of Africa along the Gulf of Guinea, and these west coast Africans were consequently most frequently represented on the slave ships.

The usual assumption concerning ~~this race~~ these migrants is that it represents a pure Negro type. This is an error. Outside the question of what the pure Negro type is, the Negro-American represents a very wide and thorough blending of nearly all African peoples from north to south; and more than that, it is to a far larger extent than many realize, a blending of European and African blood.

Not only was there the immense demand for slaves which had its outlet on the west coast, but the slave caravans were streaming up through the desert to the Mediterranean coast and down the valley of the Nile to the centers of Mohammedanism. Africa lost in kidnapping, war and disease, perhaps a hundred million souls. It was a rape of a continent to an extent never paralleled in ancient or modern times.

46-2-111

In the American trade there was not only the horrors of the slave raid, but also of what was called the "middle passage". As Sir William Dolben said, "The Negroes were chained to each other hand and foot, and stowed so close that they were not allowed above a foot and a half for each in breadth. Thus crammed together like herrings in a barrel, they contracted putrid and fatal disorders; so that they who came to inspect them in a morning had occasionally to pick dead slaves out of their rows, and to unchain their carcasses from the bodies of their wretched fellow-sufferers to whom they had been fastened."

In the United States the growth of the Negro population has been steady. Bancroft estimates the colonial Negro population as follows:

1714--- 59,000
1727--- 78,000
1754---293,000

The United States censuses give the following figures:

Date	Total Negroes	Per Cent of Increase
1790	757,208	
1800	1,002,037	32.3
1810	1,377,808	37.5
1820	1,771,656	28.6
1830	2,328,642	31.4
1840	2,873,648	23.4
1850	3,638,808	26.6
1860	4,441,830	22
1870	4,880,009	9.9
1880	6,580,793	34.9
1890	7,488,676	13.8
1900	8,833,994	18.0
1910	9,827,763	11.2
1920	10,463,131	6.5

The variations in the rate of increase are due to many causes, beside faulty enumerating as in 1870. The illicit slave trade and a high birth rate increased numbers up to 1850. Emancipation and its struggles decreased the rate of growth, and recent large migration to northern cities has further decreased it. Today Negroes form 9.9 per cent of the population of the country. While their birth rate has decreased, their death rate has also. In Reconstruction days, the Negro

had a death rate of between 34 to 40 per cent a thousand; today it is about 17 per thousand.

The greatest decrease in death rate has been effected in tuberculosis. Out of every 100,000 colored persons, 418 died of tuberculosis in 1911; and only 235 in 1926. Infant mortality, while still high, is dropping and typhoid fever and pneumonia have declined. On the other hand, the mortality from venereal disease is still high and from diseases of the heart and kidneys. Part of this is due to the change from country to city life in the last few decades.

The sex composition of the American Negroes has changed considerably. The ~~existence~~ excess of males, reaching the United States under the slave system was large, and even as late as 1820 there were a thousand one hundred and thirty-four males to every thousand females. This dropped to a thousand and three in 1830 and 996 in 1860. There was 992 in 1920. The corresponding figures for the whites in 1920 was a thousand and forty-four males to every thousand females, showing a more unstabled population due to white emigration.

The age composition ~~shows~~ a decreasing ~~population~~ proportion of children under fourteen and an increasing ~~population~~ proportion of adults forty-five years of age and more. Negroes marry somewhat earlier than whites and their marriages are broken by death and divorce a little more frequently.

The American Negroes are developing a definite physical type. They do not, of course, look alike. They range from what people call the "typical" Negro to the "typical" white man; but in a recent measurement of 30 physical traits, the variability of the American Negro is shown to be notably low in the majority of cases and to show in the main the characteristics of a homogeneous race. This is due ~~of course,~~ as much to ~~to the~~ social heredity as ~~well as~~ to marriage within the group.

The Negro population is distributed throughout the nation

46-2-113

although its largest concentration is still in the former slave states. In 1790, 91.1 per cent were in the South and all but 2.2 per cent of them in the South Atlantic division. The proportion increased until in 1830, 92.8 per cent of the Negroes were in the South and all but 2.2 per cent of them in the South Atlantic division. ~~The proportion increased until in 1830, 92.8 per cent of the Negroes were in the South,~~ but on the other hand, 21.5 had moved into the new East South Central cotton belt and 5.6 to the newer Southwest. The proportion living in the North was only 7.2 per cent. Since then the proportion of Negroes in the South has slowly declined; and of those in the South, the proportion in the East South Central section increased until after the war and then decreased a little, while the proportion in the Southwest greatly increased and the proportion in the North increased 10.5 per cent. One-half of one per cent in 1910 were in the West.

The so-called Black Belt represents a concentration of Negro population in the South due to cotton culture and rich land. Counties with 50 per cent or more of blacks had a Negro population as follows:

Date	Counties in which the percentage Negro was	
	50 to 74.9%	75 or more
1910	2,870,001	1,062,483
1900	2,966,976	1,090,483
1890	1,603,400	952,570
1880	2,674,953	717,282

The center of Negro population was in Virginia in 1790. In 1880 it moved 443 miles Southwest to Walker County in the extreme Northwestern Georgia. In 1900 and 1910 it was in the extreme northeast of Alabama, moving slightly westward. In 1920 the census showed 8,912,231 Negroes in the South; 1,472,309 in the North; and 78,591 in the far West. Since 1920 the number of Negroes in the North has greatly increased through migration so that there are probably in the North and

West today, 2,000,000 or more Negroes, while the Negro population of the South has increased but little, remaining at about 9,000,000.

The proportion of Negroes in the various states varies greatly. There is not a single state in which Negroes do not live, although there are very few in states like New Hampshire and North and South Dakota.

36-2-45

On the other hand, they formed in 1920 a majority of the population of South Carolina and Mississippi, and from 25 to 50 per cent of the population of the District of Columbia, Virginia, North Carolina, Georgia, Florida, Alabama, Arkansas, and Louisiana. Other states with from 10 to 25 per cent, were Delaware, Maryland, Tennessee and Texas. In the South Atlantic and South Central states the Negroes formed from between 20 and 30 per cent of the population and from 2 to 3 per cent in the Middle Atlantic and North Central states.

The recent migration has been chiefly to cities; and New York, Chicago, Philadelphia, Indianapolis, Detroit, Cleveland, St. Louis and Kansas City have received a large influx.

THE AMERICAN NEGRO

Problems of Social Contact

The establishment of the legal status of slavery in the confines of the United States was gradual. Not all the Negroes imported were by any means slaves. As early as 1790, there were nearly 60,000 free Negroes in the United States, and the number of free Negroes thereafter increased as follows:

	Number	Percent of all Negroes	Decennial increase Percent
1860	488,070	11.0	12.3
1850	434,495	11.9	12.5
1840	386,293	13.4	20.9
1830	319,599	13.7	36.8
1820	233,634	13.2	25.3
1810	186,446	13.5	71.9
1800	108,435	10.8	82.2
1790	59,557	7.9	

That there were free Negroes in the United States before 1790 is clear from numerous accounts of their activities. Moreover, while the main mass of the Negroes imported were regarded and treated as slaves, the legal status of slavery in the United States was not recognized until many years after the importation began. Indeed, the earlier assumption was that imported black labor stood upon exactly the same basis as imported white labor.

Economic conditions in England in the 17th Century had filled the jails and workhouses with paupers and vagrants. Systematic effort was made to send these to America as indentured servants. Convicts and prostitutes were added and it was reported in 1680 that the stream of forced, kidnapped and voluntary white servants reached a total of 10,000 a year. The Thirty Years war brought some German workers and servants.

But this supply was limited by the home demand for labor and the difficulty of establishing in America a caste for white servants. On the other hand, the supply of black labor under the Dutch, and

especially the English slave traders was almost unlimited. The Colonial law which at first applied to all "servants", white and black, began late in the 17th Century and early in the 18th to recognize a distinction between black servants for life and white servants for a term of years.

By 1750 black slavery became a thoroughly established institution in the United States. Nevertheless, all Negroes were not slaves and for years, up until the rise of the Cotton Kingdom, and it was recognized in law and custom that a free Negro could become a citizen, landholder and voter. Free Negroes voted in at least five colonies at the time the Constitution was adopted; they held $8,322 in taxes in Virginia alone in 1833, and in 1830 there are recorded in the United States 3,777 Free Negro owners of slaves, most of the slaves being members of their own families whom they had thus emancipated from whites

Between 1790 and 1830 the percentage of free Negroes increased. The influence of the Revolutionary War nearly doubled the number between 1790 and 1800, and there was an increase of nearly 72% between 1800-1810, and smaller increases of 25 and 36% between 1810 and 1820 and 1820 and 1830. After that, there was a determined attempt to get rid of free Negroes, either by re-enslavement or colonization, and by making manumission difficult. As a result of economic pressure and Civil War, the great mass of the Negro slaves were freed by military order in 1863 and the whole status of slavery abolished ~~by Constitutional amendment in 1865~~ by Constitutional Amendment on December 18, 1865. The presence of black slaves in America gave rise, first, to the slave codes, and then to the problem of civil and political rights of freed Negroes. The slave codes were built up gradually on the basis of West Indian legislation. The slaves under these codes, had no ordinary rights of citizenship. He could be condemned by the

46-2-117

word of one witness and sentenced without jury. He could be killed for resisting his master. He was regarded as real estate and could not be admitted as a witness in a court of law, except against another slave. The family relation among slaves was not recognized, and they could, ~~of course,~~ be bought and sold.

the trade in black labor, were the beginning of a new vastly profitable international trade. When to this was added the economic revolution of the 19th Century in the technique of industry, the modern world was born.

It was, however, impossible to keep the black population in slavery: their own resistance; the limitation of fertile land; the monetary need of higher technique with tools and machinery, and the competition of white labor, overthrew the slave system in the West Indies and in the United States.

The so-called Negro problems arose in the United States with the freeing of the slaves. Economically, the Negroes were still in slavery after Emancipation. They had no capital, no land, very little skill, and no political rights. If they had been left thus with a mere edict of emancipation, slavery would have persisted in the United States without a legal slave trade and with increased competition revolt and turmoil. An attempt was made to give the freedman a little land and capital: "Forty acres and mule". This failed, because the original idea of paying for this through a seizure of enemy property, was not practicable.

46-2-118

The enfranchising of the Negro was not simply a method of forcing this economic emancipation, it was the only political expedient which could ensure the peaceful return of the rebellious Southern states back into the Union. The result justified the experiment. There was extravagance, bribery, crime, vagrancy and disease during Reconstruction, but most of this was the inevitable accompaniment of emancipation. On the other hand, as a white contemporary said: "The Negroes ~~obeyed the constitution of the United States.~~ "They obeyed the Constitution of the United States and annulled the bonds of states, counties and cities which had been issued to carry on the war of rebellion and maintain armies in the field against the Union. They instituted a public school system in a realm where public schools had been unknown. They opened the ballot box and jury box to thousands of white men who had been debarred from them by a lack of earthly possessions. They introduced home rule in the South. They abolished the whipping post, the branding iron, the stocks and other barbarous forms of punishment which had up to that time prevailed. They reduced capital felonies from about twenty to two or three. In an age of extravagance they were extravagant in the sums appropriated for public works. In all of that time no man's rights of persons were invaded under the forms of law."

The legislation of the South ~~directly after the war and before the Negroes were enfranchised,~~ showed determination to re-establish Negro slavery in everything but in name. The white South ~~therefore, compelled~~ immediately began to bargain with the commercial and industrial North ~~and to allow free Negro labor and a minimum of civil rights in return~~ for the restoration of political power to white folk. While the bargain was being negotiated, Negroes were gradually ~~taken~~ forced from the ballot box by force and fraud. Finally, beginning

in 1890, a series of laws was passed and acquiesced in by the North which, disfranchised the poor and the illiterate; ~~in addition to that,~~ ~~it~~ excepted white people from the operation of these restrictions by a "Grandfather Clause", and ~~it~~ put the right of ~~legislation~~ in the hands of petty local officials who proceeded almost without exception to disfranchise all Negroes and to admit all whites. The result has been the present legal caste system in the South and also a peculiar nullification of Democracy throughout the United States, because the Southern states ~~wanted~~ the whole population, white and black, as the basis of their representation in Congress, but allow only the whites to vote, so that ~~then~~ the Southern whites have thus ~~debarred~~ political power. Further than that, and in order to insure no political ~~difiance~~ among the whites which might re-enfranchise the Negroes, ~~the dominant political party of the South has succeeded in disfranchising even~~ more white voters than Negro voters. The singular result is that although the population of the 11 Southern states has increased 100% in the last forty years, the number of voters, even with the recent addition of women, has increased only 50%. And in 5 of the Southern states of the Far South there has been practically no increase. Also, it actually happens that today nine thousand voters in South Carolina exercise as much power in Congress as ninety thousand voters in Ohio.

Next 2 The political problem, The

19

The problem which has always most perplexed white America, is that the question of the amalgamation of the white and black races in

10 America. ~~Years of propaganda has led the whites to associate slavery and black blood and to regard mulattoes as degenerates.~~ The increase of mixed bloods was, therefore, one of the earliest problems that ~~came to the front.~~ There were the early intermarriages of white men and free Negro women, especially in Virginia and Maryland. Mulatto children were early born of white women servants and even of free white women, especially in the time when status was determined by land holding and there were some free Negro landholders. And finally there was the large percentage of mulattoes born from the union of white men and their slave women.

Laws on the subject early became frequent. The earlier laws were aimed at free white women and made their children slaves. As conditions changed and most mulatto children were the offspring of masters and slave women, the law simply prevented legal marriage and, reversing all precedent, made the children follow the condition of the mother. Such laws actually encouraged mulatto children and the result was a large proportion of white blood in the so-called Negro race and much unacknowledged Negro blood among the whites.

The number of legal mixed marriages between white and colored people has never been large on account of the social stigma. In Boston, Massachusetts, for instance, there were 600 such marriages between 1855 and 1887. Michigan had 111 such marriages, 1874-1893, and Rhode Island 58, 1881-1893.

No successful attempt to count the number of mulattoes in the United States has ever been made. The admittedly uncomplete figures of the census and gave 15.2% of Negroes in 1890, 20.9% in 1910 and 15.9% in 1920. Investigators after careful measurements believe that over 70% of the American Negroes have some White blood

H6-2-120

III SOCIAL AND SPIRITUAL DEVELOPMENT

As a result of four centuries of migration, ~~two~~ three centuries of enslavement, and 65 years of restricted American citizenship, we have in the United States, not simply a social problem, but a developing dark nation within a modern white nation. The European ideal of a nation is a physically homogeneous group speaking the same language and having approximately the same culture. Under pressure of the facts this has been modified so as to include in nations, geographically separate, groups not homogeneous in blood, culture or language; today more of less autonomy for such groups has begun to be recognized.

In the case of the American Negro, on the other hand, we have a still newer idea, and that is that of A large group of people physically closely intermingled with the rest of the nation, and sharing the same language and culture, but nevertheless, ~~a group which socially and spiritually is largely~~ socially separate from the nation. This ~~Their~~ setting off ~~from the nation~~ is not complete. There is some intermarriage; there is very large economic inter-dependence; and despite the grouping of Negroes in sections and neighborhoods, large numbers of them live side by side with white people as ~~physical~~ neighbors.

And yet, more than any other portion of American citizens, ~~and perhaps all things considered, more than any similar European group,~~ the American Negro forms a nation to himself. This arose, historically, by the pressure of slavery which tried, and nearly succeeded in making slave and black man synonymous in the United States. After emancipation, ignorance and poverty continued the isolation of slavery: and today, ~~the~~ color caste and social ostracism without, together with group loyalty and organization within, tend to maintain and complete the closed circle.

Color caste in the United States at present involves

distinctions based on race and color. These distinctions are not always definite and they vary from place to place and from decade to decade. We may distinguish three main regions: The Southern South containing Today approximately 70% of the Negroes, the Border States containing 10-12%, and the North and West, containing 18-20%.

1. In the Southern South by law and custom; the overwhelming majority of the qualified Negroes cannot vote.

2. They live usually in the least desirable districts with streets mostly unpaved and with limited city facilities, like sewage, lighting and policing.

3. Their wages are low, and they are restricted mainly to menial occupations, hard physical labor, or the lower grades of skilled labor.

4. There can be no legal inter-marriage between whites and persons of Negro descent, and a betrayed colored girl has in practice no relief in the courts.

5. They are not recognized as citizens in civic life: they usually cannot join white religious or cultural organizations; they are either not admitted or only admitted on special terms to public places, public assemblies, churches, lectures, theatres, concerts, museums, parks and libraries. Sometimes, separate institutions, or parts of institutions, ~~like hospitals, libraries and parks~~ are set aside ~~apart~~ for them, but in that case the facilities are poorer and less effective ~~smaller~~. They are not admitted to hotels, restaurants and places of public entertainment.

6. There is an entirely separate system of public schools, with poorer equipment, poorer financial support, and usually without high schools or night schools. White colleges do not admit them, even when they are supported by the state. In such case, there is usually state institution with limited equipment and Curtailed Curriculum ~~resources~~ for their accommodation.

7. In the courts they receive a distinct standard of justice.

46-2-123

They seldom sat on juries, even when Negroes are being tried. They are liable to longer and harsher sentences and often are in danger of mob violence and even lynch law.(over)

8. So far as possible in every walk of life ~~they~~ Negroes are segregated; they have separate rooms in railway stations, separate and inferior cars or parts of cars on railway trains, separate seats in street cars, and sometimes they are allowed only on the freight elevators of public buildings. They invariably pay equal prices for ~~such~~ inferior accommodations and are equally taxed on their property.

9. They are subject to other more or less intangible and indefinite discriminations, and lack of protection; as for instance, their women ~~and often~~ are liable to insult; their property and wages are peculiarly open to exploitation; they are required to show more or less Austin deference to white folk, ~~by taking off their hats or yielding the road, etc~~.

In many of these discriminations there are personal and local exceptions, and in the last ten years mob violence and lynching have become less frequent. There is ~~more~~ increasing chance of justice in the courts, and the city schools, and in some cases, the country schools have been improved. These, however, are still exceptional cases, and as a rule, all Negroes, no matter what their training, position and trait, are subject to ~~most of~~ the above disabilities. ~~Without~~ Beyond the limits of these legal and customary caste distinctions, there is much good will and kindness, and a ~~good~~ great deal of personal charity and help.

In the Border States, the Negroes suffer less restriction. Usually, they have the right to vote, although economic pressure is brought to bear. There is less of ~~the~~ personal insult and discrimination, but there are still separate churches, often separate libraries and parks, or at least limited facilities in ~~the~~ public places. The schools in the Border States are separate but show less discrimination, and

46-2-123

in general, public funds are spent more equably. The Negro quarters in towns and cities are better served with public facilities. Inter-marriage is prohibited. The economic condition is somewhat better, the wages being higher, and the opportunities for work wider.

In the North, there is the minimum of discrimination, but it is still there. In some regions, ~~like the southern parts of Ohio, Illinois and Indiana,~~ contiguous to the South there are separate schools, but the per capita expenditure is usually equal to that of the white schools. In the North in general, there is no discrimination in schools, parks or libraries. There is usually considerable discrimination in semi-public institutions, like hotels and restaurants. Most of the Northern states have no laws against inter-marriage. Voting is free, and while Negroes are not confined to particular residence sections, nevertheless, it is difficult ~~and not impossible~~ for them to rent good homes or to secure mortgage accommodations in buying them, ~~although they are continually overcoming such difficulties.~~

There is no segregation in trains or street cars and public and personal insult is rare. Usually, ~~they still~~ Negroes keep to their own churches. The economic difficulties persist. They have trouble in finding better classes of work; working with white workers on their own merits; joining trades unions, or having a chance for advancement. Here, however, there are again considerable and individual exceptions. In other words, while there is a color line in the North, it tends to fade out here and there, and is not a rigid caste system, as in the South. Also, in the North, there is always some social intercourse between the races, usually in art and literary and musical circles.

It is, ~~of course,~~ difficult to express definitely just what the social ostracism of American Negroes ~~has~~ meant in the past and just what it means now. Its manifestations are subtle and its changes almost imperceptibly gradual. And yet perhaps a statement something

46-2-184

like this will illustrate the situation:

Up until twenty years ago, it was impossible, even in a city like New York, for colored persons to appear at public dinner and more especially, at a dinner where both men and women were present, without either open insult or caustic comment in the press; up until ten years ago it was good form, even in the freest parts of the United States and in the better circles of American Negroes, for the leaders to assert publicly and vehemently, that they did not wish to be treated as social equals by their white fellow Americans.

This situation still holds true in the South and the Border States, and even in some parts of the North; but in other parts of the North, Negroes now and then are not only made welcome at public social occasion, and it has become common for Negro leaders to say frankly that like everybody else, they wish social equality wherever it is freely and voluntarily extended; and that under no circumstances, except by compulsion, will they accept a status of social inferiority.

36-2-52

From such outward pressure there has arisen widespread social organization among American Negroes. Historically, this began with their churches. For two centuries the church has been the great center of American Negro life. The Negro church is not simply a religious organization. It is the only surviving social institution of the Negroes which had its roots in the African forests and survived slavery. Under the leadership of the priest and medicine man, and afterward of the Christian minister, the church preserved in itself the remnants of African tribal life, and became, after emancipation, the center of Negro social life. Out of the churches developed eventually the Negro secret and fraternal organizations, practical insurance and benevolence, and the beginnings of economic co-operation. A number of great colored church leaders, who were really guides in

social development, have arisen. Especially Richard Allen, (1760-1831), organizer of the A. M. E. Church; Asalon Jones, first colored Episcopal rector; George Leile, (1750), an early Baptist pioneer; John Chavis, (1801*, a Presbyterian preacher, and Alexander Crummell, a great Episcopalian minister.

Next to the churches come the beneficial and insurance societies, of which there are probably 100, some of which are large and flourishing organizations. The secret societies, including Masons, Odd Fellows, Pithians, Elks, etc., who own between five and ten million dollars worth of property and collect at least $2,000,000 a year. There are various co-operative benevolences, including homes and orphanages, hospitals and cemeteries. There are economic organizations, including some fifty small banks, a large number of building and loan associations and in all about 70,000 commercial enterprises with an annual overhead of $1,500,000.

36.2.53

By means of these organizations and individual enterprise, the American Negro has built up a group economy, so that Negro professional men and most of the Negro businessmen, serve almost exclusively a Negro clientele, while the mass of the Negroes increasingly patronize Negro professional men and Negro business. Thus, the Negro group today is serving itself with religious ministration, medical care, legal advice, and education, and partially with homes, food, books, newspapers, bank credit, photographers, hotels, beauty parlors, drug stores, undertakers, etc. This economic circle is by no means closed. The mass of colored people still work for white people. Negro professional men have white people among their clients, and Negro businessmen serve some white customers. Still the growing tendency is to form a fairly complete circle. The greatest gap remaining is the matter of capital and technical management.

The occupations in which there were at least five thousand men

or women of Negro descent employed in 1920 were as follows:

The men were employed as follows:

in agriculture	1,566,627
in extraction of minerals	72,892
in manufacturing and mechanical industries	781,827
in transportation	308,896
in trade	129,309
in public service	49,586
in professional service	41,056
in domestic and personal service	273,959
in clerical occupations	28,710

The women were employed as follows:

in agriculture	612,261
in manufacturing and mechanical industries	104,983
in trade	11,158
in professional service	39,127
in domestic and personal service	790,631
in clerical occupations	8,301

Education and intelligence among American Negroes show remarkable increase. The official figures for illiteracy are inaccurate, but they indicate the trend. Of American Negroes 10 years of age and over, there were unable to read and write: 1870, 79.9%; 1880, 70%; 1890, 57.1%; 1900, 44.5%; 1910, 30.4%; 1920, 22.9%. The urban Negro population showed only 13.4% of illiteracy in 1920, which was about equal to the illiteracy of the foreign-born. It is interesting to know that illiteracy among Negro women is slightly less than that among the men.

Of the Negro population from five to twenty years of age, there were in 1920, 53.5% attending school. The girls being slightly in the majority. Of those seven to thirteen years of age, 76.5% were in school.

The corresponding figures for native whites of native parentage was 66.9% and 92.2% in 1910, 44.7% of the children five to twenty years of age were in school, and 64.1% of those seven to thirteen years of age. This, of course, gives but a partial picture of the real situation. The educational facilities offered to American Negroes are still greatly limited. There are at present 31 exclusively Negro colleges with about 3,300 students and about 1,500 other Negro students arein white colleges. The number of Negro graduating from colleges has greatly increased:

30-2-55

1820-1829	3
1830-1849	7
1850-1859	12
1860-1869	44
1870-1879	313
1880-1889	738
1890-1899	1,126
1900-1909	1,613
1910-1919	2,861
1920-1927	4,146

This has reference simply to the Batchelor's Degree in Arts. In addition to that a considerable number of Masters of Arts, a few Doctors of Philosophy and a large number of professional graduates may be added. The wealth and property of the Negro-American group has steadily grown. One estimate makes their total property $1,800,000,000, and their land ownership 34,000 square miles, or an area nearly as large as that of Portugal, and larger than the whole of Ireland.

There is no reliable measure of crime in the United States. The crime census of 1923 shows us that American Negroes, having 9.3% of the population, 18 years of age and over, furnished 23.3% of the committments to prisons and jails. Of course, this is partially accounted for by the fact that it is easier in the United States to commit a Negro for alleged offenses than to commit a white person. On the other hand, crime among Negroes is decreasing. In 1910, for every 100,000 of the Negro population, 1,823 were committed to prisons

during the year. Thirteen years later, the proportion had fallen to 1,306, a decrease of over 28%. Of the committments one-fifth are for disorderly conduct, one-eighth for drunkenness, one-tenth for stealing, and one-thirteenth for vagrancy. What has been the spiritual and social result for America of this racial reaction and inner group development?

The contributions of American Negroes to the making of America have been many and continuous. First, of course, as a labor force they laid the foundation of the enormous economic development which made modern America. They worked not simply as slaves in the furnishing of the four great crops: tobacco, rice, sugar and cotton, which with the slave trade formed the beginning of modern international trade, but they worked also as free artisans and pioneers.

36-2-56

Previous to the full establishment of slavery, they were among the earliest of explorers, and possibly the Negro race was in America even before Columbus. Nuflo de Olana, a Negro, was with Balboa when he discovered the Pacific Ocean. Many were with Cortes, De Soto and other Spanish explorers. Negro artisans helped Menendez found St. Augustine in 1565. Stephen Dorantes, a Negro, was was with the Narvaez expedition, was the discoverer of what is now Arizona, New Mexico and the Southwest of the United States in 1539.

Negro soldiers have fought in all American wars. A few of them were in the Colonial Wars. About 4,000 were in the Continnental Army during the war for American independence, as large a proportion (9%) of American Negroes as of American whites, although seven-eighths of the blacks were in slavery. In the War of 1812, Negroes distinguished themselves on the high seas and Battle of Lake Erie, among the land forces, and particularly at the Battle of New Orleans, where they formed over one-eighth of the soldiers in line. In the Civil War, they not only furnished a large number of laborers, helpers and spies, but also 180,000 enrolled soldiers, which represented over 4% of the total

Negro population, slave and free. The free white North furnished 10%. In the World War, the Negro forming one-tenth of the population, furnished 13% of the soldiers called to the colors; 342,277 Negroes were accepted for full military service. The Negro by his insistent struggle to be free in the United States has broadened the basis of Democracy in America and in the world. This was not only by means of a continuous series of slave insurrections in the West Indies and on the continent which culminated in the freedom of Haiti and the consequent gift of the vast territory of Louisiana to the United States, but it was also carried out by the systematic running away of slaves under organized Negro leadership, and by a continuous appeal by Negroes to the conscience of America from the early 18th Century down to the Civil War.

36-2-57

After the Civil War it was Negro loyalty and the Negro vote alone that restored the South to the Union, established a new Democracy, both for white people and black, established the first system of popular education in the South, and began a new social legislation. Negro women as workers have done much to free the American working women from the harem idea of cloistered ease.

Many distinguished Americans have been of Negro descent. The first National Holiday of the United States was the Fifth of March which marked the death of Crispus Attucks, a mulatto, in the initial clash of the Revolutionary War. Richard Allen, was a great black religious leader, while John Steward founded the mission work of the white Methodist Episcopal Church. David Walker was one of the earliest Abolitionists; Frederick Douglass shares with William Lloyd Garrison the honors of the fight for the emancipation of slaves. Sojourner Truth was a singularly successful Abolitionist and radical agitator. Prince Hall, a Negro, was a pioneer Mason, deriving his authority directly from England. Granville Wood was an inventor of parts of the telephone,

and Matseliger's inventions revolutionized shoemaking. Elijah McCoy was the inventor of modern locomotive lubrication. Booker T. Washington was a pioneer in industrial education and a statesman in inter-racial adjustment. Mat Henson went to the North Pole with Peary.

There have been two Negro Senators and 21 Congressmen and several judges on the Bench. Charles Young, a West Point graduate, was one of the best officers in the American army. Many other Americans, including statesmen of the highest rank, churchmen and artists, have been of Negro descent, although this fact was seldomed mentioned in their careers.

The psychological results of the racial situation in America are extraordinary, especially in the Negro group. A spirit of revolt strives with an inferiority complex. Counsels of despair oppose a determination to survive at all costs. The push upward wavers as to its objects and ideals, ~~which might be either for America or for the black race.~~

Out of this, however, comes one inescapable result: the beginnings of literature and art.

~~In literature and art the Negro has done much for America.~~ First and foremost comes, of course, the Negro folk-song.

"Little of beauty has America given the world save the rude grandeur God himself stamped on her bosom; the human spirit in this new world has expressed itself in vigor and ingenuity rather than in beauty. And so by fateful chance the Negro folk-song—the rhythmic cry of the slave—stands today not simply as the sole American music, but as the most beautiful expression of human experience on this side of the seas. It has been neglected, it has been persistently mistaken and misunderstood; but notwithstanding, it still remains as the singular spiritual heritage of the nation and the greatest gift of the Negro people."

To this must be added the Negro rhythm in other forms of music and in dancing and the recent development of the Negro idiom of white composers like Dvorak and the colored composers like Handy, Burleigh and Dett.

by speech, history, stories and poetry to make clear his claim to manhood. William Wells Brown wrote a half dozen stories, essays and books of travel; A. A. Whitman wrote difuse poetry, with here & there startling bits of beauty; Frances Harper wrote conventional verse, with ~~now and then an~~ a rare appealing stanza; ~~and~~ George W. Williams ~~wrote~~ compiled the first standard history of the Negro in America.

This represented a ~~great beginning of the attack on prejudice and~~ however feeble and ineffective attempt at self-expression which ~~it~~ culminated in the last decade of the 19th century, with the two first ~~really~~ great figures in American Negro literature: Paul Laurence Dunbar, and Charles Waddell Chesnutt. Both of them ~~surrendering~~ wrote under the enthusiasm and over-statement of propaganda, ~~taking~~ and assuming the detached attitude of the artist, Dunbar ~~writing~~ wrote mainly of the simpler ~~and finer~~ joys and laughter reactions of Negro peasant life and Chesnutt portraying ~~ing~~ mainly the effect of the Negro on the main current of ~~Negro~~ white life ~~or~~ and the tragedy of the mulatto.

~~This brought~~ In the first fifteen years of the 20th century there developed the ~~reaction~~ clash between those who believed in a docile and good tempered acceptance of the unfortunate facts of a racial contact, ~~in order that through this retreat they might~~ so as to gain ~~favor from the~~ the good will and help of the white world; ~~for further advance~~; and those, on the other hand, who believed in ~~a more~~ an agressive and uncompromising fight on prejudice. Booker T. Washington, as statesman and writer, represented the first school, and his "Up From Slavery" was its classic. A number of other and younger writers opposed him, while still a third and smaller number, like Kelley Miller, stood between. ~~This period of Sturm und Drang dropped after the War, between 1915 and 1920, to a mass of new young writers, mainly idealists.~~ There were William Stanley Braithwaite, poet and critic; Benjamin Brawley, historian and essayist; Carter Woodson, scientific historian; and a half dozen poets—Joseph Cotter, Jr., Fenton Johnson, ~~and~~ George McClellan, ~~together with~~ Georgia Douglass Johnson, and James Weldon Johnson, ~~and Angelina Grimke.~~ These were mainly idealists in the sense that they believed ~~in the future of the Negro race, but they~~ ~~were~~ primarily ~~artists~~ and not ~~race~~ leaders dealing with the

49-2-132

This period of Sturm und Drang lasted until the World War. But even before
German new writers who heralded the
new German spirit had begun to appear

46-2-133

Since 1920, perhaps twenty-five writers, mostly young men and women, deserve mention in Negro-American literature. Their attitude and message seems at first a little bewildering until one remembers their historical genesis. Out of the controversy that surrounded the policies of Booker T. Washington there crystallized two attitudes of mind toward the Negro and his future in the United States. One we may call the Self-Assertive school. This attitude did not necessarily involve aggression or even agitation, but it was an attitude of mind which believed that self-assertion and self expression on the part of the black man was necessary to his development as a free American citizen. On the other hand, there emerged a state of mind which we may call, by the way term, Defeatist; which despaired of any chance of self-assertion on the part of the Negro. At most, it hoped that after surrender to the demands of the dominant white world, there might be some yielding to Negro ambition and recognition of Negro genius. This main division of Negro thought is manifest in recent Negro literature. In addition to that, there has come a cross division between Realists and the Romantics. The Romantics follow the natural tendency to idealize the rise of the Negro and see a fine future. The Realists follow the general trend of post-war American literature which dissects unpleasant truths. This trend in Negro-American literature was especially emphasized by the success of certain white writers who exploited Negro themes in books which were both realistic and defeatist; going ruthlessly into the slum life of the lowest level and finding no outlet for Negro ambition. Taking now these four sets of writers, we may plot present Negro-American literature somewhat as follows: most of the recent writers belong among the Self-assertive school in the sense that they believe in the Negro race and in its ultimate gaining of civil rights and artistic self-

expression. These writers include some whom we have mentioned before, like Braithwaite, Brawley, James Weldon Johnson and Georgia Johnson. They include, the newer poets, Countee Cullen, Arna Bontemps, Lewis Alexander, and they include novelists, like Walter White and Jessie Fauset. All these belong to the Romantics ~~swing, and Contrasting with them on the side of those whose writing is more realistic is a playwright, Willis Richardson~~, a poet, ~~like~~ Helene Johnson, an essayist, like Franklin Frazier, and social and historical students, like Carter Woodson and Charles Johnson. Of these, however, only Braithwaite, Cullen and Woodson have received any wide recognition from the American reading public. On the other hand, the Defeatists have had much ~~greater~~ popularity, showing that their message appeals more to white America. Claude McKay, for instance, who was Romantic in his poetry, becomes a Defeatist ~~Realist~~ in his novel. Rudolph Fisher and Eric Waldron ~~in their short stories~~ are intensely realistic in their short stories and at the same time Defeatists in their ~~novels~~ Angelina Grimke ~~is a Romantic Defeatist~~. This classification is, of course, tentative and somewhat mechanical. Tendencies in the ~~last~~ few years may quite invalidate it and yet in the main, it seems a fair picture of what is occuring today.

But they ~~include~~ have also been realists and realistic tendencies among themselves!

Treatment some of the work of Cullen and others can be classed among the realists for the time is far from past

Show for instance could race clash be portrayed when actors of the two races were not permitted to play on the same stage.

The dramatizing of the situation of Negroes in America, while an absorbing ~~drama~~ theme, has been held back from full expression by the strong racial prejudices involved. For a long time the problems of the Negro were portrayed exclusively by white writers and actors, and his humor by white ministrels, blacked up. Stowe's "Uncle Tom's Cabin" and Boucicault's "Octoroon" were early and successful plays, but ~~of course~~ staged with white players. In time colored minstrels replaced white minstrels, but they were ~~pretty~~ strictly limited to fun-making. Gradually out of this grew the Negro musical comedy in the hands of Cole-Johnson, Williams and Walker and Ernest Hogan. More recently they have been followed by striking comedy and ~~forceful~~ vaudeville artists, like Florence Mills and Josephine Baker.

For a long time, ~~however~~, the Negro actor was not allowed in serious drama. Ira Aldridge, a colored man born in Maryland, had to go to Europe for his opportunity, where he became famous and received the decorations of four nations. During the War and thereafter, white dramatists, like Torrance, O'Neill and Green, began to write serious plays on Negro themes and the managers tried colored actors. They had no particular popular success until Charles Gilpin triumphed in O'Neill's "Emperor Jones". Evelyn Preer, Paul Robeson, Frank Wilson and Rose McClendon followed the path that he blazed. ~~Then at last the~~ Today a few Negro dramatists are beginning ~~began~~ to appear, first, in the folk pageant, "The Star of Ethiopia", given in four cities in 1913 thereafter; then in the Laboratory Theater at Howard University, and finally, in various Little Theatres. Angeline Grimké, Mary Burrill, Willis Richardson and Eulalie Spence are some of the new Negro emerged as dramatic writers.

There were a few Negro painters before Tanner, like Bannister in 1876 and Harper in 1910, but the great Negro American painter is

46-2-135

Henry O. Tanner, who has done most of his work in Paris and whose "Raising of Lazarus" is hung in the Luxemberg. Recently excellent new young painters have come to the fore: W. E. Scott, who studied under Tanner, Albert A. Smith, Laura Wheeler Waring, Aaron Douglas, Hale Woodruff and a number of others.

In sculpture there is Edmonia Lewis in the past, and today, Meta Warrick Fuller, pupil of Rodin, and Mae Howard Jackson with her portrait busts of mulatto types.

The American Negro has had little opportunity to pursue a scientific career and yet no one can ignore the work on insects done by C. H. Turner, or the work in psychiatry by Dr. S. C. Fuller, or that in ~~serology~~ pathology by Dr. Julian H. Lewis of the University of Chicago. Ernest Just's investigations in the ~~origin of life~~ marine biology places him in the front rank of modern scientists; behind these came the pioneer work of Thomas Derham in 1788 and Benjamin Banneker, who published the first almanac in the United States in 1792.

G. W. Carver of Tuskegee is a well known agricultural chemist.

46-2-136

BIBLIOGRAPHY

The literature on Negro slavery and the slave trade is large and well known. On the development of the American Negro himself, the following works may be noted:

The United States Census, Bulletin Number 8, on "Negroes in the United States", 1904, "Negro Population, 1790 to 1915", 1918. Other references to the Negro are distributed throughout the various census volumes.

36-2-88

For sources of American Negro history, consult "The Journal of Negro History", edited by Carter G. Woodson, 1916 to date.

General histories of the American Negro are: George W. Williams', "History of the Negro Race in America", 1882; Carter G. Woodson, "Negro in Our History", 4th edition, 1927; Benjamin Brawley, "Social History of the American Negro", 1921; W. E. B. Du Bois, "Gift of Black Folk", 1924.

Other volumes especially to be recommended in studying the American Negro are: The Atlanta University Publications, 1896 to 1913; ~~"The New Negro", edited by Alain Locke, 1925; "Plays of Negro Life", edited by Locke and Montgomery, 1927; Benjamin Brawley, "The Negro in Literature and Art", revised edition, 1921;~~ W. E. B. Du Bois, "Souls of Black Folk", 1903, "Darkwater", 1920, "The Philadelphia Negro", 1899; C. S. Johnson and others, "The Negro in Chicago", 1922; C. H. Wesley, "Negro Labor in the United States", 1927; Carter G. Woodson, "A Century of Negro Migration", 1918, "Mind of the Negro, 1900 to 1860", 1926, and "Negro Orators and Their Orations", 1925.

American Negro literature can best be studied in the following works: the novels by Charles W. Chesnutt; James Weldon Johnson, "Autobiography of an Ex-Coloured Man", 1912; Jean Toomer, "Cane", 1923;

Jessie Fauset, "There is Confusion", 1924; Walter White, "Fire in the Flint", 1924, and "Flight", 1926; Claude McKay, "Home to Harlem", 1928; Nella Larsen "Quicksand", 1928; W. E. B. Du Bois, "The Quest of the Silver Fleece", 1911, and "Dark Princess", 1928.

There are several collections of American Negro verse: "Book of American Negro Verse", edited by James Weldon Johnson, 1922; "Caroling Dusk", edited by Countée Cullen, 1927. The works of the chief contemporary Negro American poets are: Countée Cullen, "Color", 1925, "Copper Sun", 1927; Langston Hughes, "Weary Blues", 1926, "Fine Clothes to the Jew", 1927; James Weldon Johnson, "Fifty Years and Other Poems", 1917, and "God's Trombones", 1927; Claude McKay, "Harlem Shadows", 1922; Georgia Douglas Johnson, "The Heart of a Woman", 1918, "Bronze", 1922; Joseph S. Cotter, "The Band of Gideon", 1918; William Stanley Braithwaite, "Lyrics of Love and Life", 1902, "House of Falling Leaves", 1908; Leslie Pinckney Hill, "Toussaint L'Ouverture", 1928.
The forerunner of these poets was Paul Laurence Dunbar, who published "Lyrics of Lowly Life" in 1896. We have the annual "Anthologies of Magazine Verse", edited by William Stanley Braithwaite since 1913.

36-2-89

There are several collections of Negro biographies. The most notable autobiographies are: "The Life and Times of Frederick Douglass"; and Booker T. Washington's "Up From Slavery".

The leading white writers who have made recent studies in the Negro's problems are: E. P. Reuter, "The American Race Problem", 1927; Melville J. Herskovits, "American Negro", 1928; L. I. Dublin, "Health and Wealth", chapter 12, 1928; H. A. Miller, "Races, Nations and Classes"; F. G. Detweiler, "Negro Press in the United States; ~~E. P. Reuter, "The Mulatto in the United States"; Mary White Ovington, "Portraits in Color", 1927~~ R. T. Kerlin, "Voice of the Negro, 1919" 1920

Primary Sources W.J. Simmons' Men of Mark, 1887

1 Carton

THE AMERICAN NEGRO

By W. E. Burghardt Du Bois. Ph D (Harv.)

1. Origin growth and Physique

The greatest migration of human beings within historic times, was the migration of black men from Africa to America ~~in~~ from the ~~fif-~~ ~~teenth,~~ sixteenth ~~& the~~ ~~seventeenth, eighteenth, and~~ nineteenth centuries. Exact figures concerning this trade are unobtainable. It is said that as early as 1528 there were at least 10,000 Negroes in the new world. Between 1698 and 1707 the yearly migration of Negroes averaged perhaps 25,000 a year. It dwindled after a while but after the Asiento Treaty between England and Spain in 1713, it soon reached 30,000 a year. Just before the American Revolution, from 40,000 to 100,000 were being imported. In 1787, after the Revolution, the British, French, Portuguese, Dutch and Danes were transporting 74,000 slaves a year to America. At the beginning of the nineteenth century England had in her colonies a Negro population of 800,000 Negroes; France 250,000; Denmark, 27,000; Spain and Portugal, 60,000; Holland, 50,000; Brazil, 2,000,000; and the United States, 900,000. This was the result of an importation which has been variously estimated as ~~not less than~~ certainly not less than 5,000,000, ~~nor more than~~ and possibly more than 10,000,000 Africans.

while these are no exact figures the total magnitude undoubtedly 30-2-95

Assuming that each imported slave represented four or five deaths from war, the march to the coast, and the sea voyage, it can be seen that this extraordinary migration meant the loss of at least 50,000,000 inhabitants to Africa and when there is added to this the Mohammedan slave trade, the figures may reach 100,000,000.

What kind of persons were thus introduced into the new world? They came out of all parts of Africa and they represented various degrees of racial intermixture and cultural background. They were all Negroes in the sense that they belonged predominantly to the darker races of mankind living in African and Southern Asia; but

they did not all, or even predominantly represent any extreme specialized type of mankind such as some scientists have tried to find and call the "pure" Negro. Neither were they the lowest of barbarians. Physically they were, for the most part, tall, strong, well-developed men. Culturally they represented everything from the Egypto-Ethippian culture of the Nile Valley to the carving of the Congo basin and the art of the West Coast. Suddenly and violently transplanted to America, they endured a terrific physical fight for sheer survival.

30-2-96

The slaves thus procured came from all parts of Africa—the Soudan, Central and South Africa. Distinct traces of Arab and even Malay blood could be seen side by side with the tall Bantu, the yellow Hottentot and the African dwarfs. The shipment of the slaves drawn from this wide area centered on the west coast of Africa along the Gulf of Guinea, and these west coast Africans were consequently most frequently represented on the slave ships.

The first and usual assumption concerning this race is that it represents a pure Negro type. This is an error. Outside the question of what the pure Negro type is, the Negro-American represents a very wide and thorough blending of nearly all African peoples from north to south; and more than that, it is to a far larger extent than many realize, a blending of European and African blood.[1]

Such a large number of slaves could be supplied only by organized slave raiding in every corner of Africa. The African continent gradually became revolutionized. Whole regions were depopulated, whole tribes disappeared; villages were built in caves and on hills or in forest fastnesses; the character of peoples like those of Benin developed their worst excesses of cruelty instead of the already flourishing arts of peace. The dark irresistible grasp of fetish took firmer hold on men's minds.

Further advances toward civilization became impossible. Not only was there the immense demand for slaves which had its outlet on the west coast, but the slave caravans were streaming up through the desert to the

1. Atlanta University Studies of the Negro Problem. Vol. II, Number 11 & 12. By Du Bois. Atlanta, Ga., 1906. p.28.

Mediterranean coast and down the valley of the Nile to the centers of Mohammedanism. It was a rape of a continent to an extent never paralleled in ancient or modern times.

In the American trade there was not only the horrors of the slave raid, ~~which lined the winding paths of the African jungles with bleached bones~~, but ~~there was~~ also ~~the horrors~~ of what was called the "middle passage", ~~that is, the voyage across the Atlantic.~~ As Sir William Dolben said, "The Negroes were chained to each other hand and foot, and stowed so close that they were not allowed above a foot and a half for each in breadth. Thus crammed together like herrings in a barrel, they contracted putrid and fatal disorders; so that they who came to inspect them in a morning had occasionally to pick dead slaves out of their rows, and to unchain their carcases from the bodies of their wretched fellow-sufferers to whom they had been fastened."

It was estimated that out of every one hundred lot shipped from Africa only about fifty lived to be effective laborers across the sea, and among the whites more seamen died in that trade in one year than in the whole remaining trade of England in two. The full realization of the horrors of the slave trade was slow in reaching the ears and conscience of the modern world, just as to-day the treatment of dark natives in European colonies is brought to publicity with the greatest difficulty. The first move against the slave trade in England came in Parliament in 1776, but it was not until thirty-one years later, in 1807, that the trade was banned through the arduous labors of Clarkson, Wilberforce, Sharpe, and others. 2.

Exclusively of the slaves who died before they sailed from Africa twelve and on half per cent were lost during their passage to the West Indies; at Jamaica four and one half per cent died whilst in the harbours or before the sale, and on-third more in the "seasoning". Thus, out of every lot of 100 shipped from Africa 17 died in about 9 weeks, and not more than 50 lived to be effective labourers in the islands. The circumstances of their subsequent life on the plantations were not favourable to the increase of their numbers. In Jamaica there were, in 1690, 40,000; from that year till 1820 there were imported 800,000; yet at the latter date there were only 340,000 in the island. One cause which prevented the natural increase of population was the inequality in the numbers of the sexes; in Jamaica alone there was in 1789 an excess of 30,000 males. 3.

2. The Negro. By Du Bois. New York, 1915. pp. 156 - 157.

3. History of Slavery. By Ingram. London, 1895. p. 153.

In the United States the growth of the Negro population has been steady as shown by the following numbers. Estimates of Negro population as follows in the 18th century:

1710	50,000
1725	75,000
1750	220,000
1754	260,000
1760	310,000
1770	462,000
1780	462,000

1714 - 59000
1727 - 78000
1754 - 273000

36-2-98

The United States censuses give the following figures

Date	Total Negroes	Per Cent. of Increase
1790	757,208	
1800	1,002,037	32.3
1810	1,377,808	37.5
1820	1,771,656	28.6
1830	2,328,642	31.4
1840	2,873,648	23.4
1850	3,638,808	26.6
1860	4,441,830	22.0
1870	4,880,009	9.9
1880	6,580,793	34.9
1890	7,488,676	13.8
1900	8,833,994	18.0
1910	9,827,763	11.2
1920	10,463,131	6.5

The first census showed 750,000 Negroes in the United States of whom nearly 60,000 were free. The Negroes formed nearly one-fifth of the total population of the United States and 91 per cent

The variations in the rate of increase are due to many causes, beside family, community as in 1870. The illegal slave trade and a high birth rate increased numbers up to 1850

Environment + its struggles decreased the rate of growth and recent large migration to Northern cities has further decreased it. To day Negroes form ~~of them lived in the South.~~ There were over 1,000,000 Negroes in 1800. The Louisiana Purchase brought in 50,000 more and in 1810 there were 1,400,000. Thus the Negro population nearly doubled in twenty years due to importations, annexations, and a high birth rate. During the nineteenth century, the increase of the population was at the rate of about 2.5 per cent a year and the population doubled in 30 years. In 1840 there were 2,874,000 Negroes and in 1880, 6,561,000. Then the increase slowed down. Until 1920, their decennial increase was 6.5 and they formed 9.9 per cent of the population of the country. ~~For a while, it was prophesied under~~ while their death rate has decreased their death rate has also ~~freedom the American Negro would die out. This idea has been completely given up.~~ In Reconstruction days, the Negro had a death rate of between 34 to 40 per cent a thousand; today it ~~has been reduced to~~ is about 17 per thousand.

The greatest decrease in death rate has been effected in tuberculosis. Out of every 100,000 colored persons, 418 died of tuberculosis in 1911; and only 235 in 1926. Infant mortality, while still high, is dropping and typhoid fever and pneumonia have declined. On the other hand, the mortality from venereal diseases is till high and from diseases of the heart and ~~from nephritis.~~ kidneys. Part of this is due to the change from country to city life in the last few decades.

36-2-100

201-4-93

The American Negroes are developing a definite physical type. They do not, of course, look alike, They range from what people call the "typical" Negro to the "typical" white man; but in a recent measurement of 30 physical traits, the variability of the American Negro is shown to be notably low in the majority of cases. The population is distributed throughout the nation although its largest concentration is still in the former slave states. In 1790, 91.1 per cent were in the South and all but 2.2 per cent of them in the South Atlantic division. The proportion increased until in 1830, 92.8 per cent of the Negroes were in the South, but on the other hand, 21.5 had moved into the new East South Central cotton belt and 5.6 to the newer Southwest. The proportion living in the North was only 7.2 per cent. Since then the proportion of Negroes in the South ahs slowly declined; and of those in the South, the proportion in the East South Central section increased until after the war and then decreased a little, while the proportion in the Southwest greatly increased and the proportion in the North increased 10.5 per cent. One half of one per cent in 1910 were in the West. * (insert)

The center of Negro population was in Virginia in 1790. In 1880 it moved 443 miles Southwest to Walker County in the extreme Northwestern Georgia. In 1900 and 1910 it was in the extrem northeast of Alabama, moving slightly westward. In 1920 the census showed 8,912,231 in the South; 1,472,309 in the North; and 78,591 in the far West. Since 1920 the number of Negroes in the North has greatly increased through migration so that there are probably in the North and West today, 2,000,000 or more Negroes, while the Negro population of the South has increased but little, remaining at about 9,000,000.

The proportion of Negroes in the various states varies greatly. There is not a single state in which Negores do not live, although there are very few in states like New Hampshire and North and South Dakota.

* insert

The so-called black belt represents a concentration of Negro population in the South due to cotton culture and rich land. Counties with 50 per cent or more of blacks had a Negro population as follows:

Date	Counties in which the percentage Negro was	
	50 to 74.9 %	75 or more
1910	2,870,001	1,062,483
1900	2,966,976	1,090,483
1890	1,603,400	952,570
1880	2,674,953	717,282

36-2-101

In the first fifteen years of the 20th Century, there developed the inevitable clash between those who believed in a docile and good tempered acceptance of the unfortunate facts of a racial contact, so as to gain the good will and help of the white world; and those, on the other hand, who believed in an agressive and uncompromising fight on prejudice.

36-2-103

Booker T. Washington, as statesman and writer, represented the first school, and his "Up From Slavery" was its classic. A number of other and younger writers represented by books like the "Souls of Black Folk", opposed him, while still a third and smaller number, like Kelley Miller, stood between. This period of Sturm und Drang lasted until the World War. But even before the war new writers who heralded the post-war period had begun to appear. There was William Stanley Braithwaite, poet and critic; Benjamin Brawley, historian and essayist; Carter Woodson, scientific historian; and a half dozen poets—Joseph Cotter, Jr., Fenton Johnson, George McClellan, Georgia Douglass Johnson and James Weldon Johnson.

This

Since 1920, perhaps twenty-five writers, mostly young men and women, deserve mention in Negro-American literature. Their attitude and message seems at first a little bewildering until one remembers their historical genesis. Out of the old controversy that surrounded the policies of Booker T. Washington there crystallized two attitudes of mind toward the Negro and his future in the United States. One we may call the Self-Assertive school. Their attitude ~~did~~ does not involve aggression or even agitation, but it ~~was~~ is an attitude of mind which believes that self-assertion and self-expression on the part of the black man ~~was~~ are necessary to his development as a free American citizen. On the other hand, there emerged a state of mind which we may call by the war term, Defeatist; which dispairs of or ignores any chance of self-assertion on the part of the Negro.

It simply looks the truth in the face and records ~~it~~ impressions. At most, it hopes that after surrender to the demands of the dominant white world, there may be some yielding to Negro ambition and recognition of Negro genius. Meantime, it smiles cynically at the "Problem" and at life and seeks in literature "Art for arts sake".

36-2-104

These main divisions of Negro thought are manifest in recent Negro literature. But they do not wholly explain it for, in addition, there has come a cross division separating this up and down cleft— a division between what we may roughly designate as the Realists and the Romantics.

The Romantics, unfettered by any classic tradition, dream and paint, believing, if self-assertive, in a rosy future for Negroes; if Defeatists, in a fine pessimism and grim despair. The Realists follow the general trend of post-war American literature and appeal to stark truth and facts. They either find hope as Romantics; or paint futile struggle with gay purposeless abandon as Realists.

This latter trend in Negro-American literature was especially hastened and emphasized by the success of certain white writers who exploited Negro themes in books which were both realistic and defeatist; they went ruthlessly into black slum life of the lowest level and painted no outlet for Negro ambition.

Taking now these four sets of writers, we may plot present Negro-American literature somewhat as follows: most of the recent writers belong among the self-assertive school in the sense that they believe in the Negro race and in its ultimate gaining of civil rights and artistic self-expression. These writers include the post-war work of some whom we have mentioned before, like Braithwaite, Brawley, James Weldon Johnson and Georgia Johnson. They include, especially, the newer poets, Countée Cullen, Arna Bontemps, and Lewis Alexander;

and they include novelists, like Walter White and Jessie Fauset. All these belong to the Romantic wing. But they have also their realists and realistic tendencies among themselves. To Realists of this group belong a poet like Helene Johnson, an essayist, like Franklin Frazier, and social and historical students, like Carter Woodson and Charles Johnson. Moreover, some of the work of Cullen and others can be classed among the Realists, for the line is far from fast.

Of these writers, however, only Braithwaite, Cullen and Woodson have received any wide recognition from the white American reading public. On the other hand, the Defeatists have had much wide popularity, showing that their message appeals much more to white America. Claude McKay, for instance, who was Romantic in his poetry, becomes a realistic Defeatist in his recent novel. Jean Toomer, Rudolph Fisher and Eric Walrond are intensely realistic in their short stories and at the same time Defeatists in their ideals. Langston Hughes, while a frank Realist is only at times Defeatist. Nella Larson occupies a similar position on the border line. This classification is, of course, tentative and somewhat mechanical. Tendencies in the next few years may quite invalidate it and yet in the main, it seems a fair picture of what is occurring today.

36-2-105

The dramatizing of the situation of Negroes in America, while an absorbing theme, has been held back from full expression by the strong racial prejudices involved. How, for instance, could race clash be portrayed when actors of the two races were not permitted to play on the same stage? For a long time the problems of the Negro were portrayed exclusively by white writers and actors, and his humor by white ministrels, blackened up. Stowe's "Uncle Tom's Cabin" and Boucicault's "Octoroon" were early and successful plays, but staged

with white players.

In time colored minstrels replaced white minstrels, but they were strictly limited to fun-making. Gradually, out of this grew the Negro musical comedy in the hands of Cole and Johnson, Williams and Walker and Ernest Hogan. More recently they have been followed by striking comedy and vaudeville artists, like Florence Mills and Josephine Baker.

For a long time the Negro actor was not allowed in serious drama. Ira Aldridge, a colored man born in Maryland, had to go to Europe for his opportunity, where he became famous and received the decorations of four nations. During the War and thereafter, white dramatists, like Torrance, O'Neill and Green, began to write serious plays on Negro themes and the managers tried colored actors. They had no particular popular success until Charles Gilpin triumphed in O'Neill's "Emperor Jones". Evelyn Preer, Paul Robeson, Frank Wilson and Rose McClendon followed the path that he blazed.

Today a few Negro dramatists are beginning to appear; first, in the folk pageant, "The Star of Ethiopia", given in four cities in 1913 thereafter; then in the labratory Theatre at Howard University, and finally, in various Little Theatres. Angeline Grimké, Mary Burrill, Willis Richardson and Eulalie Spence are some of the new Negro dramatic writers.

There were a few Negro painters before Tanner, like Bannister in 1876 and Harper in 1910; but the great Negro American painter is Henry O. Tanner, who has done most of his work in Paris and whose "Raising of Lazarus" is hung in the Luxemberg. Recently, excellent new young painters have come to the fore: W. E. Scott, who studied under Tanner, Albert A. Smith, Laura Wheeler Waring, Aaron Douglas, Hale Woodruff and a number of others.

In sculpture there is Edmonia Lewis in the past, and today, Meta Warrick Fuller, pupil of Rodin, and Mae Howard Jackson with her portrait busts of mulatto types.

The American Negro has had little opportunity to pursue a scientific career and yet no one can ignore the work on insects done by C. H. Turner, or the work in psychiatry by Dr. S. C. Fuller, or that in pathology by Dr. Julian H. Lewis of the University of Chicago. G. W. Carver of Tuskegee is a well-known agricultural chemist. Ernest Just's investigations in the marine biology place him in the front rank of modern scientists; behind these came the pioneer work of Thomas Derham in 1788 and Benjamin Banneker, who published one of the first almanacs in the United States in 1792.

36-2-107

like this will illustrate the situation:

Up until twenty years ago, it was impossible, even in a city like New York, for colored persons, to appear at public dinners and more especially, at dinners where both men and women were present, without either open insult or caustic comment in the press; up until ten years ago it was good form, even in the freest parts of the United States and in the better circles of American Negroes, for the leaders to assert publicly and vehemently, that they did not wish to be treated as social equals by their white fellow Americans.

This situation still holds true in the South and the Border States, and even in some parts of the North; but in other parts of the North, Negroes now and then are not only made welcome at public social occasion, and it has become common for Negro leaders to say frankly that like everybody else, they wish social equality wherever it is freely and voluntarily extended; and that under no circumstances, except by compulsion, will they accept a status of social inferiority.

From such outward pressure, there has arisen widespread social organization among American Negroes. Historically, this began with their churches. For two centuries the church has been the great center of American Negro life. The Negro church is not simply a religious organization. It is the only surviving social institution of the Negroes which had its roots in the African forests and survived slavery. Under the leadership of the priest and medicine man, and afterward of the Christian minister, the church preserved in itself the remnants of African tribal life, and became, after emancipation, the center of Negro social life. Out of the churches developed eventually the Negro secret and fraternal organizations, practical insurance and benevolence, and the beginnings of economic co-operation. A number of great colored church leaders, who were really guides in

social development, have arisen. Especially Richard Allen, (1760-1831), organizer of the A. M. E. Church; Asalom Jones, first colored Episcopal rector; George Leile, (1750), an early Baptist pioneer; John Chavis, (1801), a Presbyterian preacher, and Alexander Crummell, a great Episcopalian leader.

Next to the churches come the beneficial and insurance societies, of which there are probably 100, some of which are large and flourishing organizations. The secret societies, including Masons, Odd Fellows, Pithians, Elks, etc., own between five and ten million dollars worth of property and collect at least $2,000,000 a year. There are various co-operative benevolences, including homes and orphanages, hospitals and cemeteries. There are economic organizations, including some fifty small banks, a large number of building and loan associations and in all about 70,000 commercial enterprises with an annual turnover of $1,500,000,000.

By means of these organizations and individual enterprise, the American Negro has built up a group economy, so that Negro professional men and most of the Negro businessmen, serve almost exclusively a Negro clientele, while the mass of the Negroes increasingly patronize Negro professional men and Negro business. Thus, the Negro group today is serving itself with religious ministration, medical care, legal advice, and education; and partially with homes, food, books, newspapers, bank credit, photographers, hotels, beauty parlors, drug stores, undertakers, etc. This economic circle is by no means closed. The mass of colored people still work for white people. Negro professional men have white people among their clients, and Negro businessmen serve some white customers. Still the growing tendency is to form a fairly complete circle. The greatest gap remaining is the matter of capital and technical management.

~~The occupations in which there were at least five thousand men~~

or women of Negro descent employed in 1920 were as follows:

The men were employed as follows:

in agriculture	1,566,627
in extraction of minerals	72,892
in manufacturing and mechanical industries	781,827
in transportation	308,896
in trade	129,309
in public service	49,586
in professional service	41,056
in domestic and personal service	273,959
in clerical occupations	28,710

The women were employed as follows:

in agriculture	612,261
in manufacturing and mechanical industries	104,983
in trade	11,158
in professional service	39,127
in domestic and personal service	790,631
in clerical occupations	8,301

Education and intelligence among American Negroes show remarkable increase. The official figures for illiteracy are incomplete, but they indicate the trend. Of American Negroes 10 years of age and over, there were unable to read and write: 1870, 79.9%; 1880, 70%; 1890, 57.1%; 1900, 44.5%; 1910, 30.4%; 1920, 22.9%. The urban Negro population showed only 13.4% of illiteracy in 1920, which was about equal to the illiteracy of the foreign-born. It is interesting to know that illiteracy among Negro women is slightly less than that among the men.

Of the Negro population from five to twenty years of age, there were in 1920, 53.5% attending school, the girls being slightly in the majority. Of those seven to thirteen years of age, 76.5% were in school.

The corresponding figures for native whites of native parentage was 86.9% and 92.2% in 1910. 44.7% of the children five to twenty years of age were in school, and 64.1% of those seven to thirteen years of age. ¶ This ~~of course~~ gives but a partial picture of the real situation. The educational facilities offered to American Negroes are still greatly limited. There are at present 31 exclusively Negro colleges with about 3,300 students and about 1,500 other Negro students are in white colleges. The number of Negro graduating from colleges has greatly increased:

1820-1829	3
1830-1849	7
1850-1859	12
1860-1869	44
1870-1879	313
1880-1889	738
1890-1899	1,126
1900-1909	1,613
1910-1919	2,861
1920-1927	4,146

This has reference simply to the Batchelor's Degree in Arts. In addition to that a considerable number of Masters of Arts, a few Doctors of Philosophy and a large number of professional graduates may be added. ¶ The wealth and property of the Negro-American group has steadily grown. One estimate makes their total property $1,800,000,000, and their land ownership 34,000 square miles, or an area nearly as large as that of Portugal, and larger than the whole of Ireland.

There is no ~~reliable~~ accurate measure of crime in the United States. The crime census of 1923 ~~shows~~ indicates us that American Negroes, having 9.3% of the population, 18 years of age and over, furnished 23.3% of the commitments to prisons and jails. ~~Of course,~~ This is partially accounted for by the fact that it is easier in the United States to commit a Negro for alleged offenses than to commit a white person. On the other hand, crime among Negroes is decreasing. In 1910, for every 100,000 of the Negro population, 1,823 were committed to prisons

during the year. Thirteen years later, the proportion had fallen to 1,306, a decrease of over 28%. Of the committments one-fifth are for disorderly conduct, one-eighth for drunkenness, one-tenth for stealing, and one-thirteenth for vagrancy. What has been the spiritual and social result for America of this racial reaction and inner group development?

The contributions of American Negroes to the making of America have been many and continuous. First, ~~of course~~, as a labor force they laid the foundation of the enormous economic development which made modern America. They worked not simply as slaves in the furnishing of the four great crops; tobacco, rice, sugar and cotton, which with the slave trade formed the beginning of modern international trade, but they worked also as ~~free~~ artisans, ~~and~~ pioneers and inventors

Previous to the full establishment of slavery, they were ~~among~~ with the earliest of explorers, and possibly the Negro race was in America even before Columbus. Nuflo de Olana, a Negro, was with Balboa when he discovered the Pacific Ocean; Many were with Cortes, De Soto and other Spanish explorers. Negro artisans helped Menendez found St. Augustine in 1565. Stephen Dorantes, a Negro, was was with the Narvaez expedition, was himself the discoverer of what is now Arizona, New Mexico and the Southwest of the United States in 1539.

Negro soldiers have fought in all American wars. A few of them were in the Colonial Wars. About 4,000 were in the Continnental Army during the war for American independence, which was as large a proportion (9%) of American Negroes as of American whites; although seven-eighths of the blacks were in slavery. In the War of 1812, Negroes distinguished themselves on the high seas and Battle of Lake Erie, among the land forces, and particularly at the Battle of New Orleans, where they formed over one-eighth of the soldiers in line. In the Civil War, they not only furnished a large number of laborers, helpers and spies, but also 180,000 enrolled soldiers, which represented over 4% of the total

46-2-129

Negro population, slave and free. The free white North furnished 10%. In the World War, the Negro forming one-tenth of the population, furnished 13% of the soldiers called to the colors; 342,277 Negroes were accepted for full military service. The Negro by his insistent struggle to be free in the United States has broadened the basis of Democracy in America and in the world. This was not only by means of a continuous series of slave insurrections in the West Indies and on the continent ~~which culminated~~ culminating in the freedom of Haiti and the consequent gift of the vast territory of Louisiana to the United States; but it was also carried out by the systematic running away of slaves under organized Negro leadership, and by a continuous appeal by Negroes to the conscience of America from the early 18th Century down to the Civil War.

After the Civil War it was Negro loyalty and the Negro vote alone that restored the South to the Union, established a new Democracy, both for white people and black, established the first system of popular education in the South, and began a new social legislation. Negro women as workers have done much to free the American working women from the harem idea of cloistered ease.

Many distinguished Americans have been of Negro descent. The first National Holiday of the United States was the Fifth of March which marked the death of Crispus Attucks, a mulatto, in the initial clash of the Revolutionary War. ~~Richard Allen, was a great black religious leader, while John Steward founded the mission work of the white Methodist Episcopal Church. David Walker was one of the earliest Abolitionists;~~ Frederick Douglass shares with William Lloyd Garrison the honors of the fight for the emancipation of slaves. Sojourner Truth was a singularly successful Abolitionist and radical agitator. Prince Hall, a Negro, was a pioneer Mason, deriving his authority directly from England. Granville Wood was an inventor of parts of the telephone.

46-2-136

and Matseliger's inventions revolutionized shoemaking. Elijah McCoy was the inventor of modern locomotive lubrication. Booker T. Washington was a pioneer in industrial education and a statesman in inter-racial adjustment. Mat Henson went to the North Pole with Peary.

There have been two Negro Senators and 21 Congressmen and several judges on the Bench. Charles Young, a West Point graduate, was one of the best officers in the American army. Many other Americans, including statesmen of the highest rank, churchmen and artists, have been of Negro descent, although this fact was seldomed mentioned in their careers.

In literature and art the Negro has done much for America. First and foremost comes, of course, the Negro folk-song.

"Little of beauty has America given the world save the rude grandeur God himself stamped on her bosom; the human spirit in this new world has expressed itself in vigor and ingenuity rather than in beauty. And so by fateful chance the Negro folk-song—the rhythmic cry of the slave—stands today not simply as the sole American music, but as the most beautiful expression of human experience on this side of the seas. It has been neglected, it has been persistently mistaken and misunderstood; but notwithstanding, it still remains as the singular spiritual heritage of the nation and the greatest gift of the Negro people."

To this must be added the Negro rhythm in other forms of music and in dancing and the recent development of the Negro idiom of white composers like Dvorak and the colored composers like Handy, Burleigh and Dett.

Turning to literature, we think first of the passive contribution of the Negro of the extent to which he has been the object of thought and writing, characterization and caricature, by white Americans. It is not too much to say that without the Negro, white American literature would have lost its main theme. The early colonial writers wrote about

him and the masters of the nineteenth century like Emerson, Whittier, Lowell, Whitman, Howe and Stowe. Later writers like Cabel, Paige, Howells and Hittinson often turned to the Negro and in the recent renaissance of literature in the South, Green, Heywood and Peterkin have used Negro themes. Negro folk lore is almost the only folk lore indigenous of American soil and while it was first put into literary form by a white writer, Joel Chandler Harris, it is in its essence a Negro contribution.

The contribution of Negro writers to American literature.

36-2-59

BIBLIOGRAPHY

~~The literature on Negro slavery and the slave trade is large and well known.~~ On the development of the American Negro himself, the following works may be noted:

The United States Census, Bulletin Number 8, on "Negroes in the United States" 1904, "Negro Population, 1790 to 1915", 1918. Other references to the Negro are distributed throughout the various census volumes.

For sources of American Negro history, consult "The Journal of Negro History", edited by Carter G. Woodson, 1916 to date.

General histories of the American Negro are: George W. Williams', "History of the Negro Race in America", 1882; Carter G. Woodson, "Negro in Our History", 4th edition, 1927; Benjamin Brawley, "Social History of the American Negro", 1921; W. E. B. Du Bois, "Gift of Black Folk", 1924.

Other volumes especially to be recommended in studying the American Negro are: The Atlanta University Publications, 1896 to 1913; "The New Negro", edited by Alain Locke, 1925; "Plays of Negro Life", edited by Locke and Montgomery, 1927; Benjamin Brawley, "The Negro in Literature and Art", revised edition, 1921; W. E. B. Du Bois, "Souls of Black Folk", 1903, "Darkwater", 1920, "The Philadelphia Negro", 1899; C. S. Johnson and others, "The Negro in Chicago", 1922; C. H. Wesley, "Negro Labor in the United States", 1927; Carter G. Woodson, "A Century of Negro Migration", "Mind of the Negro, 1900 to 1860", 1926, and "Negro Orators and Their Orations", 1925.

American Negro literature can best be studied in the following works: the novels by Charles W. Chesnutt; James Weldon Johnson, "Autobiography of an Ex-Coloured Man", 1912; Jean Toomer, "Cane", 1923;

Jessie Fauset, "There is Confusion", 1924; Walter White, "Fire in the Flint", 1924, and "Flight", 1926; Claude McKay, "Home to Harlem", 1928; Nella Larsen "Quicksand", 1928; W. E. B. Du Bois, "The Quest of the Silver Fleece", 1911, and "Dark Princess", 1928.

There are several collections of American Negro verse: "Book of American Negro Verse", edited by James Weldon Johnson, 1922; "Caroling Dusk", edited by Countée Cullen, 1927. The works of the chief contemporary Negro American poets are: Countée Cullen, "Color", 1925, "Copper Sun", 1927; Langston Hughes, "Weary Blues", 1926, "Fine Clothes to the Jew", 1927; James Weldon Johnson, "Fifty Years and Other Poems", 1917, and "God's Trombones", 1927; Claude McKay, "Harlem Shadows", 1922; Georgia Douglas Johnson, "The Heart of a Woman", 1918, "Bronze", 1922; Joseph S. Cotter, "The Band of Gideon", 1918; William Stanley Braithwaite, "Lyrics of Love and Life", 1902, "House of Falling Leaves", 1908; Leslie Pinckney Hill, "Touissant L'Ouverture", 1928.
The forerunner of these poets was Paul Laurence Dunbar, who published "Lyrics of Lowly Life" in 1896. We have the annual "Anthologies of Magazine Verse", edited by William Stanley Braithwaite since 1913.

There are several collections of Negro biographies. The most notable autobiographies are: "The Life and Times of Frederick Douglass"; and Booker T. Washington's "Up From Slavery".

The leading white writers who have made recent studies in the Negro's problems are: E. P. Reuter, "The American Race Problem", 1927; Melvill J. Herskovits, "American Negro", 1928; L. I. Dublin, "Health and Wealth", chapter 12, 1928; H. A. Miller, "Races, Nations and Classes"; F. G. Detweiter, "Negro Press in the United States; E. P. Reuter, "The Mulatto in the United States"; Mary White Ovington, "Portraits in Color", 1927.

This population is distributed.

36-2-108

The age composition has changed considerably
The excess of male slaves existent gone 1034 & every
thousand females in 1820 & a normal larger proportion
earlier. This doubled to 1003 in 1830, 996 in 1860
& 989 in 1810 & 992 in 192. The whites in 1920
had 1044. The age composition shows a decreasing
proportion of children under 14 & an increase of those 45 years
of age & more. Negroes marry considerable earlier than
whites and marriages are broken by death not divorce
remarriage more frequently

Education & intelligence show remarkable increase The
official figures of illiteracy of Negroes 10 years of age & over are

1870 –	79.9	1910 –	30.4
80	70	1920 –	22.9
90	57.1		
00	44.5

The alternative was to give the Negro political power, and through this he forced himself into freedom by the establishment of public schools, by protecting himself as a wage laborer, and by beginning a new social legislation. His political power was quickly curtailed and he was largely disfranchised by indirect methods, but he had already gone too far toward freedom to be entirely re-enslaved. There persisted, however, not only the problem of restoration of his political rights but the question of his economic and social status.

30-2-93

The disfranchisement of Negro citizens by direct and indirect methods has curiously complicated the working out of Democratic Government in the United States. During slavery in determining the basis of congressional representation, five slaves counted as three white men; after emancipation came, each Negro counted as one.

But the Negroes were kept from voting at first by force and intimidation, then by fraud and finally by a series of laws which puported to disfranchise the illiterate, the propertyless, and those who did not pay their poll tax. At the same time, until this part of the law was declared unconstitutional, hereditary descent from one who had the right to vote before emancipation entitled a person to register. The result of these laws was to disfranchise the majority of Negroes. Meantime, however, the Negroes have increased in wealth and intelligence. Nevertheless, in a state like Louisiana, where over 100,000 adult Negroes can read and write, and where Negroes own large amounts of property, only 980 were allowed to register. And in Mississippi, only 850 were registered out of a total literate population, twenty-one years of age and over, of 290,000. Moreover, this disfranchisement of Negroes is accompanied by a more or less voluntary disfranchisement of whites through a white primary system which forces through public opinion and economic pressure over white voters to enter a single party primary and to promise to abide by the results. That is, to disfranchise themselves from all choice in the real elections. The singular result is that although the population of 11 Southern states has increased 100% since 1888, the number of voters in the Presidential Elections has increased only 50%, and that disfranchised woman suffrage. In five states of the Southern South with an equally large increase in population, the number of voters has remained stationary. Thus, the continued disfranchisement of the Negro American in the South is hastening a crisis similar to the ~~Routine Bureau~~ "Rotten Borough" crisis of the time of the first Reform Bill, ~~which~~ 97 actually happens that today nine thousand voters in South Carolina exercise as much power in Congress as 90,000 voters in Ohio.

36-2-20

In the first fifteen years of the 20th Century, there developed the inevitable clash between those who believed in a docile and good-tempered acceptance of the unfortunate facts of a racial contact, so as to gain the good will and help of the white world; and those, on the other hand, who believed in an agressive and uncompromising fight on prejudice.

Booker T. Washington, as statesman and writer, represented the first school, and his "Up From Slavery" was its classic. A number of other and younger writers represented by books like the "Souls of Black Folk", opposed him, while still a third and smaller number, like Kelley Miller, stood between. This period of Sturm und Drang lasted until the World War. But even before the war new writers who heralded the post-wurm period had begun to appear. There was William Stanley Braithwaite, poet and critic; Benjamin Brawley, historian and essayist; Carter Woodson, scientific historian; and a half dozen poets—Joseph Cotter, Jr., Fenton Johnson, George McClellan, Georgia Douglass Johnson and James Weldon Johnson.

36-2-81

For the special achievements of the American Negro in Art, Music, Literature, etc., see special articles on these subjects.

Since 1920, perhaps twenty-five writers, mostly young men and women, deserve mention in Negro-American literature. Their attitude and message seems at first a little bewildering until one remembers their historical genesis. Out of the old controversy that surrounded the policies of Booker T. Washington there crystallized two attitudes of mind toward the Negro and his future in the United States. One we may call the Self-Assertive school. Their attitude does not involve aggression or even agitation, but it is an attitude of mind which believes that self-assertion and self-expression on the part of the black man are necessary to his development as a free American citizen. On the other hand, there emerged a state of mind which we may call by the war term,

36-2-93

Next to the churches come the beneficial and insurance societies, of which there are ~~probably 100~~ a hundred or more, some of which are large and flourishing organizations covering several states. The secret societies, including Masons, Odd Fellows, Pythians, Elks, etc., own between ~~five and ten~~ ten and fifteen million dollars worth of property and collect at least $3,000,000 a year. There are various co-operative benevolences,

including homes and orphanages, hospitals and cemeteries. There are economic organizations, including some fifty small banks, a large number of building and loan associations, and in all about 70,000 commercial enterprises with an estimated annual overturn of $1,500,000,000.

36-2-94

By means of these organizations and by individual enterprise, the American Negro has built up a group economy, so that Negro professional men and most of the Negro business men, serve almost exclusively a Negro clientele, while the mass of the Negroes increasingly patronize Negro professional men and Negro business. Thus, the Negro group today is serving itself with religious ministration, medical care, legal advice, and education; and partially with homes, food, books, newspapers, bank credit, photographers, hotels, beauty parlors, drug stores, undertakers, etc. This economic circle is by means closed. The mass of colored people still works for white people. ~~Negro professional men have white people among their clients, and Negro business men serve some white customers.~~ Still the growing tendency is to form a fairly complete circle. The greatest gap remaining is the matter of capital and technical management.

Next to the churches come the beneficial and insurance societies, of which there are a hundred or more, some of which are large and flourishing organizations covering several states. The secret societies, including Masons, Odd Fellows, Pythians, Elks, etc., own between ten and fifteen million dollars worth of property and collect at least $3,000,000 a year. THE AMERICAN NEGRO

2. Problems of Social Contact

The vast stretches of new free land in America called for laborers. Economic conditions in England in the 17th Century had filled the jails and workhouses with paupers and vagrants. Systematic effort was made to send these to America as indentured servants. Convicts

821-2-128

36-2-99

The sex composition of the American Negroes has changed considerably. The existence of males, reaching the United States under the slave system, was large, and even as late as 1820 there were a a thousand one hundred and thirty-four males to every thousand females. This dropped to a thousand and three in 1830 and 996 in 1860. There was 992 in 1920. The corresponding figures for the whites in 1920 was a thousand and forty-four males to every thousand females, showing more unstabled population due to white emmigration.

The age composition shows decreasing population of children under fourteen and an increasing population of adults forty-five years of age and more. Negroes marry somewhat earlier than whites and their marriages are broken by death and divorce a little more frquently.

DICTIONARY OF AMERICAN BIOGRAPHY

Biographies of James DeWolf, Frederick Douglass, Elijah Johnson, Joseph Jenkins Roberts, Edward James Roye, John Brown Russwurm. Prepared for the Dictionary of American Biography, 1928-37.

De Wolf, James, (March 18, 1764 to December 21, 1837), slave trader, manufacturer and senator, was born in Bristol County, Rhode Island and was the seventh son of Mark A. and Abigail (Potter) De Wolf. Both his father and his brother-in-law were sea-faring men and had been interested in slave raiding in French Guinea. The family was poor and the boys hoed corn on their father's farm until throwing down their hoes, the walked to Providence and sailed upon one of Potter's privateers. This was during the Revolutionary War and the sea was infested with private pirates who increased in audacity and lucrative gain after the French Revolution.

36-1-10

James De Wolf went through wild experiences. He fought in many naval battles, was captured twice by the enemy and once was imprisoned. The result of this cruelty and hardship made him a man of force and indomitable energy with no nice ethical distinctions. Before his twentieth birthday he was master of a ship and before he was twenty-five, he had accumulated wealth enough to make him independent for the rest of his life.

His earliest voyages were made to Africa where he siezed and transported Negroes as slaves to the West Indies. Prividence merchants of highest commercial and social standing backed him in this trade. Apparently he had no qualms of conscience, and often went to Southern ports personally to supervise the sale of his captured Negroes. He was careful to follow the lines of largest profit. While the slave trade was flourishing after the Revolutionary War, his ships were in it. Later they turned to the furs of the North West coast, to whale fishing and even went to China. His principal trade was in the West

Indies and when, in 1804, South Carolina threw open her ports to the importation of Negroes because of the threatened national prohibition, Mr. De Wolf leaped to aid and ten of the two hundred and two vessels that entered Charleston between 1804 and 1808 belonged to him.

The attitude of England during the Napoleonic Wars greatly angered and embarrassed De Wolf and he sustained great losses through the impressment of seamen. He was a strong advocate for fighting England and eleven days after the declaration of the War of 1812, he offered the government at his own expense "an armed brig, (one of the most suitable in this country for a privateer) of one hundred and sixty tons burden, mounting eighting guns and carries one hundred and twenty men, called the 'Yankee', commanded by Oliver Wilson". The "Yankee" was immensely successful. It made six cruises in less than three years and captured more than five million dollars worth of British property.

36-1-11

After the close of the War, Mr. De Wolf sensed the coming development of manufactures in the United States. Gradually he withdrew his capital from shipping and he had already built one of the earliest cotton mills in the United States in 1812. He sensed, too, that the new industry needed political influence. For thirty years he represented the town of Bristol in the Rhode Island legislature, becoming finally, Speaker of the House and in 1821 he was elected to the United States Senate. Here he was a strong advocate of protection for the new young industries and he also opposed the extention of slavery to Missouri and the West. His interest now was no longer with the Negro slave but with the white mill laborer.

He did not like the atmosphere of Washington and resigned his seat in the Senate in 1825 and returned to the legislature of Rhode Island. He made the town of Bristol his especial care. Here on a great plantation of one thousand acres, he built himself a stately mansion and he devised many schemes for the advancement of the town and its industries.

Mr. De Wolf was tall and commanding in person and very careful about his dress. He married a daughter of William Bradford and died in New York City.

36-1-12

The chief sources of information about James De Wolf are: W. H. Monro, The History of Bristol, Rhode Island, Providence, 1880; W. H. Monro, Tales of an Old Sea Port, Princeton, 1917; C. B. Perry, Charles D'Wolf of Guadeloupe, His Ancestors and Descendents, New York, 1902.

(National Encyclopedia of Biography, 1900)

De Wolf, James, senator, was born in Bristol County, Rhode Island, March 18, 1764, son of Mark Anthony and Abigail (Potter) De Wolf. His opportunities for education were limited and during the Revolutionary war he left his home and shipped as a sailor boy on a private armed vessel. He participated in several naval encounters, was twice captured by the enemy and was confined for some time on the island of Bermuda. His zeal and ability quickly brought him to notice. Before he was twenty years of age, he was made the master of a ship. His earliest voyages as captain were made to the Coast of Africa in the slave trade. His employers were Providence merchants of the very highest commercial and social standing. Mr. De Wolf retired from the sea at an early age, and, settling in Bristol, engaged in extended commercial ventures that soon made him one of the wealthiest men in the United States. His principal business was in Cuba and other West Indian islands. He also built up a large trade with the ports of both northern and Southern Europe, especially with those of Russia. He entered somewhat into the China trade, and when the whale fishery was revived, many of his ships were transformed into whalers. In 1804 the ports of South Carolina were opened for four years for the importation of slaves; and of the 202 vessels that entered the port of Charleston during that period, 10 and their African cargoes belonged to Mr. De Wolf. When the war of 1812 broke out, he eagerly took part in it, and eleven days after war was proclaimed, his private and armed brig of War, the Yankee, was ready for sea. Mr. De.Wolf was one of the pioneers in the business of cotton manufacturing. In 1812 he built

36-1-13

in Coventry, Rhode Isla[illegible], the Arkwright Mills. Like all his enterprises they were immedia[illegible]ly and continuously successful. For nearly thirty years Mr. De Wolf represented Bristol in the General Assembly of his native State. In 1821, he entered the United States Senate as one of the members from Rhode Island. In the senate his unequalled business experience made him the recognized authority in all matters purely commercial. He was a strong Protectionist and was the first to propose the "drawing back system", which has since become so popular. He resigned his seat in 1825. Until his death he continued to represent Bristol in the General Assembly of Rhode Island. As a citizen he filled a position ne one ever held before. It may be questioned whether the interests of a town were ever more completely identified with those of an individual than were Bristol's with his. Mr. De Wolf married a daughter of William Bradford. He died in New York City, Dec. 21, 1837.

36-1-14

Douglass, Frederick (February 1817?—February 20, 1895). Abolitionist, orator, journalist, was named Frederick Augustus Washington Bailey, but assumed the name of Douglass after his escape from slavery. He was born at Tuckahoe near Easton, Talbot County, Maryland, the son of an unknown white father, and Harriet Bailey, a Negro slave, who had also some Indian blood. Thus, as some one has said, Douglass was "thrice an American".

His life was an epitome of American slavery and also a singularly complete human document. Born in slavery, he died in vigorous old age as one of the best and most widely known Americans and the first American Negro to achieve international fame. Physically he was a commanding person, over six feet in height, with brown skin, frizzly hair, leonine head, strong constitution and a fine voice.

He experienced as a child all the vicissitudes of a Negro in the border states—neglect and cruelty, indulgence and hard work; but particularly the tyranny and circumscription of an ambitious human being who was legally classed as real estate.

He turned at last upon his cruelest master, and by fighting back for the first time, realized that resistance paid even in slavery. He was sent to Baltimore as a house servant and learned to read and write with the assistance of his mistress. Soon he conceived the possibility of freedom. The settlement of his dead master's estate sent him back to the country as a field hand. He conspired with a half dozen of his fellows to escape but their plan was betrayed and he was thrown in jail. His master's forbearance secured his return to Baltimore where he learned the trade of a ship's caulker and eventually was permitted to hire his own time. A second attempt to escape September 3, 1838, was entirely successful. He came to New York City; married Anna

Murray, a free colored woman whom he had met in Baltimore, and together they went to New Bedford, where he became a common laborer.

Suddenly a career opened. He had read Garrison's Liberator, and in 1841 he attended a convention of the Massachusetts Anti-Slavery Society in Nantucket. An abolitionist who had heard him speak to his colored friends asked him to address the convention. He did so with hesitation and stammering, but as William Lloyd Garrison testifies, with extraordinary effect: "I think I never hated slavery so intensely as at that moment," wrote Garrison.

36-1-17

Much to his own surprise, he was immediately employed as an agent to the Massachusetts Anti-Slavery Society. He took part in the Rhode Island campaign against the new constitution which proposed the disfranchisement of the blacks; and he became the central figure in the famous "One Hundred Conventions" of the New England Anti-Slavery Society held in New Hampshire, Vermont, New York, Ohio, Indiana and Pennsylvania. It was a baptism of fire and brought out the full stature of the man. He was mobbed and mocked, beaten, compelled to ride in "Jim Crow" cars, and refused accommodations; but he carried the program through to the bitter end.

It is not too much to say that with all the fundamental pioneer work of Lundy, Garrison and Phillips, it was Frederick Douglass that made the abolition argument unanswerable. He was exhibit "A" of the Anti-Slavery crusade. Theoretical attacks upon the system could be answered, but Douglass was an unanswerable fact. Any system of human industry which made him a chattel was inherently wrong; and everybody who listened to the blazing eloquence of this young, handsome giant, had to agree with his indictment even if they saw no remedy.

Persons who had heard Douglass on the platform, began to doubt his story. They questioned if this man who talked good English and

bore himself with independent self-assertion, could ever have been a slave. Thereupon Douglass wrote his Narrative of the Life of Frederick Douglass which Wendell Phillips advised him to burn. It was a daring recital of facts and might lead to his re-enslavement. Douglass published the little book in 1845 and then, to avoid possible consequences, he visited Great Britain and Ireland. Here he remained two years. He met nearly all of the English Liberals—the aged Clarkson, John Bright, Lord Brougham, Douglas Jerrold and others. For the first time in his life he was treated as a man and an equal. The resultant effect upon his character was tremendous. He began to conceive emancipation not simply as physical freedom; but as social equality and economical and spiritual opportunity.

He returned to the United States in 1847 with money to buy his freedom and to establish a newspaper for the American Negro. Differences immediately arose with his white abolition friends. Garrison did not believe such a journal was needed and others even more radical, thought that the very buying of his freedom was condoning slavery. Differences, too arose as to political procedure in the abolition campaign.

In all these matters, Douglass was eminently practical. With all his intense feeling and his reasons for greater depth of feeling than any white abolitionist, he had a clear head and a steady hand. He allowed his freedom to be bought from his former master; he established the North Star and issued it for seventeen years; and he co-operated with the Liberty party which finally became the Republican party and elected Abraham Lincoln president.

The years from 1847 to 1859 were, nevertheless, exceedingly difficult. Douglass lectured, supported woman suffrage, took part in politics, tried to help Harriet Beecher Stowe to establish an industrial school for colored youth, and counseled with John Brown. When Brown was arrested, the Governor of Virginia tried to apprehend Douglass as a conspirator.

Douglass hastily fled to Canada and for six months again lectured in England and Scotland.

With the War came his great opportunity. He thundered against slavery as its real cause; he offered black men as soldiers and plead with black men to give their services. He assisted in recruiting the celebrated Fifty-fourth and Fifty-fifth Massachusetts colored regiments, giving his own sons as first recruits. Lincoln called him into conference and during Reconstruction, Douglass agitated in support of Negro suffrage and civil rights.

36-1-19

His life ended in ease and honor. He became successively Secretary of the Santo Domingo Commission, Marshall and Recorder of Deeds of the District of Columbia, and finally United States Minister to Haiti. His second marriage to a white woman, Miss Helen Pitts, in 1884, brought a flurry of criticism, but he laughingly remarked that he was quite impartial—his first wife "was the color of my mother, and the second, the color of my father". Frederick Douglass died after an all day attendance at a woman suffrage convention. His death brought tribute from the whole world, and with them, that deathless line of Theodore Tilton, his friend:

"He was a peer of princes—yea a king!
"Crowned in the shambles and the prison-pen!
The noblest slave that ever God set free!"

The chief sources of information about Frederick Douglass are his autobiographies:

1. The narrative of the Life of Frederick Douglass, an American Slave, written by himself. Boston, 1845. Republished in England and translated into French and German.

2. My Bondage and My Freedom. New York, 1855.

3. Life and Times of Frederick Douglass. Written by himself. Hartford, 1882, and Boston, 1892.

The best biographies are the following:

Frederick Douglass, the Colored Orator. By F. H. Holland. New York, 1891.

Frederick Douglass. By Charles W. Chesnutt. Boston, 1899.

Frederick Douglass. By Booker T. Washington. Philadelphia, 1907.

There are numerous references in the Life of William Lloyd Garrison, by his children, and throughout the literature of the abilition controversy. Many of Douglass's speeches have been published.

36-1-15

There are numerous references in the Life of William Lloyd Garrison by his children, and throughout the literature of the abolition controversy.

36-2-122

FREDERICK DOUGLASS

Chronology

1817

Frederick Douglass was born at Tuckahoe, near Easton, Talbot County, Maryland.

1825

Was sent to Baltimore to live with a relative of his master.

1833

March. Was taken to St. Michael's, Maryland, to live again with his master.

1834

January. Was sent to live with Edward Covey, slave breaker, with whom he spent a year.

1835-36

Hired to William Freeland. Made an unsuccessful attempt to escape from slavery. Was sent to Baltimore to learn the ship-calker's trade.

1838

May. Hired by his own time and worked at his trade.

September 3. Escaped from slavery and went to New York City. Married Miss Anna Murray. Went to New Bedfore, Massachusetts. Assumed the name of "Douglass".

1841

Attended Anti-Slavery Convention at New Bedford and addressed the meeting. Was employed as agent of the Massachusetts Anti-Slavery Society.

1842

Took part in Rhode Island campaign against Dorr constitution.

46-3-204

Lectured on slavery. Moved to Lynn, Massachusetts.

1843

Took part in the famous "One Hundred Conventions" of the New England Anti-Slavery Society.

1844

Lectured with Pillsbury, Foster, and others.

1845

Published Frederick Douglass' Narrative.

1845-46

Visited Great Britain and Ireland. Remained in Europe two years lecturing on slavery and other subjects. Was presented by English friends with money to purchase his freedom and establish a newspaper.

1847

Returned to the United States. Moved with his family to Rochester, New York. Established the North Star, subsequently renamed Frederick Douglass' Paper. Visited John Brown at Springfield, Massachusetts.

1848

Lectured on slavery and woman suffrage.

1849

Edited newspaper. Lectured against slavery. Assisted the escape of fugitive slaves.

1850

May 7. Attended meeting of the Anti-Slavery Society at New York City. Running debate with Captain Rynders.

1852

Supported the Free Soil Party. Elected delegate from Rochester, to Free Soil Convention at Pittsburgh, Pennsylvania. Supported John

P. Hale for the Presidency.

1853

Visited Harriet Beecher Stowe at Andover, Massachusetts, with reference to an industrial school for colored youth.

1854

Opposed repeal of Missouri Compromise.

June 12. Delivered commencement address at Western Reserve College, Hudson, Ohio.

1855

Published My Bondage and my Freedom.

March. Addressed the New York Legislature.

1856

Supported Freemont, candidate of the Republican Party.

1858

Established Douglass' Monthly. Entertained John Brown at Rochester.

1859

August 20. Visited John Brown at Chambersburg, Pennsylvania.

May 12. Went to Canada to avoid arrest for alleged complicity in the John Brown raid.

November 12. Sailed from Quebec to England. Lectured and spoke in England, Scotland, for six months.

1860

Returned to the United States. Supported Lincoln for Presidency.

1862

Lectured and spoke in favor of the war and against slavery.

1863

Assisted in recruiting Fifty-fourth and Fifty-fifth Massachusetts colored regiments. Invited to visit President Lincoln.

46-2-264

1864

Supported Lincoln for re-election.

1866

Was active in procuring the franchise for the freedmen. September. Elected delegate from Rochester to National Loyalists Convention at Philadelphia.

1869

Moved to Washington, D. C. Established the New National Era.

1870

Appointed Secretary of the Santo Domingo Commission by President Grant.

1872

Appointed Councillor of the District of Columbia. Elected Presidential elector of the State of New York, and chosen by the electoral college to take the vote to Washington.

1876

Delivered address at the unveiling of Lincoln Statue at Washington.

1877

Appointed Marshal of the District of Columbia by President Hayes.

1878

Visited his old home in Maryland and met his old master.

1879

Bust of Frederick Douglass placed in Sibley Hall, of Rochester University. Spoke against the proposed Negro exodus from the South.

1881

Appointed Recorder of Deeds for the District of Columbia.

46-2-204

1882

January. Published Life and Times of Frederick Douglass, the third and last of his biographies.

August 4. Mrs. Frederick Douglass died.

1884

February 6. Attended funeral of Wendell Phillips.

February 9. Attended memorial meeting and delivered eulogy on Phillips. Married Miss Helen Pitts.

1886.

Lectured on John Brown at Music Hall, Boston.

September 11. Attended a dinner given in his honor by the Wendell Phillips Club, Boston.

September. Sailed for Europe.

1886-87

Visited Great Britain, France, Italy, Greece and Egypt.

1888.

Made tour of the Southern states.

1889

Appointed United States Minister Resident and Counsul General to the Republic of Hayti and chargé d'affaires to Santo Domingo.

1890

September 22. Addressed abolition reunion at Boston.

1891

Resigned the office of Minister to Hayti.

1893

Acted as Commissioner fro Hayti at World's Columbian Exposition.

1895

February 20. Frederick Douglass died at his home on Anacostia Heights, near Washington, D. C.

46-2-206

Dictionary of American Biography

Elijah Johnson

1789 (?)—— 1849.

Elijah Johnson, sometimes called the father of Liberia, was probably born in New Jersey or else taken there during his childhood. Nothing is known of his parentage. At any rate, he was in New Jersey in 1789 and afterward received there and in New York some schooling. He took part in the War of 1812 against the British, serving in New Jersey, New York and Massachusetts. For a while, he studied for the Methodist ministry. Johnson joined the first shipload of emigrants which left New York on the ship "Elizabeth" in February, 1820. Eighty-eight colored persons and three white representatives of the United States Government and the American Colonization Society accompanied them.

36-2-167

Two commissioners of the Colonization Society had previously recommended the British Colony of Sierra Leone as a place of settlement. The British Governor, however, would not consent to permitting the Americans to make permanent settlement there. They, therefore, went temporarily to the Island of Shebro where many of them, including the three white men, died of fever. Elijah Johnson and another Negro, Daniel Coker, took charge of the Colony and led them back to Sierra Leone. The next year, a second vessel arrived with other white representatives of the Colonization Society.

The coast was explored and Cape Mesurado, the present site of the capital of Liberia, was finally chosen. A colored trader, John Mill, already had a trading post there, and he helped the emigrants negotiate with the natives.

A settlement was made on Perservance Island and all of the

Colonists gathered there, but the place was low and unhealthy; the natives hostile, because they had negotiated, as they thought, for trade and not for actual sale of their land. And finally, there was difficulty with the white slavetraders. Ayres, the white American in charge, was discouraged and wished to return to Sierra Leone. Johnson was strongly opposed. He said: "Two years long have I wanted a home. Here I have found one and here I remain." His stubborn determination decided the fate of Liberia. Ayres returned to America, leaving Elijah Johnson in charge, with eighty Colonists, of whom only twenty-one were capable of bearing arms. Johnson did not hesitate. He knew that another rainy season passed on Perseverance Island would be fatal, and in spite of native opposition, he climbed the high Cape and cleared the site of a future Monrovia. The natives shot at the workers from the high shelter of the forest and launched determined attacks upon them. A British gunboat appeared off the Cape and the commanders offered to punish the natives if Johnson would cede a piece of land to the British Government and hoist the British flag. Johnson refused point-blank, remarking: "We want no British flagstaff put up here, and it would cost us more to get it down than it will to whip the natives."

Jehudi Ashmun, another white representative of the Colonization Society and by far the most efficient, arrived in August, 1822. He found Johnson in charge, but the negotiations with the natives still unsettled. He put the Colony under military law and made Johnson Commissary of Stores.

For the next thirteen years, the Colony, under the black men, Elijah Johnson and Lott Carey, and the white man, Jehudi Ashmun(who died in 1827) and with the co-operation of Russwurm, Mechlin and

36-2-168

Buchanan, fought for existence against the natives and against the fever. There were serious wars with the natives in 1832, 1835 and 1838. The Colonial troops in all cases were led by Elijah Johnson, who had from seventy to one hundred and twenty soldiers, some of them Colonists and some of them recaptured slaves. His energetic actions gradually brought the neighboring chiefs into submission and alliance, and the Colony grew and began to take definite shape. Monrovia was built of houses on stone supports and in a style hitherto unknown to the African Coast. Johnson was a member of the conference which made its solemn declaration of independence for Liberia in July, 1847. But he was now an old man, certainly sixty, perhaps seventy years of age, and worn-out with his hard exertions and worry. He died March 23, 1849, having lived to see Liberia an independent state and a colored man elected as first President in 1847. His descendants to this day form one of the leading families in Liberia. His son, Hilary R. W. Johnson, became President in 1884, being the first native Liberian to hold the office. He served until 1892. Others of Johnson's family have occupied high position in the colony.

36-2-169

Elijah Johnson

178-(?)————1849.

Elijah Johnson, sometimes called the father of Liberia, was probably born in New Jersey. Nothing is known of his parentage. At any rate, he was in New Jersey in 1789 and received there and in New York some schooling. He took part in the War of 1812 against the British, serving in New Jersey, New York and Massachusetts. For a while, he studied for the Methodist ministry. Johnson joined the first shipload of emigrants which left New York on the ship "Elizabeth" in February, 1820, to establish an American Negro settlement in Africa, with eighty-eight colored persons and three white representatives of the United States Government and the American Colonization Society.

33-6-44

Two commissioners of the Colonization Society had previously recommended the British Colony of Sierra Leone as a place of settlement. The British Governor, however, would not consent to permitting the Americans to make permanent settlement there. They, therefore, went temporarily to the Island of Shebro where many of them, including the three white men, died of fever. Elijah Johnson and another Negro, Daniel Coker, took charge of the Colony until the next year, when a second vessel arrived.

The coast was explored and the present site of the capital of Liberia was finally chosen for settlement. The colony landed first on Perseverance Island in the harbor below Cape Mesurado. But the place was low and unhealthy, the natives hostile, and there was difficulty with the white slave-traders. Ayres, the white American in charge, was discouraged and wished to return to Sierra Leone. Johnson was strongly opposed. He said: "Two years long have I wanted

a home. Here I have found one and here I remain." His stubborn determination decided the permanent settlement of Liberia.

Ayres returned to America, leaving Elijah Johnson in charge. He knew that another rainy season passed on Perseverance Island would be fatal, and in spite of native opposition, he climbed the high Cape and cleared the site of Monrovia, the future capital. The natives shot at the workers from the shelter of the forest and launched determined attacks upon them. A British gunboat appeared off the Cape and the commanders offered to punish the natives if Johnson would cede a piece of land to the British Government and hoist the British flag. Johnson refused point-blank, remarking: "We want no ~~British~~ flagstaff put up here ~~it would~~ that will cost us more to get it down than it will to whip the natives."

Jehudi Ashmun, another white representative of the Colonization Society and by far the most efficient, arrived in August, 1822. He found Johnson in charge, but the negotiations with the natives still unsettled. He put the Colony under military law and made Johnson Commissary of Stores.

For the next thirteen years, the Colony, under the black men, Elijah Johnson and Lott Carey, and the white man, Jehudi Ashmun (who died in 1827) and with the co-operation of others, fought for existence against the natives and against the fever. The Colonial troops in all cases were led by Elijah Johnson and his energetic action gradually brought the neighboring chiefs into submission and alliance. The Colony grew and began to take definite shape.

Johnson was a member of the conference which made ~~his~~ solemn declaration of independence for Liberia in July, 1847. He died March 23, 1849, having lived to see Liberia an independent state and a colored man elected as first President in 1847.

His descendants to this day form one of the leading families

in Liberia. His son, Hilary R. W. Johnson, served as President, 1884-1892. He and others of Johnson's family have occupied high position in the colony.

Malone

Joseph Jenkins Roberts

1809-1876.

36-2-175

Joseph Jenkins Roberts, first President of the Republic of Liberia, West Africa, was born of free, colored parents at Petersburg, Virginia, March 15, 1809, having one-eighth or less of Negro blood. He married at an early age in Virginia but lost his wife and in 1829 migrated to Liberia with his widowed mother and younger brothers and became a merchant.

The governor of the colony at that time was T. H. Buchanan, a white appointee of the American Colonization Society. He was having trouble with the natives who were not reconciled to the invasion of the American Negroes. There was much fighting with the Dey and Golah Tribes and Roberts became one of Buchanan's most efficient leaders. Due to his energetic work, most of the more threatening natives were reduced to submission. Roberts then made every effort to make friends with the natives with the result that when Buchanan died in 1841, Roberts was the first colored man to become Governor of Liberia.

At that time Liberia held only the northern part of its best territory. Next to it was the Colony of Maryland and at the head of that was the first Negro graduate from college in the United States, John Russwurm, who gave Roberts full co-operation.

The necessity of organizing the country, pacifying the natives and repelling the illicit slave traders, called for larger revenues than Roberts or Russwurm had. Accordingly, they decided to lay import duties on goods brought to Liberia. This precipitated grave international difficulties for Liberia was not a sovereign country, nor was it, on the other hand, a recognized colony of America.

36-2-176

The British approached the United States on the subject but received a non-committal answer.

A radical step was necessary and Roberts after strengthening his treaties with the native tribes, took a trip to the United States in 1844. He came at a difficult time, when the question of the annexation of Texas was forcing the slavery question to the front. No American government would have dared to take any strong ground in defense of Liberia. The American Colonization Society, therefore, gave up all claims upon the Colony and Liberia was cut adrift.

Roberts returned, continued his purchase of lands from the chiefs and in 1847 called a conference and the new Republic of Liberia was proclaimed. Roberts was elected as the first President. Maryland was practically a part of Liberia from the very first and her representatives sat in Congress, but its formal annexation did not take place until 1857.

As soon as the new nation was proclaimed, Roberts hurried to England. His unexpected success there was due largely to his own character and finesse. He was a man of intelligence and poise, slight and handsome, with olive skin and crisp hair. He was an excellent conversationalist and had the manners of a gentleman. His second wife, who was named Jane Waring, and whom he had married in Monrovia in 1836, was a woman of education and spoke French.

In Europe, Roberts received unusual attention. He signed a commercial treaty in 1849 with Great Britain which recognized Liberia as an independent nation and gave Englishmen freedom of domicile

Later, Roberts visited France, where he was received by Napoleon III.; and Belgium, where he met Leopold I., and also

Holland and Prussia. France recognized Liberia in 1852; Belgium in 1858, and Denmark in 1860. The United States did not venture to recognize the Negro republic until the Civil War.

Before Roberts left England ten thousand dollars was raised by his English friends and given to him to buy the territory between Liberia and Sierra Leone where the slave trade was flourishing.

36-2-177

In 1849, Roberts was elected for a second term, which began in 1850. He remained in office until 1855, and after finishing his term was still active in the interests of Liberia, even to the extent of taking the field against rebellious natives. In 1861, he was elected first President of the new College of Liberia. Roberts visited Europe twice again in 1854 and 1863 and on his return from the last trip was appointed by the King of Belgium as Belgian Consul in Liberia.

Finally, when there arose in Liberia the financial difficulties with regard to an English loan, (See biography of E. J. Roye), and Liberia came near to revolution, Roberts at the age of 63 and already broken in health by his long service, was recalled to the presidency. He served until 1876, and died that year, February 1, two months after he had resigned the office.

Sir Harry Johnston's Liberia, N.Y., 1906, has a good account of Roberts and his wife; See also B. Brawley: Social History of the American Negro, Chapter IX.; Frederick Starr's Liberia, and the treatise by Maughan and Walker; also The African Repository, 1829-1892, and reports of the American Colonization Society passim.

Joseph Jenkins Roberts
1809-1876.

Joseph Jenkins Roberts was the first President of the Republic of Liberia, West Africa. He was born of free, colored parents at Petersburg, Virginia, March 15, 1809, having one-eighth or less of Negro blood. In early middle-age, he was slightly built and handsome, with brown hair, a blonde mustache, grey eyes and crisp, closely curled hair. He married at an early age in Virginia but lost his wife and at the age of twenty he migrated to Liberia in 1829 and became a merchant.

The settlement was having difficulty at this time with the natives. They were not reconciled to the invasion of the American Negroes and did not recognize them as having any more rights in Africa than white men. There was much fighting with the Dey and Golah Tribes and the white Governor of the colony, Buchanan, certainly needed help. Roberts became one of his leaders and due to his energetic work most of the more threatening natives were reduced to submission. Roberts then made every effort to make friends with the natives with the result that when the white governor died in 1841, Roberts was the first colored man to become Governor of Liberia under the general control of the American Colonization Society.

46-2-1

At that time Liberia held only the northern part of its best territory. Next to it was the Colony of Maryland and at the head of that was the first Negro graduate from college in the United States, John Russwurm. These two men co-operated in such a way that eventually the colonies were united.

They were for years especially bothered by the illicit slave trade. Slavers from all countries were operating on the coast and right in the territory claimed by Liberia. The necessity of organizing the

country, pacifying the natives and repelling the slave traders, called for larger revenues than Roberts or Russwurm had. Accordingly, they decided to lay import duties on goods brought to Liberia. This precipitated grave international difficulties. After all, Liberia was only a colony established by Americans. It was not a sovereign country, nor was it, on the other hand, a colony of America.

The British approached the United States on the subject, saying that in order to avoid future trouble England wanted to be informed of the relations between the United States and the colony of Liberia. The American Secretary of State was careful not to commit himself, and said that while the United States would be "unwilling" to see Liberia dispoiled of any of its territory, or restrained in its exercise of power, nevertheless, he made no claim that Liberia was any part of the United States government.

It was necessary, therefore, that Liberia should take some radical step, particularly as the English slavetraders at one end of the territory and the French Government at the other end, were making inroads upon the little state. Roberts proceeded to strengthen his treaties with the native tribles, and in 1844, took a trip to the United States. He came at a difficult time. The question of the annexation of Texas was forcing the slave problem to the front; Polk was elected President inthe fall of that year and the Abolitionists were growing stronger. No American government would have dared to take any strong ground in defense of Liberia. What happened, therefore, was that the American Colonization Society gave up all claims upon the Colony and Roberts hurried back to proceed with his purchasing of land from the natives along the whole coast line.

A conference was called, and in 1847, the new Republic of Liberia was proclaimed and Roberts was elected first President. Maryland was practically a part of Liberia from the very first and her representatives

sat in Congress, but its formal annexation did not take place until 1857. As soon as the new nation was proclaimed, Roberts hurried to England. His unexpected success there was due largely to his own character and finesse. He was a man of intelligence and poise, and an excellent conversationalist, with the manners of a gentleman. His second wife, who was named Jane Waring, and whom he had married in Monrovia in 1836, was a woman of education and spoke French. Her father had been a Baptist minister and migrated from the United States in 1824.

In Europe, Roberts received unusual attention. He signed a commercial treaty with Great Britain which recognized Liberia as an independent nation and gave Englishmen freedom of domicile. The treaty was signed by Viscount Palmers and was ratified by the Liberian Senate in 1849.

46-2-3

From England, Roy went to France, where he was received by Napoleon III.; and to Belgium, where he met Leopold I. He also visited Holland and Prussia. France recognized Liberia in 1852 and most of the other countries soon after. The United States did not dare to recognize the Negro republic until the Civil War.

On Roberts' return to England from the continent, ten thousand dollars was raised by his English friends and given to him to buy the territory of the natives when the slave trade was ripe.

Queen Victoria received the President on board the royal yacht and he and his whole official staff were sent back to Liberia on board the British warship Amazon.

Liberia had at this time an area of 12,830 square miles with 6,000 Liberians of American origin. It was exporting about $500,000 worth of goods. In 1849, Roberts was elected for a second term, which began in 1850. He remained in office until 1855.

After Mr. Roberts had finished his term as President, he was still

active in the interests of Liberia, even to the extent of taking the field against rebellious natives. In 1861, at the suggestion of the trustees of donations for Educational Liberia, an American organization, Mr. Roberts was elected President of the new College of Liberia. Under him was Edward W. Blyden, a Negro scholar of wide fame, and the Reverend Alexander Crommell, a black clergeman of the American Episcopal Church. Roberts visited Europe twice again in 1854 and 1863 and on his return from the last trip was appointed by the King of Belgium as Belgian Consul in Liberia. Afterward, when there arose in Liberia the financial difficulties (See biography of E. J. Roy) with regard to an English loan, Liberia came near to revolution. Roberts at the age of 63 and already broken in health by his long service, was recalled to the presidency. He served until 1876, and died that year, February 1, two months after he had resigned the office.

Joseph Jenkins Roberts was one of a group of colored men of unusual ability who gave their lives to the founding of a settlement of American Negroes on the West Coast of Africa. They fought tremendous difficulties in climate, territory, the hostility of the natives, the American slavetraders, and the hardships of work and industry in a primitive land. None of the group accomplished more than President Roberts.

46-2-7

Edward James Roye

1815-1871.

Edward James Roye, fifth President of the Republic of Liberia, was born in Newark, Ohio, February 3, 1815. His father came from Kentucky and was a descendant of the African Ebo tribe. He was thrifty and on his death left his son some personal property and land.

Edward Roye was educated in the public schools of Ohio, and had among his teachers, Salmon P. Chase, afterward Chief Justice of the United States. He spent three years at Ohio University at Athens, and taught school a few years in Chillicothe. He then started in business as a sheep trader and shop-keeper and lived in various parts of the Middle West. Finally, on the death of his mother in 1840, Roye began to consider the possibility of migrating to some foreign country in order to escape American prejudice. He first choose Haiti, and began to study French at Oberlin, but finally changed his mind and went to Liberia.

S-C-94

He arrived there with a stock of goods in 1846. His energy soon made him the leading merchant in the country and he was rated, in 1870, as the richest man in Liberia. He filled various positions of influence; in 1849 he was Speaker of the House of Representatives, and he served as Chief Justice from 1865 to 1868, and three times he was candidate for the Presidency and was finally elected President in 1870. He immediately announced a progressive policy. He wished to inaugurate a complete financial reconstruction, some measures for general education, and an improved system of roads. For these purposes Liberia needed capital and Roye began to negotiate for a loan from England. He went then personally to settle a boundary dispute, and started negotiations for the loan. Unfortunately, he made the initial

mistake of yiadding too much to Lord Granville, agreeing to a rectification of the boundary which practically gave back to England land which Liberia had formerly bought.

He returned to Liberia before finishing the matter of the loan but left negotiations in the hands of two Liberians and a white man, David Chinery, who was Consul for Liberia in London. A loan for $500,000 was finally negotiated on very severe terms, carrying interest at 7%, and issued at 30 per cent below par, with three years' interest to be deducted.

President Roye hastily agreed to the terms without consulting the legislature and ordered certain goods to be charged against the loan. As a final result, Liberia actually received something like $89,515 cash, while her bonds were issued for at least $400,000. The result of these financial negotiations caused great resentment in Liberia against President Roye, and he foolishly increased this resentment by seeking to extend the two year term of the Presidency by edict. Public resentment was excited to fury and the people, rising in insurrection, overpowered President Roye and his friends, seized his house and imprisoned one of his sons. On October 1, 1781, the legislature declared that President Roye was deposed from his office and an executive committee was appointed to carry on the government until a new President was elected.

The ex-President was then summoned to trial before the Supreme Court but escaped during the night, either because of carelessness or connivance, and tried to reach an English steamer in the harbor. He was drowned in the attempt to ride the breakers in a native canoe.

THE FIFTH PRESIDENT OF THE REPUBLIC OF LIBERIA.

On Monday, January 3, 1870, Hon. Edward James Roye was inaugurated President of Liberia. The election of Mr. Roye is the triumph of a party which have been striving for several years to obtain such a position in the country as would enable them to carry out certain principles which they regard as indispensable to the proper growth of that African nationality.

Edward J. Roye was born in Newark, Licking county, Ohio, February 3, 1815. His father, John Roye, was born in the state of Kentucky, but an unadulterated descendant of one of the tribes of the African continent - the Eboe - whose characteristics of industry, activity, energy and independence of spirit were visible in the mental and moral lineaments of John. Though born and reared under the disadvantages and disabilities which in those days depressed the negro in the United States, he soon, by his indomitable purpose and untiring energy, freed himself from the trammels of poverty and ignorance, and when he died, in 1829, left his son Edward, in addition to some personal property, six hundred and forty acres of land and a few town lots in and near Vandalia, Illinois.

Among the few colored children admitted to the schools of Ohio at that period was the subject of this sketch. His thirst for knowledge soon became apparent, and he made rapid progress in reading, writing, arithmetic, and other branches of elementary knowledge. After a while he gained admittance to the Newark High School, an institution which had numbered among its preceptors men eminent for their literary acquirements, among whom

8-3-94

was the distinguished elocutionist, Bronson. During the time that young Roye attended, it was taught by Mr Chase, the present Chief Justice of the United States, a nephew of Bishop Chase, President of Gambier College.

Having succeeded in the necessary preparatory studies, he entered the University of Athens, Ohio, in the spring of 1832, where he spent three years, leaving at the close of the fall term of 1835. The Rev. Robert G. Wilson, D.D., of excellent and fragrant memory, was at that time President of the University.

After leaving the University, Mr. Roye taught school for a few years in the city of Chillicothe. With that provident forecast and prudence with which his life has been marked, he saved money enough to enable him to enter upon the sheep-trading business in prosecuting which he made a trip to New Orleans, and realized by that adventure near one thousand dollars.

6-2-94

At this time he had the care of a crippled mother, to whom he devoted the most affectionate attention, for which he had the respect and goodwill of all who knew him. Leaving his mother in comfortable circumstances, he set out in the fall of 1837 to find the lands left him in Illinois by his father. To make the journey as profitable as possible he bought a buggy and two horses, and with a variety of goods, started upon his tour. Owing to the inperfect condition of the roads at that early period, his horses were so worn down that he was obliged to stop at Terre Haute, Indiana, where he purchased a large two-story building and opened a shop with the remainder of his goods, hired barbers, and established the first bath house in that town.

Mr. Roye's success in business was now rapid, and his mind, disciplined by culture, began to look to the future, and to consider the question of a permanent and congenial home. The death

of his mother, in 1840, severed the ties of affection that had bound him to his native land. About this time, too, the leaders of the colored people began earnestly to discuss their condition in that country, and to hold conventions for the purpose of adopting measures for their elevation. Mr. Roye, whose education and refinement made him unpleasantly sensitive to the burdens and deprivations of his race, eagerly attended some of these conventions to learn if anything could possibly be done for his people in the United States; but he soon became satisfied that the remedial measures proposed were partial and defective, and must be powerless to effect their purpose as long as the negro remained in this country. He saw that the prejudices of race, the competitions of labor, and the rivalry of a superior wealth and education would never accord him an equal chance in the United States. He felt that the negro must be placed beyond this prejudice, in a country where nothing would obstruct his progress but a lack of energy and enterprise. He accordingly made up his mind to emigrate to Hayti; but, while residing at Oberlin, whither he had gone to study the French language to prepare for his residence in his new home, he changed his mind and concluded to go to Liberia.

46-2-10

On the 2nd of May, 1846, he embarked in New York with a stock of goods for Liberia, reaching his destination June 7th. On his arrival at Monrovia, being much pleased with the appearance of things, and the encouraging prospects for the future, he concluded to make Africa his home.

His energy and tact as a merchant have placed him in the front rank of the commercial community. He has owned several vessels, and he had the honor of first carrying the Liberian flag into American and European waters.

Mr. Roye has filled various positions of influence and usefulness

in the Republic of Liberia. In 1849 he was Speaker of the House of Representatives, and he served as Chief Justice from the beginning of 1865 to the beginning of 1868. He has been a candidate three times for the presidency, as leader of the True Whig party, and has always received large majorities in his own county.

He has several times visited Europe on business, but, in the summer of 1866, he combined business with pleasure, made a somewhat protracted visit, and spent with Mrs. Roye a portion of his vacation in Paris.

His administration is looked forward to with great hopes by the masses of the people. Prominent among his most ardent supporters is Ex-President Warner. His policy is progressive. Among the measures which he proposes to carry out are a complete financial reconstruction, without repudiation as a basis, the general education of the masses, colonists and aborigines, an improved system of roads for interior communication, the incorporation of the native tribes contiguous, and alliance with powerful distant tribes. For the efficient execution of his plans, it is proposed to add to the existing executive officers, a Secretary of the Interior and a Secretary of Education. The antecedents of Mr. Roye are a guarantee that intelligence, energy, and integrity will mark his administration.

Edward James Roye
--------1871.

Edward James Roye was fifth President of the Republic of Liberia. He was a full-blooded Negro. The time and place of his birth is unknown but without doubt he migrated from the United States. He became an energetic merchant and shipowner. But he is chiefly known as the one president of Liberia who was deposed and against whom violence was threatened.

Possibly, he does not deserve all the blame that has been caste upon him. At the time of his election to office in 1870, Liberian trade was small on account of the lack of capital to open up the interior. Roye went to England to settle the boundary question between Liberia and Sierra Leone. An English slave-trader, John Myers Harris, had refused to recognize Liberian authority in this territory, although the territory was presumably a part of that purchased by President Roberts through the gifts of English friends. Harris defied the government of Liberia and in 1862 attempted to establish himself as an independent chief. This caused an Inter-tribal War and the Liberian Government sent a force to intervene. In the fight, the natives destroyed one of the factories of Harris and he put in a claim against Liberia for $30,000 which the neighboring English Colony of Sierra Leone supported. Even when this claim was reduced, the Colony claimed that Liberia was unable to keep peace in this territory and that the English colony should advance its boundaries to the Mano River. President Benson tried to settle this matter in 1862 by going to Sierra Leone but was referred to England. Nothing was done until the election of Roy as President in 1870.

He proceeded to England to take up the question but being no diplomat, he was easily out-maneuvered by Lord Granville, who induced

him to agree to a proposal that the British frontier should be at the Sulima River, thus, practically giving back to England most of the territory which Liberia had bought from the natives. The matter was not finally settled until 1885.

In the meantime, the question of securing money for the development of Liberia had come to the fore. A proposal had been made that England loan Liberia $500,000. Roye did not settle the matter while in England but upon his return to Monrovia, appointed a white man, David Chinery, who was at that time Consul for Liberia in London and two Liberians, Henry V. Johnson and W. S. Anderson, as commissioners. The Liberians went to London, and through Chinery negotiated a loan for $500,000 at 7% interest to be issued at 30% below par and also 3 years' interest to be deducted in advance, leaving a balance of $245,000 actually to be received by Liberia. But not all of this was received. President Roye in great haste agreed to the loan without submitting the matter to the Legislature. He then ordered a large bill of goods to be charged against the loan and these goods were overpriced with high charges for transportation and insurance. The result was that Liberia received, according to the best accounts, $89,515 in cash, while she was obligated to pay interest on something between $400,000 and $500,000 worth of bonds issued.

36-2-173

The object of the loan was to pay up $100,000 of current government indebtedness, deposit another $100,000 as security for the issue of paper currency, and deposit the balance as an emergency fund. The currency issued was to be used in public works and the opening up of roads. This plan fell through when the loan netted so small a sum and Liberia tried to repudiate the debt on the ground of fraud. Finally, in 1898, Liberia admitted a debt of something between $350,000 and $400,000, interest on which she paid until the loan was assumed by the new financial arrangements of the American loan of 1902.

As a result of these misfortunes, much resentment was felt against

President Roye which he foolishly heightened by seeking to extend his two-years of the presidency. The matter of making the term of the President four years instead of two had been discussed by the Legislature but had not been settled. In October, 1871, Roye declared that on his own authority he had extended the ten-years of the President for two years. Popular discontent on account of the loan was excited to fury by this and when Roye's partisans tried to fortify a building, the Liberian people rose in their first and last insurrection. They overpowered Roye and his friends, seized his house and imprisoned one of his sons. The Senate and House of Representatives met and on October 26, 1871, declared that President Edward James Roye was deposed from his office. An Executive Committee was appointed to carry on the government until a new President was elected. The ex-President was then summoned to trial before the Supreme Court but escaped during the night, either because of carelessness or connivance and tried to reach an English steamer which was anchored in the harbor. He was drowned in the attempt to ride the breakers in a native canoe.

John Brown Russwurm

1799-1854.

33-6-41

John Brown Russwurm, first Superintendent of Public Schools in Liberia, West Africa and afterward Colonial Secretary, Editor, and Governor of the Colony of Maryland, was born at Port Antonio, Jamaica, in 1799. He was the son of a white American and a colored woman. When his father left the Island, he put the boy in school in Canada. The father afterward married a white woman in Maine who learned of the existence of the boy, then called John Brown. She insisted that he join the family and assume his father's name. After the death of the father and her re-marriage, she still cared carefully for the boy.

He was sent to school in Maine and eventually entered Bowdoin College at Brunswick. He was reported by his classmates to have been a young man of sound intelligence, a great reader with a special fondness for history and politics. He was the first person of known Negro descent to finish an American college course, graduating in 1826.

He settled in New York City, where in 1827, he established the first colored paper in the United States, "Freedom's Journal". His paper espoused the abolitionists' cause and opposed migration to Africa, but after a time he changed his mind and said: "We consider it a mere waste of words to talk of ever enjoying a citizenship in this country." Thereupon, he migrated to Liberia in 1829 to become Superintendent of Public Schools and carry on trade. From 1830-1834, he acted as Colonial Secretary, editing and publishing at the same time the "Liberian Herald".

In 1836, he was appointed Governor of the Maryland Colony

at Cape Palmas, a position which he held until his death in 1851. The Maryland Colony was established under the auspices of the Maryland State ~~Organization~~ Colonization Society. The territory there was secured through Dr. James Hall, a friend and schoolmate of Russwurm. The President of the ~~Maryland Colonization~~ Society bore the testimony as to how well Governor Russwurm discharged his difficult duty.

"None knew better, or so well as the Board under what daily responsibilities Governor Russwurm's life in Africa was passed, and how conscientiously he discharged them; how at periods when the very existence of the then infant colony depended upon the relations with surrounding tribes of excited nations, his coolness and admirable judgment obviated or averted impending perils; how when the authority and dignity of the colonial government were at stake in lamentable controversies with civilized and angry white men, the calm decorum of his conduct brought even his opponents over to his side; how when the popular clamor among the colonists called upon him as judge to disregard the forms of law and sacrifice an offending individual in the absence of legal proof, he rebuked the angry multitude by the stern integrity of his conduct; and how, when on his visit to Baltimore in 1848, he was thanked personally by the members of the Board, he deprecated the praise bestowed upon him for the performance of his duty, and impressed all who saw him with the modest manliness of his character, and his most excellent and courteous bearing."

Hist. Howard Co. pp. 352-4

The Maryland Colony was distinct from Liberia, but Russwurm worked in careful collaboration with President Roberts of Liberia and was instrumental in the final union of the two colonies. Even before an actual union, they acted together in foreign affairs and established a common custom's tariff. Russwurm encouraged agriculture and trade,

built a stone jail which could also be used as a fort, took a census in 1843, and established a court with presiding justices. He married a daughter of Lieutenant-Governor McGill of Monrovia and at his death in 1851, left three sons and a daughter.
